**Ratio:**—3.9-1 (Coupes 1940), 4.1-1 (Coupes 1941 & 5 Pass. 1940), 4.3-1 (5 Pass. 1941, 7 Pass. 1940-41). Backlash—.006-.010". Screw adjustment.

**Removal:**—Disconnect drive shaft at rear universal. Remove axle shafts (see below) and capscrews on carrier flange. Pull carrier assembly out.

**Axle Shaft Removal:**—Remove wheel, hub, and drum assembly (use screw type hub puller—Tool C-319), block brake pedal, disconnect brake line at wheel cylinder, take off backing plate with oil seal, pull shaft and bearing (Tool C-158). NOTE—Use Tool C-358 to pull oil washer, C-201, 2 to install.

**Wheel Bearing Adjustment:**—Shims between backing plate and axle housing. With wheel and hub removed, check endplay with dial indicator. To adjust, remove backing plate, add or remove shims at both wheels equally. Endplay—.003-.008".

**SHOCK ABSORBERS**

**SHOCK ABSORBERS:**—Domestic—Delco Direct Acting. Export—Delco Direct Acting or Delco Adjustable Direct Acting (Special Equip. Dom. also). See Shock Absorber Section for complete data.

**FRONT SUSPENSION**

**Front Suspension:**—Independent, linked parallelogram type with coil springs.

See Front Suspension Section for complete data.

**Kingpin Inclination:**—4¾° to 6°.

**Camber:**—Pos. ¼°. Limits 0° to Pos. ¾°.

**Caster:**—Neg. 1° to Pos. 1°. Not adjustable.

**Toe In:**—1/16" (0-½"). Turn both rods equally.

**Steering Geometry:**—Outer wheel 20°, Inner 22°.

**STEERING GEAR**

**Steering Gear:** Chrysler (Gemmer design) Model 300 (1940 exc. 7 Pass.), Model 305 (1940 7 Pass. & 1941 models exc. 7 Pass.), Model 335 (1941 7 Pass.). Worm-and-Roller types. Models 305 and 335 have "push-pull" adjustments.

See Steering Gear Section for complete data.

**BRAKES**

**BRAKES:**—Service. Lockheed hydraulic, double anchor type. Hand brake applies independent shaft brake

See Brake Section for complete data.

**Wheel Cylinders:**—Stepped or two-stage bore type

**Drums:**—Cast-iron. Diameter—11".

**Lining:**—Molded. Width 2". Thickness 13/64".

**Length (front shoe)** 11 15/32", (rear shoe) 7 31/32".

**Clearance:**—.012" toe, .006" heel, for each shoe.

**Hand Brake:**—On drum at rear of transmission.

**Adjustment:**—See Chrysler Shop Notes for data.

**Drum:**—Cast-iron. Diameter—8".

**Lining:**—Width 2". Thick. 5/32". Length 17 1/16".

**MISC. MECHANICAL**

**WINDSHIELD WIPER:** Auto-Lite Model EWB-4001 (1940), EWD-5001, EWD-5003 (1941). Electric type. NOTE—EWD-5003 used on Convertible Coupe.

See Miscellaneous Section for complete data.

**Circuit Breaker:**—Vibrating (thermostatic) type, on switch. Starts to operate at 12 amperes.

**CONVERTIBLE TOP CONTROL (1940):** Vacuum type. See Miscellaneous Section for complete data.

**CONVERTIBLE TOP CONTROL (1941):** Electric type. See Miscellaneous Section for complete data.

**Top Control Motor:**—Auto-Lite Model EWG-4002.

**Motor Control Relay:**—Auto-Lite Model HRF-4001.

**HOOD LOCK, FRONT END ASSEMBLY & OIL PAN REMOVAL:**—Refer to Chrysler Shop Notes for data.

### MODEL IDENTIFICATION

**SERIAL NUMBER:**—On right front door hinge post. First No. 30,577,001 (Detroit), 9,374,396 (Canada).

**ENGINE NUMBER:**—First number D22-1001. Stamped on left side of block between #1 and #2 cylinders. Refer to Chrysler Shop Notes for Engine Number Lettering data ("Special Standard" bore and bearing sizes).

### TUNE-UP

**COMPRESSION:**—Ratio—6.70-1. Cast-iron head. Pressure—160-170 lbs. at 1000 RPM. or 125-135 lbs. at cranking speed of 125 RPM.

**VACUUM READING:**—18-21" steady idling at 6 MPH.

**FIRING ORDER:**—1-5-3-6-2-4.

**SPARK PLUGS:** Auto-Lite Type A7. 14 mm. Metric.

Gaps—.025"

**NOTE:** Spark plug tightening tension 26-32 ft. lbs.

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.020". Cam Angle 38° (closed).

Automatic Advance—9° max. at 1300 RPM (IGS-4203A-1), 10° max. at 1150 RPM (IGS-4203B-1), 12° max. at 1750 RPM (IGS-4113-1, 4202-1). Distributor degrees and RPM.

Vacuum Advance—9° distr. with 14" vacuum (IGS-4203A-1), 8.5° distr. with 16" vacuum (IGS-4203B-1), 7° distr. with 15" vacuum (IGS-4113-1, 4202-1).

**IGNITION TIMING:** See Ignition Timing.

Std. Setting—2° ATDC. (Cars with Aluminum Pistons), 3½-4½° ATDC. (Cars with Cast Iron Pistons) with correct degree mark after dead center mark "DC" on impulse neutralizer at indicator on front of engine.

**CARBURETION:** See Carburetor & Carb. Equipment. Idle Setting—Idle screw midway between "miss" and "roll" points. Idle speed 6 MPH.

Floar Level—Fuel level ¾" below top of bowl.

Accelerating Pump—Center hole Normal. Inner hole (Summer), Outer hole (Winter) for temperature extremes.

Fuel Pump Pressure: 4 lbs. maximum.

**MANIFOLD HEAT CONTROL:**—Thermostatic coil type. See that valve and shaft rotate freely. When installing coil, place inner end in slot in valve shaft, wind free end up one turn only counter-clockwise.

**VALVES:** See Valve Timing.

Tappet Clearance:—.008" Intake, .010" Exh. (hot and idling), .002" additional exh. clearance desirable for sustained high speeds. **NOTE:**—Tappet screws self-locking. Remove right front engine inspection shield between fender and frame for access to valves.

**STARTING:** See Battery, Starter, Generator, Regulator.

### IGNITION

Ignition Switch:—Mitchellock Model 24-R, No. 8197.

Ignition Lock—Yale & Towne or Briggs & Stratton. B&S No. 80592. Key Series 1BP to 1000BP. Groove 24.

**COIL:** Auto-Lite Model IG-4676. Service coil (less Switch & Cable) IG-3224JS. Mounted on dash.

Ignition Current—2.25 amperes idling, 5.0 stopped.

**CONDENSER:** Auto-Lite Part No. IG-3927A.

Capacity—.25-.28 microfarad.

**DISTRIBUTOR:** Auto-Lite Model IGS-4203A-1 or 4203B-1 (U. S.), IGS-4113-1 or 4202-1 (Canada). Single breaker, 6 lobe cam, full automatic advance type with auxiliary vacuum spark control and manual adjustment.

Breaker Plate Identification—Plate is marked #9 (IGS-4203A-1), #8½ (4203B-1), #7 (4113-1 & 4202-1).

Breaker Gap—.020". Limits .018-.022".

Cam Angle or Dwell—38° closed, 22° open.

Breaker Arm Spring Tension—17-20 ozs.

Rotation—Clockwise viewed from above.

#### Automatic Advance—IGS-4203A-1

12.....	1750	24.....	3500

**Vacuum Spark Control:**—Integral type (on distributor, linked directly to breaker plate). Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle (spark retarded by return spring in unit).

**Vacuum Advance—IGS-4203A-1**

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start.....	0°	7"
4°	8°	9"
6°	12°	11"
9°	18°	14"

**Vacuum Advance—IGS-4203B-1**

Start.....	0°	5"
2°	4°	7½"
4°	8°	10½"
6°	12°	12¾"
8.5°	17°	16"

**Vacuum Advance—IGS-4113-1 or 4202-1**

Start.....	0°	5"
3°	6°	9¼"
5°	10°	12½"
7°	14°	15"

**Manual Adjustment**—Provides for minor changes in ignition timing at distributor. See Ignition Timing.

**Distributor Removal**—Mounted on left side of crankcase. To remove, disconnect vacuum line, take out hold-down screw in lock plate. **Installation**—Install distributor with #1 piston in firing position (see table below) and rotor opposite #1 segment in cap.

**IGNITION TIMING**

**IGNITION TIMING**—Initial setting (correct for fuel of approx. 70 octane rating at low altitudes for all engines) shown below. See Manual Adjustment

**Flywheel Degrees** **Piston Position**  
 Aluminum Pistons.....2° ATDC.....002" ATDC.  
 Cast-iron Pistons...3½-4½° ATDC...005-.007" ATDC.  
**NOTE**—Impulse neutralizer marked 'DC' at TDC, with 15 (1°) graduations on either side.

**Timing (Using Timing Light)**—Connect timing light between distributor primary terminal and battery terminal on generator regulator. Set #1 or #6 piston in firing position (see setting above) with correct mark on impulse neutralizer aligned with pointer on chain case cover. Loosen lock-plate hold-down screw, center pointer on scale, tighten screw. Loosen lock-plate clamp bolt, rotate distributor until timing light just goes out, tighten clamp bolt. Check Manual Adjustment (following) for final setting.

**Timing (Using Synchroscope)**—Tool C-374. Clip lead to #1 spark plug, direct light on impulse neutralizer (mark correct graduation with paint), idle engine, adjust distributor as directed above until mark aligned with pointer on chain case cover.

**Manual Adjustment**—Set to give slight ping from 10-30 MPH accelerating with wide open throttle. To adjust, loosen lock-plate hold-down screw, move plate (not more than 4° or .007" before or after initial setting) counter-clockwise (if no ping), clockwise (if ping too severe), tighten screw.

**CARBURETOR**

**CARBURETION**—Carburetor, Stromberg Model BXV-3, No. 380079 (Code No. 3-65) without Fluid Drive; Model BXVD-3, No. 380080 (Code No. 3-66) with Fluid Drive. 1½" downdraft types. BXVD-3 has dash-pot type slow-closing throttle.

*For complete data, refer to Carburetor Index.*

**Idle Adjustment**—With engine warm and running at slow idle speed (choke valve wide open, fast idle inoperative), set throttle stopscrew for idle speed of

6 MPH min. Adjust idle adjusting screw for smooth idle (turn screw in for leaner mixture). Recheck idle speed. **NOTE**—If vacuum gauge used, adjust for maximum vacuum (see Vacuum Reading above).

**Accelerating Pump Setting**—Pump lever has three holes for pump link engagement. Set as follows: Inner Hole (minimum stroke)—Extreme hot temperatures or altitudes above 3000 feet.

Center Hole (med. stroke)—Normal summer setting. Outer Hole (max. stroke)—Winter temperatures.

**Float Level**—Fuel level ⅝" below top edge of bowl.

**Metering Jet**—Refer to Carburetor Index for Stromberg Downdraft Carburetor Jet Specification Table.

**NOTE**—Use of lean (High Alt.) metering jet at low alt. not recommended (reduced speed and power).

**Throttle Cracker**—Not adjustable.

**Fast Idle**—Not adjustable. Throttle stopscrew should rest on high point of cam with choke valve closed.

**Slow Closing Throttle (Dashpot) on BXVD-3 only**—For complete data, refer to Carburetion Equip. Index.

**Setting**—With all slack removed from linkage, set adjusting screw on dash pot lever so that piston travel 5/16-11/32" (turn screw in to shorten stroke).

**Automatic Choke**—Sisson Type AC-758B.

*For complete data, refer to Carburetion Equip. Index.*

**CARB. EQUIPMENT**

**Air Cleaner**—AC #1542284 heavy duty oil-bath type. Use Replacement Filter Element Assembly #1542305.

**Fuel Pump**—AC 'AT' #1523647—Exch. No. 505 diaphragm type pump. Pressure—4 lbs.

*For complete data, refer to Carburetion Equip. Index.*

**Gasoline Gauge**—Auto-Lite electric. No. NG-9918D (dash unit), No. NG-9329T (tank unit).

*For complete data, refer to Carburetion Equip. Index.*

**BATTERY**

**BATTERY**—Auto-Lite Type CF-1-15R. 6 volt, 15 plate, 105 ampere hour capacity (20 hour rate).

**Starting Capacity**—133 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 3.5 minutes. Five second voltage 4.2 volts.

**Grounded Terminal**—Positive (+) to engine.

**Dimensions**—Length 9". Width 7 1/16". Height 9 5/16".

**Location**—Under hood in left fender shield.

**STARTER**

**STARTER**—Auto-Lite MAW-4026. Arm. No. MAW-2030.

**Drive**—Overrunning clutch (manual pinion shift).

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—42-53 ozs. (new brushes).

**Cranking Engine**—125 RPM, 175 amperes, 5.4 volts.

**Performance Data**

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	4900	5.5	65
2.75 "	1480	5.0	200
5.45 "	820	4.5	300
8.50 "	400	4.0	400
11.55 "	110	3.5	500
11.5 "	Lock	3.	505
18. "	Lock	4.	670

**Removal**—Flange mounted on left front face of flywheel housing. Disconnect wires (tape battery lead). Remove oil filter tubes, filter and 2 starter bolts.

**Starting Switch**—A-L SW-2813. On starter. Manually operated by starter (pinion shift) pedal.

**GENERATOR****STANDARD**

**GENERATOR (STD.)**—Auto-Lite GDZ-4801B (Domestic), GDZ-4801A (Canada). Armature No. GDZ-2006F. Two brush with current & voltage regulation. **Charging Rate Adjustment**—No adjustment at generator. Charging rate controlled by Voltage Regulator and maximum output by Current Regulator. **Maximum Charging Rate**—35 amperes, 8.0 volts, 2200 gen. RPM or approx. 25 MPH, and above with load or discharged battery (Current Regulator setting). Actual charging rate controlled by Voltage Regulator and dependent on battery condition.

**Performance Data—GDZ-4801A, B**

Cold			Hot		
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	925	0	6.4	1000
5	6.65	1060	5	6.65	1150
10	6.85	1200	10	6.85	1290
15	7.05	1340	15	7.05	1430
20	7.3	1480	20	7.3	1590
25	7.55	1620	25	7.55	1750
30	7.8	1760	30	7.8	1980
35①	8.0	1900	35	8.0	2250

①—Current regulator setting. See Regulator data.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—53 ozs. max. (new brushes).

**Field Current**—1.60-1.78 amperes at 6.0 volts.

**Motoring Current**—4.16-4.60 amperes at 6.0 volts.

**Removal**—Pivot mounted at left side of engine at front. To remove, take out pivot and clamp bolts.

**Belt Adjustment**—Loosen pivot and clamp bolts, pull out on generator until belt is snug or 40-50 lbs. tension secured on scale attached to field frame.

**GENERATOR****SPECIAL EQUIPMENT**

**SPECIAL GENERATORS**—Auto-Lite GEB-4801A (City Police), GEG-4818B or GEG-4823B (State Police). *For complete data on these generators, and Regulators with which they are used, refer to 1941 Dodge D19 article (preceding).*

**REGULATOR**

**REGULATOR**—Auto-Lite VRP-4001A. Current-Voltage type. In case on left side of engine dash. **NOTE**—For negative battery ground use VRP-4005A.

*For complete data, refer to Electrical Equipment Index.*

**NOTE**—Regulator case cover is sealed. Serviced on exchange basis if seals not broken (to remove cover).

**Cutout Relay**

**Cuts In**—6.4-6.6 volts at approx. 1000 gen. RPM.

**Cuts Out**—4.2-4.8 volts (approx. 4-6 amps. disch.).

**Contact Gap**—.015" minimum.

**Air Gap**—.031-.034" with contacts open (check at hinge end of core).

**Voltage Regulator**

**Setting**—7.2-7.5 volts at 70°F. See Electrical Equipment Section for settings at other temperatures.

**To Check (without breaking seals)**—Connect ammeter in charging line at regulator 'B' terminal (use short heavy leads), voltmeter between 'B' terminal and ground. Operate generator at speed equivalent to 30 MPH, charging fully charged bat-

CONTINUED ON NEXT PAGE

**C NTINUED FROM PRECEDING PAGE**

tery, until voltage is steady. Voltage reading should agree with setting given above.

**To Adjust (with cover removed)**—Change regulator armature spring tension by bending lower spring hanger slightly. See Electrical Equipment Section.

**Contact Gap**—.012" min. (armature against stoppin).

**Air Gap**—.048-.052" with contacts just opening.

**Current Regulator**

**Setting**—34-36 amperes (marked '35' on the cover).

**To Check (without breaking seals)**—Connect test meters as for voltage check (above). Operate generator at speed equivalent to 30 MPH. charging battery, turn on car lights and accessories or connect load (bank of headlamp bulbs, etc.) between ammeter and battery so that generator charges at peak rate and Current Regulator operates. Current reading should agree with setting given above. If more than slight excess noted, regulator is defective.

**To Adjust (with cover removed)**—Same as for Voltage Regulator (above).

**Contact Gap & Air Gap**—Same as Voltage Regulator.

**LIGHTING**

**LIGHTING**—Headlamps—Corcoran-Brown 'Sealed Beam' type. For data, refer to Elec. Equipment Index.

**Headlamp Adjustment**—Aim upper beam straight ahead (hot spot center 3" below lamp center height).

**Beam Indicator**—Small red light on instrument panel above speedometer. Lighted with upper beams on.

**Direction Signal**—Refer to Electrical Equip. Index.

**Switches**

**Lighting**—Dodge No. 910507.

**Beam Selector**—Dodge No. 859974.

**Instrument**—Dodge No. 957065.

**Map Light**—Dodge No. 947064.

**Dome Lamp Pillar**—Dodge No. 317180.

**Door Switches**—Dodge No. 882943.

**Stop Light**—Dodge No. 677112.

**Direction Signal**—Dodge No. 938926.

**Bulb Specifications**

Position	Candlepower	Mazda No.
Headlamps		Sealed Beam
Parking	3	63
Front Direction Signal	21	1129
Instrument	1½	55
Map Light	3-21	1158
Beam & Dir. Indic., Ign. Sw.	1	51
Tail (without Direct. Signal)	3	63
Rear Dir. Signal & Tail	21-3	1158
Stop	21	1129
Rear License	3	63
Reading or Dome	15	87

**MISC. ELECTRICAL**

**LIGHTING CIRCUIT BREAKER**—Thermostatic type. Mounted on back of lighting switch.

**FUSES**—Clock—2 ampere. In connector in clock lead. Radio—14 ampere. In radio lead wire.

**Direction Signal**—9 ampere. In wire fuse connector behind instrument panel near ammeter.

**HORNS**—Dual Auto-Lite HO or HT-5003 with relay. Current Draw—35-40 amperes.

**NOTE**—Horns connected through ignition switch and are operative only with ignition switch 'on'.

**Horn Relay**: Auto-Lite Model HRC-4001, HRL-4001. Type HRL-4001 has winding connected through ignition switch so that horns operative only with ignition "On".

**Contacts Close**—1.5-3.0 volts. **Open**—5 volt.

**Contact Gap**—.026". **Air Gap**—.016-.020" (closed).

**ENGINE**

**ENGINE SPECIFICATIONS**—6 cylinder, 'L' head type.

**Bore**—3¼". **Stroke**—4½".

**Displacement**—230.2 cubic inches. **Rated HP**—25.35.

**Developed Horsepower**—105 at 3600 RPM.

**Compression Ratio**—6.7-1 cast-iron head.

**Compression Pressure**—160-170 lbs. at 1000 RPM or 125-135 lbs. at cranking speed. Variation 10 lbs. max.

**Vacuum Reading**—18-21" steady idling at 6 MPH.

Refer to Chrysler Shop Notes for Engine Removal data.

**PISTONS**—Aluminum alloy, cam ground, split skirt, steel strut, tin coated type. **Length**—3 11/16".

**Weight**—15 ounces (stripped).

**Removal**—Pistons and rods removed from above.

**Clearance**—See Fitting New Pistons.

**Original Bore & Pistons Sizes, Replacement Pistons**—Refer to Chrysler Shop Notes for sizes and markings.

**Fitting New Pistons**—Check piston size with micrometer at bottom of skirt adjacent to slot. Insert .0015" x ½" feeler between cylinder wall and piston (piston inverted, pin removed) opposite slot. Pull to withdraw feeler 10-15 lbs. (piston & block at 70° F.).

**Installing Pistons**—Slot away from camshaft.

**PISTON RINGS**—4 rings, all above pin. #1 & 2 Compr. (upper inner edge stepped), #3 & 4 Oil (slotted).

Ring	Width	End Gap	Side Clearance
Compr. #1	3/32"	.007-.015"	.0025-.004"
Compr. #2	3/32"	.007-.015"	.0020-.0035"
Oil Control	5/32"	.007-.015"	.0010-.0025"

**Replacement Rings**—Refer to Chrysler Shop Notes.

**PISTON PIN**—Diameter—55/64". **Length**—2¾". Floating type. Pin hole in rod bronze bushed.

**Pin Fit in Piston**—Thumb push fit (piston at 160°F).

**Pin Fit in Rod Bushing**—Thumb push fit at 70° F.

**Replacement Pins**—Std. & .003", .005", .008" oversize.

**CONNECTING ROD**—Length—7 13/16".

**Lower Bearing Diameter** 2 1/16". See Engine Lettering 'Special Standard' Note in Chrysler Shop Notes.

**Lower Bearing**—Removable, precision type, thin babbitt. **Clearance** .001-.002". **Sideplay** .005-.011".

**Bearing Adjustment**—Refer to Chrysler Shop Notes for Bearing Removal and Fitting data.

**Replacement Bearings**: Refer to Chrysler Shop Notes.

**Installing Rods**—Wide portion of bearing to rear (#1, 3, 5), to front (#2, 4, 6). Oil hole to camshaft.

**CRANKSHAFT**—4 bearings, 7 integral counterweights. **Bearing Diameter**—2½". See Engine Lettering Note in Chrysler Shop Notes for 'Special Standard' sizes.

**Bearing Type**—Removable, precision type, thin babbitt on steel. **Clearance**—.001-.0015".

**Bearing Adjustment**—Refer to Chrysler Shop Notes for Bearing Removal, Adjustment, & Crankshaft Oil Seals.

**Replacement Bearings & Bearing Caps**: See Chrysler Shop Notes for data.

**End Thrust**—Taken by flange faces on rear (#4) main bearing. **Endplay**—.003-.007" (.003" desired).

**CAMSHAFT**—4 bearing. Non-adjustable chain drive.

Refer to Chrysler Shop Notes for Camshaft Removal. **Bearing Type**—Removable steel-backed, babbitt-lined bushings (except #4 machined in block).

**Bearing Diameters**—#1, 2"; #2, 1 31/32"; #3, 1 15/16"; #4, 1¼". **Clearance**—.0015-.0035".

**End Thrust**—Taken by thrust plate behind camshaft sprocket hub. **Endplay**—.002-.006".

**Timing Chain**—Morse Type 1883N, No. 2661. **Width** 1". **Pitch** .500" (½"). **Length** 24" or 48 links.

**Camshaft Setting**—Sprockets marked. Mesh chain with sprockets turned so that 'O' marks are adjacent and in line with straightedge across shaft centers.

VALVES	Head Diameter	Stem Diameter	Length
Intake	1 17/32"	.340-.341"	4 25/32"
Exhaust	1 13/32"	.340-.341"	4 25/32"

	Seat Angle	Lift	Stem Clearance
Intake	45°	¾"	.001-.003"
Exhaust	45°	¾"	.003-.005"

See Chrysler Shop Notes for Exhaust Valve Seat inserts.

**Valve Guides**—Remove from above. Press new guides in (stepped end down) with upper end 7/8" below top of block, ream to .342-.343" Int., .344-.345" Exh.

**Valve Springs**—Install with closely coiled end to top. **Free length** 2". **Spring Pressure** **Length**  
Valve Closed 40-45 lbs. 1¾"  
Valve Open 107-115 lbs. 1¾"

**Valve Lifters**—Mushroom type (remove from below). **Stem diam.** 5/16". Ream holes from above (pilot in valve guide). **Oversizes** .001", .008", and .030".

**Lifter Clearance in Block**—.000-.001".

**VALVE TIMING**

**Tappet Clearance**—.008" Intake, .010" Exh. (hot and idling), .002" additional exh. clearance desirable for sustained high speeds. **NOTE**—Tappet screws self-locking. Remove right front engine inspection shield between fender and frame for access to valves.

**Valve Timing**—See Camshaft Setting above.

**Intake Valves**—Open 12° BTDC. Close 44° ALDC.

**Exhaust Valves**—Open 50° BLDC. Close 6° ATDC.

**Valve Timing Check**—With .014" (cold) tappet clearance #6 intake valve should open with #6 piston 12° or .065" BTDC with 12th graduation before DC mark on impulse neutralizer aligned with pointer on chain cover. Reset tappet clearance .008" hot.

**LUBRICATION**

**LUBRICATION**—Pressure (pump on right of engine). Refer to Chrysler Shop Notes for Oil Pump Removal.

**Normal Oil Pressure**—30-45 lbs. above 30 MPH.

**Oil Pressure Relief Valve**—Under plug below starter. Opens at 40-45 lbs. Spring painted red, green, or unmarked. If spring replaced, use same color spring.

**Crankcase Capacity**—5 quarts (refill).

**COOLING**

**COOLING SYSTEM**—Capacity—15 quarts.

Refer to Chrysler Shop Notes for Radiator Core Removal and Water Distribution Tube servicing.

**Water Pump**—Packless type with grease fitting. See Water Pump Section for complete data.

**Thermostat**—Bishop & Babcock or Fulton. On cyl. hd. **Setting**—Starts to open 157-162°F. Fully open 183°F.

**Temperature Gauge**: Motometer (Auto-Lite) Vapor Tension type. Auto-Lite No. H-9917 (U. S.), 9937 (Canada).

See Miscellaneous Section for complete data.

**CLUTCH**

**CLUTCH:**—Borg & Beck 10A7 (Std.), 9A7 (with Fluid Drive), 11A6 (Taxi) with 'Borglite' driven member. Assembly No. 928 or 938 (10A7), 952 (9A7), 931 (11A6) stamped on cover. Single plate, dry disc types. See Clutch Section for complete data.

**Facings:**—Molded-Woven, 2 used. Inside Diam. 7" (10A7), 6" (9A7), 6½" (11A6). Outside Diameter 10" (10A7), 9¼" (9A7), 11" (11A6). Thickness .125" (⅛").

**Adjustment:**—Pedal should just clear toeboard (adjust stop screw on lower end of pedal) & have 1" free travel (adjusting nut on connector link at fork).

**Removal:**—Remove release fork pull-back spring, Transmission (see Transmission) and housing underpan. Pull out clutch release bearing and sleeve. Mark cover and flywheel (or driving plate on Fluid Drive). Take out cover screws, remove assembly.

**FLUID DRIVE****OPTIONAL EQUIPMENT**

**FLUID DRIVE:** Fluid Coupling at rear of engine. See Miscellaneous Section for complete data.

**TRANSMISSION**

**TRANSMISSION:**—Own Make. All helical gear, constant-mesh, synchro-mesh (second and high), sliding gear (low and reverse) with remote shift. See Transmission Section for complete data.

**Transmission Control:**—Steering column shift. Manual type Std. Power Shift (vacuum type) Optl. See Transmission Section for complete data.

**Removal:**—Jack up front end of car, disconnect front universal (loosen companion flange nut if disassembling transmission—see Chrysler Shop Notes for Propeller Shaft Center Bearing Removal on 7 pass.). Disconnect speedometer cable, hand brake cable, gear-shift rods, vacuum and air hose (if Power Shift used). Remove trans.-to-clutch housing cap screws and nuts. Pull unit to rear, down and out of car.

**UNIVERSALS**

**UNIVERSAL JOINTS:**—Detroit-Universal Series 4200 (3 & 5 pass.), Series 7200 (7 pass.). Roller bearings, ball and trunnion type (4200) cross type (7200). See Universals Section for complete data.

**Propeller Shaft Center Bearing:**—Used on 7 passenger sedans. Refer to Chrysler Shop Notes for servicing.

**REAR AXLE**

**REAR AXLE:**—Own Make. Semi-floating, Hypoid gear with Hotchkiss drive.

See Rear Axle Section for complete data.

**Ratio:**—3 Pass. Coupe 3.73-1. Club Coupe 3.9-1. 7 Pass. 4.3-1. Others 4.1-1, 3.9-1 (Fluid Drive).

**Backlash:**—.006-.010". Screw adjustment.

**Removal:**—Hoist rear end of car, remove rear wheels. Disconnect brake hose at frame bracket, lower ends of shock absorbers, and rear universal. Disconnect Transverse Sway Bar at Axle Bracket (Custom & 7 Pass.). Support axle, remove rear spring hold-down clips, withdraw axle assembly. NOTE—Carrier can be removed without disturbing housing by disconnecting rear universal, removing axle shafts, and taking out carrier mounting screws.

**Axle Shaft Removal:**—Remove wheel, hub, and drum assembly (use screw type hub puller—Tool C-319), block brake pedal, disconnect brake line at wheel cylinder, take off backing plate with oil seal, pull shaft and wheel bearing (use Tool C-158).

**Wheel Bearing Adjustment:**—Shims between backing plate and axle housing. With wheel and hub removed, check endplay with dial indicator. To adjust, remove backing plate (above), add or remove shims at both wheels. Endplay—.003-.008".

**SHOCK ABSORBERS**

**SHOCK ABSORBERS:**—Domestic—Monroe Direct Acting, hydraulic. No. 955029 (front), 955030 (rear).

**Export:**—Delco Direct Acting, adjustable types. See Shock Absorber Section for complete data.

**Transverse Sway Strut (7 Pass.):** Rear sway bar with Monroe 958790 direct acting hydraulic shock absorber built-in bar.

See Shock Absorber Section for complete data.

**FRONT SUSPENSION**

**Front Suspension:**—Independent, linked parallelogram type with coil springs and direct acting shocks. See Front Suspension Section for complete data.

**Kingpin Inclination:**—4¾° to 6°.

**Camber:**—Positive ¼°. Limits 0° to Pos. ¾°.

**Caster:**—Negative 1° to Positive 1°. Not adjustable.

**Toe In:**—0-1/16". Turn both tie rods equally.

**Steering Geometry:**—Outer wheel turned 20°, inner wheel 22° ± 1° (5 pass.), 21½° ± ½° (7 pass.).

**STEERING GEAR**

**Steering Gear:** Chrysler (Gemmer design) Model 305 (exc. 7 Pass.), Model 335 (7 Pass. models). Worm-and-Roller types with "push-pull" adjustments. See Steering Gear Section for complete data.

**BRAKES**

**BRAKES:**—Service. Lockheed hydraulic, double anchor type. Hand lever applies independent shaft brake. See Brake Section for complete data.

**7 Passenger Service Brakes:**—Same design and size as used on Chrysler 8 Model C36. See 1942 Chrysler Eight C36 article for 7 Passenger Service Brake data.

**Drums:**—Cast-iron. Diameter 11".

**Lining:**—Molded asbestos. 2" wide. 13/64" thick.

**Length (front shoe)** 11 15/32", (rear shoe) 7 31/32".

**Clearance:**—.012" Toe (top), .008" Heel, for each shoe.

**Hand Brake:**—On drum at rear of transmission.

**Adjustment:**—Refer to Chrysler Shop Notes for data.

**Drum:**—Cast-iron. Diameter 6".

**Lining:**—Moulded and compressed asbestos. Width 2". Thickness 5/32". Length 7⅞" each (2 pieces).

**MISC. MECHANICAL**

**WINDSHIELD WIPER:**—Auto-Lite EWH-5001, 5003 (Conv. Coupe). Electric type with circuit-breaker. See Miscellaneous Section for complete data.

**Circuit Breaker:**—Vibrating, thermostatic type. Starts to operate with current of 12 amperes.

**CONVERTIBLE TOP CONTROL:**—Electric type.

See Miscellaneous Section for complete data.

**Top Control Motor:**—Auto-Lite Model FWG-4003.

## MODEL IDENTIFICATION

**SERIAL NUMBER:** On right front door hinge post.  
 1946 Numbers—30,645,001 Up (Detroit).  
 1947 Numbers—30,799,738 Up (Detroit), 45,002,146 Up (Los Angeles).  
 1948 Numbers—31,011,766 Up (Detroit), 45,022,453 Up (Los Angeles).

**ENGINE NUMBER:** Stamped on boss on left side of engine between #1 and #2 cylinders.

## TUNE-UP

**COMPRESSION:** Pressure—150-160 lbs. at 1000 RPM. or 125-135 lbs. at cranking speed of 150 RPM.

**VACUUM READING:** Steady 18-21" idling at 6 MPH.

**FIRING ORDER:** 1-5-3-6-2-4.

**SPARK PLUGS:** Auto-Lite Type A-5. 14 mm. Metric. Gaps—.025".

**IGNITION:** See Coil, Condenser, and Distributor.  
 Breaker Gap—.020" Cam Angle—38° Closed.  
 Breaker Arm Spring Tension—17-20 ounces.  
 Automatic & Vacuum Advance—See Distributor.

**IGNITION TIMING:** See Ignition Timing.  
 Std. Setting—2° After top dead center.

**Timing Mark:** Second graduation after "DC" mark on vibration dampener aligned with pointer on chain case cover. Vary as follows:

**Octane Selector:** Set for slight ping when accelerating with wide open throttle between 10-30 MPH.

**CARBURETION:** See Carburetor & Carb. Equipment.  
 Idle Setting—With engine warm, set throttle stop-screw for 6 MPH. idle speed. Adjust idle adjusting screw for smooth idle (½-1½ turns open for Carter).

**Float Level (Stromberg):** Fuel level 5/8" below top of bowl (even with bottom of inspection hole).

**Float Level (Carter B&B):** Top of float (not soldered seam) 5/64" ± 1/64" below top edge of bowl.

**Accelerating Pump:** Center hole (medium) Normal.  
 Inner Hole—Summer, Outer Hole—Winter.

**Fuel Pump Pressure:** 3½-5½ lbs.

**MANIFOLD HEAT CONTROL:** Thermostatic coil type. See that valve operates freely. When installing coil, wind free end up approx. one turn.

**VALVES:** See Valve Timing.

**Tappet Clearance:**—.008" Intake, .010" Exh., Hot.

**STARTING:** See Battery, Starter, Generator, Regulator.

## IGNITION

**IGNITION SWITCH:** Briggs & Stratton or Mitchell. NOTE—No armored cable used.

**Briggs & Stratton—B & S Switch No. 85985.**  
**Mitchellock Type 42-R—No. E-10182 (Yale & Towne lock), No. E-10663 (Hurd lock).**

**Lock Cylinder—Yale & Towne, Hurd, or Briggs & Stratton. B & S No. 85915 (Key Series CA1-CA800) or No. 80592 on Early cars (Key Series 1BP-1000BP).**

**COIL:** Auto-Lite IG-4806 or IG-4809. Mounted directly above distributor on ignition cable bracket.

**Ignition Current:**—2¼ amperes idling, 5½ stopped.

**CONDENSER:** Auto-Lite Part No. IG-3927A.

**Capacity:**—25-28 microfarad.

**DISTRIBUTOR:** Auto-Lite No. IGS-4207A-1 (U. S.) IGS-4208B-1 (Canada). Automatic advance type with Vacuum Spark Control and Octane Selector.

**Breaker Plate Identification:**—Maximum vacuum advance limited by slot in plate. Plate marked #8½ (for IGS-4207A-1 distr.), #7 (for IGS-4208B-1).

**Breaker Gap:**—.020". Limits .018-.022".

**Cam Angle:**—38° closed, 22° open.

**Breaker Arm Spring Tension:**—17-20 ounces.

**Rotation:**—Clockwise viewed from above.

## Automatic Advance—IGS-4207A-1

Degrees	R.P.M.	Degrees	R.P.M.
Start.....	350	0.....	700
3.....	400	6.....	800
5.....	620	10.....	1240
8.....	940	16.....	1880
10.....	1150	20.....	2300

## Automatic Advance—IGS-4208B-1

Degrees	R.P.M.	Degrees	R.P.M.
Start.....	350	0.....	700
3.....	400	6.....	800
6.....	850	12.....	1700
9.....	1300	18.....	2600
12.....	1750	24.....	3500

**Vacuum Spark Control: Auto-Lite Units.** On distributor, linked directly to breaker plate). Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle (spark retarded by return spring in unit).

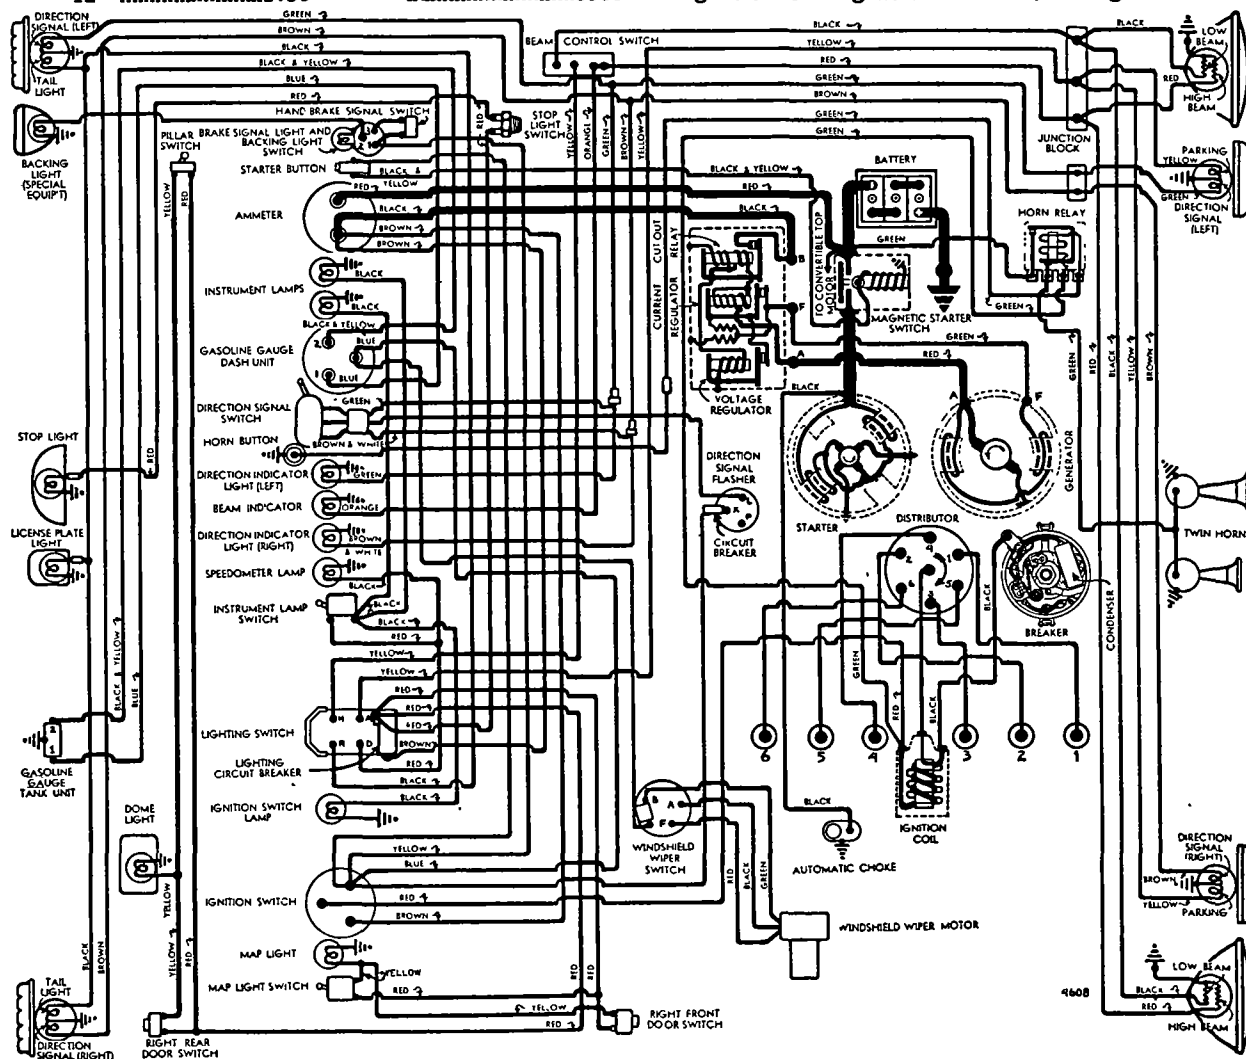

## Vacuum Advance—IGS-4207A-1

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start.....	0°	5"
2°.....	4°	7½"
4°.....	8°	10½"
6°.....	12°	12¾"
8.5°.....	17°	16"

## Vacuum Advance—IGS-4208B-1

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start.....	0°	5"
1°.....	2°	6½"
3°.....	6°	9½"
5°.....	10°	12½"
7°.....	14°	15"

**Manual Adjustment:**—Provides for minor changes in ignition timing at distributor. See Ignition Timing

**Distributor Removal:**—Mounted on left side of crankcase. To remove, disconnect vacuum line, take out hold-down screw in lock plate. **Installation Note:**—Install distributor with #1 piston in firing position (at TDC) and rotor opposite #1 segment in cap.

### IGNITION TIMING

**Std. Setting:**—Initial setting (for regular non-premium fuel) as shown below. See Manual Adjustment (following) for Final Setting.

**Flywheel Degrees      Piston Position**

All Engines ..... 2° ATDC ..... .002° ATDC  
**NOTE:**—Impulse neutralizer marked 'DC' at TDC point with 15 (1°) graduations on either side.

**Timing (Using Timing Light):**—Connect timing light between distributor primary terminal and battery terminal on generator regulator. Set #1 or #6 piston in firing position (see setting above) with correct mark on impulse neutralizer aligned with pointer on chain case cover. Loosen lock-plate hold-down screw, center pointer on scale, tighten screw. Loosen lock-plate clamp bolt, rotate distributor until timing light just goes out, tighten clamp bolt. Check Manual Adjustment (following).

**Timing (Using Synchroscope):**—Tool C-374. Clip lead to #1 spark plug, direct light on impulse neutralizer (mark correct graduation with paint), idle engine and adjust distributor (as directed above).

**Manual Adjustment:**—Set to give slight ping from 10-30 MPH accelerating with wide open throttle from 10 MPH. To adjust, loosen lock-plate hold-down screw, move plate (not more than 4° or .007" before or after initial setting) counter-clockwise (if no ping noted), clockwise to retard spark (if ping too severe), tighten screw.

### CARBURETOR

#### STROMBERG

**Stromberg Model BXV-3 (Standard), BXVD-3 (with Fluid Drive).** Stromberg No. 380158 (BXV-3), No. 380159 (BXVD-3) marked with Code No. 3-76 (BXV-3), 3-77 (BXVD-3). 1½" single barrel downdraft type with Sisson automatic choke.

**NOTE:**—BXVD-3 type has Slow-closing Throttle. See Carburetor Section for complete data.

**Idle Adjustment:**—With engine warm and running at slow idle speed (choke valve wide open, fast idle inoperative), set throttle stop screw for idle speed of 6 MPH min. Adjust idle adjusting screw for smooth idle (turn screw in for leaner mixture). Recheck idle speed. **NOTE:**—If vacuum gauge used, adjust for maximum vacuum (see Vacuum Gauge data above). **Accelerating Pump Setting:**—Pump lever has three holes for pump link engagement. Set as follows: Inner Hole (minimum stroke)—Extreme hot temperatures or altitudes above 3000 feet.

Center Hole (med. stroke)—Normal summer setting.

Outer Hole (max. stroke)—Winter temperatures.

**Float Level:**—Fuel level ⅝" below top edge of bowl.

**Metering Jet:**—See Stromberg Jet Table in Carburetor Section for complete jet data.

### CARBURETOR

#### CARTER (B&B)

**Carter (B&B) Model D6J1.** 1½" single barrel, downdraft (with Slow-closing Throttle for Fluid Drive). See Carburetor Section for complete data.

**Idle Adjustment:**—Same as for Stromberg. Idle adjusting screw setting ½-1½ turns open.

**Accelerating Pump Setting:**—Same as for Stromberg

**Float Level:**—Top of float (not soldered seam) 5/64" ± 1/64" below top edge of bowl with valve seated.  
**Metering Jet:**—See Carburetor Section for Carter (B&B) Downdraft Carburetor Jet Specification Table.

### CARB. EQUIPMENT

**Fast Idle:** Throttle opened to fast idle position when choke valve closed. No adjustment for Stromberg or Carter B&B.

**Slow Closing Throttle (Fluid Drive Cars):** Stromberg or Carter (B&B) Adjustable Dashpot types.

See Carburetion Equipment Section for complete data.

**Setting (Stromberg):**—With all slack removed from linkage, set adjusting screw on dash pot lever under float bowl so that piston travel is 5/16-11/32" (measured on dash pot rod on bowl cover). Turn screw out to lengthen stroke, in to shorten.

**Setting (Carter B&B):**—Adjusting screw on top of bowl cover open five (5) full turns from closed position.

**Automatic Choke:**—Sisson Type AC-758B.

See Carburetion Equipment Section for complete data.

**Setting:**—The choke can be adjusted by inserting a gauge pin through hole in automatic choke lever shaft and slot in base mounting flange (to position shaft) and adjusting carburetor choke valve lever so that choke valve is tightly closed.

**Air Cleaner:** AC No. 1542284 Heavy duty oil-bath type. Filter element AC No. 1544091.

**Servicing:**—Clean and refill to indicated oil level at 1000 mile or 30 day intervals. Use SAE 50 oil (above 32°F.), SAE 20-W (below 32°F.). Oil filler cap filter should be cleaned in kerosene and re-oiled by dipping in SAE 50 engine oil at the same time.

**Fuel Pump:** AC No. 1539042 or Carter Type M594S. Diaphragm type fuel pump.

**Replacement Pump:**—AC No. 577 (for 1539042).

**Pressure:**—3½-5½ lbs.

See Carburetion Equipment Section for complete data.

**Fuel Tank Filter:** New Oilite metal filter in tank.

**Servicing:**—If more than 2 pints water in tank, fuel will not pass filter. Remove filler cap and drain plug, draining tank. Disconnect fuel line at some point between pump and tank, blow out line and filter with air, increasing pressure as filter is cleaned. Flush tank with clean gasoline.

**Gasoline Gauge:** Auto-Lite electric type.

**Dash Unit:**—Auto-Lite No. NG-10884D or NG-11134D.

**Tank Unit:**—Auto-Lite No. NG-10862T.

See Carburetion Equipment Section for complete data.

### BATTERY

**Auto-Lite Type CF-1-15R.** 6 volt, 15 plate, 105 ampere hour capacity (20 hour rate).

**Starting Capacity:**—133 amperes for 20 minutes.

**Zero Capacity:**—300 amperes for 3.5 minutes. Five second voltage 4.2 volts.

**Dimensions:**—Length 9". Width 7 1/16". Hgt. 9 5/16".

**Grounded Terminal:**—Positive (+) to engine.

**Location:**—Under hood in left fender shield.

### STARTER

**Auto-Lite Model MAW-4041.** Armature MAW-2030.

**Drive:**—Outboard Barrel Type Bendix No. A2089.

**Rotation:**—Counter-clockwise at commutator end.

**Brush Spring Tension:**—42-53 ozs. (new brushes).

**Cranking Engine:**—150 RPM, 175 amperes, 5.4 volts.

### Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	4900	5.5	65
.60 "	3300	5.5	100
2.75 "	1480	5.0	200
5.45 "	820	4.5	300
8.50 "	400	4.0	400
11.55 "	110	3.5	500
11.5 "	Lock	3.0	505
18. "	Lock	4.0	670

**Removal:** Disconnect wires (tape battery lead), remove mounting bolts, withdraw starter (not necessary to disturb oil filter or oil lines).

**Starting Switch:** Auto-Lite Model SST-4001. Magnetic type mounted on left front fender shield and controlled by pushbutton on instrument panel.

See Electrical Equipment Section for complete data.

### GENERATOR

#### STANDARD

**Auto-Lite Model GDZ-4801A.** Armature GDZ-2006F. Two brush (shunt) type with voltage and current regulation. Ventilated by fan on drive pulley.

**Charging Rate Adjustment:**—No adjustment at generator. Charging rate controlled by Voltage Regulator and maximum output by Current Regulator. **Maximum Charging Rate:**—As given in tables below reached at approx. 25 MPH. car speed and above with load or discharged battery (Current Regulator setting). Actual charging rate controlled by Voltage Regulator and dependent on battery condition.

Cold Performance Data				Hot			
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.	Amperes	Volts
0	6.4	925	0	6.4	1000	0	6.4
5	6.65	1060	5	6.65	1150	5	6.65
10	6.85	1200	10	6.85	1290	10	6.85
15	7.05	1340	15	7.05	1430	15	7.05
20	7.3	1480	20	7.3	1590	20	7.3
25	7.55	1620	25	7.55	1750	25	7.55
30	7.8	1760	30	7.8	1980	30	7.8
35①	8.0	1900	35	8.0	2250	35	8.0

①—Current Regulator Setting. See Regulator data.

**Rotation:**—Counter-clockwise at commutator end.

**Brush Spring Tension:**—35-53 ozs. (new brushes).

**Field Current:**—1.60-1.78 amperes at 6.0 volts (all).

**Motoring Current:**—4.16-4.60 amperes at 6.0 volts.

**Removal:**—Pivot mounted at left side of engine at front. To remove, take out pivot and clamp bolts.

**Belt Adjustment:**—Loosen pivot and clamp bolts, pull out on generator until belt is snug or 40-50 lbs. tension secured on scale attached to field frame.

### GENERATOR

#### SPECIAL EQUIPMENT

**Auto-Lite GEG-4823A or GEG-4823B.** Armature No. GEG-2006F (both). Two brush (shunt) types with voltage and current regulation. Ventilated.

SEE CHRYSLER 8 C39 PAGE FOR ALL DATA.

### REGULATOR

**Std.**—VRP-4401A, VRP-4501A, or VRP-4503A (VRP-4001A used on Canadian Cars).

**Spec. Equip.** (for GEG-4823A, B Gen.)—VRP-4001F, VRP-4401B, or VRP-4501C (VRP-4005E for negative ground). Vibrating type voltage and current regulators.

See Electrical Equipment Section for complete data.

CONTINUED ON NEXT PAGE

## CONTINUED FROM PRECEDIN PAGE

**NOTE**—Regulator case cover sealed. Serviced on exchange basis if seals not broken (to remove cover).

**Cutout Relay**

**Cuts In**—6.4-7.0 volts (set to 6.4-6.6 volts).  
**Cuts Out**—4.1-4.8 volts (approx. 4-6 amps. disch.).  
**Contact Gap**—.015" min. **Air Gap**—.031-.034" with contacts open (check at hinge end of core).

**Voltage Regulator**

**Setting**—7.2-7.5 volts at 70° F. See Electrical Equipment Section for settings at other temperatures  
**Checking** (without breaking seals) & **Adjustment**—See Electrical Equipment Section.

**Contact Gap**—.012" min. (armature against stop pin).  
**Air Gap**—.048-.052" with contacts just opening.

**Current Regulator**

**Setting (VRP-4001A, 4401A)**—34-36 amperes ("35").  
**Setting (VRP-4001F, 4005E, 4401B)**—39-41 amperes, marked "40".

**Setting (VRP-4501A, 4503A)**—35 amperes (42 amperes at 70° F. after 15 minutes run, 33-37 amperes at 70° after additional 15 minutes run). **CAUTION**—These current regulators are temperature compensated and setting decreases with temperature rise in service.

**Setting (VRP-4501C)**—40 amperes (46 amperes at 70° F. after 15 minutes run, 38-42 amperes at 70° after additional 15 minutes run). **CAUTION**—This current regulator is temperature compensated and setting decreases with temperature rise in service.  
**Checking** (without breaking seals) & **Adjustment**—See Electrical Equipment Section.

**Contact Gap**—.012" min. (armature against stop pin).

**Air Gap**—.048-.052" with contacts just opening.

**LIGHTING**

**Headlamps**: Corcoran-Brown "Sealed Beam" type. See Electrical Equipment Section for complete data.

**Headlamp Adjustment**—Aim upper beam straight ahead (hot spot center 3" below lamp center height).  
**Beam Indicator**—Red light on upper edge of panel above speedometer. Lighted with upper beams on.

**Direction Signal**: Optl. See Electrical Equipment Section.  
**Direction Signal Indicator**—On either side of Headlamp Beam Indicator (above speedometer).

**Switches**

**Lighting**—Dodge No. 990547.  
**Beam Selector**—Dodge No. 859974.  
**Instrument**—Dodge No. 947065.  
**Map Light**—Dodge No. 947064.  
**Dome Lamp Pillar**—Dodge No. 317180.  
**Door Switches**—Dodge No. 882943.  
**Stop Light**—Dodge No. 920355.  
**Direction Signal**—Dodge No. 1163990, 980793 (RHD).

**Bulb Specifications**

Position	Candlepower	Mazda No.
Headlamps	45-35 watts	Sealed Beam
Parking (no Dir. Signal)	3	63
Front Dir. Sig. & Park	21-3	1158
Instrument	1½	55
Speedometer (after 30653062)	6	81
Map Light	6	81
Beam & Dir. Sig. Ind., Ign. Sw.	1	51
Tail (no Dir. Sig.), License	3	63
Rear Dir. Sig. & Tail	21-3	1158
Stop, Back Up, Hand Brake	21	1129
Dome	15	87

**MISC. ELECTRICAL**

**CIRCUIT BREAKERS**: Lighting—On back of lighting switch. Vibrating type, protects lighting circuits.

**Direction Signal**—Dodge No. 1161568. On flasher behind instrument panel. 8 ampere, vibrating type.

**Windshield Wiper**—Dodge No. 898572. On switch. Vibrating type. Starts to operate with 12 ampere

**Convertible Top**—Mounted near control switch. Thermostatic type. Opens at 80 amperes in 1 minute

**Hand Brake Signal**—Dodge No. 1161568. 8 ampere, vibrating type. Protects Hand Brake Light circuit.

**FUSES**: Clock—2 ampere. In clock lead.

**Radio**—14 ampere. In fuse connector at radio.

**HORNS**: Auto-Lite Model HT-4007 (Low Pitch), HT-4008 (High Pitch). Dual horns operated by relay.

**Horn Relay**: Auto-Lite HRL-4101. Connected through ignition switch, operates only with ignition on.

**Contacts Close** 1.5-3.0 volts (seal to core with 4 V).  
**Contacts Open** .5 volt min. (open from seal).

**Contact Gap**—.026". **Air Gap**—.016-.020" (armature air gap with contacts closed but not sealed). .015-.018" (gap between armature leg and yoke with armature sealed to core).

**ENGINE**

**ENGINE SPECIFICATIONS**: 6 cylinder, "L" hd. type.  
**Bore**—3¼". **Stroke**—4½".

**Displacement**—230.2 cu. ins. **Rated H.P.**—25.35.

**Developed Horsepower**—102 at 3600 RPM.

**Compression Ratio**—6.7-1 std. Cast-iron head.

**Compression & Vacuum Reading**—See Tune-up data.

**ORIGINAL BORE & PISTONS**: See Chrysler Shop Notes

**ORIGINAL BEARING SIZES**: See Chrysler Shop Notes.

**TIGHTENING TORQUES**: See Chrysler Shop Notes.

**CYLINDER HEAD**: Tightening Torque & Cylinder Head Diagram—See Chrysler Shop Notes.

**PISTONS**: Aluminum alloy, U-slot, cam ground type. **NOTE**—Skirt cam ground (.010-.012" smaller diameter across pin bosses) and tapered (.0005-.0015" smaller diameter at top of skirt than at bottom).

**Length**—3 11/16". **Weight**—16 ozs. (stripped).

**Removal**—Pistons and rods removed from above.

**Clearance**—.0008" on thrust face ¾" from bottom of skirt. Ring land diameter .0305" larger than skirt.

**Fitting New Pistons**: Measure piston size with micrometer across thrust faces (right angles to pin bosses) ¾" from bottom of skirt. Fit piston in bore using .002" x ½" feeler, insert piston upside down in bore with feeler 90° from pin bosses on side opposite slot. Clearance correct when 5-7 lbs. pull required to withdraw feeler (bore & piston at 70° F). **NOTE**—Cylinder recondition limits .0005" taper and .0005" out-of-round. Badly scored bores or with taper over .030" or out-of-round over .004" require reboring and honing to limits listed above.

**Replacement Pistons**: See Chrysler Shop Notes.

**Installing Pistons**: "U" slot away from valves.

**PISTON RINGS**: Two compression, two slotted oil control, coated rings per piston, all above pin. Oil ring grooves drilled for oil drainage (lower groove slotted).

**Ring** **Width** **End Gap** **Side Clearance**

**Compr. (#1)** 3/32" .007-.015" .0025-.004"

**Compr. (#2)** 3/32" .007-.015" .002-.0035"

**Oil Contr. (#3,4)** 5/32" .007-.015" .001-.0025"

**Installing Rings**—#1 Compr. with step on inner edge up. #2 Compr. with step on inner edge up or if step on outer edge install with step down.

**Replacement Piston Rings**: See Chrysler Shop Notes.

**PISTON PIN**: Diameter 55/64". Length 2¾". Floating type. Pin hole in rod bronze bushed.

**Pin Fit in Piston**—Thumb push fit (piston at 160° F.).

**Pin Fit in Rod Bushing**—Tight thumb push fit at normal room temperature.

**Replacement Pins**: Std., .0006", .003", .008" oversize.

**CONNECTING ROD**: Weight 1.77 lbs. (with bolts less bearings). Length 7 13/16".

**NOTE**—Pin hole in rod bronze bushed.

**Lower Bearing Diameter**—2 1/16". See "Original Bearing Size" in Chrysler Shop Notes.

**Lower Bearing**—Removable, precision type, thin babbitt on steel.

**Clearance**—.001-.0015". **Sideplay**—.0055-.0115".

**Bearing Adjustment**:—None (no shims). Replace bearings. Do not file rods or caps. See "Connecting Rods & Bearings" in Chrysler Shop Notes.

**Replacement Bearings**:—See Chrysler Shop Notes.

**Installing Rods**:—Wide portion of bearing to rear (#1, 3, 5) to front (#2, 4, 6). Oil hole to camshaft.

**CRANKSHAFT**: 4 bearings, 7 integral counterweights, with vibration dampener on front end.

**Bearing Diameter**—2½". See "Original Bearing Size" in Chrysler Shop Notes.

**Bearings**—Removable, precision type, thin babbitt on steel. No shims.

**Clearance**—.001-.0015".

**Bearing Adjustment**: None (no shims). Replace bearings. Do not file bearing caps. See "Crankshaft and Main Bearings" in Chrysler Shop Notes.

**Crankshaft Front & Rear Oil Seals**: See "Crankshaft and Main Bearings" in Chrysler Shop Notes.

**End Thrust**:—Taken by flange faces on rear (#4) main bearing. **Endplay**—.003-.007".

**CAMSHAFT**: 4 bearing. Non-adjustable chain drive. **Bearing Diameters**—#1, 2"; #2, 1 31/32"; #3, 1 15/16"; #4, 1¼".

**Bearing Type**—Removable steel-backed, babbitt-lined bushings (except #4 machined in block).

**Clearance**—.001-.003" (#1), .0015-.0035" (all others).

**End Thrust**:—Taken by thrust plate behind camshaft sprocket hub. **Endplay**—.002-.006".

**Timing Chain**: Width 1". Pitch .500" (½"). Length 24" or 48 links.

**Camshaft Setting**:—Sprockets marked. Mesh chain with sprockets turned so that 'O' marks are adjacent and in line with a straightedge across shaft centers.

**VALVES**: **Head Diameter** **Stem Diameter** **Length**  
**Intake** ..... 1 17/32" ..... 340-.341" ..... 4 25/32"  
**Exhaust** ..... 1 13/32" ..... 340-.341" ..... 4 25/32"

**Seat Angle** **Lift** **Stem Clearance**  
**Intake** ..... 45° ..... ¾" ..... .001-.003"  
**Exhaust** ..... 45° ..... ¾" ..... .003-.005"

See Chrysler Shop Notes for Exhaust Valve Seat Inserts.

**Valve Guides**:—Remove from above. Press new guides in (stepped end down) with upper end ⅞" below top of block (use Tool CM-83), then finish ream to .342-.343" Intake, .344-.345" Exhaust.

**Valve Springs**:—Install with closely coiled end to top. **Free length** 2". **Spring Pressure** **Length**

**Valve Closed** ..... 40-45 lbs. .... 1¾"

**Valve Open** ..... 107-115 lbs. .... 1¾"

**Valve Lifters**:—Mushroom type (remove from below). **Stem diam.** ⅝". Ream holes from above (pilot in valve guide). Oversizes .001", .008", .030".

**Lifter Clearance in Block**—.000-.001".

## VALVE TIMING

**Tappet Clearance:**—.008" Intake, .010" Exh. (hot and idling), .002" additional exh. clearance desirable for sustained high speeds. NOTE—Tappet screws self-locking (no locknuts). Remove right front wheel and lower wheel housing panel for access to valves.

**Valve Timing:**—See Camshaft Setting above.

**Intake Valves:**—Open 12° BTDC. Close 44° ALDC.

**Exhaust Valves:**—Open 50° BLDC. Close 6° ATDC.

**Valve Timing Check:**—With .014" tappet clearance (Cold), #6 intake valve should open with #6 piston 5° to 17° or .011" to .122" BTDC with 5th to 17th graduation before DC mark on impulse neutralizer aligned with pointer on chain case cover. Reset tappet clearance to running clearance .008" Hot.

## LUBRICATION

**Engine Oiling System:** Pressure to main and connecting rod bearings, camshaft bearings, and timing chain. New "Rotor" type oil pump.

**Crankcase Capacity:**—5 quarts (refill).

**Normal Oil Pressure:**—40-45 lbs. above 30 MPH.

**Oil Pressure Relief Valve:** Under plug below starter. Opens at 40-45 lbs. Spring painted red, green, or unmarked. If spring replaced, use same color spring.

**Oil Pump:** New "Rotor" type on right side of engine. Servicing—See "Oil Pump" in Chrysler Shop Notes.

**Oil Filter:** On left side of engine above starter. Servicing—Replace element at 8000 mile intervals.

**Oil Pressure Gauge:** Auto-Lite No. G-10881 (not elec.).

## COOLING

**Cooling System:** Positive circulation with pump on front of engine, by-pass thermostat, and water distribution tube in cylinder block behind pump. Capacity—15 quarts.

**Water Distribution Tube Servicing:** See "Cooling System" in Chrysler Shop Notes.

**Water Pump:** Packless type with grease fitting.

See Water Pump Section for complete data.

**Removal:**—Drain cooling system, remove fan belt, disconnect hoses at pump, remove pump mounting studs, lift fan and pump off.

**Belt Adjustment:**—See Generator Belt Adjustment.

**Thermostat:** In cylinder head water outlet.

**INSTALLATION NOTE:**—Install thermostat with 2 ports facing front, and 2 ports facing rear.

**Setting:**—Starts to open 157-162°F. Fully open 183°F.

**Temperature Gauge:** Auto-Lite H-10883 or H-11133. Not electric.

## CLUTCH

**Borg & Beck Model 10A7 (Std.), 9A7 (with Fluid Drive), 11A6 (7 Passenger).** Single plate, dry disc type with "Borglite" driven member.

**NOTE:**—Cover No. 952 (9A7), 928 (10A7), 931 (11A6). See Clutch Section for complete data.

**Facings:**—Woven type, 2 required.

	Inside Diameter	Outside Diam.	Thickness
9A7	6"	9 1/4"	.125" (1/8")
10A7	7"	10"	.125" (1/8")
11A6	6 1/2"	11"	.125" (1/8")

**Pedal Adjustment:** Should just clear toeboard (adjust stop screw on lower end of pedal) & have 1" free travel (adjusting nut on connector link at fork).

**Clutch Over-Center Spring:**—See "Clutch Notes" in Chrysler Shop Notes for setting procedure.

**Removal:**—Remove release fork pull-back spring, Transmission (see Transmission) and housing underpan. Pull out clutch release bearing and sleeve. Mark cover and flywheel (or driving plate on Fluid Drive). Take out cover screws, remove assembly.

## FLUID DRIVE

### OPTIONAL EQUIPMENT

**Dodge:**—Fluid coupling at rear of engine. Optl. See Miscellaneous Section for complete data.

**Oil Level:** Keep to level of filler hole. Check at first 1000 miles and every 10,000 miles. Manufacturer recommends MOPAR Fluid Drive Fluid.

**Removal:** Remove transmission and clutch (see TRANSMISSION and CLUTCH), take off driver flange stud nuts (Tool C-589), lower fluid drive assembly out.

## TRANSMISSION

**Own Make.** All helical gear, constant-mesh, synchro-mesh (Second & High), sliding gear (Low & Reverse). See Transmission Section for complete data.

**Transmission Control:** Manual steering col. shift Std. See Transmission Section for complete data.

**Removal:**—Jack up front end of car, disconnect front universal (loosen companion flange nut if disassembling transmission—see Chrysler Shop Notes for Propeller Shaft Center Bearing Removal on 7 pass.). Disconnect speedometer cable, hand brake cable, gear-shift rods, vacuum and air hose (if Power Shift used). Remove trans.-to clutch housing cap screws and nuts. Pull unit to rear, down and out of car. NOTE—Use pilot studs when installing assembly.

## UNIVERSALS

All exc. 7 Pass.—Detroit Universal Series 4200.

7 Pass. Models—Detroit Universal Series 7200.

Ball-and-Trunnion Type (4200), cross type (7200).

See Universals Section for complete data.

**Propeller Shaft Center Bearing:** Used on 7 pass. sedan. See "Propeller Shaft" in Chrysler Shop Notes.

## REAR AXLE

**Own Make.** Semi-floating, hypoid gear type with Hotchkiss drive. See Rear Axle Section for data.

Ratio	Car Used On:
3.73-1	All 3 Passenger Coupe
3.9-1	Fluid Drive (exc. 3 & 7 Pass.)
4.1-1	No Fluid Drive (exc. 3 & 7 Pass.)
4.3-1	All 7 Passenger Sedan
4.56-1	Export (incl. 7 Passenger)
4.78-1	Export (except 7 Passenger)
4.89-1	Export (7 Passenger only)

**Backlash:**—.006-.010". Screw adjustment.

**Removal:**—Disconnect rear universal, remove axle shafts (see below) and carrier assembly cap screws. **Axle Shaft Removal:**—Remove wheel, hub, and drum assembly (use screw type hub puller—Tool C-675), block brake pedal, disconnect brake line at wheel cylinder, remove axle shaft key, install sleeve (Tool C-745) in oil seal, remove brake support (oil seal mounted in support), pull shaft and bearing (use C-499 puller). NOTE—Use Puller C-293-E to remove bearing from shaft, puller C-748 or C-358 for inner oil seal, drift C-201 to install.

**Wheel Bearing Adjustment:**—Shims between backing plate and axle housing. With wheel and hub removed, check endplay with dial indicator. To adjust, remove backing plate (see above), add or remove shims (furnished .010", .0125", .015", .030" thick) equally at both wheels. Endplay—.003-.008".

**Axle Shaft Outer Seal:** New leather type mounted on brake support (backing plate).

**Oil Seal Servicing:**—See "Rear Axle" in Chrysler Shop Notes.

## SHOCK ABSORBERS

**Delco:**—Model 1030-C (Front), 1031-T (Rear).

**Monroe:**—Model K-11148 (Front), K-11149 (Rear).

**Export:**—Delco Model 942D (front), 940W (rear). Direct acting, hydraulic types.

See Shock Absorber Section for complete data.

**Hydraulic Transverse Sway Absorber:** Rear sway bar with built-in shock absorber used on 7 Pass. Sedan and Convertible Coupe.

See Shock Absorber Section for complete data.

## FRONT SUSPENSION

**Front Suspension:**—Independent, linked parallelogram type with coil springs.

See Front Suspension Section for complete data.

**Kingpin Inclination:**—4 3/4° to 6°.

**Camber:**—Positive 1/4°. Limits 0° to Pos. 3/4°.

**Caster:**—Negative 1° to Positive 1°. Not adjustable.

**Toe In:**—0-1/16". Turn both tie rods equally.

**Steering Geometry:**—Inner wheel 22 1/2°, Outer 20°.

## STEERING GEAR

**Own Make.** (Gemmer design) Model 305 (5 pass.), 335 "3-tooth" type (7 passenger).

**NOTE:**—See Gemmer 305 & 335 articles for data.

See Steering Gear Section for complete data.

## BRAKES

**Service:** Dodge "Safe-guard" Lockheed Hydraulic Front Wheels—Two-cylinder type (front shoe anchored at bottom and actuated by upper cylinder, rear shoe anchored at top and actuated by lower cylinder).

**Rear Wheels:**—Double anchor type with single double-acting wheel cylinder.

See Brake Section for complete data.

**Wheel Cylinders:**—1 1/8" bore. Single acting (front), double acting (rear wheels).

**Drums:**—Cast-iron. Diameter 11" (12" on 7 pass.).

**Lining:**—Molded Asbestos. 2" Wide. 13/64" Thick.

**Length per shoe:** 11" type—8 7/8" (rear wheel rear shoe), 11 1/2" (all others). 12" type—9 5/8" (rear wheel rear shoe), 12 9/16" (all other shoes).

**Clearance:**—.006" at each end of all shoes.

**Braking Power:**—80% front wheels, 40% rear.

**Hand Brake:**—On drum at rear of transmission.

**Adjustment:** See "Hand Brake" in Chrysler Shop Notes.

**Drum:**—Cast-iron. 6" (7" diameter on 7 Passenger).

**Lining:**—Width 2" (2 1/2" on 7" type). Thickness 5/32".

**Length:** 16 11/16" (20" on 7" type).

**Clearance:**—.015-.020" around band.

## MISC. MECHANICAL

**WINDSHIELD WIPER:** Auto-Lite Model EWH-5001, EWH-5003 (Conv. Coupe). Electric type with circuit breaker mounted on control switch.

See Miscellaneous Section for complete data.

**Circuit Breaker:**—Dodge No. 898572. On switch. Vibrating type. Starts to operate with 12 amperes.

**CONVERTIBLE TOP CONTROL:** Electric type.

See Miscellaneous Section for complete data.

**Circuit Breaker:**—Near control switch. Thermostatic type. Opens at 80 amperes in 1 minute or less.

**MODEL IDENTIFICATION**

**SERIAL NUMBER:**—On plate on left side of dash.

**ENGINE NUMBER:** Stamped on left rear engine support.

**TUNE-UP**

**COMPRESSION:**—Ratio—5.2-1 std. cast-iron head.

Pressure—110 lbs. at 80 R.P.M. (cranking speed).

**VACUUM READING:**—Gauge should show steady reading of 18-20" with engine idling.

**FIRING ORDER:** 1-6-2-5-8-3-7-4. See diagram (spark plugs not connected in this order on distrib. cap).

**SPARK PLUGS:** Champion Type C7 or 6M. 18 mm. Metric.

Gaps—.025". Limits .022-.028".

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.020". Cam Angle 48° (closed).

**Synchronization:**—Movable contacts open 45° (distr.) after fixed set (alternate 45-45° opening).

**Automatic Advance:**—21° max. at 2000 RPM (distr.).

**IGNITION TIMING:** See Ignition Timing.

**Std. Setting:**—12° BTDC. with manual spark control **ADVANCED.** Flywheel mark "Spark Adv." (1½" ahead of dead center mark "1&8/CL") at reference line on housing. **NOTE:**—Movable contacts open 45° (distr.) after this point (regular 45-45° firing intervals).

**CARBURETION:** See Carburetor & Carb. Equipment. **Idle Setting:**—Both idle screws midway between "miss" and "roll" points. Idle speed 350 Eng. RPM.

**Float Level:**—Fuel level 9/16" (Model J—EE-3 Carb.), ¾" (Model SJ—UU-3 Carb.) below top edge of bowl.

**Accelerating Pump (Model J—EE-3 Carb.)**—Inner hole (min. stroke)—Summer, Outer hole (max. stroke)—Winter.

**Accelerating Pump (Model SJ—UU-3 Carb.)**—Adjusting screw ½ turn open (Summer), 3 turns open (Winter).

**VALVES:** See Valve Timing.

**Tappet Clearance:**—.025" (cold) all valves.

**NOTE:**—To change or set tappet clearance, use feeler gauge and check actual tappet clearance of each valve (clearance between heel of cam and tappet). Remove camshafts, tappets, tappet adjusting nuts. Use shims of various thicknesses to change length of adjusting nut so that clearance when assembled will be .025" (measure length of adjusting nut with 1" micrometer, add or remove shims as necessary, recheck adjusting nut with micrometer.) Reassemble camshafts, check Valve Timing, and Ignition Timing.

**STARTING:** See Battery, Starter, and Generator.

**IGNITION**

**IGNITION SWITCH:** Delco-Remy. Part of Coil Assembly (coil lock built in coil unit).

**COIL:** Delco-Remy Model 553-A. Two coil unit in assembly with ignition switch (coil lock).

**CONDENSER:** Delco-Remy Part No. 823825 (two used).

Condensers mounted under breaker plate.

**DISTRIBUTOR:** Delco-Remy 4094 (All Models). Double breaker, 4 lobe cam, semi-automatic advance type. Contacts open alternately at regular 45° intervals corresponding to 90° firing interval of engine. Contacts must be synchronized (see Timing).

**Breaker Gap:**—Set gap at .020". Limits, .018-.024".

**Cam Angle or Dwell:**—48° (closed), 42° (open) for each set operating independently.

**Breaker Arm Spring Tension:**—17-21 ounces.

**Manual Advance:**—20° (engine—maximum).

**Automatic Advance—Model 4094**

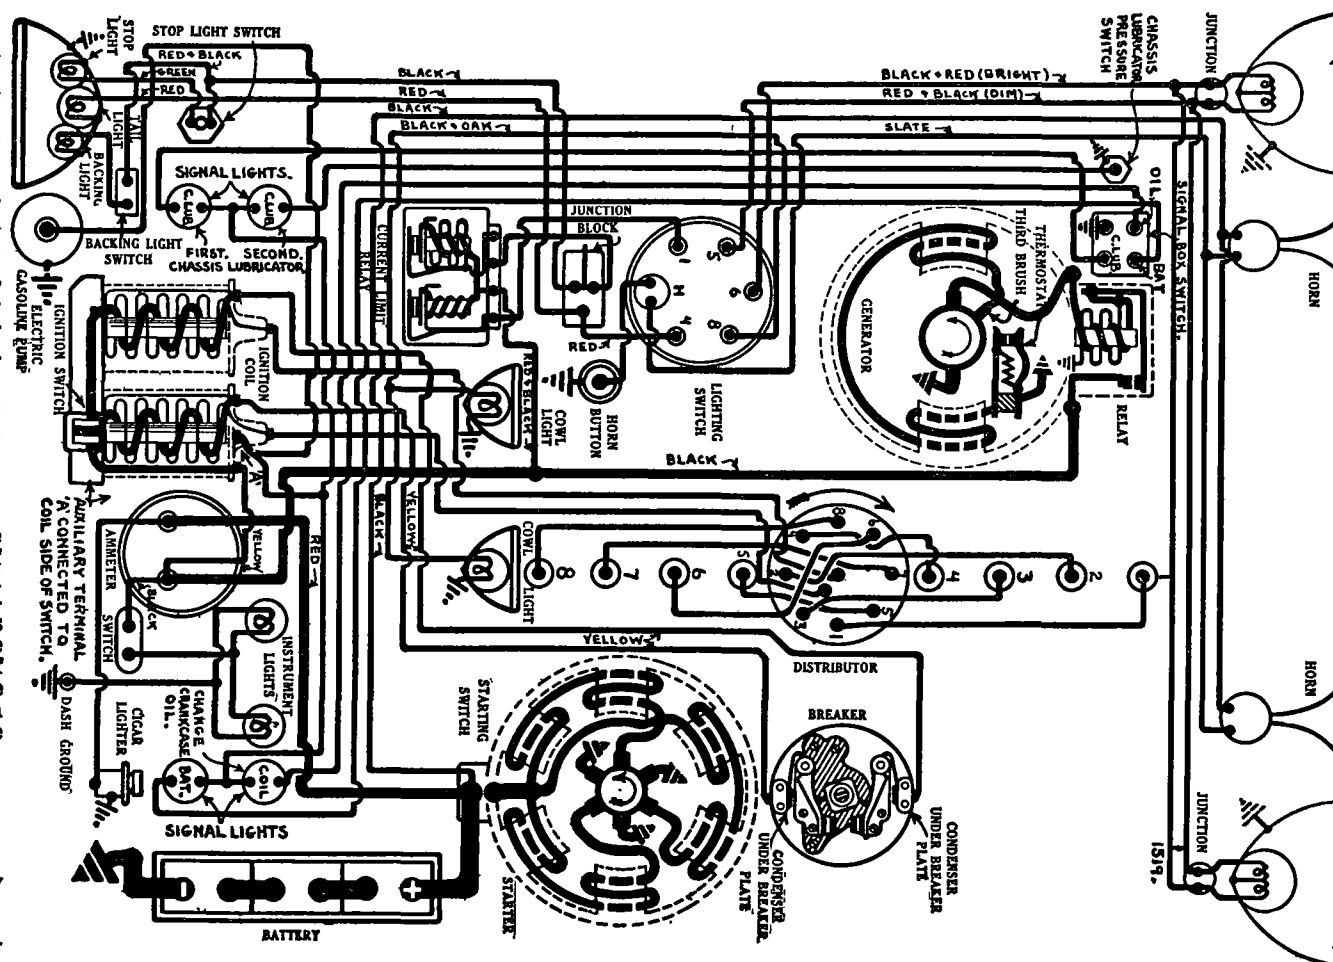

Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
1°	400	2°	800
18.5°	1400	37°	2800
21°	2000	42°	4000

**IGNITION TIMING**

**IGNITION TIMING:**—Flywheel Degs. Piston Position

All Engines .....1½" or 12° BTDC.....0645" BTDC.

**IMPORTANT:**—Above settings correct with manual spark control fully **ADVANCED.**

**Timing (Stationary Contacts):**—Synchronize contacts before setting timing if synchronizing tool is used. With #8 piston on compression, turn engine over by prying on flywheel ring gear with prybar until piston reaches firing position (manual spark control fully advanced), stop when flywheel mark "Spark Adv." (1½" before the top dead center mark "1&8/CL" for all engines, lines up with reference line on housing, loosen taper lock screw in center of breaker cam, carefully locate cam so that stationary contacts (mounted directly on breaker plate) are beginning to open, tighten lock screw, see that rotor is in position to fire #8 spark plug.

**Synchronization—Using Gauge:**—Use special synchronizing tool (dummy cam), Duesenberg #6965. Loosen taper lock screw, remove regular firing cam, install synchronizing tool on distributor shaft, turn tool until stationary contact breaker arm rubbing block drops into slot in tool and rests against shoulder, loosen lock screws on movable sub-plate (carrying second set of contacts), turn eccentric adjusting screw until second breaker arm rubbing block is against shoulder of second slot, tighten locking screws, remove tool, replace regular firing cam, check timing.

**Synchronization—On Engine:**—Turn engine over 90° from firing position of piston #8 to firing position for #3 piston (12° or 1½" on flywheel before top dead center). Loosen the lock screws on the movable sub-plate, turn eccentric adjusting screw until second set of contacts (mounted on plate) open, tighten lock screws, check contact gap.

### CARBURETOR

**Model J—Stromberg Model EE-3.** Dual (double barrel) downdraft type.

**Model SJ Schgd.—Stromberg Model UU-3.** Dual (double barrel) Updraft type.  
For complete data, refer to Carburetor Index.

### CARB. EQUIPMENT

**Fuel Pump:**—Stewart-Warner electric type (early Model J), Mechanical bellows type pump (on left side of crankcase) with Stewart-Warner 644-C electric type booster pump (late Model J), or Auto-pulse Triplex unit (SJ Supercharged).

**Gasoline Gauge:**—K-S Telegauge, hydrostatic type.  
For complete data, refer to Carburetion Equip. Index.

### BATTERY

**BATTERY:**—Exide, Type 3-LXRV-21-2G (early Model J), Type XR-21-ER (late Model J, all SJ). 6 volt, 21 plate, 164 ampere hour capacity (20 hr. rate).  
**Starting Capacity:**—123 amperes for 20 minutes.  
**Grounded Terminal:**—Negative (—) terminal.  
**Location:**—On right hand side under dust shield.

### STARTER

**Delco-Remy Model 429.** Armature No. 37895.  
**Starter Drive:**—Bendix Type R11X-10.  
**Rotation:**—Counter-clockwise at commutator end.  
**Brush Spring Tension:**—36-40 ounces each.

#### Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	3000	5.0	70
19 "	Lock	3.0	500

**Mounting:**—Flange mounted on right hand front face of flywheel housing. To remove, take out flange mounting bolts.

### GENERATOR

**Delco-Remy Model 428.** Armature No. 827753.  
Third brush regulation, thermostat control. Thermostat contacts open at 165°F. reducing generator output approximately 40%.

**Charging Rate Adjustment:**—Take off commutator cover band, loosen small round lock screw on commutator end plate, shift third brush counter-clockwise to increase, or clockwise to decrease charging rate, tighten locking screw.

**Maximum Charging Rate:**—12 amperes (hot), 7.6 volts, 1450 R.P.M.

#### Performance Data

Amperes	Volts	R.P.M.
Cold 19-21	8.3-8.7	1200
Hot 11-13	7.5-7.8	1450

**Rotation:**—Counter-clockwise at commutator end.  
**Shunt Field Current:**—3.2-4.1 amperes at 6.0 volts.  
**Brush Spring Tension:**—20-28 ounces each.

**Mounting:**—Cradle mounted on left hand side of engine. To remove, disconnect drive coupling, loosen mounting clamp band.

### CUTOUT RELAY

**Delco-Remy Model 265-B.** Mounted on generator.  
For complete data, refer to Electrical Equipment Index.

**Cuts in:**—7.0-7.5 volts, 500 R.P.M. (generator).

**Cuts out:**—0-2.5 amperes discharge.

**Relay Contact Gap:**—.015-.025".

**Air Gap:**—.012-.017" (contacts closed).

### LIGHTING

**Headlamps:**—Double filament. Upper and lower beams controlled by lighting switch.

#### Switches

**Lighting:**—Delco-Remy Model 486-D. Mounted at lower end of steering column (controlled by handle on steering wheel).

#### Bulb Specifications

Lamp	Candlepower	Mazda No.
Headlights (Std.)	21-21	1110
Stop and Backing	21	1129
Tail, Cowl, Instr., Step	3	63
Dome and Corner	3	64
Signal Lights	1.5	2B-G6-10

### MISC. ELECTRICAL

**CURRENT LIMIT RELAY:** Delco-Remy Model 5759.  
Consists of a vibrating and a lock-out type circuit breaker mounted in a single case.

#### Vibrating Unit

**Starts to operate** with current load of 35-40 amperes, limiting load to 5-20 amperes.  
**Contact Gap:**—.012-.030".  
**Air Gap:**—.015-.030" (contacts closed).  
**Spring Tension:**—5 ozs. minimum at brass button

#### Lock-out Unit

**Contacts open** with current load of 25-30 amperes, limiting current to less than 1 ampere.

### ENGINE

**ENGINE:**—Eight cylinder, In line, Overhead valve type. Two intake and two exhaust valves per cylinder operated by two camshafts on cylinder head (exh. camshaft right, int. camshaft left).

**Bore:**—3¾". **Stroke:**—4¾".

**Piston Displacement:**—420 cubic inches.

**Rated Horsepower:**—45.

**Developed Horsepower:**—(J) 265 at 4200 R.P.M.

**Compression Ratio:**—5.2-1 Std. cast-iron head.

**Compression Pressure:**—110 lbs. at 80 R.P.M.

**Pistons:**—Ray-Day, aluminum alloy, split, full skirt type. Skirt is separated from head by horizontal slot. Piston length 4¾". Weight—20 ounces.

**Removal:**—Pistons and rods removed from below.  
**Clearance:**—Top .032". Lands .027". Bottom .0035-.004".

**Piston Rings:**—Four rings per piston, three compression, one oil control, all above pin. Lower ring groove drilled radially with oil drain holes.

Ring	Width	End Gap	Wall Thickness
Comp. All	¾"	.014-.016"	.150"
Oil Cont.	3/16"	.014-.016"	.150"

**Piston Pin:**—Diameter 1 1/16". Length 3 17/64". Pin floats in piston and rod. Held by two locking rings at each end. Pin hole in connecting rod is bushed and diamond-bored to size.

**Pin Fit in Piston:**—Slight driving fit at room temperature (pin holes reamed to 1.06225-1.06175").

**Pin Fit in Rod Bushing:**—Free push fit (bushing diamond bored to inside diameter of 1.0625").

**Connecting Rod:**—Weight 18 ozs. (without cap bolts or bushing). Length 9 13/16". Rod is a Duralumin forging used with a steel bearing cap.

**Lower Bearing:**—Poured 'Mogul alloy' lined type.

**Clearance:**—.0015-.002".

**Adjustment:**—None (no shims). Bearings should not require adjustment during life of engine. Caps can be reduced with fine emery cloth on a surface plate if necessary.

**Crankshaft:**—Five bearings. Integral counterweights. Special mercury-cartridge type damper.

**Journal Diameters:**—2¾" all bearings.

**Bearing Type:**—'Mogul alloy' lined type.

**Clearance:**—.0015".

**Adjustment:**—None (no shims). Bearings should not require adjustment during life of engine. Caps can be reduced with fine emery cloth on a surface plate if necessary.

**End Thrust:**—Taken by front main bearing. Thrust washer assembled between bearing and crankshaft sprocket. Endplay .0015-.003".

**Camshaft:**—Two camshafts on cylinder head. Each camshaft supported by five bearings.

**Journal Diameters:**—1¼" all bearings.

**Bearing Type:**—'Mogul alloy' lined type.

**Clearance:**—.0015".

**End Thrust:**—Taken by front bearing. Endplay .0015-.003".

**Timing Chains:**—Link Belt. Upper Chain—Width 1 11/16", Pitch ¾", Length 51¾". Lower Chain—Width 2", Pitch ¾", Length 47¼". Both camshafts are driven in tandem by upper chain from transfer sprocket on front of engine. Transfer sprocket driven in tandem with two accessory sprockets by lower chain from crankshaft. Automatic idler take-ups used on both chains.

**Camshaft Setting:**—To change or set valve timing, turn engine over (by prying on flywheel ring gear with pry-bar inserted through inspection plate hole in housing) until #8 piston is slightly before top dead center entering power stroke (distributor rotor will be opposite #8 segment in distributor cap), stop when flywheel mark 'INT. OPENS' lines up with reference line on housing. This mark is exactly ⅝" before top dead center mark '1&8/CL'. Take off upper chain case cover, release idler sprocket by taking off cotter pin and plain washer, pry forward on sprocket bushing and spring until spring is nearly released, use tool #J-7016 to release spring tension, withdraw bushing lift chain off sprocket, remove sprocket, block chain up at lower end to prevent it dropping off transfer sprocket. Then set each camshaft as follows:

C NTINUED ON NEXT PAGE

**ENGINE**

CONTINUED FR M PRECEDIN PAGE

**Intake Camshaft.** Take out 6 capscrews, remove intake camshaft sprocket, set tappet clearance #1 intake valve at .025" (see note on tappet clearance), turn intake camshaft in direction of rotation until intake valve begins to open (use straddle clamp to twist valve tappet, valve opens when clearance is taken up and cam grips valve tappet), mesh sprocket in chain, keep driving side of chain taut, slip chain on sprocket one tooth at a time until sprocket can be mounted on camshaft without disturbing position of shaft or transfer sprocket, insert capscrews. Check ignition timing.

**Exhaust Camshaft.** With #8 piston slightly past top dead center entering power stroke and flywheel mark 'EXH.CLOSES', which is 1 1/4" past top dead center mark '1&8/CL', at reference line on housing, take off 6 cap screws, remove exhaust camshaft sprocket, set tappet clearance #1 exhaust valve at .025", turn exhaust camshaft in direction of rotation (clockwise) until #1 exhaust valve begins to close (use straddle clamp to twist valve tappet, valve closes when tappet is just released by cam so that tappet can be turned easily), mesh sprocket in chain, keep driving side of chain taut, slip chain on sprocket one tooth at a time until sprocket can be mounted on camshaft without disturbing position of camshaft or transfer sprocket, insert cap screws.

**Idler Sprocket Assembly:**—Mesh idler sprocket in chain, insert bushing and spring, use special tool to wind up spring 12 notches or two complete turns, assemble washer and cotter pin. Turn engine over with starter to allow chain to assume normal running position, then release spring tension, change setting to 9 notches or 1 1/2 turns. See Equipment Section for complete data on Link Belt automatic idler sprockets.

**Valves:**— Head Diam. Stem Diam. Stem Lgth  
Intake ..... 1 1/2" ..... 11/32" ..... 5.002"  
Exhaust ..... 1 7/16" ..... 11/32" ..... 4.992"  
**Seat Angle**—30° (all valves). **Lift** .350".  
**Stem-to-Guide Clearance**—.002".

**Valve Springs**—Double springs used on all valves.

<b>Inner Springs</b> —	Pressure	Length
Valve Closed	26 lbs.	1 15/16"
Valve Open	36-40 lbs.	1 19/32"
<b>Outer Springs</b> —	Pressure	Length
Valve Closed	35-40 lbs.	2 1/4"
Valve Open	65-70 lbs.	1 29/32"

**VALVE TIMING**

**Tappet Clearance**—.025" (cold) all valves.

**NOTE:**—To change or set tappet clearance, use feeler gauge and check actual tappet clearance of each valve (clearance between heel of cam and tappet). Remove camshafts, tappets, tappet adjusting nuts. Use shims of various thickness to change length of adjusting nut so that clearance when assembled will be .025" (measure length of adjusting nut with 1" micrometer, add or remove shims as necessary, recheck adjusting nut with micrometer).

**Valve Timing**—See Camshaft Setting (preceding page).

Intake Valves open 6° BTDC. Close 40° ALDC.

Exhaust Valves open 40° BLDC. Close 14° ATDC.

**To Check Valve Timing:**—Check tappet clearance #1 intake and exhaust valves (set at .025" cold). #1 intake valve should open with #8 piston slightly before top dead center entering power stroke when flywheel mark 'INT.OPENS' lines up with reference line on housing. This mark is exactly 5/8" before top dead center mark '1&8/CL'. #1 exhaust valve should close with #8 piston slightly past top dead center when flywheel mark 'EXH.CLOSES' lines up with reference line. This mark is 1 1/4" past top dead center mark '1&8/CL'.

**LUBRICATION**

**Lubrication:**—Pressure type. Gear type oil pump located in oil pan.

**Oil Pressure**—2-10 lbs. (low idling speeds) increasing approximately 1 lb. per M.P.H. Maximum pressure, 80-100 lbs (high speed operation).

**Oil Pressure Relief Valve**—Built into oil pump. Controlled by adjustment nut located on lower left hand side of crankcase directly in front of oil float gauge indicator. Turn adjustment nut clockwise to increase, or counter-clockwise to decrease pressure. **Capacity**—12 qts.

**CLUTCH**

**Long Model 31-A.** Double plate, dry disc type.

See Clutch Section for complete data.

**Clutch Pedal Adjustment**—Free movement of clutch pedal must be 1-1 1/2".

**Clutch Facings**—Special moulded composition, 4 required, 6 1/2" I.D., 11" O.D., .137" thick.

**NOTE:**—Manufacturer recommends that cover plate assembly and driven member assembly be returned to factory for reconditioning.

**Clutch Assembly**—The three center driving plate adjusting screws (round-headed screws) must be backed off until the ends are flush with the pressure plate before the cover plate is bolted on the flywheel. Adjust these screws by turning in until they bottom and then backing each screw off exactly 4 notches.

**FRONT SUSPENSION**

**Front Suspension:** Consists of conventional "I" beam section front axle with Reverse-Elliott ends and semi-elliptic springs.

**Caster**—1°. Shim adjustment. **Camber**—1°.

**Toe In**—1/8-1/4". Adjust in usual manner by loosening tie rod end clamps and rotating tie rod.

**KingPin Bearing Adjustment**—Kingpins are carried on a double-row ball bearing at the top and a ball thrust bearing at the bottom. Adjustment for end-thrust (up-and-down movement) is provided at lower bearing. To adjust, remove locking bar in adjusting nut below kingpin, back off adjusting nut, remove shims until there is no perceptible up- and-down movement of steering knuckle with adjusting nut tightened, or there is a slight drag on steering knuckle when revolved around kingpin. Replace locking bar.

**STEERING GEAR**

**Steering Gear:**—Ross Cam-and-Lever type.

See Steering Gear Section for complete data.

**BRAKES**

**BRAKES:**—Service—Lockheed Hydraulic, double anchor type. Hand lever applies brake at rear of transmission. See article in Brake Section.

See Brake Section for complete data.

**Drum Diameter**—15".

**Lining**—Moulded. Width 2 1/4". Thickness 1/4". Length per wheel 28 3/4".

**Clearance**—.010" between lining and drum.

## MERCURY SHOP NOTES

1939 to 1948: Ford V8 "100" information listed below applies to 1939 to 1948 Mercury.

**STARTING 1949:** See separate **MERCURY SHOP NOTES** ahead of **MERCURY** car pages.

## HOOD ALIGNMENT

### 1949 FORD PASSENGER CARS

**HOOD ALIGNMENT: Fore-and-Aft Adjustment**—3 hood hinge bracket-to-hood screws at each hinge. Loosen screws just enough to allow hinge to hold hood in place when raised. Lower hood, shift hood fore or aft until correctly positioned. Raise hood without disturbing alignment, tighten screws. Check hood safety catch action (bend catch if necessary). **Up-and-Down Adjustment**—Loosen locknut on top of latch dowel. Turn dowel with screwdriver down if hood fits too tight, up if hood loose on dowel or too much clearance at lower edge of hood. Tighten locknut.

## RADIATOR GRILLE

### 1949 FORD PASSENGER CARS

**RADIATOR GRILLE:** Chrome-plated or Stainless steel type grille assemblies used (parts not interchangeable except as unit) consisting of following parts:

- 1—Top Moulding. 3-piece radiator grille opening.
  - 2—Center Moulding. Radiator grille assembly consisting of right and left center bars, ornament, and vertical reinforcement (on back side).
- NOTE**—Stainless steel type center moulding is a spot welded and riveted assembly and cannot be disassembled. Chrome plated type assembled with screws and tinnerman nuts and can be disassembled.
- 3—Lower Moulding. Mounted on stone deflector with nuts and fasteners. Not attached to grille.

**Grille Removal:** Take out hidden screws at each end of center moulding after removing parking lights. Remove screws at top and bottom of vertical grille reinforcement behind grille. Take off center moulding. Upper moulding can then be removed. Lower moulding on stone deflector can be removed without disturbing other grille parts.

## CYLINDER HEAD

### 1937-44 "V8" MODELS

**REWORKING OF CYLINDER HEADS:** Manufacturer recommends that all cylinder heads prior to 1945 (as listed below) be reworked for improved cooling. These heads must also be reworked for increased valve clearance when used with Replacement (Std. 1945 & Later) Cylinder Blocks.

### 1937-44 Cylinder Heads (Require Reworking)

Part No.	Used On
77-6050-A (2 used) ①	85 HP. (1937)
78-6050-B (2 used) ①	85 HP. (1937-38)
81A-6049-A & 6050-A ②	85, 90, 95, 100 HP. (1938-44)
81A-6049-B & 6050-B ②	85, 90, 95, 100 HP. (1938-44)
81T-6049-A & 6050-A ②	85, 90, 95, 100 HP. (1938-44)
99T-6049 & 6050 ②	95, 100 HP. (1939-44)
29T-6049 & 6050 ②	95, 100 HP. (1939-44)
①—21 Stud type.	②—24 Stud type.

## Replacement Cylinder Heads (No Reworking Required)

Part No.	Used On:
41T-6050 (2 used)	③ 90 HP. (1938-42)
59A-6050-A (2 used)	④ 90, 100 HP. (1938-42)
59A-6050-A (2 used)	100 HP. (1942-46)
59A-6050-B (marked 59A-B) ④	90, 100 HP. (1938-42)
59A-6050-B (marked 59A-B)	100 HP. (1942-48)
③—Pass., Comm'l, 1 Ton 90 HP with steel sleeves.	
④—Pass., Comm'l, 1 Ton 90 & 100 HP without sleeves.	

**Reworking of Cylinder Head for Improved Cooling:** The water hole at center of top edge of the head between #4 & #5 valves should be increased to 3/4" (from 7/16") and hole at center of head between #2 and #3 cylinder bores should be increased to 5/8"

**Reworking of Cylinder Head for Valve Clearance:** Use special Fixture, No. 6050-B-1, and Cutter, No. 6050-B-2, to enlarge combustion chamber as follows: Place cylinder head on dowels on one side of the fixture (with fixture clamped in vise) and secure head with bolt through fixture. Insert cutter through guide hole in fixture and cut away head material at edge of combustion chamber to the full depth of the chamber. Rework head at each valve in this manner (fixture has two holes so that one intake and one exhaust valve can be re-worked at each set-up of the fixture).

**CAUTION**—New design head gaskets must be used with these reworked heads.

See *Cylinder Head Gasket data (following)*.

### 1945-48 "V8" MODELS

**CYLINDER HEADS:** Heads are new design as listed below. These heads are interchangeable (Right & Left) and have larger water passages and increased valve clearance required for use with the new "41A" and "59A" Cylinder blocks (see Cylinder Block data under "Engine Exchange" below).

**CAUTION**—New design head gaskets must be used with these new type heads.

See *Cylinder Head Gasket data (following)*.

Part No.	Cylinder Heads	Used on
41T-6050 (2 used)		90 HP.
59A-6050-A (2 used)		90 & 100 HP.
59A-6050-B (2 used—Stmpd. 59A-B)		90 & 100 HP.

**NOTE**—Heads may be identified by part number prefix "41T" or "59A" cast on top surface.

### 1937-48 "V8" MODELS

**CYLINDER HEAD GASKETS:** New design gaskets as listed below have 5/16" round hole in place of large blunt cone shaped opening in center lower edge of gasket between #2 & #3 cylinder bores. When this gasket used with old design head (with smaller water passages), head must be reworked as directed in "Reworking Cylinder Head for Improved Cooling" above. *Special gaskets must be used on 1945-48 engines (and earlier engines with new type "41T" or "59A" Cylinder Blocks).*

### Cylinder Head Gaskets 85 & 90 HP. Models

Part No.	Cyl. Block	For—Year
40-6051-B	78-6010 ①	1937-38
91A-6051	81A-6010-A, -B ②	1938-44
41A-6051	41A-6010-B ②	1945 & Repl.
<b>95 &amp; 100 HP. Models</b>		
19A-6051	99A-19A-29A-6010 ②	1939-44
59A-6051	59A-6010-C ②	1945 & Repl.
①—21 Stud type.	②—24 Stud type.	

### 1948-49 6 CYLINDER "H" ENGINE

**6 CYLINDER HEAD BOLTS & STUDS:** Studs used on engines up to 7HA-61171, bolts used after this number. Both studs and bolts furnished for service but should not be mixed. Use all studs or bolts.

### 1948-49 6 CYLINDER "H" ENGINE

**6 CYLINDER HEAD GASKET:** Gasket must be installed with large full flow passages at rear. Late type gaskets have left front corner cut off for identification. If this type gasket with cutoff corner installed backwards, water leaks at the rear corner between head and block will occur.

### ALL MODELS

**CYLINDER HEAD INSTALLATION:** Use Torque Indicating Wrench and tighten in following order:

### FORD SIX

### FORD V8

**Tightening Torque**—See Tightening (Torque Wrench) Specifications below.

## TIGHTENING (TORQUE WRENCH) SPECIFICATIONS

### 1949 PASS. CARS, 1948 TRUCKS

C NTINUED FROM PRECEDIN PAGE

**ENGINE REMOVAL****1946-48 V8 & 6 CYL. MODELS**

**ENGINE REMOVAL:** For Engine Servicing (& Oil Pan Removal on Six)—Drain cooling system and crankcase. Remove engine as follows:

1. Disconnect and remove radiator hoses and thermostats, remove radiator (see Radiator Removal).
  2. Disconnect cables and remove battery.
  3. Remove engine hood by taking out capscrews in hood hinges and bolts in support arm at each side.
  4. Disconnect all electrical wires and cables at engine accessories (remove spark plug wires and conduits, disconnect ground cable at rear of engine).
  5. Disconnect hand throttle and choke cables at carburetor (free hand throttle cable clamp at dash and loop cable out of the way by hooking it back of generator regulator, free choke cable clamp at dash and hook cable back of battery box), disconnect fuel line at fuel pump.
  6. Remove all engine accessories (except water pumps and starter), remove oil filler pipe.
  7. On V8, loosen clamp on exhaust cross-pipe, disconnect both exhaust pipes at exhaust manifold connections, remove cross-pipe (left bank pipe). On 6 Cylinder, disconnect exhaust pipe at manifold.
  8. Remove two engine front support bolts.
  9. Install sling on engine, attach hoist, take up slack in sling and hoist cables.
  10. Remove front floor pan, take out capscrews mounting transmission on flywheel housing.
  11. Move engine straight forward to disengage clutch shaft, then lift engine out of chassis.
- Cab-over-Engine Model Note**—On these models, radiator grille and radiator are removed from the forward end, and special engine cradle should be used to slide engine out toward front.

**ENGINE EXCHANGE****1937-48 "V8" MODELS**

**REPLACEMENT CYLINDER BLOCKS:** A new type Cylinder Block (with valves .09" farther from center line of engine) is furnished for service replacement on all models. When old type cylinder heads are used with these new blocks, heads must be reworked for increased valve clearance. See "Reworking of Cylinder Head for Valve Clearance" above.

**NOTE**—These new type blocks were used in original production engines beginning with 1945.

**85 & 90 HP. Models**

Part No.	Used to Replace	
Cyl. Block	Cyl. Assy.	Cyl. Block No.
41A-6010-B2	41A-6011-B2①	81A-6010-A, -B
	41A-6011-C2②	

**95 & 100 HP. Models**

59A-6010-C	59A-6011-A③	99A-, 19A-, 29A-6010
	59A-6011-B④	
①—Marked 41A-B2.	③—Marked 59A-A.	
②—Marked 41A-C2.	④—Marked 59A-B.	

**CYLINDER SLEEVES****ALL 1940-49 MODELS**

**CYLINDER SLEEVES:** Dry type Steel or Cast Iron cylinder sleeves used in production on some Ford engines. On V8 engines with sleeves, engine may be marked with letters 'HS' stamped on top of block beside inner front corner of left cylinder head.

**Cylinder Sleeves**

Model	Wall Thickness	Part No.
4 Cyl. Engine	.040"	99A-6055
6 Cyl. "G" Eng. Semi-finished (.090")		1GA-6055-C
6 Cyl. "G" Engine	Finished	1GA-6055-D
6 Cyl. "H" Engine	Cast Iron	7HA-6055-B
V8 '60' Engine	.040"	52-6055-B
V8 '90' Engine	.040"	91A-6055
V8 '90' Engine	Cast Iron (.122")	11A-6055-B
V8 '100' Engine	.040"	99A-6055
V8 '100' Engine	.060"	09A-6055
V8 '100' Engine	Cast Iron	59A-6055-B
V8 '100' "B" Engine	Cast Iron	59A-6055-C

**Service Limits:** Steel sleeves should be replaced if worn more than .003" or if ridged at top due to wear. Sleeves which have been buckled (visible waves or burned spots) must also be replaced.

**Steel Sleeve Installation:** Sleeves should be removed and installed with a puller which applies pressure evenly (do not use arbor press). Use Sleeve Replacer tool, No. 6055-A, to install new sleeves, check sleeves after installation for buckling using a plug gauge or new piston. If piston sticks any point, remove sleeve and install another new sleeve.

**Cast Iron Sleeve Installation:** These sleeves are thicker than steel type and cylinder must be bored out for sleeve installation. Rebore cylinder to size .0012" smaller than outside diameter of sleeve to provide correct press fit, counterbore top of cylinder to fit flange on upper end of sleeve, press sleeve in place. **NOTE**—These sleeves are furnished with finished cylinder bore to fit a standard size piston. No finishing operations are necessary.

**Fitting Pistons on Sleeve Equipped Engines:**—Special gauge thicknesses used (not same as for engines without sleeves). See Piston Fitting Instructions on each car model page for complete instructions.

**PISTONS****1937-40 '60' MODELS**

**REPLACEMENT PISTONS:** Pistons furnished for service are steel alloy, three-ring, dome head type.

Part No.	Piston Size.
52A-6110-A	Standard
52A-6110-C	.005" Oversize
52A-6110-G	.020" Oversize

**Steel Section Type Piston Rings:**—These ring sets are composed of the special rings listed below.

**Top Compression Ring:**—One-piece cast iron ring with cadmium-plated tapered face. Ring should be installed with mark 'TOP' up (stamped on side of ring near slot). No expander spring used.

**Lower Compression Ring:**—Two-piece ring with wide upper cast iron section and narrow lower steel section. Expander spring is used (has initial bearing only on cast iron section) and face of cast iron section is cadmium plated. Install cast iron section with gap toward one side of engine, expander spring and steel section with gap toward opposite side of engine.

**Oil Control Ring:**—Three-piece ring with slotted cast iron center section and narrow steel sections above and below. Expander spring is used (has initial bearing only on cast iron section) and face of cast iron section is cadmium plated. Install cast iron section with gap toward one side of engine, both steel sections and expander spring with gaps toward opposite side of engine.

## PISTON PINS

## 1937-48 MODELS

**PISTON PIN FITTING:** Pins can be removed and installed without heating pistons. New pins, pistons, and connecting rods are held to close limits so that no fitting is required. Check pin fit as directed below. Oversize pins can be fitted in old pistons (and rod bushings) if clearances excessive and diameter of pin hole does not exceed .7535" (V8 Engines). Ream and burnish pin holes to size providing correct clearance for .001" or .002" Oversize Pin. CAUTION—Do not install oversize pins in new pistons. If connecting rod bushing worn so that clearance excessive with new Standard Size pin (as used with new pistons), install new bushing in connecting rod as directed below.

**Pin Fit in Piston:** Pin should be light hand push fit with piston and pin at room temperature (70°F).

## V8 Piston Pin Clearance

Piston	Clearance (New)	Worn Limit
Steel	.0003-.0009"	.0015"
Aluminum	.0001-.0002"	.0015"

## 6 Cyl. Piston Pin Clearance

Aluminum	.000-.0005"	.0015"
----------	-------------	--------

**Pin Fit in Rod Bushing:** Pin should pass through bushing slowly of own weight. Clearance (new) should be .0002-.0005" and worn limit is .0015" for all engines. Renew bushing if clearance excessive (with new pistons), or ream and burnish bushing and install oversize pin (with old pistons).

## 1937-48 MODELS

**CONNECTING ROD BUSHING SERVICING:** Drive old bushing out of connecting rod (use suitable driver to avoid damage to rod). Press new bushing in place, drill four oil holes (to same size as holes in rod), ream and burnish or hone bushing to inside

diameter of .7505" (V8 Engines) which will provide correct fit for new standard size pin.

**CAUTION:**—Check alignment of connecting rod after bushing installed and correct any misalignment caused by this operation.

## 1938-48 MODELS

**REPLACEMENT PISTON PINS:** Piston pins furnished for service in Standard Size and in Under- and Oversizes which are color-marked for identification as follows:

## 4 Cylinder Engine (1941-42)

Part No.	Color	Size
99A-6135-A	Green	Standard
99A-6135-B	Yellow	.002" Oversize

**1937-48 V8 MODELS****CONNECTING ROD BEARING SERVICING:**

Bearings float between connecting rod and crankpin and have bearing surface on both sides. Running clearance for oil film must be provided at inner face (on crankpin) and outer face (in connecting rod bore) and replacement bearings are furnished both Undersize (on crankpin) and Oversize (in connecting rod) as indicated in Replacement Bearing data (following). Check crankpin diameter, connecting rod bore diameter, and bearing thickness with micrometer and select replacement bearings to give correct clearances as follows:

Connecting Rod—If bore worn more than .0015" over original size (see table), rod should be replaced (or honed for oversize replacement bearing).

Model	Con. Rod Bore Diameter
"60" Engine ('37-39)	1.800"
"60" Engine ('40)	1.900"
"85" & "90" V8 Engines	2.220" (2.2195-2.2220")
"95" & "100" V8 Engines	2.360" (2.3597-2.3603")

CAUTION—Both rods used on each connecting rod bearing must be same size. Replace or hone both rods to same size (one bearing used for two rods).

Connecting Rod Bearing—Measure bearing thickness with micrometer gauge by placing a piece of round stock on inner face of bearing and measuring total thickness of bearing and stock (measure stock separately and subtract from micrometer reading for bearing thickness figure). Replace bearings measuring less than .1085" thick (V8 "85", "90", "95", "100" Engines). New bearing thicknesses are

Model	Con. Rod Bearing Thickness
"60" Engines	.09995"
"85", "90", "95", "100" V8 Engines	.1095"

Crankshaft Crankpins—Check crankpins for condition, replace crankshaft or re-machine crankpins if scored or grooved, tapered more than .001", or out-of-round more than .0015". Shafts should be re-machined as noted under "Crankshaft & Main Bearing" section below. NOTE—If crankpins worn evenly, and to less than maximum limits given above, crankshaft will be satisfactory for service providing that connecting rod bearings installed which provide bearing clearance of less than .005" (desired bearing clearance .0015-.0035").

**CRANKSHAFT & MAIN BEARINGS****1941-42 FOUR CYL. MODELS****1941-47 SIX CYL. MODELS**

**REPLACEMENT MAIN BEARINGS:** Bearings are furnished as shown below. On 4 Cyl. Engine, center bearing takes end thrust (bearing flanged on both ends). On 6 Cyl. Engine, 2 intermediate bearings used; #4 bearing takes end thrust. Upper and lower bearing halves not interchangeable on Six.

**4 Cyl. Engine (1941-42)**

## 1936-48 V8 MODELS

**CRANKSHAFT SERVICING:** Measure crankshaft main bearing journals and crankpins with a micrometer gauge. Crankshafts should be replaced or re-machined if journals or crankpins scored or grooved, if tapered more than .001", or if out-of-round more than .0015". Re-machine crankshaft by grinding to a standard undersize (see Replacement Connecting Rod and Main Bearing data) and then polishing with #320 grit polishing paper. NOTE—If crankshaft worn evenly and to less than maximum limits given above, crankshaft will be satisfactory for service providing that main bearings installed which will provide bearing clearance of less than .003" (desired bearing clearance .001-.003").

Model	Main Bearing Journal Diameter in Cyl. Block	Bearing Bore
"60" Engine ('37-39)	1.9990"	② 2.170-2.171"

"85" & "90" Repl. Block①	2.4990"	⑤ 2.670-2.671"
"95" & "100" V8	2.4990"	2.670-2.671"
"95" & "100" Repl. Block②	2.4990"	2.670-2.671"
①—Part No. 41A-6010-B2.	②—Part No. 59A-6010-C.	
③—Or 2.270-2.271".		
④—2.670-2.671" with 81A-6010-B Cylinder Block and 68-6303-A Crankshaft.		
⑤—When used with 1937-38 crankshaft, special bearings must be used (with larger outside diameter) for correct bearing clearance.		

## 1936-48 V8 MODELS

**SPECIAL MAIN BEARING NOTE (Some Engines)**—Some cylinder blocks have been manufactured with main bearing bore .015" Oversize. These blocks can be identified by mark "ERP" stamped on oil pan gasket flange at left front corner of block. CAUTION—All bearings installed in these engines must be special "O.D. .015" Oversize type

## 1936-48 V8 MODELS

**REPLACEMENT MAIN BEARINGS:** Bearings furnished in Standard Size and Undersizes shown below (also with "O.D. .015" Oversize"—see Special Main Bearing Note above). Rear Main Bearings which have end flanges to take end thrust are also furnished with thicker or thinner flanges (Oversize in length or Undersize between flanges) for crankshaft endplay adjustment as follows:

## CAMSHAFT &amp; BEARINGS

## 1937-48 V8 "90" &amp; "100" MODELS

**CAMSHAFT SERVICING:** Camshaft should be replaced if cams worn, scored, or otherwise damaged; or if journals scored, corroded, or worn to diameter of less than 1.7955". See Timing Gear and Oil Pump Drive Gear data for these items.

**CAMSHAFT BEARING SERVICING:** Camshaft bushings should be replaced if scored or worn to inside diameter greater than 1.7985". Replace bushings as follows:

**Bushing Removal & Installation**—Use puller, No. 6261-A, to remove bushings so that bushing is drawn out evenly. Install new bushings with same tool making certain that oil holes in bushing line up with oil channels in cylinder block. New bushings are finished type and need not be reamed.

**Bearing Clearance**—.001-.002" (new), .004" (worn limit).

C NTINUED N NEXT PAGE

## C CONTINUED FROM PRECEDING PAGE

## TIMING GEARS

## 1936-40 V8 MODELS

**TIMING GEARS:** Camshaft gears are "pressed on" type (aluminum or fibre) and camshaft must be removed from the engine for gear replacement.

**Camshaft Gear Removal & Installation:** Press old gear off shaft in an arbor press. Use special gear replacer fixture, No. 6256-A, when pressing new gear on shaft.

**CAUTION—**Mark on camshaft gear and mark on end of camshaft must be lined up within 1/64" to insure correct valve timing.

**Replacement Gears:** Crankshaft gears are Cast Alloy Steel, camshaft gears Fibre or Aluminum. Gears are furnished in the following sizes.

## CRANKSHAFT GEAR (1936-40)

Part Number	Used On:
52-6306	"60" Engines
48-6306	V8 "90" & "100" Engines

## CAMSHAFT GEAR (1936-40)

## "60" Engine—Fibre Type—42 Teeth

Part Number	Size
52-6256-A	Standard
52-6256-B	.006" Oversize
52-6256-C	.010" Oversize

## "90" &amp; "100" V8 Engines—44 Teeth

Part Number	Fibre Gear	Aluminum Gear	Size
48-6256-A	81B-6256-A2		Standard
48-6256-B	81B-6256-B		.006" Oversize
48-6256-C	81B-6256-C		.010" Oversize

## 1940-48 MODELS

**TIMING GEARS:** Beginning with 1940 production, a new bolted-on type camshaft gear was used (fibre, aluminum or malleable iron type) and this type gear can be replaced without removing the camshaft from the engine as follows:

**Camshaft Gear Removal and Installation:**—Gear is bolted on camshaft hub flange by 4 offset cap screws. To remove gear, remove crankshaft pulley (and damper on 6 Cyl. Engine)—use Puller 6312-A, and timing gear cover. Bend back lock plate tangs, take out four camshaft gear mounting cap screws, remove gear. When replacing gear, make certain that marks on camshaft and crankshaft gears are lined up and see that lockplate tangs are bent up against flats on mounting screws. **NOTE—**Camshaft gear mounting screw holes offset so gear can only be installed in correct position. Use 6312-B Pulley Replacer to install crankshaft pulley.

**Replacement Gears:** Crankshaft gears are Cast Alloy Steel and are furnished in one size only. Camshaft gears are Fibre, Aluminum, or Malleable Iron and are furnished in the following sizes:

## CRANKSHAFT GEAR (1940-48)

## VALVE SYSTEM

## 1936-48 MODELS

**VALVE ASSEMBLY SERVICING:** The complete valve assembly (valve, spring, and guide) should be removed and installed as a unit. Service these assemblies as follows:

**Valve Assembly Removal:**—Use special bar type lifter V-78 (All Fords and Mercury) inserting the end of lifter through valve spring coils to engage flanged lower end of guides, pull guide down slightly, withdraw 'C' type guide retainer, lift valve assembly out of engine.

**Valve Assembly Dismantling:**—Use special bench fixture Part No. V-130 (All Engines). Fixture consists of special press by which valve spring can be compressed to free spring retainer (fixture has stop which prevents excessive valve spring compression).

**Valve Grinding and Tappet Clearance Note (for all V8 Models):**—To perform these operations with minimum amount of hand cranking, note which valves are fully open (first column in table below), grind or check valves listed on same line of table—then turn shaft 'til next 'valve open' point reached.

Valves Open	Valves to Grind
1. 4X & 1N	3X, 8N, 6N, 7X, 3N, 2X
2. 3X & 8N	1X, 7N, 5X, 2N, 4X, 1N
3. 1X & 7N	8X, 5N, 6X, 4N

## OR

1. 8X & 5N	1X, 7N, 6N, 7X, 3N, 2X
2. 6N & 7X	5X, 2N, 4X, 1N, 8X, 5N
3. 5X & 2N	6X, 4N, 3X, 8N

**NOTE—**'X' Exhaust Valve. 'N' Intake Valve.

**Tappet Clearance Checking (All Engines):** Check tappet clearance when re-installing valves. Turn camshaft until lifter is on heel of cam, make certain that valve assembly is seated in block ("C" washer engaging both halves of valve guide), check clearance between mushroom end of valve stem and top surface of lifter with a feeler gauge. If clearance less than minimum (see table below), install a shorter valve or grind off end of valve stem, if clearance greater than maximum, install longer valve, or reface valve or valve seat to lower the valve in the block.

## Tappet Clearance

V8 Engine Intake Valves	.010" Min., .012" Max.
V8 Engine Exhaust Valves	.014" Min., .016" Max.
6 Cyl. Engine All Valves	.013" Min., .015" Max.

## 1936-48 MODELS

**VALVES (V8 Engines):** Intake and exhaust valves used on V8 engines are interchangeable and when replacing some valves only, new valves should be used for Intake (to keep intake valve clearance at minimum). All valves re-used should have a minimum stem diameter of .3090" (Intake), .3065" (Exhaust). **CAUTION—**Replace all valves with stem diameter of less than .3065".

6 Cyl. Engines—Intake and exhaust valves are not interchangeable. All valves re-used should have stem diameter in excess of .3065" and must not be

pitted, corroded, or burned. **CAUTION—**Replace all valves with stem diameter of less than .3065".

## 1936-48 MODELS

**VALVE SPRINGS (All Engines):** Valve springs are painted with protective coating and care should be taken not to chip this coating or to clean springs with any caustic solution which will remove it. Spring tension should be checked with a spring tester and all springs discarded if tension is not within 30-40 lbs. compressed to 2 1/8".

**CAUTION—**Do not re-use springs on which protective paint coating has been removed or which do not test within limits.

## 1936-48 MODELS

**VALVE GUIDES (All Engines):** When replacing some guides only, use the new guides for Intake Valves (to keep intake valve stem clearance at a minimum). Check guide wear by placing a new valve of .311" diameter in the guide half, measure combined valve stem and valve guide thickness on each side at top of guide. Any guide being re-used should have a minimum thickness (with valve stem) of .6665" (Intake), .6660" (Exhaust). Use any new guides, and old guides having least wear, for Intake Valves.

**CAUTION—**Replace both halves of all guides having thickness (with valve stem) less than .6660".

## 1936-48 MODELS

**VALVE LIFTERS (PUSHRODS) All Engines:** Lifters are hollow barrel type and can be lifted out of guide holes in block after valve assemblies have been removed. Lifters worn to diameter of less than .9980" should be replaced (new diameter .9995"), and lifters showing wear at either end should be resurfaced (pressed steel type lifters may be resurfaced (pressed steel type lifters may be resurfaced at both ends, cast type at larger bottom end only). Replace lifters which are less than 1.710" in length after resurfacing. Check lifter clearance when re-installed in engine. Lifter should slip into guide hole in block of own weight.

**CAUTION—**Do not use resurfaced lifters with new valves.

## 1936-48 MODELS

**VALVE SEAT INSERTS:** Special hard molybdenum-chrome alloy steel valve seat inserts are used for Exhaust or Intake and Exhaust valves on some engines. Reface any valve seats which show that valve has not been seating, or where seat width is greater than 1/8", or if new guides are installed. Replace all inserts that are loose in the cylinder block or cracked.

**Seat Insert Removal & Installation:** Use care not to damage cylinder block when removing old inserts. Clean up counterbore in cylinder block and machine to size providing .0015-.0030" press fit for new insert. Chill new insert in dry ice for at least 15 minutes, then install insert in block using a driver that will insure the insert being seated evenly in the block. Reface new inserts.

## OIL PAN REMOVAL

## 1941-47 6 CYL. MODELS

**OIL PAN REMOVAL:** Remove the engine from the chassis (see Engine Removal above). Then remove starter, take out oil pan cap screws and lift pan off. **Oil Pan Installation Note—**Use new packing at front and rear ends of pan. **CAUTION—**Soak new packing in engine oil for 2 hours before using.

**1936-42 V8 MODELS**

**OIL PAN REMOVAL:** To remove oil pan, drain cooling system, disconnect upper and lower radiator hoses, disconnect exhaust pipe and remove cross-pipe, disconnect radius rods at rear end, push rear end of rods down and block in this position. Remove front engine support bolts, attach hoist and raise front end of engine. Remove oil pan screws, remove pan. NOTE—Pan removal will be facilitated by removing starter motor and engine side pans, disconnecting steering tie rod, and turning crankshaft so that #4 piston is at top dead center.

**Oil Pan Installation Note—**Use new packing at front end of pan. CAUTION—Soak new packing in engine oil for 2 hours before using.

**1946-47-48 MODELS**

**OIL PAN REMOVAL:** Remove oil pan drain plug and drain the oil. Disconnect steering drag link at steering gear pitman arm. Loosen clamp on exhaust cross-pipe, disconnect exhaust pipe at left exhaust manifold and remove cross-pipe. Take out cap-screws in ball joint at rear end of front radius rods, lower rear end of rods to provide clearance (rods can be held down by wooden block inserted between radius rod ball and frame). Take out engine splash pan mounting screws, move pans to the side and out of the way. Remove starter by disconnecting brace at commutator end and taking out two through bolts on commutator end plate. Disconnect oil filter return line at oil pan connection, remove oil level indicator stick and tube. Take out oil pan capscrews and remove pan from beneath car. NOTE—Additional clearance can be secured by attaching hoist to front bumper bars (not axle) and raising front end of car slightly.

**Oil Pan Installation Note—**Use new gaskets and new packing at front end of pan. Soak new packing in engine oil for 2 hours before using.

**OIL PUMP****1937-48 V8 MODELS**

**OIL PUMP: Removal & Disassembly—**To remove pump from engine, remove locking wire and take out mounting screw in pump mounting flange, pull pump down and out (NOTE—Pump body fits in recess in cylinder block and it may be necessary to jar it slightly to loosen it). To dismantle pump, remove strainer screen retainer spring, remove screen, take out screen cover mounting screws, remove screen cover and gasket. Take out four capscrews in pump cover, remove cover, lift out pump driven gear. If pump shaft and driving gear are to be removed, drive out pin in drive gear, place pump in arbor press with support under drive gear, press shaft and driving gear out through lower end of pump housing.

**Oil Pump Relief Valve (Pressure Regulator) Note—**On pumps with relief valve located on side of pump housing, remove locking wire, take out relief valve nut, spring, and valve plunger.

**Servicing—**Clean out all oil passages in pump housing with compressed air. Replace all worn parts when clearances exceed following limits:

**Pump Shaft & Bushings—**Shaft clearance in bushings should be .001-.003" and bushings should be replaced if clearance exceeds .005". Replace shaft if

pump gear worn or if bearing surface worn to diameter of less than .497". Replace bushings if worn to inside diameter greater than .502". Remove old bushings with driver, press new bushings in place, line ream bushings to inside diameter of .500".

**Pump Driven Gear & Shaft—**Clearance between driven gear and stub shaft in pump housing should be .002-.0035". Replace shaft if clearance exceeds .005". To replace shaft, drive old shaft out of housing, press new shaft in place making certain that end of shaft will clear pump cover when it is installed.

**Oil Pressure Regulator (Relief Valve)—**Check relief valve spring tension and replace spring if tension is less than 78 ozs. or more than 87 ozs. when compressed to length of 1.380".

**Pump Assembly—**Insert pump shaft in housing, press drive gear on shaft until clearance between gear hub and end of housing (endplay) is .017", drill new 5/32" hole through shaft in line with hole in gear, install 5/32" pin andpeen both ends of the pin to prevent loosening in service. Complete assembly by reversing disassembly directions above. CAUTION—Make certain that relief valve nut and pump mounting screw are locked with wire and that lockwashers used under screw heads on pump cover and oil screen cover.

**1937-48 V8 MODELS**

**OIL PUMP DRIVE (Camshaft Gear):** Pump drive gear is pressed on rear end of camshaft. Remove old gear with gear puller, No. 6254-A, drive new gear on shaft with a fibre block (support shaft in vise with brass jaws). NOTE—Late design camshafts have flat on oil pump drive gear hub and gears have a similar flat to prevent the gear turning in service. These gears and camshaft must be used together and flats must be lined up when installing gear. Drive gear on shaft until it is firmly seated against the shoulder on the shaft.

**Oil Pump Idler Gear:** This gear located in rear end of cylinder block between camshaft gear and oil pump drive gear on pump shaft.

**Removal & Disassembly—**Take out capscrews in cover on rear face of cylinder block, lift off cover and gear assembly, and gasket.

**Servicing—**Replace all worn parts when clearances exceed following limits:

**Idler Gear & Bushing—**Clearance on shaft should be .001-.003". Replace bushing if worn to inside diameter greater than .752" or if clearance exceeds .005". To replace bushing, drive old bushing out, press new bushing in gear, ream bushing to provide shaft clearance of .001-.003".

**Idler Gear Shaft—**Replace shaft if scored or worn to diameter less than .747". To replace shaft, press old shaft out, press new shaft in cover until end of shaft is flush with face of cover.

**1937-48 V8 MODELS**

**OIL PRESSURE REGULATOR (Relief Valve):** Relief valves located under plug directly above front camshaft bearing (under valve cover) on all engines. Engines with late type oil pump (41A-6600-A & B) have additional relief valve on side of pump housing. Check relief valve spring tension and replace springs which are not within limits listed below.

**CAUTION—**Special type relief valve used on engines with oil pump relief valve. Correct type must be used in each engine.

**Cylinder Block Relief Valve (Engines without Oil Pump Relief Valve)—**Replace valve spring if tension less than 43 ozs. or more than 50 ozs. when compressed to length of 1.380".

**Cylinder Block Relief Valve (Engines with Oil Pump Relief Valve)—**Replace valve spring if tension less than 78 ozs. or more than 87 ozs. when compressed to length of 1.380".

**Oil Pump Relief Valve—**Replace valve spring if tension less than 78 ozs. or more than 87 ozs. when compressed to length of 1.380".

**1937-48 V8 MODELS**

**LOW OIL PRESSURE NOTE:** Low oil pressure may be caused by fuel pump push rod bushing being worn through, permitting oil to escape from main oil channel. Replace bushing by driving old bushing out of cylinder block and driving new bushing in until top of bushing is flush with face of casting. New bushings need not be reamed.

**1941-47 SIX CYL. "G" ENGINE**

**OIL PUMP: Removal & Disassembly.** To remove pump from engine, take off Oil Pump Screen Cover assembly by removing lock wire and capscrew at rear intermediate main bearing cap and lock wire and three capscrews in cover on front main bearing cap. Remove front main bearing cap with oil pump body. To disassemble pump, lift out driven (idler) gear from stub shaft in body, press drive gear and shaft out of driving gear and body, using an arbor press.

**Servicing—**Clean out all oil passages in pump body with compressed air. Replace all worn parts when clearances exceed following limits:

**Pump Shaft and Bushings—**Replace shaft if fibre drive gear worn or if bearing surface worn to diameter of less than .560". Replace bushing in pump body if worn to inside diameter greater than .566". Remove old bushing with driver, press new bushing in place until inner edge flush with pump body, line ream bushings to inside diameter of .5625".

**Pump Driven (Idler) Gear & Shaft—**Clearance between driven (idler) gear and stub shaft in pump body should be .002-.0035". Replace shaft if clearance exceeds .005". To replace shaft, press old shaft out of body, press new shaft in place until outer end flush with body (inner end of shaft must clear cover when it is installed).

**Pump Assembly—**Insert pump shaft in body, press driving gear on shaft. Install driven (idler) gear on stub shaft in pump body.

**1947-48-49 SIX CYL. "H" ENGINE**

**6 CYLINDER ROTOR TYPE OIL PUMP: Removal** from 1949 Passenger Car. Remove distributor cap, turn engine over until #1 cylinder at firing position (rotor will point to oil hole in distributor), allow crankshaft to remain in this position while pump off engine. Remove front engine mounts-to-frame bolts. Loosen rear engine mounting. Raise front of engine 2" and move 1/2" to left. Remove distributor. Take out 3 pump mounting capscrews in pump cover, pull pump out.

C NTINUED N NEXT PAGE

## CONTINUED FROM PRECEDING PAGE

**Pump Disassembly**—Remove cover and outer rotor (rotate drive gear to free rotor from pump body). Drive out pin in drive gear and press gear off shaft. Remove shaft and inner rotor. Clean all parts and check to specifications listed below.

**Pump Specifications and Clearances**—As follows:

**Outer Rotor.** Outside Diameter 2.249" (wear limit 2.245"). Clearance in Body .005-.010" (wear limit .012").

**Pump Body.** Inside Diameter 2.258" (wear limit 2.260").

**Inner Rotor.** Clearance in Outer Rotor .006" (wear limit .010").

**Shaft.** Outside Diameter .5175" (wear limit .5170"). Shaft Endplay .004-.008" (wear limit .010").

**Pump Assembly**—If new shaft installed, assemble shaft with inner rotor in pump. Press drive gear on end of shaft to obtain .004" clearance between gear and upper end of pump body. Drill pin hole in shaft. Install pin and peen both ends. Place outer rotor in body, install cover being sure to use new cover gasket.

**Pump Installation**—Reverse removal instructions listed above making certain distributor correctly positioned for proper ignition timing.

## RADIATOR

## 1946-47-48 MODELS

**RADIATOR REMOVAL:** Drain cooling system. Disconnect and remove upper and lower radiator hoses. On 6 Cyl. models, take out four capscrews and lockwashers mounting fan blade assembly on pulley, remove fan blades. On V8 models, remove two capscrews mounting fan bracket on generator bracket,

slip off drive belt and remove fan and bracket assembly. Take out mounting bolts in radiator support flanges (at bottom on each side) and bolts in support bracket at each side. Lift radiator straight up and out.

## CLUTCH NOTES

## 1949 FORD PASSENGER CARS

**V8 PASS. CAR FLYWHEEL RUBBING ON HOUSING COVER WHEN CLUTCH DISENGAGED:** Due to distortion of cover on front side of flywheel housing being distorted at flywheel bolt circle. Correct by taking off cover (drops straight down after removing attaching bolts) and flattening. COVER MUST BE FLAT.

## OVERDRIVE NOTES

## 1949 FORD PASSENGER CARS

**OVERDRIVE NOISE (EARLY 1949 CARS):** Can be caused by Overdrive case interference at Rear Engine Support at two points as follows:

1)—**Rear Engine Support Bolt.** Head of bolt may be interfering with underside of Overdrive Case. Correct by grinding off head of bolt (do not grind head to less than  $\frac{1}{8}$ " thick). Thin head bolt No. 355519-S2 used on later cars in production.

2)—**Overdrive Case.** Grooves on underside of case at engine mounting too shallow so that flanges on engine support interferes with Overdrive case at this point. Correct by filing grooves in case and cleaning up ends of grooves if casting flash evident. Later cars used matched assemblies in production.

## BRAKE NOTES

## 1948 TRUCK SERIES F-4, F-5, F-6

**HAND BRAKE ADJUSTMENT:** For independent shaft brake at transmission. Set hand lever in fully released position and make certain that flat portion

of cam is resting on rear of brake band upper end (if cam not flat, remove clevis pin in upper end of cam, adjust clevis rod until cam is flat when rod re-connected). Remove locking wire from brake band anchor adjusting screw (left side), turn screw clockwise until clearance between band and drum is .010" at the anchor screw, install lock wire. Loosen locknut on adjusting screw for lower position of brake band (round screw on brake mounting bracket), turn screw until clearance between lower portion of brake band and drum is .010", tighten locknut. Tighten adjusting nut at lower end of main adjusting bolt (on which band positioning springs are located) until clearance between upper portion of band and drum is .010". This completes the brake adjustment.

## ELECTRICAL SYSTEM NOTES

## 1949 PASS. CARS, 1948 TRUCKS

**STARTER MOTOR RUSTING (1949 CARS, 1948 TRUCKS):** Correct by enlarging drain hole to  $\frac{3}{8}$ " in endplate on underside. This can be done from underneath with starter on engine. If performed on bench all drill chips must be removed from starter. Drill  $\frac{3}{8}$ " hole  $\frac{1}{2}$ " deep (DO NOT DRILL DEEPER THAN  $\frac{1}{2}$ " OR FIELD COIL MAY BE DAMAGED).

## STARTER SUPPORT BRACE

## 1938 MODELS

**STARTER SUPPORT BRACE:** To correct thump or pound in engine when accelerated between 18 and 28 M.P.H., special starter motor to oil pan brace 82-A-11140-B (60 Engine), 81-A-11140-B (90 Engine) should be installed. Fasten this brace or bracket to starter through-bolt at starter end, remove one oil pan to cylinder block bolt and replace with special bolt 20426-S (60 Engine), 20426-S2 (90 Engine) to hold opposite end.

**NOTE:**—Engine changes made during 1936 as follows: New type steel-alloy piston (requiring special cylinder head) superseding aluminum alloy pistons. Heavier crankshaft with removable main bearings, new oil pump, new oil pan. Data on all types given below. Engines with each type equipment identified as follows:

**Aluminum Alloy Pistons**—Block not marked. Head marked '40'.

**Steel-Alloy Pistons**—Block marked 'SP' or 'SPG' on upper front end of left cylinder block near water coupling. Head marked '46' on top.

**Heavier Crankshaft**—Engine not marked but new pan with greater bearing clearance used.

### MODEL IDENTIFICATION

Model	Year	Body Type
68	1936	Passenger Cars
67	1936	Commercial Chassis
51	1936	Truck (131½" & 157" WB)

**SERIAL NUMBER:**—Same as engine number. Stamped on top of clutch housing and on left frame side member in front of dash bracket.

**ENGINE NUMBER:** Same as Serial Number (above).

### TUNE-UP

**COMPRESSION:** Ratio—6.3-1 Aluminum Head (Passenger Cars), 5.32-1 Cast Iron Head (Trucks).

**Pressure**—140 lbs. at 2700 R.P.M. Max., 113 lbs. at cranking speed (6.3-1 Al. hd.), 110 lbs. at 2500 R.P.M. Max., 95 lbs. at cranking speed (5.32-1 iron hd.).

**VACUUM READING:**—Gauge should show steady reading of 18-20" with engine idling at 5-7 M.P.H.

**FIRING ORDER:** 1-5-4-8-6-3-7-2. See diagram for cylinder numbering and spark plug cable connections.

**SPARK PLUGS:** Champion No. 18. 18 mm. Metric type. Gaps—.025".

**IGNITION:** See Coil, Condenser, and Distributor.

**Breaker Gap**—.012-.014" (40-12127 Distr.), .014-.016" (68-12127 Distr.).

**Cam Angle**—35-37½° (closed). Both sets together. **Automatic Advance**—8° max. at 1500 RPM (40-12127 Distr.), 950 RPM (68-12127 Distr.). Distributor degrees and RPM.

**IGNITION TIMING:** See Ignition Timing.

**Std. Setting**—4° BTDC. No flywheel marks provided (see Ignition Timing for method of setting ignition and also Vacuum Brake Adjustment).

**CARBURETION:** See Carburetor & Carb. Equipment. **Idle Setting**—Both idle screws midway between "miss" and "roll" points. Idle speed 5-7 MPH.

**Float Level**—Fuel level 15/32" below top of bowl. **Accelerating Pump**—First type not adjustable. Inner hole—Summer, Outer hole—Winter (if adjustable).

**Fuel Pump Pressure:** 3½ lbs. maximum.

**VALVES:** See Valve Timing.

**Tappet Clearance**—.0125-.0135". No adjustment.

**STARTING:** See Battery, Starter, Generator, and Regulator (when used).

### IGNITION

**IGNITION NOTE:** Complete Ignition Unit No. 40-12127-B or 68-12127 (part production). Mounted on front of gear case. Driven through tongue-and-slot coupling from camshaft.

**NOTE:**—These ignition units interchangeable as a unit although specifications are not identical (see data below). Parts are not interchangeable. May be identified by round top coil (40-12127-B), flat type coil (68-12127) and by part No. 68-12116 stamped on inner face of terminal plate on 68-12127 units.

**Ignition Switch:**—Oakes Hershey type co-incidental ignition switch and steering post lock.

**COIL:** Ford No. 18-12024-A (40-12127-B Distr.), 68-12024 (68-12127). Mounted on top of distributor as part of ignition unit. **NOTE:**—Coils not interchangeable.

**Ignition Current**—2.8 amperes idling, 4 stopped.

**Ignition Resistance**—Part No. 40-12250 mounted on fuse block and connected in coil primary circuit.

**CONDENSER:** Ford Part No. 18-12300-B (All Distr.).

**Capacity**—.33-.36 microfarad.

**DISTRIBUTOR:** Ford 40-12127-B. Double breaker, 8 lobe cam, full automatic advance type with Vacuum Brake Control (see Ignition Setting for adjustment). Same design as used previously on Ford V-8 with one set of contacts used to load coil (this set closes first and opens first) and one set for ignition timing.

**Breaker Gap**—.012-.014" (both sets). Adjusted by loosening lock screw on stationary contact bracket and turning contact stud (accessible through hole in housing after removing rubber plug).

**NOTE:**—Use .012-.014" two-step feeler labeled 'Breaker V-8' in BV-45 Ford Feeler Gauge Sets as 'Go' and 'No-go' gauges in setting gap.

**Cam Angles**—Closed 35-37½°. Open 7½-10°—for both sets operating together with correct coil-load-ignition lead.

**Breaker Arm Spring Tension**—22-27 ounces.

CONTINUED ON NEXT PAGE

## CONTINUED FROM PRECEDING PAGE

Automatic Advance  
(High Vacuum—Vacuum Brake Inoperative)

Distributor	Engine	Distributor	Engine
Degrees	R.P.M.	Degrees	R.P.M.
Start	200	0	400
2	325	4	650
3	425	6	850
5	825	10	1650
8	1500	16	3000

**Vacuum Brake**—Consists of an adjustable spring-loaded plunger in vacuum cylinder on side of distributor housing. Braking action of plunger on edge of advance weight plate governed by manifold vacuum. See Ignition Timing for setting.

**NOTE**—Distributor shaft and governor weight assemblies with above advance characteristics identified by figure '40-B' stamped on the rear end of shaft beside coupling tongue and on outside rim of advance weight (this mark may be seen by removing vacuum brake piston).

**DISTRIBUTOR**: Ford 68-12127. Same design as 48-12127B except for breaker plate design (new type breaker arm and contact mounting). See diagram.

**Breaker Gap**—.014-.016" (both sets). Adjust by loosening lock screw and turning eccentric adjusting screw on stationary contact mounting plate accessible through terminal plate opening after plates removed).

**NOTE**—New two-step feeler blade marked '.014-.016"' can be added to BV-45 feeler gauge set for use in setting these contact gaps.

**Cam Angles**—Closed 35-37½°. Open 7½-10°. Same as previous type distributor due to new breaker arm design.

**Breaker Arm Spring Tension**—20-24 ounces.

Automatic Advance  
(High Vacuum—Vacuum Brake Inoperative)

Distributor	Engine	Distributor	Engine
Degrees	R.P.M.	Degrees	R.P.M.
Start	200	0	400
2	300	4	600
3	375	6	750
5	600	10	1200
8	950	16	1900

**Distributor Removal**:—At front of engine. To remove, disconnect vacuum line and take out 3 capscrews in mounting flange.

## IGNITION TIMING

**IGNITION TIMING**:— Flywheel Degrees Piston Pos'n

All Engines ..... 4° BTDC ..... .0058" BTDC

**NOTE**—See Vacuum Brake Setting section below.  
**To Set Timing**—No flywheel marks provided. Timing designed to be set with piston on top dead center. With #1 piston on top dead center entering power stroke, loosen timing adjusting screw on left side of ignition unit, place screw in retard position at lower end of slot, move screw upward in slot until contacts begin to open. Note graduation of scale on plate under screw head in line with reference mark on housing, move screw up one additional graduation, tighten screw. This will give correct 4° BTDC setting.

**NOTE**—Top dead center position of Piston #1 can be determined by inserting gauge rod in cylinder or by measuring distance to tops of pistons #2 and 3 which should be equal.

**Vacuum Brake Setting**:—Vacuum Brake should be adjusted for best performance with particular fuel or operating conditions. To adjust, loosen locknut, back off adjusting screw until engine 'pings' under load, turn up adjusting screw just enough to eliminate ping, tighten locknut.

## CARBURETOR

**CARBURETION**:—Carburetor—Stromberg Model EE-1, 1" dual, downdraft type. Various type used as follows:

Ford Part No.	Service
67-9510-A	Standard Equipment.
SE-67-9510	Service option on all models.
67-9510-B	Altitudes of 5000-10000 ft.
67-9510-C	Altitudes of 10000-15000 ft.
67-9510-D	Altitudes above 15000 ft.

**NOTE**—These carburetors same except for jet calibration (see 67-9510-A Note below) and adjusted in same manner.

See article in Carburetor Section for complete data and Jet Calibration data on all models.

**67-9510-A Carburetor**—This model used in part production is equipped with a .97" venturi and slightly smaller main metering jet which gives better fuel economy. This model may be identified by figure '97' cast on body under connector link. Type SE-67-9510 has 13/16" venturi and smaller main metering jet (see Stromberg Jet Specifications in Carburetion Section). Both types have accelerating pump adjustment.

**NOTE**—Do not adjust carburetor until engine is warmed up and idling at hot or slow idling speed with choke valve wide open.

**Idle Adjustment**—Manufacturer recommends use of vacuum gauge and adjustment of idling screws for highest vacuum reading. If vacuum gauge not used, adjust throttle stopscrew for 5-7 M.P.H. idling speed, turn each idle adjusting screw in until engine begins to miss, out until engine begins to roll, finally turn screw in slowly until engine fires smoothly. Readjust throttle stopscrew for idling speed.

**Accelerating Pump Setting (67-9510A, SE-67-9510 only)**—Two studs provided on throttle lever for pump link connection and marked as follows:

S—3/16" shorter pump stroke for summer operation.  
W—Normal for winter or improved performance.

**Fast Idle**:—Integral with carburetor. Operative with choke valve closed. No adjustment required.

## CARB. EQUIPMENT

**Air Cleaner**:—AC. #1525501 oil-wetted type std., Heavy duty oil-bath type optional.

**Fuel Pump**:—AC. Type R #1521764 Diaphragm type. For complete data, refer to Carburetion Equip. Index.

**Gasoline Gauge (Trucks)**: King-Seeley "Telegauge" Hydrostatic type.

For complete data, refer to Carburetion Equip. Index. (1936 Car Models) King-Seeley Electric. Ford Part No. 68-9280-A (dash unit—68 Std., 67), 68-9280-B (dash unit—68 Deluxe), 68-9275 (tank unit—all).

For complete data, refer to Carburetion Equip. Index.

## BATTERY

**BATTERY**:—Ford No. 40-10655-C, 6 volt, 17 plate, 100 ampere hour capacity (20 hour rate).

**Starting Capacity**—126 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 3.3 minutes.

**Grounded Terminal**—Positive (+) terminal.

**Location**—On left side under front floor.

**Dimensions**—Width 7.2". Length 10.5". Height 7.1".

## STARTER

Ford Model No. 18-11002. Armature No. 18-11005.

**Drive**—Inboard Bendix L11FX-10. Ford No. B-11350.

**Cranking Engine**—100 RPM., 190-215 amperes.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—2 lbs. each.

Torque	R.P.M.	Volts	Amperes
4 ft. lb.	1070	4.6	200
8 "	660	4.3	340
12 "	300	3.65	465
14 "	Lock	3.5	500

**Starting Switch**:—Ford No. 48-11450. Operated by pedal on toeboard.

**Removal**:—Starter mounted on right front face of flywheel housing. To remove, take off pan at right of engine, take out two through-bolts on commutator endplate.

## GENERATOR

## STANDARD

Ford Model No. 40-10000-B (Cars), 67-10000-A (Comm'l. & Trucks), 51-10000-A (Trucks). Arm. No. 18-10005.

Third brush control type. Ventilated.

**NOTE**—These generators are the same except for pulley diameter and type as follows:

Generator	Pulley Diameter	Pulley Type
40-10000-B	4.30"	Single Sheave
67-10000-A	5.18"	Single Sheave
51-10000-A	4.08"	Double Sheave

**NOTE**—Above generators serviced by following models: 81-A-10000-A (40-10000-B, 67-10000-A), 79-10000-B (51-10000-A).

**Charging Rate Adjustment**—Take off commutator cover band, shift third brush by hand counter-clockwise to increase or clockwise to decrease charging rate. Brush held in position by friction.

**Standard Charging Rate Setting**—16 amperes (hot), at 1810 R.P.M. or 30 M.P.H. (68 with 4.3" pulley).

Performance Data		
Generator Hot		
Amperes	Volts	R.P.M.
0	6.2	650
4	6.4	815
8	6.5	1020
12	6.6	1300
16	6.7	1810
18	6.8	3000

Performance Standards—See Note	
Amperes	Eng. R.P.M.
Start	500
17	1300
11	3000

**NOTE**—Generators which do not test up to these "Performance Standards" should be examined and overhauled.

**Rotation**—Counter-clockwise at commutator end.  
**Brush Spring Tension**—26-28 ounces.  
**Field Current**—4.6 amperes at 6.1 volts maximum at 850-1200 R.P.M. Field resistance 1.0 ohms at 70°F.

**Removal**—Mounted on bracket at front of engine between cylinder banks with fan mounted on forward end. Driven in tandem with two water pumps by Vee belt. To remove, take off nut on bracket mounting stud.

**Belt Adjustment**—Loosen nut on bracket flange mounting stud, move generator up until total side-play on belt at point midway between water pump and crankshaft pulleys is  $\frac{3}{4}$ -1", tighten nut.

## GENERATOR SPECIAL EQUIPMENT

**GENERATORS (SPEC. EQUIP)**—Various types for special service on all models as follows:

Generator	Pulley Diam.	Type Service
67-10000-H	5.18"	High Speed
68-10000-HA	4.38"	High Speed
68-10000-HB	4.38"	Low Speed
78-10000-HA	4.38"	High Speed
78-10000-HB	3.58"	Low Speed

**NOTE**—These generators serviced by the following models: 81-A-10000-B (67-10000-H; 68-, 78-10000-HA), 82A-10000-B (78-10000-HB), 81A-10000-C (68-10000-HB).

**Armature Nos.**—68-10005-H (67-10000-H, 68-10000-HA), 18-10005 (68-10000-HB), 78-10005-HA (78-10000-HA, HB).

**Maximum Charging Rate**—See table below. Reached at 33 M.P.H. (67-10000-H), 30 M.P.H. (68-, 78-10000-HA), 28 M.P.H. (68-, 78-10000-HB).

**Charging Rate Adjustment**—Same as for standard generator (above). See Regulator data below for models on which regulator is used.

Performance Standards—See Note		
67-10000-H, 68-10000-HA, 78-10000-HA		
Amperes	Eng. R.P.M.	
Start	525	
28	1250	
16	3000	
68-10000-HB		
Start	350	
18	1000	
16	3000	
78-10000-HB		
Start	350	
26	1000	
16	3000	

**NOTE**—If generators do not test up to these "Performance Standards" they should be examined and overhauled.

**Rotation**—Counter-clockwise at commutator end.  
**Field Current**—3.43-4.17 amperes at 6.0 volts (field resistance 1.44-1.75 ohms for all models).

**Removal & Belt Adjustment**—Same as for standard generator (above).

**SPECIAL GENERATORS**—Other Makes—Refer to Electrical Equipment Index for "Special Generator" article for complete data on special Generators and Regulators which may be found on these models.

## CUTOUT RELAY

**CUTOUT RELAY**—Ford No. B-10505. Mounted on generator. Generator field lead grounded to relay.  
**Cuts In**—5.8-6.3 volts, 10 MPH.  
**Cuts Out**—3 ampere maximum discharge.  
**Contact Gap**—.015-.020".  
**Air Gap**—.010-.015" with contacts closed.

## REGULATOR

**REGULATOR**—Ford No. 40-10505 or 68-10505 (Special Equipment). Consists of Cutout Relay and Voltage Regulator (two-rate relay) in case on generator. See article in Electrical Equipment Section for complete data.

### Cutout Relay

All data same as for B-10505 above.

### Regulator

**Setting**—Contacts open when voltage reaches 8.5 volts and remain open until relay contacts open.  
**Cuts In**—7 volts or 10 M.P.H.  
**Cuts Out**—3 ampere discharge current.  
**Contact Gap**—.015-.020".  
**Air Gap**—.010-.015" with contacts closed.

## LIGHTING

**LIGHTING**—Headlamps—Corcoran-Brown "Two-Lite," Upper and lower beams controlled by lighting switch handle on steering wheel.

**Headlamp Adjustment**—Aim headlamps straight ahead with top of upper beam at lamp center height 25 feet from the car.

### Switches

**Lighting**—R.B.M. Model B-11654-B. Ford Part No. B-11657 (Body and Contact Assembly), 48-11647 (Plate and Wiring Assembly), B-11655-B (Cover).  
**Stop Light**—Ford No. 48-13480.

### Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps	32-32	2330-C
Stop and Tail	21-2	1158
All others	3	63

## MISC. ELECTRICAL

**FUSES**—Fuse Block Ford Part No. 40-12250. Ignition resistance unit mounted on fuse block.

**Lighting**—20 ampere capacity on fuse block.

**HORNS**—Sparton. Vibrator type. Current draw 6-8 amperes each.

## ENGINE

**ENGINE SPECIFICATIONS PASSENGER CAR AND COMM'L**—Eight cyl., 90° Vee, 'L' head type with both cylinder blocks and crankcase cast enbloc.

**Bore**—3.062". **Stroke**—3.75".

**Piston Displacement**—221 cubic inches.

**Rated Horsepower**—30.

**Developed Horsepower**—85 at 3800 RPM.

**Compression Ratio**—6.3-1 Std. aluminum head.

**Compression Pressure**—140 lbs. at 2700 R.P.M. or 113 lbs. at cranking speed of 100 R.P.M.

**Vacuum Reading**—Gauge should show steady reading of 18-20" with engine idling at 5-7 M.P.H.

**ENGINE SPECIFICATIONS FOR TRUCKS**—Same as for Passenger Car & Commercial except as follows:  
**Developed Horsepower**—80 at 3800 R.P.M.

**Compression Ratio**—5.32-1 Std. cast-iron head.

**Compression Pressure**—110 lbs. at 2500 R.P.M. r 90 lbs. at cranking speed of 100 R.P.M.

**CYLINDER HEAD**: Tightening Torque and Cylinder Head Diagram—See Ford Shop Notes.

**PISTONS—ALUMINUM ALLOY TYPE**—Split skirt, Cam ground type. Length 2.97". Recondition engines to take finished replacement pistons.

**Weight**—287-291 grams (stripped), 389.5-396.5 grams with rings and pin.

**Removal**—Pistons and rods removed from above.

**Clearance**—.002" Min., .003" Max. See Fitting Pistons.

**Replacement Pistons**—See Ford Special Shop Notes.

**Fitting New Pistons**—Use .002" feeler  $\frac{1}{2}$ " wide inserted between piston and cylinder wall at right angles to pin on side opposite slot. Pull to withdraw feeler should be 6-10 lbs. **NOTE**—On engines with inserted hardened sleeves, use .0025" feeler with 6-10 lbs. pull.

**Installing Pistons**—Slot to left (viewed from driver's seat) for all pistons.

**PISTONS—STEEL ALLOY TYPE**—Heat treated, steel-alloy, Cam ground type with domed head and cut-away skirt. Recondition cylinders to take finished replacement pistons.

**NOTE**—Original equipment steel-alloy pistons furnished as an assembly with fitted pins and connecting rods. For replacement, separate pistons, pins, and connecting rods must be used. Piston assembly with fitted pins and rods discontinued.

**Replacement Pistons**—See Ford Special Shop Notes.

**Fitting New Pistons**—Use .0025" feeler  $\frac{1}{2}$ " wide inserted between piston and cylinder wall at right angles to pin. Pull required to withdraw feeler must be 7-12 lbs. **NOTE**—On engines with inserted hardened sleeves, use .003" feeler with 7-12 lbs. pull.

**PISTON RINGS—ALL PISTONS**—Two compression, one oil control ring per piston, all above pin. Oil ring groove drilled with eight  $\frac{1}{8}$ " oil drain holes (slot on each side also used on aluminum pistons).

Ring	Width	End Gap	Side Clearance
Compr. #1	.0915-.092"	.012-.017"	.0025-.003"
Compr. #2	.0915-.092"	.012-.017"	.002-.0025"
Oil Contr.	.1545-.155"	.012-.017"	.0015-.002"

**PISTON PIN—ALUMINUM PISTONS**—Diam.—.7501-.7504". Length 2.780". Pin floats in piston & rod and is held by retaining ring in connecting rod. Heat piston to 200° F. (dip in boiling water for one minute) to remove or install pins.

**Pin Fit in Piston**—.0001" tight to .0001" loose.

**Pin Fit in Rod Bushing**—.0001" clearance.

See Ford Shop Notes for Pin Fitting directions.

**Installing Pins**—Use tapered pilot inserted ahead of pin to expand retainer in rod.

**ENGINE**

C CONTINUED FROM PRECEDING PAGE

**PISTON PIN—STEEL PISTONS:**—Original equipment pins retained by plugs expanded in groove in piston bosses. These pins cannot be removed in the field. Pin Diameter—.7501-.7504". Length—2.850". Pin Fit in Piston—.0005" clearance. Pin Fit in Rod Bushing—.0001" clearance. See Ford Shop Notes for Pin Servicing Directions.

**CONNECTING ROD—ALL PISTONS:**—Length 7".

Weight—469-473 grams.

Crankpin Journal Diameter—1.999".

Lower Bearing—Copper-lead, Cadmium-nickel, or Cadmium-silver type. Bearing surface on outer face (in rod), and inner face (on crankpin). Bearing halves float in rods (side-by-side rod mounting). Bearing Dimensions—Thickness .1095". Length 1.933". Bearings have flanged ends. Clearance—.0015-.0035" (total diametrical), .010-.022" (total endplay).

Bearing Adjustment:—None (no shims). Replace bearings. Do not file caps. Use tool, Part No. V-131, to check bearing fit. Bearings should rotate freely with bearing caps tight.

Replacement Bearings:—See Ford Shop Notes for Bearings for Oversize Rods and undersize crankpins.

Installing Rods:—Rods and caps marked 'R1', 'L1' etc. Install rods in same numbered cylinder with mark on rod and cap together and pointing down.

**CRANKSHAFT—FIRST TYPE:**—Three bearing, integral counterweights. Weight 56.5 lbs. Journal Diameters—1.999" (all bearings). Bearing Type—Babbitt bearing surface integral with crankcase and bearing caps. Clearance—.001-.003".

Bearing Adjustment:—None (no shims). Do not file bearing caps. Engine must be taken down and new bearings poured in crankcase and caps.

End Thrust:—Taken by #3 (rear) main bearing. Endplay .002-.006". Adjusted by replacing bearing.

**CRANKSHAFT—SECOND TYPE:**—Larger journal diameters and heavier than first type. Journal Diameters—2.399" (all bearings). Bearing Type—Removable steel-backed, copper-lead lined. Bearings furnished for service std., .003", .010" undersize.

NOTE—Install bearings with tongue or lug in groove and assemble caps so that groove in block and cap are on same side. Clearance—.001-.003".

Bearing Adjustment:—None (no shims). Replace bearings. Do not file bearing caps.

Replacement Bearings:—See Ford Shop Notes for Undersizes and special long rear bearings.

End Thrust:—Same as for first type above.

NOTE—New design oil pan with greater clearance for main bearing studs used with this crankshaft. Interchangeable with old pan. Old pan can be used with new crankshaft by denting pan with ball-pein hammer to increase clearance.

**CAMSHAFT:**—Three bearing. Helical gear drive. Journal Diameters—1.797" (all bearings). Bearing Type—Steel-backed, babbitt-lined. Bearing Clearance—.001-.002".

End Thrust:—Taken by gear hub and front bearing and by hub and cover plate. Endplay .005". Adjusted by replacing bearing or cover plate.

Timing Gears:—Crankshaft gear alloy steel. Camshaft gear Bakelized Fabric. Backlash between gears .004" maximum.

Camshaft Setting:—Mesh crankshaft gear tooth marked 'O' with camshaft gear space marked '/'.

**VALVES:**— Head.Diam. Stem.Diam. Length  
All Valves.....1.537".....3105-3115".....4.750-4.751"  
Seat Angle Lift Stem Clearance  
All Valves .....45°.....292"......0015-.0035"

See Ford Special Shop Notes for Valve Servicing data.

NOTE—High tungsten chrome alloy steel exhaust valve seat inserts are used.

Valve Guides:—Split type. See Valve Assembly Removal.

Valve Lifters:—Alloy-iron type operating in reamed holes in block. Serviced by installing oversize lifters. Diameter—.999-.9995". Clearance—.0005-.001".

Valve Springs:—Free length 2.42". See Valve Assembly removal below.

Spring Pressure Spring Length  
Valve Closed .....37-40 lbs.....2.13"  
Valve Open .....76-80 lbs.....1.84"

Valve Assembly Removal:—Insert end of V-78 bar type valve lifter between spring coils to engage flanged lower end of guide, pry down on guide until 'C' washer at upper end can be removed, remove assembly from above. Use special fixture V-130 to compress spring and remove spring retainer. Install valves in same manner.

**VALVE TIMING**

Tappet Clearance: .0125-.0135" for all valves. No adjustment. Grind off valve stem end if clearance insufficient or replace valves if excessive.

Valve Timing: See Camshaft Setting above.

Intake Valves—Open 9°30' BTDC. Close 54°30' ALDC. Exh. Valves—Open 57°30' BLDC. Close 6°30' ATDC. To Check Valve Timing—No flywheel marks or other means provided to check valve timing. If dead center point for any piston is established on flywheel, intake opening for valve in this cylinder will be approximately 2.96 teeth before this point with piston .0327" before top dead center.

**LUBRICATION**

**LUBRICATION:**—Pressure System. Gear type oil pump located in oil pan at rear of engine.

1936 NOTE—Two types of oil pumps used. Interchangeable except that oil return pipe from rear main bearing must be removed when new type oil pump installed.

Normal Oil Pressure—30 lbs. at 2000 RPM.

Oil Pressure Regulator—Located under plug directly above front camshaft bearing. Operates at 30 lbs. Not adjustable.

Oil Pressure Gauge—King-Seeley Electric Ford No. 48-9273 (dash unit—Deluxe Pass. & Truck). Ford No. 48-9278 (engine unit).

See Miscellaneous Section for complete data.

NOTE—Std. Passenger Car & Comm'l. not regularly equipped. Part No. 68-18426 gasoline gauge and oil pressure gauge assembly may be installed replacing regular gasoline gauge. Same engine unit as above. Crankcase Capacity—5 qts.

**CLUTCH**

Long Model 9CF-CI (Pass. Cars & Comm'l), 11CF-CI (Trucks). Single plate, dry disc, semi-centrifugal type.

See Clutch Section for complete data.

Facings—Molded asbestos, 2 required.

	Inside Diam.	Outside Diam.	Thick.
Pass. Cars	5.76"	9.0"	.140"
Trucks	6.5"	11.0"	.140"

Pedal Adjustment—Free movement of pedal ¾-1" To adjust, remove clevis pin in end of clutch lever connecting link, turn clevis.

NOTE—Greater pedal clearance required on 9CF and 11CF semi-centrifugal clutches to provide proper release bearing clearance.

Removal:—Disconnect rear spring at frame connection in center, take out clutch housing screws, slide rear end and transmission to rear as a unit exposing clutch, take out capscrews mounting clutch on flywheel.

**FRONT SUSPENSION**

Front Suspension:—Conventional 'I' beam section front axle with Reverse-Elliott ends and transverse cantilever spring.

Kingpin Inclination—8° crosswise.

Caster—9° Max., 4½° Min. (Pass. Cars), 5° Max., 3° Min. (Trucks). Must be alike within ½°. No adjustment provided.

Camber—1° Max., ¼° Min. No adjustment.

Toe In—1/16" (Pass. cars), 0" (Trucks). On trucks, toe in increases with load and should be set with truck empty. Adjust all models by loosening tie rod clamp bolts and turning rod.

Steering Geometry (Toe out on turns)—Inner wheel turned 23 1/3° (Pass. Cars), 22 2/3° (131½" W.B. Trucks), 22¼° (157" W.B. Trucks), outer wheel turned 20° (all models). Allowable variation ½°.

**STEERING GEAR**

Steering Gear: Gemmer model. Worm-and-Sector type.

See Steering Gear Section for complete data.

**BRAKES**

**BRAKES:**—Service—Own make. Mechanical type. Hand lever applies all four service brakes (Pass.), or operates independent rear wheel brake (Trucks). See Brake Section for complete data.

Drum Diameter—12" (Pass. & Comm'l), 14" (Trucks).

Lining (Pass.)—Semi-moulded. Width 1.75". Thickness .185". Length per shoe 13.25".

(Truck)—Width 2.5". Thickness .25". Length per shoe 17.5".

Hand Brake:—See Service Brakes above.

Lining (Trucks)—Width 1.5". Thickness .187". Length per wheel 41.1".

1937 M DELS

## CONTINUED FROM PRECEDING PAGE

additional graduation, tighten screw. This provides correct 4° BTDC. Ignition timing.

**Vacuum Brake Setting:**—To adjust, loosen locknut, back off adjusting screw until engine 'pings' under load, turn screw in just enough to eliminate ping, tighten locknut. When adjusted on Stroboscope, vacuum brake should retard spark to peepsight (set at 2°) at 950 RPM.

## CARBURETOR

**Stromberg Model EE-7/8.** Dual, double barrel, down-draft type. Ford numbers for models used and service for which intended are as follows:

Service	Carburetor
Standard Equipment.....	52-9510-B
Special Service .....	52-9510
Altitude (5000-10000') .....	52-9510-C
Altitude (10000-15000') .....	52-9510-D
Altitude (Over 15000') .....	52-9510-E

**See article in Carburetor Section for complete data and Jet Calibrations for each model.**

**Settings (Idle Setting, Float Level, and Accelerating Pump): See Tune-Up.**

**Fast Idle**—Integral with carburetor. Operative with choke valve closed. No adjustment required.

## CARB. EQUIPMENT

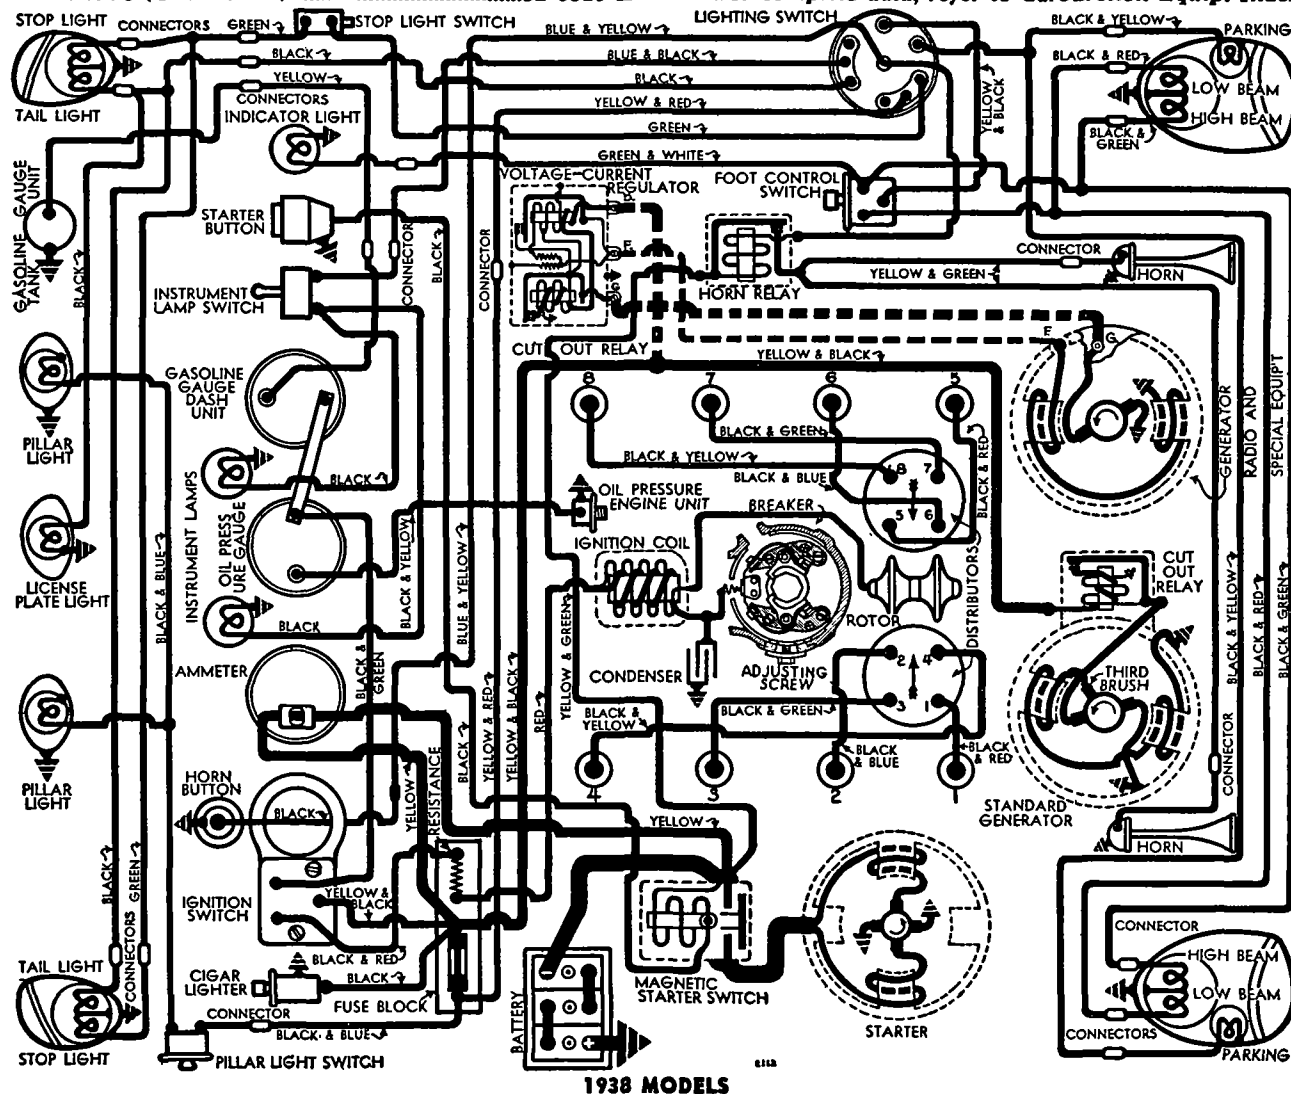

**Air Cleaner:** AC No. 1528238 oil-wetted type Std.,  
United or Donaldson oil-bath type Optl.

**Fuel Pump:** AC Type R, No. 1523257, Ford No. 52-9350-B. Diaphragm type.

**For complete data, refer to Carburetion Equip. Index.**

**Gasoline Gauge:—King-Seeley Electric. Ford Part No. Dash Unit—Ford No. 78-9280 (1937), 81A-9280-A (1938). Tank Unit—Ford No. 78-9275 (1937-38 Pass. Cars & Comm.), 79-9275A (1937 First 2500 Trucks), 79-9275B (1937-38 After first 2500 Trucks).**

**For complete data, refer to Carburetion Equip. Index.**

## BATTERY

**Ford No. 78-10665-A (1937), 81A-10655-A (1938).**  
**6 Volt, 17 Plate, 100 ampere hour (20 hr. rate).**  
**Starting Capacity—126 amperes for 20 minutes.**  
**Zero Capacity—300 amperes for 3.3 minutes.**  
**Grounded Terminal—Positive (+) terminal.**  
**Location—Mounted in recess in cowl on right side of engine compartment.**

## STARTER

**Ford No. 52-11002. Armature No. 52-11005.**  
**Starter Brace (to correct Thumps or Pounds) See**  
*Ford Special Shop Notes for data.*  
**Drive (60 Models). Barrel Type Bendix, Ford Nos.**  
**52-11350,B,C. See Electrical Equipment Section for**  
**differences and data on each type.**  
**Rotation—Counter-clockwise at commutator end.**  
**Brush Spring Tension—2 lbs. each.**  
**Cranking Engine—100 RPM., 190-215 amperes.**

Performance Data.			
Torque.	R.P.M.	Volts.	Amperes.
4 ft. lbs.....	1070.....	4.6 .....	200
8 " .....	660.....	4.3 .....	340
12 " .....	300.....	3.85 .....	465

**Starting Switch:**—R.B.M. Model 2220, Ford No. 78-11450 (except Bus), 70-11450 (Bus). Magnetic type mounted on right side of engine dash above starter. Controlled by pushbutton switch on instrument panel, Ford No. 78-11500 (1937), 81A-11500 (1938).

**Removal:**—Starter mounted on right front face of fly-wheel housing. To remove, take off pan at right of engine, take out two through bolts on endplate.

## GENERATOR

## STANDARD

## 1937 Car & Truck Models

Generator	Armature	Pulley Diam.
①BB-10000-D	18-10005	3.68"
②74-10000-HA	74-10005-HA	3.68"
③74-10000-HB	74-10005-HB	3.68"

## 1938 Car & Truck Models

82A-10000-A	79-10005	3.5"
③ 82A-10000-B	82A-10005-A	3.5"
82A-10000-C	82A-10005-B	3.5"
①—Replacement Generator	82A-10000-A.	
②—Replacement Generator	82A-10000-E.	
③—Replacement Generator	82A-10000-D.	

**Type**—Third brush control type. Air cooled.  
**Maximum Charging Rate**—See Performance Standards below. Reached at 28-30 M.P.H. depending on pulley used on each model.

**Charging Rate Adjustment**—Take off commutator cover band, shift third brush by hand, counter-clockwise to increase, or clockwise to decrease charging rate. Brush held in position by friction.

## Performance Standards

BB-10000-D		82A-10000-A	
Amperes	Eng. R.P.M.	Amperes	Eng. R.P.M.
Start.....	500	Start.....	500
17.....	1300	17.....	1300
11.....	3000	11.....	3000
82A-10000-B		82A-10000-C	
Start.....	525	Start.....	350
26.....	1250	18.....	1000
16.....	3000	16.....	3000
74-10000-HA		74-10000-HB	
Start.....	350	Start.....	500
18.....	950	26.....	1200
16.....	3000	16.....	3000

**Rotation**—Counter-clockwise at commutator end.  
**Brush Spring Tension**—26-28 ounces.  
**Field Current**—4.92-6 amperes at 6.0 volts (BB-10000-D, 82A-10000-A), 3.43-4.17 amperes at 6.0 volts (Others). Field resistance 1.0 ohms at 70° (BB-10000-D, 82A-10000-A), 1.44 ohms at 70° (All others).

**Removal:** Take off nut on bracket stud.

**Belt Adjustment:**—Loosen nut on bracket flange mounting stud, move generator up until total side movement on belt midway between generator and water pump pulleys is 1", tighten nut.

## GENERATOR

### SPECIAL EQUIPMENT

**GENERATORS (RADIO & SPECIAL EQUIP.):** Two brush type with vibrating voltage and current regulation. Ventilated. Models used as follows:

Generator	Armature	Pulley Diam.
82A-10000-D	78-10005-A, C	3.58"
82A-10000-E①	78-10005-B, D	3.58"

①—Low Speed (Taxi, Door-to-door Dlvry, etc.).

**Charging Rate Adjustment**—None. See Regulator.  
**Maximum Charging Rate**—Controlled by regulator (dependent on battery condition and load). To check generator capacity, disconnect field lead at generator, connect both generator terminals together, use "BRS" set of rheostat connected across battery terminals to apply load until voltage is exactly 6 volts. Operate generator at 1000 RPM, check output with ammeter in charging line. After making test, restore original field connections.

**Do not operate generator in service with terminals connected together (eliminates all regulator action)**

### Performance Standards

82A-10000-D		82A-10000-E	
Amperes	Eng. RPM	Amperes	Eng. RPM
Start.....	500	Start.....	350
28 .....	1250	20 .....	1000
28 .....	2500	20 .....	2500

**Rotation**—Counter-clockwise at commutator end.  
**Field Current**—1.82-2.22 amperes at 6.0 volts (field resistance 2.7 ohms at 70°F).

**Removal & Belt Adjustment:** Same as given above.

**SPECIAL GENERATORS:**—Other Makes—Refer to *Electrical Equipment Index* for 'Special Generator' article for complete data on special Generators and Regulators which may be found on these models.

## CUTOUT RELAY

**CUTOUT RELAY:**—Ford No. B-10505 (Std. on all models). Mounted on generator field frame. Generator field lead grounded to mounting screw.  
**Cuts In**—5.8-6.3 volts.  
**Cuts Out**—3 ampere maximum discharge.  
**Contact Gap**—.015-.020".  
**Air Gap**—.010-.015" with contacts closed.

## REGULATOR

Ford Model No. 81A-10505. Used with Special Equipment Generators (above). Consists of vibrating Voltage-and-Current Regulator and Cutout Relay  
**NOTE**—This type superseded by 01A-10505-C.

### Cutout Relay

Specifications same as standard model (above).

### Voltage-and-Current Regulator

**Voltage Setting**—7.6 volts max. at 70°F.  
**Current Setting**—30 amperes (82A-10000D Gen.), 23 amperes (82A-10000E Gen.).  
**Regulator Checking**—See article in *Electrical Equipment Section* for complete instructions.

## LIGHTING

**LIGHTING:**—Headlamps—Corcoran-Brown 'Two-Lite', Pre-focused type. Upper and lower beams controlled by lighting switch at lower end of steering column. (1937), beam selector switch on toeboard (1938).  
**Headlamp Adjustment**—With upper beams lighted, aim each headlamp straight ahead with top of beam at lamp center height at 25 feet (Pass. Car).  
**Beam Indicator** (1938)—Red Jewel at upper left corner of instrument panel. Lighted whenever upper beams in use.

### Switches—1937

**Lighting**—R.B.M. Model B-11654-B, Ford No. B-11657 (Switch Body), B-11655-B (lower cover). Complete switch furnished only as assembly with wiring harness as follows: 78-11653 (Pass. Cars), 77-11653A (Comml. Std.), 77-11653B (Comml. Del.), 79-11653A (Truck Std.), 79-11653B (Truck Del.).  
**Instrument**—Ford No. 78-13740 (Pass. Cars), 50-13740 (Comml. & Truck).  
**Dome Lamp**—Ford No. B-13752A (All models).  
**Stop Lamp**—Ford No. 48-13480 (Pass. Car & Comml.), BB-13480A (Truck).

### Switches—1938

**Lighting**—Wiring & Plate Assy. Ford No. 81A-11647 (Pass. Cars), 81C-11647 (Comml.), 81T-11647 (Truck). Switch Body & Contact Assy. Ford No. 81A-11657 (All models).  
**Beam Selector**—Ford No. 81A-11657  
**Instrument Light**—Ford No. 50-13740  
**Stop Light**—Ford No. 48-13480 (Pass. Car & Comml.), 81T-13480 (Truck).

## MISC. ELECTRICAL

**FUSES:**—Fuse Block—R.B.M. Model 40-12250. Ignition resistor unit mounted on assembly.

**Fuse Capacity**—20 ampere.

**HORNS:** Sparton. Vibrator type.

**Horn Relay:** Ford No. 81A-13842.

**Contact Closing Voltage**—3.5-4.5 volts.

**Current Draw**—Approximately ¾ ampere.

## ENGINE

**ENGINE THUMP OR POUND CORRECTION:**—Refer to *Ford Shop Notes* for data on installation of special Starter Support Brace.

**ENGINE SPECIFICATIONS:**—Own Model 60. Eight cylinder, 90° Vee, 'L' head type.

**Bore**—2.6". **Stroke**—3.2".

**Displacement**—136 cu. ins. **Rated H.P.**—21.6.

**Developed Horsepower**—60 at 3500 RPM.

**Compression Ratio**—6.6-1 Std. aluminum head.

**Compression & Vacuum Reading**—See *Tune-Up*.

**CYLINDER HEAD TIGHTENING:** See *Ford Shop Notes*.

**PISTONS:** Cast alloy steel, cam ground type.

**Weight**—226-231 grams (stripped), 302.65 grams (with rings and pin).

**Removal**—Pistons and rods removed from above.

**Clearance**—See *Fitting New Pistons*.

**Replacement Pistons:**—See *Ford Special Shop Notes*.

**Fitting New Pistons:**—Use .002" feeler inserted between piston and wall at right angles to pin bosses. Pull required to withdraw feeler must be within 7-12 lbs. **NOTE**—On engines with inserted hardened sleeves, use .0025" feeler with 7-12 lbs. pull.

**PISTON RINGS:**—Two compression, one oil control ring per piston, all above pin. Oil ring groove drilled with oil drain holes. Replacement rings furnished standard and .005", .010", .020", .025" oversize.

Ring	Width	End Gap	Side Clearance
Compr. #1	.092-.0925"	.012-.017"	.0025-.003"
Compr. #2	.092-.0925"	.012-.017"	.002-.0025"
Oil Cont	.1545-.155"	.012-.017"	.0015-.002"

**PISTON PIN:**—Diameter—.6876-.6879". Length—2.365-.2368". Pin floats in piston and rod. Held by locking ring at each end. Pin hole in rod bronze-bushed.  
**Pin Fit in Piston**—.0004" clearance.  
**Pin Fit in Rod Bushing**—.0001" clearance. Bushing diamond-bored to diameter of .6878-.6881".  
 See *Ford Shop Notes* for Pin Fitting directions.

**CONNECTING ROD:**—Length 6.125". Weight 268-272 grams. Lower Bearing Diameter—1.800".

**Crankpin Journal Diameter**—1.599".

**Bearing Type**—Steel-backed, special alloy-lined. Bearing floats in both rods (side-by-side mounting) with bearing surface on inner and outer faces.  
**Bearing Dimensions**—Length 1.535". Thick .09995".  
**Clearance**—.0005-.0025" (total diametrical), .010-.022" (total sideplay).

**Bearing Adjustment:**—None (no shims). Replace bearings. Do not file caps. Bearings must turn freely with caps tight. Use special tool to check bearings.

**Replacement Bearings:**—See *Ford Shop Notes* for Bearings for Oversize Rods and undersize crankpins.

**Installing Rods:**—Rods and caps marked 'R1', 'L1' etc. Install rods in same numbered cylinders with marks on rods and caps together, pointing down.

**CRANKSHAFT:**—Cast-steel. Three bearing type with integral counterweights.

**Journal Diameters**—1.999" (all bearings).

**Bearing Type**—Steel-backed, babbitt-lined.

**Clearance**—.0005-.0025".

**Bearing Adjustment:**—None (no shims). Replace bearings. Do not file bearing caps.

**End Thrust:**—Taken by #3 (rear) main bearing. Endplay .002-.005". Adjust by replacing bearing.

**Replacement Bearings:**—See *Ford Shop Notes* for Undersize and special long rear bearings.

**CAMSHAFT:**—Three bearing. Helical gear driven.

**Journal Diameters**—1.498" (all bearings).

**Bearings**—Steel-backed, babbitt-lined bushings.

**Clearance**—.002".

**End Thrust:**—Taken by gear hub and front bearing and by gear hub and cover plate. Endplay .004-.008". Adjusted by replacing bearing or cover plate.

**Timing Gears:**—Crankshaft gear cast alloy-steel.

**Camshaft gear** Bakelized fabric.

**Camshaft Setting:**—Mesh crankshaft gear tooth marked '0' with camshaft gear space marked '1'. Camshaft gear hub similarly marked and both marks must be in line.

VALVES:	Head Diameter	Stem Diameter	Length
All valves	1.281"	.2785-.2795"	4.375"

	Seat Angle	Lift	Stem Clearance
All valves	45°	.251"	.0015-.0035"

**NOTE**—Valve Seat Inserts used for Exhaust Valves.

See *Ford Special Shop Notes* for Valve Servicing data.

**Valve Guides:**—Split type. See Valve Assembly Removal.

**Valve Lifters:**—Alloy iron type operating in reamed holes in block.

**Diameter**—.8290-.8295". **Clearance**—.0005-.001".

**Valve Springs:**—See Valve Assembly Removal.

	Spring Pressure	Spring Length
Valve Closed	26-30 lbs.	2.05"
Valve Open	48-52 lbs.	1.80"

**Valve Assembly Removal:** See *Ford Shop Notes*.

CONTINUED N NEXT PAGE

CONTINUED FR M PRECEDIN PAGE

**VALVE TIMING**

**Tappet Clearance:** .011-.012" All Valves. No adjustment. Replace valves if clearance excessive, grind off end of valve stem if clearance insufficient.

**Valve Timing:**—See Camshaft Setting above.

**Intake Valves—**Open 9°30' BTDC, Close 54°30' ALDC.  
**Exh. Valves—**Open 57°30' BLDC, Close 6°30' ATDC.  
**To Check Valve Timing:**—No flywheel marks provided. If dead center point for any cylinder established on flywheel, intake valve for this cylinder should open approximately 3.22 flywheel teeth before this point with piston .0270" BTDC.

**LUBRICATION**

**LUBRICATION:**—Pressure system. Gear type oil pump mounted on front main bearing cap in crankcase. Bakelite drive gear meshes with crankshaft gear. Normal Oil Pressure—30 lbs. at 2000 RPM.

**Oil Pressure Regulator—**Opens at 30 lbs. Located above front camshaft bearing between cylinder banks. Overflow from valve oil timing gears. Not adjustable.

**Crankcase Capacity—**4 qts.

**Oil Pressure Gauge:**—King-Seeley Electric. Ford No. Dash Unit—No. 78-9273 (1937), 81A-9273-A (1938) Engine Unit—No. 48-9278 (1937-38)

**NOTE:**—Dash unit serviced by 81A-9273-A (1938) See Miscellaneous Section for complete data.

**COOLING**

**COOLING SYSTEM:**—Water Pump—Centrifugal, packless type, 2 used (1 pump for each cylinder bank). See Water Pump Section for complete data.

**Removal:**—Slack off belt adjustment, unscrew large mounting nut behind pulley, pull pump out.

**Thermostat:**—In outlet hose for each bank (2 used).

**Water Capacity:** 15 qts. (1937-38 Pass. Cars, 1937 Comm'l.), 16 qts. (1938 Comm'l.), 24 qts. (Truck).

**CLUTCH****PASSENGER CARS**

**Long Model 8½CB-CS6.** Single plate, dry disc type. **NOTE:**—Model 9CF-CS Optl. on 1938 Sedan Delivery. See Clutch Section for complete data.

**Facings:**—Molded type, 2 required. Inside diameter 6". Outside diameter 8½". Thickness .125".

**Adjustment:**—Clutch pedal free travel should be ¾-1". To adjust, remove clevis pin at end of clutch pedal adjusting rod, turn clevis on rod.

**Removal:**—Disconnect rear spring at frame connection in center, rear shock absorber links, rear brake cables, speedometer cable. Support engine, take out rear engine mounting bolts, take out clutch housing mounting screws, slide drive unit (transmission and rear end) to rear to expose clutch. Take out clutch mounting screws in cover flange on flywheel.

**CLUTCH****COMMERCIAL & TRUCKS**

**Long Model 9CF-CS.** Semi-centrifugal, single plate, dry disc type.

See Clutch Section for complete data.

**Facings:**—Molded (asbestos composition) type, 2 required. I. D. 5¾". O. D. 9". Thickness .137".

**Adjustment & Removal:**—Same as for Model 74 (above) except that pedal travel should be 1.5-1.75". **Truck Models with Front Propeller Shaft:**—On these models it is not necessary to disturb rear axle.

**TRANSMISSION****3-SPEED TYPE**

**Own Make—Std. on All Models except 1937 Truck.** Constant-mesh, synchro-mesh, helical gears (Second & High), sliding gear (Low & Reverse). Low and Reverse gears are spur type except on 1938 Pass Cars (82A). **NOTE:**—Four-speed Transmission Optl. on Commercial Models (1937-38), Truck (1938). See Transmission Section for complete data.

**Removal:**—Disconnect rear shock absorbers and brake cables, disconnect rear spring at frame connection in center, disconnect speedometer drive cable. Take out universal joint ball housing screws, slide rear end back to disengage drive shaft at splined joint of universal yoke. Support engine, take out rear engine mounting bolts, take out clutch housing screws, pull transmission straight back.

**TRANSMISSION****4-SPEED TYPE**

**Own Make—Std. on 1937 Truck Model 75, Optl. on 1938 Truck & 1937-38 Commercial Models.** Sliding spur gear type.

See Transmission Section for complete data.

**Removal:**—Take out all except top bolt in intermediate universal joint ball housing (frame bolts), remove all screws in front universal joint cover, slide cover back 6" on housing, take out screws in universal joint flange directly back of universal, disengage by pushing flange back on shaft against spring, take out remaining bolt at intermediate universal, pull shaft down at front to clear frame cross-member, pull forward until intermediate universal is free of shaft at spline joint, remove shaft assembly. Support engine, remove rear engine mounting bolts, take out clutch housing mounting screws, pull transmission straight back and remove.

**UNIVERSALS**

**Spicer.** Steel Bushing Type (except Truck Model 75), Needle Bearing Type (75 '37). Single universal mounted in housing at rear of transmission case (all models), intermediate universal mounted on frame cross-member between front and rear propeller shafts (trucks only).

See Universals Section for complete data.

**REAR AXLE****PASS. CARS & COMMERCIAL**

**Own Make.** 3/4 Floating, spiral bevel gear type with straddle mounted pinion and torque tube drive.

See Rear Axle Section for complete data.

**Ratio:**—4.44-1 Std., 4.11-1 & 4.55-1 Optl.

**Backlash:**—.010" maximum. Adjusted by changing gasket thickness between axle housing and differential housing.

**Removal:**—Disconnect rear shock absorber links, rear brake cables, speedometer cable, and rear spring center connection on frame. Take out universal joint ball housing screws, pull axle assembly to rear to disengage drive shaft at splined joint in universal joint rear yoke.

**Axle Shaft Removal:**—Remove wheels and wheel hubs, take out axle housing flange screws in differential housing, remove housing, dismantle differential, pull axle shafts out at inner end (shaft and differential side gear integral).

**Wheel Bearing Adjustment:**—None.

**REAR AXLE****TRUCKS**

**Own Make.** Full-floating, spiral bevel gear type with straddle mounted pinion and torque tube drive.

See Rear Axle Section for complete data.

**Ratio:**—6.67-1 Std., 5.14-1, 5.83-1 Optl.

**Backlash:**—.004-.016".

**Removal:**—Same as for passenger car models (above) except that rear springs are semi-elliptic and drive shaft is disconnected at intermediate universal. **Axle Shaft Removal:**—Remove rear wheel hub cap, take off nuts on eight hub studs which hold axle flange in place, install two special screws in tapped holes in flange, turn screws up evenly to break flange away from hub, back screws off, strike axle shaft flange at center to loosen cones on studs, remove cones, pull axle shaft out (does not disturb wheel bearing adjustment).

**Wheel Bearing Adjustment:**—Remove axle shaft (see above), unscrew outer bearing nut, remove adjusting nut retainer and grease retainer. Use special bearing adjusting wrench, turn inner adjusting nut up tight and then back off ½ turn, install retainer, grease retainer, outer bearing nut, turn outer nut up tight.

**SHOCK ABSORBERS**

**SHOCK ABSORBERS:**—Ford (Houde). Hydraulic type. See Shock Absorber Section for complete data.

**FRONT SUSPENSION**

SEE 1937-38 FORD V8 "85" CAR PAGES FOR DATA

**STEERING GEAR**

**Steering Gear:** Gemmer Model 305. Worm-and-Roller type with "push-pull" adjustments.

See Steering Gear Section for complete data.

**BRAKES**

**Service Brakes:**—Four wheel type. Own make, mechanical, two shoe, self-energizing type. New design with cable actuation for all wheels. Hand lever applies all four service brakes (131" Truck has separate hand brake band in each rear wheel).

See Brake Section for complete data.

**PASS. CARS & COMMERCIAL**

**Drum Diameter—**12". Cast iron alloy type.

**Lining—**Two types used. May be identified by brass wire (primary shoe), zinc wire (secondary shoe). (1937 models), Molded type—Primary Shoe, Woven type—Secondary Shoe (1938 models). Width 1.75". Thickness .185". Length per shoe 13.25".

**Hand Brake:**—See Service Brakes above.

**ONE-TON TRUCKS**

**Drum Diameter—**Cast Iron. 12" (front), 15.12" (rear wheel).

**Lining—**Width 1.75" (front), 2.5" (rear). Thickness .185" (front), .25" (rear). Length per shoe 13.25" (front), 18.41" (rear).

**Hand Brake:** See Service Brakes above.

**OTHER TRUCKS**

**Drum Diameter—**14". Cast iron type.

**Lining—**Brass wire type (all shoes). Width 2.5". Thickness .25". Length 17.5" per shoe.

**Hand Brake:**—Applies independent self-energizing band in each rear wheel.

**Lining—**Brass wire type. Width 1.5". Thickness .187". Length 41.12" per wheel.

**OIL PAN REMOVAL:**—See Ford Shop Notes.

### MODEL IDENTIFICATION

Model	Year	Body Type
77	1937	Commercial Chassis
78	1937	Passenger Cars
79	1937	Truck (131½" & 157" WB)
81A	1938	Passenger Cars
81C	1938	Commercial Chassis
81Y	1938	1 Ton Truck (122" WB)
81T	1938	1½ Ton Truck (134" WB)
817T	1938	1½ Ton Truck (157" WB)
81U	1938	Dump Truck (134" WB)
81W	1938	C-O-E Truck (134" WB)
811W	1938	C-O-E Truck (101" WB)
811Z	1938	C-O-E Dump Trk (101" WB)
811T	1938	School Bus (191" WB)
817W	1938	C-O-E Truck (157" WB)

**SERIAL & ENGINE NUMBER:**—Stamped on top of clutch housing and on left frame side member in front of dash bracket.

### TUNE-UP

**COMPRESSION:** Ratio—6.2-1 Cast iron or Aluminum. Pressure—140 lbs. at 2300 RPM or 113 lbs. at cranking speed of 100 RPM.

**VACUUM READING:**—18-20" steady at 5-7 M.P.H.

**FIRING ORDER:** 1-5-4-8-6-3-7-2. See diagram for cylinder numbering and spark plug cable connections.

**SPARK PLUGS:** Champion No. 18. 18 mm. Metric (1937), Type H-10. 14 mm. Metric type (1938). Gaps—.025"

**IGNITION:** See Coil, Condenser, and Distributor. Breaker Gap—.014-.016" Cam Angle 36° (closed—both sets operating together). Automatic Advance—8° max. at 950 RPM (distr.).

**IGNITION TIMING:** See Ignition Timing. Std. Setting—4° BTDC. No flywheel marks provided. See Ignition Timing for method of setting ignition and also Vacuum Brake Adjustment.

**CARBURETION:** See Carburetor & Carb. Equipment. Idle Setting—Both idle screws ⅝-¾ turn open (Stromberg Carb.), ⅞ turn open (Chandler-Groves Carb.). Idle speed 5-7 MPH.

**Float Level:**—Fuel level 15/32" (Stromberg Carb.), 11/16" (Chandler-Groves Carb.) below top of bowl.

**Accelerating Pump (Stromberg)**—Inner hole—Summer, Outer hole—Winter.

**Accelerating Pump (Chandler-Groves)**—Center hole Normal. Inner hole (Summer), Outer hole (Winter) for extreme hot and cold temperatures.

**Fuel Pump Pressure:** 3½ lbs. maximum.

**VALVES:** See Valve Timing. Tappet Clearances—.010-.012" Intake, .014-.016" Exhaust. No adjustment.

**STARTING:** See Battery, Starter, Generator, and Regulator (when used).

### IGNITION

**Ignition Switch:** Oakes Hershey type co-incidental ignition switch and steering post lock.

**1938 Switch:**—Oakes Steering Column & Ignition Lock Assembly No. 301665, Ford No. 81A-3676 (Pass. cars); No. 301685, Ford No. 81C-3676 (Comm'l. & 1 Ton); No. 301675, Ford No. 81T-3676 (Trucks). Ignition Switch No. 301683 (all models).

**Lock Cylinder:**—Hurd or Briggs & Stratton No. 80000,

Ford No. 81A-3686-A (with 2 keys), Key Series FJ000 -FJ999, FX000-FX999. Groove No. 17.

**COIL:** Ford No. 78-12036 or 81A-12036. Mounted on top of distributor as part of ignition unit assembly. **Resistor Unit:**—On 40-12250 Fuse Block on dash. Connected in coil primary circuit. **Ignition Current:**—4½-6 amperes (stopped). **Ignition primary circuit resistance:**—1-1 1/3 ohms.

**CONDENSER:** Ford Part No. 78-12300 (78-12036 Coil), 81A-12300 (81A-12036 Coil). **Capacity:**—33-36 microfarad.

**DISTRIBUTOR:** Ford No. 78-12127 (less ignition coil, and distributor plates). Double breaker, 8 lobe cam, full automatic advance type with Vacuum Brake Control (See Ignition Timing for adjustment). **REPLACEMENT DISTRIBUTOR:**—Model No. 11A-12127 with different advance. See 1941 Ford V8 Passenger Car article for all data on this model.

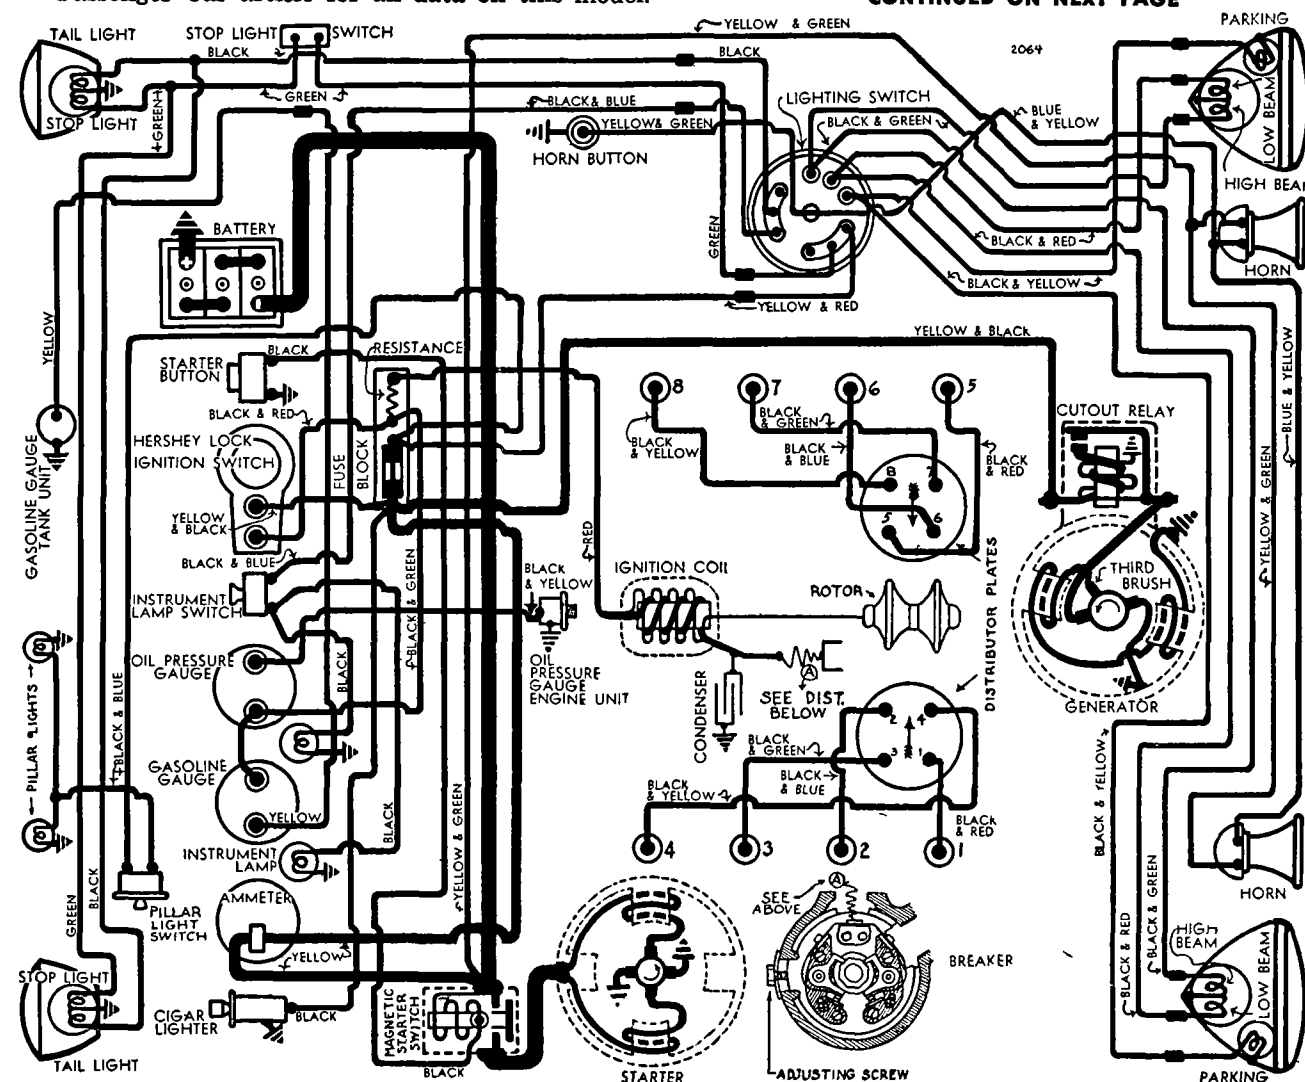

**Breaker Gap:**—.014-.016" (both sets). Use special two step feeler—.014" step 'go,' .016" step 'no g.' **Cam Angle:**—36° closed, 9° open. For both sets operating together with correct coil-loading lead. **Breaker Arm Spring Tension:**—20-24 ozs. **Rotation:**—Clockwise viewed from drive end.

**Automatic Advance**  
(High Vacuum or Vacuum Brake Inoperative)

Distributor	R.P.M.	Engine	R.P.M.
Degrees Start	200	Degrees 0	400
2	300	4	600
3	375	6	750
5	600	10	1200
8	950	16	1900

**Removal:**—Ignition unit mounted on front of engine. To remove, disconnect vacuum line, take off caps, take out screws in mounting flange.

CONTINUED ON NEXT PAGE

1937 MODELS

C NTINUED FR M PRECEDIN PAGE  
IGNITION TIMING

**IGNITION TIMING:**—For each engine as follows (see Vacuum Brake Setting below for adjustment depending on type of service and fuel used).

**Flywheel Degrees Piston Position**  
All '85' Engines ..... 4° BTDC ..... 0058° BTDC.

**To Set Timing:**—No flywheel marks provided and timing should be set with piston on top dead center. With #1 piston on top dead center entering power stroke, loosen timing adjusting screw on left hand side of ignition unit housing, place screw in retard position at lower end of slot, move screw slowly up until timing contacts begin to open, note graduation on plate under screw head which is in line with reference mark on housing, move screw up exactly one additional graduation, tighten screw. This provides correct 4° BTDC. ignition timing.

**NOTE:**—Dead center position can be determined by inserting gauge rod in cylinder or by measuring to tops of #2 and #3 pistons (should be equal).  
**Vacuum Brake Setting:**—To adjust, loosen locknut, back off adjusting screw until engine 'pings' under load, turn screw in just enough to eliminate ping. If adjusted on Stroboscope, vacuum brake should retard spark to peepsight (set at 2°) at 950 RPM. (78-12127 Distr.), 650 RPM. (11A-12127 Distr.).

### CARBURETOR

**Stromberg Model No. EE-1, Ford No. 67-9510-A or Holley (Chandler-Groves) Model AA-1, Ford No. 91A-9510A.** Dual (double barrel) downdraft type. **NOTE:**—Model 91A-9510A replaced by 21A-9510A.

**For complete data, refer to Carburetor Index.**  
**Idle Adjustment:**—With engine warm, choke valve wide open, and Fast Idle inoperative, set throttle lever stopscrew for 5-7 MPH. idling speed, turn each idle adjusting screw (one for each barrel, adjust in

succession) in until engine begins to miss, out until engine begins to roll, finally turn screw in slowly until engine fires smoothly. Final setting should be approximately  $\frac{5}{8}$ - $\frac{3}{4}$  turn (Stromberg),  $\frac{7}{8}$  turn (Chandler-Groves) from inner seated position. Re-adjust stopscrew for correct idling speed.

**NOTE:**—Vacuum gauge recommended for idling adjustment. Set for highest steady gauge reading.  
**Accelerating Pump Setting (Stromberg):**—Two ball studs provided for pump link connection:

'S'—Minimum Stroke, Summer operation.  
'W'—Maximum Stroke, Winter operation.

**Accelerating Pump Setting (Chandler-Groves):**—Three holes provided for pump link connection:

Upper (Short Radius)—Min. stroke, Hot weather.  
Center—Medium stroke, normal temperatures.

Lower (Long Radius)—Max. stroke, Cold weather.

**NOTE:**—Link locked in pump rod by snap-lock. Pull link shaft out of pump rod to disengage lock.

**Fast Idle (All Models):**—Integral with carburetor. Operated by choke lever. No adjustment required.

### CARB. EQUIPMENT

**Air Cleaner:** AC No. 1528237 Std., 1528395 Exp. Oil-wetted type. United or Donaldson heavy duty oil-bath type Optl.

**Gasoline Gauge:** King-Seeley Electric type. Ford No. Dash Unit—78-9280 (1937 All Models), 81A-9280A (1938 Std. Pass. Cars, Comm'l. & Trucks), 81A-9280B (1938 Deluxe Pass. Cars).

**Tank Unit:** 78-9275 (1937-38 Pass. Cars & Comm'l.), 79-9275A (1937 First 2500 Trucks), 79-9275B (1937-38 Trucks after first 2500), 70-9275 (Bus).

**For complete data, refer to Carburetion Equip. Index.**

**Fuel Pump:** AC Type R, No. 1523138 (1937), 1523307 Ford No. 68-9350 (1938). Diaphragm type.

**For complete data, refer to Carburetion Equip. Index.**

### BATTERY

Ford No. 78-10665-A (1937), 81A-10665-A (1938). 6 volt, 17 plate, 100 ampere hour (20 hr. rate).

**Starting Capacity:**—128 amperes for 20 minutes.

**Zero Capacity:**—300 amperes for 3.3 minutes.

**Grounded Terminal:**—Positive (+) terminal grounded to dash. **Engine Ground:**—Ground strap between right rear cylinder head stud and dash.

**Location:**—Battery mounted in cowl recess on right hand side under engine hood.

### STARTER

Ford No. 18-11002. Armature No. 18-11005.

**Starter Brace** (to correct thumps or pounds)—See Ford Special Shop Notes for corrective data.

**Drive:**—Inboard Bendix L11FX-10, Ford #B-11350.

**Rotation:**—Counter-clockwise at commutator end.

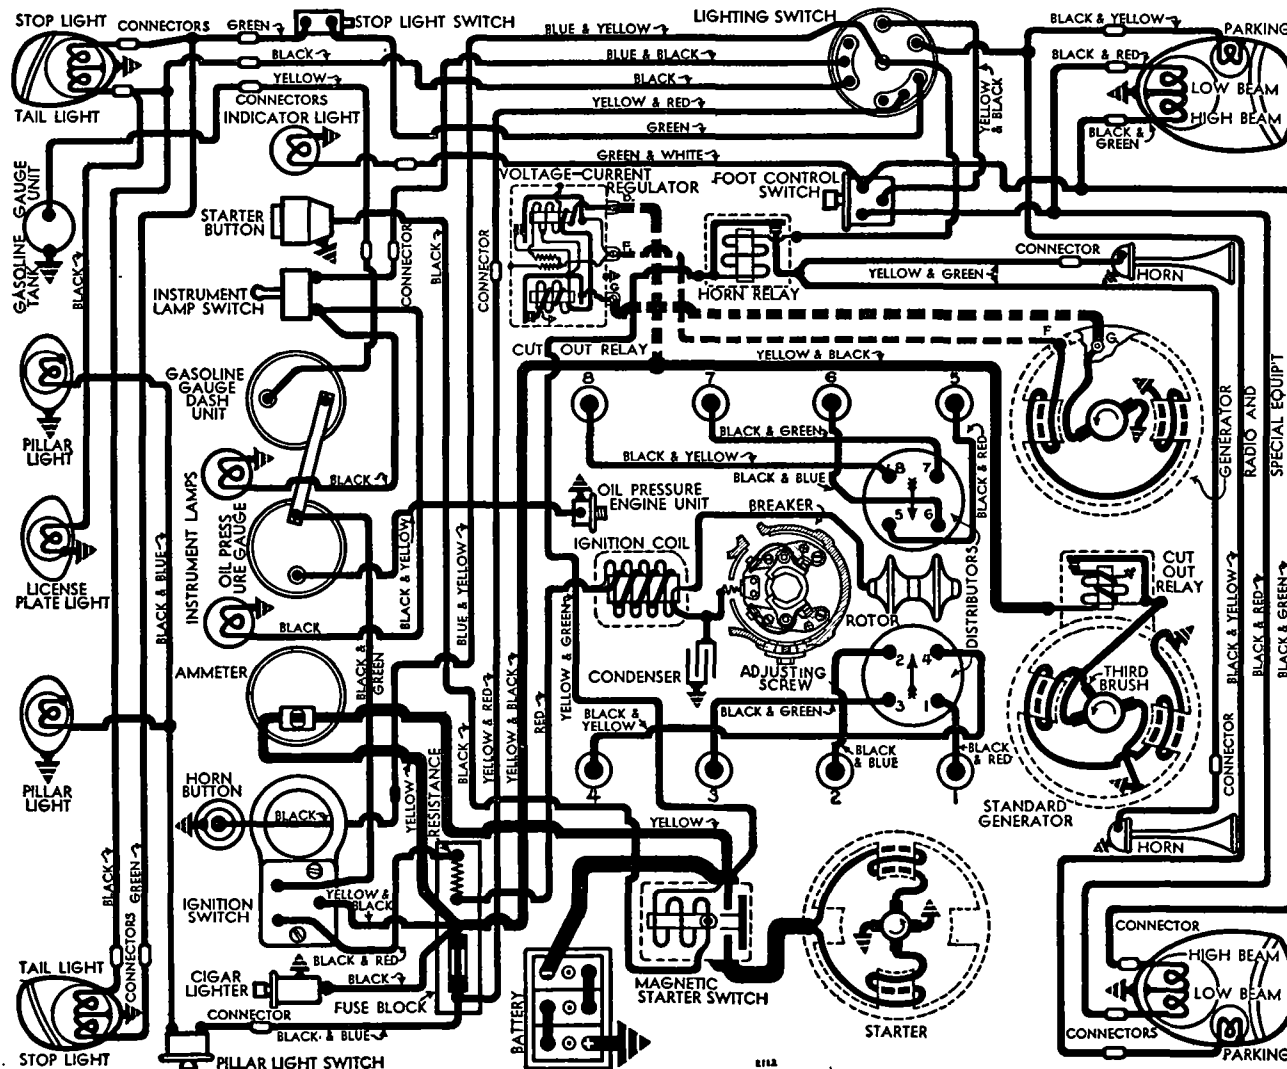

**Brush Spring Tension:**—2 lbs. each.

**Cranking Engine:**—100 RPM., 190-215 amperes.

Performance Data			
Torque	R.P.M.	Volts	Amperes
4 ft. lbs.	1070	4.6	200
8 "	660	4.3	340
12 "	300	3.65	465
14 "	Lock	3.5	500

**Starting Switch:**—R.B.M. Model 2220, Ford No. 78-11450. Magnetic type mounted on right side of engine dash above starter. Controlled by pushbutton switch on instrument panel, Ford No. 78-11500 (1937), 81A-11500 (1938).

**Removal:**—Starter mounted on right front face of flywheel housing. To remove, take off pan at right of engine, remove through bolts on comm. endplate.

1938 M DELS

**GENERATOR****STANDARD**

**GENERATOR (STD):**—Third brush control type. Air-cooled. Various models used as follows:

1937 Car & Truck Models		
Generator	Armature	Pulley Diam.
① 40-10000-B	18-10005	4.38"
79-10000-B	79-10005-A	Double 4.68"
② 78-10000-HA	78-10005-HA	4.38"
④ 78-10000-HB	78-10005-HB	3.68"
③ 78-10000-HC	78-10005-HB	4.38"
⑥ 79-10000-HA	79-10005-HA	Double 4.68"

Start.....	525	Start.....	525
26.....	1300	18.....	850
16.....	2500	16.....	2500

**NOTE:**—If generators do not test up to these "Performance Stds." they should be overhauled.

**Rotation:**—Counter-clockwise at commutator end.

**Field Current:**—4.5-6.0 amperes at 6 volts (1.0-1.22 ohms resistance) for 40-10000-B, 81A-10000-A, 79-10000-B; 3.43-4.17 amperes at 6.0 volts (1.44-1.75 ohms resistance) for all other generators.

**Removal:**—Generator mounted on bracket at front of engine between cylinder banks with fan mounted on forward end. Driven in tandem with two water pumps by Vee Belt. To remove, take off nut on bracket stud.

**Belt Adjustment:**—Loosen nut on bracket flange mounting stud, move generator up until total side movement on belt midway between generator and water pump pulleys is 1", tighten nut.

**GENERATOR****SPECIAL EQUIPMENT**

**GENERATOR (RADIO & SPECIAL EQUIP.):**—Two brush type with vibrating Voltage and Current Regulation. Air-cooled. Models used as follows:

'85" Car & Truck Models	
81A-10000-D	78-10005-A.C.....4.2"
81A-10000-E①	78-10005-B.D.....4.2"

'85" Truck Models	
81T-10000-A	78-10005-A.C.....Double 4.5"
81T-10000-B①	78-10005-B.D.....Double 4.5"

①—Low Speed (Taxi, Door-to-door Delvry, etc.)

**Charging Rate Adjustment:**—No adjustment provided. See Regulator Section below.

**Maximum Charging Rate:**—Controlled by regulator (dependent on battery condition and load). To check generator capacity, disconnect field lead at generator, connect both generator terminals together (use short insulated wire), use 'BRS' set or rheostat connected across battery terminals to apply load until voltage is exactly 6 volts. Operate generator at 1000 R.P.M., check output with ammeter connected in charging line. After making test, restore original connections, do not operate generator with terminals connected together (this eliminates all regulator action).

**Performance Data.**

Amperes	Eng. R.P.M.	Amperes	Eng. R.P.M.
Start.....	350	Start.....	350
20.....	1000	20.....	1050

**Rotation:**—Counter-clockwise at commutator end. **Field Current:**—1.82-2.22 amperes at 6.0 volts (2.7-3.3 ohms resistance) for all models.

**Removal & Belt Adjustment:** Same as Std. (above). **SPECIAL GENERATORS:**—Other Makes—Refer to Electrical Equipment Index for "Special Generator" article for complete data on special Generators and Regulators

**CUTOUT RELAY**

**CUTOUT RELAY:**—No. B-10505 (On all Std. Generators above). Mounted on generator with field lead grounded to mounting screw.

**Cuts In:**—7 volts, 10 M.P.H.

**Cuts Out:**—3 ampere maximum discharge.

**Contact Gap:**—.015-.020".

**Air Gap:**—.010-.015" with contacts closed.

**REGULATOR**

**REGULATOR:**—Ford No. 81-A-10505. Used on Special Generators (above). Consists of Vibrating Voltage-and-Current Regulator and Cutout Relay in case on dash. **NOTE:**—This type superseded by 01A-10505-C. For complete data, refer to Electrical Equipment Index.

**Cutout Relay.**

See Standard model above.

**Voltage-and-Current Regulator.**

**Voltage Setting:**—7.6 volts max. at 70° F.

**Current Setting:**—30 amperes (81-82-A-10000-D; 81-T-10000-A Generators), 23 amperes (81-82-10000-E; 81-T-10000-B Generators).

**Regulator Checking:**—See article in Electrical Equipment Section for complete directions.

**LIGHTING**

**LIGHTING:**—Headlamps. Corcoran-Brown "Two-Lite", Pre-focused type. Upper and lower beams controlled by lighting switch (1937), Beam Selector Switch on toeboard (1938).

**Headlamp Adjustment:**—Aim each headlamp straight ahead so that upper beam is centered on vertical line directly ahead of the lamp and upper edge of beam at lamp-center height at 25 feet (Pass. Car). **Beam Indicator:**—Red Jewel at upper left corner of instrument panel. Lighted with upper beams on.

**Switches—1937**

**Lighting:**—R.B.M. Ford No. B-11657 (Switch Body), B-11655-B (Lower Cover). Complete Switch furnished only as an assembly with wiring harness as follows: 78-11653 (Pass. Cars), 77-11653A (Comm. Std.), 77-11653B (Comm. Del.), 79-11653A (Truck Std.), 79-11653B (Truck Del.).

**Instrument:**—Ford No. 78-13740 (Pass. Cars), 50-13740 (Comm. & Truck).

**Dome Lamp:**—Ford No. B-13752A (all models).

**Stop Lamp:**—Ford No. 48-13480 (Pass. Cars & Comm.), BB-13480A (Truck).

**Switches—1938**

**Lighting:**—R.B.M. Ford No. for Wiring & Plate Assembly as follows: 81A-11647 (Pass. Cars), 81C-11647 (Comm.), 81T-11647 (Trucks).

**Lighting (C-O-E):**—No. 81W-11653 (Switch & Wiring).

**Switch Body & Contact Assem.**—81-A-11657 (all).

**Beam Selector:**—Ford No. 81-A-13532.

**Instrument Light:**—Ford No. 50-13740.

**Stop Light:**—Ford No. 48-13480 (Pass. & Comm.), 81-T-13480 (all trucks).

Bulb Specifications		
Position	Candlepower	Mazda No.
Headlamps	32-32	2330
Parking (Cars), Indicator	1	51
Parking (Others), Instrmt.	3	63
Stop & Tail	21-3	1158
Pillar	3	63
Dome Light (Comm.)	15	87

**NOTE:**—Parking lamps for 1937 (except Truck) were 1½ cp., Mazda No. 55.

**MISC. ELECTRICAL**

**FUSES:**—Fuse Block, R.B.M. Model, Ford No. 40-12250. Mounted on dash (with Ignition Resistor).

**Fuse Capacity:**—20 amperes (on fuse block).

**HORNS:**—Twin Horns Std. on Passenger car models (Vibrator type 1937, Air Electric type operated by horn relay 1938). Single horn (vibrating type) Std. on Comm. and truck models. Twin horns are blended tone (R.H. Horn High Note, L. H. Horn Low Note). **Horn Relay:**—Ford Part No. 81A-13842.

**ENGINE**

**ENGINE THUMP OR POUND CORRECTION:**—Refer to Ford Shop Notes for data on installation of special Starter Support Brace.

**ENGINE SPECIFICATIONS:**—Own Model 85. Eight cylinder, 90° Vee, 'L' head type.

**Bore:**—3.062". **Stroke:**—3.75".

**Piston Displacement:**—221 cubic inches.

**Rated Horsepower:**—30.

**Developed Horsepower:**—85 at 3800 R.P.M.

**Compression Ratio:**—6.2-1 Std. head.

**NOTE:**—Aluminum head superseded by cast-iron head with same compression ratio.

**Compression Pressure:**—140 lbs. at 2400 RPM. (aluminum Head), 145 lbs. at 2400 RPM. (Cast Iron Head) or 113 lbs. at cranking speed of 100 RPM.

**Vacuum Reading:**—18-20" steady reading with engine idling at 5-7 M.P.H.

**Replacement Rings:** See *Ford Shop Notes*.**PISTON PIN:**—Diameter—.7501-.7504". Length—2.847-2.850". Pin floats in rod and piston. Held by locking ring at each end. Pin hole in rod is bronze-bushed. Pin fit in Piston—.0001-.0002" clearance (aluminum pistons), .0003-.0009" clearance (steel pistons) or light hand push fit with piston at 70°F. Pin fit in Rod Bushing—.0002-.0005" clearance (pin should pass through bushing slowly of own weight). See *Ford Shop Notes for Pin Fitting directions*.**Replacement Pins:** See *Ford Shop Notes*.**CONNECTING ROD:**—Length 7". Weight 451-455 grams. Crankpin Journal Diameter—1.999" (connecting rod diameter on crankpin—2.220").**Bearing Type**—Steel-backed, special alloy-lined. Bearing floats in both rods (side-by-side mounting) with bearing surface on inner and outer faces.**Bearing Dimensions**—Length 1.933". Thick. .1095". **Clearance**—.0015-.0035" (see Bearing Adjustment). **Sideplay**—.003-.007" (bearing endplay), .006-.014" (side clearance for both rods).**Bearing Adjustment:** None (no shims). Do not file bearing caps. Replace bearings if less than .1085" thick, replace or hone rods for oversize bearings if worn more than .0015" over original size of 2.2195-2.2200". CAUTION—Both rods must be same size.**Replacement Bearings:** See *Ford Shop Notes*.**Installing Rods:**—Rods and caps marked 'R1', 'L1' etc. Install rods in same numbered cylinders with marks on rods and caps together and pointing down.**CRANKSHAFT:**—Cast-steel, three bearing type with integral counterweights. Weight 63.5 lbs. **Journal Diameters**—2.399" (all bearings).**Bearing Type**—Steel-backed, babbitt-lined. **Clearance**—.001-.003".**Bearing Adjustment:**—None (no shims). Replace bearings. Do not file bearing caps.**End Thrust:**—Taken by #3 (rear) main bearing. Endplay .002-.006". Adjusted by replacing bearing.**Replacement Bearings:** See *Ford Shop Notes*.**CAMSHAFT:**—Three bearing. Helical gear drive.**Bearing Diameters**—1.797" all bearings. Replace camshaft if worn to less than 1.7955" diameter.**Bearings**—Steel-backed, babbitt-lined bushings.**Clearance**—.002".**End Thrust:**—Taken by gear hub and front bearing and by hub and cover plate. Endplay .005". Adjusted by replacing bearing or cover plate.**Timing Gears:**—Crankshaft gear cast alloy-steel. Camshaft gear Bakelized fabric.**Backlash**—.004" maximum.**Camshaft Setting:**—Mesh crankshaft gear tooth marked '0' with camshaft gear space marked '/'. Camshaft gear hub similarly marked and both marks should be in line.

VALVES:	Head Diam.	Stem Diam.	Length
All valves ..... .1537"	..... .3105-.3115"	..... .4750-.4751"	

	Seat Angle	Lift	Stem Clearance
All valves ..... .45°	..... .292"	..... .0015-.0035"	

**NOTE**—Service limit for valve stem diameter is .309" Intake, .3065" Exhaust. Valves interchangeable. See *Ford Special Shop Notes for Valve Servicing data*.**NOTE**—Valve Seat inserts used for Exhaust Valves.**Valve Guides:** Split type retained by 'C' washer and valve spring. **NOTE**—Replace both halves of all guides measuring less than .6665" (thickness of guide half and valve stem at top of guide with valve of .311" stem diameter in place in guide).For *Valve Guide servicing data*, see *Ford Shop Notes*.**Valve Lifters:** Barrel type in reamed holes in block. **Diameter**—.9995". Replace if worn to less than .998" in diameter or length less than 1.710" after any necessary resurfacing of ends (cast type can be resurfaced on both ends, pressed steel type on bottom end only). **Clearance**—.0005-.0015". Lifter should slip into hole in block of own weight.

Valve Springs:	Spring Pressure	Spring Length
Valve Closed ..... .37-40 lbs.	..... .2.13"	
Valve Open ..... .76-80 lbs.	..... .1.84"	

**NOTE**—Replace spring if the pressure is less than 30 lbs. when compressed to 2.125".

**VALVE TIMING****Tappet Clearance:** .010-.012" Intake, .014-.016" Exhaust. No adjustment.**Valve Timing:** See *Camshaft Setting* above.**Early 1937****Intake Valves**—Open 9°30' BTDC. Close 54°30' ALDC**Exh. Valves**—Open 57°30' BLDC. Close 6°30' ATDC.**Late 1937 & 1938****Intake Valves**—Open at TDC. Close 44° ALDC.**Exhaust Valves**—Open 48° BLDC. Close 6° ATDC.**To Check Valve Timing**—No flywheel marks or other means provided to check timing. If dead center for any piston is established on flywheel, intake valve opening for this cylinder will be approximately 2.96 teeth before this point with piston .0327" before top dead center (Early 1937), with piston at top dead center (Late 1937 and 1938).**LUBRICATION****LUBRICATION:**—Pressure. Gear type oil pump located in crankcase at rear of engine.**Oil Pump and Oil Pressure Regulator:** See "Oil Pump" in *Ford Shop Notes for data*.**Normal Oil Pressure**—30 lbs. at 2000 RPM.**Crankcase Capacity**—5 quarts.**Oil Pressure Gauge:** King-Seeley Electric. Ford No. Dash Unit—78-9273 (1937 All Models), 81A-9273A (Std. Pass. Cars, Comm'l., Truck), 81A-9273B (1938 Deluxe Pass. Cars).**Engine Unit**—48-9278 (1937-38 all models).**NOTE**—Use dash unit Ford Part No. 81A-9273A for replacement.See *Miscellaneous Section for complete data*.**COOLING****COOLING SYSTEM:**—Water Pump—Centrifugal, packless type, 2 used (1 pump for each cylinder bank). See *Water Pump Section for complete data*.**Removal**—Slack off belt adjustment, support engine at forward end, remove front engine mounting bolts, take out mounting screws in pump body.**Thermostat:**—In outlet hose for each bank (2 used). **Drain Valves:**—One each side at bottom of radiator.**Capacity:** 22 qts. (Pass. Cars, Comm'l., 1 Ton), 25 qts. (1937 Truck), 24 qts. (1938 Truck exc. C-O-E & 1 Ton), 23 qts. (1938 C-O-E Trucks).**CLUTCH****PASS. CARS & COMMERCIAL****Long Model 9CF-CS.** Semi-centrifugal, single plate, dry disc type.See *Clutch Section for complete data*.**Clutch Facings**—Molded asbestos composition, 2 required. I.D. 5.76". O.D. 9.0". Thick. .137".**Clutch Pedal Adjustment**—Free movement of pedal must be 1½-1¾". To adjust, remove clevis pin in end of clutch pedal adjusting rod, turn clevis.**Removal:**—Disconnect rear spring at frame connection in center, rear shock absorber links, rear brake cables, speedometer cable. Support engine, take out rear engine mounting bolts, take out clutch housing mounting screws, slide drive unit (transmission and rear end) to rear to expose clutch. Take out mounting screws in clutch cover flange on flywheel, remove clutch.**CLUTCH****TRUCKS****Long Model 11CF-CS.** Semi-centrifugal, single plate, dry disc type.See *Clutch Section for complete data*.**Facings**—Molded asbestos composition, 2 required. Inside Diam. 6.5". Outside Diam. 11.0". Thick. .137".**Adjustment:**—Pedal free movement should be 1.5-1.75". To adjust, remove clevis pin at end of pedal connector rod, turn clevis on rod.**Removal:**—Disconnect front propeller shaft (coupling shaft) and remove transmission (see Transmission Removal below), take out mounting screws in clutch cover flange, remove clutch assembly.**TRANSMISSION****PASS. CARS & COMMERCIAL****Own Make.** Constant-mesh, synchro-mesh (Second & High), sliding gear (Low & Reverse), all helical gear type.See *Transmission Section for complete data*.**NOTE**—Model 67 Three-Speed Spur Gear type Transmission and Model 51 Four-Speed Spur Gear type Transmission Optl. on Commercial Models.

**Removal:**—Disconnect rear shock absorbers and brake cables, disconnect rear spring at frame connection in center, disconnect speedometer drive cables. Take out universal joint ball housing screws, slide rear end back to disengage drive shaft at splined joint of universal yoke. Support engine, take out rear engine mounting bolts, take out clutch housing screws, pull transmission straight back.

## TRANSMISSION

### 3-SPEED TYPE

**Own Make.** Model 67 (Std. 81Y), Model 70B, 70C (Optl. on Other Trucks). Constant-mesh, helical gears (Second & High), sliding spur gears (Low & Reverse). Synchro-mesh for Second & High on Model 67 only.

*See Transmission Section for complete data.*

**Removal:**—Disconnect and remove front propeller shaft (coupling shaft) as directed below. Support engine at rear end, take out rear engine mounting bolts, take out clutch housing mounting screws, pull transmission straight back and remove.

**NOTE**—Models 811-W, Z have one universal joint only (no coupling shaft used).

**Front Propeller Shaft (Coupling Shaft) Removal:**—Remove as follows: Take out all except top bolt in intermediate universal joint ball housing (at frame) remove all screws in front universal joint cover, slide cover back 6" on housing, take out screws in universal joint flange directly in back of universal, disengage by pushing flange back on shaft against spring tension, take out remaining bolt at intermediate universal, pull shaft down at front to clear cross-member, pull shaft forward until free at rear splined joint, remove shaft assembly.

## TRANSMISSION

### 4-SPEED TYPE

**Own Make.** Model 51 (Std. All Models exc. 81Y). Four-speed, all sliding spur gear type.

*See Transmission Section for complete data.*

**Removal:** Same as for 3-Speed Truck type (above).

## UNIVERSALS

**Spicer.** Steel bushing type (Pass. Cars, Comm'l., 1 Ton), Needle bearing type (Other Trucks). One universal joint mounted in rear of transmission case (all models), intermediate universal mounted on frame cross-member between front and rear propeller shafts (All Trucks with 134", 157", 191" Wheel-base).

*See Universals Section for complete data.*

## REAR AXLE

### PASS. CARS & COMMERCIAL

**Own Make.** 3/4 floating, spiral bevel gear type with straddle-mounted pinion and torque tube drive.

*See Rear Axle Section for complete data.*

**Ratio**—3.78-1 Std., 3.54-1 & 4.11-1 Optl.

**Backlash**—.010" maximum. Adjusted by changing gasket thickness between axle housing and differential housing.

**Removal:**—Disconnect rear shock absorber links, rear brake cables, speedometer cable, and rear spring center connection on frame. Take out universal joint ball housing screws, pull axle assembly to rear to disengage drive shaft at splined joint in universal joint rear yoke.

**Axle Shaft Removal**—Remove wheels and wheel hubs, take out axle housing flange screws in differ-

ential housing, remove housing, dismantle differential, pull axle shafts out at inner end (shaft and differential side gear integral).

**Wheel Bearing Adjustment:**—None. Wheel bearings retained in hub by grease retainer and lock ring.

## REAR AXLE

### TRUCKS

**REAR AXLE (STD.):**—Own Make. Full floating, spiral gear type with straddle mounted pinion and torque tube drive.

*See Rear Axle Section for complete data.*

**Ratio**—Std. 6.67-1 (except 81Y), 4.857-1 (81Y). Optl. 5.14-1, 5.83-1 (except 81Y), 4.11-1 (81Y).

**Backlash**—.004-.016".

**Removal:**—Disconnect brake cables, speedometer cable, rear springs (semi-elliptic type). Take out universal joint ball housing bolts (rear joint), pull axle assembly to rear to free splined joint, remove assembly from under truck.

**Axle Shaft Removal.** Remove wheel hub cap by taking out two screws, take off nuts on 8 hub studs which hold axle flange in place, install two special screws in tapped holes in flange, turn screws up evenly to break flange loose from hub, back these screws out and strike axle shaft flange at center to loosen centering cones on studs, remove cones, pull axle shaft out (wheel bearings not disturbed). **NOTE**—When installing axle shaft, make certain that gasket in place under shaft flange, cones in place on studs, and that the two loosening screws backed off sufficiently so that stud nuts can be securely tightened. Then turn the two loosening screw in just enough to prevent loosening in service.

**Wheel Bearing Adjustment.** Remove axle shaft (above), use special bearing adjusting wrench BB-17033-B and remove outer or bearing locknut, pull out nut retainer and grease retainer. Inner bearing adjusting nut can then be adjusted or removed. To adjust, turn nut up tight, back off 1/8 turn, install nut retainer, grease retainer and outer bearing nut, turning outer nut up tight.

**REAR AXLE GEAR CHANGE (TRUCKS):**—Ring and pinion gears have been changed from 'Generated' type to 'Formate' type. These gears not interchangeable singly (use both ring and pinion gear of same type). Formate gears stamped 'SS'.

## REAR AXLE

### SPECIAL TRUCK EQUIPMENT

**REAR AXLE (OPTL.):**—Two speed type with planetary reduction gear set built in differential case.

*See Rear Axle Section for complete data.*

**Ratio**—5.83-1 (Direct), 8.11-1 (Second speed).

**Backlash**—.006-.020".

**Removal:**—Same as for standard axle (above) except that control linkage must also be disconnected.

## SHOCK ABSORBERS

**SHOCK ABSORBERS:**—Ford (Houde). Hydraulic type.

**NOTE**—Used on front end only of Trucks.

*See Shock Absorber Section for complete data.*

## FRONT SUSPENSION

**Front Suspension:**—Conventional 'T' beam section front axle with Reverse Elliott type ends and transverse cantilever spring (exc. C-O-E Trucks), semi-elliptic springs (C-O-E Trucks). Axles positioned by radius rods at spring ends (all models with transverse spring).

**Kingpin Inclination**—8° crosswise (except C-O-E Trucks), 7° crosswise (C-O-E Trucks).

**Caster**—9° Max., 4 1/2° Min. (Pass. Cars, Comm'l., 1 Ton), 3 1/2° Max., 1° Min. (C-O-E Trucks), 5° Max., 3° Min. (All other Truck models). Must be equal for both wheels within 1/2 degree. Axle may be bent cold to correct caster provided that proper equipment (including wedges and blocks to prevent crushing axle flange) used.

**Camber**—1° Max., 1/4° Min. (all). Camber should be equal for both front wheels within 1/4° (camber for right wheel must never be greater than left wheel). Axle may be bent cold providing proper equipment used (see Caster adjustment).

**Toe In**—1/16" (Pass. Cars, Comm'l., C-O-E Trucks), 0" (All other Trucks). Toe-in should be set at 10-1 ratio to camber. Toe-in on trucks increases with load and should be set at 0" with truck empty. Adjust in usual manner by loosening clamp bolts and turning tie rod.

**Steering Geometry (Toe out on Turns)**—With outer wheel turned 20°, inner wheel should be turned 23 1/2° (Pass. Cars & Comm'l.), 23° (1 Ton Truck), 23 3/4° (101" WB. Trucks), 22 3/4° (131" & 134" WB. Trucks), 22 1/4° (157" WB. Trucks).

## STEERING GEAR

**Steering Gear:** Gemmer Model 305. Worm-and-Roller type with "push-pull" adjustments.

*See Steering Gear Section for complete data.*

## BRAKES

### PASS. CARS & COMMERCIAL

**BRAKES (PASS. CAR & COMM'L.):** Service. Own Make Mechanical, two shoe, self-energizing type. New design with cable actuation for all wheels. Hand lever applies all four service brakes.

*See Brake Section for complete data.*

**Drum Diameter**—12". Cast iron alloy type.

**Lining**—Two types used. May be identified by brass wire (primary shoe), zinc wire (secondary shoe). (1937), Molded—Primary Shoe, Woven—Secondary Shoe (1938). Width 1.75". Thickness .185". Length per shoe 13.25".

**Hand Brake:**—See Service Brakes above.

## BRAKES

### TRUCKS

**BRAKES (81Y 1 TON):** Service—Own Make, Mechanical, two-shoe, four wheel type. Hand lever applies all four service brakes.

*See Brake Section for complete data.*

**Drum Diameter**—12" (front wheels), 15.12" (rear).

**Lining**—Width 1.75" (front), 2.5" (rear). Thickness .185" (front), .25" (rear). Length per shoe 13.25" (front), 18.41" (rear).

**BRAKES (EXCEPT 81Y):** Service—Own Make, Mechanical, two-shoe, four wheel type. Hand brake is independent (see below).

*See Brake Section for complete data.*

**Drum Diameter**—14" (1937), 15.12" (1938).

**Lining**—Woven type—all shoes (1937), Molded—Primary Shoe, Woven—Secondary Shoe (1938).

	Width	Thickness	Length (Per Shoe)
1937	1.5"	.187"	17.5"
1938	2.5"	.25"	18.41"

**Hand Brake:**—Applies independent self-energizing band in each rear wheel.

**Drum Diameter**—14".

**Lining**—Woven type. Width 1.5". Thickness .187". Length per wheel 41.12".

**TRUCK NOTE:**—All Engine data below applies also to Ford Truck Models with '60' Engine. See Ford Truck article for all other Truck data.

### MODEL IDENTIFICATION

Model	Year	Body Type
922A	1939	Passenger Cars
922C	1939	Commercial Chassis
922A	1940	Passenger Cars
922C	1940	Commercial Chassis

**SERIAL & ENGINE NUMBER:**—Stamped on top of clutch housing and on left frame side member in front of dash bracket.

### TUNE-UP

**COMPRESSION:** Ratio—6.8-1 Std. No Optl. ratios.  
Pressure—158 lbs. at 2800 RPM max. or 116 lbs. at cranking speed of 100 RPM.

**VACUUM READING:**—Steady 18-20" at 5-7 M.P.H.

**FIRING ORDER:** 1-5-4-8-6-3-7-2. See diagram for cylinder number and spark plug cable connections.

**SPARK PLUGS:** Champion Type H-10. 14 mm. Metric. Gaps—.025"

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.014-.016". Cam Angle 36° (closed—both sets operating together).

Automatic Advance—8° max. at 950 RPM (distr.).

**IGNITION TIMING:** See Ignition Timing.

Std. Setting—4° BTDC. No flywheel marks provided (see Ignition Timing for method of setting Ignition and also Vacuum Brake Adjustment).

**CARBURETION:** See Carburetor & Carb. Equipment.

Idle Setting—Both idle screws  $\frac{5}{8}$ – $\frac{3}{4}$  turn open (Stromberg Carb.),  $\frac{1}{8}$  turn open (Chandler-Groves Carb.). Idle speed 5-7 MPH.

Float Level—Fuel level 15/32" (Stromberg Carb.), 11/16" (Chandler-Groves Carb.) below top of bowl.

Accelerating Pump (Stromberg)—Inner hole—Summer, Outer hole—Winter.

Accelerating Pump (Chandler-Groves Carb.) Center hole Normal. Inner hole (Summer), Outer hole (Winter) for extreme hot and cold temperatures.

Fuel Pump Pressure:  $3\frac{1}{2}$  lbs. maximum.

**VALVES:** See Valve Timing.

Tappet Clearance—.011-.012". No adjustment.

**STARTING:** See Battery, Starter, Generator, and Regulator (when used).

### IGNITION

**Ignition Switch:**—Oakes Steering Column & Ignition Lock Assembly. Part Nos. as follows:

1939 Types—Assy. 301665, Ford No. 81A-3676 (Pass. Cars); No. 301685, Ford No. 81-C-3676 (Comm'l. & 1 Ton); No. 301675, Ford No. 81-T-3676 (Trucks). Ignition Switch No. 301683 (all models).

1940 Types—Assy. No. 302110, Ford No. 01A-3676A (Std. Pass. Car); 302126, Ford No. 01A-3676B (Deluxe Pass. Car); 302120, Ford No. 01C-3676 (Comm'l.,  $\frac{3}{4}$ , 1 Ton); Ford No. 81W-3676 (C-O-E Truck); 302122, Ford No. 01T-3676 (Other Trucks). Ignition Switch No. 301683 (All Models).

Lock Cylinder—Hurd or Briggs & Stratton No. 80935, Ford No. 91-A-3686-A (with 2 keys). Key Series—FK000 to FK999. Groove—No. 17.

**COIL:** Ford No. 78-12036 or 81A-12036 (Coil less Condenser). Mounted on ignition unit (part of ignition assembly).

**Resistor Unit:**—Connected in coil primary circuit. Mounted on Fuse Block Assembly No. 91-A-12250 (passenger cars), 40-12250 (Comm'l. & Trucks). Ignition Current— $4\frac{1}{2}$ –6 amperes (stopped). Ignition primary circuit resistance—1-1  $\frac{1}{3}$  ohms.

**CONDENSER:** Ford Part No. 78-12300 (78-12036 Coil), 81A-12300 (81A-12036 Coil).

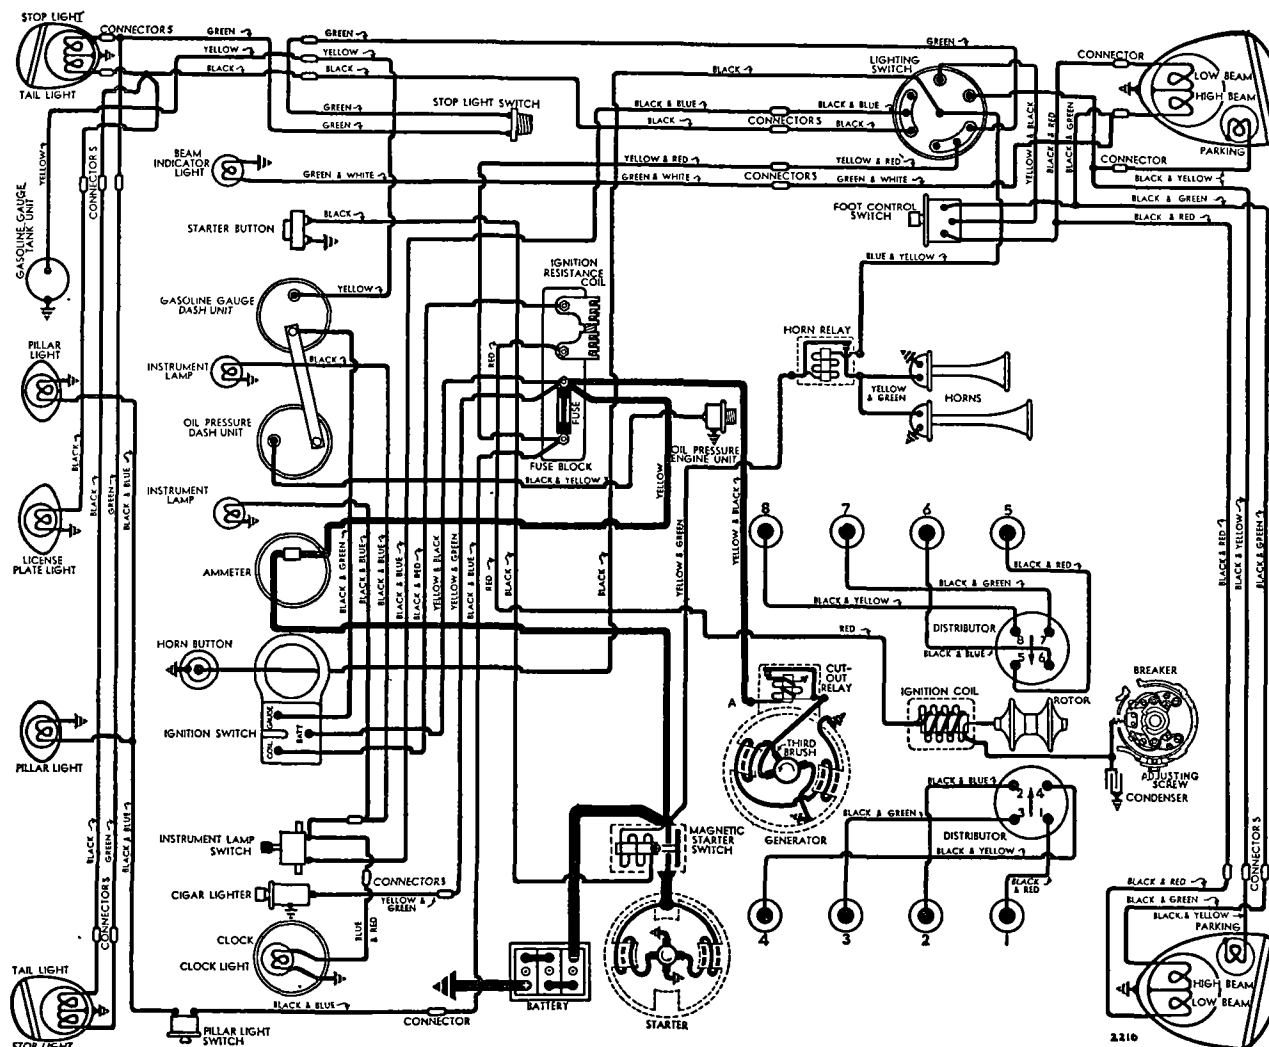

Capacity—.33-.36 microfarad.

**DISTRIBUTOR:** Ford Model 78-12127. (Less Coil, caps and distributor plates). Double breaker, 8 lobe cam, full automatic advance type with Vacuum Brake REPLACEMENT DISTRIBUTOR—Model No. 11A-12127 with different advance. See 1941 Ford V8 article for all data on this model.

Breaker Gap—.014-.016" (both sets). Use special two step feeler—.014" step 'go', .016" step 'no go'. Cam Angle—36° closed, 9° open. For both sets operating together with correct coil-loading lead.

Breaker Arm Spring Tension—20-24 ozs.

Rotation—Clockwise viewed from drive end.

1939 MODELS

### Automatic Advance (High Vacuum or Vacuum Brake Inoperative) Distributor Engine

Degrees Start	R.P.M.	Degrees Start	R.P.M.
2	200	0	400
3	300	4	600
5	375	6	750
8	600	10	1200
	950	16	1900

**Removal:**—Ignition unit mounted on front of engine. To remove, disconnect vacuum line, take off caps, take out screws in mounting flange.

### IGNITION TIMING

**IGNITION TIMING:**—For each engine as follows (see Vacuum Brake Setting below for adjustment depending on type of service and fuel used).

Flywheel Degrees Piston Position

'60' Engines ..... 4° BTDC ..... 0048° BTDC.

**Timing Note**—Manufacturer recommends use of Laboratory Test Set with Stroboscope attachment or V-126 Timing Fixture for all ignition settings.

**Timing (On Engine)**—No flywheel marks provided and timing should be set with piston on top dead center. With #1 piston on top dead center entering power stroke, loosen timing adjusting screw on left hand side of ignition unit housing, place screw in retard position at lower end of slot, move screw slowly up until timing contacts begin to open, note graduation on plate under screw head which is in line with reference mark on housing, move screw up exactly one additional graduation, tighten screw. **NOTE**—Dead center position can be determined by inserting gauge rod in cylinder or by measuring to tops of #2 and #3 pistons (should be equal).

**Vacuum Brake Setting**—Should be adjusted to eliminate pinging when engine operated with load. To adjust, loosen locknut, back off adjusting screw until engine pings with load, turn screw in just

enough to eliminate ping, tighten locknut. When adjusted on Stroboscope, vacuum brake should retard spark to peepsight (set at 2°) at 950 RPM. (78-12127 Distr.), 650 RPM. (11A-12127 Distr.).

## CARBURETOR

**Stromberg Model No. EE-7/8, Ford No. 52-9510-B, or Holley (Chandler-Groves) Model AA-7/8, Ford No. 922A-9510-A.** Dual (double barrel) downdraft type. *For complete data, refer to Carburetor Index.*

**Idle Adjustment**—With engine warm, choke valve wide open, and Fast Idle Inoperative, set throttle lever stopscrew for 5-7 M.P.H. (350 R.P.M.) idling speed, turn each idle adjusting screw (one for each barrel, adjust in succession) in until engine begins to miss, out until engine begins to roll, finally turn screw in slowly until engine fires smoothly. Final setting should be approximately  $\frac{1}{8}$ - $\frac{3}{4}$  turn (Stromberg),  $\frac{1}{8}$  turn (Chandler-Groves) from inner seated

position. Readjust stopscrew for correct idling speed. **NOTE**—Vacuum gauge recommended for idling adjustment. Set for highest steady gauge reading.

**Accelerating Pump Setting (Stromberg)**—Two ball studs provided for pump link connection:

'S'—Minimum Stroke, Summer operation.

'W'—Maximum Stroke, Winter operation.

**Accelerating Pump Setting (Chandler-Groves)**—

Three holes provided for pump link connection:

Inner (#1)—Min. stroke, Summer temperatures.

Center (#2)—Med. stroke, Winter temperatures.

Outer (#3)—Max. stroke, Extreme Cold weather.

**Fast Idle (All Models)**—Integral with carburetor. Operated by choke lever. No adjustment required.

## CARB. EQUIPMENT

**Air Cleaner:** AC No. 1528238 (1939), 1529224 (1940) oil-wetted type Std. Heavy duty oil-bath type Optl.

**Gasoline Gauge:** King-Seeley Electric. Ford Nos. Dash Unit—91A-9280A (1939 Std. Pass. Car, Comml. Trucks), 91A-9280B (1939 Deluxe Pass. Cars), 01A-9280A (1940 Std. Pass. Cars, Comml. Trucks), 01A-9280B (1940 Deluxe Pass. Cars).

**Tank Unit**—No. 01A-9275A (1939-40 Pass. Cars & Comml.), 01A-9275B (1940 Sedan Delivery), 01Y-9275 (122" Panel Delivery), 01T-9275 (Trucks exc. C-O-E), 81W-9275 (1939 C-O-E Trucks), 01W-9275 (1940 COE).

*For complete data, refer to Carburetion Equip. Index.*

**Fuel Pump:** AC Type R, No. 1523257, Ford No. 52-9350B. Diaphragm type.

*For complete data, refer to Carburetion Equip. Index.*

## BATTERY

**BATTERY (1939):** Ford No. 81A-10655A. 6 volt, 17 plate, 100 ampere hour capacity (20 hour rate).

**Starting Capacity**—128 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 3.3 minutes.

**Grounded Terminal**—Positive (+) grounded to dash. **Engine Ground**—Strap connector between right rear cylinder head stud and dash.

**Dimensions**—Length 10.5". Width 7.2". Height 7.1".

**Location**—On right hand side of cowl under hood.

**BATTERY (1940):** Ford No. 01A-10655A. 6 volt, 17 plate, 120 ampere hour capacity (20 hour rate).

**Starting Capacity**—150 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 4.0 minutes.

**Dimensions**—Length 10.6". Width 7.3". Height 9.2".

**Other Specifications**—Same as 1939 (above).

**Battery Indicator (1940):** King-Seeley Voltmeter type (used in place of Ammeter). Ford No. 01A-10844A (Std.), 01A-10844B (Deluxe & replacement unit for 01A-10844A).

*For complete data, refer to Electrical Equipment Index.*

## STARTER

**Ford No. 52-11002. Armature No. 52-11005.**

**Drive**—Barrel type Bendix No. A-1806. Ford No. 52-11350-C.

*See Electrical Equipment Section for data on Special Ford Barrel type Bendix Drive servicing.*

**Rotation**—Counter-clockwise at commutator end.

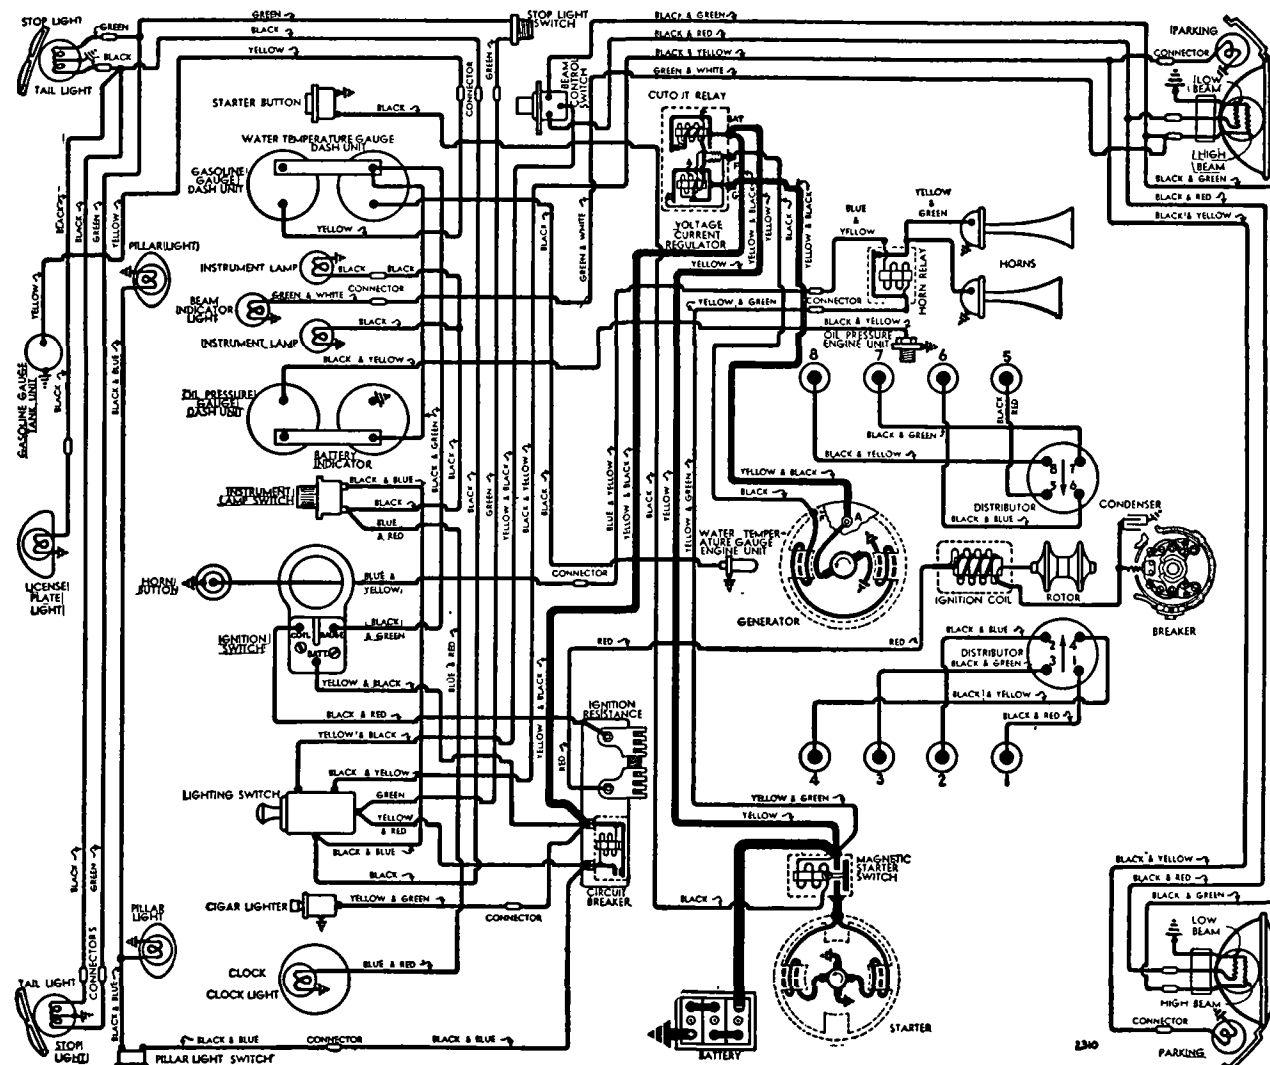

**Brush Spring Tension**—2 lbs. each.

**Cranking Engine**—100 RPM., 190-215 amperes.

## Performance Data

Torque	R.P.M.	Volts	Amperes
4 ft. lbs.	1070	4.8	200
8 "	660	4.3	340
12 "	300	3.65	465
14 "	Lock	3.5	500

CONTINUED ON NEXT PAGE

1940 MODELS

## CONTINUED FROM PRECEDING PAGE

**Starting Switch:**—R-B-M. Model 2220, Ford No. 78-11450. Magnetic type mounted on right side of engine dash above starter. Controlled by pushbutton No. 91A-11500 (1939 Pass. Cars), 81A-11500 (1939 Others), 01A-11500A (1940 Std.), 01A-11500B (1940 Deluxe).

**Removal:**—Starter mounted on right front face of fly-wheel housing. To remove, take off pan at right of engine, take out through bolts on commutator end plate and free starter support brace, remove starter.

## GENERATOR

## THIRD-BRUSH TYPES

**GENERATOR (STD.):**—Model used on each car type shown in table below. All models third brush control type. Ventilated by fan on drive pulley.

922A, 922C, 92Y—60 Engine		
Generator	Armature	Pulley Diam.
82A-10000-A	79-10005	3.71"

**Charging Rate Adjustment:**—Remove commutator cover band, shift third brush by hand counter-clockwise to increase, or clockwise to decrease output (brush held in position by friction). Maximum rated output (shown in table below) secured with third brush set 1½ commutator bars from nearest (insulated) main brush. Set charging rate as low as possible to keep battery fully charged.

**Maximum Charging Rate:**—See table below.

Performance Std.—82A-10000A		
Amperes		R.P.M.
Start	500	
17	1300	
11	3000	

**Rotation:**—Counter-clockwise at commutator end.

**Field Current:**—4.5-6.0 amperes at 6.0 volts (1.0-1.22 ohms resistance).

**Brush Spring Tension:**—Approx. 28 ozs.

**Removal:**—Loosen nut on mounting bracket stud, remove drive belt, lift generator out.

**Belt Adjustment:**—Loosen nut on bracket mounting stud, raise generator up until side movement on belt between generator and water pump pulley is 1".

## GENERATOR

## TWO-BRUSH TYPES

**GENERATOR (RADIO & SPECIAL EQUIP.):**—Two brush (shunt) type with vibrating type voltage and current regulation. Ventilated by fan on drive pulley. Models used for each car as follows:

922-A, 922-C, 92-Y—60 Engine		
Generator	Armature	Pulley Diam.
82A-10000-D	78-10005-A,C	3.58"
82A-10000-E	78-10005-B,D	3.58"
022A, 022C		
01A-10000-A,B	01A-10005	3.68"

①—Low Speed (Taxi, Door-to-door Deliv., etc.)

**Charging Rate Adjustment:**—No adjustment at the generator. See Regulator data below.

**Maximum Charging Rate:**—Controlled by regulator and dependent on battery condition and load. To check generator output, disconnect field lead at generator, connect both generator terminals together (use short insulated wire). Use 'BRS' set or rheostat connected across battery terminals and apply load until voltage is exactly 6 volts. Connect ammeter in charging line, run engine at 1000 RPM.

check output (see table below). After completing test, restore original connections. Do not operate generator with terminals connected together. This eliminates all regulator action.

## Performance Data

82A-10000-D		82A-10000-E	
Amperes	R.P.M.	Amperes	R.P.M.
Start	500	Start	350
28	1250	20	1000
81-T-10000-A		81-T-10000-B	
Amperes	R.P.M.	Amperes	R.P.M.
Start	550	Start	350
28	1300	20	1050
01A-10000-A		01A-10000-B	
Amperes	Eng. R.P.M.	Amperes	Eng. R.P.M.
Start	580	Start	520
32	1100	30	1060
32	2500	30	2500

**Rotation:**—Counter-clockwise at commutator end.

**Field Current:**—2.22 amperes at 6.0 volts (82A-10000-D,E—field resistance 2.7 ohms at 70°F), 2.86 amperes at 6.0 volts (01A-10000A—field resistance 2.1 ohms at 70°F), 2.1 amperes at 6.0 volts (01A-10000B—field resistance 2.88 ohms at 70°F).

**Brush Spring Tension:**—Approx. 28 ounces.

**Removal & Belt Adjustment:**—Same as Std. (above).

## GENERATOR

## SPECIAL EQUIPMENT

**SPECIAL GENERATORS:**—Other Makes—Refer to Electrical Equipment Index for 'Special Generator' article for complete data on special Generators and Regulators which may be found on these models.

## CUTOUT RELAY

**CUTOUT RELAY:**—No. B-10505 (Used on all Std. Generators above). Mounted on generator. Generator field lead grounded to relay mounting screw.

**Cuts In:**—5.8-6.3 volts, 400 Eng. RPM. (60 Pass. Cars)

**Cuts Out:**—2 amperes maximum discharge current.

**Contact Gap:**—.015-.020" Air Gap—.010-.015" (closed).

**NOTE:**—Relay case is sealed. No adjustment possible.

## REGULATOR

**REGULATOR:**—No. 91A-10505-A. Used on all Special 2 Brush Generators (above). See 1939-40 Ford "85" article (following) for all data on this regulator.

**NOTE:**—This type superseded by 01A-10505-C.

## LIGHTING

**LIGHTING:**—Headlamps, Ford (Corcoran-Brown) Two-Lite, Pre-focused type (1939), Ford Sealed Beam type (1940). Upper and lower beams controlled by Beam Selector Switch on toeboard.

**Headlamp Adjustment:**—With upper beams lighted, aim each headlamp straight ahead so that beam centered on vertical line directly ahead of lamp center. Upper edge of beam should be at lamp center height at 25 feet (1939 Pass. Cars & Comm.), center of beam hot spot should be on horizontal line 3" below lamp center height (1940 models).

**Beam Indicator:**—In upper left hand corner of instrument panel. Lighted when upper beams in use.

## Switches—1939

**Lighting:**—R-B-M. Ford No. (Switch & Wiring Assembly) 91A-11653-A (Std. Pass. Cars), 91A-11653-B (Deluxe Passenger Cars), 91C-11653 (Commercial). Switch Body & Contact Assembly 81A-11657 (All). Beam Selector—R-B-M. Ford No. 81A-13532.

## Switches—1940

**Lighting:**—R-B-M No. 6425. Ford No. 01A-11652.

**Beam Selector:**—R-B-M No. 2480. Ford No. 81A-13552.

**Switch & Wiring:**—No. 01A-11653A (Pass. Cars), 01C-11653 (Comm. & Truck except C-O-E).

**Instrument:**—Ford No. 01A-13740A (Std.), 01A-13740B (Deluxe), 50-13740 (Trucks).

**NOTE:**—Passenger Car Types replaced by 21A-13740. Stop Light—Ford No. 91A-13480.

## Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps (1939)	32-32	2330
Headlamps (1940)		Sealed Beam
Parking (Comm'l., Trucks)	3	63
Parking (Pass. Cars)	1½	55
Instr. ('39), License	3	63
Instr. ('40), Beam Ind.	1	51
Stop & Tail	21-3	1158

## MISC. ELECTRICAL

**LIGHTING CIRCUIT PROTECTION:**—Ford No. 91A-12250 (Circuit Breaker) or No. 40-12250 (Fuse Block). Mounted on rear of dash under cowl with Ignition Resistor as an assembly. Vibrating type circuit breaker serviced by No. 01A-12250 (1940 type).

**Fuse Capacity:**—20 amps. (for 40-12250 Fuse Block).

**HORNS:** Pass. Cars. Ford No. 91A-13832 (high note), 91A-13833 (low note). Twin horns with relay.

**Commercial:**—Ford No. 78-13833A. Vibrator type.

**Horn Current:** 6-8 amperes.

**Horn Relay:** R-B-M. Ford No. 91A-13842.

**Contact Closing Voltage:**—3.5-4.5 volts.

**Current Draw:**—Approximately ¾ ampere.

## ENGINE

**ENGINE SPECIFICATIONS:**—Own '60', 8 Cylinder, 90°

Vee, L head. Both banks & crankcase cast enbloc.

**Bore:**—2.6". **Stroke:**—3.2". **Displacement:**—136 cu. ins.

**Developed H.P.:**—60 at 3500 RPM. **Rated H.P.:**—21.6.

**Compression Ratio:**—6.6-1 Std. No Optl. ratios.

**Compression Pressure:**—158 lbs. at 2800 R.P.M. max., or 116 lbs. at cranking speed of 100 RPM.

**Vacuum Reading:**—18-20" steady at 5-7 M.P.H.

**OIL PAN REMOVAL:** See Ford Shop Notes.

**CYLINDER HEAD:** Tightening Torque and Cylinder Head Diagram—See Ford Shop Notes.

**CYLINDER SLEEVES:**—Hardened, dry type cylinder sleeves used on engines marked 'HS' on cylinder block beside inner front corner of left cylinder head. Servicing:—See Ford Shop Notes for complete data.

**PISTONS:**—Steel alloy, light wgt., cam-ground. Recondition cylinders for finished replacement pistons. Weight—226-231 grams (without rings or pin).

**Removal:**—Pistons and rods removed from above.

**Clearance:**—See Fitting New Pistons.

**Replacement Pistons:**—See Ford Shop Notes for data.

**Fitting New Pistons:**—Use .002" feeler (.0025" feeler for engines with sleeves), .50" wide, inserted between piston and cylinder wall at right angles to pin. Pull to withdraw feeler—7-12 lbs.

**PISTON RINGS:**—Two compression, one oil ring, all above pin. Oil ring groove drilled with drain holes. **NOTE:**—Expander used with #2 Compr. and oil ring.

Ring	Width	End Gap	Side Clearance
Compr. #1	.092-.0925"	.012-.017"	.0025-.003"
Compr. #2	.092-.0925"	.012-.017"	.002-.0025"
Oil Cont.	.1535-.154"	.012-.017"	.0015-.002"

**Replacement Rings:**—See Ford Shop Notes for data.

**ENGINE**

C ONTINUED FROM PRECEDIN PAGE

**PISTON PIN:**—Diameter .6876-.6879". Length 2.368".  
 Floating type (locking rings in piston at each end).  
 Pin hole in connecting rod bronze-bushed.  
**Pin Fit in Piston:**—.0004" clearance.  
**Pin Fit in Rod Bushing:**—.0001" clearance. *See Ford Shop Notes for Pin Fitting Directions & Pin Oversizes.*  
**Replacement Pins:**—Std. & .002" over- & under-size.

**CONNECTING ROD:**—Length—6.125" (all models).  
 Weight—271 grams (1939), 295 grams (1940).  
**Crankpin Journal Diameter:**—1.599" ('39), 1.699" ('40). Diameter on crankpin 1.800" ('39), 1.900" ('40).  
**Bearing Type:**—Steel-backed, special-alloy lined.  
 Bearing floats in both rods (side-by-side mounting) with bearing surface on both inner and outer face.  
**Bearing Dimensions:**—Length 1.535" ('39), 1.403" ('40). .09995" thick. NOTE—'39 bearings only have end flanges.  
 Clearance—.0005-.002" (total diametrical).  
 Sideplay—.010-.022" (total).

**Bearing Adjustment:**—None (no shims). Do not file.  
**Replacement Bearings:**—*See Ford Shop Notes for special bearings for Oversize Rods & Undersize Crankpins.*  
**Installing Rods:**—Marks on rods and caps must be together and installed in same numbered cylinder with marks pointing down toward oil pan.

**CRANKSHAFT:**—3 bearing. Integral counterweights.  
 1940 NOTE—New type crankshaft used with larger main and connecting rod journals.  
**Journal Diameters:**—1.999" ('39), 2.099" ('40).  
**Bearing Type:**—Steel-backed, special-alloy lined.  
 Clearance—.001-.003" (or slight drag with .002" feeler assembled in bearing for clearance check).  
**Bearing Adjustment:**—None (no shims). Do not file.  
**End Thrust:**—Taken by rear bearing. Adjust by replacing bearing. Endplay—.002-.005".  
**Replacement Bearings:**—*See Ford Shop Notes for Undersizes and special long bearings.*

**CAMSHAFT:**—Three bearings. Helical gear drive.  
**Bearing Diameters:**—1.498" (all bearings).  
**Bearings:**—Steel-backed, babbitt-lined bushings.  
 Clearance—.002".  
**End Thrust:**—Taken by gear hub and cover plate. Adjusted by replacing coverplate. Endplay—.005-.015".  
**Timing Gears:**—Cast alloy steel (crankshaft), Bakelized Fabric (Camshaft). Backlash—.004" max.  
**Camshaft Setting:**—Mesh 'O' marked tooth of crankshaft gear with '/' marked space on camshaft gear (this mark must line up with mark on gear hub).

**VALVES:**—

	Head Diameter	Stem Diameter	Length
All Valves	1.281"	.2795"	4.375"
	Seat Angle	Lift	Stem Clearance
All Valves	45°	.251"	.0015-.0035"

*See Ford Shop Notes for Valve Servicing data.*

NOTE—Inserts used for exhaust valves only.

**Valve Guides:**—Split type retained by 'C' washer and valve spring. *See Ford Shop Notes for servicing data.*  
**Valve Lifters:**—Barrel type in reamed holes in block.  
 Diameter—.8295". Clearance—.0005-.001".

**Valve Springs:**—

	Pressure	Length
Valve Closed	26-30 lbs.	2.05"
Valve Open	48-52 lbs.	1.80"

**VALVE TIMING**

**Tappet Clearance:**—.011-.012". No adjustment.  
**Valve Timing:**—*See Camshaft Setting above.*  
**Intake Valves:**—Open 9½° BTDC. Close 54½° ALDC.  
**Exhaust Valves:**—Open 57½° BLDC. Close 6½° ATDC.  
**To Check Valve Timing:**—No flywheel marks provided. If dead center point established for any cylinder on flywheel, intake valve for this cylinder should open approximately 3.22 flywheel teeth before this point with the piston .027" BTDC.

**LUBRICATION**

**LUBRICATION:**—Pressure. Gear type oil pump mounted on front main bearing cap in crankcase.  
**Normal Oil Pressure:**—30 lbs. at 2000 R.P.M.  
**Oil Pressure Regulator:**—Under plug above front camshaft bearing. Opens at 30 lbs. Not adjustable.  
**Oil Pressure Gauge:**—King-Seeley Electric. Ford No. Dash Unit:—91A-9273A ('39), 01A-9273A ('40). Engine Unit: 48-9278 (all models).  
*See Miscellaneous Section for complete data.*  
**Crankcase Capacity:**—4 qts.

**COOLING**

**COOLING SYSTEM:**—Capacity—15 qts. (922A), 13 qts. (022A, 022C), 16 quarts (922C, 02D, 92Y, 02Y).  
**Water Pump:**—Packless 2 used (1 for each bank).  
*See Water Pump Section for complete data.*  
**Removal:**—Slack off belt adjustment, unscrew large mounting nut behind pulley, pull pump out.  
**Thermostat:**—In each cylinder head outlet (2 used).  
 Setting—Starts to open at 145°F. Fully open 180°.  
**Temperature Gauge:**—1939—King-Seeley Liquid type, Ford Part No. 91A-10883-A. 1940—King-Seeley Electric. Ford Nos. 01A-10883A (dash unit), 99A-10884 (engine unit).  
*See Miscellaneous Section for complete data.*

**CLUTCH**

**CLUTCH:**—Long Model 8½CB-CS (922A), Model 9CF-CS (all others). Single plate, dry disc type. 9CF-CS is semi-centrifugal type.  
*See Clutch Section for complete data.*  
**Facings:**—Moulded type, 2 required. Inside Diam. 6" (8½CB), 5.76" (9CF). Outside Diam. 8.5" (8½CB), 9" (9CF). Thickness .125" (8½CB), .137" (9CF).  
**Adjustment:**—Pedal free movement should be .75-1" (8½CB), 1.5-1.75" (9CF). To adjust, remove clevis pin at end of connector rod, turn clevis on rod.  
**Removal:**—Slide rear axle and transmission to rear as a unit to expose clutch (see Transmission Removal (below), take out mounting screws in cover.

**TRANSMISSION**

**TRANSMISSION:**—Own Make. Constant-mesh, synchro-mesh (second & high), sliding gear (low & reverse), all helical gears (pass. car), second & high gears only (on Commercial Transmission).  
*See Transmission Section for complete data.*  
**Transmission Control (022A):**—Remote steering column mounted, mechanical shift.  
*See Transmission Section for complete data.*  
**Removal:**—To remove, disconnect hand brake cable, hydraulic brake line at torque tube connection (bleed lines when re-connected), speedometer cable, shock absorber links. Disconnect rear spring at center frame connection. Take out universal joint ball housing screws, slide rear axle assembly back to disengage drive shaft at splined joint. Support

engine at rear, take out rear engine mounting bolts, clutch housing screws, pull trans'm straight back.  
 NOTE—Disconnect gear shifter rods from levers at transmission on 1940 passenger cars.

**UNIVERSALS**

**UNIVERSAL JOINT:**—Spicer 7990-SF ('39), 202-7 ('40). Steel bushing type. 1 joint to rear of transmission. *See Universals Section for complete data.*

**REAR AXLE**

**REAR AXLE:**—Own Make. ¾ floating, Spiral bevel gear type with Torque Tube drive.  
*See Rear Axle Section for complete data.*  
**Ratio:**—4.44-1 Std. 4.55-1 Comm'l (1940).  
**Backlash:**—.012" maximum.  
**Removal:**—Disconnect hand brake cables, hydraulic brake line at torque tube connection (bleed lines when re-connected), speedometer cable, shock absorber links. Disconnect rear spring at center frame connection. Take out universal joint ball housing mounting screws, pull axle assembly to rear to disengage drive shaft at splined joint.  
**Axle Shaft Removal:**—Axle must be dismantled and shaft removed through differential housing at inner end (side gear integral). *See Rear Axle Section for Ford Rear Axle article for complete data.*

**SHOCK ABSORBERS**

**SHOCK ABSORBERS:**—Houde (Houdaille). Front—BBDK (1939), BBDM (1940). Rear—BBDW (1939), BBDX (1940). Double acting, adjustable types. *See Shock Absorber Section for complete data.*

**FRONT SUSPENSION**

**Front Suspension:**—Conventional 'T' beam section front axle with Reverse Elliott ends and transverse spring. Axle positioned by radius rods.  
**Kingpin Inclination:**—8° crosswise (all models).  
**Caster:**—9° Max., 4½° Min. (all models). Must be equal within ½°. Axle may be bent cold to correct caster if proper tools (wedges and blocks to prevent crushing axle flange) are used.  
**Camber:**—1° Max., ¼° Min. (all models). Must be equal within ¼°, right wheel must not exceed left. Adjust as for caster (see caster data above).  
**Toe In:**—1/16". Set at 1-10 ratio to Camber. Adjust by loosening clamp bolts and turning tie rod.  
**Steering Geometry (Toe out on turns):**—Outer wheel turned 20°. Inner 23½°. Allowable variation ½°.

**STEERING GEAR**

**Steering Gear:**—Gemmer Model 305. Worm-and-Roller type with "push-pull" adjustments.  
*See Steering Gear Section for complete data.*

**BRAKES**

**BRAKES:**—Service—Lockheed Hydraulic, double anchor, non-energizing type. Hand lever applies rear wheel service brakes.  
*See Brake Section for complete data.*  
**Wheel Cylinders:**—Stepped or two-stage bore type:  
 Front Wheel—Front cylinder 1.25". Rear 1.00".  
 Rear Wheel—Front cylinder 1.125". Rear 1.00".  
**Drums:**—Cast iron. Diameter 12".  
**Lining:**—Woven type (forward shoe—all wheels), Moulded type (rear shoe—all wheels). Width 1.75". Thickness .20". Length per shoe 13.18" (forward shoe—all wheels), 10.1" (rear shoe—all wheels).  
 Clearance—Least possible amount without drag.  
**Hand Brake:**—*See Service Brakes above.*

**TRUCK NOTE:**—All Engine data below applies also to Ford Truck Models with '85' Engine. See Ford Truck article (following) for other data.

### MODEL IDENTIFICATION

Model	Year	Body Type
91A Std. & Deluxe	1939	Passenger Cars
91C① 99C②	1939	Commercial Chassis
01A Std. & Deluxe	1940	Passenger Cars
01C① 09C②	1940	Commercial Chassis
①—"85" Engine. ②—"95" Engine.		

**SERIAL & ENGINE NUMBER:**—Stamped on top of clutch housing and on left frame side member in front of dash bracket.

### TUNE-UP

**COMPRESSION:**—Ratio—6.2-1 Std. Cast iron or aluminum heads.

Pressure—140 lbs. max. at 2300 RPM. or 113 lbs. at cranking speed of 100 RPM.

**VACUUM READING:**—Steady 18-20" at 5 M.P.H.

**FIRING ORDER:** 1-5-4-8-6-3-7-2. See diagram for cylinder numbering and spark plug cable connections.

**SPARK PLUGS:** Champion Type H-10. 14 mm. Metric. Gaps—.025"

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.014-.016" Cam Angle 36° (closed—both sets operating together).

Automatic Advance—8° max. at 950 RPM (distr.).

**IGNITION TIMING:** See Ignition Timing.

Std. Setting—4° BTDC. No flywheel marks provided (see Ignition Timing for method of setting Ignition and also Vacuum Brake Adjustment).

**CARBURETION:** See Carburetor & Carb. Equipment.

Idle Setting—Both idle screws  $\frac{5}{8}$ — $\frac{3}{4}$  turn open. Idle speed 5-7 MPH.

Float Level—Fuel level  $\frac{11}{16}$ " ( $\frac{21}{32}$ — $\frac{23}{32}$ ") below top edge of float bowl.

Accelerating Pump—Inner hole—Summer, Center hole—Winter. Outer hole—Extreme Winter temperatures.

Fuel Pump Pressure:  $\frac{3}{4}$  lbs. maximum.

**VALVES:** See Valve Timing.

Tappet Clearance—.010-.012" Intake, .014-.016" Exhaust. No adjustment provided.

**STARTING:** See Battery, Starter, Generator, Regulator.

### IGNITION

**Ignition Switch:**—Oakes Steering Column & Ignition Lock Assembly. Part Nos. as follows:

1939 Types—Assembly No. 301665, Ford No. 81A-3676 (Pass. Cars); No. 301685, Ford No. 81C-3676 (Comm. & 1 Ton); No. 301675, Ford No. 81T-3676 (Trucks). Ignition Switch No. 301683 (All Models).

1940 Types—Assembly No. 302110, Ford No. 01A-3676A (Std. Pass. Cars); 302126, Ford No. 01A-3676B (Deluxe Pass. Cars); 302120, Ford No. 01C-3676 (Comm.,  $\frac{3}{4}$  & 1 Ton); Ford No. 81W-3676 (C-O-E Trucks); 302122, Ford No. 01T-3676 (Other Trucks). Ignition Switch No. 301683 (All Models).

Lock Cylinder—Hurd or Briggs & Stratton No. 80935. Ford No. 91-A-3686-A (with keys). Key Series—FK000 to FK999. Groove—No. 17.

**COIL:** Ford N. 78-12036 or 81A-12036 (Coil less Condenser). Mounted on ignition unit (part of ignition assembly).

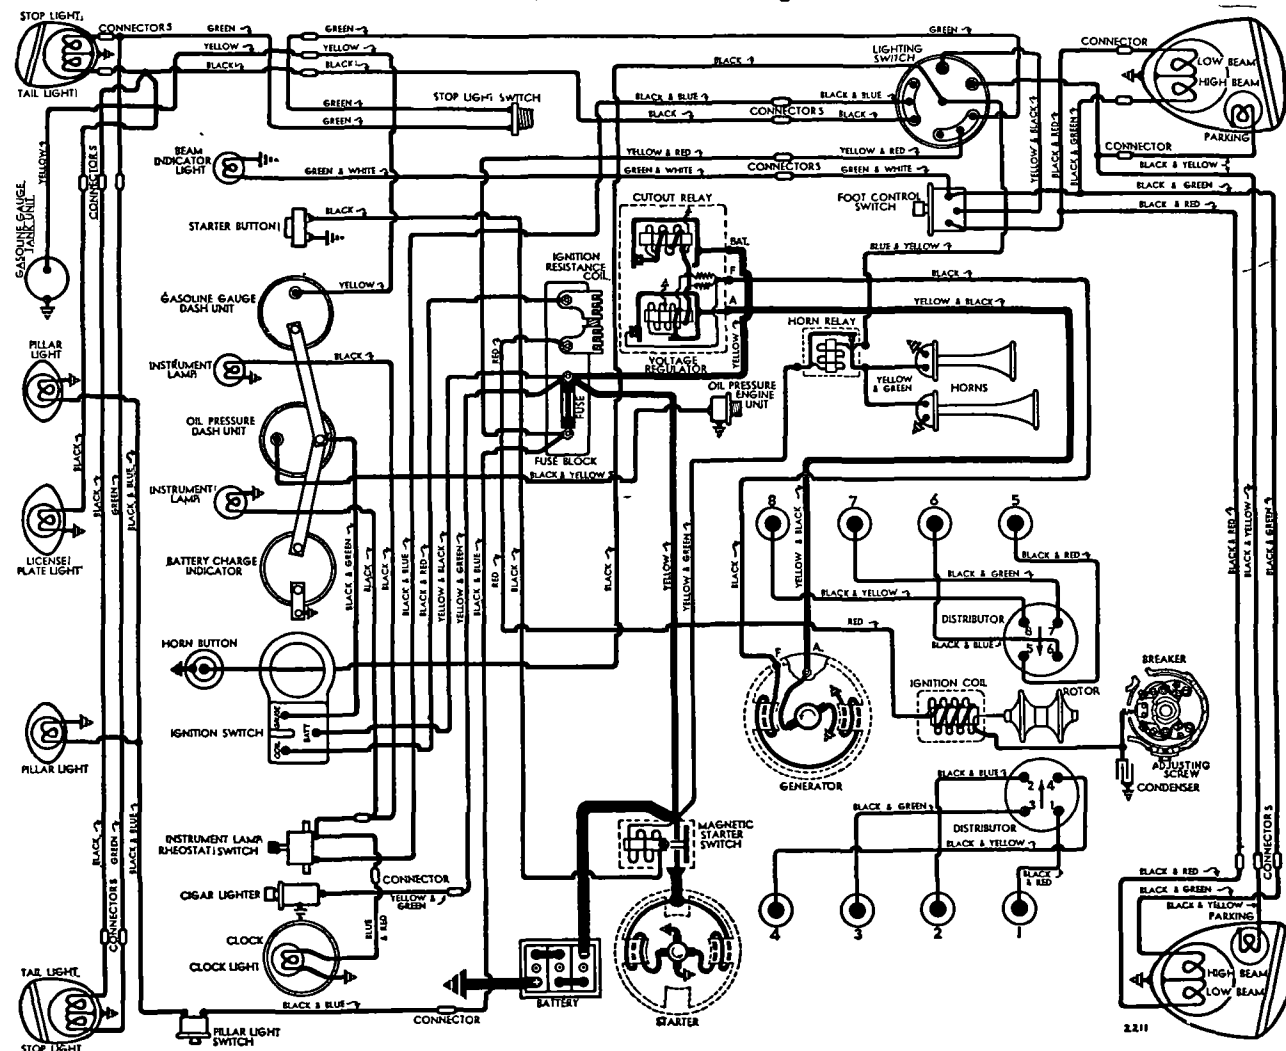

Resistor Unit—Connected in coil primary circuit. Mounted on Fuse Block No. 91-A-12250.

**Ignition Current**—4½-6 amperes (stopped). Ignition primary circuit resistance—1-1½ ohms.

**CONDENSER:** Ford Part No. 78-12300 (78-12036 Coll), No. 81A-12300 (81A-12036 Coll). Capacity—.33-.26 microfarad.

**DISTRIBUTOR:** Ford Model 78-12127 (Less Coil, Caps, and distributor plates). Double breaker, 8 lobe cam, full automatic advance type with Vacuum Brake Control (see Ignition Timing for adjustment). Same design as used on preceding V8 models.

**REPLACEMENT DISTRIBUTOR:** Model No. 11A-12127 with different advance. See 1941 Ford V8 Passenger Car article for all data on this model. Breaker Gap—.014-.016" (both sets). Use special two step feeler—.014" step 'go', .016" step 'no go'. Cam Angle—36° closed, 9° open. For both sets operating together with correct coil-loading lead. Breaker Arm Spring Tension—20-24 ozs. Rotation—Clockwise viewed from drive end.

1939 M DELS

See "60" Diagram for Third-Brush Generator

### Automatic Advance

(High Vacuum or Vacuum Brake Inoperative)

Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start	200	0	400
2	300	4	600
3	375	6	750
5	600	10	1200
8	950	16	1900

**Removal:**—Ignition unit mounted on front of engine. To remove, disconnect vacuum line, take off caps, take out screws in mounting flange.

### IGNITION TIMING

**IGNITION TIMING:**—For each engine as follows (see Vacuum Brake Setting below for adjustment depending on type of service and fuel used).

Flywheel Degrees Piston Position

All Engines .....4° BTDC.....0058° BTDC.

**Ignition Timing Note**—Manufacturer recommends use of Laboratory Test Set with Stroboscope attachment or V-126 Timing Fixture for all ignition settings.

**Timing (On Engine)**—No flywheel marks provided and timing should be set with piston on top dead center. With #1 piston on top dead center entering power stroke, loosen timing adjusting screw on left hand side of ignition unit housing, place screw in retard position at lower end of slot, move screw slowly up until timing contacts begin to open, note graduation on plate under screw head which is in line with reference mark on housing, move screw up exactly one additional graduation, tighten screw. This provides correct 4° BTDC. ignition timing.

**NOTE**—Dead center position can be determined by inserting gauge rod in cylinder or by measuring to tops of #2 and #3 pistons (should be equal).

**Vacuum Brake Setting**—Should be adjusted to eliminate pinging when engine operated with load. To adjust, loosen locknut, back off adjusting screw until engine pings with load, turn screw in just enough to eliminate ping, tighten locknut. When adjusted on Stroboscope, vacuum brake should retard spark to peepsight (set at 2°) at 950 RPM. (78-12127 Distr.), 650 RPM. (11A-12127 Distr.).

## CARBURETOR

Holley (Chandler-Groves) Model AA-1, Ford No. 91A-9510-A. Dual (double barrel) downdraft type.

**NOTE**—Model 91A-9510A replaced by 21A-9510-A. For complete data, refer to Carburetor Index.

**Idle Adjustment**—See Note below. With engine warm, choke valve wide open and Fast Idle inoperative, set throttle lever stopscrew for 350 R.P.M. (5 M.P.H.) idle speed. Turn each idle adjusting screw (one for each barrel, adjust in order) in until engine begins to miss, then out until engine begins

to roll, finally turn screw in slowly until engine fires smoothly. Final setting should be approximately ¾ turn of the screw out from the inner seated position. Readjust throttle stopscrew for correct idle speed.

**NOTE**—Vacuum Gauge recommended for idling adjustment. Set for highest steady gauge reading.

**Accelerating Pump Setting**—Three holes provided for pump link connection. Adjust as follows:  
#1 (Inner)—Min. Stroke—Summer Temperatures.  
#2 (Center)—Med. Stroke—Winter Temperatures.  
#3 (Outer)—Max. Stroke—Extreme cold weather.

**NOTE**—Link locked in pump rod by snap-lock. Pull link shaft out of pump rod to disengage lock.

**Fast Idle**—Integral with carburetor. Operated by choke valve lever. No adjustment required.

## CARB. EQUIPMENT

**Air Cleaner**: AC No. 1528238 (1939), 1529224 (1940) oil-wetted type Std. Heavy duty oil-bath type Optl.

**Gasoline Gauge**: King-Seeley Electric. Ford Nos. Dash Unit—91A-9280A (1939 Std. Pass. Car, Comm., Trucks), 91A-9280B (1939 Deluxe Pass. Cars), 01A-9280A (1940 Std. Pass. Cars, Comm., Trucks), 01A-9280B (1940 Deluxe Pass. Cars).

**Tank Unit**—No. 01A-9275A (1939-40 Pass. Cars & Comm.), 01A-9275B (1940 Sedan Delivery), 01Y-9275 (122" Panel Delivery), 01T-9275 (Trucks exc. C-O-E).

**Fuel Pump**:—AC Type R #1523307. Diaphragm type. Ford No. 68-9350.

For complete data, refer to Carburetion Equip. Index.

## BATTERY

**BATTERY (1939)**: Ford No. 81A-10655A. 6 volt, 17 plate, 100 ampere hour capacity (20 hour rate).

**Starting Capacity**—126 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 3.3 minutes.

**Grounded Terminal**—Positive (+) grounded to dash. Engine Ground—Strap connector between right rear cylinder head stud and dash.

**Dimensions**—Length 10.5". Width 7.2". Height 7.1". Location—On bracket ahead of cowl at right of engine under engine hood.

**BATTERY (1940)**: Ford No. 01A-10655A. 6 volt, 17 plate, 120 ampere hour capacity (20 hour rate).

**Starting Capacity**—150 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 4.0 minutes.

**Dimensions**—Length 10.6". Width 7.3". Height 9.2".

**Other Specifications**—Same as 1939 (above).

**Battery Indicator**: King-Seeley Electric. Voltmeter type. Ford No. 91A-10844B (1939 Deluxe Pass. Car), No. 01A-10844A (Std. 1940), 01A-10844B (Deluxe 1940 & replacement for 01A-10844A).

For complete data, refer to Electrical Equipment Index.

## STARTER

**STARTER**:—No. 18-11002. Armature N. 18-11005.

**Drive**—Inboard Bendix Type L11FX-10. Ford N. B-11350 or Ford B&S Drive No. 91A-11350. Refer to Electrical Equipment Index for Ford B&S Drive servicing instructions.

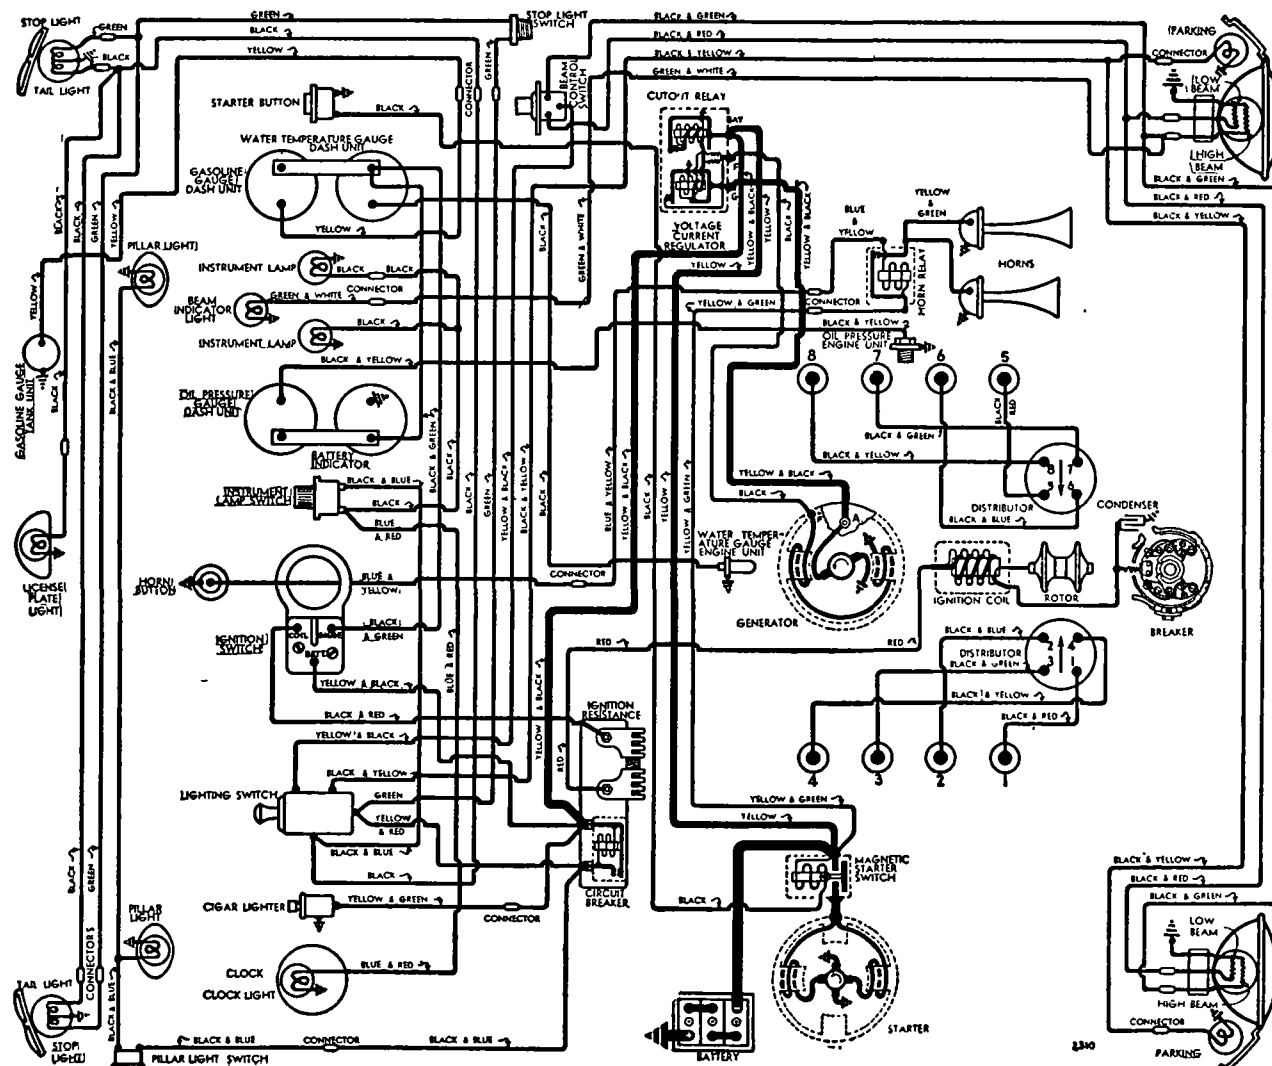

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—2 lbs. each.

**Cranking Engine**—100 RPM., 190-215 amperes.

Performance Data			
Torque	R.P.M.	Volts	Amperes
4 ft. lbs.	1070	4.8	200
8 " "	860	4.3	340
12 " "	300	3.65	465
14 " "	Lock	3.5	500

CONTINUED ON NEXT PAGE

1940 MODELS

## CONTINUED FROM PRECEDING PAGE

**Starting Switch:**—R.B.M. Model 2220, Ford No. 78-11450. Magnetic type mounted on right side of engine dash above starter. Controlled by pushbutton switch No. 91A-11500 (1939), 01A-11500A (1940 Std.), No. 01A-11500B (1940 Deluxe).

**Removal:**—Starter mounted on right front face of fly-wheel housing. To remove, take off pan at right of engine, take out through bolts on commutator end plate and free starter support brace, remove starter.

**GENERATOR****THIRD-BRUSH TYPES**

**Third Brush Control Type (Std. 1939).** Various types used as listed below. Generators are ventilated.

Generator	Armature	Pulley Diam"
81A-10000-A.....	79-10005	4.2"
81A-10000-B.....	79-10005-HA	4.2"

**Charging Rate Adjustment:**—Remove commutator cover band, shift third brush by hand, counter-clockwise to increase output, or clockwise to decrease output. Brush is held in position by friction. Maximum rated output (shown in table below) secured with third brush set 1½ commutator bars from nearest (insulated) main brush. Set charging rate as low as possible to keep battery fully charged. **Maximum Charging Rate:**—As follows:

Performance Data		81A-10000-B	
Amperes	Eng. R.P.M.	Amperes	Eng. R.P.M.
Start.....	500	Start.....	525
17.....	1300	26.....	1250
11.....	2500	16.....	2500

**Rotation:**—Counter-clockwise at commutator end. **Brush Spring Tension:**—Approximately 28 ozs. **Field Current:**—4.5-6.0 amperes at 6.0 volts (81A-10000-A—field resistance 1.0-1.22 ohms), 3.43-4.17 amperes at 6.0 volts (81A-10000-B—field resistance 1.44-1.75 ohms).

**Removal & Belt Adjustment:** Same as for Two-Brush Generators (see below).

**GENERATOR****TWO-BRUSH TYPES**

**Two-brush (shunt) type.** Various types used as listed below. Generators are ventilated and have external voltage and current regulation.

Generator	Armature	Pulley Diam.
81A-10000-D.....	78-10005-A,C	4.38"
81A-10000-E.....	78-10005-B,D	4.38"
91A-10000.....	78-10005-A	3.68"
①01A-10000-A.....	01A-10005	3.68"
①01A-10000-B.....	01A-10005	3.18"

①—Replacement Generator 21A-10000.

**Charging Rate Adjustment:**—No adjustment at generator. See Regulator data below.

**Maximum Charging Rate:**—Controlled by regulator and dependent on battery condition and load. To check generator output, disconnect field lead at generator, connect both generator terminals together (use short insulated wire). Use 'BRS' set or rheostat connected across battery terminals, apply load until voltage is exactly 6 volts. Connect ammeter in charging line, run engine at 1000 R.P.M., check output (see table below). After completing test, restore original connections.

**Do not operate generator in service with terminals connected together. This eliminates all regulator action.**

**Performance Data**

81A-10000, 81A-10000-D		81A-10000-E	
Amperes	Eng. R.P.M.	Amperes	Eng. R.P.M.
Start.....	500	Start.....	350
28.....	1250	20.....	1000
28.....	2500	20.....	2500
01A-10000-A		01A-10000-B	
Start.....	580	Start.....	520
32.....	1100	30.....	1060
32.....	2500	30.....	2500

**Rotation:**—Counter-clockwise at commutator end. **Field Current:**—2.2 amperes at 6.0 volts (91A-10000, 81A-10000-D,E—field resistance 2.7 ohms at 70°F), 2.86 amperes at 6.0 volts (01A-10000-A—field resistance 2.1 ohms at 70°F), 2.1 amperes at 6.0 volts (01A-10000-B—field resistance 2.88 ohms at 70°F).

**Removal:**—Generator mounted on bracket between cylinder banks at front of engine, driven in tandem with two water pumps by Vee belt. To remove, loosen nut on bracket stud.

**Belt Adjustment:**—Loosen nut on mounting bracket, raise generator up until slide movement on belt midway between generator and water pump pulleys is 1", tighten mounting nut.

**GENERATOR****SPECIAL EQUIPMENT**

**SPECIAL GENERATORS:**—Other Makes—Refer to Electrical Equipment Index for 'Special Generator' article for complete data on special Generators and Regulators which may be found on these models.

**CUTOUT RELAY**

**Ford No. B-10505 (Used with Third Brush Generator).** Mounted on generator. Generator field lead grounded to relay mounting screw.

**Cuts In:**—5.8-6.3 volts, 600 R.P.M. (Pass. Cars).

**Cuts Out:**—2 amperes maximum discharge.

**Contact Gap:**—.015-.020" Air Gap .010-.015" (closed).

**REGULATOR**

**REGULATOR:**—No. 91A-10505-A. Consists of Cutout Relay and vibrating Voltage-Current Regulator in case on dash.

**NOTE:**—This 2-unit regulator superseded by new 3-unit type No. 01A-10505-C.

**For complete data, refer to Electrical Equipment Index.** **NOTE:**—Regulator mounted on rubber cushions and grounded to dash through separate ground lead. Case is sealed (no adjustments are possible).

**Cutout Relay**

**Cuts In:**—6.5-7.0 volts, 510 Eng. R.P.M.

**Cuts Out:**—2 ampere maximum discharge current.

**Voltage-Current Regulator**

**Setting:**—7.6 volts Max. at 70° F.

**Current Setting:**—30 amperes.

**Regulator Checking & Adjustment:**—See article in Electrical Equipment Section for complete checking directions. No adjustment possible (case is sealed).

**LIGHTING**

SEE 1939-40 FORD V8 "60" CAR PAGES FOR DATA

**MISC. ELECTRICAL**

**LIGHTING CIRCUIT PROTECTION:**—Ford No. 91A-12250 (Circuit Breaker) or No. 40-12250 (Fuse Block). Mounted on rear of dash under cowl with Ignition Resistor as an assembly. Vibrating type circuit breaker serviced by No. 01A-12250 (1940 type).

**Fuse Capacity:**—20 amps. (for 40-12250 Fuse Block).

**HORNS:**—Ford No. 91A-13832 (High Note), 91A-13833 (Low Note). Air electric type dual horns with relay

**Horn Current:**—11-13 amperes (each).

**Horn Relay:**—R-B-M. Ford No. 91-A-13842.

**Contact Closing Voltage:**—3.5-4.5 volts.

**Current Draw:**—Approximately ¾ ampere.

**ENGINE**

**ENGINE SPECIFICATIONS (91A,C; 01A,C):**—8 cyl., 90° Vee, L head. Both banks & crankcase cast Enbloc. **Bore:**—3.062". **Stroke:**—3.75". **Rated Horsepower:**—30. **Displacement:** 221 cu. ins. **Developed Horsepower:**—90 at 3800 RPM. **Compression Ratio:**—6.20-1 Cast-iron head. **Compression & Vacuum Reading:**—See Tune-Up.

**ENGINE SPECIFICATIONS (99C, 09C):**—Own 95. See 1939-40 Mercury article for all "95" Engine data.

**OIL PAN REMOVAL:** See Ford Shop Notes.

**CYLINDER HEAD:** Tightening Torque and Cylinder Head Diagram—See Ford Shop Notes.

► Re-working Head for Improved Cooling: See Ford Shop Notes for instructions (and new Head Gaskets).

**CYLINDER SLEEVES:**—Hardened, dry type cylinder sleeves used on engines marked 'HS' on cylinder block beside inner front corner of left cylinder head. **Servicing:**—See Ford Shop Notes for complete data.

**PISTONS:**—Steel alloy, light wgt., cam ground type. Recondition for finished replacement pistons.

**Weight:**—333-337 grams (without rings or pin).

**Removal:**—Pistons and rods removed from above.

**Clearance:**—See Fitting New Pistons.

**Replacement Pistons:**—See Ford Shop Notes for data.

**Fitting New Pistons:** Use .50" wide feeler stock of correct thickness (see Table below) inserted between piston and cylinder wall at right angles to pin to check clearance. Pull required to withdraw feeler should be 6-10 lbs. (all types).

**Engine With Sleeves****Feeler Thickness**

**Steel Piston Aluminum Piston**

New Piston & Sleeve .....003".....003"

New Piston—Worn Sleeve .....004".....004"

Worn Piston & Sleeve .....005".....005"

**Engines Without Sleeves**

New Piston & Bore .....0025".....002"

New Piston—Worn Bore .....004".....004"

Worn Piston & Bore .....005".....005"

**PISTON RINGS:**—Two compression, one slotted oil ring, all above pin (drain holes in oil ring groove).

**NOTE:**—Expander used with #2 Compr. and oil ring.

**Ring Width End Gap Side Clearance**

Compr. #1.....0915-.0920".....012-.017".....0025-.003"

Compr. #2.....0915-.0920".....012-.017".....002-.0025"

Oil Contr.....1535-.1540".....012-.017".....0015-.002"

**Replacement Rings:**—See Ford Shop Notes for data.

**PISTON PIN:**—Diameter—.7501-.7504". Length—2.850" (steel pistons), 2.780" (aluminum pistons). Floating type. Pin hole in rod bronze-bushed.

**Pin Fit in Piston:**—.0001-.0002" clearance (aluminum pistons), .0003-.0009" clearance (steel pistons) or light hand push fit with piston at 70°F.

**Pin Fit in Rod Bushing:**—.0002-.0005" clearance (pin should pass through bushing slowly of own weight). See Ford Shop Notes for Pin Fitting directions.

**Replacement Pins:** See Ford Shop Notes.

**CONNECTING ROD:**—Length 7.000". Weight 476 grams. Crankpin Journal Diameter—1.999" (connecting rod diameter on crankpin—2.220").

**Bearing Type:**—Steel-backed, special-alloy lined. Bearing floats in both rods (side-by-side mounting) with bearing surface on inner and outer faces.

**ENGINE****CONTINUED FROM PRECEDING PAGE**

**Bearing Dimensions**—Length 1.747". Thickness .1095". These bearings do not have end flanges. **Clearance**—.0015-.0035" (see Bearing Adjustment). **Sideplay**—.003-.007" (bearing endplay), .006-.014" (side clearance for both rods).

**Bearing Adjustment**: None (no shims). Do not file bearing caps. Replace bearings if less than .1085" thick, replace or hone rods for oversize bearings if worn more than .0015" over original size of 2.2195-2.2200". **CAUTION**—Both rods must be same size.

**Replacement Bearings**: See *Ford Shop Notes*.

**Installing Rods**:—Marks on rods and caps must be together and installed in same numbered cylinder with marks pointing down toward oil pan.

**CRANKSHAFT**:—3 bearing. Integral counterweights. **Journal Diameters**—2.499" (all bearings).

**Bearing Type**—Steel-backed, special-alloy lined. **Clearance**—.001-.003" (or slight drag with .002" feeler assembled in bearing for clearance check).

**Bearing Adjustment**:—None (no shims). Do not file. **End Thrust**:—Taken by rear main bearing. Adjust by replacing bearing. **Endplay**—.002-.006".

**Replacement Bearings**:—See *Ford Shop Notes for Undersizes and special long rear main bearings*.

**CAMSHAFT**:—Three bearing. Helical gear drive.

**Bearing Diameters**—1.797" all bearings. Replace camshaft if worn to less than 1.7955" diameter. **Clearance**—.002".

**End Thrust**:—Taken by gear hub and cover plate. Adjusted by replacing coverplate. **Endplay**—.005-.015".

**Timing Gears**:—Cast alloy iron (crankshaft), Bakelized Fabric—pressed on shaft, or Aluminum Alloy—bolted on shaft (camshaft). **Backlash**—.004" max. See *Ford Shop Notes for Timing Gear Replacement*.

**Camshaft Setting**:—Mesh '0' marked tooth of crankshaft gear with '1' marked space on camshaft gear (this mark must be in line with mark on hub).

**VALVES**:—Head Diameter Stem Diameter Length  
All Valves..... 1.537"..... 3.115"..... 4.750-4.751"

Seat Angle Lift Stem Clearance  
All Valves..... 45°..... .292"..... .0015-.0035"

**NOTE**—Service limit for valve stem diameter is .309" Intake, .3065" Exhaust. Valves interchangeable. See *Ford Shop Notes for Valve Servicing data*. **NOTE**—Seat inserts used for all valves.

**Valve Guides**:—Split type retained by 'C' washer and valve spring. **NOTE**—Replace both halves of all guides measuring less than .6665" (thickness of guide half and valve stem at top of guide with valve of .311" stem diameter in place in guide). For *Valve Guide servicing data*, see *Ford Shop Notes*.

**Valve Lifters**:—Barrel type in reamed holes in block. **Diameter**—.9995". Replace if worn to less than .998" in diameter or length less than 1.710" after any necessary resurfacing of ends (cast type can be resurfaced on both ends, pressed steel type on bottom end only). **Clearance**—.0005-.0015". Lifter should slip into hole in block of own weight.

**Valve Springs**: Pressure Length  
Valve Closed ..... 37-40 lbs..... 2.13"  
Valve Open ..... 76-80 lbs..... 1.84"  
**NOTE**—Replace spring if the pressure is less than 30 lbs. when compressed to 2.125".

**VALVE TIMING**

**Tappet Clearance**:—.010-.012" Intake, .014-.016" Exhaust. No adjustment.

**Valve Timing**:—See Camshaft Setting above.

**Intake Valves**—Open at TDC. Close 44° ALDC.

**Exhaust Valves**—Open 48° BLDC. Close 6° ATDC.

**To Check Valve Timing**—No flywheel marks provided. Intake valve opens with piston at TDC.

**LUBRICATION**

**LUBRICATION**:—Pressure. Gear type oil pump mounted in crankcase at rear of engine.

**Normal Oil Pressure**:—30 lbs. at 2000 R.P.M.

**Oil Pump and Oil Pressure Regulator**: See "Oil Pump" in *Ford Shop Notes* for data.

**Oil Pressure Gauge**:—King-Seeley Electric. Ford Nos: Dash Unit: 91A-9273B ('39 Del. Pass.Car), 91A-9273A ('39—all others), 91A-9273B ('40 Deluxe), 91A-9273A ('40—all others). Eng. 48-9278 (all). See *Miscellaneous Section* for complete data.

**Crankcase Capacity**:—5 qts.

**COOLING**

**COOLING**:—Capacity. 22 qts. (Pass. Car; '39 Comm'l ¾ & 1 Ton; '40 Truck exc. C-O-E). 20 qts. ('40 Comm.). 24 qts. ('39 Truck exc. C-O-E). 23 qts. (C-O-E).

**Water Pump**: Packless. 2 used (1 for each bank).

See *Water Pump Section* for complete data.

**Removal**:—Slack off drive belt, support engine at forward end, remove front engine mounting bolts, take out mounting screws in pump body.

**Thermostat**:—In each cylinder head outlet (2 used). **Setting**:—Start to open at 145°F. Fully open 180°.

**Temperature Gauge**:—1939—King-Seeley Liquid type, Ford Part No. 91A-10883B (Del. Pass. car), 91A-10883A (all others). 1940—King-Seeley Electric Ford Nos. Dash Unit: 91A-10883A (Std.), 91A-10883B (Deluxe). Engine Unit: 99A-10884. See *Miscellaneous Section* for complete data.

**CLUTCH**

**CLUTCH**:—Long Model 9CF-CS. Semi-centrifugal, single plate, dry disc type.

See *Clutch Section* for complete data.

**Facings**:—Molded type, 2 required. Inside Diam. 5.76". Outside Diam. 9". Thickness .137".

**Adjustment**:—Pedal free movement should be 1.0-1.25". To adjust, remove clevis pin at end of connector rod, adjust clevis on rod.

**NOTE**—Pedal free movement 1.5-1.75" for '39 cars. **Removal**:—Slide rear axle and transmission to rear as a unit to expose clutch (see Transmission Removal below), take out mounting screws in cover.

**TRANSMISSION**

**TRANSMISSION**:—Own Make. Constant-mesh, synchro-mesh (Second & High), sliding gear (low & reverse), all helical gear type. **NOTE**—Four speed spur gear type optional on Commercial.

See *Transmission Section* for complete data.

**Transmission Control (01A)**:—Steering col. shift Std. See *Transmission Section* for complete data.

**Removal**:—Disconnect rear shock absorbers, hand brake cables, hydraulic brake line at torque tube connection (bleed lines when re-connected), speedometer cable. Disconnect rear spring at center frame connection, take out universal joint ball housing screws, slide rear axle assembly back to disengage drive shaft at splined joint. Support engine

at rear, take out rear engine mounting bolts and clutch housing screws, pull trans'm straight back. **NOTE**—Disconnect gear shifter rods from levers at transmission on 1940 passenger car models.

**UNIVERSALS**

**UNIVERSAL JOINT**:—Spicer 6454-FS ('39), 202-6 (std. '40), 202-8 (01C, 09C with 4 spd. trans.). Steel bushed type at rear of transmission.

See *Universals Section* for complete data.

**REAR AXLE**

**REAR AXLE**:—Own Make. ¾ floating, Spiral Bevel gear type with Torque Tube drive.

See *Rear Axle Section* for complete data.

**Ratio**—3.78-1 Std.; 3.54-1, 4.11-1 Optl.

**Backlash**—.012" max.

**Removal**:—Disconnect rear shock absorbers, hand brake cables, hydraulic brake line at torque tube connection (bleed lines when re-connected), speedometer cable. Disconnect rear spring at center frame connection, take out universal joint ball housing screws, pull axle assembly to rear to disengage splined joint, remove axle assembly.

**Axle Shaft Removal**:—Refer to *Ford Passenger Car Rear Axle* article in *Rear Axle Section*.

**REAR AXLE****OPTIONAL EQUIPMENT**

**TWO-SPEED REAR AXLE**: Columbia—Two-Speed type. See *Rear Axle Section* for complete data.

**Removal**:—Same as for standard axle (above) except that control linkage must also be disconnected.

**SHOCK ABSORBERS**

**SHOCK ABSORBERS**:—Houdelle (Houdaille). Front — BBDK (1939), BBDM (1940). Rear—BBDW (1939), BBDX (1940). Double acting, hydraulic, adjustable. See *Shock Absorber Section* for complete data.

**FRONT SUSPENSION**

**Front Suspension**:—Conventional 'I' beam section front axle with Reverse Elliott ends and transverse front spring. Axle positioned by radius rods. **Kingpin Inclination**—8° crosswise. **Caster**—9° Max., 4½° Min. Equal within ½°. **Camber**—1° Max., ¼° Min. Must be equal within ¼° and the right wheel must not exceed the left. **Toe In**—1/16". Set at 1-10 ratio to Camber. Adjust by loosening tie rod clamp bolts and turning tie rod. **Steering Geometry**—Inner wheel 23½°. Outer 20°.

**STEERING GEAR**

**Steering Gear**: Gemmer Model 305. Worm-and-Roller type with "push-pull" adjustments.

See *Steering Gear Section* for complete data.

**BRAKES**

**BRAKES**:—Service. Lockheed hydraulic, double anchor type. Hand lever applies rear service brakes.

See *Brake Section* for complete data.

**Drums**:—Cast iron. Diameter 12".

**Wheel Cylinders**:—Stepped or two-stage bore type:

Front Wheel—Front cylinder 1.25". Rear 1.00".

Rear Wheel—Front cylinder 1.125". Rear 1.00".

**Lining**:—Woven (forward shoes), Molded (rear shoes). Width 1.75". Thickness .20". Length per shoe 13.18" (forward shoes), 10.1" (rear shoes).

**Clearance**:—Least possible amount without drag.

**Hand Brake**:—See Service Brakes above.

**MISC. MECHANICAL**

1940 Power Operated Conv. Top: Vacuum Power type. See *Miscellaneous Section* for complete data.

**OIL PAN REMOVAL:** Refer to Ford Shop Notes.

## MODEL IDENTIFICATION

3/4 Ton Trucks

99U	09U	V8 "95" (Dump Trk)	134"

①—Wheelbase for 1940 models 158"

**SERIAL & ENGINE NUMBER:**—Stamped on top of clutch housing and on left frame side member near generator.

## TUNE-UP

**COMPRESSION:** Ratio and pressure as follows:

Engine	Ratio	Pressure at 100 RPM
60	6.6-1	116 lbs.
85①	6.2-1	113 lbs.
85 Truck	5.9-1	108 lbs.
95①	6.3-1	112 lbs.
95 Truck	5.9-1	106 lbs.

①—Commercial, 3/4 and 1 Ton Truck.

**VACUUM READING:**—Steady 18-20" at 5-7 MPH.

**FIRING ORDER:** 1-5-4-8-6-3-7-2. See diagram for cylinder numbering and spark plug cable connections.

**SPARK PLUGS:** Champion Type H-10. 14 mm. Metric. Gaps—.025"

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.014-.016" Cam Angle—36° (closed—both sets operating together).

Automatic Advance—8° max. at 950 RPM (distr.).

**IGNITION TIMING:** See Ignition Timing.

Std. Setting—4° BTDC. No flywheel marks provided. See Ignition Timing for timing procedure and Vacuum Brake adjustment.

**CARBURETION:** See Carburetor & Carb. Equipment.

**Idle Setting:**—Both idle screws 5/8-3/4 turns open (Stromberg Carb.), 3/8-7/8 turn open (Chandler-Groves Carb.). Idle speed 5-7 MPH.

**Float Level:**—Fuel level 15/32" (Stromberg Carb.), 21/32-23/32" (Chandler-Groves Carb.) below top edge of bowl.

**Accelerating Pump (Stromberg Carb.)**—Inner hole—Summer, Outer hole—Winter.

**Accelerating Pump (Chandler-Groves Carb.)**—Inner hole Summer, Center hole ordinary Winter temperatures, Outer hole extreme winter temperatures.

**Fuel Pump Pressure:** 3 1/2 lbs. maximum.

**VALVES:** See Valve Timing.

**Tappet Clearance:**—.011-.012" All Valves ("60" V8), .010-.012" Intake ("90" & "100"), .014-.016" Exhaust ("90" & "100").

**STARTING:** See Battery, Starter, Generator, and Regulator (when used).

## IGNITION

**Ignition Switch:**—Oakes Steering Column & Ignition Lock Assembly. Part Nos. as follows:

**1939 Types:**—Assembly No. 301685, Ford No. 81C-3676 (Comm., 3/4, 1 Ton); 301675, Ford No. 81T-3676 (Trucks). Ignition Switch No. 301683 (All Models).

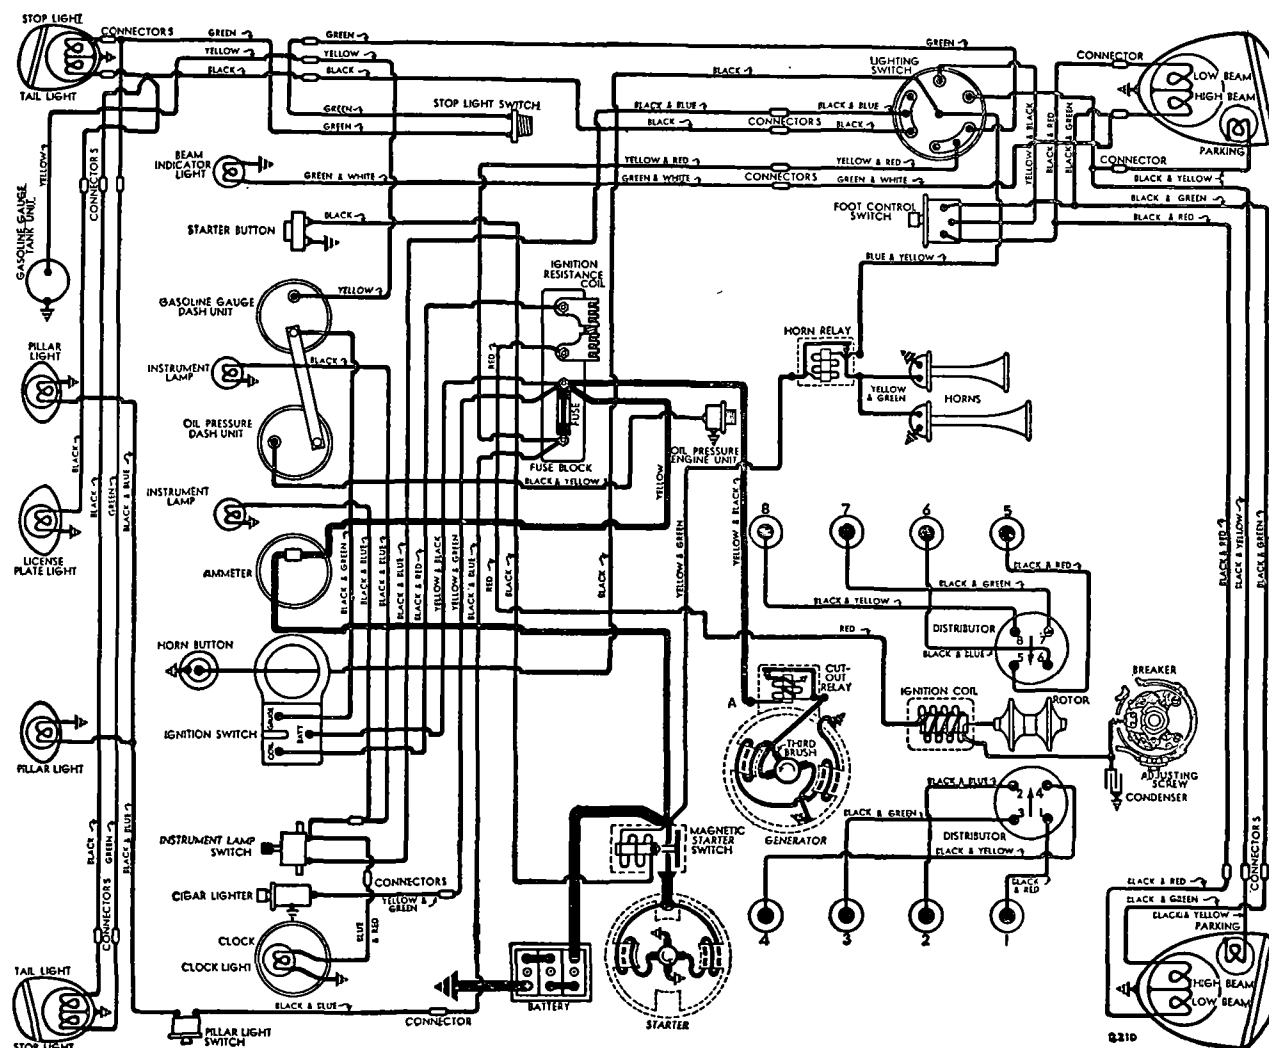

**1940 Types:**—Assembly No. 302120, Ford No. 01C-3678 (Comm., 3/4, 1 Ton); Ford No. 81W-3676 (C-O-E Trucks); 302122, Ford No. 01T-3676 (Other Trucks). Ignition Switch No. 301683 (All Models).

**Lock Cylinder:**—Hurd or Briggs & Stratton No. 80935, Ford No. 91A-3686A (with keys).

**Key Series:**—FK000 to FK999. Groove—No. 17.

**COIL:** Ford No. 78-12036 or 81A-12036 (Coil less Condenser). Mounted on ignition unit (part of ignition assembly).

**Resistor Unit:**—Connected in coil primary circuit. Mounted on Circuit Breaker Assembly No. 01A-12250.

1939 MODELS

**Ignition Current**—4½-6 amperes (engine stopped).  
**Ignition primary circuit resistance** 1-1½ ohms.

**CONDENSER:** Ford Part No. 78-12300 (78-12036 Coll), 81A-12300 (81A-12036 Coll).

**Capacity**—.33-.36 microfarad.

**DISTRIBUTOR:** Ford Model 78-12127 (Less Coil, caps, and distributor plates). Double breaker, 8 lobe cam, full automatic advance type with Vacuum Brake Control (See Ignition Timing for adjustment).

**REPLACEMENT DISTRIBUTOR**—Model No. 11A-12127 with different advance. See 1941 Ford V8 article for all data on this model.

**Breaker Gap**—.014-.016" (both sets). Use special two step feeler—.014" step 'go', .016 step 'no go'.

**Cam Angle**—36° closed, 9° open. For both sets operating together with correct coil-loading lead.

**Breaker Arm Spring Tension**—20-24 ozs.

**Rotation**—Clockwise viewed from drive end.

**Automatic Advance**  
 (High Vacuum or Vacuum Brake Inoperative)

Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start	200	0	400
2	300	4	600
3	375	6	750
5	600	10	1200
8	950	16	1900

**Removal:**—Ignition unit mounted on front of engine. To remove, disconnect vacuum line, take off caps, take out screws in mounting flange.

## IGNITION TIMING

**IGNITION TIMING:**—For each engine as follows (see Vacuum Brake Setting below for adjustment de-

pending on type of service and fuel used).

**Flywheel Degrees** **Piston Position**

'60' Engines .....4° BTDC.....0048" BTDC.  
 '85' & '95' Engines .....4° BTDC.....0058" BTDC.

**Timing Note**—Manufacturer recommends use of Laboratory Test Set with Stroboscope attachment  
**Timing (On Engine)**—No flywheel marks provided and timing should be set with piston on top dead center. With #1 piston on top dead center entering power stroke, loosen timing adjusting screw on left hand side of ignition unit housing, place screw in retard position at lower end of slot, move screw slowly up until timing contacts begin to open, note graduation on plate under screw head which is in line with reference mark on housing, move screw up exactly one additional graduation, tighten screw.

**Vacuum Brake Setting:**—Should be adjusted to eliminate pinging when engine operated with load. To adjust, loosen locknut, back off adjusting screw until engine pings with load, turn screw in just enough to eliminate ping, tighten locknut. When adjusted on Stroboscope, vacuum brake should retard spark to peepsight (set at 2°) at 950 RPM. (78-12127 Distr.), 650 RPM. (11A-12127 Distr.).

## CARBURETOR

**Carburetor**—Holley (Chandler-Groves) Model No. AA-7/8 Ford No. 922A-9510A (60 Engine); AA-1, Ford No. 91A-9510-A (85 & 95 Engine). Dual, downdraft types. NOTE—Stromberg Model EE-7/8, Ford No. 52-9510B also used on 1939 models with "60" Engine. NOTE—Model 91A-9510A replaced by 21A-9510-A. For complete data, refer to Carburetor Index.

**Idle Adjustment**—With engine warm, choke valve wide open, and Fast Idle inoperative, set throttle lever stopscrew for 5-7 MPH. idling speed, turn each idle adjusting screw (one for each barrel, adjust in succession) in until engine begins to miss, then out until engine begins to roll, finally turn screw in until engine fires smoothly. Final setting should be approximately ⅝-¾ turn open (Stromberg), ⅝-¾ turn open (Chandler-Groves). Readjust stopscrew for correct idling speed of 5-7 MPH.

**NOTE**—Vacuum gauge recommended for idling adjustment. Set for highest steady gauge reading.

**Float Level (Stromberg)**—Fuel level should be 15/32" below top edge of bowl with engine idling.

**Float Level (Chandler-Groves)**—1⅝-1 11/32" from bottom of float to face of cover with valve seated (invert to check). Fuel level 21/32-23/32" below top edge of bowl.

**Accelerating Pump Setting (Stromberg)**—Two ball studs provided for pump link connection as follows:  
 "S"—Minimum stroke—Summer operation.  
 "W"—Maximum stroke—Winter operation.

**Accelerating Pump Setting (Chandler-Groves)**—Three holes provided for pump link connection:  
 Inner (#1)—Min. stroke, Summer Temperatures.  
 Center (#2)—Med. stroke, Winter Temperatures.  
 Outer (#3)—Max. stroke, Extreme Cold Weather.

**NOTE**—Link locked in pump rod by snap-lock. Pull link shaft out of pump rod to disengage this lock.

## C NTINUED FROM PRECEDING PAGE

**Fast Idle:**—Integral with carburetor. Operated by choke valve lever. No adjustment required.

## CARB. EQUIPMENT

**Air Cleaner:** AC No. 1528238 (1939 "60" Engine), 1528237 (1939 "85" & "95" Engine), 1529224 (1940 All) oil-wetted type Std. Heavy duty oil-bath type Optl.

**Gasoline Gauge:** King-Seeley Electric. Ford Nos. Dash Unit—91A-9280A (1939), 01A-9280A (1940). Tank Unit—81W-9275 (1939 C-O-E Trucks), 01W-9275 (1940 C-O-E Trucks), 01Y-9275 (1940 122" Panel Delivery), 01T-9275 (1939-40 Other Trucks).

For complete data, refer to Carburetion Equip. Index.

**Fuel Pump:**—AC Type R. #1523257, Ford No. 52-9350B (60 Engine); #1523307, Ford No. 68-9350 (85 & 95 Engines). Diaphragm type.

For complete data, refer to Carburetion Equip. Index.

## BATTERY

**BATTERY (1939):** Ford No. 81A-10655-A. 6 volt, 17 plate, 100 ampere hour capacity (20 hour rate).

Starting Capacity—126 amperes for 20 minutes.

Zero Capacity—300 amperes for 3.3 minutes.

**Grounded Terminal:**—Positive (+) grounded to dash. Engine ground—Strap connector between right rear cylinder head stud and dash.

**Dimensions:**—Length 10.5". Width 7.2". Height 7.1".

**Location:**—On right hand side of cowl under hood.

**BATTERY (1940):** Ford No. 01A-10655-A. 6 volt, 17 plate, 120 ampere hour capacity (20 hour rate).

Starting Capacity—150 amperes for 20 minutes.

Zero Capacity—300 amperes for 4.0 minutes.

**Grounded Terminal:**—Positive (+) to dash.

**Engine Ground:**—Strap connector between right rear cylinder head and dash (connected to battery ground strap bolt on Deluxe cars).

**Dimensions:**—Length 10.6". Width 7.3". Height 9.2".

**Location:**—On right side in engine compartment.

**Battery Indicator:**—King-Seeley. Voltmeter type. Ford No. 01A-10844A (1940 Std.), 01A-10844B (1940 Deluxe & replacement for 01A-10844A).

For complete data, refer to Electrical Equipment Index.

## STARTER

Ford No. 52-11002 (60 Eng.), 18-11002 (85, 95 Eng.).

**Armature:**—52-11005 (52-11002), 18-11005 (18-11002).

**Drive:**—Barrel Type Bendix No. A-1806, Ford No. 52-11350-C (52-11002), Inboard Bendix No. L11FX-10, Ford No. B-11350 or Ford B&S Drive 91A-11350 (18-11002). Refer to Electrical Equipment Index for Barrel Type Bendix Drive & Ford B&S Drive servicing.

**Rotation:**—Counter-clockwise at commutator end.

**Brush Spring Tension:**—2 lbs. each.

**Cranking Engine:**—100 RPM., 190-215 amperes.

**Torque**

Torque	R.P.M.	Volts	Amperes
4 ft. lbs.	1070	4.6	200
8 "	660	4.3	340
12 "	300	3.65	465
14 "	Lock	3.5	500

**Starting Switch:** R-B-M. Ford No. 78-11450 (1939), 01A-11450A (1940) magnetic type mounted on dash and controlled by pushbutton on instrument panel Ford No. 81A-11500 (1939), 01A-11500A (1940).

**Removal:**—Starter mounted on right front face of flywheel housing. To remove, take off pan at right of engine, free starter-to-oil pan support bracket, take out through-bolts on commutator end plate.

## GENERATOR

## THIRD-BRUSH TYPES

**Third Brush Control Type (Std. 1939).** Various types used as listed below. Generators are ventilated by fan on drive pulley.

## 1939—"60" Engines

Generator	Armature	Pulley Diam.
82A-10000-A	79-10005	3.71"

## 1939—"85" &amp; "95" Engines

81A-10000-A	79-10005	4.38"
81A-10000-B	79-10005-HA	4.38"
79-10000-B	79-10005	Double 4.68"

**Charging Rate Adjustment:**—Remove commutator cover band, shift third brush by hand, counter-clockwise to increase output, or clockwise to decrease output. Brush is held in position by friction. Maximum rated output (shown in table below) secured with third brush set 1½ commutator bars from nearest (insulated) main brush. Set charging rate as low as possible to keep battery fully charged. **Maximum Charging Rate:**—As follows:

## Performance Data

81A-10000-A		81A-10000-B	
Amperes	Eng. R.P.M.	Amperes	Eng. R.P.M.
Start	500	Start	525
17	1300	26	1250
11	2500	16	2500
82A-10000-A		79-10000-B	
Start	500	Start	500
17	1300	17	1350
11	2500	11	2500

**Rotation:**—Counter-clockwise at commutator end.

**Brush Spring Tension:**—Approximately 28 ozs.

**Field Current:**—6 amperes at 6.0 volts (79-10000B, 81A-10000A, 82A-10000A—field resistance 1.0 ohm at 70° F.), 4.17 amperes at 6.0 volts (81A-10000B—field resistance 1.44 ohms at 70° F.).

**Removal & Belt Adjustment:** Same as for Two-Brush Generators (see below).

## GENERATOR

## TWO-BRUSH TYPES

**Two Brush (Shunt) Type (Optl. 1939, Std. 1940).** Various types used as listed below. Generators are ventilated and have external voltage and current regulation.

## 1939—"60" Engines

Generator	Armature	Pulley Diam.
82A-10000-D	78-10005-A, C	3.68"
82A-10000-E①	78-10005-B, D	3.68"

## 1939—"85" &amp; "95" Engines

81A-10000-D	78-10005-A, C	4.38"
81A-10000-E①	78-10005-B, D	4.38"
81T-10000A	78-10005-A, C Double	4.68"
81T-10000-B①	78-10005-B, D Double	4.68"

## 1940—All Engines

01A-10000-A③	01A-10005	3.68"
01A-10000-B③	01A-10005	3.18"
81T-10000-A②	78-10005-A, C Double	4.68"
81T-10000-B①②	78-10005-B, D Double	4.68"

①—Low Speed (Taxi, Door-to-Door Delvry., etc.).

②—Std. on 1940 C-O-E Trucks.

③—Replacement Generator 21A-10000.

**Charging Rate Adjustment:**—No adjustment. See Regulator data below.

**Maximum Charging Rate:**—Controlled by regulator and dependent on battery condition and load. To check generator output, disconnect generator field lead at generator, connect both generator terminals together (use short insulated wire). Use 'BRS' set or rheostat connected across battery terminals and apply load until voltage is exactly 6 volts. Connect ammeter in charging line, run engine at approximately 1000 RPM, check output at 3 speeds given in performance table below. Restore original connections after completing test. **Do not operate generator in service with both terminals connected together. This eliminates all regulator action and will damage generator.**

## Performance Data

81A-, 82A-10000-D		81A-, 82A-10000-E	
Amperes	Eng. RPM	Amperes	Eng. RPM
Start	500	Start	350
28	1250	20	1000
28	2500	20	2500
01A-10000-A		01A-10000-B	
Start	580	Start	520
32	1100	30	1060
32	2500	30	2500
81T-10000-A		81T-10000-B	
Start	550	Start	350
28	1300	20	1050
28	2500	20	2500

**Rotation:**—Counter-clockwise at commutator end.

**Field Current:**—2.86 amperes at 6 volts (01A-10000 A—field resistance 2.1 ohms at 70°), 2.1 amperes at 6.0 volts (01A-10000B—field resistance 2.88 ohms at 70° F.), 2.22 amperes at 6.0 volts (81A-10000-D, E; 82A-10000-D, E; 81T-10000-A, B—field resistance 2.7 ohms at 70° F.).

**Brush Spring Tension:**—Approximately 28 ozs.

**Removal:**—Generator mounted on bracket between cylinder banks at front of engine, driven in tandem with water pumps by Vee belt (on Cab-over-Engine Trucks, fan on generator shaft with double drive belts). To remove, loosen bracket stud nut.

**Belt Adjustment:**—Loosen nut on bracket mounting stud, raise generator up until side movement on belt midway between generator and water pump pulley is 1" (thumb and finger pressure).

**GENERATOR****SPECIAL EQUIPMENT**

**SPECIAL GENERATORS:**—Other Makes—Refer to *Electrical Equipment Index* for 'Special Generator' article for complete data on special Generators and Regulators which may be found on these models.

**CUTOUT RELAY**

Ford No. B-10505 (Used with Third Brush Generator). Mounted on generator. Generator field lead grounded to relay mounting screw.

**Cuts In**—5.8-6.3 volts, 400 Eng. RPM (60 Trucks), 660 RPM (85 & 95 Trucks).

**Cuts Out**—2 amperes maximum discharge.

**Contact Gap** .015-.020". **Air Gap** .010-.015" (closed).

**NOTE**—Relay case sealed. No adjustment possible.

**REGULATOR**

**REGULATOR:**—Ford No. 01A-10505-A. Vibrating type Voltage-Current regulator with Cutout Relay in case on dash. **NOTE**—Regulator mounted on rubber cushions and grounded through separate ground wire attached to case. Regulator case is sealed and no adjustments can be made.

**REPLACEMENT REGULATOR NOTE**—New type 3-unit Regulator (separate Voltage & Current Regulator units) furnished as service replacement for above 2-unit type. See 'Ford Regulator—3-unit Type' article in *Electrical Equipment Section* for complete data on this new type.

**Cutout Relay**

**Cuts In**—5.8-6.3 volts.

**Cuts Out**—5.5 amperes max. (Cold 60°), 1.7 amperes (Hot 180°)—see *Regulator article in Electrical Equipment Section* for specifications at other temperatures.

**Voltage-Current Regulator**

**Voltage Setting**—6.9-7.2 volts at 70°F.

**Current Setting**—30-33 amperes.

**Regulator Checking & Adjustment**—See *Ford Regulator article in Electrical Equipment Section* for complete testing directions. No adjustments can be made as regulator case is sealed.

**LIGHTING**

**Headlamps**—Ford (Corcoran-Brown) Two-Lite, Pre-focused, type (1939), Ford Sealed Beam type (1940), Upper and Lower Beams controlled by Beam Selector Switch on toeboard.

For complete data, refer to *Electrical Equipment Index*.

**Headlamp Adjustment**—Aim Upper Beam of each headlamp straight ahead with upper edge of beam on horizontal line at lamp center height (1939), center of hot spot 3" below horizontal line at lamp center height (1940) at distance of 25 feet.

**Beam Indicator**—Red jewel on instrument panel directly above speedometer. Lighted when upper beams in use.

**Switches—1939**

**Lighting**—R-B-M. Ford No. 81W-11653 (C-O-E Trucks), 81T-11647 (Others). Switch Body & Contact Assembly 81A-11657 (All Models).

**Beam Selector**—Ford No. 81A-13532.

**Instrument Light**—Ford No. 50-13740.

**Stop Light**—Ford No. 81T-13480.

**Switches—1940**

**Lighting**—R-B-M No. 6425. Ford No. 01A-11652.

**NOTE**—Switch is mounted on instrument panel.

**Beam Selector**—R-B-M No. 2480. Ford No. 81A-13552. Switch & Wiring Assy. Ford No. 01W-11653 (C-O-E Trucks), 01C-11653 (Other Trucks).

**Instrument Light**—Ford No. 50-13740.

**Stop Light**—Ford No. 91A-13480.

**Bulb Specifications**

Position	Candlepower	Mazda No.
Headlamps (1939)	32-32	2330
Headlamps (1940)		Sealed Beam
Parking (Comm'l., Trks.)	3	63
Instrmt. (Comm'l., Trks.)	3	63
Beam Indicator	1	51
Stop & Tail	21-3	1158

**MISC. ELECTRICAL**

**LIGHTING CIRCUIT BREAKER:**—R-B-M Model 6700, Ford No. 01A-12250. Combined with Ignition Resistor on block on dash under cowl. Combination thermostatic and wound-coil type. Contacts open with current of 50 amperes. Current continues to flow through winding which is connected across the contacts resulting in rapid vibrating action.

**FUSE BLOCK:** Ford No. 40-12250. Used instead of Lighting Circuit Breaker on some models. Combined with Ignition Resistor on block on dash under cowl.

**Fuse Capacity**—20 amperes.

**HORNS:** Vibrator type single horn Std.

**Horn Current**—6-8 amperes.

**ENGINE****V8 "60" TYPE**

**ENGINE SPECIFICATIONS:**—Own Model, 8 Cylinder 90° V, L head. Both banks & crankcase cast enbloc. **Bore**—2.6". **Stroke**—3.2". **Displm't**—136 cu. ins. **Rated Horsepower**—21.6.

**Developed Horsepower**—60 at 3500 R.P.M.

**Compression Ratio**—6.6-1 Std. No Optl. ratios.

**Compression Pressure**—158 lbs. at 2800 R.P.M. or 116 lbs. at cranking speed of 100 RPM.

**Vacuum Reading**—18-20" steady at 5-7 M.P.H.

For all other "60" Engine data, refer to 1939-40 Ford V8 "60" Passenger Car & Comm'l article.

**ENGINE****V8 "85" TYPE**

**ENGINE SPECIFICATIONS:**—Own Model, 8 Cylinder, 90° V, L head. Both banks & crankcase cast enbloc. **Bore** 3.062". **Stroke** 3.75". **Displm't**. 221 cu. ins.

**Rated Horsepower**—30.

**Developed Horsepower**—90 at 3800 RPM.

**Compression Ratio**—6.2-1 (Comm'l, ¾, 1 Ton), 5.9-1 (Other Trucks). Heads are Cast Iron.

**Compression Pressure**—145 lbs. at 2300 RPM. max. or 113 lbs. at cranking speed of 100 RPM. (6.2-1 Head), 135 lbs. at 2300 RPM. max. or 108 lbs. at cranking speed of 100 RPM (5.9-1 Head).

**Vacuum Reading**—18-20" steady at 5-7 M.P.H.

For all other "85" Engine data, refer to 1939-40 Ford V8 "85" Passenger Car & Comm'l article.

**ENGINE****V8 "95" TYPE**

**ENGINE SPECIFICATIONS:** Own 95.8 cylinder, 90° Vee, "L" Head. Both banks and crankcase cast enbloc. **Bore**—3.187". **Stroke**—3.75".

**Rated Horsepower**—32.5. **Displacement**—239 cu. ins.

**Developed Horsepower**—95 at 3600 RPM.

**Compression Ratio**—6.3-1 (Comm'l), 5.9-1 (Trucks). Heads are Cast Iron.

**Compression Pressure**—145 lbs. at 2400 RPM max. or 112 lbs. at cranking speed of 100 RPM. (6.3-1 Head), 135 lbs. at 2200 RPM. max. or 108 lbs. at cranking speed of 100 RPM. (5.9-1 Head).

**Vacuum Reading**—Steady 18-20" idling at 5 MPH.

For all other "95" Engine data, refer to 1939-40 Mercury V8 "95" Passenger Car article.

**VALVE TIMING**

**Tappet Clearance:**—.011-.012" All Valves ("60" V8), "90" & "100"—.010-.012" Int., .014-.016" Exhaust.

**Valve Timing ("60" Engine):** See Camshaft setting.

**Intake Valves**—Open 9½° BTDC. Close 54½° ALDC.

**Exhaust Valves**—Open 57½° BLDC. Close 6½° ATDC.

**Valve Timing ("85" & "95"):** See Camshaft Setting.

**Intake Valves**—Open at TDC. Close 44° ALDC.

**Exhaust Valves**—Open 48° BLDC. Close 6° ATDC.

**To Check Valve Timing**—No marks on flywheel or other means provided to check timing. If dead center position for piston #1 is established on flywheel, intake opening for this cylinder should occur with piston .0270° BTDC. with flywheel mark 3.22 teeth before dead center point (60 Engine) or with piston on top dead center and flywheel mark at dead center point (85, 95 Engines).

**LUBRICATION**

**LUBRICATION:**—Crankcase Capacity—4 qts. (60 Engine), 5 qts. (85, 95 Engines).

**Normal Oil Pressure**—30 lbs. at 2000 R.P.M. (all).

**Oil Pressure Gauge:**—King-Seeley Electric. Ford Nos.:

**Dash Unit**—91A-9273A (1939), 01A-9273A (1940)

**Engine Unit**—48-9278 (All Models).

See *Miscellaneous Section* for complete data.

**COOLING**

**Capacity:** 16 qts. ("60" ¾ & 1 Ton), 22 qts. ("85" ¾ & 1 Ton), 23 qts. (C-O-E Trucks), 24 qts. (Other Trucks 1939), 22 qts. (Other Trucks 1940).

**Water Pump:** Packless. 2 used (1 for each bank).

See *Water Pump Section* for complete data.

**Removal "60"**—Slack off belt adjustment, unscrew large mounting nut behind pulley, pull pump out.

**Removal "85" & "95"**—Slack off drive belt, support engine at front, remove front engine mounting bolts, take out mounting screws in pump body.

**Thermostat:** In each cylinder head outlet (2 used). Starts to open at 145°F., fully open at 180°F).

**Temperature Gauge (1939):** King-Seeley (not electrical). Ford No. 91W-10883 (C-O-E Trucks), No. 91A-10883-A (Other Trucks).

See *Miscellaneous Section* for complete data.

**Temperature Gauge (1940):** King-Seeley Electric. **Dash Unit**—Ford No. 01A-10883A (exc. C-O-E).

**Engine Unit**—Ford No. 99A-10884 (exc. C-O-E).

**NOTE**—Gauge on C-O-E Trucks is Ford No. 91W-10883 (not electric) type.

See *Miscellaneous Section* for complete data.

**NOTE**—Gaug reads 212 (Hot) with Ignition Off.

C NTINUED ON NEXT PAGE

C NTINUED FROM PRECEDING PA E

**CLUTCH**

Long Model 9CF-CS (Trucks with "60" Engine), Model 11CF-CI (All Others). Semi-centrifugal, single plate, dry disc type.

See Clutch Section for complete data.

Facings—Molded type, 2 required. Inside Diam. 5.76" (9CF), 6.5" (11CF). Outside Diam. 9" (9CF), 11" (11CF). Thickness .137" (all).

Adjustment:—Pedal free movement should be 1.5-1.75". To adjust, remove clevis pin at end of connector rod, adjust clevis on rod.

Removal:—Remove transmission (see Transmission Removal below). Take out mounting screws in clutch cover flange.

**TRANSMISSION****3-SPEED TYPE**

TRANSMISSION (3 SPD.):—Own Make. Std. on ¾ & 1 Tonner. Constant-mesh, synchro-mesh (Second & High), helical gears (Second & High), sliding spur gears (Low & Reverse). 4 Spd. Trans. Optl.

See Transmission Section for complete data.

Removal (1939): Remove the front shaft (coupling shaft) as follows: Take out all except top bolt in intermediate universal joint ball housing (frame bolts), remove all screws in front universal joint cover, slide cover back 6" on housing, take out screws in universal joint flange directly in back of universal, disengage coupling by pushing it back on shaft against spring tension, take out remaining bolt at intermediate universal joint, pull shaft down at front end to clear cross-member, pull forward until free at splined joint at rear end, remove shaft assembly. Support engine at rear end, take out rear engine mounting bolts, take out clutch housing mounting screws, pull transmission straight back and remove.

NOTE—Models 911-W, Z have one universal joint only (no coupling shaft used).

Removal (1940): Remove four companion flange bolt nuts at front universal. Take out 2 bolt nuts at coupling shaft center support (all except 101" WB. Cab-Over-Engine). Lower propeller shaft assembly to floor. Support engine at rear end, take out rear engine mounting bolts and clutch housing mounting screws. Pull transmission straight back and remove.

**TRANSMISSION****4-SPEED TYPE**

TRANSMISSION (4 SPD.):—Own Make. Std. on all models except ¾ & 1 Tonner. Sliding spur gear type.

See Transmission Section for complete data.

Removal:—Same as for 3 Spd. transmission above.

**UNIVERSALS**

Spicer. Needle bearing types (except 1939 ¾ & 1 Ton—Steel Bushing type). Universal joint installations are as follows:

1939 Models (exc. 911W, 911Z)—Two universals used, one at rear of transmission case, additional universal at frame cross-member between front and rear driveshafts.

1939 Models 911W, 911Z—One universal only. Mounted in ball housing at rear of transmission case.

1940 Models—New type exposed driveshaft (Hotchkiss Drive) with Universal Joints mounted on drive-shaft flanges (see Coupling Shaft Bearing below). Universal Joint types are as follows:

Wheelbase	1940 Universal Joints		
	Front	Center	Rear
101" .....	1351-17 .....	None .....	1358-104
122" .....	1318-103 .....	1311-102 .....	1318-103
134 & 158" .....	1358-4 .....	1351-107 .....	1358-104
194" .....	1358-5 .....	1351-107 .....	1358-105

See Universals Section for complete data.

Coupling Shaft Bearing (1940): With change from Torque Tube Drive to Hotchkiss Drive a new type cushion mounted Coupling Shaft Ball Bearing bolted to underside of intermediate frame cross member is now used. Bearing is mounted on end of coupling shaft in a sleeve with a felt retainer sleeve on each end and a bearing baffle over the front end. Bearing is retained by center universal companion flange. Bearing and sleeve assembly mounted in center support which is bolted to underside of frame cross member.

**REAR AXLE****STANDARD**

REAR AXLE (STD.):—Own Make. Full-floating, Spiral Bevel gear type with straddle-mounted pinion and new Hotchkiss drive.

See Rear Axle Section for complete data.

Ratio—¾ & 1 Tonner: 4.857-1 (Std. 85), 6.67-1 (Std. 60), 4.11-1 (Optl.). Other Trucks: 6.67-1 (Std.), 5.14-1 stamped with SS or 5.83-1 (Optl.).

Backlash—.004-.016".

Removal (1939): Disconnect hand brake cables and brake line (at torque tube connection—bleed lines when re-connected), speedometer cable. Disconnect rear springs (semi-elliptic type), take out universal joint ball housing bolts (rear joint), pull axle assembly to rear to disconnect splined joint, remove assembly.

Axle Shaft Removal—Take out two screws and remove hub cap, remove nuts on 8 hub studs which hold axle shaft flange in place, turn the two special screws (in tapped holes in flange) up evenly to break flange loose from wheel hub, back these screws out, strike axle shaft flange at center to loosen centering cones on studs, remove cones, pull axle shaft out (wheel not disturbed).

Wheel Bearing Adjustment—Remove axle shaft (above), use special bearing adjusting wrench and remove bearing locknut (outer nut), nut retainer, and grease retainer. Adjust inner bearing adjusting nut by turning up until tight and then backing off ½ turn, install grease retainer, bearing nut retainer, outer bearing locknut, turn locknut up tight.

NOTE—When installing axle shaft, make certain that gasket in place under shaft flange, cones in place on studs and that two loosening screws backed off sufficiently so that stud nuts can be tightened securely. Turn the two loosening screws in just enough to prevent loosening in service.

Removal (1940): Split rear universal by taking out bolts and nuts. Lower propeller shaft. Disconnect hand brake cables at equalizer (¾ & 1 Tonner) and flexible hydraulic brake line at rear axle (bleed lines when re-connected). Disconnect rear springs (semi-elliptic type) and withdraw axle assembly from beneath truck.

Axle Shaft Removal—Take out two screws (except ¾ & 1 Tonner) and remove hub cap, remove nuts on 8 hub studs which hold axle shaft flange in place, turn the two special screws (in tapped holes in flange) up evenly to break flange loose from wheel hub, back these screws out, strike axle shaft flange at center to loosen centering cones on studs, remove cones, pull axle shaft out (wheel not disturbed).

Wheel Bearing Adjustment—Remove axle shaft (above), use special bearing adjusting wrench and remove bearing locknut (outer nut), nut retainer, and grease retainer (except ¾ & 1 Tonner). Adjust inner bearing adjusting nut by turning up until tight and then backing off ½ turn, install grease retainer, bearing nut retainer, outer bearing locknut, turn locknut up tight.

NOTE—When installing axle shaft, make certain that gasket in place under shaft flange, cones in place on studs and that two loosening screws backed off sufficiently so that stud nuts can be tightened securely. Turn the two loosening screws in just enough to prevent loosening in service.

**REAR AXLE****SPECIAL EQUIPMENT**

REAR AXLE (OPTL.):—Two-speed type.

See Rear Axle Section for complete data.

Ratio—5.83-1 (Direct), 8.11-1 (2nd speed).

Backlash—.006-.020".

Removal:—Same as for standard axle (above) except that control linkage must also be disconnected.

**SHOCK ABSORBERS**

SHOCK ABSORBERS:—Houdé (Houdaille). Double acting, hydraulic, adjustable. Used on front end only.

See Shock Absorber Section for complete data.

**FRONT SUSPENSION****1939 MODELS**

Front Suspension (1939): Conventional "I" beam front axle with Reverse Elliott ends and transverse spring positioned by radius rods (except Cab over Engine models), semi-elliptic springs (Cab over Engine models).

Kingpin Inclination—8° crosswise (except Cab-Over-Engine Trucks—7°).

Caster—9° Max., 8¼° Min (¾, 1 Ton). 3½° Max., 1° Min. (Cab-Over-Engine), 5° Max., 3° Min. (others). Must be equal within ½°. NOTE—Axle may be bent cold to correct caster provided that proper tools (wedges and blocks to prevent crushing axle flange) used.

Camber—1° Max., ¼° Min. (all models). Must be equal within ¼° and right wheel must not exceed left wheel. Adjust as for Caster (see Caster Note).

**Toe In**—1/16" (Cab-Over-Engine), 0" (other trucks—empty). Set at 10-1 ratio to camber. Toe in increases with load on trucks and should be set with truck empty. Adjust by loosening clamp bolts and turning tie rod.

**Steering Geometry (Toe out on turns)**—Outer wheel turned 20°, Inner wheel 23° (¾ & 1 Ton), 23¾° (101" WB. models), 22¾° (134" WB. models), 22¼° (157" WB. models). Allowable variation ½°.

## FRONT SUSPENSION

### 1940 MODELS

**Front Suspension (1940)**: Conventional "I" beam front axle with Reverse Elliott ends and new semi-elliptic springs.

**Kingpin Inclination**—7° crosswise.

**Caster**—3½° Max., 1° Min. Must be equal within ½°.

**NOTE**—Caster angle controlled by wedge shims inserted between axle pads and springs. To increase caster, insert taper wedge shims equally at both sides (make certain that spring tie bolts extend through wedge anchoring spring to axle).

**Camber**—1° Max., ¼° Min. Must be equal within ¼° and right wheel must not exceed left wheel. **NOTE**—Axle may be bent cold to correct Camber provided that proper tools (wedges and blocks to prevent crushing axle flange) used.

**Toe In**—1/16". Set at 1-10 ratio to Camber. Toe-in increases with load on trucks and should be set with truck empty. Adjust by loosening clamp bolts and turning tie rod.

**Steering Geometry (Toe out on Turns)**—Outer wheel turned 20°. Inner wheel 23° (¾ & 1 Tonner), 23¾° (101" WB.), 22¾° (134" WB.), 22¼° (158" WB.). Allowable variation ½°.

## STEERING GEAR

**Steering Gear**: Gemmer Model 305. Worm-and-Roller type with push-pull adjustments.

See *Steering Gear Section for complete data.*

## BRAKES

**BRAKES**:—Service. Lockheed, hydraulic, double anchor type. Hand lever applies rear wheel service brakes (¾ & 1 Ton), independent rear wheel or driveshaft brake (All Others).

See *Brake Section for complete data.*

**Drums**—Cast-iron. Diameter: ¾ Ton (12" front & rear). 1 Ton (12" front, 14" rear). Other Trucks (14" front, 15" rear).

**Wheel Cylinders**—Stepped type used on ¾ Ton (front & rear wheels), 1 Ton (front). Sizes as follows:

	Front Wheel Front Rear	Rear Wheel Front Rear
¾ Ton	1.25"-1.00"	1.25"-1.00"
1 Ton	1.25"-1.00"	1.375"-1.375"
All Others	1.375"-1.375"	1.50"-1.50"

**Lining**—Forward shoes (Woven—all wheels ¾ Ton, front wheel 1 Ton. Molded—All Others). Rear shoes (Molded—All Models).

	Width	Thick- ness	Length per Shoe Forward	Rear
¾ Ton (all)	1.75"	20"	13.18"	10.1"
1 Ton (front)	1.75"	20"	13.18"	10.1"
1 Ton (rear)	2.00"	268"	15.53"	10.75"
Others (front)	2.00"	268"	15.53"	10.75"
Others (rear)	3.50"	33"	16.64"	11.52"

**Clearance**—Least possible amount without drag.

**Hand Brake (¾ & 1 Ton)**:—See Service Brakes above.

**Hand Brake (1939 exc. ¾ & 1 Ton)**: Independent internal expanding brake band in each rear wheel.

**Drum Diameter**—14".

**Lining**—Woven type. Width 1.5". Thickness .185". Length per wheel 41.12".

**Hand Brake (1940 exc. ¾ & 1 Ton)**: Independent external contracting brake band on drum at rear of transmission.

**Adjustment**—Fully release hand brake lever. Flat on cam should rest on ear of band (if not, remove pin in lower end of hand lever). Turn anchor screw (on left side) in to give .010" clearance between drum and band, replace locking wire. Loosen lock nut and turn bracket adjusting screw (on right side) to give .010" clearance for lower half of band, tighten lock nut. Tighten adjusting rod nut (on right side) to give .010" clearance for upper half of band (slotted side of nut up). Adjust brake rod clevis so that pin enters clevis and hand brake lever with flat of cam on ear of band and lever in fully released position.

**Drum Diameter**—7.81".

**Lining**—Woven. Width 2.5". Thickness 0.250".

**COMMERCIAL & TRUCK NOTE:**—All Engine data below applies also to Ford Commercial & Truck Models with V8 '90" engine. See Ford Commercial & Truck article for all other data.

**ENGINE HOOD NOTE:**—Hood is Alligator type with release knob under instrument panel to left of steering column. To raise hood, pull out on release knob (hood will raise slightly), press in on safety catch under front edge of hood.

**OIL PAN REMOVAL:**—See Ford Shop Notes for data.

## MODEL IDENTIFICATION

Model	Year	Body Type
11A	1941	Passenger Cars
21A	1942	Passenger Cars

**SERIAL & ENGINE NUMBER:**—Stamped on top of clutch housing and on left frame rail (near gen.).

## TUNE-UP

**COMPRESSION:**—Ratio—6.2-1 Std. Cast iron or aluminum heads.

Pressure—140 lbs. max. at 2300 RPM. or 113 lbs. at cranking speed of 100 RPM.

**VACUUM READING:**—Steady 18-20" idling at 5-7 MPH.

**FIRING ORDER:**—1-5-4-8-6-3-7-2. See diagram.

**SPARK PLUGS:**—Champion H-10 (Pass. Cars), H-9 Com. (Truck). 14 MM. Metric type.  
Gaps—.025".

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.014-.016". Cam Angle 36° (closed—both sets operating together).

Automatic Advance—8° max. at 950 RPM (78-12127 Distr.), 11° max. at 600 RPM (11A-12127 & 21A-12127 Distr.). Distributor degrees and RPM.

**IGNITION TIMING:** See Ignition Timing.

Std. Setting—4° BTDC. No flywheel marks provided. See Ignition Timing for ignition timing procedure and Vacuum Brake adjustment.

**CARBURETION:** See Carburetor & Carb. Equipment.  
Idle Setting—Both idle screws  $\frac{5}{8}$ - $\frac{3}{4}$  turn open. Idle speed 5-7 MPH.

Float Level—Fuel level  $\frac{11}{16}$ " ( $\frac{21}{32}$ - $\frac{23}{32}$ ") below top edge of float bowl.

Accelerating Pump—Inner (#1) hole—Summer, Center (#2) hole—Winter, Outer (#3) hole for extremely cold temperatures only.

Fuel Pump Pressure:  $3\frac{1}{2}$  lbs. maximum.

**VALVES:** See Valve Timing.

Tappet Clearance—.010-.012" Intake, .014-.016" Exhaust. No adjustment.

**STARTING:** See Battery, Starter, Generator, Regulator.

## IGNITION

Ignition Switch:—Oakes Steering Column and Ignition Lock Assembly.

Steering Post & Ign. Lock Assem. Ignition Switch

	Oakes No.	Ford No.	Oakes No.
1941 Deluxe Cars	302448	11A-3676B	302494
1941 Super Deluxe	302550	11A-3676B	302494
1941 Sedan Delvry	302575	11C-3676B	302461
1942 All Cars	302756	21A-3676A	302494

Lock Cylinder—Hurd or Briggs & Stratton No. 80935, Ford No. 91A-3686A (With Keys).

Key Series—FK000 to FK999. Groove—No. 17.

**COIL:** Ford No. 78-12036 or 81A-12036 (1941), 1GA-12024 (1942). 1941 type coils mounted on top of distributor as part of ignition unit. 1942 coil is new type mounted separately on bracket on left of engine. Resistor Unit—Connected in coil primary circuit. Mounted on Circuit Breaker Assembly No. 11A-12250 (V8 models only).

Ignition Current— $4\frac{1}{2}$ -6 amperes (V8) with engine stopped. Ignition primary resistance 1- $1\frac{1}{2}$  ohms.

**CONDENSER:** Ford Part No. 78-12300 (78-12036 Coil), 81A-12300 (81A-12036 Coil), 1GA-12300B (1GA-12024 Coil).

Capacity—33-36 mfd. (78-12300 & 81A-12300), 29-32 mfd. (1GA-12300B).

**DISTRIBUTOR (1941):** Ford 78-12127 or 11A-12127 (less coil, caps, and plates). Both types alike except for automatic advance.

Breaker Gap—.014-.016" (both sets). Use special two step feeler—.014" step 'go', .016" step 'no go'.

Cam Angle—36° closed, 9° open. For both sets operating together with correct coil-loading lead.

Breaker Arm Spring Tension—20-24 ozs.

Rotation—Clockwise viewed from drive end.

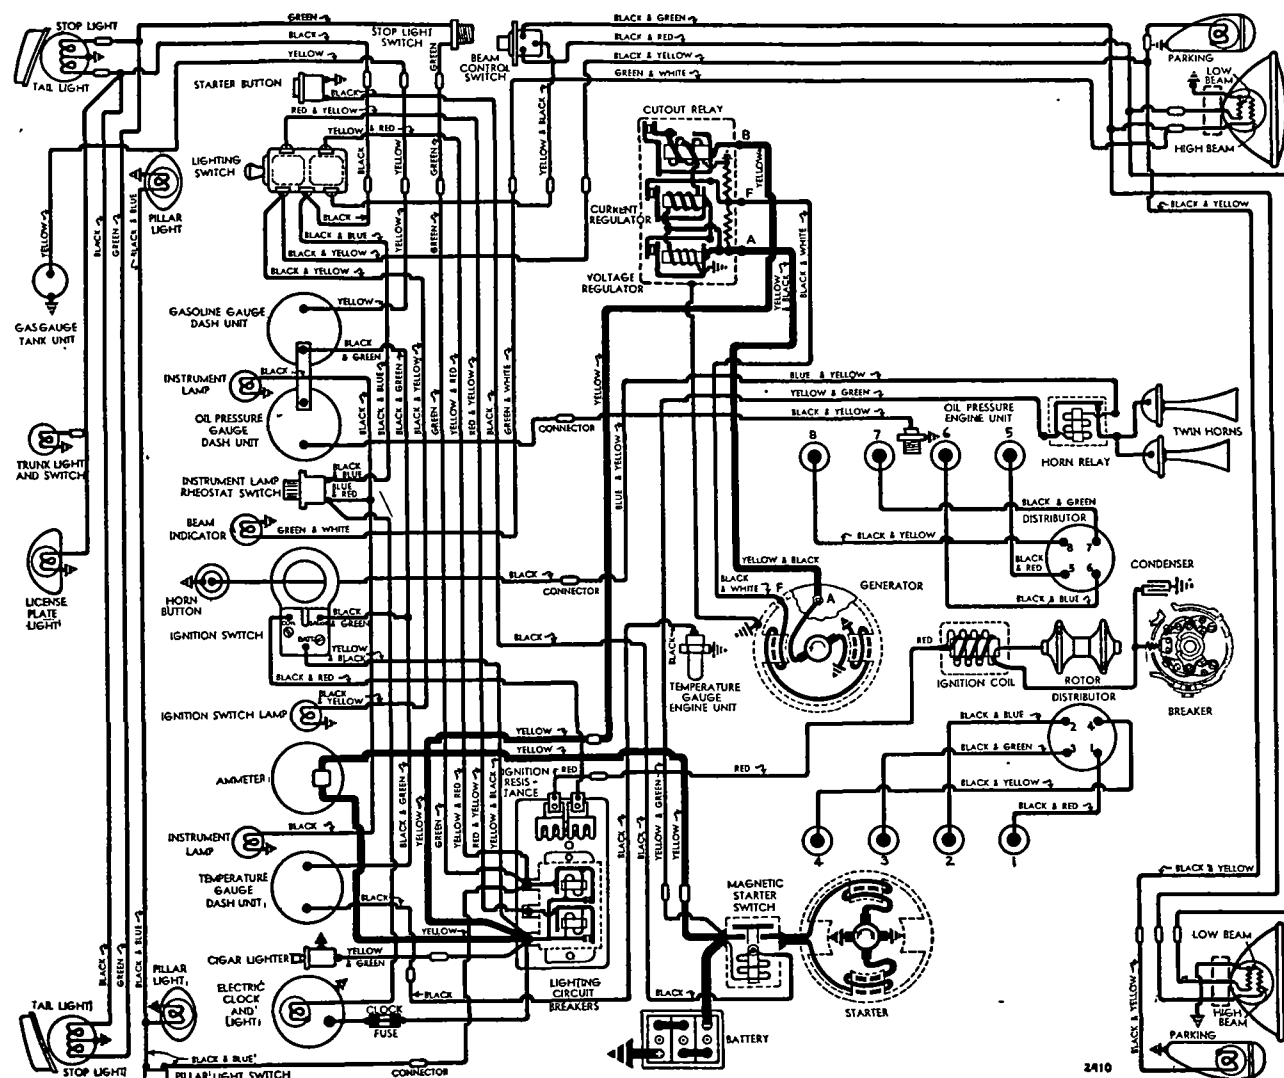

No. 78-12127			
Distributor Degrees	Automatic Advance R.P.M.	Engine Degrees	Engine R.P.M.
Start	200	0	400
8	950	16	1900

NOTE—Limits are  $7\frac{1}{2}$ - $8\frac{1}{2}$ ° (distributor).

No. 11A-12127			
Distributor Degrees	Automatic Advance R.P.M.	Engine Degrees	Engine R.P.M.
Start	200	0	400
11	600	22	1200

NOTE—Limits are  $10\frac{1}{2}$ - $11\frac{1}{2}$ ° (distributor).

Removal:—Ignition unit mounted on front of engine. To remove, disconnect vacuum line, take off caps, take out screws in mounting flange.

1941 MODELS

**DISTRIBUTOR (1942):** Ford 21A-12127 (Less Terminal housing). New flat ignition unit (with separate coil) mounted on front of the engine and is driven directly off end of camshaft. Double breaker, 8 lobe cam, full automatic advance type with Vacuum Brake control (breaker design same as used earlier).

**Breaker Gap**—.014-.016" (both sets). Use special two step feeler—.014" step 'go', .016" step 'no go'.

**Cam Angle or Dwell**—Approx. 36° closed, 9° open. Set dwell at 80% (limits 78-80% at 2000 RPM.) on Ford Test Set. For both sets operating together with correct coil-loading lead.

**Breaker Arm Spring Tension**—20-24 ounces.

**Rotation**—Clockwise viewed from drive end (counter-clockwise viewed from front of car).

#### Automatic Advance—No. 21A-12127

(Vacuum Brake Disconnected)

Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start.....	200	0.....	400
11.....	600	22.....	1200

**NOTE**—Limits are 10½-11½° (distributor degrees).  
**Removal:**—Distributor mounted on front of engine. To remove, disconnect primary lead, remove distributor cap, take out mounting screws in distributor flange, lift unit out.

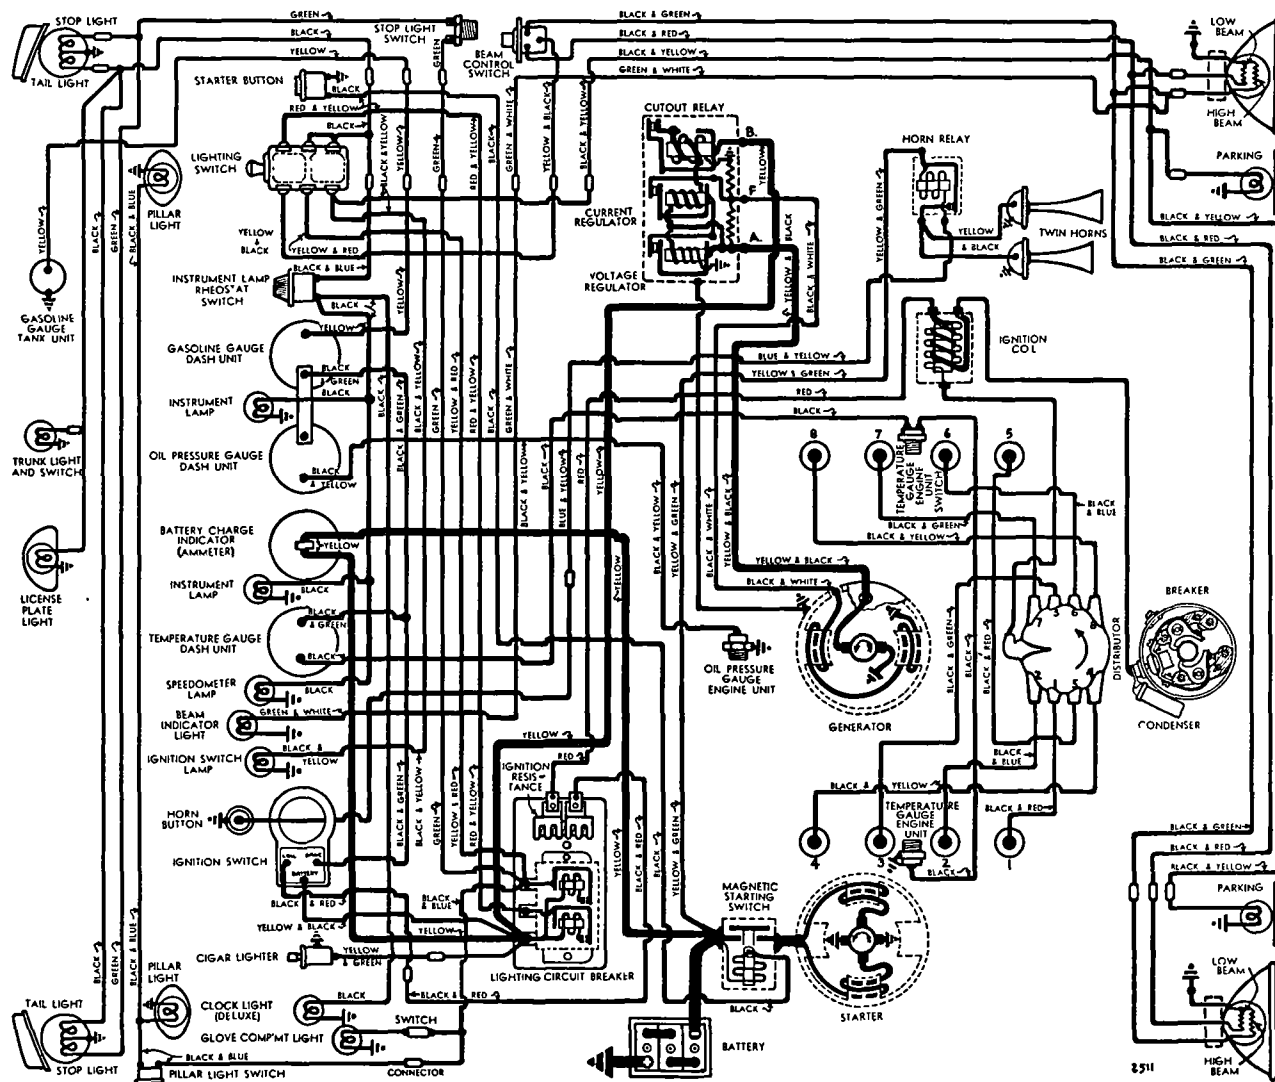

### IGNITION TIMING

**IGNITION TIMING:**—For each engine as follows (see Vacuum Brake Setting below for adjustment depending on type of service and fuel (V8 only).

**Flywheel Degrees** **Piston Position**

All V8 Engines .....4° BTDC.....0058° BTDC

**Timing Note**—Manufacturer recommends use of

1942 MODELS

Laboratory Test Set with Stroboscope attachment or V-126 Timing Fixture for all ignition settings.

**Timing (On Engine)**—No flywheel marks provided and timing should be set with piston on top dead center. With #1 piston on top dead center entering power stroke, loosen timing adjusting screw on left hand side of ignition unit housing, place screw in retard position at lower end of slot, move screw slowly up until timing contacts begin to open, note graduation on plate under screw head which is in line with reference mark on housing, move screw up one additional graduation on V8 Engines only.

**Vacuum Brake Setting (V8 Engines)**—Should be adjusted to eliminate ping when engine operated with load. To adjust, loosen locknut, back off adjusting screw until engine pings with load, turn screw in just enough to eliminate ping, tighten locknut. When adjusted on Stroboscope, vacuum brake should retard spark to peepsight (set at 2°) at 950 RPM. (78-12127 Distr.), 650 RPM. (11A-12127 & 21A-12127 Distr.) with no vacuum to release brake.

### CARBURETOR

**Holley (Chandler-Groves) Ford No. 91A-9510-A ('41), No. 21A-9510-A (1942).** Dual, downdraft types.

**NOTE**—Model 21A-9510-A used as replacement for 91A-9510-A. This new 21A-9510-A carburetor has bowl vent at rear and must be used on 1942 cars with new type higher fan (bowl vent location prevents fuel level fluctuations in bowl due to fan blast).

For complete data, refer to Carburetor Index.

**Idle Adjustment**—With engine warm, choke valve wide open, and Fast Idle inoperative, set throttle lever stop screw for 5-7 MPH. idling speed, turn each idle adjusting screw (one for each barrel, adjust in succession) in until engine begins to miss, then out until engine begins to roll, finally turn screw in until engine fires smoothly. Final setting should be approximately ⅝-¾ turn of screw from inner seated position. Recheck idle speed.

**NOTE**—Vacuum gauge recommended for idling adjustment. Set for highest steady gauge reading.

**Float Level**—Fuel level 11/16" plus or minus 1/32" (21/32-23/32" below top edge of float. See Carburetor article for float level checking data.

**Accelerating Pump Setting**—Three holes provided for pump link connection as follows:

Inner (#1)—Min. stroke, Summer Temperatures.  
Center (#2)—Med. stroke, Winter Temperatures.  
Outer (#3)—Max. stroke, Extreme Cold Weather.

**Fast Idle:**—Integral type. No adjustment required.

### CARB. EQUIPMENT

**Air Cleaner:**—Ford No. 91A-9600-A oil-wetted type Std., Heavy Duty oil-bath type Optl.

**Gasoline Gauge:**—King-Seeley Electric. Ford Nos. Dash Unit—No. 11A-9280B (1941 Pass. Cars), 11C-9280B (1941 Sedan Delivery), 21A-9280 (1942 Cars). **NOTE**—These units have Ivory Pointers. No. 11A-9280A (Red Pointer) also used on 1941 models. Tank Unit—No. 99A-9275B (1941-42 Pass. Cars), 01A-9275B (1941 Sedan Delivery), 21A-9275A (1942 Sedan Delivery).

For complete data, refer to Carburetion Equip. Index.

**Fuel Pump:**—AC Type R, Ford No. 11A-9350. AC Replacement Pump No. 541. Diaphragm type.

For complete data, refer to Carburetion Equip. Index.

CONTINUED ON NEXT PAGE

C NTINUED FROM PRECEDIN PAGE

**BATTERY**

**BATTERY:**—Ford No. 01A-10655-A. 6 volt, 17 plate, 120 ampere hour capacity (20 hour rate).  
**Starting Capacity**—150 amperes for 20 minutes.  
**Zero Capacity**—300 amperes for 4.0 minutes.  
**Grounded Terminal**—Positive (+) grd. to dash.  
**Engine Ground**—Strap connector between right rear cylinder head and dash.  
**Dimensions**—Length 10.6". Width 7.3". Height 9.2".  
**Location**—On right side in engine compartment.

**STARTER**

**STARTER:**—Ford No. 18-11002. Armature No. 18-11005.  
**Drive**—Inboard Bendix Drive Type L11FX-10, Ford No. B-11350 or special Ford B&S Drive No. 91A-11350. Refer to Electrical Equipment Index for servicing data on this Ford B&S Drive.  
**Rotation**—Counter-clockwise at commutator end.  
**Brush Spring Tension**—2 lbs. each.  
**Cranking Engine**—100 RPM., 190-215 amperes.

**Performance Data**

Torque	R.P.M.	Volts	Amperes
4 ft. lbs.	1070	4.6	200
8 "	660	4.3	340
12 "	300	3.65	465
14 "	Lock	3.5	500

**Starting Switch:**—R-B-M Model 5604, Ford No. 01A-11450-A Magnetic Switch mounted on dash, controlled by pushbutton on instrument panel R-B-M Model 3242, Ford No. 11A-11500 (Pass. Cars); R-B-M Model 3233, Ford No. 01A-11500A (Sedan Dlvry.), 21A-11500B (1942 Deluxe & Super Deluxe), 21A-11500C (1942 Special Pass. Cars).

**Removal:**—Starter mounted on right front face of flywheel housing. To remove, take off pan at right of engine, free starter-to-oll pan support bracket, take out through-bolts on commutator end plate.

**GENERATOR**

Ford No. 01A-10000-B (1941), 21A-10000 (1942).  
**Armature**—Ford No. 01A-10005 (all models). Two-brush shunt type with vibrating current and voltage regulation (new 3-Unit regulator).  
**NOTE**—Model 01A-10000-B replaced by 21A-10000.  
**Charging Rate Adjustment**—None (see Regulator).  
**Maximum Charging Rate**—Controlled by regulator and dependent on battery condition and load. To check generator output, disconnect generator field lead at generator, connect both generator terminals together (use short insulated wire). Use 'BRS' set or rheostat connected across battery terminals and apply load until voltage is exactly 6 volts. Connect ammeter in charging line, check output at 2 speeds given in performance table below. Restore original connections after completing test. Do not operate generator in service with both terminals connected together. This eliminates all regulator action and will damage generator.

**Performance Data**

Amperes	Engine RPM.
Start	520
30	1060
30	2500

**Rotation**—Counter-clockwise at commutator end.  
**Field Current**—2.1 amperes at 6.0 volts (field resistance 2.88 ohms at 70°F.).  
**Brush Spring Tension**—Approximately 28 ozs.

**Removal (V8 Eng.):**—Generator mounted on bracket between cylinder banks at front of engine, driven in tandem with water pumps by Vee belt. **NOTE**—On 1942 models, generator mounting bracket modified to include fan mounting (fan driven by separate belt). To remove generator, loosen nut on mounting bracket stud.

**Belt Adjustment:**—Loosen nut on bracket mounting stud and raise generator until side movement of belt (with thumb and finger pressure) is 1" midway between generator and water pump pulley.

**GENERATOR****SPECIAL EQUIPMENT**

**SPECIAL GENERATORS:**—Other Makes—Refer to Electrical Equipment Index for 'Special Generator' article for complete data on special Generators and Regulators which may be found on these models.

**REGULATOR**

**REGULATOR:**—Ford No. 01A-10505C. Three-Unit Type. Consists of Cutout Relay, vibrating Voltage Regulator and vibrating Current Regulator (separate units) in single case on engine side of dash. For complete data, refer to Electrical Equipment Index.  
**NOTE**—Regulator case grounded through 'pigtail' to dash or ground wire to generator.

**Cutout Relay**

**Cuts In**—5.8-6.3 volts at operating temperature.  
**Cuts Out**—8 amperes discharge current (maximum).

**Voltage Regulator**

**Setting**—6.9-7.2 volts at 70-80° F. See Ford Regulator article in Elec. Equip. Section for other temps.  
**Checking & Adjusting**—Refer to Electrical Equipment Index for article on 'Ford Regulator—3 Unit Type' for complete instructions.

**Current Regulator**

**Setting**—30-33 amperes hot (after 5 minutes run).  
**Checking & Adjusting**—See Voltage Regulator

**LIGHTING**

**LIGHTING:**—Headlamps—Ford Sealed Beam type. Controlled by Lighting Switch on instrument panel and Beam Selector Switch on toeboard. For complete data, refer to Electrical Equipment Index.  
**Headlamp Adjustment**—Aim each headlamp straight ahead with upper beam hot spot centered on horizontal line 3" below lamp center height.  
**Beam Indicator**—At left end of speedometer dial. (1941), lower edge of speedometer dial (1942). Lighted whenever Upper Beams in use.

**Switches**

**Lighting**—R-B-M Model 2445, Ford No. 11A-11652 (Pass. Cars), 01A-11652 (Sedan Delivery). Light Switch Knob & Insert (used with above switches) No. 11A-11661-A or C (Pass. Cars except Special 70C, 73C, 77C), 11A-11661-B or D (Spec. 70C, 73C, 77C), 11C-11661B (Sedan Delivery), 21A-11661A ('42 Del. & Super Del.), 21A-11661B (Special).  
**Beam Selector**—R-B-M Ford No. 11A-13532 (switch only). Switch & Wiring Ford No. 11A-11653 (1941 Pass. Cars), 21A-11653 (1942 Pass. Cars), 01A-11653A (1941 Sedan Delivery).  
**Instrument**—Ford No. 11A-13740-A or C (1941 Deluxe & Super Deluxe), 11A-13740-B or D (1941 Special Pass. Cars), 21A-13740 (1942 Pass. Cars), 01A-13740B (1941 Sedan Delivery).  
**Stop Light**—Ford No. 11A-13480.

**Bulb Specifications**

Position	Candlepower	Mazda No.
Headlamps	Sealed Beam	
Parking, Instr. ('41), Clock	1½	55
Instr. ('42), Ign. Lock	1	51
Beam Indicator	1	51
Dome (Pillar), Luggage Compt.	3	63
Stop & Tail	21-3	1154
Rear License	3	63

**MISC. ELECTRICAL**

**LIGHTING CIRCUIT BREAKER:**—No. 11A-12250-A. (V8). Combined with Ignition Resistor on block on dash under cowl. Consists of two separate circuit breaker units (one unit protects headlamp circuits, second unit protects other lighting circuits). Breakers are thermostatic and wound-coil type. Contacts open with current of 50 amperes and vibrate rapidly to control current.

**FUSE BLOCK:**—Ford No. 11A-12250-B. Special fuse block and ignition resistor used on Special Models 70C (Tudor), 73C (Fordor), 77C (Coupe).  
**Fuse**—25 ampere capacity. On fuse block.

**HORNS:**—Air Electric dual horns (Pass. Cars & Sedan Delivery). Horn relay used with dual horns.  
**Horn Current**—24-28 amperes (total—dual horns),  
**Horn Relay:**—R-B-M No. 50357, Ford No. 11A-13842D (except 70C, 73C, 77C), No. 11A-13842C (70C, 73C, 77C).  
**Contact Closing Voltage**—3.5-4.5 volts.  
**Current Draw**—Approximately ¾ ampere.

**ENGINE**

**ENGINE SPECIFICATIONS:**—Own 90. 8 cylinder, 90° Vee, L head. Both banks & crankcase cast Enbloc.  
**Bore**—3.062". **Stroke**—3.75".  
**Rated Horsepower**—30. Displacement 221 cu. ins.  
**Developed Horsepower**—90 at 3800 RPM.  
**Compression Ratio**—6.20-1 Cast-iron head.  
**Compression & Vacuum Reading**—See Tune-up data.

**CYLINDER HEAD:** Tightening Torque and Cylinder Head Diagram—See Ford Shop Notes.

► Re-working Head for Improved Cooling: See Ford Shop Notes for instructions (and new Head Gaskets).

**CYLINDER SLEEVES:**—Hardened, dry type cylinder sleeves used on some engines. May carry mark 'HS' on block beside inner front corner of left cyl. head. Servicing:—See Ford Shop Notes for data.

**PISTONS:**—Steel alloy, light weight, cam ground type or Aluminum alloy, T slot type. Recondition engine to take finished replacement pistons (replace sleeves, install Std. pistons. See Sleeve Note).  
**Weight**—333-337 grams (without rings or pin).  
**Removal**—Pistons and rods removed from above.  
**Clearance**—See Fitting New Pistons.

**Replacement Pistons:**—See Ford Shop Notes for data.

**Fitting New Pistons:**—Use .50" wide feeler stock of correct thickness inserted between piston and cylinder wall at right angles to pin to check clearance. Pull to withdraw feeler should be 6-10 lbs.

**Engine With Sleeves**

	Feeler Thickness	Steel Piston	Aluminum Piston
New Piston & Sleeve	.003"	.003"	
New Piston—Worn Sleeve	.004"	.004"	
Worn Piston & Sleeve	.005"	.005"	

**Engines Without Sleeves**

New Piston & Bore	.0025"	.002"
New Piston—Worn Bore	.004"	.004"
Worn Piston & Bore	.005"	.005"

**ENGINE**

**PISTON RINGS:**—Two compression, one slotted oil ring, all above pin (drain holes in oil ring groove).  
**NOTE:**—Expander used with #2 Compr. and oil ring.  
 Ring Width End Gap Side Clearance  
 Compr. #1.....0915-.0920".....012-.017".....0025-.003"  
 Compr. #2.....0915-.0920".....012-.017".....002-.0025"  
 Oil Contr.....1535-.1540".....012-.017".....0015-.002"  
**Replacement Rings:**—See Ford Shop Notes for data.  
**PISTON PIN:**—Diameter—.7501-.7504". Length—2.850" (steel pistons), 2.780" (aluminum pistons). Floating type. Pin hole in rod bronze-bushed.  
 Pin Fit in Piston—.0001-.0002" clearance (aluminum pistons), .0003-.0009" clearance (steel pistons) or light hand push fit with piston at 70°F.  
 Pin Fit in Rod Bushing—.0002-.0005" clearance (pin should pass through bushing slowly of own weight).  
 See Ford Shop Notes for Pin Fitting directions.  
**Replacement Pins:** See Ford Shop Notes.  
**CONNECTING ROD:**—Length 7.000". Weight 476 grams. Crankpin Journal Diameter—1.999" (connecting rod diameter on crankpin—2.220").  
 Bearing Type—Steel-backed, special-alloy lined. Bearing floats in both rods (side-by-side mounting) with bearing surface on inner and outer faces.  
 Bearing Dimensions—Length 1.747". Thick. .1095". Clearance—.0015-.0035" (see Bearing Adjustment). Sideplay—.003-.007" (bearing endplay), .006-.014" (side clearance for both rods).  
 Bearing Adjustment: None (no shims). Do not file bearing caps. Replace bearings if less than .1085" thick, replace or hone rods for oversize bearings if worn more than .0015" over original size of 2.2195-2.2200". CAUTION—Both rods must be same size.  
**Replacement Bearings:** See Ford Shop Notes.  
**Installing Rods:**—Marks on rods and caps must be together and installed in same numbered cylinder with marks pointing down toward oil pan.  
**CRANKSHAFT:**—3 bearing. Integral counterweights. Journal Diameters—2.499" (all bearings).  
 Bearing Type—Steel-backed, special-alloy lined. Clearance—.001-.003".  
 Bearing Adjustment:—None (no shims). Do not file.  
 End Thrust:—Taken by rear main bearing. Adjust by replacing bearing. Endplay—.002-.006".  
**Replacement Bearings:** See Ford Shop Notes.  
**CAMSHAFT:**—Three bearing. Helical gear drive. Bearing Diameters—1.797" all bearings. Replace camshaft if worn to less than 1.7955" diameter.  
 Bearings—Steel-backed, babbitt-lined bushings. Clearance—.002".  
 End Thrust:—Taken by gear hub and cover plate. Adjusted by replacing coverplate. Endplay—.005-.015".  
 Timing Gears:—Cast alloy iron (crankshaft), Bakelized Fabric or Aluminum bolted-on (Camshaft). Backlash—.004" maximum. Refer to Ford Shop Notes for Timing Gear Replacement data.  
 Camshaft Setting:—Mesh '0' marked tooth of crankshaft gear with '/' marked space on camshaft gear (this mark must be in line with mark on hub).  
**VALVES:**—Head Diameter Stem Diameter Length  
 All Valves.....1.537"......3115".....4.750-4.751"  
 Seat Angle Lift Stem Clearance  
 All Valves.....45°......292"......0015-.0035"  
**NOTE:**—Service limit for valve stem diameter is .309" Intake, .3065" Exhaust. Valves interchangeable. See Ford Shop Notes for Valve Servicing data.  
**NOTE:**—Seat inserts used for all valves.  
**Valve Guides:**—Split type retained by 'C' washer and

valve spring. **NOTE:**—Replace both halves of all guides measuring less than .6665" (thickness of guide half and valve stem at top of guide with valve of .311" stem diameter in place in guide).  
 For Valve Guide servicing data, see Ford Shop Notes.

**Valve Lifters:**—Barrel type in reamed holes in block. Diameter—.9995". Replace if worn to less than .998" in diameter or length less than 1.710" after any necessary resurfacing of ends (cast type can be resurfaced on both ends, pressed steel on bottom only). Clearance—.0005-.0015". Lifter should slip into hole in block of own weight.

**Valve Springs:** Pressure Length  
 Valve Closed ..... 37-40 lbs.....2.13"  
 Valve Open..... 76-80 lbs.....1.84"  
**NOTE:**—Minimum spring tension 30 lbs. at 2.125".

**VALVE TIMING**

**Tappet Clearance:** .010-.012" Intake, .014-.016" Exh.  
**Valve Timing:**—See Camshaft Setting above.  
 Intake Valves—Open at TDC. Close 44° ALDC.  
 Exhaust Valves—Open 48° BLDC. Close 6° ATDC.  
 To Check Valve Timing—No flywheel marks provided. Intake valve opens with piston at TDC.

**LUBRICATION**

**LUBRICATION:**—Pressure. Gear type oil pump mounted in crankcase at rear of engine.  
 Normal Oil Pressure:—30 lbs. at 2000 R.P.M.  
 Oil Pump and Oil Pressure Regulator: See "Oil Pump" in Ford Shop Notes for data.  
 Oil Pressure Gauge:—King-Seeley Electric. Ford No. Dash Unit: '41 Pass. Car 11A-9273B (Ivory Pointer), 11A-9273A (Red Pointer); '41 Sedan Delivery 11C-9273B; 1942 Passenger Cars 21A-9273.  
 Engine Unit: 48-9278.  
 See Miscellaneous Section for complete data.  
 Crankcase Capacity:—5 quarts.

**COOLING**

**Water Capacity:**—26¼ qts. (11A), 22 qts. (21A).  
**Water Pump:**—Packless type, 2 used (1 for each bank). See Water Pump Section for complete data.  
**Thermostat:**—In each cylinder head outlet (2 used). Setting—Start to open at 145°F. Fully open 180°.  
**Temperature Gauge:**—King-Seeley Electric. Ford No. Dash Unit: '41 Pass. Car 11A-10883B (Ivory Pointer), 11A-10883A (Red Pointer); '41 Sedan Del. 11C-10883B; '42 Passenger Cars 21A-10883.  
 Engine Unit: 99A-10884.  
**NOTE:**—Accessory Temperature Gauge Switch (for Other Bank) No. 01A-10990. Kit No. 11A-18381.  
 See Miscellaneous Section for complete data.

**CLUTCH**

**CLUTCH:**—Long Model 9CF-CS. Semi-centrifugal, single plate, dry disc type. See Clutch Section for data.  
 Facings—Molded type, 2 required. Inside Diam. 5.76". Outside Diam. 9". Thickness .137".  
 Adjustment:—Pedal free movement should be 1.0-1.25". To adjust, remove clevis pin at end of connector rod, adjust clevis on rod.  
**Removal:**—Slide rear axle and transmission to rear as a unit to expose clutch (see Transmission Removal below), take out mounting screws in cover.

**TRANSMISSION**

**TRANSMISSION:**—Own Make. Constant-mesh, synchro-mesh (Second & High), sliding gear (low & reverse), all helical gear type.  
 See Transmission Section for complete data.  
**Transmission Control:**—Mechanical steering col. shift. See Transmission Section for complete data.

**Removal:**—Disconnect gear shifter rods at levers on transmission (Pass. Cars), disconnect rear shock absorbers, hand brake cables, hydraulic brake line at torque tube connection (bleed lines when re-connected), and speedometer cable. Disconnect rear spring at center frame connection, take out universal joint ball housing screws, slide rear axle assembly back to disengage drive shaft at splined joint. Support rear of engine, take out rear engine mounting bolts, clutch housing screws & transmission.

**UNIVERSALS**

**UNIVERSAL JOINT:**—Spicer 202-6 Steel bushing type. See Universals Section for complete data.

**REAR AXLE**

**REAR AXLE:**—Own Make. ¾ floating, Spiral Bevel gear type with Torque Tube drive.  
 See Rear Axle Section for complete data.  
 Ratio—3.78-1 Std. 3.54-1 or 4.11-1 Optl.  
 Backlash—.012" maximum.

**Removal:**—Disconnect rear shock absorbers, hand brake cables, hydraulic brake line at torque tube connection (bleed lines when re-connected), speedometer cable. Disconnect rear spring at center frame connection, take out universal joint ball housing screws, pull axle assembly to rear.  
**Axle Shaft Removal:**—Refer to Ford Passenger Car Rear Axle article in Rear Axle Section.

**SHOCK ABSORBERS**

**SHOCK ABSORBERS:**—Houdé (Houdaille). Double acting, adjustable, hydraulic type.  
 Houdé Model Right—Ford No.—Left  
 Front '41 .....BBCN.....11A-18045A.....11A-18046A  
 Front '42 .....BBCN.....21A-18045 .....21A-18046  
 Rear .....BBCZ.....11A-18080A.....11A-18081A  
 See Shock Absorber Section for complete data.

**FRONT SUSPENSION**

**Front Suspension:**—Conventional 'I' beam section front axle with Reverse Elliott ends and transverse front spring. Axle positioned by radius rods.  
 Kingpin Inclination—8° crosswise.  
 Caster—9° Max., 4½° Min. Equal within ½°.  
 Camber—1° Max., ¼° Min. Must be equal within ¼° and the right wheel must not exceed the left.  
 Toe In—1/16". Set at 1-10 ratio to Camber. Adjust by loosening tie rod clamp bolts and turning tie rod.  
 Steering Geometry—Inner wheel 23½°. Outer 20°.

**STEERING GEAR**

**Steering Gear:** Ford Make (Gemmer Model 305). Worm-and-Roller type with push-pull adjustments. See Steering Gear Section for complete data.

**BRAKES**

**BRAKES:**—Service. Lockheed hydraulic, double anchor type. Hand lever applies rear wheel service brakes. See Brake Section for complete data.  
 Drums—Cast iron. Diameter 12".  
 Wheel Cylinders—Stepped or two-stage bore type: Front Wheel—Front cylinder 1.25". Rear 1.00". Rear Wheel—Front cylinder 1.125". Rear 1.00".  
 Lining—Woven (forward shoes), Molded (rear shoes). Width 1.75". Thickness .20". Length per shoe 13.18" (forward shoes), 10.1" (rear shoes).  
 Clearance—Least possible amount without drag.  
**Hand Brake:**—See Service Brakes above.

**MISC. MECHANICAL**

**Power Operated Convertible Top:** Auto-Lite Electric type. See Miscellaneous Section for complete data.

**COMMERCIAL & TRUCK NOTE:**—All Engine data below applies also to Ford Commercial & Truck Models with 6 Cylinder engine. See Ford Commercial & Truck article for all other data.

**ENGINE HOOD NOTE:**—Passenger Cars—Hood is Alligator type with release knob under instrument panel to left of steering column. To raise hood, pull out on release knob (hood will raise slightly), press in on safety catch under front edge of hood.

### MODEL IDENTIFICATION

**MODEL NOTE:**—This new 6 Cylinder Engine offered in following models: Ford Special, Deluxe, Super Deluxe Passenger Car Models; All Commercial & Truck Models except Cab-over-Engine models.

Model	Year	Body Type
1GA	1941	Passenger Cars
2GA	1942	Passenger Cars

**SERIAL & ENGINE NUMBER:**—Stamped on top of clutch housing and on left frame rail (near gen.).

### TUNE-UP

**COMPRESSION:**—Ratio—6.7-1 Std. Cast Iron Head. Head has large water passages and water distribution nozzle so that premium fuel not required.

**Pressure:**—165 lbs. at 2000 RPM. max. or 105-125 lbs. at cranking speed (100 RPM.).

**VACUUM READING:**—Approx. 18-20" at idling speed.

**FIRING ORDER:**—1-5-3-6-2-4. See diagram for spark plug cable connections.

**SPARK PLUGS:**—Champion H-10. 14 MM. Metric. Gaps—.025".

**IGNITION:** See Coil, Condenser, and Distributor.

**Breaker Gap**—.014-.016". **Cam Angle** 40° (closed). **Automatic Advance**—11-12° max. at 600 RPM. distr.

**IGNITION TIMING:** See Ignition Timing.

**Std. Setting**—2° BTDC. No flywheel marks provided. See Ignition Timing for timing procedure and Vacuum Brake adjustment.

**CARBURETION:** See Carburetor & Carb. Equipment.

**Idle Setting**—Idle screw open to point where highest steady vacuum reading secured. Idle speed 350 RPM or 8 MPH.

**Float Level**—Fuel level 11/16" (21/32-23/32") below top edge of bowl.

**Accelerating Pump**—Center (#2) hole Normal. Inner (#1) hole (Summer), Outer (#3) hole (Winter) for temperature extremes.

**Fuel Pump Pressure:** 3½ lbs. maximum.

**MANIFOLD HEAT CONTROL:**—Automatic thermostatic type. Valve has counterweight and thermostatic coil attached to shaft and should be closed (counterweight arm against stop pin on manifold) with engine cold. See that valve operates freely.

**VALVES:** See Valve Timing.

**Tappet Clearance**—.013-.015". All Valves Cold. No adjustment.

**STARTING:** See Battery, Starter, Generator, Regulator.

### IGNITION

**Ignition Switch:**—Oakes Steering Column and Ignition Lock Assembly.

**Steering Post & Ign. Lock Assem. Ignition Switch**

Oakes No.	Ford No.	Oakes No.
Pass. Cars '41.....302448	11A-3676-B	302494
Pass. Cars '42.....302756	21A-3676-A	302494
Sedan Del. ....302478	11C-3676-B	302494

**Lock Cylinder**—Hurd or Briggs & Stratton No. 80935, Ford No. 91A-3686A (With Keys).

**Key Series**—FK000 to FK999. Groove—No. 17.

**COIL:** Ford No. 1GA-12024. Mounted separately on top left corner of engine block.

**Resistor Unit**—Connected in coil primary circuit. Mounted on Circuit Breaker Assembly 11A-12250-A (exc. Special), on Fuse Block 11A-12250-B (on all Special Models 70C, 73C, 77C Passenger Cars).

**Ignition Current**—4½-6 amperes with the engine stopped. Ignition primary resistance 1-1½ ohms.

**CONDENSER:** Ford Part No. 1GA-12300B. Capacity—.29-.32 microfarad.

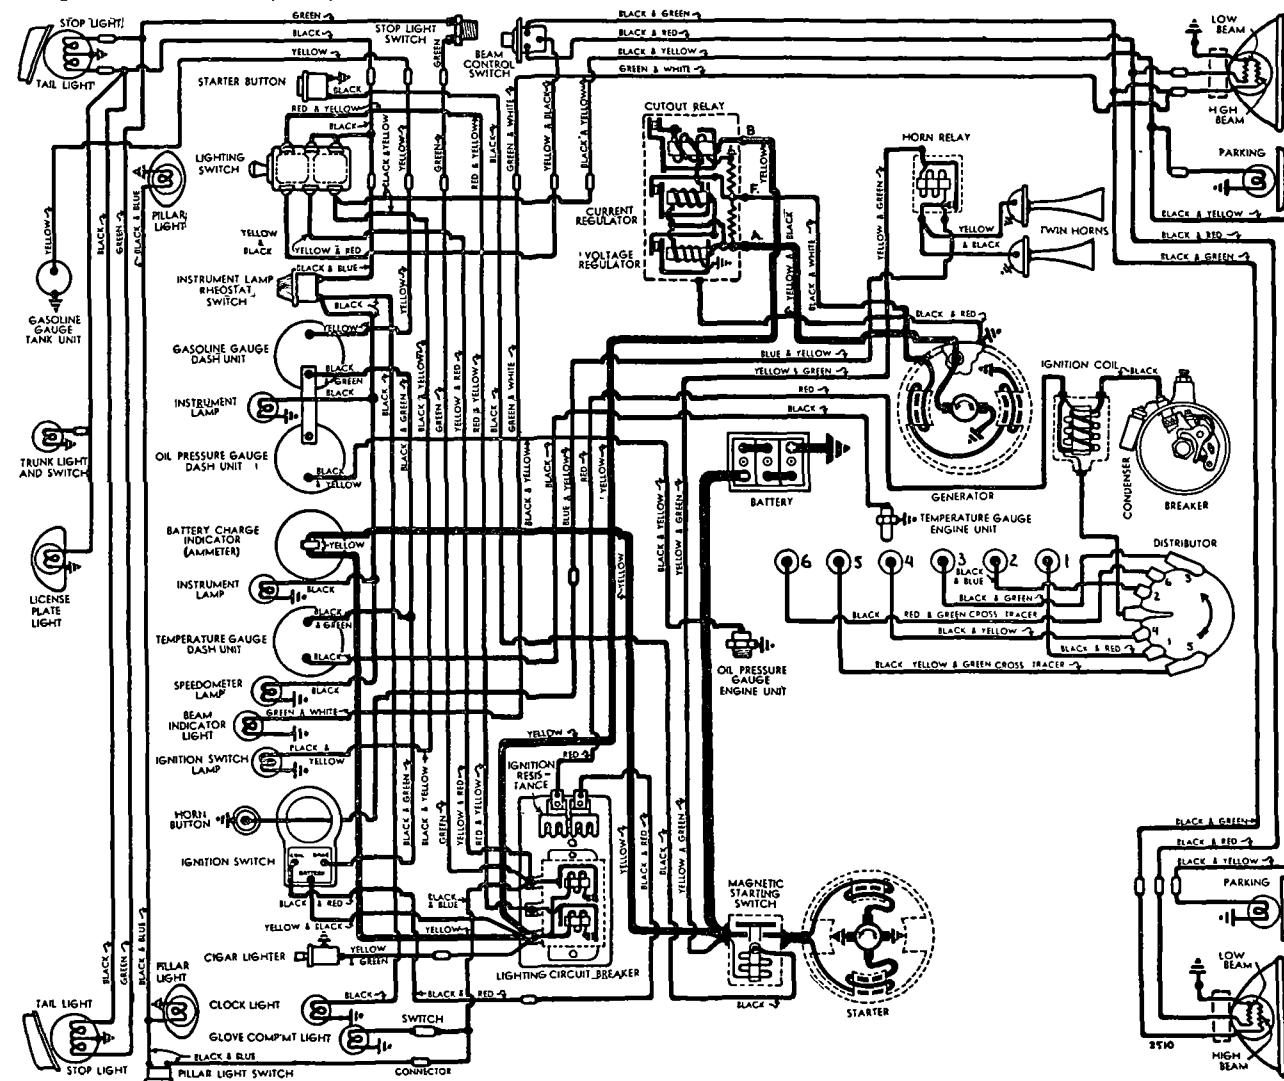

**DISTRIBUTOR:** Ford 1GA-12127 (less Terminal Housing). Single breaker, 6 lobe cam, full automatic advance type with Vacuum Brake Control. Ignition unit mounted on front end of engine and driven directly off end of camshaft. Ignition coil mounted separately.

**Breaker Gap**—.014-.016".

**Cam Angle or Dwell**—Approx. 40° closed, 20° open. Set dwell at 67% (limits 62-67% at 2000 RPM.) on Ford Test Set.

**Breaker Arm Spring Tension**—20-24 ounces.

**Rotation**—Counter-clockwise viewed from the front of the engine or clockwise viewing drive end of ignition unit.

Automatic Advance (Vacuum Brake Disconnected) Distributor Engine			
Degrees	R.P.M.	Degrees	R.P.M.
Start .....	200	0 .....	400
11-12 .....	600	22-24 .....	1200

**Removal:**—Distributor mounted on front of engine. To remove, disconnect primary lead, remove distributor cap, take out mounting screws in distributor flange, lift unit out.

## IGNITION TIMING

**IGNITION TIMING:**—See Vacuum Brake Setting for final adjustment dependent on fuel and operating conditions.

	Flywheel Degrees	Piston Position
All Engines .....	2° BTDC.....	.0018" BTDC.

**Timing:**—Manufacturer recommends use of Ford Laboratory Test Set (Heyer H1) with Distributor Stroboscope (Heyer HI-DFZ) and Special Adapter (Heyer EGDAF). On Stroboscope set timing index at 1° before top dead center, set peepsight at Zero. Adjust the distributor by loosening screw in slot on left side of distributor and moving screw up (to retard spark), down (to advance spark), so that stroboscopic disc light is in line with peepsight, tighten adjusting screw.

**Timing (On the Car)**—No flywheel marks provided. With distributor adjusted as described above, this will give correct 2° BTDC. timing when installed on the engine.

**Vacuum Brake Setting:**—Should be adjusted to eliminate pinging when engine operated with load. To adjust, loosen locknut, back off adjusting screw until engine pings with load, then turn screw in just enough to eliminate ping, tighten locknut. When adjusted on stroboscope, vacuum brake should retard spark to peep sight with peep sight set at 2° when distributor is driven at 650 RPM. with no vacuum to release brake.

## CARBURETOR

**Holley (Chandler-Groves) Ford No. 1GA-9510-A.** Single barrel, downdraft type with manual choke. For complete data, refer to Carburetor Index.

**Idle Adjustment:**—Use tachometer or vacuum gauge to adjust carburetor (adjust for highest steady reading of vacuum gauge). With engine warm and choke valve wide open, set throttle lever stop-screw so that engine idles at 350 RPM. Adjust idle adjusting screw so that engine fires smoothly and vacuum gauge indicates highest steady obtainable reading (turn screw in for leaner mixture, out for richer mixture). Recheck idle speed.

**Accelerating Pump Setting:**—Three holes provided in throttle lever for pump rod link connection. Adjust for seasonal requirements as follows:  
#1 (Inner) Hole—Summer or Hot weather.  
#2 (Center) Hole—Average fuel and weather.  
#3 (Outer) Hole—Extremely Cold Weather.

**Metering Jets:**—See Holley Chandler-Groves (Ford) Jet Specification Table in Carburetor Section.

**Pow r Valve:**—Vacuum controlled by-pass valve. Opens when vacuum decreases to 8½-9" of HG. Not adjustable.

**Float Level:**—Use 9550-A Float Position Gauge to set float (same gauge used on other Ford models). 1.353" end 'Go', 1.322" end 'No Go' measuring from underside of bowl cover to bottom of float (cover and float assembly inverted). Fuel level in bowl should be 11/16" plus or minus 1/32".

**Choke:**—Offset butterfly type with poppet type relief valve. Choke is spring-loaded for automatic control in part-choke position (locked when valve fully closed). Choke and throttle are interconnected for 'throttle-cracking' action when choke closed for cold starting. No adjustment required.

## CARB. EQUIPMENT

**Air Cleaner:**—Ford No. 1GA-9600-C oil wetted type Std. Heavy duty oil-bath type optional.

**Fuel Pump:**—AC 'R' No. 1537744—Exchange No. 543, Ford No. 1GA-9350 diaphragm type fuel pump.

For complete data, refer to Carburetion Equip. Index.

Pressure—1½-2¾ lbs.

**Gasoline Gauge:**—King-Seeley Electric, Ford Nos.

**Dash Unit:**—No. 11A-9280B (1GA), 21A-9280 (2GA).

**Tank Unit:**—No. 99A-9275B (Pass. Cars), 01A-9275B (1GA Sedan Delivery), 2GA-9275B (2GA Sedan Delivery).

For complete data, refer to Carburetion Equip. Index.

## BATTERY

**BATTERY:**—Ford No. 01A-10655-A. 6 volt, 17 plate, 120 ampere hour capacity (20 hour rate).

**Starting Capacity:**—150 amperes for 20 minutes.

**Zero Capacity:**—300 amperes for 4.0 minutes.

**Dimensions:**—Length 10.6". Width 7.3". Height 9.2".

**Location:**—Left side of engine in engine compartment.

**Grounded Terminal:**—Positive (+) terminal grounded to dash. Engine Ground—Strap connector between rear of cylinder head and dash.

## STARTER

**Ford No. 18-11002.** Armature Number 18-11005.

**Drive:**—Inboard Bendix No. L11FX-10, Ford No. B-11350, or Ford B & S Drive (operates through rubber—no springs used) No. 91A-11350. Refer to Electrical Equipment Index for Ford B&S Starter Drive article for complete data.

**Rotation:**—Counter-clockwise at commutator end.

**Brush Spring Tension:**—2 lbs. each.

**Cranking Engine:**—100 RPM., 190-215 amperes.

### Performance Data

Torque	R.P.M.	Volts	Amperes
4 ft. lbs. ....	1070 .....	4.6 .....	200
8 " .....	860 .....	4.3 .....	340
12 " .....	300 .....	3.65 .....	465
14 " .....	Lock .....	3.5 .....	500

**Starting Switch:**—R.B.M. Ford No. 01A-11450-A. Magnetic switch mounted on dash and controlled by pushbutton on instrument panel Ford No. 11A-11500-B (1GA), 29A-11500-B (2GA Pass. Cars), 21A-11500 (2GA Station Wagon).

**Removal:**—Starter mounted on right front face of flywheel housing. To remove, disconnect cable, take off starter-to-oil pan support bracket, remove the through-bolts on commutator end plate.

**NOTE:**—Take off crankcase ventilator extension tube.

## GENERATOR

**GENERATOR:**—Ford No. 1GA-10000-B. Arm. 01A-10005. (1GA), No. 2GA-10000-A. Armature 2GA-10005 (2GA). Two brush (shunt) type with vibrating type voltage and current regulation. Ventilated by fan on drive pulley. Similar to V8 Models except for pivot mounting at left front of engine. Generator is driven by belt from crankshaft and drives water pump (with fan on 2GA) through a separate belt.

**Charging Rate Adjustment:**—None (see Regulator).

**Maximum Charging Rate:**—Controlled by regulator and dependant on battery condition and load. To check generator output, disconnect generator field lead at generator, connect both generator terminals together (use short insulated wire). Use 'BRS' set or rheostat connected across battery terminals and apply load until voltage is exactly 6 volts. Connect ammeter in charging line, check output at 2 speeds given in performance table below. Restore original connections after completing test. Do not operate generator in service with both terminals connected together. This eliminate all regulator action and will damage generator.

Amperes	Performance Data	Engine RPM.
Start .....		565
30 .....		1160
30 .....		2500

**Rotation:**—Counter-clockwise at commutator end.  
**Field Current:**—2.1 amperes at 6.0 volts (field resistance 2.88 ohms at 70°F).

**Brush Spring Tension:**—Approximately 28 ozs.

**Removal:**—Generator mounted on adjustable bracket at left front of engine. To remove, take out bolt in mounting bracket, slip off drive belt and water pump belt, lift generator out.

**Belt Adjustment:**—½" deflection midway between generator and crankshaft pulley (generator belt), generator and pump pulley (pump belt). Adjust both belts by loosening two capscrews in mounting bracket beneath generator, move generator up and out (bolt holes slotted at this angle).

## REGULATOR

**REGULATOR:**—Ford No. 01A-10505C. Three-Unit Type. Consists of Cutout Relay, vibrating Voltage Regulator and vibrating Current Regulator (separate units) in single case on engine side of dash.

For complete data, refer to Electrical Equipment Index.  
**NOTE:**—Regulator case grounded through 'pigtail' to dash or separate ground wire to generator. This ground lead must be re-connected if cover removed.

### Cutout Relay

**Cuts In:**—5.8-6.3 volts at operating temperature.  
**Cuts Out:**—8 amperes discharge current (maximum).

### Voltage Regulator

**Setting:**—6.9-7.2 volts at 70-80° F. See Ford Regulator article in Elec. Equip. Section for other temps.  
**Checking & Adjusting:**—Refer to Electrical Equipment Index for article on 'Ford Regulator—3 Unit Type' for complete instructions.

### Current Regulator

**Setting:**—30-33 amperes Hot (after engine run for 5 minutes).  
**Checking & Adjusting:**—See Voltage Regulator.

C NTINUED ON NEXT PAGE

## CONTINUED FROM PRECEDING PAGE

## LIGHTING

**LIGHTING:**—Headlamps—Ford Sealed Beam type. Controlled by Lighting Switch on instrument panel and Beam Selector Switch on toeboard.

*For complete data, refer to Electrical Equipment Index.*

**Headlamp Adjustment:**—Aim each headlamp straight ahead with upper beam hot spot centered on horizontal line 3" below lamp center height.

**Beam Indicator:**—In speedometer dial (at left end on 1GA, at lower edge on 2GA). Lighted whenever Country (high) beam is in use.

## Switches

**Lighting:**—R-B-M Model 2445, Ford No. 11A-11652. Light Switch Knob and Insert Ford No. 11A-11661-A or C (1GA Deluxe & Super Del.), 11A-11661-B or D (1GA Special), 21A-11661-A (Deluxe & Super Del.), 21A-11661-B (2GA Special).

**Beam Selector:**—R-B-M. Ford No. 11A-13532 (switch only), No. 11A-11653 for 1GA (switch and wiring), No. 21A-11653 for 2GA (switch and wiring).

**Instrument:**—Ford No. 11A-13740-A or C (1GA Deluxe & Spec. Deluxe), 11A-13740-B or D (1GA Special), No. 21A-13740 (2GA).

**Stop Light:**—Ford No. 11A-13480.

## Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps		Sealed Beam
Parking, Instrument, Clock	1½	55
Beam Indicator, Ign. Lock	1	51
Stop & Tail	21-3	1154
Stop (Station Wagon)	21	1129
Tail (Station Wagon)	3	63
Dome (Pillar), Luggage Comp.	3	63
Rear License	3	63

## MISC. ELECTRICAL

**LIGHTING CIRCUIT BREAKER** (All Models Except 'SPECIAL') :—Ford No. 11A-12250A. Combined with ignition resistor on block on dash under cowl. Consists of two separate circuit breaker units (one unit protects headlamp circuits), second unit protects other lighting circuits). Breakers are thermostatic and wound-coil type. Contacts open with current of 50 amperes and vibrate rapidly to control current.

**LIGHTING FUSE BLOCK** (USED ON 'SPECIAL' 70C, 73C, 77C) :—Ford No. 11A-12250B. Combined with ignition resistor on block on dash under cowl. Fuse protects lighting circuits.

**Lighting Fuse:**—25 amperes.

**FUSES:**—Lighting—25 amperes (on 'Special' only).

**Electric Clock:**—2 amperes.

**HORNS:**—Air Electric dual horns (Pass. Cars except 'Special' Models), single horn ('Special'). Horn relay used on all models.

**Horn Current:**—24-28 amperes (total—dual horns).

**Horn Relay:**—R-B-M. Ford Nos. 11A-13842C (used with single horn on 'Special' models & Sedan delivery), No. 11A-13842D (on cars with dual horns). Contact Closing Voltage—3.5-4.5 volts.

**Current Draw:**—Approximately ¾ ampere.

## ENGINE

**ENGINE REMOVAL** (For Oil Pan Removal & General Engine Service): See Ford Shop Notes.

**ENGINE SPECIFICATIONS:** 1GA (1941), 2GA (1942) 90 HP. 6 cylinder, "L" head type.

Bore—3.3". Stroke—4.4".

Rated Horsepower—26.1. Displacement—226 cu. ins.

Developed Horsepower—90 at 3300 RPM.

Compression Ratio—6.7-1. Head is cast iron with large water passages. Premium fuel not required. Compression Pressure—165 lbs. max. at 2000 RPM. or 105-125 lbs. at cranking speed (100 RPM.).

Vacuum Reading—Approx. 18-20" at idling speed.

**TIGHTENING TORQUES:** See Ford Shop Notes.

**CYLINDER HEAD:** Tightening (Torque Wrench) Specifications—See Ford Shop Notes.

**CYLINDER SLEEVES:**—Hardened, dry type cylinder sleeves used on some engines.

**Servicing:** Refer to Ford Shop Notes for complete data.

**PISTONS:**—Steel alloy, light weight, cam ground type or Aluminum alloy, T slot type (both types are spherical or 'dome' head). Recondition engines to take finished replacement pistons.

**NOTE:**—Original pistons are 3-ring type. Replacement pistons are 4-ring Aluminum type.

**Weight:**—365 grams (Al.), 460 grams (Steel).

**Removal:**—Pistons and rods removed from above.

**Clearance:**—See Fitting New Pistons.

**Replacement Pistons:**—See Ford Shop Notes for data.

**Fitting New Pistons:** Use .50" wide feeler stock of correct thickness (as listed below) inserted between piston and cylinder wall at right angles to pin to check clearance. Pull required to withdraw feeler should be 5-8 lbs. (all types).

**Feeler Thickness:**—.002" New Piston in New Plain Bore, .004" New Piston in Worn Plain Bore, .005"

Worn Piston in Worn Plain Bore.

**PISTON RINGS:**—Two compression, one slotted type oil control ring, all above pin (drain holes in oil ring groove). **NOTE:**—Expander used with #2 Compression ring and oil control ring.

Ring	Width	End Gap	Side Clearance
Compr. #1	.0915-.0920"	.012-.017"	.0025-.003"
Compr. #2	.0915-.0920"	.012-.017"	.002-.0025"
Oil #3	.1860-.1865"	.012-.017"	.0015-.002"

**Replacement Rings:**—See Ford Shop Notes for data.

**PISTON PIN:**—Diameter .8501-.8504". Length 2.91". Floating type with retainer at each end. Pin hole in rod is bronze-bushed.

**Pin Fit in Piston:**—.0005" max. or light hand push fit with piston at 70°F.

**Pin Fit in Rod Bushing:**—.0002-.0005" (pin should pass through bushing slowly of own weight).

*See Ford Shop Notes for Pin Fitting directions.*

**Replacement Pins:** See Ford Shop Notes.

**CONNECTING ROD:**—Length 7.800". Weight 727 grams. Crankpin Journal Diameter—2.235".

**Bearing Type:**—Steel-backed, special alloy lined type removable shells clamped in rod and cap. Clearance—.0013-.0035". Sideplay—.003-.007".

**Bearing Adjustment:**—None (no shims). Replace bearings worn .005" or more (.005" or more thinner than original insert).

**Replacement Bearings:**—Refer to Ford Shop Notes.

**CRANKSHAFT:**—Four bearing, cast alloy steel, counter-weighted type (vibration dampener at front). Journal Diameters—2.499" (all bearings).

**Bearing Type:**—Steel-backed, special alloy lined removable bearing shells.

**Clearance:**—.001-.003" (or slight drag with .002" feeler assembled in bearing for clearance check).

**Bearing Adjustment:**—None (no shims). Do not file. **End Thrust:**—Taken by rear main bearing. Adjust by replacing bearing. **Endplay:**—.002-.006".

**Replacement Bearings:**—Refer to Ford Shop Notes.

**CAMSHAFT:**—Four bearing. Helical gear drive.

**Bearing Diameters:**—1.797" all bearings. Replace the camshaft if worn to less than 1.7955" diameter. Replace bearings if inside diameter more than 1.802".

**Bearings:**—Steel-backed, babbitt-lined bushings.

**Clearance:**—.001-.002".

**Timing Gears:**—Cast alloy steel (crankshaft), fibre or aluminum, bolted-on type (camshaft).

*See Ford Shop Notes for Timing Gear Replacement data.*

**Camshaft Setting:** Mesh marked tooth of crankshaft gear in marked space between teeth on camshaft gear.

VALVES:	Head Diameter	Stem Diameter
Intake	1.647"	.3115"
Exhaust	1.510"	.3115"

	Seat Angle	Lift	Stem Clearance
Intake	45°	.292"	.0015-.0035"
Exhaust	45°	.292"	.0015-.0045"

**NOTE:**—Service limit for valve stem diameter .3065".

*Refer to Ford Shop Notes for Valve Assembly Removal directions and valve servicing data.*

**NOTE:**—Seat inserts used on exhaust valves.

**Valve Guides:**—Split type retained by 'C' washer and valve spring. **NOTE:**—Replace both halves of all guides measuring less than .6665" (thickness of guide half and valve stem at top of guide with valve of .311" stem diameter in place in guide).

*For Valve Guide servicing data, see Ford Shop Notes.*

**Valve Lifters:**—Barrel type in reamed holes in block. Diameter—.9995". Replace if worn to less than .998" in diameter or length less than 1.710" after any necessary resurfacing of ends (cast type can be resurfaced on both ends, pressed steel type on bottom end only). Clearance—.0005-.0015". Lifter should slip into hole in block of own weight.

Valve Springs:	Pressure	Length
Valve Closed	37-40 lbs.	2.13"
Valve Open	76-80 lbs.	1.84"

**NOTE:**—Replace spring if the pressure is less than 30 lbs. when compressed to 2.125".

## VALVE TIMING

**Tappet Clearance:** .013-.015" All Valves Cold No adjustment.

**Valve Timing:**—See Camshaft Setting above.

**Intake Valves:**—Open 3° BTDC. Close 41° ALDC.

**Exhaust Valves:**—Open 48° BLDC. Close 6° ATDC.

**To Check Valve Timing:**—No marks provided. If top dead center point established on flywheel, intake valve should open approx. 1 tooth before this top dead center position.

## LUBRICATION

**LUBRICATION:**—Pressure type. Oil pump in crankcase.

**Normal Oil Pressure:**—30 lbs. at 2000 RPM.

**Oil Pump:**—Helical gear type. Pump mounted on front main bearing cap in crankcase and driven by gear from crankshaft timing gear.

**Oil Pump Service:**—See Ford Shop Notes.

**Oil Pressure Regulator:**—Under plug on right side of crankcase in front of fuel pump. Not adjustable. **NOTE:**—Replace oil relief valve spring if not within limits of 44-46 ozs. with spring compressed to 1.40".

**Oil Screen & Drain Plug:**—New type single unit on bottom of oil pan (plug is large type with screen

mounted on inner end so that screen removed and accessible for cleaning whenever plug taken out).

**Oil Pressure Gauge:**—King-Seeley Electric. Ford No. Dash Unit—11A-9273B (1GA Pass. Car), 21A-9273 (2GA Pass. Car), 11C-9273B (Sedan Delivery).

**Engine Unit:**—48-9278 (All Models).

See Miscellaneous Section for complete data.

**Crankcase Capacity:**—5 quarts.

## COOLING

**COOLING SYSTEM:**—Capacity 17 qts. (1GA), 15 (2GA).

**NOTE:**—Engine has distributing tube in cylinder block with nozzle for each cylinder which directs cooling water flow in engine.

**Water Pump:**—Self-sealing (packless), balanced, centrifugal type. Mounted on front of cylinder block and driven by belt from generator pulley. Delivery Capacity 50 gals. per minute against 15 lbs. pressure. **NOTE:**—1GA pump shaft mounted on bushing, 2GA type on sealed ball-bearing.

See Water Pump Section for complete data.

**Thermostat:**—New dual-valve type. Located in water outlet elbow on cylinder head. With main valve closed (cold engine), water is by-passed through passage in head directly to water pump to maintain circulation through engine. By-pass passage is shut off when main valve opens to permit circulation through radiator.

**Temperature Gauge:**—King-Seeley Electric. Ford Nos. Dash Unit—11A-10883B (1GA Pass. Car), 21A-10883 (2GA Pass. Car), 11C-10883B (Sedan Delivery).

**Engine Unit:**—99A-10884 (All Models).

See Miscellaneous Section for complete data.

## CLUTCH

**CLUTCH:**—Long Model 10CF-TI. Single plate, dry disc, semi-centrifugal type.

**Facings:**—Woven type, 2 required. Inside Diam. 6 $\frac{3}{4}$ ". Outside Diam. 10". Thickness .125".

See Clutch Section for complete data.

**Adjustment:**—Pedal free movement should be 1.0-1.25". To adjust, remove clevis pin at end of connector rod, adjust clevis on rod.

**Removal:**—Slide rear axle and transmission to rear as a unit to expose clutch (see Transmission Removal below), take out mounting screws in cover.

## TRANSMISSION

**TRANSMISSION:**—Own Make. Constant-mesh, synchro-mesh (Second & High), sliding gear (low & reverse), all helical gear type.

See Transmission Section for complete data.

**Transmission Control:**—Mechanical steering col. shift.

See Transmission Section for complete data.

**Removal:**—Disconnect gear shifter rods at levers on transmission (Pass. Cars), disconnect rear shock absorbers, hand brake cables, hydraulic brake line at torque tube connection (bleed lines when re-connected), and speedometer cable. Disconnect rear spring at center frame connection, take out universal joint ball housing screws, slide rear axle assembly back to disengage drive shaft at splined joint. Support rear of engine, take out rear engine mounting bolts, transmission mounting screws & transmission.

## UNIVERSALS

**UNIVERSAL JOINT:**—Spicer Model 202-6. Steel bushing type. Single joint at rear of transmission case.

See Universals Section for complete data.

## REAR AXLE

**REAR AXLE:**—Own Make.  $\frac{3}{4}$  floating, Spiral Bevel gear type with Torque Tube drive.

See Rear Axle Section for complete data.

**Ratio:**—3.78-1 Std.; 3.54-1, 4.11-1 Optl.

**Backlash:**—.012" max.

**Removal:**—Disconnect rear shock absorbers, hand brake cables, hydraulic brake line at torque tube connection (bleed lines when re-connected), speedometer cable. Disconnect rear spring at center frame connection, take out universal joint ball housing screws, pull axle assembly to rear.

**Axle Shaft Removal:**—Refer to Ford Passenger Car Rear Axle article in Rear Axle Section.

## SHOCK ABSORBERS

**SHOCK ABSORBERS:**—Houde (Houdaille). Double acting, adjustable, hydraulic type.

**Houde Model Right—Ford No.—Left**

Front '41 .....BBCN.....11A-18045A ..... 11A-18046A

Front '42 .....BBCN.....21A-18045 ..... 21A-18046

Rear .....BBCZ.....11A-18080A ..... 11A-18081A

See Shock Absorber Section for complete data.

## FRONT SUSPENSION

**Front Suspension:**—Conventional 'I' beam section front axle with Reverse Elliott ends and transverse front spring. Axle positioned by radius rods.

**Kingpin Inclination:**—8° crosswise.

**Caster:**—9° Max., 4 $\frac{1}{2}$ ° Min. Equal within  $\frac{1}{2}$ °.

**Camber:**—1° Max.,  $\frac{1}{4}$ ° Min. Must be equal within  $\frac{1}{4}$ ° and the right wheel must not exceed the left. Axle may be bent cold to adjust caster & camber if proper tools (to prevent axle flange damage) used.

**Toe In:**—1/16". Set at 1-10 ratio to Camber. Adjust by loosening tie rod clamp bolts and turning tie rod.

**Steering Geometry:**—Inner wheel 23 $\frac{1}{3}$ °. Outer 20°.

## STEERING GEAR

**Steering Gear:** Ford Make (Gemmer Model 305).

Worm-and-Roller type with push-pull adjustments.

See Steering Gear Section for complete data.

## BRAKES

**BRAKES:**—Service. Lockheed hydraulic, double anchor type. Hand lever applies rear wheel service brakes.

See Brake Section for complete data.

**Drums:**—Cast iron. Diameter 12".

**Wheel Cylinders:**—Stepped or two-stage bore type:

Front Wheel—Front cylinder 1.25". Rear 1.00".

Rear Wheel—Front cylinder 1.125". Rear 1.00".

**Lining:**—Woven (forward shoes), Molded (rear shoes). Width 1.75". Thickness .20". Length per shoe 13.18" (forward shoes), 10.1" (rear shoes).

**Clearance:**—Least possible amount without drag.

**Hand Brake:**—See Service Brakes above.

## MISC. MECHANICAL

**Power Operated Convertible Top:** Auto-Lite Electric type. See Miscellaneous Section for complete data.

**ENGINE HOOD NOTE:**—Hood is alligator type with release catch on nose of hood. To raise hood, pull out on release catch, lift auxiliary catch (exposed when release catch raised), raise hood.

**V8 OIL PAN REMOVAL:** Refer to Ford Shop Notes.

## MODEL IDENTIFICATION

Commercial Models		Engine	Wheelbase
Model	1941	1942	
1NC	2NC	4 Cyl.	①

②—1941—118" WB. 1942—114" WB.

**SERIAL & ENGINE NUMBER:**—Stamped on top of the clutch housing (opening in toeboard with cover plate provided, number visible when floor mat and plate removed and light directed through opening).

## TUNE-UP

### COMPRESSION:

Engine	Ratio	Head Material	Pressure at 100 RPM
4 Cylinder	6.0-1	Cast-iron	103 lbs.
6 Cylinder	6.7-1	Cast-iron	117 lbs.
V8 "90" ①	6.2-1	Cast-iron	113 lbs.
V8 "90" ②	5.9-1	Cast-iron	108 lbs.
V8 "100" '41 ①	6.6-1	Aluminum	116 lbs.
V8 "100" '42 ①	6.6-1	Cast-iron	116 lbs.
V8 "100" '41 ②	5.9-1	Cast-iron	106 lbs.
V8 "100" '42 ②	6.4-1	Cast-iron	120 lbs.

①—Comm'l, 3/4 & 1 Ton. ②—Other Trucks.

**VACUUM READING:**—Steady 18-20" idling at 5-7 MPH.

**FIRING ORDER:**—1-2-4-3 (4 Cyl.), 1-5-3-6-2-4 (6 Cyl.), 1-5-4-8-6-3-7-2 (V8). See diagram for cylinder Nos.

**SPARK PLUGS:**—Champion H9 Comm. 14 MM. Metric. Gaps—.025".

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.014-.016". Cam Angle 40° (4 Cyl. & 6 Cyl.—Closed), 36° (V8—Closed both sets together)

**Automatic Advance (4 Cyl.)**—8½-9½° max. at 800 RPM. (distributor).

**Automatic Advance (6 Cyl.)**—11-12° max. at 600 RPM. (distributor).

**Automatic Advance (V8)**—8° max. at 950 RPM. (78-12127 Distr.), 11° max. at 600 RPM. (11A-12127 & 21A-12127 Distr.), distributor degrees and RPM.

**IGNITION TIMING:** See Ignition Timing.

**Std. Setting**—At TDC. (4 Cyl.), 2° BTDC. (6 Cyl.), 4° BTDC. (V8). No flywheel marks provided. See Ignition Timing for timing procedure and Vacuum Brake adjustment.

**CARBURETION:** See Carburetor & Carb. Equipment.

**Idle Setting (4 Cyl.)**—Idle screw opened to point where engine fires smoothly (turning screw in will cause engine to "roll"). Idle speed 5-7 MPH. **NOTE**—Main metering jet adjustment screw should be set for maximum speed and power with engine operating on 1/3 throttle.

**Idle Setting (6 Cyl.)**—Idle screw open to point where

highest steady vacuum reading secured. Idle speed 350 RPM. or 8 MPH.

**Idle Setting (V8)**—Both idle screws ⅝-¾ turn open. Idle speed 5-7 MPH.

**Float Level (4 Cyl.)**—9/32" from gasket seat on cover to nearest point on float (invert to check).

**NOTE**—Set both floats alike.

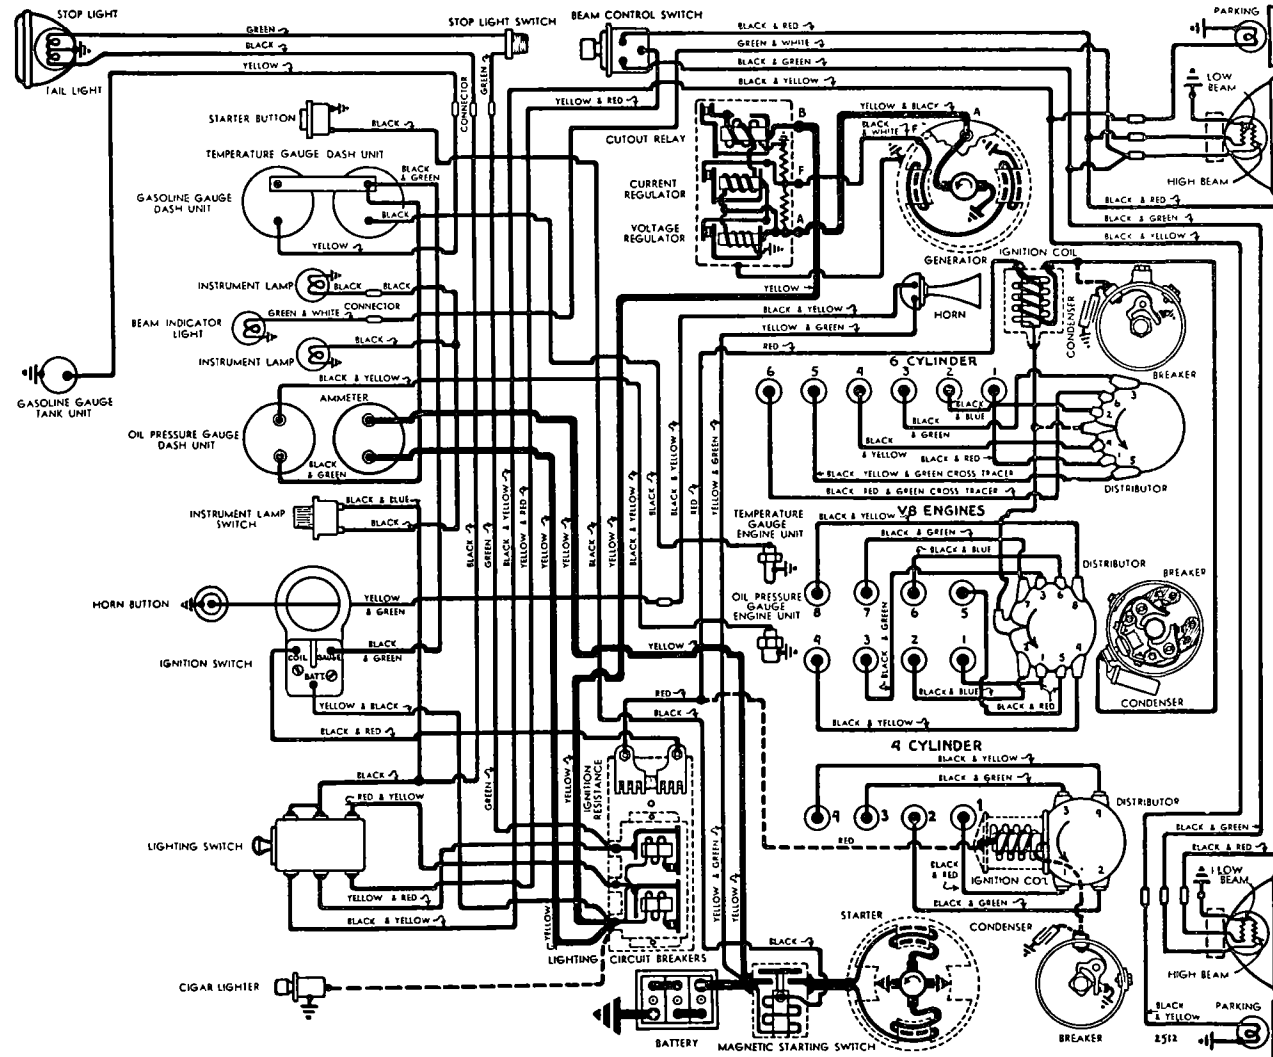

**Float Level (6 Cyl. & V8)**—Fuel level 11/16" (21/32-23/32" below top edge of bowl).

**Accelerating Pump (6 Cyl.)**—Center (#2) hole—Normal. Inner (#1) hole (Summer), Outer (#3) hole (Winter) for temperature extremes.

**Accelerating Pump (V8)**—Inner (#1) hole—Summer, Center (#2) hole—Winter. Outer (#3) hole for extremely cold temperatures only.

**Fuel Pump Pressure:** 3½ lbs. maximum.

**MANIFOLD HEAT CONTROL (6 CYL.):** Automatic type. Valve has counterweight and thermostatic coil attached to shaft and should be closed (counterweight arm against stop pin on manifold) with engine cold.

Refer to 1941 V8 Pass. Car diagram for Ignition Wiring of 1941 V8 Trucks

**VALVES: See Valve Timing.**

**Tappet Clearance:**—.010-.012" Intake, .014-.016" Exh. (4 Cyl. & V8), .013-.015" Intake and Exhaust (6 Cyl.). No adjustment provided.

**STARTING: See Battery, Starter, Generator, Regulator.****IGNITION**

**Ignition Switch:**—Oakes Steering Column and Ignition Lock Assembly.

**Steering Post & Ign. Lock Assem. Ignition Switch**

	Oakes No.	Ford No.	Oakes No.
Comm'l. ①	302120	21C-3676-A	302461
Comm'l. ②	302478	21C-3676-B	302494
¾ & 1 Tonner	302120	21C-3676-A	302461
Cab-over-Eng.	301790	21W-3676	302461
Other Trucks	302122	21T-3676	302461
①—Floor mtd. Gearshift. ②—Strg. Col. Gearshift.			

**Lock Cylinder:**—Hurd or Briggs & Stratton. B&S No. 80935, Ford No. 91A-3686-A (with Keys).

**Key Series:**—FK000 to FK999. Groove—No. 17.

**COIL:** Ford No. 9N-12024 (4 Cyl.), 1GA-12024 (6 Cyl.), 78-12036 or 81A-12036 (1941 V8), 1GA-12024 (1942 V8). Coil mounted as part of ignition unit assembly (4 Cyl. & 1941 V8), separately on engine block (6 Cyl. & 1942 V8).

**Resistor Unit:**—Connected in coil primary circuit. Mounted on Circuit Breaker Assembly 11A-12250-A

**Ignition Current:**—4½-6 amperes (All) with engine stopped. Ignition primary resistance 1-1½ ohms.

**CONDENSER:** Ford Part No. 91A-12300 (4 Cyl.), 78-12300 or 81A-12300 (1941 V8), 1GA-12300B (6 Cyl. & 1942 V8).

**Capacity:**—33-36 mfd. (78-12300 & 81A-12300), .29-.32 mfd. (91A-12300 & 1GA-12300B).

**DISTRIBUTOR (4 CYL.):** Ford 9N-12000 (With Coil), 9N-12100 (less Coil). Single breaker, 4 lobe cam, full automatic advance type (no Vacuum Brake Control). Ignition unit (coil mounted on distributor) mounted on front end of engine and driven directly off end of camshaft.

**Breaker Gap:**—.014-.016". Use special two step feeler—.014" step 'go', .016" step 'no go'.

**Cam Angle or Dwell:**—Approx. 40° closed, 50° open. Set dwell at 41% (limits 36-41% at 2000 RPM.) on Ford Test Set.

**Breaker Arm Spring Tension:**—20-24 ounces.

**Rotation:**—Clockwise viewed from drive end (counter-clockwise viewed from front of engine).

**Automatic Advance (4 Cylinder)**

Distributor	R.P.M.	Distributor	R.P.M.
3-4	400	6-8	800
8½-9½	800	17-19	1600

**Removal:**—Ignition unit mounted on front of engine. To remove, take off cap, take out mounting screws

**DISTRIBUTOR (6 CYL. & V8):** All data same as for Passenger Car equipment. See 1941-42 Ford 6 Cylinder and V8 articles for complete data.

**IGNITION TIMING**

**IGNITION TIMING:**—For each engine as follows. See Vacuum Brake Setting following for adjustment depending on type of service and fuel (6 Cyl. & V8).

**Flywheel Degrees Piston Position**

4 Cyl. Engine	At TDC	0000" TDC
6 Cyl. Engine	2° BTDC	0018" BTDC
All V8 Engines	4° BTDC	0058" BTDC

**Timing:**—Manufacturer recommends use of Ford Laboratory Test Set (Heyer H1) with Distributor Stroboscope (Heyer H1-DFZ) and Special Adapter (Heyer EGDAE for 4 Cyl., EGDAF for 6 Cyl.). On Stroboscope set timing index at top dead center (4 Cyl.), at 1° before top dead center (6 Cyl.), at 2° before top dead center (V8), set peepsight at Zero. Adjust distributor by loosening adjusting screw in slot on left side of housing and moving screw up (to retard spark), down (to advance spark) in slot until Stroboscopic disc light is in line with peepsight, tighten adjusting screw.

**Timing (On the Engine):**—No flywheel marks provided. With distributor adjusted as described above, this will give correct TDC (4 Cyl.), 2° BTDC (6 Cyl.), 4° BTDC (V8) timing on the engine.

**Vacuum Brake Setting (6 Cyl. & V8 only):**—Should be adjusted to eliminate pinging when engine operated with load. To adjust, loosen locknut, back off adjusting screw until engine pings with load, then turn screw in just enough to eliminate ping, tighten locknut. When adjusted on the stroboscope, vacuum brake should retard spark to peepsight with peepsight set at 2° when distributor is driven at 650 RPM. with no vacuum to release brake.

**CARBURETOR**

**Carburetor (4 Cyl.):**—Marvel-Schebler Model TSX, Ford No. ONY-9510. Single barrel, updraft type.

For complete data, refer to Carburetor Index.

**Idle Adjustment:**—With engine warm, set throttle stopscrew for 5-7 MPH. idle speed. Turn idle adjusting screw in until engine rolls, then turn screw out until engine fires smoothly. Recheck idle speed.

**Power (Main Metering Jet) Adjustment:**—Open throttle approximately 1/3, turn power adjusting screw in until engine begins to lose power and speed drops off, then turn screw out until speed picks up and power is at maximum. Road test car and turn screw out slightly if engine falters when picking up.

**Float Level:**—9/32" from gasket surface on bowl cover to nearest point on float with valve seated (invert cover to check). Set both floats alike.

**Metering Jets:**—Refer to Carburetor Index for Marvel-Schebler Carburetor article for complete data.

**Carburetor (6 Cyl. & V8):** All data same as for Passenger Car equipment. See 1941-42 Ford 6 Cylinder and V8 articles for complete data.

**CARB. EQUIPMENT**

**Air Cleaner:**—Ford No. 91A-9600A (4 Cyl. & V8 except C-O-E), 1GA-9600C (6 Cyl.), 81W-9600A (Cab-Over-Engine). Oil-wetted type std. Oil bath type Optl.

**Fuel Pump:**—Type AC No. AC Exch. No. Ford No.  
4 Cyl. R. 1537465 1NC-9350  
6 Cyl. R. 1537744 543 1GA-9350  
V8 R. 1537384 541 11A-9350

For complete data, refer to Carburetion Equip. Index.  
**Pressure:**—1½-2¾ lbs.

**Gasoline Gauge:**—King-Seeley Electric type. Ford No. Dash Unit—91A-9280A (Cab-Over-Engine), 11C-9280A (Comm'l & Other Trucks). Tank Unit—No.

01W-9275 (Cab-over-Engine), 01Y-9275 (1941 Panels), 21C-9275B (1942 Panels), 01T-9275 (1941 Others), 21C-9275A (1942 Closed Cabs).

For complete data, refer to Carburetion Equip. Index.

**BATTERY**

**BATTERY:**—Ford No. 01A-10655-A. 6 volt, 17 plate, 120 ampere hour capacity (20 hour rate).

**Starting Capacity:**—150 amperes for 20 minutes.

**Zero Capacity:**—300 amperes for 4.0 minutes.

**Grounded Terminal:**—Positive (+) grd. to dash.

**Engine Ground:**—Strap connector between rear of cylinder head (right head on V8) and dash.

**Dimensions:**—Length 10.6". Width 7.3". Height 9.2".

**Location:**—In engine compartment on left side (6 Cyl.), on right side (4 Cyl. & V8 exc. C-O-E). Under seat on right side on Cab-Over-Engine models.

**STARTER**

**STARTER:**—Ford No. 52-11002 (4 Cyl.), 18-11002 (6 Cyl. V8). Armature 52-11005 (4 Cyl.), 18-11005 (Others).

**Drive:**—Barrel type Bendix No. A-1806, Ford No. 52-11350C (52-11002). Inboard Bendix No. L11FX-10, Ford No. B-11350 or Ford B&S Drive (rubber type, no spring) No. 91A-11350. Refer to Electrical Equip. Index for Ford B&S Starter Drive data.

**Rotation:**—Counter-clockwise at commutator end.

**Brush Spring Tension:**—2 lbs. each.

**Cranking Engine:**—100 RPM., 190-215 amperes.

**Performance Data**

Torque	R.P.M.	Volts	Amperes
4 ft. lbs.	1070	4.6	200
8 "	660	4.3	340
12 "	300	3.65	465
14 "	Lock	3.5	500

**Starting Switch:**—R-B-M. Ford No. 01A-11450-A. Magnetic switch mounted on dash and controlled by instrument panel pushbutton, Ford No. 11C-11500 (1941), 21C-11500 (1942).

**Removal:**—Starter mounted on right front face of flywheel housing. To remove, take off pan at right of engine, free starter-to-oil pan support bracket, take out through-bolts on commutator end plate.

**GENERATOR**

**GENERATOR:** Ford Numbers

Truck	Generator	Armature
All 4 Cyl. ('41-42)	1NC-10000	01A-10005
All 6 Cyl. (1941)	1GA-10000	01A-10005
All 6 Cyl. (1942)	2GA-10000	2GA-10005
All V8 exc. C-O-E ('41)	01A-10000B	01A-10005
C-O-E Trk. (1941)	81T-10000A	78-10005C
C-O-E Trk. (1941)	81T-10000B	78-10005D
All V8 incl. C-O-E ('42)	21A-10000	01A-10005

Two brush type with vibrating type voltage and current regulation. Ventilated by drive pulley fan.

**Charging Rate Adjustment:**—None (see Regulator).

**Maximum Charging Rate:**—Controlled by regulator and dependent on battery condition and load. To check generator output, refer to Ford 6 Cyl. or V8 Passenger Car article for complete directions.

## CONTINUED FR M PRECEDING PAGE

## Performance Data

01A-10000-B		INC-10000	
Amperes	Eng. RPM.	Amperes	Eng. RPM.
Start.....	520	Start.....	610
30.....	1060	30.....	1240
30.....	2500	30.....	2500
81T-10000-A		1GA-10000-B	
Start.....	550	Start.....	565
28.....	1300	30.....	1160
28.....	2500	30.....	2500
81T-10000-B		21A-10000	
Start.....	350	Start.....	520
20.....	1050	30.....	1060
20.....	2500	30.....	2500

**Rotation**—Counter-clockwise at commutator end.  
**Field Current**—2.1 amperes at 6.0 volts (1NC-, 1GA-, 2GA-, 21A-10000, 01A-10000B—field resistance 2.88 ohms at 70°F), 2.22 amperes at 6.0 volts (81T-10000-A,B—field resistance 2.7 ohms at 70°F).

**Brush Spring Tension**—Approximately 28 ozs.

**Removal (4 Cyl.)**—Generator pivot mounted at right of engine. To remove, take out mounting bolts.

**Removal (6 Cyl.)**—Generator mounted on adjustable bracket at left front of engine. To remove, take out 2 capscrews in mounting bracket.

**Removal (V8 Eng.)**—Generator mounted on bracket between cylinder banks at front of engine. To remove, loosen nut on bracket stud.

**Belt Adjustment (4 Cyl.)**—Loosen pivot and clamp bolts, swing generator away from engine until side movement of belt (finger pressure) is 1" midway between generator and fan pulleys.

**Belt Adjustment (6 Cyl.)**— $\frac{1}{2}$ " deflection midway between generator and crankshaft pulley (generator belt), generator and pump pulley (pump belt). Adjust both belts by loosening 2 capscrews in mounting bracket beneath generator, move generator up and out (bolt holes slotted at this angle).

**Belt Adjustment (V8 Eng.)**— $\frac{1}{2}$ " deflection midway between generator and water pump pulleys. NOTE—Generator mounting bracket modified to include fan mounting (fan driven by separate belt). Both belts adjusted in same manner by loosening mounting bolts and raising mounting brackets.

## REGULATOR

**REGULATOR**—Ford No. 01A-10505C. Three-Unit Type. Consists of Cutout Relay, vibrating Voltage Regulator and vibrating Current Regulator (separate units) in single case on engine side of dash.

For complete data, refer to *Electrical Equipment Index*. NOTE—Regulator case grounded through 'pigtail' to dash or separate ground wire to generator. This ground connection must be in place when regulator operated or tested (disturbed by cover removal).

## Cutout Relay

**Cuts In**—5.8-6.3 volts at operating temperature.  
**Cuts Out**—8 amperes discharge current (maximum).

## Voltage Regulator

**Setting**—6.9-7.2 volts at 70-80° F. See Ford Regulator article in *Electrical Equipment Section* for other temperatures.

**Checking & Adjusting**—Refer to *Electrical Equipment Index* for article on 'Ford Regulator—3 Unit Type'.

## Current Regulator

**Setting**—30-33 amperes (after 5 min. run).

**Checking & Adjusting**—See Voltage Regulator above.

## LIGHTING

**LIGHTING**—Headlamps—Ford Sealed Beam Type. Controlled by Lighting Switch on instrument panel and Beam Selector Switch on toeboard.

For complete data, refer to *Electrical Equipment Index*.

**Headlamp Adjustment**—Aim upper beam straight ahead (hot spot center 3" below lamp center height).

**Beam Indicator**—On panel centered above speedometer. Lighted whenever upper beams in use.

## Switches

**Lighting**—R-B-M. Ford No. 11A-11652 or 01C-11653 (Commercial), No. 01C-11653 (Trucks exc. C-O-E), No. 01W-11653 (Cab-Over-Engine Trucks). Light Switch Knob & Insert No. 11C-11661-C. NOTE—Light Switch Nos. 11653 includes switch and wiring.

**Beam Selector**—R-B-M. Ford No. 11A-13532.

**Instrument**—No. 50-13740 (Closed Cabs, Panels).

**Stop Light**—Ford No. 11A-13480.

## Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps	Sealed Beam	
Parking (Trucks exc. C-O-E)	3	63
Parking (Cab-Over-Engine)	$1\frac{1}{2}$	55
Instrument, Beam Indicator	1	51
Stop	21	1129
Tail	3	63
Dome (Panels)	15	87

## MISC. ELECTRICAL

**LIGHTING CIRCUIT BREAKER**—Ford No. 11A-12250A. Combined with Ignition Resistor on block on dash under cowl. Consists of two separate circuit breaker units (one unit protects headlight circuits, second unit protects other lighting circuits) of the thermostatic and wound-coil type. Contacts open with current of 50 amperes and vibrate rapidly to control current.

**HORNS**—Ford No. 78-13833-A. Vibrator type, electric single horn. Horn Current—6-8 amperes.

## ENGINE

## 4 CYLINDER TYPE

**ENGINE SPECIFICATIONS (4 CYL. ENGINE)**—4 Cylinder, 'L' head, Enbloc type.

**Bore**—3.187". **Stroke**—3.75".

**Displacement**—119.5 cubic inches.

**Rated Horsepower**—18.2.

**Developed Horsepower**—30 at 2800 RPM (for 1941), 40 at 3200 RPM (for 1942).

**Compression Ratio**—6.0-1 Cast-iron head.

**Compression Pressure**—129 lbs. at 1200 RPM, or 103 lbs. at cranking speed of 100 RPM.

**Vacuum Reading**—18-20" steady idling at 5-7 MPH.

**CYLINDER SLEEVES**—Hardened, dry type, cylinder sleeves used on some engines.

**Servicing**—See Ford Shop Notes for data.

**PISTONS (4 CYL.)**—Steel alloy, light weight, cam ground type. When reconditioning engine, replace cylinder sleeves and install new Std. pistons.

**Weight**—358-362 grams (without rings or pin).

**Removal**—Pistons and rods removed from above.

**Clearance**—See Fitting New Pistons.

**Fitting New Pistons**—Use .003" feeler, .50" wide, inserted between piston and cylinder wall at right angles to pin. Pull required to withdraw feeler must be 7-12 lbs. NOTE—On engines with plain cylinders (no sleeves), use .0025" feeler with 7-12 lbs. pull.

**Replacement Pistons**—See Ford Shop Notes for data.

**PISTON RINGS (4 CYL.)**—Two compression, one slotted oil control ring, all above pin. Oil ring groove

drilled for oil drainage. NOTE—Expanders are used with #2 Compression Ring & Oil Control Ring.

Ring	Width	End Gap	Side Clearance
Compr. #1	.130-.140"	.012-.017"	.0025-.003"
Compr. #2	.130-.140"	.012-.017"	.002-.0025"
Oil Cont.	.1535-.1540"	.012-.017"	.0015-.002"

**Replacement Rings**—See Ford Shop Notes for data.

**PISTON PIN (4 CYL.)**—Diameter—.7501-.7504". Length 2.97". Pin floating type with locking ring in piston at each end. Pin hole in rod bronze-bushed.

**Pin Fit in Piston**—.0005" clearance.

**Pin Fit in Rod Bushing**—.0001" clearance. Refer to Ford Shop Notes for Piston Pin Fitting directions.

**CONNECTING ROD (4 CYL.)**—Length 7.000".

**Weight**—580 grams.

**Crankpin Journal Diameter**—2.094".

**Bearing Type**—Removable steel-backed, special alloy lined type, clamped in rod and bearing cap. **Clearance**—.0005-.002". **Sideplay**—.002-.006".

**Adjustment**—None (no shims). Replace bearings. Do not file rods or bearing caps.

**Replacement Bearings**—Refer to Ford Shop Notes.

**CRANKSHAFT (4 CYL.)**—Three bearing type with integral counterweights.

**Journal Diameters**—2.2485" (all bearings).

**Bearing Type**—Removable, steel-backed, special alloy lined. Front & Rear bearings interchangeable. **Clearance**—.001-.003" (or slight drag with .002" feeler assembled in bearing for clearance check).

**Bearing Adjustment**—None (no shims). Replace bearings. Do not file bearing caps.

**End Thrust**—Taken by center bearing. Adjust by replacing bearing. **Endplay**—.002-.006".

**Replacement Bearings**—Refer to Ford Shop Notes.

**CAMSHAFT (4 CYL.)**—Three bearing with Helical Gear drive (gear furnished as unit with shaft).

**Journal Diameters**—1.797" (all bearings).

**Bearings**—Steel-backed, babbitt-lined bushings. **Clearance**—.002".

**Timing Gears**—Cast alloy iron (crankshaft), Baked Fabric or Aluminum bolted on (camshaft).

**Backlash**—.004" maximum. Refer to Ford Shop Notes for Timing Gear Replacement data.

**Camshaft Setting**—Mesh 'O' marked tooth of crankshaft gear with '/' marked space on camshaft gear (this mark must be in line with mark on hub).

VALVES (4 CYL.)	Head Diam.	Stem Diam.	Length
Intake	1.537"	.3115"	4.750-4.751"
Exhaust	1.280"	.3115"	4.750-4.751"

	Seat Angle	Lift	Stem Clearance
All Valves	45°	.307"	.0015-.0035"

See Ford Shop Notes for Valve Servicing data.

NOTE—Seat inserts used for all valves.

**Valve Guides**—Split type retained by 'C' washer and valve spring. See Ford Shop Notes for servicing data.

**Valve Lifters**—Barrel type in reamed holes in block. **Diameter**—.9995". Replace if worn to less than .998" in diameter or length less than 1.710" after any necessary resurfacing of ends (cast type can be resurfaced on both ends, pressed steel type on bottom end only).

**Clearance**—.0005-.0015". Lifter should slip into hole in block of own weight.

Valve Springs	Pressure	Length
Valve Closed	37-40 lbs.	2.13"
Valve Open	76-80 lbs.	1.82"

**ENGINE****6 CYLINDER TYPE**

**ENGINE SPECIFICATIONS:** 1GA (1941), 2GA (1942)  
90 HP. 6 cylinder, "L" head type.  
Bore—3.3". Stroke—4.4".  
Rated Horsepower—26.1. Displacement 226 cu. ins.  
Developed Horsepower—90 at 3300 RPM.  
Compression Ratio—6.7-1 Cast Iron Head.  
Compression Pressure—165 lbs. max. at 2000 RPM.  
or 117 lbs. at cranking speed.  
Vacuum Reading—Approx. 18-20" at idling speed.  
► For all other 6 Cyl. Engine data, refer to 1941-42 Ford 6 Cylinder Passenger Car article.

**ENGINE****V8 "90" TYPE**

**ENGINE SPECIFICATIONS:** Own 90. 8 Cylinder, 90° Vee, "L" Head type. Both cylinder banks and crankcase cast Enbloc.  
Bore—3.062". Stroke—3.75".  
Rated Horsepower—30. Displacement 221 cu. ins.  
Developed Horsepower—90 at 3800 RPM.  
Compression Ratio—6.2-1 (Comm'l, ¾, 1 Ton), 5.9-1 (Other Trucks). Cast Iron Heads.  
Compression Pressure—140 lbs. (6.2-1 Head), 135 lbs. (5.9-1 Head) max. at 2300 RPM. or 113 lbs. (6.2-1), 108 lbs. (5.9-1) at cranking speed of 100 RPM.  
Vacuum Reading—Steady 18-20" at 5-7 MPH.  
► For all other V8 "90" Engine data, refer to 1941-42 Ford V8 "90" Passenger Car article.

**ENGINE****V8 "100" TYPE**

**ENGINE SPECIFICATIONS:** Own 100. 8 Cylinder, 90° Vee, "L" Head type. Both cylinder banks and crankcase cast Enbloc.  
Bore—3.187". Stroke—3.75".  
Rated Horsepower—32.5. Displacement 239 cu. ins.  
Developed Horsepower—100 at 3800 RPM.  
Compression Ratio & Pressure—As follows: Pressure Engine Ratio Material at 100 RPM  
V8 "100" '41①.....6.6-1.....Aluminum.....116 lbs.  
V8 "100" '42①.....6.6-1.....Cast-iron.....116 lbs.  
V8 "100" '41②.....5.9-1.....Cast-iron.....106 lbs.  
V8 "100" '42②.....6.4-1.....Cast-iron.....120 lbs.  
①—Commercial, ¾ & 1 Ton. ②—Other Trucks.  
Vacuum Reading—Steady 18-20" idling at 5 MPH.  
► For all other V8 "100" Engine data, refer to 1941-42 Mercury V8 "100" Passenger Car article.

**VALVE TIMING**

**Tappet Clearance:** .010-.012" Intake (4 Cyl. & V8), .014-.016" Exhaust (4 Cyl. & V8), .013-.015" All Valves (6 Cyl.). No adjustment provided.

**Valve Timing (4 Cyl.):** See Camshaft Setting above.  
Intake Valves—Opens 6° BTDC. Closes 22° ALDC.  
Exhaust Valves—Opens 38° BLDC. Closes 6° ATDC.  
Checking Timing—No flywheel marks or other means provided to check timing. If top dead center point established on flywheel, intake valve should open slightly less than 2 teeth before this point.

**Valve Timing (6 Cyl.):** See Camshaft Setting.  
Intake Valves—Open 3° BTDC. Close 41° ALDC.  
Exhaust Valves—Open 48° BLDC. Close 6° ATDC.  
To Check Valve Timing—No flywheel marks provided. If top dead center point established on flywheel, intake valve should open approximately 1 tooth before this top dead center position.

**Valve Timing (V8 "90" & "100"):** See Camshaft Setting.  
Intake Valves—Open At TDC. Close 44° ALDC.  
Exhaust Valves—Open 48° BLDC. Close 6° ATDC.  
To Check Valve Timing—No flywheel marks provided. Intake valve opens with piston at TDC.

**LUBRICATION**

**LUBRICATION:**—Pressure system. Gear type oil pump in crankcase. Pump mounted on right side of front main bearing cap with pump housing integral with bearing cap (4 and 6 Cyl.), mounted separately at rear of crankcase (V8 engines).

**Normal Oil Pressure:**—25 lbs. at 1400 RPM. (4 Cyl.), 30 lbs. at 2000 RPM. (6 Cyl. & V8 Engines).

**Oil Pressure Regulator:**—Opens at 25 lbs. (4 Cyl. Eng.), 30 lbs. (others). Not adjustable. Located under plug between cylinder banks at front of engine on 'V8' engine. Located under plug on right side of crankcase in front of fuel pump on Six Cylinder engines. Located under plug at top of timing gear cover (engine front cover) on left side on 4 Cyl. Engines.

**Oil Screen & Drain Plug (4 & 6 Cyl.):**—Single unit on bottom of oil pan (plug is large type with screen mounted on inner end so that screen removed and accessible for cleaning whenever plug taken out).

**Oil Pressure Gauge:**—King-Seeley Electric. Ford No. 11C-9273A (Dash Unit), 48-9278 (Eng. Unit).  
See Miscellaneous Section for complete data.

**Crankcase Capacity:**—4 qts. (4 Cyl.), 5 qts. (others).

**COOLING**

**COOLING SYSTEM:**—Capacity. 14 qts. (All 4 Cylinder), 16¾ qts. ('42 6 Cyl. Comm'l., ¾ & 1 Ton), 17¼ qts. ('42 6 Cyl. Regular Truck), 23 qts. (All V8's exc. '41 C-O-E), 24 qts. ('41 Cab-Over-Engine).

**Six Cylinder Note:**—A water distributing tube installed in cylinder block with a nozzle for each cylinder which directs flow of cooling water in engine.

**Water Pump (4 Cyl. Eng.):**—Packless type, 1 used. Mounted on front end of cylinder block and driven by fan belt (fan mounted on front end of water pump shaft).

See Water Pump Section for complete data.

**Removal:**—Remove drive belt, take out mounting bolts and remove fan. Take out pump mounting screws and remove pump assembly.

**Water Pump (6 Cyl. Eng.):**—Packless (self-sealing), balanced, centrifugal type. Mounted on front of cylinder block and driven by a separate belt from the generator pulley.

See Water Pump Section for complete data.

**Removal:**—Remove drive belt, take out mounting bolts and remove fan. Take out pump mounting screws and remove pump assembly.

**Water Pump (V8 Engines):**—Packless type, 2 used (1 for each bank). Mounted on front of engine block.

See Water Pump Section for complete data.

**Removal:**—Slack off drive belt, support engine at forward end, remove front engine mounting bolts (engine mounting integral with pump housing), take out mounting screws in pump body.

**Thermostat (4 Cyl. & V8):**—In top radiator hose (4 Cyl. Engine—1 used), in each cylinder head outlet elbow (V8 Engine—2 used).  
Setting—Starts to open at 145° F. Fully open 180° F.

**Thermostat (6 Cylinder):**—New dual-valve type. Located in outlet elbow on cylinder head. With main valve closed (cold engine), water is by-passed through passage in head directly to water pump to maintain circulation through engine. By-pass passage is shut off when main valve opens.

**Temperature Gauge:**—King-Seeley Electric. Ford No. 11C-10883A (Dash Unit), 99A-10884 (Eng. Unit).  
V8 NOTE—Accessory Temperature Gauge Switch (for Other Bank) No. 01A-10990. Kit No. 11A-18381.  
See Miscellaneous Section for complete data.

**CLUTCH**

**CLUTCH:**—Long Model 9CF-CS (4 Cyl., All Models, V8 '90' Commercial), 10CF-TI (6 Cyl. Comm'l & V8 '100' Comm'l, ¾ & 1 Ton), 11CF-CS (All Others). Semi-centrifugal, single plate, dry disc type.  
See Clutch Section for complete data.

**Facings:**—Molded type, 2 required.

Clutch Model	Inside Diameter	Outside Diameter	Thickness
9CF-CS	5.76"	9"	137"
10CF-TI	6.75"	10"	137"
11CF-CS	6.50"	11"	137"

**Adjustment:**—Pedal free movement should be 1.5-1.75". To adjust, remove clevis pin at end of connector rod, adjust clevis on rod.

**Removal:**—Remove transmission (see Transmission Removal below). Take out mounting screws in clutch cover flange.

**TRANSMISSION****3-SPEED TYPE**

**TRANSMISSION (3 SPD.):**—Own Make. Standard on all Commercial, ¾ & 1 Ton with 6 Cyl. & V8 Engines (4 Spd. type Std. on 1 Ton with 4 Cyl. Engine). Constant-mesh, synchro-mesh, helical gears (second and high), sliding spur gears (low and reverse).  
6 Cylinder Note—Transmission housed in separate case bolted to flywheel housing.

See Transmission Section for complete data.

NOTE—4 Spd. Transmission Optl. on these models.

**Removal:**—Remove 4 front companion flange bolt nuts at front universal. On truck models with two propeller shafts, take out 2 bolt nuts at coupling shaft center support. Lower propeller shaft assembly to floor. Support engine at rear end, take out rear engine mounting bolts. Remove clutch housing mounting screws (transmission mounting screws on 6 Cyl.). Pull transmission straight back and remove.

NOTE—1941 Commercial models equipped with Torque Tube Drive. See 1941-42 Ford V8 "90" Passenger Car article for Transmission Removal instructions on these models.

**TRANSMISSION****4-SPEED TYPE**

**TRANSMISSION (4 SPD.):**—Own Make. Std. on all Truck models except ¾ & 1 Ton (with 6 Cylinder and V8 Engines). Sliding spur gear type.  
See Transmission Section for complete data.

NOTE—This Transmission Optl. on other models.

**Removal:**—Same as for 3 Spd. Transmission above.

C NTINUED ON NEXT PAGE

CONTINUED FR M PRECEDING PAGE

## UNIVERSALS

**UNIVERSAL JOINTS:**—Spicer—Needle bearing types. Two used (101" and 114" WB. models), 3 used with slip-joint in center behind coupling shaft bearing (122", 134", 158", 194" wheelbase models).

See *Universals Section* for complete data.

NOTE—1941 Commercial models equipped with one universal joint (Spicer Steel Bushing Type) in ball housing at rear of transmission.

## Spicer Model Nos.

Wheelbase	Front	Center	Rear
101"	1351-22, 23	None	1358-104, 115
114" ①	1278-102	None	1278-102
114" ②	1311-102	None	1318-104
122"	1318-103	1311-102	1318-103
134&158"	1358-4, 31	1351-110, 111	1358-104, 115
194"	1358-5, 32	1351-110, 111	1358-105, 116
①—3 Spd. transmission.	②—4 Spd. transmission.		

**Coupling Shaft (Center) Bearing (Trucks):**—A cushion mounted Coupling Shaft Ball Bearing bolted to underside of intermediate frame cross member is now used. Bearing is mounted on end of coupling shaft in a sleeve with a felt retainer sleeve on each end and a bearing baffle over the front end. Bearing is retained by center universal companion flange. Bearing and sleeve assembly mounted in center support which is bolted to underside of frame cross member.

REAR AXLE  
COMMERCIAL TYPES

**REAR AXLE (COMMERCIAL):**—Own Make. 3/4 floating, Spiral Bevel gear type with straddle-mounted pinion with Torque Tube drive (1941), Hotchkiss drive (1942 models).

See *Rear Axle Section* for complete data.

Ratio—6 & 8: 3.78-1 Std., 3.54-1 Optl. 4: 4.55-1.  
Backlash—.012" maximum.

**Removal:**—Split rear universal joint by taking out two 'U' bolts and nuts. Lower propeller shaft. Disconnect hand brake cables and flexible hydraulic brake line at rear axle (bleed brake lines when re-connected). Disconnect rear shock absorbers from axle. Disconnect rear springs (semi-elliptic type) and withdraw axle assembly to the rear.

NOTE—1941 Commercial models equipped with Torque Tube Drive. See 1941-42 Ford V8 "90" Passenger Car article for Rear Axle Removal instructions on these models.

**Axle Shaft Removal:**—Axle must be dismantled and shaft removed through differential housing at inner end (side gear integral). See *Rear Axle Section* for Ford Rear Axle article for complete data.

REAR AXLE  
TRUCKS

**REAR AXLE (TRUCKS):**—Own Make. Full-floating, Spiral Bevel gear type with straddle-mounted pinion and Hotchkiss drive.

See *Rear Axle Section* for complete data.

Ratio	Standard	Optional
3/4 & 1 Ton (4 Cyl.)	6.67-1	
3/4 & 1 Ton (Others)	4.857-1	4.11-1
All Others	6.67-1	5.14-1, 5.83-1
Backlash—.004-.016".		

**Removal:**—Split rear universal joint by taking out two 'U' bolts and nuts. Lower propeller shaft. Disconnect hand brake cables at equalizer (3/4 & 1 Tonner) and flexible hydraulic brake line at rear axle (bleed lines when re-connected). Disconnect rear springs (semi-elliptic type) and withdraw axle assembly from beneath truck.

**Axle Shaft Removal:**—Take out two screws (except 3/4 & 1 Tonner) and remove hub cap, remove nuts on 8 hub studs which hold axle shaft flange in place, turn the two special screws (in tapped holes in flange) up evenly to break flange loose from wheel hub, back these screws out, strike axle shaft flange at center to loosen centering cones on studs, remove cones, pull axle shaft out (wheel not disturbed).

**Wheel Bearing Adjustment:**—Remove axle shaft (above), use special bearing adjusting wrench and remove bearing locknut (outer nut), nut retainer, and grease retainer (except 3/4 & 1 Tonner). Adjust inner bearing adjusting nut by turning up until tight and then backing off 1/8 turn, install grease retainer, bearing nut retainer, outer bearing locknut, turn locknut up tight.

NOTE—When installing axle shaft, make certain that gasket in place under shaft flange, cones in place on studs and that two loosening screws backed off sufficiently so that stud nuts can be tightened securely. Turn the two loosening screws in just enough to prevent loosening in service.

REAR AXLE  
SPECIAL EQUIPMENT

**REAR AXLE (OPTL.):**—Own Make. Two-speed type. See *Rear Axle Section* for complete data.

Ratio—5.83-1 (Direct), 8.11-1 (2nd speed).

Backlash—.008-.020".

**Removal:**—Same as for standard axle (above) except that control linkage must also be disconnected.

## SHOCK ABSORBERS

**SHOCK ABSORBERS:**—Houdé (Houdaille). Double acting, adjustable, hydraulic type. Model numbers: FRONT—BBCN (Comm'l), BBCME or BBCHMS (Trucks). REAR—BBCZ (Comm'l), BBG, BBCLL, or BBCLT (Trucks).

See *Shock Absorber Section* for complete data.

## FRONT SUSPENSION

**Front Suspension:**—Conventional 'T' beam section front axle with Reverse Elliott ends and new semi-elliptic springs.

**Kingpin Inclination:**—7° crosswise.

**Caster:**—3 1/2° Max., 1° Min. Must be equal within 1/2°.

NOTE—Caster angle controlled by wedge shims inserted between axle pads and springs. To increase caster, insert taper wedge shims equally at both sides (make certain that spring tie bolt passes through hole in wedge so that wedge held securely in place with spring leaves).

**Camber:**—1° Max., 1/4° Min. Must be equal within 1/4° and right wheel must not exceed left wheel. NOTE—Axle may be bent cold to correct Camber provided that proper tools (wedges and blocks to prevent crushing axle flange) used.

**Toe In:**—1/16". Set at 1-10 ratio to Camber. Toe-in increases with load on trucks and should be set with truck empty. Adjust by loosening clamp bolts and turning tie rod.

**Steering Geometry (toe out on turns):**—Outer wheel turned 20°. Inner wheel 23° (Comm'l, 3/4 & 1 Tonner), 23 3/4° (101" WB.), 23 3/4° (134" WB.), 22 1/4° (158" WB.). Allowable variation 1/2°.

## STEERING GEAR

**Steering Gear (Comm'l Models):** Ford Make (Gemmer Model 305 design). Worm-and-Roller type with push-pull adjustments.

**Steering Gear (Truck Models):** Gemmer Model 335. Worm-and-Roller type with push-pull adjustments. See *Steering Gear Section* for complete data.

## BRAKES

**BRAKES:**—Service. Lockheed hydraulic, double anchor type. Hand lever applies rear wheel service brakes (Comm'l, 3/4 & 1 Tonner), independent shaft brake behind transmission (all others). See *Brake Section* for complete data.

**Drums:**—Cast-Iron. Diameter: Comm'l & 3/4 Ton (12" front & rear). 1 Ton (12" front, 14" rear). Other Trucks (14" front, 15" rear).

**Wheel Cylinders:**—Stepped type used on Commercial & 3/4 Ton (front & rear wheels), 1 Ton (front). Sizes as follows:

	Front Wheel Front Rear	Rear Wheel Front Rear
Commercial	1.25"-1.00"	1.125"-1.00"
3/4 Ton	1.25"-1.00"	1.25"-1.00"
1 Ton	1.25"-1.00"	1.375"-1.375"
All Others	1.375"-1.375"	1.50"-1.50"

**Lining:**—Forward shoes (Woven—all wheels Comm'l & 3/4 Ton, front wheel 1 Ton; Molded—All Others). Rear shoes (Molded—All Models).

	Thick- ness	Length per Shoe Forward Rear
Comm'l, 3/4 Ton	1.75".....20"	13.18".....10.1"
1 Ton (front)	1.75".....20"	13.18".....10.1"
1 Ton (rear)	2.00".....268"	15.53".....10.75"
Others (front)	2.00".....268"	15.53".....10.75"
Others (rear)	3.50".....33"	16.64".....11.52"

Clearance—Least possible amount without drag.

**Hand Brake (Comm'l, 3/4 & 1 Ton):**—See Service Brakes above.

**Hand Brake (Others):**—On drum at rear of transmission.

**Adjustment:**—Fully release hand brake lever. Flat on cam should rest on ear of band (if not, remove pin in lower end of hand lever). Turn anchor screw (on left side) in to give .010" clearance between drum and band, replace locking wire. Loosen lock nut and turn bracket adjusting screw (on right side) to give .010" clearance for lower half of band, tighten lock nut. Tighten adjusting rod nut (on right side), to give .010" clearance for upper half of band (slotted side of nut up). Adjust brake rod clevis so that pin enters clevis and hand brake lever with flat of cam on ear of band and lever in fully released position.

**Drum Diameter:**—7.81".

**Lining:**—Woven. Width 2.5". Thickness 0.250".

**ENGINE HOOD NOTE:** Hood is Alligator type hinged at cowl. To raise hood, pull out on release catch on nose of hood, lift auxiliary catch (exposed when release catch raised), lift hood up at forward end.

**OIL PAN REMOVAL & INSTALLATION:** See Ford Shop Notes.

### MODEL IDENTIFICATION

**NOTE—**All trucks built in 1944-45 were fitted with the V8 "100" Engine (3.187" Bore).

Model	1944 Models	Wheelbase
498T		158"
494T School Bus		194"
Model	1945 Models	Wheelbase
59C Commercial		114"
59T		134"
598T		158"
594T School Bus		194"

Model	1946-47 Models	Wheelbase
69C Light Duty	V8 "100"	114"
69Y One Ton	6 Cyl. "90"	122"
69T Heavy Duty	V8 "100"	134"
69U Dump Truck	6 Cyl. "90"	134"
69W Cab-over-Engine	V8 "100"	134"
691W Cab-over-Engine	V8 "100"	101"
694T School Bus	V8 "100"	194"
698T Heavy Duty	6 Cyl. "90"	158"
698W Cab-over-Engine	V8 "100"	158"

**SERIAL & ENGINE NUMBER:** Stamped on top of clutch housing and visible when floor mat and transmission cover plate removed.

### TUNE-UP

**COMPRESSION:** Ratio—6.7-1 (6 Cyl. Engine), 6.4-1 (V8 1944-45), 6.75-1 (V8 1946-47). All heads Cast Iron.

**Pressure—**120 lbs. (105-125) at cranking speed of 100 RPM.

**VACUUM READING:** Steady 18-20" idling at 500 RPM.

**FIRING ORDER:** 1-5-4-8-6-3-7-2 (for 8 cyl. engine), 1-5-3-6-2-4 (for 6 cyl.). See diagram.

**SPARK PLUGS:** Champion H9 Comm. 14 mm. Metric. Gaps—.025".

**IGNITION (6 CYL.):** See Coil, Condenser, & Distrib'tr. Breaker Gap—.014-.016" Cam Angle 40° (closed). Breaker Arm Spring Tension—20-24 ounces. Automatic Advance—Starts at 200 RPM. Maximum 9° at 600 RPM. (distr. degrees & RPM).

**IGNITION (V8):** See Coil, Condenser, & Distributor. Breaker Gap—.014-.016". Cam Angle 36° closed for both sets operating together. Breaker Arm Spring Tension—20-24 ounces. Automatic Advance—Starts at 200 RPM. Maximum 11° at 600 RPM (distr. degrees & RPM).

**IGNITION TIMING:** See Ignition Timing. Std. Setting—1° BTDC (Six Cylinder Engines), 4° BTDC (V8 Engines). No flywheel marks provided. See Ignition Timing for timing procedure and Vacuum Brake adjustment.

**CARBURETION:** See Carburetor & Carb. Equipment.

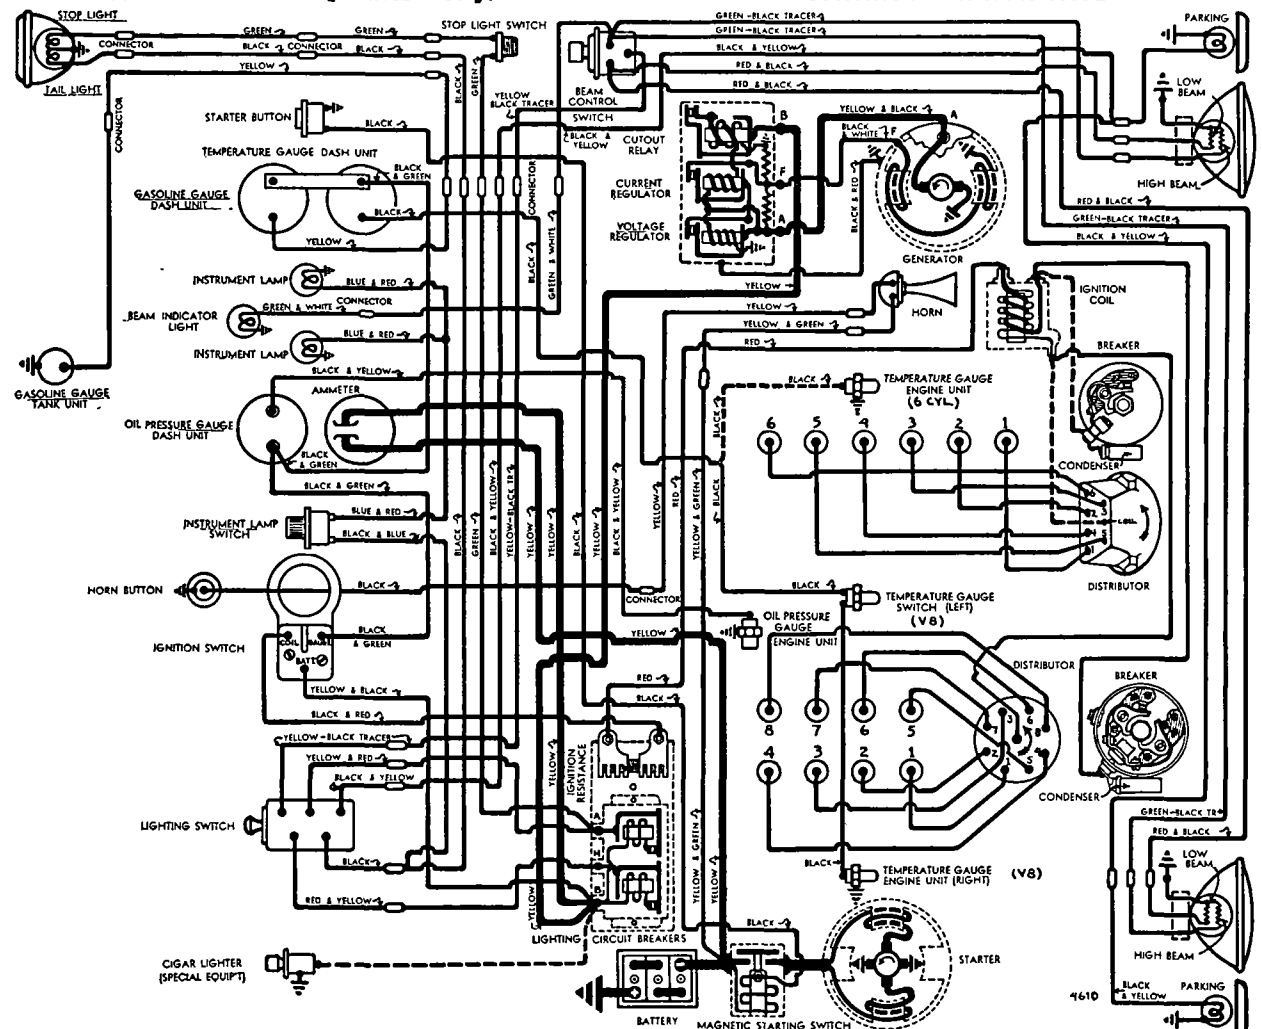

**Idle Setting—**Both idle screws  $\frac{5}{8}$ — $\frac{3}{4}$  turn open and set for smooth idle. Idle speed 500 Eng. RPM or 5-7 MPH. **NOTE—**Six Cylinder Engine carburetor has only one idle adjusting screw (single barrel type). **Float Level—**Fuel level  $\frac{11}{16}$ " ( $\frac{21}{32}$ — $\frac{23}{32}$ ") below top edge of bowl.

**Accelerating Pump—**Center (#2) hole Normal. Inner (#1) Hole—Summer, Outer (#3) Hole—Winter for temperature extremes.

**Fuel Pump Pressure:**  $\frac{3}{2}$  lbs. maximum.

**MANIFOLD HEAT CONTROL (6 CYL.):** Automatic thermostatic type. Valve should be closed (counterweight arm against stop pin) with engine cold and should operate freely.

**MANIFOLD HEAT CONTROL (V8-'46-47):** Automatic thermostatic type located in exhaust manifold connection of left hand cylinder block (diverts exhaust gases through by-pass channel in intake manifold from left bank to right bank when valve is closed). See that valve operates freely.

1946-47 MODELS

See 1942 Truck Diagram for wiring on 1944-45 Models

**VALVE TAPPET CLEARANCE:** 6 Cylinder. .013-.015" Cold, for All Valves. No adjustment.

**V8 Engine—**.010-.012" Intake, .014-.016" Exhaust, Cold. No adjustment.

**Valve Timing Check—**See Valve Timing.

**STARTING:** See Battery, Starter, Generator, Regulator.

### IGNITION

**IGNITION SWITCH:** Oakes Steering Column & Ignition Lock Assembly. Part Nos. as follows:

**Steering Col. & Ign. Lock Ignition Switch**

Oakes No.	Ford No.	Oakes No.	Ford No.
Lgt. Trk.①	302120...01C-3676A	302461...81A-3700

CONTINUED N NEXT PAGE

## CONTINUED FROM PRECEDIN PA E

Lock Cylinder—Hurd or Briggs & Stratton No. 80935, Ford No. 91A-3686A (with key).

Key Series—FK000 to FK999. Groove—No. 17

**COIL:** Ford No. 1GA-12024. Coil mounted separately on left front corner of cylinder block.

Resistor Unit—Connected in coil primary circuit. Mounted on Circuit Breaker Assy. No. 11A-12250-A.

Ignition Current—4½-6 amperes with engine stopped. Ignition primary resistance 1-1½ ohms.

**CONDENSER:** Ford Part No. 1GA-12300-B.

Capacity—.29-.32 microfarad.

**DISTRIBUTOR (6 CYL. ENGINE):** Ford No. 5GA-12127 (Less Terminal Housing & Rotor). New "Sealed Dry" type. Single breaker, 6 lobe cam, full automatic advance type with Vacuum Brake adjustment. Breaker Gap—.014-.016".

Cam Angle or Dwell—40° closed, 20° open (distr.).

Breaker Arm Spring Tension—20-24 ozs.

Rotation—Clockwise viewing drive end of unit.

Distributor Degrees	Automatic Advance R.P.M.	Engine Degrees	R.P.M.
Start.....	200	0.....	400
9 .....	600	18.....	1200

**DISTRIBUTOR (V8 ENGINE):** Ford No. 21A-12127 (1944-45), No. 59A-12127 (1946-47)—Less Terminal Housing, Cap & Rotor. New flat type, Single Cap, "Sealed Dry" (1946-47) distributor similar to type used on 1942 models. Double breaker, 8 lobe cam, full automatic advance type with Vacuum Brake adjustment.

Breaker Gap—.014-.016" (each set). Use special two-step feeler—.014" step "go," .016" step "no go."

Cam Angle or Dwell—Approx. 36° closed, 9° open for both sets operating together with correct coil loading lead. Set dwell at 80% (limits 78-80% at 2000 RPM) on Ford Test Set.

NOTE—Cam Angle for each set operating singly approximately 22½° closed, 22½° open (50%).

Breaker Arm Spring Tension—20-24 ounces.

Rotation—Clockwise viewed from drive end (counter-clockwise viewed from front of car).

Automatic Advance (With Vacuum Brake disconnected)			
Distributor Degrees	RPM	Engine Degrees	RPM
Start.....	200	0.....	400
11 .....	600	22.....	1200

NOTE—Limits 10½-11½ distributor degrees.

**Vacuum Brake:** Consists of a spring-loaded, vacuum controlled, brake piston which bears on edge of retard disc of breaker advance mechanism and acts as a "drag" to retard normal advance when engine is accelerated or operated under load. Piston is normally held out of engagement by manifold vacuum.

**Removal:** Distributor mounted on front of engine. To remove, disconnect primary lead, remove distributor cap, take out mounting screws in distributor flange, lift unit out.

## IGNITION TIMING

**Std. Setting—**As listed below. See Vacuum Brake Setting for final adjustment dependent on fuel and operating conditions.

Model	Flywheel Degrees
6 Cyl. "90" Engines.....	1° BTDC
V8 "100" Engines.....	4° BTDC

**Ignition Timing (6 Cyl. Basic Setting)—**Distributor can be timed for correct ignition timing when off engine as follows: Place small straight edge or scale against tang on drive end of distributor shaft (scale must be on wide side of shaft), rotate distributor in direction of rotation (clockwise) until leading edge of scale is exactly ½" before the nearest edge of the distributor mounting hole on the vacuum piston side of the mounting flange. If contacts do not begin to open at this point, loosen adjusting screw on side of distributor housing, move screw down (to advance spark) or up (to retard spark) in slot until contacts begin to open, tighten adjusting screw. This setting will provide correct 1° BTDC ignition timing when distributor installed on eng.

**Ignition Timing (V8 Basic Setting)—**Distributor can be set for correct ignition timing when off engine as follows: Place a small straight edge or scale against tang on drive end of distributor shaft (scale must be on wide side of shaft), rotate distributor in direction of rotation (clockwise) until trailing edge of scale is exactly ¾" past the nearest edge of the small mounting hole (left hand hole—nearest vacuum brake) on the mounting flange. If left-hand (timing) contacts do not begin to open at this point, loosen adjusting screw on side of distributor housing, move screw down (to advance spark), up (to retard spark) in slot until contacts begin to open, tighten adjusting screw. This setting will provide correct 4° BTDC ignition timing when distributor installed on engine. NOTE—Timing is controlled by opening of left hand breaker contacts only (right hand contacts "load" coil and open and close earlier than the left hand contacts).

**Ignition Timing (On Engine)—**No flywheel marks or other means provided to check timing on engine. If basic setting of distributor is correct (above), all necessary adjustments for operating conditions and octane rating of fuel being used can be made by means of the Vacuum Brake adjustment as follows:

**Vacuum Brake Setting—**Should be adjusted to eliminate pinging when engine operated with load. To adjust, loosen locknut, back off adjusting screw until engine pings with load, then turn screw in just enough to eliminate ping, tighten locknut. When adjusted on the stroboscope, vacuum brake should retard spark to peep sight with peep sight set at 2° when distributor is driven at 650 RPM with no vacuum to release brake.

## CARBURETOR

**Holley (Chandler-Groves) Ford No. 5GA-9510-A (Six Cyl. Engine), No. 59A-9510-A (V8 Engine).** Single Barrel (6 Cyl.), Dual or double barrel (V8), downdraft types with manual choke control.

See Carburetor Section for complete data.

**Idle Adjustment—**With engine warm and idling at hot idling speed (choke valve open, fast idle inoperative), set throttle stopscrew for idle speed of 500 Engine RPM, turn each idle adjusting screw (one for each barrel, adjust in succession) in until engine

begins to miss, then turn screw out until engine begins to roll, finally turn screw in just enough so that engine fires smoothly. Recheck idle speed.

NOTE—There is only one idle adjusting screw on the Six Cylinder Engine (single barrel) carburetor.

**Accelerating Pump Setting—**Three holes in throttle lever for pump link connection. Adjust as follows: Inner (#1)—Extremely hot weather.

Center (#2)—Normal setting—moderate weather.

Outer (#3)—Extremely cold weather.

**Float Level—**Use 9550-A gauge to set the float level (1.353" end "Go," 1.332" end "No Go") measuring from underside of bowl cover to bottom of float with cover and float assembly inverted. Fuel level in bowl should be 11/16" plus or minus 1/32".

**Metering Jets—**See Chandler-Groves (Ford) Jet Specification Table in Carburetor Section.

**Fast Idle:** Integral with carburetor. Operated by choke valve lever. No adjustment.

## CARB. EQUIPMENT

**Air Cleaner:** Ford No. 1GA-9600-C (Six Cyl.), 91A-9600-A (V8 exc. C-O-E), 81W-9600-A (C-O-E). Heavy duty oil-bath type.

**Servicing—**Clean and refill (to level mark on case) with same grade engine oil used in crankcase at 3500 mile intervals (when crankcase drained) or more often if required. Wash filter element in cleaning fluid.

NOTE—Clean and re-oil filter element in oil filler cap (crankcase breather) every 1000 miles.

**Fuel Pump:** AC Type R, Ford No. 1GA-9350 (Six Cyl.), 11A-9350 (V8). Diaphragm type fuel pump.

See Carburetion Equipment Section for data.

**Pressure—**3½ lbs. maximum (2-3¼ lbs.).

**Gasoline Gauge:** King-Seeley Electric. Ford Nos. Dash Unit—11C-9280A (All Models).

**Tank Unit—**No. 21C-9275-A (Clsd. Cabs), 21C-9275-B (Panels), 01W-9275 (C-O-E), 594T-9275 (School Bus), 21C-9275-B (C-O-E with side tank).

See Carburetion Equipment Section for data.

## BATTERY

**Ford No. 01A-10655-C.** 6 volt, 15 plate, 100 Ampere Hour Capacity (20 hour rate).

**Grounded Terminal—**Positive (+) grounded to engine dash. **Engine Ground—**Strap connector between rear of cylinder head and dash.

**Location—**In engine compartment on left side (6 Cyl.), right side (V8 exc. C-O-E), under right seat (C-O-E).

**Dimensions—**Length 10.56". Width 7.28". Hgt. 8.25".

## STARTER

**Ford Model No. 18-11002. Armature No. 18-11005.** Drive—Inboard Bendix No. A1472, Ford No. B-11350.

**Rotation—**Counter-clockwise at commutator end.

**Brush Spring Tension—**2 lbs. each.

**Cranking Engine—**100 RPM, 190-215 amperes.

Performance Data			
Torque 4 ft. lbs.	R.P.M.	Volts	Amperes
8	1070	4.6	200
8	660	4.3	340
12	300	3.65	465
14	Lock	3.5	500

**Starting Switch:** Ford No. 21A-11450. Magnetic switch mounted on the dash and controlled by instrument panel pushbutton, Ford No. 21C-11500.

**Removal:** Starter mounted on right front face of fly-wheel housing. To remove, take off pan at right of engine, free starter-to-oil pan support bracket, take out through-bolts on commutator end plate.

## GENERATOR

**Ford Model No. 2GA-10000A (Six Cyl. Engine), 21A-10000 (V8 Engine).** Two brush (shunt) type with vibrating type voltage and current regulation. Ventilated by fan on drive pulley.

**Armature—No. 2GA-10005 (2GA-10000A Gen.), 01A-10005A (21A-10000 Gen.).**

**Charging Rate Adjustment—No adjustment.** See Regulator data below.

**Maximum Charging Rate—Controlled by regulator and dependent on battery condition and load.** To check generator output, disconnect generator field lead at generator, connect both generator terminals together (use short insulated wire), Use 'BRS' set or rheostat connected across battery terminals and apply load until voltage is exactly 6 volts. Connect ammeter in charging line, run engine, check output at 2 speeds given in performance table below. Restore original connections after completing test. **Do not operate generator in service with both terminals connected together.** This eliminates all regulator action and will damage generator.

### Performance Data

2GA-10000A		21A-10000	
Ampere	Eng. RPM.	Ampere	Eng. RPM.
Start.....	565	Start.....	520
30 .....	1160	30 .....	1060
30 .....	2500	30 .....	2500

**Rotation—Counter-clockwise at commutator end.**

**Field Current—2.1 amperes at 6.0 volts (field resistance 2.88 ohms at 70° F.).**

**Brush Spring Tension—Approximately 28 ozs.**

**Removal (6 Cyl.):** Generator mounted on adjustable bracket at left front of engine. To remove, take out bolt in mounting bracket, slip off drive belt and water pump belt, lift generator out.

**Removal (V8):** Generator mounted on bracket in cylinder banks at front of engine, driven in tandem with water pumps by Vee belt. To remove, loosen nut on bracket stud.

**Belt Adjustment (6 Cyl.):** ½" deflection midway between generator and crankshaft pulley (generator belt), generator and pump pulley (water pump belt). Adjust both belts by loosening two capscrews in mounting bracket beneath generator, move generator up and out (mounting bolt holes slotted at this angle).

**Belt Adjustment (V8):** ½" deflection midway between generator and pump pulleys. **NOTE—Generator mounting bracket modified to include fan mounting (fan driven by a separate belt).** Both belts adjusted in same manner by loosening mounting bolt and raising mounting brackets.

## REGULATOR

**Ford No. 01A-10505-C. Three-Unit Type.** Consists of a Cutout Relay, vibrating Voltage Regulator, and vibrating Current Regulator (separate units) in single case on engine side of dash.

See Electrical Equipment Section for complete data.

**NOTE—Regulator case is grounded through separate ground wire extending from regulator to generator frame. This ground connection must be in place when regulator being operated or tested.**

### Cutout Relay

**Cuts In—5.8-6.3 volts at operating temperature.**

**Cuts Out—8 ampere discharge current maximum.**

### Voltage Regulator

**Setting—6.9-7.2 volts at 70-80° F.**

**Checking & Adjusting—See "Ford Regulator—3-unit Type" in Electrical Equipment Section for data.**

### Current Regulator

**Setting—30-33 amperes (after 5 minutes run).**

**Checking & Adjusting See Voltage Regulator above.**

## LIGHTING

**Headlamps—Ford Sealed Beam type.** Controlled by Lighting Switch on instrument panel and Beam Selector Switch on toeboard.

See Electrical Equipment Section for complete data.

**Headlamp Adjustment—Aim upper beam straight ahead (hot spot center 3" below lamp center height). Beam Indicator—On panel directly above speedometer. Lighted whenever upper beams in use.**

### Switches

**Lighting—Ford No. 11A-11652 (Switch & Wiring). Switch Knob & Insert No. 11C-11661A.**

**Beam Selector—Ford No. 11A-13532 (Switch only), No. 01C-11653 (Switch & Wiring—except C-O-E).**

**Instrument—Ford No. 50-13740 (1944), 21C-13740 (1945-47).**

**Stop Light—Ford No. 11A-13480.**

### Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps .....	Sealed Beam	
Parking .....	3 .....	63
Instrument, Beam Ind. ....	1 .....	51
Stop & Tail .....	21-3 .....	1154

## MISC. ELECTRICAL

**LIGHTING CIRCUIT BREAKER: Ford No. 11A-12250A.** Combined with Ignition Resistor on block on dash under cowl. Consists of two separate circuit breaker units (one unit protects Headlamp circuits, second unit protects other circuits) of the thermostatic and wound-coil type. Contacts open with current of 50 amperes and vibrate to control current.

**HORNS: Ford No. 78-13833A.** Vibrator type, single horn. **Horn Current—6-8 amperes.**

## ENGINE

### 6 CYLINDER "90" TYPE

**ENGINE SPECIFICATIONS: 6GA 90 HP.** Six cylinder, "L" head type.

**Bore—3.30" Stroke—4.40".**

**Displacement—226 cu.ins. Rated H.P.—26.13**

**Developed Horsepower—90 at 3300 RPM.**

**Compression Ratio—6.7-1. Cast Iron Head.**

**Compression Pressure & Vacuum Reading—See Tune-up data.**

**TIGHTENING TORQUES: See Ford Shop Notes.**

**CYLINDER HEAD: Tightening Torque—See Ford Shop Notes.**

**OTHER ENGINE DATA: Pistons, Piston Rings, Piston Pins, Connecting Rod, Crankshaft & Main Bearings, Camshaft, and Valves), see Ford 6 Cylinder (1946-47) Passenger Car article.**

## ENGINE

### V8 "100" TYPE

**ENGINE SPECIFICATIONS: Eight Cylinder, 90° Vee, "L" Head type.** Both cylinder banks and crankcase cast Enbloc.

**Bore—3.187". Stroke—3.75".**

**Displacement—239 cu.ins. Rated H.P.—32.5.**

**Developed Horsepower—100 at 3800 RPM.**

**Compression Ratio—6.4-1 (1944-45), 6.75-1 (1946-47). Cast Iron Heads. See Cylinder Head notes below.**

**Compression Pressure & Vacuum Reading—See Tune-up data.**

**TIGHTENING TORQUES: See Ford Shop Notes.**

**CYLINDER HEAD (1944): Tightening Torque—See Ford Shop Notes.**

► **Re-working Head for Improved Cooling: See Ford Shop Notes for instructions and new Head Gaskets.**

**NOTE—If Service Replacement Block No. 59A-6010C used with these heads, heads must be machined out to provide clearance for valves. See Ford Shop Notes.**

**CYLINDER HEAD (1945-47): Tightening Torque—See Ford Shop Notes.**

► **New Type Cylinder Head & Block on 1945-46-47—New type units used as follows:**

**Cylinder Head No. 59A-6050-B—Heads interchangeable Right & Left and can be identified by part number prefix "59A" cast on top. Heads have larger ¾" hole at top center and larger ⅝" hole at center between #2 and #3 bore.**

**Head Gasket No. 59A-6051—Gasket has 5/16" round hole instead of blunt cone shaped opening at center lower edge between #2 and #3 bore. This gasket must be used with new type head (above) and with old heads which have been reworked for improved cooling.**

**Cylinder Block No. 59A-6010-C—Has valve ports located .09" farther from center line of block and may be identified by oblong water passages on gasket surface just above valve (were round on earlier type blocks). CAUTION—If previous type heads (81A-, 81T-, 99T-, 29A-) used with this block, head must be machined out for valve clearance.**

**For Head re-working instructions, See Ford Shop Notes.**

**OTHER ENGINE DATA: Pistons, Piston Rings, Piston Pins, Connecting Rod, Crankshaft & Main Bearings, Camshaft, and Valves), see Ford V-8 "100" (1946-47) Passenger Car article.**

## VALVE TIMING

**Tappet Clearance (6 Cyl.): .013-.015" All Valves Cold. No adjustment.**

**(V8 "100" Engine)—.010-.012" Intake, .014-.016" Exhaust, Cold. No adjustment.**

**Valve Timing: See Camshaft Setting above. Timing figures correct with .015" tappet clearance.**

### Six Cyl. "90" Engine

**Intake Valves—Open 3° BTDC. Close 41° ALDC.**

**Exhaust Valves—Open 48° BLDC. Close 6° ATDC.**

### V8 "100" Engine

**Intake Valves—Open at TDC. Close 44° ALDC.**

**Exhaust Valves—Open 48° BLDC. Close 6° ATDC.**

## CONTINUED FROM PRECEDING PAGE

**Valve Timing Check**—No flywheel marks or other means provided to check timing. No. 1 intake valve should open approximately 1 tooth on flywheel before top dead center position (6 Cyl. Engine), with piston on top dead center (V8 Engine).

## LUBRICATION

**Engine Oiling System:** Pressure to main bearings, connecting rod lower bearings, camshaft bearings, timing gears, and valve lifters (6 cyl. only). Oil pump mounted in crankcase at rear of engine (V8), or on #1 main bearing cap with oil intake pipe extending to oil screen in sump at rear end of oil pan (6 Cyl. Engines).

**Crankcase Capacity**—5 quarts.

**Normal Oil Pressure**—35 lbs. at 2000 RPM. (6 Cyl. Engine), 30 lbs. at 2000 RPM. (1944-45 V8 Engine), 50 lbs. at 2000 RPM. (1946-47 V8 Engine).

**NOTE**—1946-47 V8 engine has new type greater-capacity oil pump with pressure regulator built-in pump housing.

**Oil Pressure Regulator (6 Cyl. Engine)**—Located under plug on right side of crankcase at front of engine. Not adjustable.

**NOTE**—Replace oil relief valve spring if not within limits of 44-46 ounces with spring compressed to 1.40".

**Oil Pressure Regulator (V8 Engine)**—Located under plug above front camshaft bearing (under manifold) and on oil pump housing (some models). Not adjustable.

**NOTE**—Check relief valve spring tension whenever engine overhauled. Replace the cylinder block relief valve if tension not within limits of 43-50 ozs. at 1.380" (engines without oil pump relief valve), or 78-87 ozs. at 1.380" (engines with oil pump relief valve). Replace oil pump relief valve spring if tension not within limits of 78-87 ozs. at 1.380".

**Oil Drain Plug & Screen (6 Cyl. Engine):** Drain plug is large type with screen mounted on inner end so that it is removed with the plug. Clean screen whenever plug taken out.

**Oil Drain Plug & Screen (V8 Engine):** Drain plug located on bottom of oil pan directly under screen. On 1946-47 engines (except Light Duty), removable plate on bottom of pan provides access to screen.

**Oil Pump (6 Cyl. Engine):** Gear type. Mounted on front main bearing cap and driven from crankshaft timing gear (pump housing integral with bearing cap).

**Oil Pump Servicing**—See Ford Shop Notes.

**Oil Pump (V8 Engine):** Gear type. In crankcase at rear of engine. **NOTE**—New type pump 41A-6600-A (engines without oil pan baffles), 41A-6600-B (engines with oil pan baffles) has oil pressure relief valve in pump body.

**Oil Pump Servicing**—See Ford Shop Notes.

**Oil Filter:** Replace filter cartridge at 5000 mile intervals (Ford No. 01A-18662-A Unit).

**Oil Pressure Gauge:** King-Seeley Electric. Fords Nos. Dash Unit—Ford No. 41C-9273.

**Engine Unit**—Ford No. 41A-9278 (V8), 48-9278 (six). See Miscellaneous Section for complete data.

## COOLING

**Cooling System:** Positive circulation with water pump at front of engine (2 pumps on V8). Six Cyl. engine has water distributing tube in block to direct cooling water on exhaust valve seats and ports and has by-pass channel in head and block to permit recirculation of water in block with thermostat closed (thermostat is dual-valve type).

**Capacity**—17 qts. (6 Cyl.), 23 qts. (V8).

**Pressure Valve**—In radiator filler cap. Opens at 3½-4½ lbs.

**Radiator Core Removal**—See Ford Shop Notes.

**Water Pump (6 Cyl.):** Packless, centrifugal type with sealed ball bearing shaft.

See Water Pump Section for complete data.

**Removal**—Drain cooling system, remove fan blade assembly by taking out four capscrews in shaft hub, disconnect hose connection at pump. Take out three pump mounting capscrews, lift pump out.

**Belt Adjustment**—See Generator Belt Adjustment.

**Water Pump (V8):** Packless, centrifugal type (two). Mounted on front of engine (pump housing integral with front engine mounting).

See Water Pump Section for complete data.

**Removal**—Drain cooling system, place support jack under engine (use wood block on jack to avoid damaging pan), remove bolt from engine front support, raise engine so that no weight rests on front support. Loosen generator mounting bolt, remove drive belt. Disconnect and remove water pump hose. Remove four capscrews mounting water pump on engine, lift pump out. **CAUTION**—One mounting screw located within water pump inlet connection (accessible with hose removed).

**Belt Adjustment**—See Generator Belt Adjustment.

**Thermostat (6 Cyl.):** In cylinder head water outlet elbow. By-pass (dual valve) type.

**Setting**—Starts to open at 150-155°F. Fully open at 175-180°F.

**Thermostat (V8):** In each cylinder head outlet (one thermostat used for each cylinder bank).

**Setting**—Starts to open 150-155°F. Fully open at 170°F.

**Temperature Gauge:** King-Seeley Electric. Ford Nos. Dash Unit—Ford No. 11C-10883A.

**Engine Unit (6 Cyl. Engine)**—No. 99A-10884.

**Engine Unit (V8 Engine)**—No. 01A-10990 (Temperature Gauge Switch—in left hand cylinder head), No. 99A-10884 (Regular Engine Unit—in right hand cylinder head).

See Miscellaneous Section for complete data.

## CLUTCH

**Long Model 10CF-T1 (Comm'l), 11CF-CS (Others).** Semi-centrifugal, single plate, dry disc type.

See Clutch Section for complete data.

Facings	Inside	Diameter	Outside	Thickness
10CF-T1	6.75"	10"	125"	①
11CF-CS	6.50"	11"	137"	

①—Thickness on 1944 and previous models—137".

**Adjustment:** Pedal free travel must be 1.5-1.75". To adjust, disconnect clevis at clutch equalizer lever on left side of clutch housing, adjust clevis on rod for 1.5" free travel when re-connected.

**Removal:** Remove transmission (see Transmission Removal below), hold clutch in released position by installing wedges between each release lever and

cover, remove flywheel housing by taking out seven bolts and one capscrew, take out capscrews in clutch cover mounting flange, remove cover assembly and driven member.

## TRANSMISSION

## 3-SPEED TRUCK TYPE

**Own Make.** Constant-mesh, synchro-mesh, helical gears (Second & High), sliding spur gears (Low & Reverse). Used with conventional floor-mounted gearshift.

See Transmission Section for complete data.

**NOTE**—Four Speed Transmission is Optional on these models.

**Removal:** Disconnect propeller shaft at rear universal joint (remove nuts on "U" bolts), remove shaft by sliding it to the rear until it clears splined shaft in transmission. Remove clutch equalizer shaft by taking out clevis pin at clutch shaft and clutch pedal connector rod (**CAUTION**—do not lose spring and bushing halves in equalizer shaft bracket). Remove front floor plate by taking out retaining screws. Disconnect speedometer cable at engine rear support, remove nuts and washers from two engine rear support bolts. Raise rear end of engine (use block of wood on jack under engine) until rear support clears mounting bolts. Remove capscrews mounting transmission on flywheel housing, pull transmission straight back until main drive gear shaft clears clutch, lift transmission out through floor opening.

## TRANSMISSION

## 4-SPEED TRUCK TYPE

**Own Make.** Four-speed, sliding spur gear type with conventional floor-mounted gearshift.

See Transmission Section for complete data.

**NOTE**—This transmission Optl. on Comm'l models.

**Removal:** Remove seat cushion, floor mat, and transmission cover on floor. Support engine with jack under flywheel housing (use wood block on jack), raise jack until engine weight is off rear mounting. Free coupling shaft support bearing from cross-member by removing nuts on two bolts, disconnect front universal joint by taking out four bolts mounting universal joint flange on hand brake drum and disconnect intermediate universal joint at support bearing by removing nuts on "U" bolts (tape bearing caps in place to prevent losing needle bearings), remove front shaft. Remove clutch equalizer shaft by taking out pin in clutch shaft and clevis pin at lever and pulling equalizer shaft off the bracket (**CAUTION**—Do not lose spring and bushing halves). Remove two bolts in engine rear support. Disconnect speedometer shaft at transmission. Remove transmission capscrews from flywheel housing, pull transmission straight back until clutch (main drive gear) shaft clears, then lift transmission out through floor opening.

**NOTE**—To remove brake assembly, take out 2 capscrews in hand brake lever sector on transmission case and two capscrews in brake adjusting screw bracket, disconnect hand brake link from transmission and anchor adjusting screw from brake band, remove brake band assembly and hand brake lever. Remove nut holding universal joint flange on transmission mainshaft, remove universal joint flange and brake drum.

## UNIVERSALS

**Spicer.** Needle bearing type, two used (114" WB. Light Duty & 101" C-O-E Trucks), three used with slip joint at forward end of rear shaft behind coupling shaft support bearing (Other Trucks).

**NOTE**—On Light Duty (114" WB) Trucks, propeller shaft is one-piece type and slip joint is provided by the front universal yoke sliding on the splined drive shaft in the transmission.

See *Universals Section* for complete data.

### Spicer Model Nos.

Wheelbase	Front	Center	Rear
114" ①	1278-102X	None	1278-102X
114" ②	1311-102X	None	1318-104X
122"	1318-103X	1311-102X	1318-103X
134" & 158"	1358-54X	1351-5107X	1358-5104X
194"	1358-55X	1351-5107X	1358-5105X
101"	1351-517X	None	1358-5104X

①—3-Speed Transmission. ②—4-Speed Transmis'n.

**Coupling Shaft Center Bearing:** Consists of cushion mounted ball bearing bolted to underside of frame intermediate cross-member. Bearing is mounted on end of coupling shaft in a sleeve with felt retainer sleeve on each end and bearing baffle on front end. Bearing is retained by center universal companion flange nut.

## REAR AXLE

### 3/4 FLOATING TYPE

**Own Make.** 3/4 Floating, Spiral Bevel Gear type with straddle-mounted pinion and Hotchkiss Drive.

See *Rear Axle Section* for complete data.

Ratio (6 Cyl.)—3.78-1 Std., 3.54-1, 4.11-1 Optl.

Ratio (V8)—3.54-1 Std., 3.78-1, 4.11-1 Optl.

Backlash—.012" maximum.

**Removal:** Raise rear end of frame, disconnect propeller shaft by removing two "U" bolts and nuts in rear universal joint, lower propeller shaft. Disconnect hand brake cables and brake lines at rear axle (bleed brakes when line re-connected). Disconnect rear shock absorber links, disconnect rear springs, withdraw axle assembly from underneath.

**Axle Shaft Removal**—Axle assembly must be dismantled and axle shaft removed at inner end through differential housing. See *Ford Rear Axle article* (in *Rear Axle Section*) for complete data.

## REAR AXLE

### FULL-FLOATING TRUCK TYPE

**Own Make.** Full-floating, Spiral Bevel Gear type with straddle-mounted pinion and Hotchkiss Drive. See *Rear Axle Section* for complete data.

Ratio (One Ton)—4.86-1 Std., 4.11-1 Optl.

Ratio (Other Trucks)—6.67-1 Std., 5.14-1, 5.83-1 Optl.

Backlash—.004-.016".

**Removal:** Raise rear end of frame, remove axle shafts (see below), wheel and drum assemblies. Disconnect hydraulic brake line at each wheel and hose at bracket (bleed brake lines when re-connected). Remove backing plate assemblies by taking out six bolts in axle housing flange, disconnect rear universal joint by taking off nuts on two "U" bolts and lower propeller shaft. Disconnect rear shock absorber links (School Bus). Remove nuts on rear spring "U" bolts, drive bolts up free of axle housing, lower axle assembly and remove from underneath.

**Axle Shaft Removal**—Remove hub cap, remove nuts on 8 hub studs which hold axle shaft flange in place, turn the two special screws (in tapped holes in flange) up evenly to break flange loose from wheel hub, back these screws out, strike axle shaft flange at center to loosen centering cones on studs, remove cones, pull axle shaft out (wheel not disturbed).

**Wheel Bearing Adjustment**—Remove axle shaft (above), use special bearing adjusting wrench and remove bearing locknut (outer nut), and lockwasher. Adjust bearings by turning bearing adjusting nut (inner nut) up until tight and then backing nut off 1/8 turn. Install bearing lockwasher making certain that it fits over dowel pin on adjusting nut, install bearing locknut and turn this nut up tight. **NOTE**—When installing axle shaft, make certain that gasket in place under shaft flange, cones in place on studs and that two loosening screws backed off sufficiently so that stud nuts can be tightened securely. Turn the two loosening screws in just enough to prevent loosening in service.

## REAR AXLE

### TWO-SPEED TRUCK TYPE

**Own Make.** Two-speed, Full-floating, Spiral Bevel Gear (final drive), spur gear planetary unit (reduction gearing), with straddle-mounted pinion and Hotchkiss Drive.

See *Rear Axle Section* for complete data.

Ratio—5.83-1 (Direct Drive), 8.11-1 (2nd speed).

Backlash—.006-.020".

**Removal:** Same as for standard axle (above) after control linkage has been disconnected.

## SHOCK ABSORBERS

**Houde (Houdaille).** Double acting, hydraulic, adjustable type. Used at Front and Rear end (114" Light Duty Truck and 194" School Bus), Front end only (122" One Ton Truck).

See *Shock Absorber Section* for complete data.

Houde Model	Right—Ford No.—Left
114", 122" Front BBCN-3	51A-18045.....51A-18046
114" Rear	BBCZ-3 .....51C-18080.....51C-18081
194" Front	BBCHMS .....
194" Rear	BBCLT .....

**Adjustment:** Standard setting marked by line on face of lever hub (pointer should be aligned with this mark). Adjustment can be varied by turning pointer clockwise (for more control) or counter-clockwise (for less control) not more than 1 or 2 serrations at a time. **NOTE**—Stops are provided to limit adjustment in either direction.

**Refilling:** Check at 5000 mile intervals and fill to level of filler plug hole. Use Ford No. M-4633-B fluid only (Houde L-1404) required for these new shock absorbers which may be identified by round top filler plug.

## FRONT SUSPENSION

**Front Axle**—Conventional "I" beam section with Reverse Elliott ends and semi-elliptic springs.

**Kingpin Inclination**—8° (Light Duty & 1 Ton), 8 1/2° (Other Trucks) crosswise.

**Caster**—3° (exc. C-O-E), 4°20' (C-O-E) with load. Both wheels should be equal within 1/2°.

**NOTE**—Caster angle controlled by wedge shims inserted between axle pads and springs. To increase caster, insert taper wedge shims equally at both

sides (make certain spring tie bolt passes through hole in wedge so wedge held securely in place).

**Camber**—3/4° (both wheels equal within 1/4°, right wheel must not exceed left wheel). Axle may be bent cold to correct Camber providing that proper tools (wedges and blocks to prevent crushing axle flange) are used.

**Toe In**—1/16". Set at 1-10 ratio to Camber. Toe-in increases with load and should be set with truck empty. Adjust by loosening clamp bolts and turning tie rod.

## STEERING GEAR

**Light Duty & 1 Ton Truck**—Ford No. 21C-3503A (Gemmer Model 305 design). Worm-and-Roller type with push-pull adjustments.

See *Steering Gear Section* for complete data.

**Other Trucks**—Gemmer 335 (Ford No. 01T-3503 except C-O-E, No. 01W-3503 for C-O-E). Worm-and-Roller type with "push-pull" adjustments.

See *Steering Gear Section* for complete data.

## BRAKES

**Service**—Lockheed Hydraulic, double anchor type. Hand lever applies rear wheel service brakes (Light Duty & 1 Ton Truck), independent shaft brake at rear of transmission case (Other Trucks).

See *Brake Section* for complete data.

**Drums**—Composite (Cast iron and steel).

	Front — Drum Diameter —	Rear
Light Duty (114")	12"	12"
1 Ton (122")	12"	14"
Other Trucks	14"	15"

**Lining**—Molded type (all shoes).

	Width	Thickness	Length per Shoe ①
Light Duty (114")	1.75"	20"	13.5"—10.28"
1 Ton (Front)	1.75"	20"	13.5"—10.28"
1 Ton (Rear)	2.00"	27"	15.53"—10.78"
Others (Front)	2.00"	27"	15.53"—10.78"
Others (Rear)	3.50"	335"	16.67"—11.57"

①—Forward Shoe—Rear (reverse) Shoe.

**Clearance**—Least possible amount without drag.

**Hand Brake (Light Duty & 1 Ton Truck):** Hand lever applies rear wheel service brakes. See *Service Brakes* (above).

**Hand Brake (Other Trucks):** Independent external contracting band on drum at rear of transmission.

**Adjustment**—Set hand brake in fully released position and make certain that flat portion of cam is resting on rear of brake band upper end (if cam not flat, remove clevis pin in upper end of cam, adjust clevis rod until cam is flat when rod re-connected). Remove locking wire from brake band anchor adjusting screw (left side), turn screw clockwise until clearance between band and drum is .010" at the anchor screw, install lock wire. Loosen locknut on adjusting screw for upper portion of brake band (round screw on brake mounting bracket), turn screw until clearance between upper portion of brake band and drum is .010", tighten the locknut. Tighten adjusting nut at lower end of main adjusting bolt (on which band positioning springs are located) until clearance between lower portion of band and drum is .010". This completes the brake adjustment.

**Drum Diameter**—7.81".

**Lining**—Woven type. Width 2.5". Thickness .25". Length 24.6".

► **ENGINE PRODUCTION CHANGE:** New "H" Series Engine starting September 1947. New ignition system, valve system, oil pump, and cooling system.

► **"H" SERIES ENGINE INFORMATION**—For Tune-Up, Ignition, Ignition Timing, and Engine data, see 1949 FORD SIX car pages.

**OIL PAN REMOVAL:** See *Ford Shop Notes for Engine Removal instructions (recommended for oil pan removal).*

## MODEL IDENTIFICATION

**SERIAL & ENGINE NUMBER:** Stamped on top of clutch housing (visible through opening in floor) and on left frame side member near front engine support.

## TUNE-UP

**COMPRESSION: Pressure**—105-125 lbs. at cranking speed of 100 RPM. (Std. 6.7-1 Cast Iron Head).

**VACUUM READING:** Approx. 18-20" at idling speed.  
**FIRING ORDER:** 1-5-3-6-2-4.

**SPARK PLUGS:** Champion H-10 (Pass. Cars), H-9 Comm'l (Trucks). 14 mm. Metric type.  
Gaps—.025"

**IGNITION:** See Coil, Condenser, and Distributor.

**Breaker Gap—.014-.016". Cam Angle 40° closed.**

**Breaker Arm Spring Tension—20-24 ozs.**

**Automatic Advance—See Distributor.**

**IGNITION TIMING:** See Ignition Timing.

**Std. Setting—1° BTDC.**

**Timing Marks**—None. See Ignition Timing for directions on setting of distributor for correct timing when installed on engine.

**Vacuum Brake Setting**—Set to just eliminate ping-  
ing when engine operated under load (back off ad-  
justing screw until engine pings, then turn screw in  
just enough to eliminate ping).

**CARBURETION:** See Carburetor & Carb. Equipment.

**Idle Setting**—Adjust idle screw for smooth idling and highest steady reading of vacuum gauge (when used). Idle speed 500 Engine RPM. (can be judged by marking fan belt and setting engine for 25 revolutions of the belt in 10 seconds).

**Float Level**—1.322-1.353" bottom of float to underside of bowl cover with needle valve seated (Gauge 9550-A). Fuel level 11/16" plus or minus 1/32" below top edge of bowl.

**Accelerating Pump**—Center (#2) hole Normal. Inner (#1) hole—Summer, Outer (#3) hole—Winter for temperature extremes.

**Fuel Pump Pressure:** 3½ lbs. (2-3¼ lbs.)

**MANIFOLD HEAT CONTROL:** Automatic thermostatic type. Valve should be closed (counterweight arm against stop pin) with engine cold and should operate freely.

**VALVES:** See Valve Timing.

**Tappet Clearance—.013-.015" Intake & Exhaust,  
Cold. No adjustment provided.**

**STARTING:** See Battery, Starter, Generator, and Regulator.

## IGNITION

**IGNITION SWITCH:** Oakes Steering Column & Ignition Lock Assembly No. 302848, Ford No. 51A-3676-A (Deluxe Models), Oakes No. 302850, Ford No. 51A-

**3676-B (Super Deluxe Models). Ignition Switch Assembly** Oakes No. 302494, Ford No. 11A-3680 (All). **Ignition Lock—Hurd or Briggs & Stratton** No. 80935, Ford No. 91A-3686A (with key). **Key Series—FK000 to FK999. Groove—No. 17.**

**COIL:** Ford No. 1GA-12024. Mounted on engine.

**Resistor Unit**—Connected in coil primary circuit (part of Lighting Circuit Breaker Assembly).

**Ignition Current**—4½-6 amperes with engine stopped (primary resistance 1-1⅓ ohms).

**CONDENSER:** Ford Part No. 1GA-12300-B.

Capacity—.29-.32 microfarad.

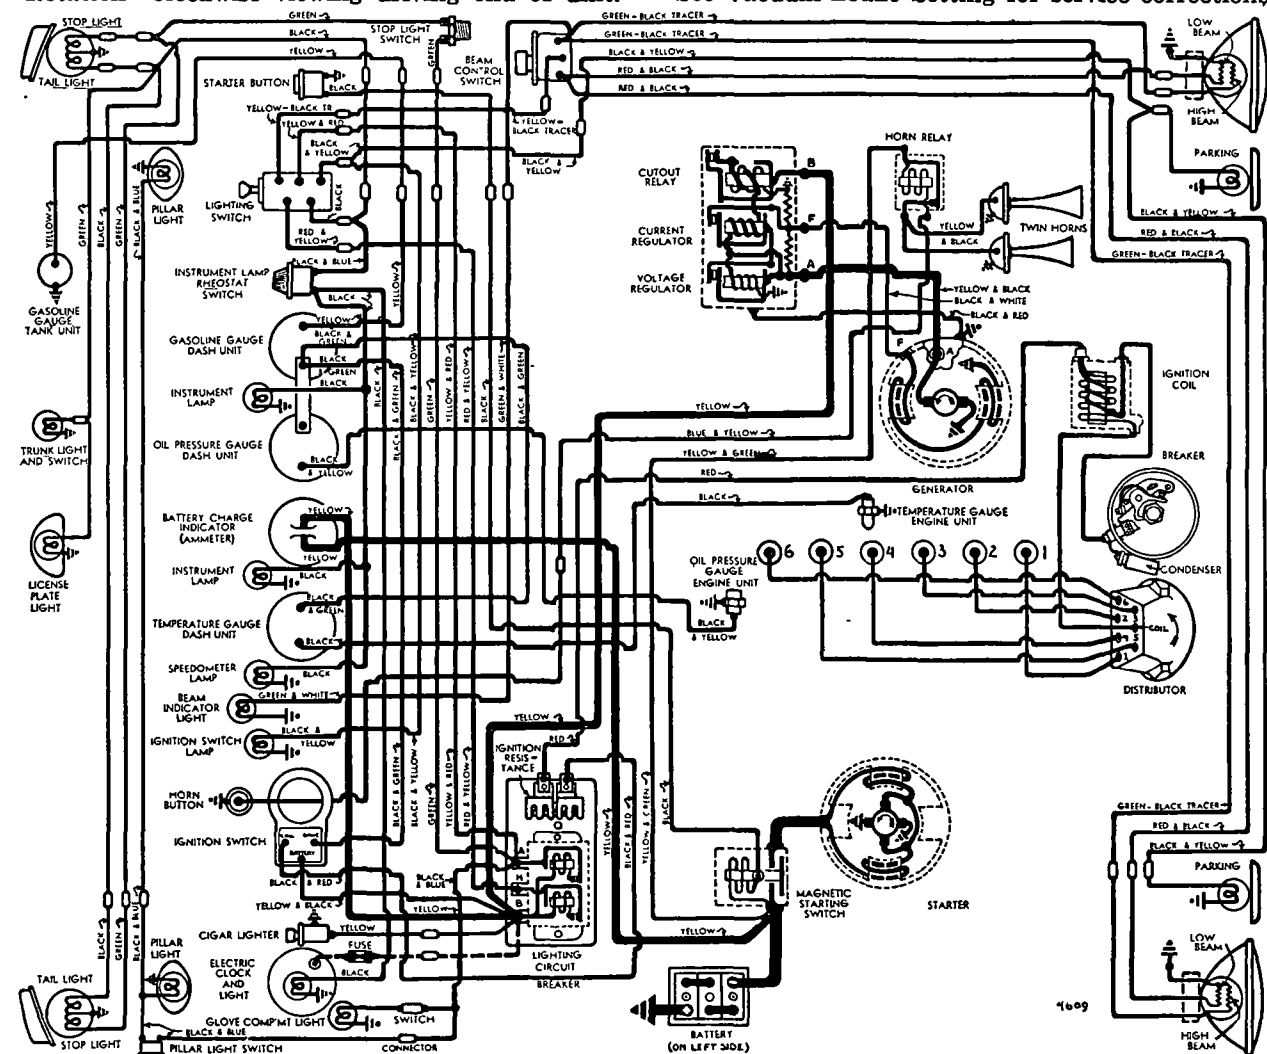

**DISTRIBUTOR:** Ford No. 5GA-12127 (less Terminal Housing & Rotor). New "Sealed-dry" type. Single breaker, 6 lobe cam, full automatic advance type with Vacuum Brake adjustment.

**Breaker Gap—.014-.016"**

**Cam Angle or Dwell**—40° closed, 20° open (distr.).

**Breaker Arm Spring Tension—20-24 ozs.**

**Rotation**—Clockwise viewing driving end of unit.

Distributor	Automatic Advance	Engine
Degrees	R.P.M.	Degrees R.P.M.
Start.....	200	0..... 400
9 .....	600	18.....1200

**Vacuum Brake:** Consists of a spring-loaded vacuum controlled brake piston which bears on edge of retard disc of breaker advance mechanism and acts as a "drag" to retard normal advance when engine is accelerated or operated under load. Piston is normally held out of engagement by manifold vacuum.

**Distributor Removal:** Disconnect coil lead, unsnap two clips holding distributor cap in place, take out mounting capscrews. NOTE—Vacuum connection (for Vacuum Brake operation) is through hole in face of mounting flange.

## IGNITION TIMING

### Std. Setting

### Flywheel Degrees

**All Engines** ..... 1° BTDC

See Vacuum Brake Setting for service corrections.

**Ignition Timing (Basic Setting)**—Distributor can be timed for correct ignition timing when off engine as follows: Place small straightedge or scale against tang on drive end of distributor shaft (scale must be on wide side of shaft), rotate shaft in direction of rotation (clockwise) until leading edge of scale is exactly  $\frac{1}{8}$ " before nearest edge of distributor mounting hole on vacuum piston side of mounting flange. If contacts do not begin to open at this point, loosen adjusting screw on side of distributor, move screw down (to advance spark), or up (to retard spark) in the slot until contacts begin to open, tighten adjusting screw. This will provide correct 1° BTDC ignition timing when distributor installed on engine.

**Ignition Timing (On Engine)**—No flywheel marks or other means provided to check timing on engine. If basic setting of distributor correct (above), all necessary adjustments for operating conditions and octane rating of fuel being used can be made through the Vacuum Brake adjustment.

**Vacuum Brake Adjustment**—Road test car. Back off vacuum brake adjusting screw until engine pings when operating under load, then turn adjusting screw in just enough to eliminate ping, tighten locknut.

## CARBURETOR

**Holley (Chandler-Groves) Ford No. 5GA-9510-A.** Single barrel, downdraft type with manual choke control.

*See Carburetor Section for complete data.*

**Idle Adjustment**—With engine warm and choke valve wide open, set throttle stop screw for idle speed of 500 engine RPM. Turn idle adjusting screw in until engine begins to miss, then turn screw out until engine begins to roll, finally turn screw in just enough so that engine idles smoothly. Recheck idle speed. **NOTE**—Idle speed can be noted by marking spot on fan belt and setting speed for 25 revolutions of the belt in 10 seconds.

**Accelerating Pump Setting**—Three holes in throttle lever for pump connection. Set as follows:

- #1 (Inner)—Extremely Hot Weather.
- #2 (Center)—Normal weather and fuel.
- #3 (Outer)—Extremely Cold Weather.

**Float Level**—Use Ford No. 9550-A Gauge to check float. Invert air horn and float assembly, place gauge on face of bowl cover. Bottom of float should be 1.322-1.353" from face of cover (1.353" portion of gauge "GO", 1.322" portion "NO GO"). Adjust by bending lip on float lever. Fuel level in bowl 11/16" plus or minus 1/32" below top edge.

**Metering Jets**—See Chandler-Groves (Ford) Jet Specification Table in Carburetor Section.

**Fast Idle**: Consists of a "kicker" lever which opens throttle valve to fast idle position when choke valve closed for cold starting. Should not require adjustment.

## CARB. EQUIPMENT

**Air Cleaner**: Ford No. 1GA-9600-C. Oil-bath type. Servicing—Clean and refill (to level mark on case) with same grade engine oil used in crankcase at 3500 mile intervals (when draining crankcase), or more often if required.

**NOTE**—Clean and re-oil filter element in oil filler cap every 1000 miles.

**Gasoline Gauge**: King-Seeley Electric. Ford Nos.

**Dash Unit**—No. 51A-9280-A (1946 Deluxe & Sedan Del.), 51A-9280-B ('46 Sup. Del.), 6A-9280 (1947).

**Tank Unit**—No. 99A-9275-B (Deluxe & Super Deluxe Models), 21A-9275-A (Sedan Delivery).

*See Carburetion Equipment Section for data.*

**Fuel Pump**: AC. Type R, Ford No. 1GA-9350. Diaphragm type. Pressure—3½ lbs. max. (2-3¼ lbs.).

*See Carburetion Equipment Section for data.*

## BATTERY

**Ford Type No. 01A-10655-A.** 6 volt, 17 Plate, 120 Ampere Hour Capacity (20 hour rate).

**Starting Capacity**—150 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 4.0 minutes.

**Grounded Terminal**—Positive (+) terminal grounded to dash. **Engine Ground**—Separate ground strap from rear of cylinder head to dash.

**Location**—On left side in engine compartment.

**Dimensions**—Length 10.56". Width 7.28". Height 8.25".

## STARTER

**Ford Model No. 18-11002.** Armature No. 18-11005.

**Drive**—Inboard Bendix No. A1472. Ford No. B-11350.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—2 lbs. each.

**Cranking Engine**—100 RPM., 190-215 amperes.

### Performance Data

Torque	R.P.M.	Volts	Amperes
4 ft. lbs.	1070	4.6	200
8 "	660	4.3	340
12 "	300	3.65	465
14 "	Lock	3.5	500

**Starting Switch**: Ford No. 21A-11450 Magnetic Switch mounted on dash and controlled by pushbutton switch on instrument panel, Ford No. 19A-11500 (Pass. Cars).

**Removal**: Starter mounted on right front face of flywheel housing. To remove, disconnect cable, take out capscrews in right hand engine side pan and move pan to one side, loosen two through-bolts on commutator end plate and disconnect brace on commutator end of starter.

## GENERATOR

**Ford Model No. 2GA-10000A.** Armature No. 2GA-10005. Two brush (shunt) type with voltage and current regulation. Ventilated by fan on drive pulley.

**Charging Rate Adjustment**—None (see Regulator). **Maximum Charging Rate**—Controlled by regulator and dependent on battery condition and load. To check generator output, disconnect generator field lead at generator, connect both generator terminals together (use short insulated wire). Use 'BRS' set or rheostat connected across battery terminals and apply load until voltage is exactly 6 volts. Connect ammeter in charging line, check output at 2 speeds given in performance table below. Restore original connections after completing test. Do not operate generator in service with both terminals connected together. This eliminates all regulator action and will damage generator.

### Performance Data

Amperes	Engine RPM
Start.....	565
32 .....	1160
30 .....	2500

**Rotation**—Counter-clockwise at commutator end.

**Field Current**—2.1 amperes at 6.0 volts (field resistance 2.88 ohms at 70°F).

**Brush Spring Tension**—Approximately 28 ozs.

**Removal**: Generator mounted on adjustable bracket at left front of engine. To remove, take out bolt in mounting bracket, slip off drive belt and water pump belt, lift generator out.

**Belt Adjustment**: ½" deflection midway between generator and crankshaft pulley (generator belt), generator and pump pulley (pump belt). Adjust both belts by loosening two capscrews in mounting bracket beneath generator, move generator up and out (bolt holes slotted at this angle).

## REGULATOR

**Ford Model No. 01A-10505-C.** Three-unit type Voltage & Current Regulator. In case with Cutout Relay on dash.

*See Electrical Equipment Section for complete data.*

**NOTE**—Regulator case grounded through 'pigtail' to dash or separate ground wire to generator. This ground connection must be in place when regulator being operated or tested (disturbed by cover removal).

### Cutout Relay

**Cuts In**—5.8-6.3 volts at operating temperature.

**Cuts Out**—8 amperes discharge current (maximum).

### Voltage Regulator

**Setting**—6.9-7.2 volts at 70-80° F. See Ford Regulator article in Elec. Equip. Section for other temps.

**Checking & Adjusting**—See *Electrical Equipment Index for article on 'Ford Regulator—3 Unit Type' for complete instructions.*

### Current Regulator

**Setting**—30-33 amperes Hot (after engine run for 5 minutes).

**Checking & Adjusting**—See Voltage Regulator.

## LIGHTING

**Headlamps**: Ford "Sealed Beam" type.

*See Electrical Equipment Section for complete data.*

**Adjustment**—Aim upper beam straight ahead (hot spot centers 3" below lamp center height at 25 ft.).

**Beam Indicator**—Red jewel on lower edge of speedometer dial. Lighted when upper beams in use.

### Switches

**Lighting**—Ford No. 11A-11652 (Switch & Wiring—All Models), 51A-11661A (Knob & Insert—Deluxe Models), 51A-11661B (Knob & Insert—Super Deluxe with Blue-Gray Trim), 51A-11661C (Knob & Insert—Super Deluxe with Brown Trim).

**Beam Selector**—Ford No. 11A-13532 (Switch only), 5GA-11653 (Switch & Wiring).

**Instrument**—Ford No. 19A-13740.

**Stop Light**—Ford No. 11A-13480.

C NTINUED ON NEXT PAGE

## C NTINUED FR M PRECEDING PA E

## Bulb Specifications

SEE 1946-47-48 FORD V8 PASS. CAR PAGES  
FOR DATA

## MISC. ELECTRICAL

**LIGHTING CIRCUIT BREAKER:** Ford No. 11A-12250A Combined with the Ignition Resistor on block on dash under cowl. Consists of two separate circuit breaker units (one unit protects headlamp circuits, second unit protects other lighting circuits). Breakers are thermostatic and wound-coil type. Contacts open with current of 50 ampere and vibrate rapidly to control current.

**HORNS:** Ford No. 91A-13832 (High Note), 91A-13833 (Low Note). Air electric type dual horns operated by horn relay.

Horn Current—24-28 amperes (total).

**Horn Relay:** Ford No. 11A-13842D (Horns on Left Side), 5GA-13842 (Horns on Right Side).

Contact Closing Voltage—3.5-4.5 volts.

Current Draw—Approximately ¾ ampere.

## ENGINE

► **ENGINE PRODUCTION CHANGE:** New "H" Series Engine starting September 1947. New ignition system, valve system, oil pump, and cooling system.

► **"H" SERIES ENGINE INFORMATION—For Tune-Up, Ignition, Ignition Timing, and Engine data, see 1949 FORD SIX car pages.**

**ENGINE SPECIFICATIONS:** 6GA 90 HP. Six cylinder, "L" head type.

Bore—3.30" Stroke—4.40"

Displacement—226 cu. ins. Rated H.P. 26.13

Developed Horsepower—90 at 3300 RPM.

Compression Ratio—6.7-1. Cast Iron Head.

Compression & Vacuum Reading—See Tune-up data.

**ENGINE REMOVAL (For Oil Pan Removal & General Engine Service):** See Ford Shop Notes.

**OIL PAN REMOVAL:** See Ford Shop Notes.

**TIGHTENING TORQUES:** See Ford Shop Notes.

**CYLINDER HEAD:** Tightening Torque—See Ford Shop Notes.

**CYLINDER SLEEVES:** Hardened, dry type cylinder sleeves used on some engines.

Sleeve Installation—See Ford Shop Notes.

**PISTONS:** New aluminum alloy, four-ring, Cam-ground, Dome Head type. Pistons have additional oil ring below piston pin.

Weight—414 grams (stripped), 576 grams (complete).

Removal—Pistons and rods removed from above. Clearance—See Fitting New Pistons.

**Fitting New Pistons:** Use .50" wide feeler stock of correct thickness (as listed below) inserted between piston and cylinder wall at right angles to pin to check clearance. Pull required to withdraw feeler should be 5-8 lbs. (all types).

Feeler Thickness—.002" New Piston in New Plain Bore, .004" New Piston in Worn Plain Bore, .005" Worn Piston in Worn Plain Bore.

**Replacement Pistons:** See Ford Shop Notes.

**PISTON RINGS:** Two compression, one oil ring above pin, additional oil ring on piston skirt below pin. Upper oil ring groove slotted, lower oil ring groove drilled for oil drainage.

Ring	Width	End Gap	Side Clearance
Compr. (#1) ..	.092-.0925"	.012-.017"	.0015-.003"
Compr. (#2) ..	.092-.0925"	.012-.017"	.001-.0025"
Oil (#3, 4) ..	.186-.1865"	.012-.017"	.001-.0025"

**Replacement Rings:** See Ford Shop Notes.

**PISTON PIN:** Diameter .8501-.8504". Length 2.91"

Pin floats in piston and rod with locking ring at each end.

**Pin Fit in Piston**—.000-.0005" clearance or light hand push fit with piston at 70°F.

**Pin Fit in Rod Bushing**—.0002-.0005" clearance (pin should fall through bushing slowly of own weight).

See Ford Shop Notes for Pin Fitting directions.

**Replacement Pins:** See Ford Shop Notes.

**CONNECTING ROD:** Length 7.800" Weight 732 grams.

Crankpin Journal Diameter—2.235".

**Lower Bearing**—Removable, steel-backed, special alloy lined type. No shims.

Clearance—.0013-.0035". Sideplay—.003-.007".

**NOTE**—Replace bearing inserts worn .005" or more (.005" or more thinner than original insert).

**Bearing Adjustment:** None (no shims). Replace bearings. Do not file rods or bearing caps. **NOTE**—Make certain that small tangs on bearing halves engage grooves in rod and cap.

**Replacement Bearings:** See Ford Shop Notes.

**CRANKSHAFT:** Four Bearings, Cast alloy steel with integral counterweights and Vibration Dampener on front end.

**Journal Diameters**—2.499" (all main bearings).

**Bearing Type**—Removable precision type, steel-backed, special alloy lined type. No shims.

Clearance—.001-.003".

**Bearing Adjustment:** None (no shims). Replace bearings. Do not file bearing caps.

**Replacement Bearings:** See Ford Shop Notes.

**End Thrust:** Taken by rear main bearings. Adjust by replacing bearing (use bearing with thicker flange to reduce endplay).

Endplay—.002-.006"

**CAMSHAFT:** Four bearing with helical gear drive.

**Bearing Diameters**—1.797" all bearings. Replace the camshaft if worn to less than 1.7955" diameter. Replace bearings if inside diameter more than 1.802".

**Bearing Type**—Steel-backed, babbitt-lined bushings.

Clearance—.001-.002".

**Timing Gears:** Crankshaft Gear—cast alloy steel, Camshaft Gear—aluminum alloy, bolted-on type.

**Timing Gear Replacement**—See Ford Shop Notes.

**Camshaft Setting:** Mesh marked tooth of crankshaft gear in marked space between teeth of camshaft gear.

**VALVES:** Head Diameter Stem Diameter

Intake .....1.620".....3095-.3105"

Exhaust .....1.484".....3095-.3105"

Seat Angle Lift Stem Clearance

Intake .....45".....292".....0015-.0035"

Exhaust .....45".....292".....0015-.0045"

**NOTE**—Service limit for valve stem diameter .3065".

**Valve Assembly Removal & Servicing**—See Ford Shop Notes.

**NOTE**—Inserted valve seats of molybdenum-chrome steel are used for exhaust valves.

**Valve Guides:** Split type retained by 'C' washer and valve spring. **NOTE**—Replace both halves of all guides measuring less than .6665" (thickness of guide half and valve stem at top of guide with valve of .311" stem diameter in place in guide).

For Valve Guide servicing data, see Ford Shop Notes.

Valve Springs:	Pressure	Length
Valve Closed .....	37-40 lbs.....	2.13"
Valve Open .....	76-80 lbs.....	1.85"

**NOTE**—Replace spring if the pressure is less than 30 lbs. when compressed to 2.125".

**Valve Lifters:** Barrel type in reamed holes in block. Diameter—.9995". Replace if worn to less than .998" in diameter or length less than 1.710" after any necessary resurfacing of ends (cast type can be resurfaced on both ends, pressed steel type on bottom end only).

**Clearance**—.0005-.0015". Lifter should slip into hole in block of own weight.

Clearance—.0005-.0015". Lifter should slip into hole in block of own weight.

Clearance—.0005-.0015". Lifter should slip into hole in block of own weight.

## VALVE TIMING

**Tappet Clearance:** .013-.015" All Valves Cold. No adjustment.

**Valve Timing:** See Camshaft Setting above.

**Intake Valves**—Open 3° BTDC. Close 41° ALDC.

**Exhaust Valves**—Open 48° BLDC. Close 6° ATDC.

**Valve Timing Check**—No flywheel marks or other means provided to check timing. If top dead center position located on flywheel, intake valve for this cylinder should open approx. 1 tooth on flywheel before this top dead center point.

## LUBRICATION

**Engine Oiling System:** Pressure to main, connecting rod, and camshaft bearings, and to valve lifters and timing gears. Oil pump mounted on #1 main bearing cap in crankcase (oil intake pipe extends to oil screen in sump at rear end of oil pan).

**Oil Pan Removal:** See Ford Shop Notes.

**Crankcase Capacity**—5 quarts.

**Normal Oil Pressure**—35 lbs. at 2000 RPM of engine.

**Oil Pressure Regulator**—Located under plug on right side of crankcase at front end. Not adjustable.

**NOTE**—Replace oil relief valve spring if not within limits of 44-46 ounces with spring compressed to 1.40".

**Oil Pump:** Gear type. Mounted on front main bearing and driven from crankshaft timing gear (pump housing integral with main bearing cap).

**Oil Pump Servicing**—See Ford Shop Notes.

**Oil Screen & Drain Plug:** Screen mounted on inner end of drain plug and removed with plug when crankcase drained. Clean oil screen each time removed.

**Oil Filter:** Replace filter cartridge at 5000 mile intervals (Ford No. 01A-18662-A Unit).

**Oil Pressure Gauge:** King-Seeley Electric, Ford Nos.

Dash Unit—No. 51A-9273-A (1946 Deluxe), No. 51A-9273-B (1946 Super Deluxe), No. 6A-9273 (All 1947).

**Engine Unit**—No. 41A-9278 (80 lb.) All Models.

See Miscellaneous Section for complete data.

## COOLING

**Cooling System:** Positive circulation with water distributing tube in block to direct cooling water on exhaust valve seats and ports. Re-circulation of water in engine with thermostat closed provided by by-pass channel in front end of head and block leading to pump inlet.

**Capacity**—14.5 quarts (Pass. Cars).

**Pressure Valve**—In radiator filler cap. Opens at 3½-4½ lbs.

**Water Pump:** Packless, centrifugal type with sealed ball bearing shaft.

See Water Pump Section for complete data.

**Belt Adjustment**—See Generator Belt Adjustment.

**Thermostat:** In cylinder head water outlet below. Bypass (dual valve) type. Starts to open at 150-155°F. Fully open at 175-180°F.

**Temperature Gauge:** King-Seeley Electric. Ford Nos. Dash Unit—No. 51A-10883-A (1946 Deluxe), No. 51A-10883-B (1946 Super Deluxe), No. 6A-10883 (All '47). Engine Unit—No. 99A-10884 (All models).  
*See Miscellaneous Section for complete data.*

### CLUTCH

**Long Model 10CF-TI, Ford No. 19A-7563.** Single plate, semi-centrifugal, dry disc type.

*See Clutch Section for complete data.*

**Facings—Woven asbestos composition.** I.D. 6¾". O.D. 10". Thickness ⅛".

**Pedal Adjustment:** Pedal free travel 1-1¼". To adjust, disconnect clevis at equalizer (throw-out) shaft end of pedal connector rod, turn clevis on rod.

**Removal:** Remove Transmission (see Transmission Removal below), install wooden wedges between each release lever and cover to hold the clutch in released position, take out six capscrews mounting cover assembly on flywheel, lift out cover assembly and driven member.

### TRANSMISSION

**Own Make.** Three-speed, all-helical gear type. Constant-mesh, synchro-mesh (Second & High), sliding gear (Low & Reverse).

*See Transmission Section for complete data.*

**Transmission Control:** Remote control type with gearshift lever on steering column.

*See Transmission Section for complete data.*

**Removal:** Remove Rear Axle (see Rear Axle Removal below), remove capscrews mounting front seat track on floor, move front seat back for necessary room. Take out mounting screws in front floor pan spacer, remove spacer. Disconnect gearshift connecting rods at transmission case, disconnect and remove equalizer (clutch release) shaft. Remove capscrew and washer on end of transmission shaft (in universal joint), remove universal joint. Remove nuts and washers on engine rear support bolts. Support engine by placing jack (use wood block on jack) under rear end and raise engine sufficiently so that rear support clears mounting bolts (NOTE—remove nuts holding lower half of engine rear support assembly and remove the assembly). Take out eight capscrews mounting transmission case on flywheel housing, pull transmission straight back and lift out.

### UNIVERSALS

**Spicer Model 202-6X, Ford No. B-7090.** Steel bushing type. Single joint in torque ball at rear of transmission case.

*See Universals Section for complete data.*

### REAR AXLE

**Own Make.** ¾ Floating, Spiral Bevel Gear type with Torque Tube Drive.

*See Rear Axle Section for complete data.*

**Ratio—3.78-1 Std., 4.11-1 Optl.**

**Backlash—.012" maximum.**

**Removal:** Raise rear end of car. Disconnect track bar. Disconnect rear spring (use spring spreader if available) by placing block under each rear spring eye and lowering car so that weight keeps spring extended and then removing spring shackle bolts and bars. Take out pin in hand brake equalizer and disconnect hand brake cable. Disconnect hydraulic brake line at torque tube and rear shock absorber links at each wheel. Disconnect accelerator pedal, remove pedal pads, floor mat, beam control switch (take out two mounting screws), and floor pan. Disconnect speedometer cable at torque tube. Remove nuts on four universal joint ball housing bolts and two bolts holding ball cap halves together, remove ball cap. Pull rear axle back to disconnect torque tube from transmission and remove from beneath car.

**NOTE—Bleed brake line after rear axle re-installed and line connected.**

### SHOCK ABSORBERS

**Houde (Houdaille).** Double Acting, adjustable, hydraulic types (Front & Rear).

*See Shock Absorber Section for complete data.*

**Houde Model Right — Ford No. — Left**  
Front.....BBCN-3.....51A-18045 ..... 51A-18046  
Rear①.....BBCZ-3.....51A-18080A ..... 51A-18081A  
Rear②.....BBCZ-3.....51A-18080B ..... 51A-18081B  
①—Except Sedan Delivery and Station Wagon.  
②—Sedan Delivery & Station Wagon only.

**Adjustment:** Standard setting marked by line on face of lever hub (pointer should be aligned with this mark). Adjustment can be varied by turning pointer clockwise (for more control) or counter-clockwise (for less control) not more than 1 or 2 serrations at a time. **NOTE—Stops are provided to limit adjustment in either direction.**

**Refilling:** Check every 5000 miles, fill to level of filler plug hole. Use Ford No. M-4633-B fluid only (Houde L-1404) required for these new shock absorbers which may be identified by round top filler plug.

### FRONT SUSPENSION

**Front Axle:** Conventional "T" beam section type with Reverse-Elliott ends and transverse spring. Axle positioned by radius rods.

**Kingpin Inclination—8° crosswise.**

**Caster—3°.** Axle may be bent cold for minor corrections providing correct tools used to prevent crushing of axle flange.

**Camber—¾°.** Adjust as for Caster (above).

**Toe In—1/16".** Adjust in usual manner by changing length of tie rod.

### STEERING GEAR

**Gemmer design (Model 305), Ford Make.** Worm-&-Roller type with push-pull adjustments.

*See Steering Gear Section for complete data.*

### BRAKES

**Service:** Lockheed Hydraulic, self-centering, double anchor type. Hand lever applies rear wheel brakes.

►These brakes do not have anchor pin adjustment.

*See Brake Section for complete data.*

**Drums—Composite cast iron and steel type.** Diameter 12".

**Clearance—Least possible amount without drag.**

**Lining—Width 1.75". Thickness .187". Length per shoe 13.12" (forward shoes), 10.08" (rear shoes).**

**Hand Brakes:** See Service Brakes (above).

### MISC. MECHANICAL

**Power Operated Convertible Top:** Two types as follows:

1—Convertible—Auto-lite electric type.

2—Sportsman Convertible—Hydro-Letric type.

*See Miscellaneous Section for complete data.*

**Power Window Regulators (Sportsman Convertible):** Hydro-Letric type.

*See Miscellaneous Section for complete data.*

**HOOD LOCK:** Hood is Alligator type hinged at cowl. To raise hood (Pass. Cars), pull out release knob under instrument panel, release safety catch under front edge of hood.

**OIL PAN REMOVAL:** See Ford Shop Notes.

## MODEL IDENTIFICATION

**SERIAL & ENGINE NUMBER:** Stamped on top of clutch housing (visible through hole in floor) and on left frame side member near front eng. support.

## TUNE-UP

**COMPRESSION:** Pressure—105-125 lbs. at cranking speed of 100 RPM. (Std. 6.75-1 Cast Iron Head).

**VACUUM READING:** Steady 18-20" idling at 5-7 MPH.

**FIRING ORDER:** 1-5-4-8-6-3-7-2 (Cyl. Nos. 1-2-3-4 Right Bank, 5-6-7-8 Left Bank, front-to-rear).

**SPARK PLUGS:** Champion Type H-10, 14 mm. Metric. Gaps—.025".

**IGNITION:** See Coil, Condenser, and Distributor.

**Breaker Gap**—.014-.016" (both sets).

**Cam Angle**—36° (both sets operating together).

**Breaker Arm Spring Tension**—20-24 ozs.

**Automatic Advance**—Starts at 200 RPM. Maximum 11° at 600 RPM (Distr. degrees & RPM).

**IGNITION TIMING:** See Ignition Timing.

**Std. Setting**—4° BTDC.

**Timing Marks**—None. See Ignition Timing for directions on setting of distributor for correct timing when installed on engine.

**Vacuum Brake Setting**—Set to just eliminate ping-pong when engine operated under load (back off screw until engine pings, then turn screw in until ping is eliminated).

**CARBURETION:** See Carburetor & Carb. Equipment. **Idle Setting**—Both idle screws  $\frac{5}{8}$ — $\frac{3}{4}$  turn open and set for smooth idle and highest steady reading of vacuum gauge (when used). Idle speed 500 RPM or 5-7 MPH.

**Float Level**—1.322-1.353" bottom of float to underside of bowl cover with needle valve seated (Gauge 9550-A). Fuel level  $11/16$ " plus or minus  $1/32$ " below top edge of bowl.

**Accelerating Pump**—Center (#2) hole Normal. Inner (#1) hole—Summer, Outer (#3) hole—Winter for temperature extremes.

**Fuel Pump Pressure:**  $3\frac{1}{2}$  lbs. maximum.

**MANIFOLD HEAT CONTROL:** Automatic thermostatic control type (located in exhaust manifold outlet of left cylinder bank). See that valve operates freely.

**VALVES:** See Valve Timing.

**Tappet Clearance**—.010-.012" Intake, .014-.016" Exhaust. No adjustment provided.

**STARTING:** See Battery, Starter, Generator and Regulator.

## IGNITION

**IGNITION SWITCH:** Oakes Steering Column & Ignition Lock Assembly No. 302848, Ford No. 51A-3676-A (Deluxe Models), Oakes No. 302850, Ford No. 51A-3676-B (Super Deluxe Models). Ignition Switch Assembly Oakes No. 302494, Ford No. 11A-3680 (All Models).

**Lock Cylinder**—Hurd or Briggs & Stratton #80935 Ford No. 91A-3686-A (with Keys).

**Key Series**—FK000 to FK999. Groove—No. 17.

**COIL:** Ford No. 1GA-12024. Mounted separately on left front corner of cylinder block.

**Ignition Current**—4½-6 amperes with engine stopped (primary resistance 1-1½ ohm).

**Resistor Unit**—Connected in coil primary circuit (part of Circuit Breaker Assembly 11A-12250A).

**CONDENSER:** Ford Part No. 1GA-12300-B.

**Capacity**—29-.32 microfarad.

**DISTRIBUTOR:** Ford No. 59A-12127 (less Terminal Housing, Cap & Rotor). New "Single Cap" sealed-dry "V" outlet type. Double breaker, 8 lobe cam, full automatic advance type with Vacuum Brake adjustment. Breaker "loading" and "timing" contacts operate in same manner as on previous V8 models.

**Breaker Gap**—.014-.016" (both sets). Use special two step feeler—.014" step 'go', .016" 'no go'.

**Cam Angle or Dwell**—Approx. 36° closed, 9° open.

Set dwell at 80% (78-80% at 2000 RPM) on Ford Test Set for both sets operating together with correct coil loading lead.

**NOTE**—Cam Angle for each set operating singly approximately 22½° closed, 22½° open (50%).

**Breaker Arm Spring Tension**—20-24 ounces.

**Rotation**—Clockwise viewed from drive end (counter-clockwise viewed from front of car).

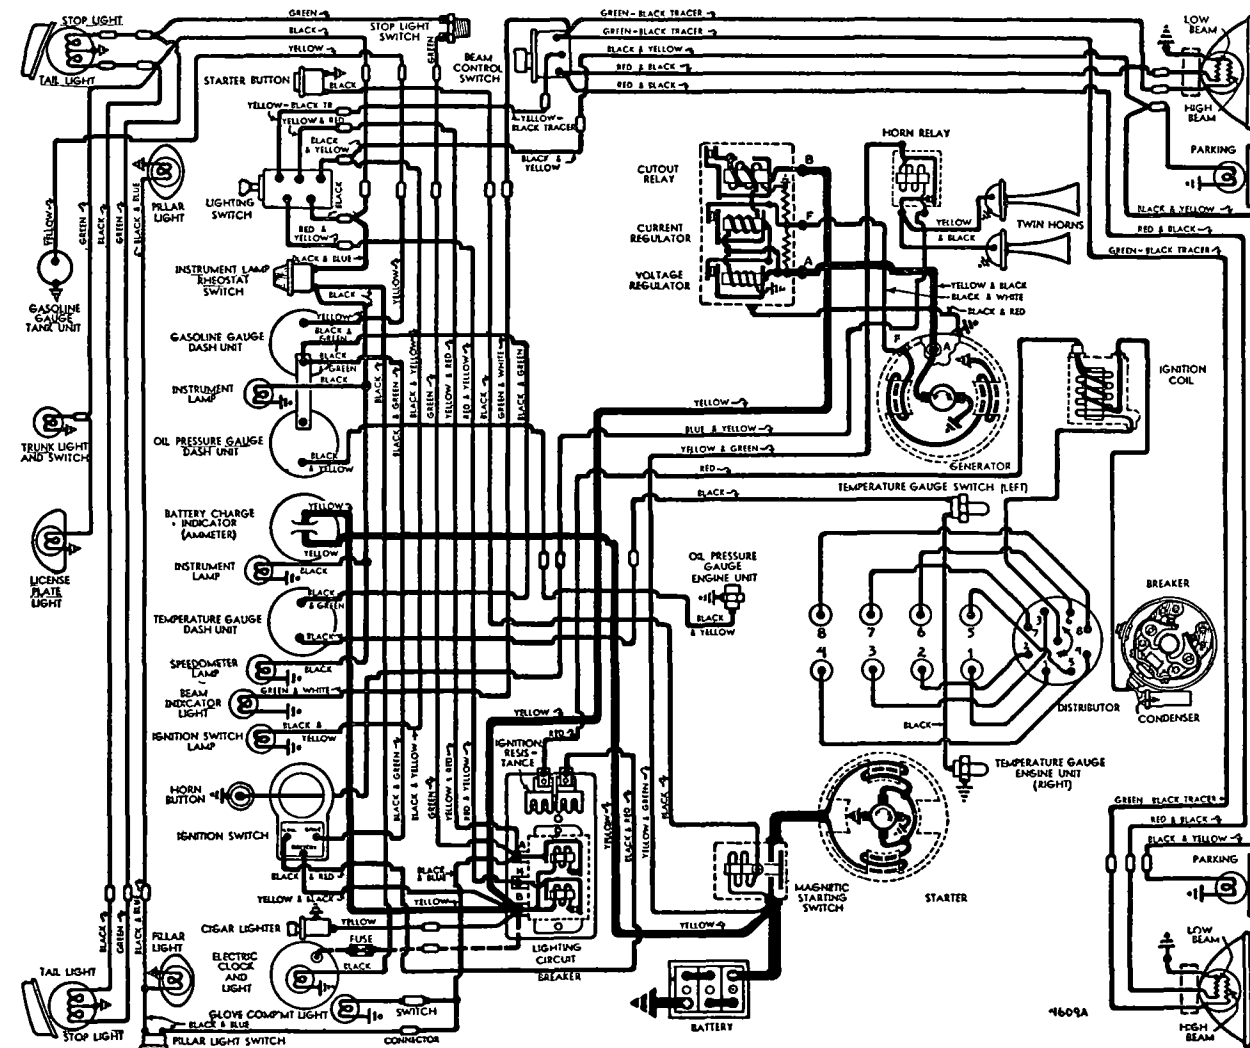

## Automatic Advance

(Vacuum Brake Disconnected)

Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start.....	200	0.....	400
11.....	600	22.....	1200

**NOTE**—Limits are 10½-11½° (distributor degrees).

**Vacuum Brake:** Consists of a spring-loaded vacuum controlled brake piston which bears on edge of retard disc of breaker advance mechanism and acts as a "drag" to retard normal advance when engine is accelerated or operated under load. Piston is normally held out of engagement by manifold vacuum.

**Removal:**—Distributor mounted on front of engine. To remove, disconnect primary lead, remove distributor cap, take out mounting screws in distributor flange, lift unit out.

## IGNITION TIMING

**Std. Setting**—See Vacuum Brake Setting for service correction for operating conditions.

**Flywheel Degrees Piston Position**  
All V8 Engines ..... 4° BTDC ..... 0058° BTDC.

**Ignition Timing (Basic Setting)**—Distributor can be timed for correct ignition timing when off engine as follows: Place a small straight edge or scale against tang on drive end of distributor shaft (scale must be on wide side of shaft), rotate distributor in direction of rotation (clockwise) until trailing edge of scale is exactly  $\frac{3}{8}$ " past the nearest edge of the small mounting hole (left hand hole—nearest vacuum brake) on the mounting flange. If left hand (timing) contacts do not begin to open at this point, loosen adjusting screw on side of distributor housing, move screw down (to advance spark), up (to retard spark), in slot until contacts begin to open, tighten adjusting screw. This setting will provide correct 4° BTDC. Ignition timing when distributor installed on engine.

**NOTE**—Timing is controlled by opening of left hand breaker contacts only (right hand contacts "load" coil and open and close earlier than the left hand contacts).

**Timing (On the Car)**—No flywheel marks provided. With distributor adjusted as described above, this will give correct 4° BTDC. timing when installed on the engine and all necessary adjustments for operating conditions and octane rating of fuel being used can be made by means of the Vacuum Brake adjustment as follows:

**Vacuum Brake Setting**—Should be adjusted to eliminate pinging when engine operated with load. To adjust, loosen locknut, back off adjusting screw until engine pings with load, then turn screw in just enough to eliminate ping, tighten locknut.

## CARBURETOR

Holley (Chandler-Groves) Ford No. 59A-9510-A. Dual (double barrel), downdraft type with manual choke control.

See Carburetor Section for complete data.

**Idle Adjustment**—With engine warm, choke valve wide open, and Fast Idle inoperative, set throttle lever stopscrew for 500 RPM. idling speed, turn each idle adjusting screw (one for each barrel, adjust in succession) in until engine begins to miss, then out until engine begins to roll, finally turn screw in until engine fires smoothly. Final setting should be approximately  $\frac{5}{8}$ – $\frac{3}{4}$  turn of screw from inner seated position. Readjust stopscrew for correct idling speed. **NOTE**—Idling speed can be estimated by marking spot on fan belt and setting speed for 25 revolutions of the belt in 10 seconds.

**Accelerating Pump Setting**—Three holes provided in the throttle lever for pump rod link connection. Adjust for seasonal requirements as follows:

- #1 (Inner) Hole—Summer or Hot weather.
- #2 (Center) Hole—Average fuel and weather.
- #3 (Outer) Hole—Extremely Cold weather.

**Float Level**—Use 9550-A gauge to set the float level (1.353" end 'Go', 1.332" end 'No Go') measuring from underside of bowl cover to bottom of float (with

cover and float assembly inverted). Fuel level in bowl should be 11/16" plus or minus 1/32".

**Metering Jets**—See Chandler-Groves (Ford) Jet Table in Carburetor Section for complete data.

**Fast Idle**—Integral with carburetor. Operated by choke valve lever. No adjustment required.

## CARB. EQUIPMENT

**Air Cleaner:** Ford No. 91A-9600-A. Oil-bath type.

**Servicing**—Clean and refill (to level mark on case) with same grade engine oil used in crankcase at 3500 mile intervals (when crankcase drained) or more often if required. Clean filter element by washing in cleaning fluid.

**NOTE**—Clean and re-oil filter element in oil filler cap (crankcase breather) every 1000 miles.

**Fuel Pump:** AC. Type R. Ford No. 11A-9350. Diaphragm type. Exchange Pump AC No. 541 ('46), 571 ('47).

See Carburetion Equipment Section for data.

**Pressure**— $3\frac{1}{2}$  lbs. max. (2– $3\frac{1}{4}$  lbs.).

**Gasoline Gauge:** King-Seeley Electric. Ford Nos. Dash Unit—No. 51A-9280-A (1946 Deluxe & Sedan Del.), 51A-9280-B ('46 Sup. Del.), 6A-9280 (1947). Tank Unit—No. 99A-9275B (Deluxe & Super Deluxe Models), 21A-9275A (Sedan Delivery).

See Carburetion Equipment Section for data.

## BATTERY

Ford Type No. 01A-10655-A. 6 volt, 17 plate, 120 Ampere Hour Capacity (20 hour rate).

**Starting Capacity**—150 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 4.0 minutes.

**Grounded Terminal**—Positive (+) grounded to dash.

**Engine Ground**—Strap connector between right rear cylinder head and dash.

**Dimensions**—Length 10.56". Width 7.28". Hgt. 8.25".

**Location**—On right side in engine compartment.

## STARTER

Ford Model No. 18-11002. Armature No. 18-11005. Drive—Inboard Bendix Drive No. A1472, Ford No. B-11350.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—2 lbs. each.

**Cranking Engine**—100 RPM., 190-215 amperes.

### Performance Data

Torque	R.P.M.	Volts	Amperes
4 ft. lbs.	1070	4.6	200
8 "	660	4.3	340
12 "	300	3.65	465
14 "	Lock	3.5	500

**Starting Switch:** Ford No. 21A-11450 Magnetic Switch mounted on dash and controlled by pushbutton switch on instrument panel, Ford No. 19A-11500 (Pass. Cars).

**Removal:**—Starter mounted on right front face of flywheel housing. To remove, take off pan at right of engine, free starter-to-oil pan support bracket, take out through-bolts on commutator end plate.

## GENERATOR

Ford Model No. 21A-10000. Armature No. 01A-10005A. Two brush (shunt) type with vibrating voltage and current regulation. Ventilated by fan on drive pulley.

**Charging Rate Adjustment**—None. See Regulator. **Maximum Charging Rate**—Controlled by regulator

and dependent on battery condition and load. To check generator output, disconnect generator field lead at generator, connect both generator terminals together (use short insulated wire). Use 'BRS' set or rheostat connected across battery terminals and apply load until voltage is exactly 6 volts. Connect ammeter in charging line, run engine, check output at 2 speeds given in performance table below. Restore original connections after completing test. Do not operate generator in service with both terminals connected together. This eliminates all regulator action and will damage generator.

### Performance Data

Amperes	Engine RPM.
Start .....	520
30 .....	1060
30 .....	2500

**Rotation**—Counter-clockwise at commutator end. **Field Current**—2.1 amperes at 6.0 volts (field resistance 2.88 ohms at 70°F).

**Brush Spring Tension**—Approximately 28 ozs.

**Removal:**—Generator mounted on bracket between cylinder banks at front of engine, driven in tandem with water pumps by Vee belt. To remove, loosen nut on bracket stud.

**Belt Adjustment:**  $\frac{1}{2}$ " deflection midway between generator and water pump pulleys. **NOTE**—Generator mounting bracket also includes the fan mounting (fan driven by a separate belt). Both belts adjusted in same manner by loosening mounting bolt and raising mounting brackets.

## REGULATOR

Ford Model No. 01A-10505-C. Three Unit Type. Consists of Cutout Relay, Vibrating Voltage Regulator and vibrating Current Regulator (separate units) in single case on engine side of dash.

See Electrical Equipment Section for complete data. **NOTE**—Regulator case is grounded through separate ground wire extending from regulator to generator frame. This ground connection must be in place when regulator being operated or tested.

### Cutout Relay

**Cuts In**—5.8-6.3 volts at operating temperature.

**Cuts Out**—8 ampere discharge current maximum.

### Voltage Regulator

**Setting**—6.9-7.2 volts at 70-80°F.

**Checking & Adjusting**—Refer to Electrical Equipment Index for article on 'Ford Regulator—3-unit Type' for complete instructions.

### Current Regulator

**Setting**—30-33 amperes (after 5 minutes run).

**Checking & Adjusting** See Voltage Regulator above.

## LIGHTING

**Headlamps:** Ford "Sealed Beam" type.

See Electrical Equipment Section for complete data.

**Adjustment**—Aim upper beam straight ahead (hot spot center 3" below lamp center height at 25 ft.).

**Beam Indicator**—On lower edge of speedometer dial. Lighted whenever upper beams in use.

### Switches

**Lighting**—Ford No. 11A-11652 (Switch & Wiring—All Models), 51A-11661A (Knob & Insert—Deluxe Models), 51A-11661B (Knob & Insert—Super Deluxe Models with Blue-Grey Trim), 51A-11661C (Knob & Insert—Super Deluxe Models with Brown Trim).

## CONTINUED FROM PRECEDING PA E

Beam Selector—Ford No. 11A-13532 (Switch only), 21A-11653 (Switch & Wiring).  
Instrument—Ford No. 19A-13740.  
Stop Light—Ford No. 11A-13480.

Bulb Specifications		Mazda No.	
Position	Candlepower	Sealed Beam	
Headlamps			
Parking	3		63
Beam Indicator, Ign. Lock	1		51
Instrument, Clock	1½		55
Stop & Tail	21-3		1154
Dome (Pillar), Luggage Compt.	3		63
Rear License	3		63

## MISC. ELECTRICAL

**LIGHTING CIRCUIT BREAKER:** Ford 11A-12250A Combined with Ignition Resistor on block on dash under cowl. Consists of two separate circuit breaker units (one unit protects headlight circuits, second unit protects other lighting circuits) of the thermostatic and wound-coil type. Contacts open with current of 50 amperes and vibrate rapidly to control current.

**HORNS:** Ford No. 91A-13832 (High Note), 91A-13833 (Low Note). Air electric type dual horns operated by horn relay.

Horn Current—24-28 amperes total.

Horn Relay: Ford No. 11A-13842D.  
Contact Closing Voltage—3.5-4.5 volts.  
Current Draw—Approximately ¾ ampere.

## ENGINE

**ENGINE SPECIFICATIONS:** Own "100". Eight Cylinder, 90° Vee, "L" Head type. Cylinder banks and crankcase cast Enbloc.

Bore—3.187". Stroke—3.75".

Displacement—239 cu. ins. Rated H.P.—32.5.

Developed Horsepower—100 at 3800 RPM.

Compression Ratio—6.75-1 Cast Iron Heads.

Compression & Vacuum Readings—See Tune-up data

►1946-47 ENGINE SERVICE NOTES: Cylinder Head. New type, Part No. 59A-6050-A or -B, is interchangeable right-and-left. May be identified by figures "59A" or "59A-B" on top. Heads have greater valve clearance for new cylinder block (below) and larger water holes for improved cooling (¾" hole at top center and ½" hole at center between #2 and #3 cylinders).

►Cylinder Head Gasket—New type, Part No. 59A-6051, may be identified by 5/16" round hole instead of blunt coneshaped opening at lower edge between #2 and #3 cylinder bores. This gasket must be used with new 1946 type Cylinder Head (above).

►Cylinder Block—New type, Part No. 59A-6010-C with valve ports located .09" farther from center line of block. May be identified by number or by oblong water passages just above valves (round on previous types).

►CAUTION—If the earlier type Cylinder Heads (81A-81T-, 99T-, 29A-) used with this block, heads must be machined out for valve clearance, and water passages in head should be enlarged for improved cooling. Refer to Ford Shop Notes for complete data.

OIL PAN REMOVAL: See Ford Shop Notes.

ENGINE REMOVAL: See Ford Shop Notes.

TIGHTENING TORQUES: See Ford Shop Notes.

**CYLINDER HEAD:** Tightening—See Ford Shop Notes.  
**CYLINDER SLEEVE:** Cast iron, dry type cylinder sleeves may be used (engine may have mark "HS" on block beside inner front corner of left cyl. head). Servicing—See Ford Shop Notes.

**PISTONS:** Steel Alloy, light weight, cam ground type or Aluminum Alloy, T slot type. Recondition engine to take finished replacement pistons (if sleeves used, replace sleeves, use new Std. size pistons). NOTE—All pistons are four ring type with slotted oil control ring on skirt below pin hole.

Removal—Pistons and rods removed from above.

Clearance—See Fitting New Pistons.

Replacement Pistons: See Ford Shop Notes.

Fitting New Pistons: Use .50" wide feeler stock of correct thickness (see table below) inserted between piston and cylinder wall at right angles to pin to check clearance. Pull required to withdraw feeler should be 6-10 lbs. (all types).

Engines with Steel Sleeves	Feeler Thickness	
	Steel Piston	Aluminum Piston
New Piston & Sleeve	.003"	.003"
New Piston—Worn Sleeve	.004"	.004"
Worn Piston & Sleeve	.005"	.005"

Engines without Sleeves	
New Piston & Bore	.0025"
New Piston—Worn Bore	.004"
Worn Piston & Bore	.005"

**PISTON RINGS:** Two compression, two slotted oil rings per piston (lower oil ring below pin). Oil ring grooves have oil drain holes.

Ring	Width	End Gap	Side Clearance
Compr. #1	.0915-.0920"	.012-.017"	.0015-.003"
Compr. #2	.0915-.0920"	.012-.017"	.001-.0025"
Oil Contr.	.1545-.1550"	.012-.017"	.001-.0025"

Replacement Rings: See Ford Shop Notes.

**PISTON PIN:** Diameter .7501-.7504". Length 2.975" (with steel pistons), 2.850" (with aluminum pistons). Floating type with locking ring in piston at each end. Pin hole in connecting rod bronze bushed. Pin Fit in Piston—.0001-.0002" (aluminum pistons), .0003-.0009" (steel pistons) or light hand push fit with piston at 70°F.

Pin Fit in Rod Bushing—.0002-.0005" (pin should pass through bushing slowly of own weight).

See Ford Shop Notes for Pin Fitting directions.

Replacement Pins: See Ford Shop Notes.

**CONNECTING ROD:** Length 7.000". Weight 492 grams. Crankpin Journal Diameter—2.1390" Connecting rod diameter on crankpin 2.360" (2.3597-2.3603").

**Bearing Type:** Steel-backed, special alloy lined with bearing surface on both inner and outer face. Bearing floats in both rods (side-by-side mounting). **Bearing Dimensions:** Length 1.747". Thick .1095". Clearance—.0015-.0035" (see Bearing Adjustment). Sideplay—.003-.007" (bearing endplay), .006-.014" (side clearance for both rods).

**Bearing Adjustment:** None (no shims). Do not file bearing caps. Replace bearings if less than .1085" in thickness, replace or hone rod for oversize bearing if worn more than .0015" over original size (2.3597-2.3603"). CAUTION—Both rods must be same size.

Replacement Bearings: See Ford Shop Notes.

Installing Rods: Marks on rods and bearing caps (R1, L1 etc.) must be together and installed in same

numbered cylinder with marks pointing down toward pan.

**CRANKSHAFT:** Three bearing type with integral counterweights. NOTE—New type crankshaft used with new wide land (four ring) pistons. Journal Diameters—2.4990" (all bearings).

**Bearing Type:** Steel-backed, special alloy-lined.

Clearance—.001-.003".

**Bearing Adjustment:** None (no shims). Do not file bearing caps.

Replacement Bearings: See Ford Shop Notes.

**End Thrust:** Taken by rear main bearing. Adjust by replacing bearing. Endplay—.002-.006".

**CAMSHAFT:** Three bearing type. Helical gear drive. Bearing Diameters—1.797" all bearings. Replace camshaft if worn to less than 1.7955" diameter.

**Bearing Type:** Steel-backed, babbitt-lined bushings.

Clearance—.001-.002".

**End Thrust:** Taken by gear hub and thrust surface on inner face of cover plate. Adjusted by replacing coverplate. Endplay—.005-.015".

**Timing Gears:** Cast alloy iron (crankshaft), Aluminum or malleable iron bolted-on type (camshaft). Backlash—.004" maximum.

Replacement Gears—See Ford Shop Notes for Gear Oversizes and installation instructions.

**Camshaft Setting:** Mesh marked tooth of crankshaft gear in similarly marked space between teeth on camshaft gear.

**VALVES:** Head Diameter Stem Diameter Length  
All Valves .....1.510" .....3.105" .....4.577"

	Seat Angle	Lift	Stem Clearance
Intake	45°	.292"	.0015-.0035"
Exhaust	45°	.292"	.0025-.0045"

NOTE—Service limit for valve stem diameter is .309" Intake, .3065" Exhaust. Valves interchangeable. Valve Seat Inserts—Used on all valves.

For Valve Servicing data, see Ford Shop Notes.

**Valve Guides:** Split type retained by "C" washer and valve spring. NOTE—Replace both halves of all guides measuring less than .6665" (thickness of guide half and valve stem at top of guide with valve of .311" stem diameter in place in guide).

For servicing data, see Ford Shop Notes.

**Valve Lifters:** Barrel type in reamed holes in block. Diameter—.9995". Replace if worn to less than .998" in diameter or length less than 1.710" after any necessary resurfacing of ends (cast type can be resurfaced on both ends, pressed steel type on bottom end only).

Clearance—.0005-.0015". Lifter should slip into hole in block of own weight.

**Valve Springs:** Replace if pressure less than 30 lbs. when compressed to 2.125".

	Spring Pressure	Length.
Valve Closed	37-40 lbs.	2.13"
Valve Open	76-80 lbs.	1.84"

## VALVE TIMING

**Tappet Clearance:** .010-.012" Intake, .014-.016" Exhaust, Cold. No adjustment.

**Valve Timing:** See Camshaft Setting above.

Intake Valves—Open at TDC. Close 44° ALDC.

Exhaust Valves—Open 48° BLDC. Close 6° ATDC.

**Valve Timing Check**—No flywheel marks or other means provided to check timing. No. 1 intake valve should open with No. 1 piston on top dead center entering intake stroke.

## LUBRICATION

**Engine Oiling System:** Pressure to main bearings, connecting rod lower bearings, camshaft bearings, and timing gears. Oil pump mounted in crankcase at rear of engine.

**Oil Pan Removal:** See *Ford Shop Notes*.

**Crankcase Capacity**—5 quarts.

**Normal Oil Pressure**—50 lbs. at 2000 RPM.

**Oil Pressure Regulator**—Located under plug above front camshaft bearing (under manifold) and on oil pump housing (some models). Not adjustable. NOTE—Check relief valve tension spring whenever engine overhauled. Replace the cylinder block relief valve spring if tension not within limits of 43-50 ozs. at 1.380" (engines without oil pump relief valve), or 78-80 ozs. at 1.380" (engines with oil pump relief valve). Replace oil pump relief valve spring if tension not within limits of 78-87 ozs. at 1.380".

**Oil Pump:** Gear type. In crankcase at rear of engine. NOTE—This new type pump, No. 41A-6600-A (for engines without oil pan baffles), has oil pressure regulator (relief valve) in pump body.

**Oil Pump Servicing**—See *Ford Shop Notes*.

**Oil Pressure Gauge:** King-Seeley Electric. Ford Nos. **Dash Unit**—No. 51A-9273-A (1946 Deluxe), No. 51A-9273-B (1946 Super Deluxe), No. 6A-9273 (All 1947). **Engine Unit**—No. 41A-9278 (80 lb.) All Models. See *Miscellaneous Section for complete data*.

## COOLING

**Cooling System:** Positive circulation with two water pumps at front of engine (pump for each bank). **Capacity**—22 quarts.

**Pressure Valve**—In radiator filler cap. Opens at 3½-4½ lbs.

**Water Pump:** Packless, centrifugal type (2 used). Mounted on front of engine (pump housing integral with front engine mounting). See *Water Pump Section for complete data*.

**Removal**—Drain cooling system, place support jack under engine (use wood block on jack to avoid damaging pan), remove bolt from front engine support, raise engine until no weight rests on front support. Loosen generator mounting bolt, remove drive belt. Disconnect and remove hose at pump. Remove four capscrews mounting pump on engine, lift pump out. CAUTION—One mounting screw located within water pump inlet connection (accessible with hose removed).

**Belt Adjustment**—See *Generator Belt Adjustment*.

**Thermostat:** In each cylinder head water outlet (two used). Start to open at 150-155°F. Fully open at 175-180°F.

**Temperature Gauge:** King-Seeley Electric. Ford Nos. **Dash Unit**—No. 51A-10883-A (1946 Deluxe), No. 51A-10883-B (1946 Super Deluxe), No. 6A-10883 (All '47). **Engine Unit**—No. 01A-10990 (Temperature Gauge Switch—in left hand cylinder head), No. 99A-10884 (regular Engine Unit—in right cylinder head). See *Miscellaneous Section for complete data*.

## CLUTCH

**Long Model 10CF-TI, Ford No. 19A-7563.** Single plate, semi-centrifugal, dry disc type.

See *Clutch Section for complete data*.

**Facings**—Woven asbestos composition. I.D. 6¾". O.D. 10". Thickness ⅛".

**Pedal Adjustment:** Pedal free travel 1-1¼". To adjust, disconnect clevis at equalizer (throw-out) shaft end of pedal connector rod, turn clevis on rod.

**Removal:** Remove Transmission (see Transmission Removal below), install wooden wedges between each release lever and cover to hold the clutch in released position, take out six capscrews mounting cover assembly on flywheel, lift out cover assembly and driven member.

## TRANSMISSION

**Own Make.** Three-speed, all-helical gear type. Constant-mesh, synchro-mesh (Second & High), sliding gear (Low & Reverse).

See *Transmission Section for complete data*.

**Transmission Control:** Remote control type with gearshift lever on steering column.

See *Transmission Section for complete data*.

**Removal:** Remove Rear Axle (see Rear Axle Removal below), remove capscrews mounting front seat track on floor, move front seat back for necessary room. Take out mounting screws in front floor pan spacer, remove spacer. Disconnect gearshift connecting rods at transmission case, disconnect and remove equalizer (clutch release) shaft. Remove cap screw and washer on end of transmission shaft (in universal joint), remove universal joint. Remove nuts and washers on engine rear support bolts. Support engine by placing jack (use wood block on jack) under rear end and raise engine sufficiently so that rear support clears mounting bolts (NOTE—remove nuts holding lower half of engine rear support assembly and remove the assembly). Take out eight capscrews mounting transmission case on flywheel housing, pull transmission straight back and lift out.

## UNIVERSALS

**Spicer Model 202-6X, Ford No. B-7090.** Steel bushing type. Single joint in torque ball at transmission.

See *Universals Section for complete data*.

## REAR AXLE

**Own Make.** ¾ Floating, Spiral Bevel Gear type with Torque Tube Drive.

See *Rear Axle Section for complete data*.

**Ratio**—3.54-1 Std., 3.78-1 & 4.11-1 Optl.

**Backlash**—.012" maximum.

**Removal:** Raise rear end of car. Disconnect track bar. Disconnect rear spring (use spring spreader if available) by placing block under each rear spring eye and lowering car so that weight keeps spring extended and then removing spring shackle bolts and bars. Take out pin in hand brake equalizer and disconnect hand brake cable. Disconnect hydraulic brake line at torque tube and rear shock absorber links at each wheel. Disconnect accelerator pedal, remove pedal pads, floor mat, beam control switch (take out two mounting screws), and floor pan.

Disconnect speedometer cable at torque tube. Remove nuts on four universal joint ball housing bolts and two bolts holding ball cap halves together, remove ball cap. Pull rear axle back to disconnect torque tube from transmission.

## SHOCK ABSORBERS

**Houde (Houdaille).** Double Acting, adjustable, hydraulic types (Front & Rear).

See *Shock Absorber Section for complete data*.

**Houde Model Right — Ford No. — Left**  
Front.....BBCN-3.....51A-18045.....51A-18046  
Rear①.....BBCZ-3.....51A-18080A.....51A-18081A  
Rear②.....BBCZ-3.....51A-18080B.....51A-18081B

①—Except Sedan Delivery and Station Wagon.

②—Sedan Delivery & Station Wagon only.

**Adjustment:** Standard setting marked by line on face of lever hub (pointer should be aligned with this mark). Adjustment can be varied by turning pointer clockwise (for more control) or counter-clockwise (for less control) not more than 1 or 2 serrations at a time. NOTE—Stops are provided to limit adjustment in either direction.

**Refilling:** Check every 5000 miles, fill to level of filler plug hole. Use Ford No. M-4633-B fluid only (Houde L-1404) required for these new shock absorbers (identified by round top filler plug).

## FRONT SUSPENSION

**Front Axle:** Conventional "I" beam section type with Reverse-Elliott ends and transverse spring. Axle positioned by radius rods.

**Kingpin Inclination**—8° crosswise.

**Caster**—3°. Axle may be bent cold for minor corrections providing correct tools used to prevent crushing of axle flange.

**Camber**—¾°. Adjust as for Caster (above).

**Toe In**—1/16". Adjust in usual manner by changing length of tie rod.

## STEERING GEAR

**Gemmer design (Model 305), Ford Make.** Worm-&-Roller type with push-pull adjustments.

See *Steering Gear Section for complete data*.

## BRAKES

**Service:** Lockheed Hydraulic, self-centering, double anchor type. Hand lever applies rear wheel service brakes. NOTE—These brakes do not have anchor pin adjustment.

See *Brake Section for complete data*.

**Drums**—Composite iron and steel. Diameter 12".

**Clearance**—Least possible amount without drag.

**Lining**—Width 1.75". Thickness .187". Length per shoe 13.12" (forward shoes), 10.08" (rear shoes).

**Hand Brakes:** See *Service Brakes (above)*.

## MISC. MECHANICAL

**Power Operated Convertible Top:** Two types as follows:  
1—Convertible—Auto-lite electric type.

2—Sportsman Convertible—Hydro-Letric type.

See *Miscellaneous Section for complete data*.

**Power Window Regulators (Sportsman Convertible):** Hydro-Letric type.

See *Miscellaneous Section for complete data*.

**HOOD LOCK:** Lock handle is center louvre on right side (left side facing truck) of hood nose. Pull out on handle (operates lock and auxiliary catch) and hold handle out while raising hood.

## MODEL IDENTIFICATION

F-6 2 C-O-E	8R8WH	8H8WH	158"	

①—Rouge 239 Truck V8, 100 Horsepower.

②—Rouge 226 Truck Six, 95 Horsepower.

**ENGINE NUMBER:** On Rating Plate on dispatch compartment (glove box) door and on left side of frame near steering gear mounting bracket. NOTE—Engine Number is also Serial Number.

## TUNE-UP

**COMPRESSION PRESSURE:** 110 lbs. at cranking spd.

**VACUUM READING:** Steady 18-21" idling at 500 RPM.

**FIRING ORDER (V8):** 1-5-4-8-6-3-7-2. See diagram.

**FIRING ORDER (6 CYL.):** 1-5-3-6-2-4. See diagram.

**SPARK PLUG GAPS:** .025-.028".

Plug Type—Champion H-9 Comm. 14 mm.

**IGNITION:** See Coil, Condenser, and Distributor.

**Breaker Gap—(6 Cyl.)** .024-.026" (V8) .014-.016"

**Cam Angle—(6 Cyl.)** 36° closed, (V8) 27° closed.

**Breaker Arm Spring Tension—**17-20 ounces.

**Advance Performance—**See Distributor.

**IGNITION TIMING:** 2° BTDC (V8), TDC (6 Cyl.).

**Timing Procedure—**See Ignition Timing.

**V8—Crankshaft Pulley Mark—**Circular boss aligned with pointer on right side of engine front cover.

**6 Cyl.—Dampener Mark—**Circular boss or groove (depending on type of dampener used). 2 pointers on front engine cover. Use pointer nearest to outer circumference of dampener for proper 6 Cyl. Timing.

**CARBURETION:** See Carburetor & Carb. Equipment.

**Idle Setting—**Approx. 1 turn open. 2 screws used on V8—turning screws out gives richer mixture.

**Idle Speed—**Approximately 500 RPM.

**Float Level—**1.322-1.353" bottom of float to underside of bowl cover with needle valve seated (use Gauge No. 9550-A).

**Accelerating Pump—**Center hole average setting. Inner hole for hot weather, Outer for cold weather.

**Fuel Pump Pressure—**3½-4½ lbs. (V8), 4-5 lbs. (6).

**MANIFOLD HEAT CONTROL:** Automatic.

**V8 Engine—**Valve located between right end of exhaust pipe cross over and right exhaust manifold.

**6 Cylinder—**At center of exhaust manifold just under intake manifold.

**VALVE TAPPET CLEARANCE:** V8 Engine. .010-.012" Int., .014-.016" Exh. Cold. No adjustment.  
6 Cylinder—.013-.015" Cold, All Valves.

►6 Cyl. High Speed Setting—.002" additional exhaust valve clearance recommended by manufacturer.

**SIX NOTE—**Adjustable, self-locking tappet screws used.

**Valve Timing Check—**See Valve Timing.

**STARTING:** See Battery, Starter, Generator, Regulator.

## IGNITION

**IGNITION SWITCH:** Ford No. 6A-11572-A (Mitchell type), No. 6A-11572-B (Briggs & Stratton type).

**Ignition Lock—**Ford No. 6A-11582-A.

**COIL:** Ford No. 7RA-12029-A. Metal can type.

**Location—**Next to distributor.

**Ignition Current—**Approx. 5.2-5.7 amperes at 6 volts, stopped. Primary resistance 1.05-1.15 ohms at 70°.

**CONDENSER:** Ford No. 7RA-12300-B.

**Capacity—**.21-.25 microfarad.

**DISTRIBUTOR:** Less Distributor Cap and Rotor.

V8 Eng. 7RA-12127-C 6 Cyl. 7HA-12127

Type—New "Pressure" distributor with spark advance controlled by vacuum diaphragm moving breaker plate to advance spark against two breaker plate springs. Operating vacuum taken from 1 carburetor connection (2 passages inside carburetor, 1 at venturi, 1 at throttle valve). Full spark advance obtained at 18-35 MPH. with normal road load or for part throttle operation at any speed.

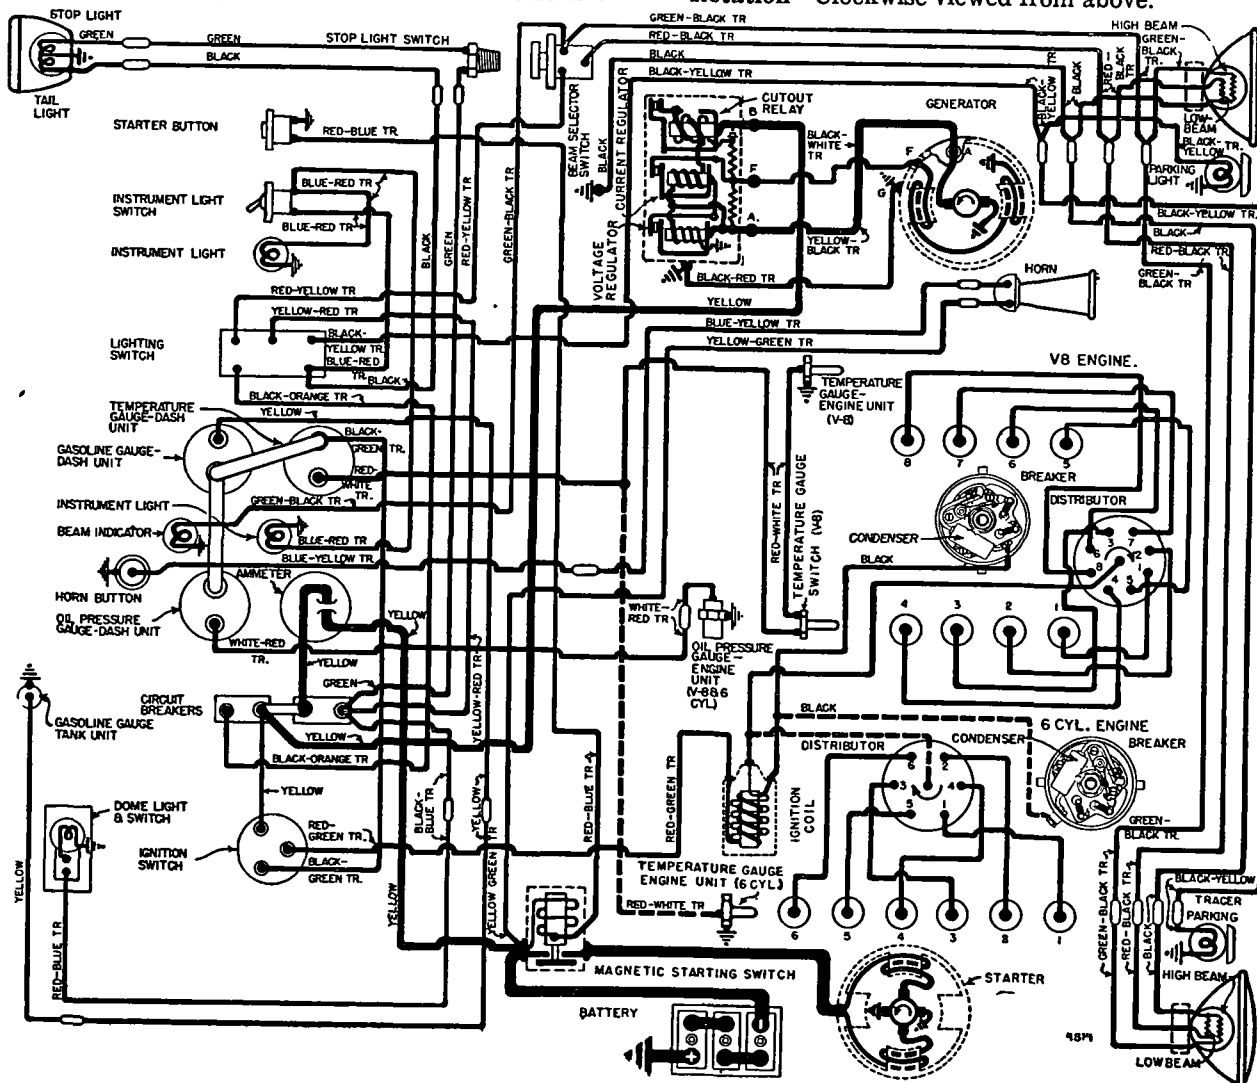

►NOTE—Distributor is single contact type (no "coil loading" contacts are used). 6 Cylinder distributor angled mounted on left side (shaft splined in drive gear).

**Breaker Gap—(6 Cyl.)** .024-.026" (V8) .014-.016".

**Cam Angle—(6 Cyl.)** 36° closed, (V8) 27° closed.

**Breaker Arm Spring Tension—**17-20 ounces.

**Rotation—**Clockwise viewed from above.

**V8—Advance Performance**  
► (at Wide Open Throttle)

Distributor	Engine

**Distributor Removal:** Disconnect vacuum line, take out hold-down screw, lift off. V8 distributor mounted at front of engine on right side. 6 Cylinder distributor mounted on left side of engine at center.

**IGNITION TIMING**

**V8 Engine** ..... 2° BTDC.  
**6 Cylinder** ..... TDC.

**Timing Marks—See Tune-Up data.**

**Timing—**With #1 piston at firing position and timing mark aligned with pointer on front of engine, loosen distributor clamp screw, rotate distributor until contacts begin to open, tighten clamp screw. Check spark plug connections (see diagram), see that rotor opposite #1 terminal in cap.

**Timing (with Neon Timing Light)—CAUTION—**Vacuum line must be disconnected to avoid vacuum advance operating. Mark timing mark and pointer with white chalk (6 cylinder equipped with two pointers—See Dampener Mark above). Connect timing light to #1 spark plug. Idle engine and adjust distributor (as directed above) until mark and pointer aligned when light flashes.

**CARBURETOR**

**V8 Engine—Holley-Ford No. 7RT-9510-A**

**6 Cylinder—Holley-Ford No. 7HT-9510-A**

Dual or double barrel (V8), single barrel (6 Cyl.) downdraft type with new vacuum passages for distributor operation.

**See Carburetor Section for complete data.**

**NOTE—**6 Cyl. Cab-over-Engine Trucks have 7HW-9510 Updraft type carburetor.

**Settings (Idle Setting, Float Level, and Accelerating Pump):** See Tune-Up data.

**Metering Jets—See Holley-Ford Jet Specification Table in Carburetor Section.**

**Fast Idle:** Integral type. Operated by choke valve lever. No adjustment required.

**CARB. EQUIPMENT**

**Fuel Pump (V8—std.):** Ford No. 7RA-9350-C.

**6 Cyl. (std.):** Ford No. 7HA-9350-B.

**V8 Optl. (fuel-&-vacuum):** Ford No. 7RA-9350-E.

**Pressure—**3 1/2-4 1/2 lbs. (V8), 4-5 lbs. (6 Cyl.).

**See Carburetion Equipment Section for complete data.**

**Gasoline Gauge:** King-Seeley Electric.

**Dash Unit—**Ford No. 7RC-9280 (all models).

**Tank Unit (All Closed Cabs)—**Ford No. 7RC-9275.

**Tank Unit (F-1, 2, 3 Panels)—**Ford No. 21C-9275B.

**Tank Unit (F-4, 5, 6 Panels & Bus)—**No. 7RT-9275.

**See Carburetion Equipment Section for complete data.**

**Air Cleaner V8, & 6Cyl. C-O-E (oil bath):** Ford No. 7RT-9600-C (1 quart capacity).

**6 Cyl. exc. C-O-E (oil bath)—**Ford No. 7HT-9600-A Servicing (oil bath type)—Clean and re-fill sump (to level mark) with same grade oil used in crankcase at 1000 mile intervals. Occasionally wash filter in cleaning fluid.

**BATTERY**

**Std.—**Ford 81A-10655-A. 6 Volt, 17 Plate, 100 Ampere Hour Capacity (20 hour rate).

**Zero Capacity—**300 amperes for 3.3 minutes. Five Second Voltage—4.2 volts.

**Grounded Terminal—**Positive (+) terminal.

**Dimensions—**L. 10 1/2". W. 7 1/8". H. 7 1/4".

**Location—**At rear of engine on right side (V8), left side (6 Cyl.). On right running board under separate cover on Cab-Over-Engine trucks.

**School Bus (Spec. Equip. Other Models):** Ford No. 01A-10655-A. 6 Volt, 17 Plate, 120 Ampere Hour Capacity (20 hour rate).

**Grounded Terminal & Location—**As given above.

**STARTER**

**V8 Engine—**Ford Model 7RA-11002

**6 Cylinder (Early)—**Ford Model 7HA-11002-A①

**6 Cylinder (Late)—**Ford Model 7HA-11002-B②

①—For use with B-11350 drive (10 tooth pinion).

②—For use with 7HA-11350 drive (9 tooth pinion).

**Armature No.—**Ford No. 18-11005.

► **Starter Motor Rusting Correction—**See "Electrical System Notes" in Ford Shop Notes.

**Drive—10 Tooth Pinion Type (All V8, Early 6 Cyl.)**

Ford No. B-11350 (Bendix No. A1472) for use with 112 tooth flywheel ring gear.

**Drive—9 Tooth Pinion Type (Late 6 Cyl.)** Ford Part No. 7HA-11350 (with 114 tooth flywheel ring gear).

► **6 CYL. STARTER DRIVE CAUTION—**Use proper type drive. Both 9 and 10 tooth pinions used as listed above.

**Rotation—**Counter-clockwise at commutator end.

**Brush Spring Tension—**20-22 ounces.

**Cranking Engine—**100 RPM., 190-215 amperes.

**Performance Data**

Torque	R.P.M.	Volts	Amperes
4 ft. lbs. ....	1070 .....	4.6 .....	200 .....
8 " .....	660 .....	4.3 .....	340 .....
12 " .....	300 .....	3.65 .....	465 .....
14 " .....	Lock .....	3.5 .....	500 .....

**Starting Switch:** Ford No. 21A-11450 Magnetic Switch mounted on front of dash next to battery (left side on 6 Cyl. Conventional Truck, right side all others) controlled by pushbutton, Ford No. 11C-11500.

**Removal:** On right front face of flywheel housing cover. To remove, take off right engine splash pan (if used), free starter-to-oil pan bracket, take out 2 starter through bolts.

**GENERATOR**

**Ford Model No. 8BA-10002-A (less pulley & bracket.)**

**Armature No.—**Ford No. 8BA-10005-A.

**2 brush type with current and voltage regulation.**

**Charging Rate Adjustment—**None. See Regulator.

**Maximum Charging Rate—**30 amperes, 7 volts. Controlled by regulator and dependent on load and battery condition.

**To Check Generator Output—**Connect ammeter in series with charging line at regulator "ARM" terminal, connect short insulated jumper between generator "A" and "F" terminals (to short out regulator). Run engine at approximately 1500 RPM. and note ammeter reading. If generator output equals or exceeds rate output (below) generator performance is satisfactory. Remove jumper.

► **CAUTION—**Do not operate generator at higher speeds or in service with jumper connected between generator armature and field terminals. This jumper eliminates all regulator action.

**Performance Data**

**Amperes** ..... Engine R.P.M. .... 1500

**Rotation—**Counter-clockwise at commutator end.

**Brush Spring Tension—**20-24 ozs.

**Removal (V8):** On support secured to valve chamber cover by stud and nut, driven by belt in tandem with water pumps. To remove, loosen stud nut and disengage generator belt, take out capscrew in mounting strap, lift generator off support.

**Removal (6 Cyl.):** Separate generator mounting bracket mounted on engine bracket on left side of engine at front. To remove, slack off belt by loosening mounting bracket bolts, take out mounting strap bolt, lift generator off mounting bracket.

**Belt Adjustment (V8):** Loosen 2 bolts on fan mounting bracket, loosen generator support mounting stud nut, raise generator up until side movement on belt midway between generator and water pump pulleys is 1/2" (thumb and finger pressure), tighten stud nut. Adjust fan belt in similar manner, tighten 2 fan bracket bolts.

**Belt Adjustment (6 Cyl.):** 1/2" deflection midway between generator and pump pulleys. To adjust, loosen 2 mounting bracket bolts under generator and capscrew in bracket slot behind generator.

**REGULATOR**

**Regulator** ..... **Generator** ..... **Amperes**

51A-10505-A or C ..... 8BA-10002-A (Std.) ..... 30-33

**Voltage-current 3-Unit types.**

**See Electrical Equipment Section for complete data.**

**NOTE—**Ground wire between generator and regulator must be in place.

**Cutout Relay**

**Cuts In—**6.4-6.9 volts with engine at normal operating temperature.

**Cuts Out—**8 ampere discharge current (maximum).

**Contact Gap—**.010" (armature against upper stop).

**Air Gap—**.017" between armature and core with contacts open.

**Voltage Regulator**

**Voltage Setting—**7.0-7.5 volts with engine at normal operating temperature.

**Checking & Adjustment—**See Elec. Equip. Section.

**Air Gap—**.035" between armature and core with contacts just closed.

► **CAUTION—**Make certain gauge contacts armature and not brass rivet on underside of armature.

**Contact Spring Tension—**5 ounces minimum with contacts just opening.

**Current Regulator**

**Current Setting—**30-33 amperes with engine at normal operating temperature.

**Checking & Adjustment—**See Elec. Equip. Section.

**Air Gap—**.035" between armature and core with contacts just closed.

**Contact Spring Tension—**5 ounces minimum with contacts just closed.

**LIGHTING**

**Headlamps:** Ford "Sealed Beam" type.

**See Electrical Equipment Section for complete data.**

**Adjustment—**Aim upper beams straight ahead (hot spot centers 3" below lamp center height at 25 ft.).

**Beam Indicator—**Bulb between Fuel and Oil Gauges on panel. Lighted when Upper Beam in use.

## MISC. ELECTRICAL

CIRCUIT BREAKERS: Ford No. 51A-12258-A. Consists of two circuit breakers behind instrument panel: Top Unit Headlights. Lower Unit Auxiliary Lights.  
HORNS: Ford No. 7RC-13833. Single horn.  
Horn Current—6-8 amperes.

## ENGINE

## 6 CYLINDER 95 HORSEPOWER ROUGE 226

ENGINE SPECIFICATIONS: Own 7HT. Six cylinder, "L" head type.  
Bore—3.30". Stroke—4.40".  
Displacement—226 cu. ins. Rated HP—26.13.  
Developed Horsepower—95 at 3300 RPM.  
Compression Ratio—6.8-1 cast-iron head.  
Compression & Vacuum Reading—See Tune-Up data.  
TIGHTENING TORQUES: See Ford Shop Notes.

OTHER ENGINE DATA: SEE 1949 FORD 6 CYLINDER PASSENGER CAR ARTICLE for Pistons, Piston Rings, Piston Pins, Connecting Rod, Crankshaft & Main Bearings, Camshaft, and Valves.

## ENGINE

## V8 100 HORSEPOWER ROUGE 239

ENGINE SPECIFICATIONS: Own 8R. Eight cylinder, "L" head, 90° Vee type with both cylinder banks and crankcase cast Enbloc.  
Bore—3.187". Stroke—3.75".  
Developed Horsepower—100 at 3600 RPM.  
Displacement—239 cu. ins. Rated HP—32.5.  
Compression Ratio—6.8-1 cast-iron heads.  
Compression & Vacuum Reading—See Tune-Up data.  
TIGHTENING TORQUES: See Ford Shop Notes.

OTHER ENGINE DATA: SEE 1949 FORD V8 PASSENGER CAR ARTICLE for Pistons, Piston Rings, Piston Pins, Connecting Rod, Crankshaft & Main Bearings, Camshaft, and Valves.

## VALVE TIMING

VALVE TAPPET CLEARANCE: V8 Engine. .010-.012" Int., .014-.016" Exh. Cold. No adjustment.  
6 Cylinder—.013-.015" Cold, All Valves.  
►6 Cyl. High Speed Setting—.002" additional exhaust valve clearance recommended by manufacturer.  
SIX NOTE—Adjustable, self-locking tappet screws used.  
Valve Timing: See Camshaft Setting.

## SIX CYL. "H" ENGINE

Intake Valves—Open 11° BTDC. Close 41° ALDC.  
Exhaust Valves—Open 48° BLDC. Close 10° ATDC.

## V8 "R" ENGINE

Intake Valves—Open at TDC. Close 44° ALDC.  
Exhaust Valves—Open 48° BLDC. Close 6° ATDC.  
Valve Timing Check—Intake valve opens at TDC (V8), 11° BTDC (6 Cyl.). Valve timing mark location on crankshaft pulley (V8), dampener (6 Cyl.).

## LUBRICATION

Engine Oiling System: Pressure to main bearings, connecting rod lower bearings, camshaft bearings. Timing gears and distributor drive gear lubricated through drilled hole in front end of camshaft on V8. Timing gears lubricated by spray past camshaft thrust plate on 6 cylinder engine.

►OIL PAN CLEAN-OUT PLATE—On underside of oil pan, attached by 7 nuts. Remove to clean oil pump intake and screen, and oil pan.

Crankcase Capacity—5 quarts (6 quarts when changing filter).

Normal Oil Pressure—50 lbs. at 2000 RPM.

Oil Pressure Relief Valve (6 Cyl.): In cylinder block just to rear of oil filter mounting. Not adjustable. Spring Tension—12.62-12.88 ozs. at 1.14".

Oil Pressure Relief Valve (V8): In oil pump body. Spring Tension—242-246 ozs. at 1.14".

V8 NOTE—Cylinder block oil relief valve not used.

Oil Pump (6 Cylinder): Rotor type. Mounted externally on right side of engine with drive gear at center of camshaft.

Oil Pump (V8 Engine): Gear type (two types: one equipped with spur gears, second helical gears). In crankcase at rear of engine.

Oil Filter: On 6 cylinder, mounted directly on block (no external oil lines) on left side at rear. On V8, mounted on left cylinder head. Replace cartridge every 5000 miles or more often if required.

Oil Filter Cartridge—Ford No. 01A-18662-A (No. 7HA-6731 for Purolator filter on some 6 Cyl. Eng.).

Oil Pressure Gauge: King-Seeley Electric.

Dash Unit—Ford No. 7RC-9273 (K-S #41360).

Engine Unit—Ford No. 41A-9278 (K-S #9530).

See Miscellaneous Section for complete data.

Crankcase Ventilation: Filter element in oil filler cap (inlet) with outlet pipe in rear valve chamber extending down on right side of 6 cylinder engine, or from top of engine down behind fan and out along left side of V8 engine.

V8 NOTE—Outlet pipe may be equipped with filter element just below upper elbow.

Servicing—Wash screen in cleaning fluid and wet with engine oil when dry every 2500 miles.

## COOLING

Cooling System: Pressure type with relief valve in filler cap, by-pass in block, and belt-driven water pump (2 used on V8).

Capacity—18 quarts (6 Cyl.), 23 quarts (V8).

Pressure Valve—In radiator filler cap. Ford Nos. 41A-8100-B (with knurled edge) or 41A-8100-A (flange type grip—use with 51A-8138 radiator cap gasket). Opens at 3½-4½ lbs.

Water Pump (6 Cylinder): Centrifugal, belt-driven, packless type. Shaft mounted on sealed duplex ball bearing. No lubrication required.

See Water Pump Section for complete data.

Belt Adjustment—See GENERATOR.

Water Pumps (V8 Engine): Two used. Centrifugal, belt-driven, packless type. Shaft mounted on pre-packed ball-bearing at front, and a bushing next to seal. Oil cup provided for bushing lubrication.  
See Water Pump Section for complete data.

►CAUTION—V8 WATER PUMP LUBRICATION: Fill oil cup in pump with SAE #20 engine oil every 1000 miles. When oiling new pump insert piece of wire down along-side wick in oiler to permit air to escape from cavity.

Belt Adjustment—See GENERATOR.

Thermostat: In cylinder head water outlet (2 on V8). Ford No. 7HA-8575-A (6 Cyl.), 8RT-8575-A (V8). Two makes: Standard-Thompson or Fulton-Sylphon.  
Setting (6 Cyl.)—Starts to open 157-162°F.  
Setting (V8 Eng.)—Starts to open 148-153°F.

Temperature Gauge: King-Seeley Electric.

Dash Unit—Ford No. 7RC-10883 (K-S #41370).

Engine Unit—Ford No. 99A-10884 (K-S #7000).

Temp. Switch (V8 only)—Ford No. 01A-10990 (K-S No. 8355) in left cylinder head.

See Miscellaneous Section for complete data.

## CLUTCH

Long Model 10CF-TI (F-1 with 3 spd. Transmission). Long Model 11CF-CI (All Other Models).

Semi-centrifugal, single plate, dry disc types.

See Clutch Section for complete data.

Facings (10CF)—Moulded, 10" O.D. .125" thick.

Facings (11CF)—Woven (School Bus), Moulded (Others). Outside Diameter 11". Thickness .137".

Pedal Adjustment: 1-1¼" (F-1 with 3 spd. Trans.), 1½-1¾" (All Others) pedal free travel. Adjusting clevis provided at forward end of connector rod between pedal shaft and equalizer shaft.

Removal: Remove transmission (see TRANSMISSION Removal below). Install wooden wedges between each release lever and cover to hold clutch in released position, take out 6 cover capscrews, lift assembly out. NOTE—Flywheel housing may have to be removed on some models.

## TRANSMISSION

## 3-SPEED TYPE

Own Make. 3-speed, all helical gear type. Constant-mesh, synchro-mesh (Second & High), sliding gear (Low & Reverse).

See Transmission Section for complete data.

NOTE—This transmission standard on F-1 Series. Heavy Duty 3-speed or 4-speed transmissions Optl.

Removal: Remove propeller shaft by disconnecting rear universal and sliding shaft out of transmission. Disconnect clutch linkage and speedometer cable. Remove front floor plate. Remove nuts and washers from two engine rear support bolts. Raise rear end of engine (use block of wood on jack under engine) until rear support clears mounting bolts. Remove transmission mounting capscrews, pull transmission straight back until main drive gear shaft clears clutch, lift transmission out through floor opening.

## TRANSMISSION

## HEAVY DUTY 3-SPEED TYPE

Own Make. Heavy duty, 3-speed. Helical gear, constant-mesh, synchro-mesh (Second & High). Sliding spur gear (Low & Reverse).

See Transmission Section for complete data.

NOTE—This transmission standard on F-2, F-3 Series, optional on F-1, F-4, F-5.

Removal: Same as for 4-Speed type following.

## TRANSMISSION

## 4-SPEED TYPE

Own Make. 4-speed, sliding spur gear type.

See Transmission Section for complete data.

NOTE—This transmission standard on F-4, F-5, F-6 Series, optional on F-1, F-2, F-3.

Removal: Remove seat cushion, floor mat, and transmission cover on floor. Support engine with jack under flywheel housing (use wood block on jack), raise jack until engine weight is off rear mounting. Free coupling shaft support bearing from cross-member by removing nuts on two bolts, disconnect

front universal joint by taking out four bolts mounting universal joint flange at hand brake drum and disconnect intermediate universal joint at support bearing by removing nuts on "U" bolts (tape bearing caps in place to prevent losing needle bearings), remove front shaft. Remove clutch equalizer shaft by taking out pin in clutch shaft and clevis pin at lever and pulling equalizer shaft off the bracket (CAUTION—Do not lose spring and bushing halves). Remove two bolts in engine rear support. Disconnect speedometer shaft at transmission. Remove transmission capscrews from flywheel housing, pull transmission straight back until clutch (main drive gear) shaft clears, then lift transmission out through floor opening.

NOTE—To remove brake assembly, take out 2 capscrews in hand brake lever sector on transmission case and two capscrews in brake adjusting screw bracket, disconnect hand brake link from transmission and anchor adjusting screw from brake band, remove brake band assembly and hand brake lever.

### UNIVERSALS

Spicer. Needle bearing type, two used (Series F-1, and F-5, F-6 C-O-E 110"), three used with slip joint at forward end of rear shaft behind coupling shaft support bearing (All Others).

SERIES F-1 NOTE—Propeller shaft is one-piece type with slip joint provided by front universal yoke sliding on splined drive shaft in transmission.

See *Universals Section* for complete data.

#### Spicer Model Nos.

Series	Front	Center	Rear
F-1①	1278-102X	None	1278-102X
F-1②	1311-102X	None	1318-105X
F-2, F-3	1318-103X	1311-102X	1318-103X
F-4, F-5, F-6	1358-54X	1351-5107X	1358-5104X
F-5, F-6 110"	1351-517X	None	1358-5104X
F-5 194"	1358-514X	1351-5107X	1358-5107X

①—3-Speed Transmission. ②—4-Speed Trans.

**Coupling Shaft Center Bearing:** Consists of cushion mounted ball bearing bolted to underside of frame intermediate cross-member. Bearing is mounted on end of coupling shaft in a sleeve with felt retainer sleeve on each end and bearing baffle on front end.

### REAR AXLE

#### F-1 SERIES—SEMI-FLOATING HYPOID TYPE

Own Make. Semi-floating, Hypoid Gear type with Hotchkiss drive (separate carrier not used). Axle ends flanged (no separate hub). Wheel bearings are sealed-ball pre-lubricated (no lubrication required).

▶NOTE—AXLE NOT SAME AS USED ON FORD CAR.

See *Rear Axle Section* for complete data.

Ratio (Standard)—3.73-1 (41-11).

Ratio (Optional)—4.27-1 (47-11).

Backlash—.003-.006". Shim adjustment.

**Removal:** Raise rear of truck. Disconnect rear universal. Remove axle shafts (see instructions below). Disconnect brake line at "T" on left side of axle housing, and hand brake cable. Remove nuts on rear spring "U" bolts, drive bolts up free of housing, lower axle assembly and remove from underneath.

**Axle Shaft Removal:** Remove wheel. Take off drum. Remove 4 axle retainer nuts (work through opening in axle shaft flange). Use Puller No. 4235 and pull shaft (do not disturb brake backing plate or damage wheel bearing oil seal).

**Wheel Bearing Adjustment:** None. Pre-lubricated sealed ball-bearings.

### REAR AXLE

#### F-2, 3, 4, 5 SERIES—FULL-FL ATIN TYPE

Own Make. Full-floating, Spiral Bevel Gear type with Hotchkiss drive.

See *Rear Axle Section* for complete data.

Ratios: Standard	Optional
F-2, F-3 .....4.86-1 (34-7).....	4.11-1 (37-9)
F-4 .....5.14-1 (36-7).....	5.83-1 (35-6), 6.67-1 (33-5)
F-5 .....6.67-1 (33-5).....	5.83-1 (35-6), 5.14-1 (36-7)

Backlash—.004-.018".

**Removal:** Raise rear end of frame, remove axle shafts (see below), wheel and drum assemblies. Disconnect hydraulic brake line at each wheel and hose at bracket (bleed brake lines when re-connected). Remove backing plate assemblies. Disconnect rear universal. Remove nuts on rear spring "U" bolts, drive bolts up free of housing, lower axle assembly and remove from underneath truck.

**Axle Shaft Removal:** Remove hub cap, remove nuts on 8 hub studs holding axle shaft flange in place, turn 2 special screws (in tapped holes in flange) up evenly to break flange loose from hub, back these screws out, strike axle shaft flange at center to loosen centering cones on studs, remove cones, pull axle shaft out (wheel not disturbed).

**Wheel Bearing Adjustment:** Remove axle shaft (see above), use special bearing adjustment wrench and remove bearing locknut (outer nut), and lockwasher. Adjust bearings by turning bearing adjusting nut (inner nut) up until tight and then backing nut off 1/8 turn. Install bearing lockwasher making certain that it fits over dowel pin on adjusting nut, install bearing locknut and turn this nut up tight. NOTE—When installing axle shaft make certain that gasket in place under shaft flange, cones in place on studs and that two loosening screws backed off sufficiently so that stud nuts can be tightened securely. Turn two loosening screws in just enough to prevent loosening in service.

### REAR AXLE

#### TWO-SPEED TYPE—STD. F-6 SERIES, OPTL. F-5 SERIES

Own Make. Vacuum Operated Shift, Two-speed, Full-floating, Spiral Bevel Gear (final drive), spur gear planetary unit (reduction gearing) with Hotchkiss drive.

See *Rear Axle Section* for complete data.

Ratio—5.83-1 (Direct Drive), 8.11-1 (2nd Speed).

Backlash—.004-.018".

**Removal:** Same as for standard axle (above) after disconnecting vacuum line at hose connection.

### SHOCK ABSORBERS

Houde (Houdaille). Direct acting, hydraulic type.

▶Shocks are sealed (cannot be refilled or repaired).

F-1, F-2, F-3—Ford No. 7RC-18045-B, Houde No. H-160 (Front). 7RC-18080-B, Houde H-170 (Rear). F-4, F-5, F-6 NOTE—Houde rotary type shocks optional equipment for front end only (Ford No. 8T-18045 Right, No. 8T-18046 Left). These shocks are adjustable and can be refilled.

See *Shock Absorber Section* for complete data.

### FRONT SUSPENSION

Front Axle—Conventional "I" beam section with Reverse Elliott ends and semi-elliptic springs.

Kingpin Inclination—7° crosswise.

Caster—1° minimum, to 3 1/2° maximum. Both wheels should be equal within 1/2°.

NOTE—Caster angle controlled by wedge shims inserted between axle pads and springs. To increase caster, insert taper wedge shims equally at both sides (make certain spring tie bolt passes through hole in wedge so wedge held securely in place).

**Camber**—1/4° minimum, to 1° maximum. Right wheel must never exceed Left wheel. Axle may be bent cold to correct Camber providing proper tools used to prevent crushing axle flange.

**Toe In**—1/16". Set at 1-10 ratio to Camber. Toe In increases with load and should be set with truck empty. To adjust, loosen clamp bolts, turn tie rod.

### STEERING GEAR

F-1, F-2, F-3—Ford No. 7RC-3504.

F-4, F-5, F-6—Ford No. 7RT-3504.

F-5 & F-6 C-O-E—Ford No. 7RW-3504-B.

Worm-and-Roller types with "push-pull" adjustment. Gemmer 305 & 335 design. See Gemmer.

See *Steering Gear Section* for complete data.

### BRAKES

#### F-1 SERIES

**Service—F-1:** Ford-Bendix Hydraulic, Duo-Servo, Single Anchor type without eccentric adjustment. Hand lever applies rear wheel service brakes.

See *Brake Section* for complete data.

**Wheel Cylinders**—Diameter: Front wheel 1.0655" (hone limit 1.0675"). Rear 1.003" (hone limit 1.005").

**Drums**—11" composite (cast iron and steel).

**Lining**—Molded or woven. Width 2". Thickness 3/16".

Length per shoe: 11 29/32".

**Clearance**—.010" at each end of secondary shoe with primary shoe forced out against drum (adjusting screw in each wheel backed off 14 notches or "clicks" from point where shoes drag on drum).

**Hand Brake:** See Service Brakes (above).

### BRAKES

#### F-2, F-3, F-4, F-5, F-6 SERIES

**Service—F-2 (All Wheels), F-3 (Front):** Ford-Lockheed Hydraulic, self-centering, double anchor type. Hand lever applies rear wheel service brakes.

**F-3 (Rear Wheels), F-4, 5, 6 (All Wheels)—Ford-Lockheed Hydraulic, double anchor type.** Hand lever applies rear wheel service brakes (F-3), independent shaft brake at transmission (F-4, F-5, F-6).

See *Brake Section* for complete data.

**Wheel Cylinders**—Diameters: F-2 All Wheels, F-3 Front 1.378" (hone limit 1.382") forward shoe, 1.003" (hone limit 1.005") reverse shoe. F-3 Rear Wheels;

F-4, F-5, F-6 Front Wheels 1.378" (hone limit 1.382").

F-4, F-5, F-6 Rear Wheels 1.503" (hone limit 1.507").

**Drums**—Diameters: 12" F-2 All, F-3 Front. 14" F-3 Rear, F-4, 5, 6 Front. 15" F-4, 5, 6 Rear Wheels.

**Lining**—Molded type (all shoes).

Wheels		Shoe Lgth.	
Front	Rear	Width	Thick. Pri. Sec.
F-2, 3	F-2	1 23/32"	3/16".....13 1/2".....10 3/8"
F-4, 5, 6	F-3	2"	1/4".....15 17/32".....10 3/4"
—	F-4, 5, 6	3 1/2"	5/16".....16 21/32".....11 9/16"

**Clearance**—Least possible amount without drag.

**Hand Brake (F-3):** Hand lever applies rear wheel service brakes. See Service Brakes above.

**Hand Brake (F-4, F-5, F-6):** Independent external contracting band on drum at rear of transmission.

**Adjustment**—See *Ford Shop Notes*.

**Drum Diameter**—7.81".

**Lining**—Woven type. Width 2.5". Thickness .25".

Length 24.6".

**HOOD LOCK:** Pull T-handle under edge of instrument panel on left side, push back on safety catch under front edge of hood, raise hood, prop open with support rod located on plate ahead of radiator.

**HOOD ALIGNMENT & RADIATOR GRILLE REMOVAL:** See Ford Shop Notes.

## MODEL IDENTIFICATION

**VEHICLE NUMBER:** Stamped on plate attached to engine side of dash and on top of right frame side rail just to rear of front suspension upper control arm.

## TUNE-UP

**COMPRESSION PRESSURE:** 110 lbs. at cranking spd.

**VACUUM READING:** Steady 18-21" idling at 500 RPM.

**FIRING ORDER:** 1-5-3-6-2-4. See diagram.

**SPARK PLUG GAPS:** .030". Limits .029-.032".

**Plug Type—Champion H-10, 14 mm.**

**IGNITION:** See Coil, Condenser, and Distributor.

**Breaker Gap—.024-.026".**

**Cam Angle or Dwell—36° closed, 24° open.**

**Breaker Arm Spring Tension—17-20 ounces.**

**Advance Performance—See Distributor.**

## IGNITION TIMING: TDC.

**Timing Procedure—See Ignition Timing.**

**Dampener Mark—**Circular boss or groove (depending on type of dampener used). 2 pointers on front engine cover. Use pointer nearest to outer circumference of dampener for proper timing.

## CARBURETION: See Carburetor & Carb. Equipment.

**Idle Setting—**Approx. 1 turn open. One screw—turning screw out gives richer mixture.

**Idle Speed—**Approximately 500 RPM.

**Float Level—**1.322-1.353" bottom of float to underside of bowl cover with needle valve seated (use Gauge No. 9550-A).

**Accelerating Pump—**Center hole average setting. Inner hole for hot weather, Outer for cold weather.

**Fuel Pump Pressure—**4-5 lbs.

**MANIFOLD HEAT CONTROL:** Automatic thermostatic type. Valve should be closed (counterweight arm against stop pin) with engine cold and should operate freely.

**VALVE TAPPET CLEARANCE:** .013-.015" Cold, All Valves.

► **High Speed Setting—.002"** additional exhaust valve clearance recommended by car manufacturer.

► **ADJUSTABLE SELF-LOCKING TAPPET SCREWS**

Valve Timing Check—See Valve Timing.

**STARTING:** See Battery, Starter, Generator, Regulator.

## IGNITION

**IGNITION SWITCH:** Ford No. 6A-11572-A (Mitchell type), No. 6A-11572-B (Briggs & Stratton type).

**Ignition Lock—**Ford No. 8A-11582-A.

**COIL:** Ford No. 7RA-12029-A. Can type.

**Location—**On left side of engine above distributor.

**Ignition Current—**Approx. 5.2-5.7 amperes at 6 volts, stopped. Primary current resistance 1.05-1.15 ohms (75°F.).

**CONDENSER:** Ford No. 7RA-12300-B.

**Capacity—.21-.25 microfarad.**

**DISTRIBUTOR:** Ford No. 7HA-12127 (Less Cap and Rotor). New "Pressure" distributor with spark advance controlled by vacuum diaphragm moving breaker plate to advance spark against two breaker plate springs. Operating vacuum taken from 1 carburetor connection (2 passages inside carburetor, 1 at venturi, 1 at throttle valve). Full spark advance obtained at 18-35 MPH, with normal road load or for

part throttle operation at any speed.

► **NOTE—Distributor angle-mounted on left side of engine and shaft splined to oil pump drive gear.**

**Breaker Gap—.024-.026".**

**Cam Angle—36° closed, 24° open.**

**Breaker Arm Spring Tension—17-20 ounces.**

**Rotation—**Clockwise viewed from above.

## Advance Performance (at Wide Open Throttle)

Distributor			Engine		
Degrees	Vacuum	R.P.M.	Degrees	Vacuum	R.P.M.
0°	0"	200	0°	0"	400
13 1/4-3°	0.4"	500	3 1/2-6°	0.4"	1000
5 1/2-6 3/4°	1.4"	1000	11-13 1/2°	1.4"	2000
11 1/2-13°	5.5"	1000	23-26°	5.5"	2000
8 1/2-9 3/4°	2.9"	1500	17-19 1/2°	2.9"	3000
10 1/2-11 1/2°	4.1"	2000	21-23°	4.1"	4000

**Distributor Removal:** Mounted on left side of engine at center. To remove, disconnect vacuum line, take out hold-down screw in timing arm, lift off.

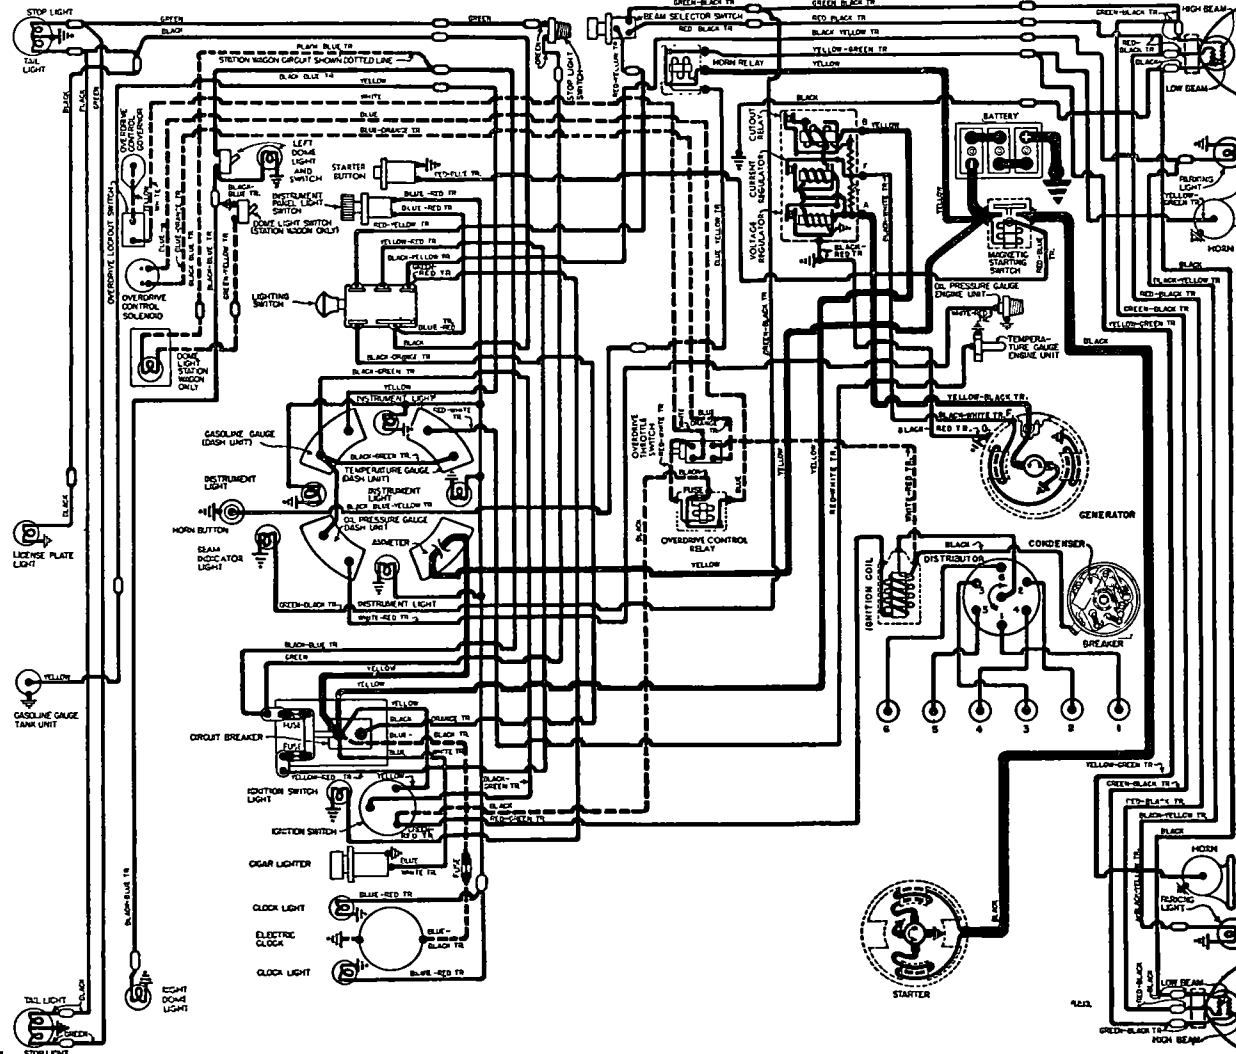

## IGNITION TIMING

**Std. Setting .....at TDC.**

**Dampener Mark—**Circular boss or groove (depending on type of dampener used). 2 pointers on front engine cover. Use pointer nearest to outer circumference of dampener for proper timing.

**Timing—**With #1 piston at firing position and timing mark aligned with pointer on front of engine, loosen clamp screw on timing arm, rotate distributor until contacts begin to open, tighten clamp screw. Check spark plug connections (see diagram), see that rotor opposite #1 terminal in cap).

► **Timing (with Neon Timing Light)—CAUTION—**Vacuum line must be disconnected to avoid vacuum advance operating. Mark proper timing pointer (see Dampener Mark above) and dampener mark with white chalk. Connect timing light to #1 spark plug. Idle engine and adjust distributor (as directed above) until mark and pointer aligned when light flashes.

**CARBURETOR**

Holley-Ford No. 8HA-9510-A. Single barrel down-draft type with new vacuum passages for distributor operation.

See Carburetor Section for complete data.

Settings (Idle Setting, Float Level, and Accelerating Pump): See Tune-Up data.

Metering Jets—See Holley-Ford Jet Specification Table in Carburetor Section.

Fast Idle: Integral type. Operated by choke valve lever. No adjustment required.

**CARB. EQUIPMENT**

Fuel Pump (std.): Ford No. 7HA-9350-B.

Optl. (Fuel-& Vacuum)—Ford No. 8HA-9350.

Pressure—4-5 lbs.

See Carburetion Equipment Section for complete data.

Gasoline Gauge: King-Seeley Electric.

Dash Unit—Ford No. 8A-9280 (K-S #42285).

Tank Unit (All exc. Sta. Wagon)—Ford No. 99A-9275-B (K-S #7540).

Tank Unit (Station Wagon)—Ford No. 01A-9275-A (K-S #7748).

See Carburetion Equipment Section for complete data.

Air Cleaner (std.—oil-wetted): Ford No. 8HA-9600-A.

Optl. (oil bath)—Ford No. 8HA-9600-B1 (1 pint capacity), 8HA-9600-B4 (1 quart capacity).

Servicing (oil-wetted type)—Wash filter assembly in cleaning fluid and re-oil when dry every 1000 miles.

Servicing (oil bath type)—Clean and refill sump (to level mark) with same grade oil used in crankcase at 1000 mile intervals. Occasionally wash filter in cleaning fluid.

**BATTERY**

Ford No. 81A-10655-A. 6 Volt, 17 Plate, 100 Amp. Hr. Zero Capacity—300 amperes for 3.3 minutes. Five Second Voltage—4.2 volts.

Grounded Terminal—Positive (+).

Location—On left side in engine compartment.

Dimensions—L. 10½". W. 7⅞". H. 7¼".

**STARTER**

Ford Model No. 7HA-11002. Armature No. 18-11005.

► Starter Motor Rusting Correction—See "Electrical System Notes" in Ford Shop Notes.

Drive—Ford No. 7HA-11350. New 9 tooth pinion type for use with 114 tooth flywheel ring gear.

Rotation—Counter-clockwise at commutator end.

Brush Spring Tension—20-22 ounces.

Cranking Engine—100 RPM., 190-215 amperes.

**Performance Data**

Torque	R.P.M.	Volts	Amperes
4 ft. lbs.	1070	4.6	200
8 "	660	4.3	340
12 "	300	3.65	465
14 "	Lock	3.5	500

Starting Switch: Ford No. 21A-11450 Magnetic Switch mounted on left front fender apron and controlled by panel pushbutton switch Ford No. 6H-11500.

Removal: On right front face of flywheel housing cover. To remove, take off right engine splash pan (if used), free starter-to-oil pan bracket, take out 2 starter through bolts.

**GENERATOR**

Ford No. 8BA-10002-A (less pulley and bracket).

Armature No.—Ford No. 8BA-10005-A.

2 brush type with current and voltage regulation.

Charging Rate Adjustment—None. See Regulator. Maximum Charging Rate—30 amperes, 7 volts, reached at approximately 20 MPH. Controlled by regulator and dependent on load and battery condition.

To Check Generator Output—Connect ammeter in series with charging line at regulator "ARM" terminal, connect short insulated jumper between generator "A" and "F" terminals (to short out regulator). Run engine at approximately 1500 RPM. and note ammeter reading. If generator output equals or exceeds rate output (below) generator performance is satisfactory. Remove jumper.

► **CAUTION**—Do not operate generator at higher speeds or in service with jumper connected between generator armature and field terminals. This jumper eliminates all regulator action.

**Performance Data**

Amperes	Engine R.P.M.
30	1500

Rotation—Counter-clockwise at commutator end.

Brush Spring Tension—20-24 ozs.

Removal: Separate generator mounting bracket mounted on engine bracket on left side of engine at front. To remove, slack off belt by loosening mounting bracket bolts, take out mounting strap bolt, lift off generator.

Belt Adjustment: ½" deflection midway between generator and pump pulleys. To adjust, loosen 2 mounting bracket bolts under generator and capscrew in bracket slot behind generator.

**REGULATOR****Ford Numbers**

Regulator	Generator	Amperes
51A-10505-A or C	8BA-10002-A (Std.)	30-33

Voltage-current 3-Unit types.

See Electrical Equipment Section for complete data.

NOTE—Separate ground wire extending to cowl must be in place when generator operated.

**Cutout Relay**

Cuts In—6.4-6.9 volts with engine at normal operating temperature.

Cuts Out—8 ampere discharge current (maximum).

Contact Gap—.010" (armature against upper stop).

Air Gap—.017" between armature and core with contacts open.

**Voltage Regulator**

Voltage Setting—7.0-7.5 volts with engine at normal operating temperature.

Checking & Adjustment—See Electrical Equip. Section.

Air Gap—.035" between armature and core with contacts just closed.

► **CAUTION**—Make certain gauge contacts armature and not brass rivet on underside of armature.

Contact Spring Tension—5 ounces minimum with contacts just opening.

**Current Regulator**

Current Setting—30-33 amperes with engine at normal operating temperature.

Checking & Adjustment—See Electrical Equip. Section.

Air Gap—.035" between armature and core with contacts just closed.

Contact Spring Tension—5 ounces minimum with contacts just opening.

**LIGHTING**

Headlamps: Ford "Sealed Beam" type.

See Electrical Equipment Section for complete data.

Adjustment—Aim upper beams straight ahead (hot spot centers 3" below lamp center height at 25 ft.). Beam Indicator—Bulb between 50 and 60 on speedometer. Lighted with Upper Beam "on".

Direction Signal: Optl. See Electrical Equipment Section. Direction Indicators—Right and Left indicators on lower edge of speedometer.

Direction Signal Flasher—Ford No. 8L-13350-B.

**Switches**

Lighting—Ford No. 7RA-11654.

Beam Selector—Ford No. 7RA-13532.

Instrument—Ford No. 21C-13740.

Dome Light—Ford No. 8A-13752.

Dome Light (Sta. Wagon)—Ford No. 8M-13752-A.

Door Switches (Optl.)—Ford No. 8M-13713.

Stop Light—Ford No. 11A-13480.

**Bulb Specifications**

Position	Candlepower	Mazda No.
Headlamps	Sealed Beam	4030
Parking (no Dir. Sig.)	3	63
Front Dir. Sig. & Park	21-3	1154
① All Instrument	1½	55
Beam & Dir. Sig. Indicators	1	51
② Stop & Tail	21-3	1154
Dome & Trunk	6	81
Dome (Station Wagon)	6	82
Courtesy (Optl.)	6	82
Rear License	3	63
①—With "Black Light" Filters No. 8A-13593.		
②—Rear Direction Signal flashes Stop Light.		

**MISC. ELECTRICAL**

**CIRCUIT BREAKERS:** Lighting (Headlights)—Ford No. 8A-12258-A. On bracket behind instrument panel together with two lighting fuses (see wiring diagram).

Convertible Top—Ford No. 51A-12250-A. 30 ampere. On hydraulic pump motor or on front of dash near convertible top control switch.

**FUSES:** Auxiliary Lights (Parking, Tail & Instrument)—14 ampere. On circuit breaker bracket behind instrument panel (see wiring diagram).

Dome & Stop Lights—14 ampere. Next to fuse listed above.

Clock—2 ampere. In clock feed wire.

Overdrive—30 ampere. On ignition terminal of overdrive relay (on dash under hood).

Direction Signal—15 ampere. In feed from ignition switch to flasher.

**HORNS:** Ford No. 51A-13832-A or B (High Pitch, Right Horn), No. 51A-13833-A or B (Low Pitch, Left Horn). Dual horns operated by relay. NOTE—"A" horns are 4.28" high, "B" horns are 4.14". Horns marked "HI" or "LO" on air columns.

Air Gap—.027-.029" for high pitch (right horn), .032-.034" for low pitch (left) for Sparks-Withington. NOTE—Air Gap for Auto-Lite type horns .040" HI, .050" LO.

Horn Current—13 amperes (high pitch), 14 (low).

Horn Relay: Ford No. 7RA-13853-B. On dash.

► **CAUTION**—Use only Ford type relay No. 7RA-13853-B with TAN plastic cover. If Mercury relay No. 7RA-13853-A with Black plastic cover installed, shock at button may result when blowing horn.

Contact Gap—.015-.025".

Contact Closing Voltage—4 volts max.

C NTINUED ON NEXT PAGE

## CONTINUED FROM PRECEDING PAGE

## ENGINE

**ENGINE SPECIFICATIONS:** Own 8HA. Six cylinder, "L" head type.

Bore—3.30". Stroke—4.40".

Displacement—226 cu. ins. Rated HP—26.13.

Developed Horsepower—95 at 3300 RPM.

Compression Ratio—8.8-1 cast iron head.

Compression & Vacuum Reading—See Tune-Up.

**TIGHTENING TORQUES:** See Ford Shop Notes.

**CYLINDER HEAD AND GASKET INSTALLATION:**

See "Cylinder Head" in Ford Shop Notes.

► **CYLINDER HEAD STUD CHANGE:** See "Cylinder Head" in Ford Shop Notes.

**CYLINDER SLEEVE:** Cast iron dry type cylinder sleeves furnished for replacement service.

**PISTONS:** 4-ring (all above pin), flat head, aluminum alloy, steel strut, U-slot, cam ground type.

Weight—17.35 ozs.

Removal—Pistons and rods removed from above.

Clearance—See Fitting Pistons.

**Replacement Pistons:** Standard size and .0025", .005", .020", .030", .040", and .060" Oversize.

**Fitting Pistons:** Use ½" wide feeler inserted between piston and cylinder wall at right angles to pin. Feeler thickness .002" for New Piston in New Bore, .004" for New Piston in Worn Bore or Worn Piston in New or Worn Bore. Pull to withdraw feeler 6-10 lbs.

**PISTON RINGS:** 2 compression, 2 slotted oil rings, all above pin. Upper oil ring groove drilled with oil drain holes, lower ring groove slotted.

Ring	Width	End Gap	Side Clearance
Compr. (#1)	.093"	.012-.017"①	.0015-.0035"②
Compr. (#2)	.093"	.012-.017"①	.001-.004"③
Oil (#3, 4)	.186"	.012-.017"①	.001-.004"③
Worn Limits—①	.035", ②	.0045", ③	.005"

**Replacement Rings:** Snap type ring sets furnished std. size and .020", .030", .040", .060" Oversize.

**PISTON PIN:** Diameter .8504" (maximum).

Floating type (lock ring in piston at each end). Pin hole in connecting rod bronze-bushed.

Pin Fit in Piston—.0003" (new), .0015" (worn limit).

Pin Fit in Rod Bushing—.0002-.0005" (new), .0015" (worn limit).

**Replacement Pins:** Sizes and paint marks: Std. (green), .001" Oversize (blue), .002" Oversize (yellow).

**CONNECTING ROD:** Length 8¼". Weight 29.0 ozs.

Crankpin Journal Diameter—2.2988". Maximum wear limits—Out-of-round .0015", Taper .001".

**Lower Bearing—**Removable, steel-backed, copper-lead alloy lined, locked in type. No shims. Upper and lower halves interchangeable.

Clearance—.000-.0025" (new), .005" (worn limit).

► **NOTE—**Replace bearing shells less than .0593" thick.

Sideplay—.006-.014" (new), .017" (worn limit).

**Bearing Adjustment:** None (no shims). Do not file caps. Replace bearings. Tang on bearing must engage groove in rod and cap.

**PALNUT NOTE—**Tighten finger tight plus 1/3 turn.

**Replacement Bearings:** Standard size and .002", .010", .020", .030", .040" Undersize.

**CRANKSHAFT:** 4 bearing, integral counterweights.

Vibration Damper—Viscous or rubber type.

Journal Diameters—2.8740" (all bearings). Max. wear limits—Out-of-round .0015", Taper .001".

**Bearings—**Steel-backed, copper-lead alloy lined, replaceable shells. Upper and lower halves alike.

Clearance—.0009-.0032" (new), .0052" (worn limit).

► **NOTE—**Replace main bearing shells less than .0938" thick.

**Bearing Adjustment:** None (no shims). Do not file caps. Replace bearings. Tang on bearing must engage groove in block and cap.

**Replacement Bearings:** Std., .002", .020", .030" U. S.

**End Thrust:** Taken by rear main bearing. Adjust by replacing bearing if endplay excessive.

Endplay—.003-.006" (new), .008" (worn limit).

**CAMSHAFT:** Four bearing with helical gear drive. Gear at center of shaft for oil pump & distributor drive.

**Bearing Diameter—**1.9285" (replace bearing if diameter greater than worn limit 1.9315").

**Bearings—**Steel-backed, babbitt lined bushings.

Clearance—.001-.002".

**Replacement Bearings:** Three sizes as follows:

1—Std. size on both inside and outside diameter.

2—Std. on I.D., .080" Oversize on O.D.

3—.015" Undersize on I.D., std. size on O.D.

**End Thrust:** Thrust plate bolted to front of block behind camshaft hub (hub keyed on front end of shaft).

**Timing Gears:** Helical cast aluminum camshaft gear bolted on hub on camshaft, cast alloy iron crankshaft gear.

**Replacement Camshaft Gears—**Std., .006", .012" OS.

**Camshaft Setting:** Mesh marked tooth of crankshaft gear with marked space on camshaft gear.

**VALVES:** Head Diam. Stem Diam. Stem Clearance

Intake .....1.65".....3410"①......001-.0031"②

Exhaust .....1.51".....3405"③......0015-.0035"④

Seat Angle Lift

All Valves .....45°.....350"

Worn Limits (Stem Diam.)—① .3385", ③ .3375"

Worn Limits (Clearance)—② .0046", ④ .006"

► **NOTE—**Valves are straight-stemmed type operating in one-piece valve guides.

Valve Seat Inserts—Used for exhaust valves.

**Valve Guides:** One-piece type pressed in block.

Removal: Use special tool 6510-0 to remove guides.

Installation—Upper end of guide 1.18" Intake, 1.08" Exhaust below top face of block. Install with stepped end down. Use tool 6510-N to drive guides in place.

**Valve Lifters:** Mushroom type with self-locking adjusting screws. Removable from below with camshaft out.

Diameter—.6240" (replace if worn to less than wear limit of .6225").

Clearance—.0005-.0015" (new) .003" (worn limit).

**Valve Springs:** Coated springs used. Install springs with closely spaced coils toward top (against block). Spring Test—47-53 lbs. at 2.109". Free length 2.50".

## VALVE TIMING

**Tappet Clearance:** .013-.015" Cold, All Valves.

► **High Speed Setting—**.002" additional exhaust valve clearance recommended by car manufacturer.

► **ADJUSTABLE SELF-LOCKING TAPPET SCREWS USED.**

**Valve Timing:** See Camshaft Setting above.

Intake Valves—Open 11° BTDC. Close 41° ALDC.

Exhaust Valves—Open 48° BLDC. Close 10° ATDC.

Valve Timing Check—Intake valve opens 11° BTDC.

Valve timing mark location on vibration dampener.

## LUBRICATION

**Engine Oiling System:** Pressure to main, connecting rod, and camshaft bearings. Timing gears lubricated by spray past camshaft thrust plate. Rotor type oil pump mounted externally on right side of engine. Crankcase Capacity—4 quarts (5 quarts when changing filter).

Normal Oil Pressure—45 lbs. at 30 MPH.

**Oil Pressure Relief Valve:** In cylinder block just to rear of oil filter mounting. Not adjustable.

Spring Tension—12.62-12.88 ozs. at 1.14".

**Oil Pump:** Rotor type. Mounted externally on right side of engine with drive gear at center of camshaft.

**Oil Pump Removal and Installation—**See Ford Shop Notes.

**Oil Filter:** Mounted directly on block (no external oil lines) on left side. Replace cartridge each 5000 miles or more often if required.

**Oil Filter Cartridge—**Ford No. 7HA-6731 (for Puro-lator filter), No. 01A-18662-A (for Fram filter).

**Oil Pressure Gauge:** King-Seeley Electric.

Dash Unit—Ford No. 8A-9273.

Engine Unit—Ford No. 41A-9278.

See Miscellaneous Section for complete data.

**Crankcase Ventilation:** Filter element in oil filler cap (inlet) with outlet pipe in rear valve chamber extending down on right side of engine.

**Servicing—**Wash screen in cleaning fluid and wet with engine oil when dry at oil change period (2500 miles).

## COOLING

**Cooling System:** Pressure type with relief valve in filler cap, one belt-driven pump, and by-pass.

**NOTE—**Water distributing tube not used.

Capacity—16 quarts.

**Pressure Valve—**In radiator filler cap. Ford No. 26H-8100-B (AC #846740). Opens at 3½-4½ lbs.

**Water Pump:** Centrifugal, belt-driven, packless type. Shaft mounted on sealed duplex ball bearing.

See Water Pump Section for complete data.

**Belt Adjustment—**See Generator Belt Adjustment.

**Thermostat:** In head water outlet. Ford No. 7HA-8575-A or B. Two makes used Standard-Thompson or Fulton-Sylphon.

Setting (7HA-8575-A)—Starts to open 157-162°F.

Setting (7HA-8575-B)—Starts to open 148-153°F.

**Temperature Gauge:** King-Seeley Electric.

Dash Unit—Ford No. 8A-10883.

Engine Unit—Ford No. 8A-10884.

See Miscellaneous Section for complete data.

## CLUTCH

**Long Model 9½CF-TS, Ford No. 8A-7563.** Single plate, semi-centrifugal, dry disc type.

► **DISC NOTE—**Softer damper springs used on cars with Overdrive (black colored springs). Cars without Overdrive have aluminum colored damper springs.

See Clutch Section for complete data.

**Facings—**Thickness .125". Outside diameter 9½".

**Pedal Adjustment:** 1" free travel. Lock nut and adjusting nut at release lever end of release rod.

**Removal:** Remove transmission (see TRANSMISSION Removal below). Take off flywheel housing. Install wooden wedges between each release lever and cover to hold clutch in released position, take out 6 cover capscrews, lift assembly out.

## TRANSMISSION

**Own Make.** 3-speed, all helical gear type. Constant-mesh, synchro-mesh (Second & High), sliding gear (Low & Reverse).

*See Transmission Section for complete data.*

**Transmission Control:** Steering column mounted shift  
*See Transmission Section for complete data.*

**Removal:** Disconnect rear universal, slide propeller shaft out of transmission. Disconnect clutch, transmission and speedometer linkage. Support rear of engine and disconnect rear engine mounting from frame. Take out 4 transmission-to-flywheel housing capscrews and remove transmission.

## OVERDRIVE

**Warner Model AS1-R10E (exc. Conv. & Sta. Wagon).** Optl. equipment. Overdrive is solenoid operated type (no centrifugal pawls) with Governor Control and throttle operated "kick-down."

**Warner Model AS3-R10E (Conv. & Sta. Wagon).** Similar to AS1-R10E (above) except a special solenoid adapter plate used (re-locates solenoid under overdrive), "X" type frame used on these cars has insufficient clearance for solenoid in regular mounting position on side of overdrive.

*See Transmission Section for complete data.*

► **Overdrive Noise Correction on Early Cars—See "Overdrive Notes" in Ford Shop Notes.**

**Solenoid—Ford No. 8M-6916, (8A-6916 for Conv. & Station Wagon).**

**Control Relay—Ford No. 8M-6915.** On engine side of dash. 30 ampere fuse on ignition terminal.

**Lock-Out Switch—Ford No. 8M-6917-A.**

**Throttle Kick-down Switch—Ford No. 8A-6918.**

**Governor—Ford No. 8M-6919.**

**Removal:** Same as for Std. transmission (above) after disconnecting overdrive control cable and wiring.

## UNIVERSALS

**Mechanics Type 2CR.** Needle bearing type. 2 used.  
*See Universals Section for complete data.*

**NOTE—**Slip joint formed by splined yoke of front universal engaging transmission mainshaft (or overdrive shaft). One-piece propeller shaft used.

► **CAUTION (ALL CARS EXCEPT STATION WAGON)—**Rear universal joint companion flange nut controls pinion bearing "pre-load" (must be adjusted whenever nut is loosened). *See 1949 Ford Passenger Car Rear Axle for data.*

## REAR AXLE PASSENGER CARS

**Own Make.** Semi-floating hypoid gear type with Hotchkiss drive with separate carrier. Axle ends flanged (no separate hub). Wheel bearings are sealed-ball pre-lubricated (no lubrication required).  
*See Rear Axle Section for complete data.*

**Ratio—Standard:** 3.73-1 (39-11). With overdrive: 4.10-1 (41-10). Optional: 3.54-1 (41-11).

**Backlash—.005-.008".** Screw adjustment.

► **NOTE—***Collapsible spacer used for pinion bearing "pre-load".*

**Removal:** Disconnect rear universal. Remove axle shafts (see instructions below). Remove carrier from housing.

► **CAUTION—***Do not loosen universal joint companion flange nut (unless rear axle to be disassembled). This nut controls pinion bearing pre-load (must be adjusted whenever nut loosened).*

**Axle Shaft Removal:** Remove wheel. Take off drum. Remove 4 axle retainer locking type nuts (work through opening in axle shaft flange). Use Puller No. 4235-P and pull shaft (do not disturb brake backing plate or damage wheel bearing oil seal). Replace one nut to secure backing plate.

**Wheel Bearing Adjustment:** None (sealed ball-bearing).

## REAR AXLE

### STATION WAGON

**Own Make.** Semi-floating, hypoid gear type with Hotchkiss drive (separate carrier not used). Axle ends flanged — (no separate hub). Wheel bearings are sealed-ball pre-lubricated (no lubrication required).

► **NOTE—***AXLE NOT SAME AS FORD PASSENGER CAR, similar to Mercury.*

*See Rear Axle Section for complete data.*

**Ratio (Standard)—3.91-1 (43-11).**

**Ratio (with Overdrive)—4.27-1 (47-11).**

**Backlash—.003-.008".** Shim adjustment.

**Removal:** Raise rear of car. Disconnect rear universal. Remove axle shafts (see instructions above). Disconnect brake line at "T" on left side of axle housing, and hand brake cable. Disconnect shock absorbers, spring U-bolts and shackles. Remove axle housing assembly from car.

**Axle Shaft Removal:** Same as for Ford Pass. Car Rear Axle (above).

## SHOCK ABSORBERS

**Front—**Delco Model 1037-F or Houdaille No. H-180, Ford No. 8A-18045-A (Pass. Cars), Houdaille H-210, Ford No. 8A-18045-B (Station Wagon).

**Rear—**Delco Model 1031-R or Houdaille No. H-190, Ford No. 8A-18080-A (Pass. Cars), Houdaille H-200, Ford No. 8A-18080-B (Station Wagon).

Direct acting, hydraulic types. Two makes are used and are interchangeable.

► **NOTE—***Shock absorbers are permanently sealed and cannot be refilled or repaired.*

*See Shock Absorber Section for complete data.*

**Rear Shock Absorber Installation—**Lower tube has welded stone shield on lower end which must be installed toward front of car.

## FRONT SUSPENSION

**Front Suspension:** Independent, linked parallelogram type with coil springs, direct acting shocks, and front stabilizer.

*See Front Suspension Section for complete data.*

► **Pitman Arm and Idler Arm Bracket Change—**Requires 2 different Toe In Settings listed below. For identification of parts, see 1949 Ford in Front Suspension Section.

► **CAUTION—***Specifications listed below supersede earlier 1949 Ford Front End Specifications.*

**Kingpin Inclination—**5° crosswise.

**Caster—**Positive ¼° to Negative ¾°. Threaded bushing adjustment at lower pivot pin.

**Camber—**Positive ¼° to Positive ¾°. Eccentric adjustment at upper pivot pin.

► **Toe In—CAUTION: Two settings as follows:**

1)—1/8" toe out to 3/16" toe out for cars built before March 1, 1949.

2)—1/16" toe in to 1/8" toe in for cars built after March 1, 1949.

**Adjustment—**Adjusting sleeve on outer end of each tie rod. Adjust equally.

## STEERING GEAR

Gemmer design (Model 300), Ford Make. Worm-&-Roller type.

*See Steering Gear Section for complete data.*

## BRAKES

**Service:** Ford-Bendix Hydraulic, Duo-Servo, Single Anchor type without eccentric adjustment. Hand lever applies rear wheel service brakes.

*See Brake Section for complete data.*

**Wheel Cylinders—**Diameter: Front wheel 1.128" (hone limit 1.132"). Rear Wheel: .878" (hone limit .880").

**Drums—**Diameter 10" (11" Sta. Wagon rear drums).

**Lining—**Molded or Woven. Width 2¼" (front wheel), 1¾" (rear wheel). Thickness 3/16". Length per shoe: 11¾" (11 15/16" Sta. Wag. rear wheel shoes).

**Clearance—.010"** at each end of secondary shoe with primary shoe forced out against drum (adjusting screw in each wheel backed off 14 notches or "clicks" from point where shoes drag on drum).

**Hand Brake:** See Service Brakes (above).

► **Hand Brake Linkage Change (for easier application) and Cable Interference Correction—**See "Ford-Bendix Hydraulic" in Brake Section.

## MISC. MECHANICAL

**Power Operated Convertible Top:** Hydro-Lectric type (hydraulic actuation with motor-driven pump supplying oil under pressure for power cylinders).  
*See Miscellaneous Section for complete data.*

**HOOD LOCK:** Pull T-handle under edge of instrument panel on left side, push back on safety catch under front edge of hood, raise hood, prop open with support rod located on plate ahead of radiator.

**HOOD ALIGNMENT & RADIATOR GRILLE REMOVAL:** See Ford Shop Notes.

## MODEL IDENTIFICATION

**VEHICLE NUMBER:** Stamped on plate attached to engine side of dash and on top of right frame side rail just to rear of front suspension upper control arm.

## TUNE-UP

**COMPRESSION PRESSURE:** 110 lbs. at cranking spd.

**VACUUM READING:** Steady 18-21" idling at 500 RPM.

**FIRING ORDER:** 1-5-4-8-6-3-7-2. See diagram.

**SPARK PLUG GAPS:** .030". Limits .029-.032".

Plug Type—Champion H-10, 14 mm.

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.014-.016".

Cam Angle or Swell—27° closed, 18° open.

Breaker Arm Spring Tension—17-20 ounces.

Advance Performance—See Distributor.

**IGNITION TIMING:** 2° BTDC.

Timing Procedure—See Ignition Timing.

Crankshaft Pulley Mark—Circular boss aligned with timing pointer on right side of engine front cover.

**CARBURETION:** See Carburetor & Carb. Equipment.

Idle Setting—Approx. 1 turn open. Two screws—turning screws out gives richer mixture.

Idle Speed—Approximately 500 RPM.

Float Level—1.322-1.353" bottom of float to underside of bowl cover with needle valve seated (use Gauge No. 9550-A).

Accelerating Pump—Center hole average setting. Inner hole for hot weather, Outer for cold weather.

Fuel Pump Pressure—3½-4½ lbs.

**MANIFOLD HEAT CONTROL:** Automatic. No adjustment. Valve located between right end of exhaust pipe cross over and right exhaust manifold.

**VALVE TAPPET CLEARANCE:** .010-.012" Intake valves, .014-.016" Exhaust, Cold. No adjustment. Valve Timing Check—See Valve Timing.

**STARTING:** See Battery, Starter, Generator, Regulator.

## IGNITION

**IGNITION SWITCH:** Ford No. 6A-11572-A (Mitchell type), No. 6A-11572-B (Briggs & Stratton type). Ignition Lock—Ford No. 8A-11582-A.

**COIL:** Ford No. 7RA-12029-A. Can type.

Location—On front lower corner of right cylinder head.

Ignition Current—Approx. 5.2-5.7 amperes at 6 volts, stopped. Primary current resistance 1.05-1.15 ohms (75°F.).

**CONDENSER:** Ford No. 7RA-12300-B.

Capacity—.21-.25 microfarad.

**DISTRIBUTOR:** Ford No. 7RA-12127-C (less Cap and Rotor). New "Pressure" distributor with spark advance controlled by vacuum diaphragm moving breaker plate to advance spark against two breaker plate springs. Operating vacuum taken from 1 carburetor connection (2 passages inside carburetor, 1 at

venturi, 1 at throttle valve). Full spark advance obtained at 18-35 MPH. with normal road load or for part throttle operation at any speed.

► **NOTE—Distributor is single contact type (no "coil loading" contacts are used).**

Breaker Gap—.014-.016".

Cam Angle—27° closed, 18° open.

Breaker Arm Spring Tension—17-20 ounces.

Rotation—Clockwise viewed from above.

### Advance Performance (at Wide Open Throttle)

Distributor	Engine
Degrees Vacuum R.P.M.	Degrees Vacuum R.P.M.
0° ..... 0" ..... 200	0° ..... 0" ..... 400
1½-2¼ ..... 0.4" ..... 500	2½-4½ ..... 0.4" ..... 1000
4¼-5¼ ..... 1.7" ..... 1000	8½-10½ ..... 1.7" ..... 2000
6¼-7¼ ..... 2.85" ..... 1500	12½-14½ ..... 2.85" ..... 3000
7½-8½ ..... 3.7" ..... 2000	15-17 ..... 3.7" ..... 4000

**Distributor Removal:** Mounted at front of engine on right side. To remove, disconnect vacuum line, take out hold down screw, lift off.

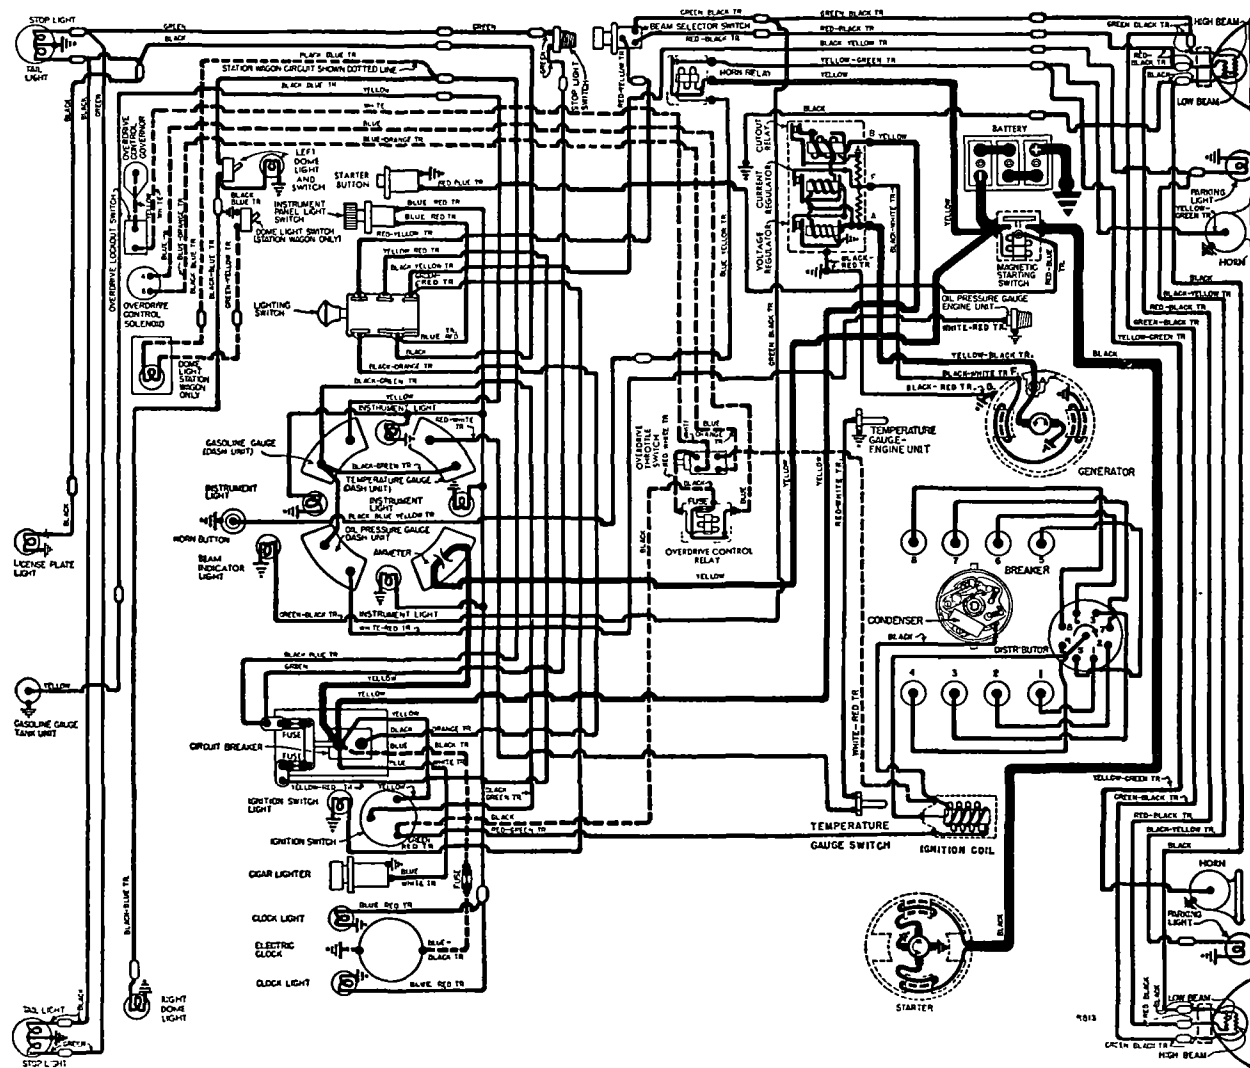

## IGNITION TIMING

Std. Setting ..... 2° BTDC.

**Crankshaft Pulley Mark—**Circular boss on rear edge of pulley with timing pin on right side of engine front cover.

**Timing—**With #1 piston at firing position and timing mark on pulley aligned with timing pin on front of engine, loosen hold-down screw on distributor, rotate distributor until contacts begin to open, tighten hold-down screw. Check spark plug connections (see diagram), see that rotor opposite #1 terminal in cap.

► **Timing (with Neon Timing Light)—CAUTION—**Vacuum line must be disconnected to avoid vacuum advance operating. Mark timing pin and pulley mark with white chalk. Connect timing light to #1 spark plug. Idle engine and adjust distributor (as directed above) until mark and timing pin aligned when light flashes.

## CARBURETOR

Holley-Ford No. 8BA-9510-A. Dual (double barrel) downdraft type with new vacuum passages for distributor operation.

See Carburetor Section for complete data.

Settings (Idle Setting, Float Level, and Accelerating Pump): See Tune-Up data.

Metering Jets—See Holley-Ford Jet Specification Table in Carburetor Section.

Fast Idle: Integral type. Operated by choke valve lever. No adjustment required.

## CARB. EQUIPMENT

Fuel Pump (std.): Ford No. 7RA-9350-C.

Optl. (Fuel-& Vacuum)—Ford No. 7RA-9350-E.

Pressure—3½-4½ lbs. (both types).

See Carburetion Equipment Section for complete data.

Gasoline Gauge: King-Seeley Electric.

Dash Unit—Ford No. 8A-9280 (K-S #42285).

Tank Unit (All exc. Sta. Wagon)—Ford No. 99A-9275-B (K-S #7540).

Tank Unit (Station Wagon)—Ford No. 01A-9275-A (K-S #7748).

See Carburetion Equipment Section for complete data.

Air Cleaner (std.—oil-wetted): Ford No. 8BA-9600-A3.

Optl. (oil bath)—Ford No. 8BA-9600-A1 or A2 (1 pt. capacity), 8BA-9600-A6 (1 quart capacity).

Servicing (oil-wetted type)—Wash filter assembly in cleaning fluid and re-oil when dry every 1000 miles.

Servicing (oil bath type)—Clean and re-fill sump (to level mark) with same grade oil used in crankcase at 1000 mile intervals. Occasionally wash filter in cleaning fluid.

## BATTERY

Ford No. 81A-10655-A. 6 Volt, 17 Plate, 100 Amp. Hr. Zero Capacity—300 amperes for 3.3 minutes. Five Second Voltage—4.2 volts.

Grounded Terminal—Positive (+).

Location—On left side in engine compartment.

Dimensions—L. 10½". W. 7⅞". H. 7¼".

## STARTER

Ford Model No. 7RA-11002. Armature No. 18-11005.

► Starter Motor Rusting Correction—See "Electrical System Notes" in Ford Shop Notes.

Drive—Bendix No. A1472 (Ford No. B-11350).

Rotation—Counter-clockwise at commutator end.

Brush Spring Tension—20-22 ounces.

Cranking Engine—100 RPM., 190-215 amperes.

### Performance Data

Torque	R.P.M.	Volts	Amperes
4 ft. lbs.	1070	4.6	200
8 " "	660	4.3	340
12 " "	300	3.65	465
14 " "	Lock	3.5	500

Starting Switch: Ford No. 21A-11450 Magnetic Switch mounted on left front fender apron and controlled by panel pushbutton switch Ford No. 6H-11500.

Removal: On right front face of flywheel housing cover. To remove, take off right engine splash pan (if used), free starter-to-oil pan bracket, take out 2 starter through bolts.

## GENERATOR

Ford No. 8BA-10002-A (less pulley and bracket).

Armature No.—Ford No. 8BA-10005-A.

2 brush type with current and voltage regulation.

Charging Rate Adjustment—None. See Regulator. Maximum Charging Rate—30 amperes, 7 volts, reached at approximately 20 MPH. Controlled by regulator and dependent on load and battery condition.

To Check Generator Output—Connect ammeter in series with charging line at regulator "ARM" terminal, connect short insulated jumper between generator "A" and "F" terminals (to short out regulator). Run engine at approximately 1500 RPM. and note ammeter reading. If generator output equals or exceeds rate output (below) generator performance is satisfactory. Remove jumper.

► CAUTION—Do not operate generator at higher speeds or in service with jumper connected between generator armature and field terminals. This jumper eliminates all regulator action.

### Performance Data

Amperes	Engine R.P.M.
30	1500

Rotation—Counter-clockwise at commutator end.

Brush Spring Tension—20-24 ozs.

Removal: On support secured to valve chamber cover by stud and nut, driven by belt in tandem with water pumps. To remove, loosen stud nut and disengage generator belt, take out capscrew in mounting strap, lift generator off support.

Generator Belt Adjustment: Loosen 2 bolts on fan mounting bracket, loosen generator support mounting stud nut, raise generator up until side movement on belt midway between generator and water pump pulleys is ½" (thumb and finger pressure), tighten stud nut. Adjust fan belt in similar manner, tighten 2 fan bracket bolts.

## REGULATOR

### Ford Numbers

Regulator	Generator	Amperes
51A-10505-A or C	8BA-10002-A (Std.)	30-33

Voltage-current 3-Unit types.

See Electrical Equipment Section for complete data.

NOTE—Separate ground wire extending to cowl must be in place when generator operated.

### Cutout Relay

Cuts In—6.4-6.9 volts with engine at normal operating temperature.

Cuts Out—8 ampere discharge current (maximum).

Contact Gap—.010" (armature against upper stop).

Air Gap—.017" between armature and core with contacts open.

### Voltage Regulator

Voltage Setting—7.0-7.5 volts with engine at normal operating temperature.

Checking & Adjustment—See Electrical Equip. Section.

Air Gap—.035" between armature and core with contacts just closed.

► CAUTION—Make certain gauge contacts armature and not brass rivet on underside of armature.

Contact Spring Tension—5 ounces minimum with contacts just opening.

### Current Regulator

Current Setting—30-33 amperes with engine at normal operating temperature.

Checking & Adjustment—See Electrical Equip. Section.

Air Gap—.035" between armature and core with contacts just closed.

Contact Spring Tension—5 ounces minimum with contacts just opening.

## LIGHTING

Headlamps: Ford "Sealed Beam" type.

See Electrical Equipment Section for complete data.

Adjustment—Aim upper beams straight ahead (hot spot centers 3" below lamp center height at 25 ft.).

Beam Indicator—Bulb between 50 and 60 on speedometer. Lighted with Upper Beam "on".

Direction Signal: Optl. See Electrical Equipment Section.

Direction Indicators—Right and Left indicators on lower edge of speedometer.

Direction Signal Flasher—Ford No. 8L-13350-B.

### Switches

Lighting—Ford No. 7RA-11654.

Beam Selector—Ford No. 7RA-13532.

Instrument—Ford No. 21C-13740.

Dome Light—Ford No. 8A-13752.

Dome Light (Sta. Wagon)—Ford No. 8M-13752-A.

Door Switches (Optl.)—Ford No. 8M-13713.

Stop Light—Ford No. 11A-13480.

### Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps	Sealed Beam	4030
Parking (no Dir. Sig.)	3	63
Front Dir. Sig. & Park	21-3	1154
① All Instrument	1½	55
Beam & Dir. Sig. Indicators	1	51
② Stop & Tail	21-3	1154
Dome & Trunk	6	81
Dome (Station Wagon)	6	82
Courtesy (Optl.)	6	82
Rear License	3	63
①—With "Black Light" Filters No. 8A-13593.		
②—Rear Direction Signal flashes Stop Light.		

## MISC. ELECTRICAL

CIRCUIT BREAKERS: Lighting (Headlights)—Ford No. 8A-12258-A. On bracket behind instrument panel together with two lighting fuses (see wiring diagram).

Convertible Top—Ford No. 51A-12250-A. 30 ampere. On hydraulic pump motor or on front of dash near convertible top control switch.

FUSES: Auxiliary Lights (Parking, Tail & Instrument)—14 ampere. On circuit breaker bracket behind instrument panel (see wiring diagram).

Dome & Stop Lights—14 ampere. Next to fuse listed above.

Clock—2 ampere. In clock feed wire.

Overdrive—30 ampere. On ignition terminal of overdrive relay (on dash under hood).

Direction Signal—15 ampere. In feed from ignition switch to flasher.

HORNS: Ford No. 51A-13832-A or B (High Pitch, Right Horn), No. 51A-13833-A or B (Low Pitch, Left Horn). Dual horns operated by relay. NOTE—"A" horns are 4.28" high, "B" horns are 4.14". Horns marked "HI" or "LO" on air columns.

Air Gap—.027-.029" for high pitch (right horn), .032-.034" for low pitch (left) for Sparks-Withington. NOTE—Air Gap for Auto-Lite type horns .040" HI, .050" LO.

Horn Current—13 amperes (high pitch), 14 (low). Horn Relay: Ford No. 7RA-13853-B. On dash.

► CAUTION—Use only Ford type relay No. 7RA-13853-B with TAN plastic cover. If Mercury relay No. 7RA-13853-A with Black plastic cover installed, shock at horn button may be felt when blowing horn.

Contact Gap—.015-.025".

Contact Closing Voltage—4 volts max.

CONTINUED N NEXT PAGE

## C NTINUED FROM PRECEDIN PAGE

## ENGINE

**ENGINE SPECIFICATIONS:** Own 8BA. Eight cylinder, "L" head, 90° Vee type with both cylinder banks and crankcase cast Enbloc.

Bore—3.187". Stroke—3.75".

Displacement—239 cu. ins. Rated HP—32.5.

Developed Horsepower—100 at 3600 RPM.

Compression Ratio—6.8-1 cast-iron heads.

Compression & Vacuum Reading—See Tune-Up.

**TIGHTENING TORQUES:** See Ford Shop Notes.

**CYLINDER SLEEVE:** Cast iron dry type cylinder sleeves furnished for replacement service.

**PISTONS:** 4-ring (1 below pin), dome head, aluminum alloy, steel strut, U-slot, cam ground type.

► **CAUTION—1949 Ford and Mercury Pistons or Rings are not interchangeable.**

Weight—13.12 ozs.

Removal—Pistons and rods removed from above.

Clearance—See Fitting Pistons.

**Replacement Pistons:** Std., .005", .020", .030", .040", .060" OS.

**Fitting Pistons:** Use .50" wide feeler stock of correct thickness (as listed below) inserted between piston and cylinder wall at right angles to pin to check clearance. Pull required to withdraw feeler 6-10 lbs. Feeler Thickness—.002" New Piston in New Plain Bore, .003" New Piston in New Sleeve, .004" New Piston in Worn Bore, .005" Worn Piston in Worn Bore.

**PISTON RINGS:** 2 compression, 2 slotted oil rings (lower oil ring below pin). Upper oil ring groove drilled with oil drain holes, lower groove slotted.

Ring	Width	End Gap	Side Clearance
Compr. (#1)	.0915-.0920"	.012-.017" <sup>①</sup>	.0015-.0035" <sup>②</sup>
Compr. (#2)	.0915-.0920"	.012-.017" <sup>①</sup>	.001-.004" <sup>③</sup>
Oil (#3, 4)	.1545-.1550"	.012-.017" <sup>①</sup>	.001-.004" <sup>③</sup>
Worn Limits	① .035" ② .0045" ③ .005"		

**Replacement Rings:** Snap type, Expander type, or Steel Section type ring sets furnished in the following sizes: Std., .020", .030", .040", .060" Oversize.

**PISTON PIN:** Diameter .7504" (maximum). Floating type (lock ring in piston at each end). Pin hole in connecting rod bronze-bushed. Pin Fit in Piston—.0005" (new), .0015" (worn limit). Pin Fit in Rod Bushing—.0002-.0005" (new), .0015" (worn limit).

**Replacement Pins:** Sizes and paint marks: Std. (green), .001" Oversize (blue), .002" OS (yellow).

**CONNECTING ROD:** Length 7". Weight 18.7 ozs.

Crankpin Journal Diameter—2.1390". Maximum wear limits—Out-of-round .0015", Taper .001".

► **Lower Bearing—Locked in (not floating type as used on earlier engines).** Steel-backed, copper-lead alloy lined, replaceable shells. Upper and lower halves interchangeable.

Clearance—.0005-.003" (new), .005" (worn limit).

► **NOTE—Replace bearing shells less than .0745" thick.** Sideplay—.006-.014" (new), .022" (worn limit).

**Bearing Adjustment:** None (no shims). Do not file caps. Replace bearings. Tang on bearing must engage groove in rod and cap.

► **NOTE—Self-locking connecting rod nuts used. Tighten to 40-45 ft. lbs. Palnuts not required.**

**Replacement Bearings:** Standard size and .002", .010", .020", .030", .040" Undersize.

**CRANKSHAFT:** 3 bearing with integral counterweights.

► **SLUDGE TRAPS—Crankpin throws equipped with sludge traps having removable plugs for cleaning. Always use new plugs if old plugs disturbed and peen or stake crankshaft to hold plugs in place securely.**

Journal Diameters—2.4990" (all bearings). Max. wear limits—Out-of-round .0015", Taper .001".

Bearings—Steel-backed, copper-lead alloy lined, replaceable shells. Upper and lower halves alike.

Clearance—.000-.003" (selective fit, crankshaft to turn free). Worn limit .005" maximum.

► **NOTE—Replace main bearing shells less than .0835" thick.**

**Bearing Adjustment:** None (no shims). Do not file caps. Replace bearings. Tang on bearing must engage groove in block and cap.

**Replacement Bearings:** Standard size and .002", .010", .020", .030" Undersize. Rear mains also furnished .015" Oversize in Overall Length for taking up end-play wear.

**End Thrust:** Taken by rear main bearing. Adjust by replacing bearing if endplay excessive.

Endplay—.002-.006" (new), .008" (worn limit).

**CAMSHAFT:** Three bearing. Helical gear drive. Distributor drive gear pressed on front end of shaft, oil pump drive gear on rear end.

Bearing Diameter—1.7985" (replace bearing if diameter greater than worn limit 1.8015").

Bearings—Steel-backed, babbitt lined bushings.

Clearance—.001-.002".

**Replacement Bearings:** Standard size and .010", .015" Undersize. Undersize bearings require finish reaming.

**End Thrust:** Taken by front end of camshaft and thrust surface on inner face of cylinder front cover. Adjust by replacing cover. Endplay—.007-.016".

**Timing Gears:** Helical cast aluminum camshaft gear bolted on camshaft, cast alloy iron crankshaft gear.

► **CAUTION—Camshaft gear teeth REVERSE (L.H.) providing one-way thrust to camshaft for silencing backlash.**

**Replacement Camshaft Gears—Std.** .008", .012" OS.

**Camshaft Setting:** Mesh marked tooth of crankshaft gear with marked space on camshaft gear.

**VALVES:** Head Diameter Stem Diameter Length

All Valves.....1.515".....3410"①.....4.8140"

Seat Angle Lift Stem Clearance

All Valves.....45".....292".....0015-.0035"②

Wear Limit—①—.3375". ②—.005" Int., .006" Exh.

► **NOTE—Valves are straight-stemmed type operating in one-piece valve guides.**

**Valve Seat Inserts—Used on all valves.**

**Valve Guides:** One-piece type positioned and retained by "C" washer. Inside diameter .344", Outside diameter 1.031". Length 2.20". NOTE—Rubber seal used on intake guide.

**Valve Lifters:** Barrel type operating in guide holes in cylinder block.

Diameter—.9992" (replace if worn to less than .9977"). Length limit after resurfacing 1.700".

Clearance—.0007-.0016" (new), .003" (worn limit).

**Valve Springs:** Coated springs used.

Spring Pressure—37-40 lbs. (closed), 78-80 (open).

Spring Test—37-40 lbs. at 2.125". Free length 2.41".

## VALVE TIMING

**Tappet Clearance:** .010-.012" Intake, .014-.016" Exhaust, Cold. No adjustment.

**Valve Timing:** See Camshaft Setting above.

**Intake Valves—Open at TDC. Close 44° ALDC.**

**Exhaust Valves—Open 48° BLDC. Close 6° ATDC.**

**Valve Timing Check—Intake valve opens at TDC.**

**Valve timing mark location on crankshaft pulley.**

## LUBRICATION

**Engine Oiling System:** Pressure to main bearings, connecting rod lower bearings, camshaft bearings, timing gears and distributor drive gear. Piston pins and valve lifters lubricated by splash. Oil pump mounted in crankcase at rear of engine.

**Crankcase Capacity—4 quarts (5 quarts when changing oil filter).**

**Normal Oil Pressure—45 lbs. at 30 MPH.**

**Oil Pressure Relief Valve:** In oil pump body. Not adjustable.

**Spring Tension—15 lbs. 2 ozs. to 15 lbs. 6 ozs. at 1.14".** NOTE—Cylinder block oil relief valve not used.

**Oil Pump:** Gear type (two types: one equipped with spur gears, second helical gears). In crankcase at rear of engine.

**Oil Filter:** On left cylinder head. Replace cartridge each 5000 miles or more often if required.

**Oil Filter Cartridge—Ford No. O1A-18662-A.**

**Oil Pressure Gauge:** King-Seeley Electric.

**Dash Unit—Ford No. 8A-9273.**

**Engine Unit—Ford No. 41A-9278.**

See Miscellaneous Section for complete data.

**Crankcase Ventilation:** Filter element in oil filler cap (inlet) with outlet pipe extending from top of engine down behind fan and out along left side.

**Servicing—Wash screen in cleaning fluid and wet with engine oil when dry at oil change period (2500 miles).**

## COOLING

**Cooling System:** Pressure type with relief valve in filler cap and two belt-driven pumps (one for each bank) with re-circulating by-pass.

**Capacity—21 quarts.**

**Pressure Valve—In radiator filler cap. Ford No. 26H-8100-B (AC #846740). Opens at 3½-4½ lbs.**

**Water Pumps:** Two used. Centrifugal, belt-driven packless type. Shaft mounted on pre-packed ball-bearing at front, and bushing next to seal. Oil cup provided for bushing lubrication.

► **CAUTION—WATER PUMP LUBRICATION: Oil cup provided on each pump which should be filled with SAE #20 engine oil when new and every 1000 miles. Use length of wire inserted in oil cup if necessary when oiling.**

See Water Pump Section for complete data.

**Fan Belt Adjustment—Loosen 2 fan mounting bracket bolts, raise fan up until side movement of belt midway between fan and crankshaft pulleys is ½".**

**Generator (& Water Pump) Belt Adjustment—See GENERATOR.**

**Thermostats:** Two used (one in each head water outlet). Ford No. 8BA-8575-B or 8RT-8575-A. Two makes used Standard-Thompson or Fulton-Sylphon.

**Setting (8BA-8575-B)—Starts to open 157-162°F.**

**Setting (8RT-8575-A)—Starts to open 148-153°F.**

**Temperature Gauge:** King-Seeley Electric.

**Dash Unit—Ford No. 8A-10883.**

**Engine Unit—Ford No. 8A-10990 (switch in right bank), No. 8A-10884 (reg. unit in left bank).**

See Miscellaneous Section for complete data.

## CLUTCH

Long Model 9½CF-TS, Ford No. 8A-7563. Single plate, semi-centrifugal, dry disc type.

See Clutch Section for complete data.

- Flywheel Rubbing on Housing Cover when Clutch Disengaged Correction—See "Clutch Notes" in Ford Shop Notes.

Facings—Thickness .125". Outside diameter 9½".

Pedal Adjustment: 1" free travel. Lock nut and adjusting nut at release lever end of release rod.

Removal: Remove transmission (see TRANSMISSION Removal below). Take off flywheel housing. Install wooden wedges between each release lever and cover to hold clutch in released position, take out 6 cover capscrews, lift assembly out.

## TRANSMISSION

Own Make. 3-speed, all helical gear type. Constant-mesh, synchro-mesh (Second & High), sliding gear (Low & Reverse).

See Transmission Section for complete data.

Transmission Control: Steering column mounted shift  
See Transmission Section for complete data.

Removal: Disconnect rear universal, slide propeller shaft out of transmission. Disconnect clutch, transmission and speedometer linkage. Support rear of engine and disconnect rear engine mounting from frame. Take out 4 transmission-to-flywheel housing capscrews and remove transmission.

## OVERDRIVE

Warner Model AS1-R10E (exc. Conv. & Sta. Wagon). Optl. equipment. Overdrive is solenoid operated type (no centrifugal pawls) with Governor Control and throttle operated "kick-down."

Warner Model AS3-R10E (Conv. & Sta. Wagon). Similar to AS1-R10E (above) except a special solenoid adapter plate used (re-locates solenoid under overdrive), "X" type frame used on these cars has insufficient clearance for solenoid in regular mounting position on side of overdrive.

See Transmission Section for complete data.

- Overdrive Noise Correction on Early Cars—See "Overdrive Notes" in Ford Shop Notes.

Solenoid—Ford No. 8M-6916, (8A-6916 for Conv. & Station Wagon).

Control Relay—Ford No. 8M-6915. On engine side of dash. 30 ampere fuse on ignition terminal.

Lock-Out Switch—Ford No. 8M-6917-A.

Throttle Kick-down Switch—Ford No. 8A-6918.

Governor—Ford No. 8M-6919.

Removal: Same as for Std. transmission (above) after disconnecting overdrive control cable and wiring.

## UNIVERSALS

Mechanics Type 2CR. Needle bearing type. 2 used.  
See Universals Section for complete data.

NOTE—Slipjoint formed by splined yoke of front universal engaging transmission mainshaft (or overdrive shaft). One-piece propeller shaft used.

►CAUTION (ALL CARS EXCEPT STATION WAGON)—Rear universal joint companion flange nut controls pinion bearing "pre-load" (must be adjusted whenever nut is loosened). See 1949 Ford Passenger Car Rear Axle for data.

## REAR AXLE

### PASSENGER CARS

Own Make. Semi-floating hypoid gear type with Hotchkiss drive with separate carrier. Axle ends flanged (no separate hub). Wheel bearings are sealed-ball pre-lubricated (no lubrication required).  
See Rear Axle Section for complete data.

Ratio—Standard: 3.73-1 (39-11). With overdrive: 4.10-1 (41-10). Optional: 3.54-1 (41-11).

Backlash—.005-.008". Screw adjustment.

- NOTE—Collapsible spacer used for pinion bearing "pre-load".

Removal: Disconnect rear universal. Remove axle shafts (see instructions below). Remove carrier from housing.

- CAUTION—Do not loosen universal joint companion flange nut (unless rear axle to be disassembled). This nut controls pinion bearing pre-load (must be adjusted whenever nut loosened).

Axle Shaft Removal: Remove wheel. Take off drum. Remove 4 axle retainer locking type nuts (work through opening in axle shaft flange). Use Puller No. 4235-P and pull shaft (do not disturb brake backing plate or damage wheel bearing oil seal). Replace one nut to secure backing plate.

Wheel Bearing Adjustment: None (sealed ball-bearing).

## REAR AXLE

### STATION WAGON

Own Make. Semi-floating, hypoid gear type with Hotchkiss drive (separate carrier not used). Axle ends flanged —(no separate hub). Wheel bearings are sealed-ball pre-lubricated (no lubrication required).

- NOTE—AXLE NOT SAME AS FORD PASSENGER CAR, similar to Mercury.

See Rear Axle Section for complete data.

Ratio (Standard)—3.91-1 (43-11).

Ratio (with Overdrive)—4.27-1 (47-11).

Backlash—.003-.008". Shim adjustment.

Removal: Raise rear of car. Disconnect rear universal. Remove axle shafts (see instructions above). Disconnect brake line at "T" on left side of axle housing, and hand brake cable. Disconnect shock absorbers, spring U-bolts and shackles. Remove axle housing assembly from car.

Axle Shaft Removal: Same as for Ford Pass. Car Rear Axle (above).

## SHOCK ABSORBERS

Front—Delco Model 1037-F or Houdaille No. H-180, Ford No. 8A-18045-A (Pass. Cars), Houdaille H-210, Ford No. 8A-18045-B (Station Wagon).

Rear—Delco Model 1031-R or Houdaille No. H-190, Ford No. 8A-18080-A (Pass. Cars), Houdaille H-200, Ford No. 8A-18080-B (Station Wagon).

Direct acting, hydraulic types. Two makes are used and are interchangeable.

- NOTE—Shock absorbers are permanently sealed and cannot be refilled or repaired.  
See Shock Absorber Section for complete data.

Rear Shock Absorber Installation—Lower tube has welded stone shield on lower end which must be installed toward front of car.

## FRONT SUSPENSION

Front Suspension: Independent, linked parallelogram type with coil springs, direct acting shocks, and front stabilizer.

See Front Suspension Section for complete data.

- Pitman Arm and Idler Arm Bracket Change—Requires 2 different Toe In Settings listed below. For identification of parts, see 1949 Ford in Front Suspension Section.

- CAUTION—Specifications listed below supersede earlier 1949 Ford Front End Specifications.

Kingpin Inclination—5° crosswise.

Caster—Positive ¼° to Negative ¾°. Threaded bushing adjustment at lower pivot pin.

Camber—Positive ¼° to Positive ¾°. Eccentric adjustment at upper pivot pin.

- Toe In—CAUTION: Two settings as follows:

1)—1/8" toe out to 3/16" toe out for cars built before March 1, 1949.

2)—1/16" toe in to 1/8" toe in for cars built after March 1, 1949.

Adjustment—Adjusting sleeve on outer end of each tie rod. Adjust equally.

## STEERING GEAR

Gemmer design (Model 300), Ford Make. Worm-&-Roller type.

See Steering Gear Section for complete data.

## BRAKES

Service: Ford-Bendix Hydraulic, Duo-Servo, Single Anchor type without eccentric adjustment. Hand lever applies rear wheel service brakes.

See Brake Section for complete data.

Wheel Cylinders—Diameter: Front wheel 1.128" (hone limit 1.132"). Rear Wheel: .878" (hone limit .880").

Drums—Diameter 10" (11" Sta. Wagon rear drums). Lining—Molded or Woven. Width 2¼" (front wheel), 1¾" (rear wheel). Thickness 3/16". Length per shoe: 11¾" (11 15/16" Sta. Wag. rear wheel shoes).

Clearance—.010" at each end of secondary shoe with primary shoe forced out against drum (adjusting screw in each wheel backed off 14 notches or "clicks" from point where shoes drag on drum).

Hand Brake: See Service Brakes (above).

- Hand Brake Linkage Change (for easier application) and Cable Interference Correction—See "Ford-Bendix Hydraulic" in Brake Section.

## MISC. MECHANICAL

Power Operated Convertible Top: Hydro-Lectric type (hydraulic actuation with motor-driven pump supplying oil under pressure for power cylinders).  
See Miscellaneous Section for complete data.

## HOOD ASSEMBLY

## 1947-48 MODELS

**HOOD REMOVAL:** Lift hood. At each hood hinge, remove two capscrews from inside hood and two additional capscrews from outside (on lower edge of hood), remove hood props if used, lift hood off.

**HOOD REPLACEMENT:** Place hood in position on hinges, install one inside and one outside capscrew in each hinge (use punch to align screw holes), then install remaining capscrews in each hinge, install hood props (first type hinge only), check hood alignment and adjust for proper fit by loosening hood hinge capscrews and shifting hood on hinges (screw holes are slotted to permit this adjustment).

**Hood Hinge Replacement Note:** Whenever hood hinges require replacement, install new type hinges with heavier coil springs and larger ( $\frac{3}{8}$ " ) mounting studs. Hood props not required with this hinge.

## TIGHTENING (TORQUE WRENCH) SPECIFICATIONS

## 1947-48 MODELS

**NOTE:**—Torque figures given below are for threads which are clean and dry. **CAUTION:**—If threads are oiled, reduce torque approximately 10%.

	Ft. Lbs.	In. Lbs.
Cylinder Head Bolts①.....	40-50	480-600
Spark Plugs .....	5-10	60-120
Con. Rod Bearing Bolts.....	40-45	480-540
Main Bearing Cap Bolts.....	85-95	1020-1140
Flywheel Mtg. Bolts .....	36-40	432-480
Camshaft Sprocket Bolts .....	35-40	420-480
Camshaft Retaining Nut.....	30-35	360-420
Timing Gear Cover Bolts.....	14-20	168-240
Filler Block Screws.....	14-16	168-192
Int. & Exh. Manifolds .....	31-35	372-420
Oil Pan Screws .....	10-14	120-168
Water Pump Mtg. Bolts.....	12-15	144-180
Water Outlet on Cyl. Head.....	20-25	240-300
Starter Mtg. Bolts .....	20-25	240-300
Generator Bracket Mtg. Bolts.....	31-35	372-420
Vibration Dampener Bolt.....	100-130	1200-1560
Engine Mountings .....		See Note
Steering Wheel Nut.....	10-15	120-180
Steering Gear Mtg. Bolts.....	25-30	300-360
Front Shock Mtg. Nuts.....	10-15	120-180
Rear Shock Mtg. Nuts.....	25-30	300-360
Rear Spring "U" Bolts.....	45-55	540-660
Wheel Mtg. Nuts or Bolts.....	85-90	1020-1080
Radiator Mtg. Nuts.....	4-7	48-84
Rear Axle Diff. Carrier.....	38-42	456-504
Rear Axle Shaft Nut②.....	160 Min.	1920

①—Tighten cold and recheck with engine at 150°.

②—Minimum Torque. Turn nut further to line up cotter pin holes in nut and shaft.

**Engine Mounting Torque Note:**—Tighten front and rear support insulator nuts (1/2-20-NF-3) to 38-43 ft.lbs. Tighten support insulator-to-frame nuts (front) and support insulator-to-crossmember nuts (rear) to 15-20 ft.lbs. Tighten rear support-to-transmission bolt to 18-23 ft.lbs.

**Palnut Tightening Note:**—Spin nuts down fingertight, then tighten additional  $\frac{1}{4}$ - $\frac{1}{2}$  turn to lock.

## CYLINDER HEAD

**CYLINDER HEAD INSTALLATION:** Use a Torque Indicating Wrench to tighten cylinder head bolts, tighten in correct sequence as shown in diagram. Heads should be tightened cold and rechecked after engine temperature reaches 150°F.

**Tightening Torque:** See Tightening Specifications.

## ENGINE REMOVAL

## 1947-48 MODELS

**ENGINE REMOVAL:** Proceed as follows:

1. Remove Hood (see Hood Assembly above).
2. Drain cooling system.
3. Disconnect windshield wiper hose at manifold (or at vacuum pump), disconnect fuel line at point where fuel pump flexible line connected to tubing at frame, disconnect exhaust pipe at manifold.
4. Remove Radiator (see Radiator removal below).
5. Remove Battery. Disconnect cables, lift out.
6. Disconnect Wiring. Disconnect ground cable near left front engine mounting, disconnect wiring at starter, generator, and distributor.
7. Remove Air Cleaner.
8. Disconnect Temperature Gauge by removing bulb from cylinder head (Frazer), disconnecting lead (Kaiser). Disconnect oil gauge by disconnecting line at flexible hose connection on left side of engine (Frazer), disconnecting lead at engine unit (Kaiser).
9. Disconnect throttle linkage at both cowl brackets and at carburetor throttle lever.
10. Remove Distributor. Disconnect spark plug leads and vacuum line at vacuum spark control unit, take out hold-down screw in advance arm, and lift off.
11. Free Front Engine Mountings by removing nuts.
12. Raise front end of car and support it securely on stands to provide access for following operations:
13. Disconnect clutch throw-out linkage and transmission control linkage at transmission case. On Overdrive cars, disconnect linkage and wiring.
14. Free Rear Engine Mountings from frame.
15. Disconnect propeller shaft at front universal.
16. Disconnect speedometer cable at transmission, drain transmission case.
17. Remove engine from chassis by attaching hoist to lifting bracket mounted on engine at #7 and #28 cylinder head bolts (see Cylinder Head diagram)

## ORIGINAL BORE &amp; PISTONS

## 1947-48 MODELS

**BORE & PISTON SIZES:** Engines originally equipped at factory with special oversize pistons may be identified by code letter following engine number:

"B"—Pistons are .002" Oversize.

"N"—Pistons are .020" Oversize.

"AB"—Pistons .002" Oversize. Main and connecting rod bearings Undersize (See Original Bearing Sizes).

"AN"—Pistons .020" Oversize. Main and connecting rod bearings Undersize (See Original Bearing Sizes).

"BX"—Pistons .002" Oversize. Main bearings are Undersize (see Original Bearing Sizes following).  
 "NX"—Pistons .020" Oversize. Main bearings are Undersize (see Original Bearing Sizes following).

## PISTONS

## 1947-48 MODELS

**PISTON IDENTIFICATION:** Two types of aluminum alloy pistons used which can be identified as follows:  
 ▶ **CAUTION:**—Piston weight different on each type.

**Strut Type Piston:**—Has wide strut embedded within skirt at each piston pin boss and drilled oil drain holes in both #3 and #4 ring grooves.

**T-Slot Type Piston:**—Has horizontal slot in lower (#4) ring groove and short vertical slot on one side of piston skirt. #3 oil ring groove has drilled oil drain holes.

## 1947-48 MODELS

**REPLACEMENT PISTONS:** See "Piston Identification" for types used. Each type piston furnished in following sizes:

## Kaiser-Frazer Part No.

Piston Size	Strut Type	T-Slot Type
Standard .....	200108	201947
.005" Oversize .....	200357	201949
.010" Oversize .....	200358	201950
.020" Oversize .....	200359	201951
.025" Oversize .....	202484	202487
.030" Oversize .....	200360	201952

▶ **CAUTION:**—Piston weight different on each type.

## PISTON RINGS

## 1947-48 MODELS

**REPLACEMENT RINGS:** Rings furnished as single rings (12 Compression, 12 Oil Rings required), or in complete sets (1 Set per car) as follows:

## Single Rings

Ring Size	Compression—Part No.	Oil
Standard .....	200111	200112
.010" Oversize .....	200361	200364
.020" Oversize .....	200362	200365
.030" Oversize .....	200363	200366

## Ring Sets

Ring Size	Cyl. Size ①	Part No.
Standard .....	Std. to .009" OS	203145
.020" Oversize .....	.010" to .029" OS	203146
.040" Oversize .....	.030" to .049" OS	203147
.060" Oversize .....	.050" to .069" OS	203148

①—Use ring indicated for oversize cylinders within this range (check End Gap).

## ORIGINAL BEARING SIZES

## 1947-48 MODELS

**MAIN & CONNECTING ROD BEARING SIZES:** Engines originally equipped with special undersize main and connecting rod bearings may be identified by code letter following engine number:

"A"—Main & Connecting Rod Bearings .010" Undersize.

"X"—Main Bearings .002" Undersize.

"AB"—Main & Connecting Rod Bearings .010" Undersize and Pistons Oversize (see Original Bore and Pistons).

"AN"—Main & Connecting Rod Bearings .010" Undersize and Pistons Oversize (see Original Bore and Pistons).

"BX"—Main Bearings .002" Undersize and Pistons Oversize (see Original Bore and Pistons).

"NX"—Main Bearings .002" Undersize and Pistons Oversize (see Original Bore and Pistons).

## CRANKSHAFT & MAIN BEARINGS

### 1947-48 MODELS

**FRONT MAIN BEARING CHANGE:** Two types of front main bearing used (flanged & unflanged). This bearing takes end thrust (see Endplay Adjustment).

1)—**Front Main Bearing (Flanged Type).** End thrust taken by flange on bearing.

2)—**Front Main Bearing (Not Flanged).** End thrust taken by thrust washer installed in front of bearing.

### FRONT MAIN BEARING ASSEMBLY

#### Flanged Type Bearing<sup>①</sup>

K-F Part No.	Bearing Std.	K-F Part No.	Thrustwasher
200070.....	" .002" US.	200065 ....	" .002" Shim
201928.....	" .004" US.	200067 .....	" .008" Shim
202062.....	" .010" US.	200068 .....	" .008" Shim
200337.....	" .010" US.	200066 .....	Thrust Plate

①—Original type Bearing Cap used with flanged bearings not furnished for service (use No. 202689).

#### Bearing without Flange

K-F Part No.	Bearing Std.	K-F Part No.	Thrustwasher
202686.....	" .002" US.	202685.....	" pins (3)
202687.....	" .010" US.	202684.....	Thrustwasher
202691.....	" .010" US.	200065 ....	" .002" Shim
202689.....	Bearing Cap	200067 .....	" .008" Shim
202690.....	" Cap Dowel	200068 .....	Thrust Plate

**Replacement Note—**Both types of front main bearings are interchangeable. Flanged type can be used to replace unflanged type by removing thrustwasher and dowel pins.

### 1947-48 MODELS

**CRANKSHAFT ENDPLAY ADJUSTMENT:** Requires removal of vibration dampener and crankshaft pulley, timing gear cover, timing chain and sprockets (remove as an assembly). NOTE—Endplay can be checked at flywheel (after clutch cover pan removed) without otherwise disturbing engine.

**Endplay Adjustment:** With crankshaft removed, remove thrustwasher and adjusting shims from end of crankshaft, measure total thickness of shims with a micrometer (note this figure), re-install shims and thrustwasher. Make up a piece of 2" diameter steel tube exactly 2 $\frac{7}{8}$ " long, install this tube on end of crankshaft, install and tighten vibration dampener washer and nut (NOTE—Use of this tube will make it unnecessary to install and remove pulley, vibration dampener, and sprocket while checking & adjusting endplay). Measure crankshaft endplay with a dial indicator set up on the timing chain endplate (force crankshaft forward and backward to check endplay). Add or remove shims from shim pack back of thrustwasher until endplay is .004-.006".

►**CAUTION—**Make certain that clearance exists between slinger on rear end of crankshaft and upper and lower filler blocks in rear end of crankcase.

### 1947-48 MODELS

**FRONT & REAR FILLER BLOCKS:** Lower filler blocks (front and rear) are bolted on lower face of crankcase to close oil pan opening (filler blocks must be removed to replace pan gasket). Rear filler blocks (additional upper filler block located in crankcase) are grooved for cork oil seals which bear on polished surface of crankshaft directly behind oil slinger. Filler blocks can be removed and replaced without disturbing crankshaft as follows:

**Front Filler Block (Lower) Servicing:** Remove by taking out mounting cap screws and timing gear cover cap screws which enter the filler block. When installing filler block, first install oil pan side gaskets (No. 200266), install filler block (use Perma-tex), install new end gasket (No. 200267) on block.

**Rear Filler Block (Lower) Servicing:** Same as for the lower front block (above) except for crankshaft oil seal (square cork gasket). Remove and discard old gasket, clean out gasket groove, install new cork gasket (No. 200095) with projection at ends even on both sides, install lower filler block after upper block has been installed.

**Rear Filler Block (Upper) Servicing:** Block is seated in groove in crankcase and can be "rotated" out without disturbing crankshaft after lower filler block removed. Remove and discard old oil seal gasket (square cork gasket), clean out gasket groove, install new cork gasket with projection at ends even on both sides. Coat surface of block which seats in crankcase with Perma-tex before installing block.

## CAMSHAFT & BEARINGS

### 1947-48 MODELS

**CAMSHAFT CHANGE:** Two different camshafts are used (camshaft changed when fuel pump mounting location changed) and can be identified as follows: Early Cars—Fuel pump mounted at rear of engine. Later Cars—Fuel pump mounted at front of engine.

#### Replacement Camshafts for All Engines

K-F Part No. 200113.....	Fuel Pump at Rear
K-F Part No. 203017.....	Fuel Pump at Front

### 1947-48 MODELS

**CAMSHAFT REMOVAL:** Camshaft can be removed with radiator off and engine in car as follows:

1. Remove timing gears (remove both gears and chain as an assembly). This requires removal of vibration dampener and pulley, timing gear cover.
2. Remove cylinder head.
3. Remove fuel pump.
4. Remove oil pan, oil pan return tube & oil pump.
5. Lift valves, using valve spring lifter tool C-482 (see Note below), block valves up by inserting a clothespin or block of wood under each valve head.
- NOTE—Remove right front tire and wheel and take off splash shield under fender for access to valves.
6. Block up Valve Lifters (lift each lifter up by hand and fasten in upper position with a wire).
7. Remove Camshaft Thrustplate by taking out two screws retaining thrustplate on crankcase.
8. Pull camshaft out through front of engine.

## VALVE SYSTEM

### 1947-48 MODELS

**VALVE LIFTER REMOVAL:** Lifters can be removed on some cars, without disturbing head, as follows: Remove splash shield under right front fender for access to valve compartment. Remove valve spring seat lock (retaining pin on early cars, split type locks on later cars). Turn tappet clearance adjusting screw down as far as possible, remove valve spring. Working through spark plug hole, lift valve up with a wire to provide clearance. Turn tappet clearance adjusting screw up free of the lifter barrel, tilt adjusting screw and locknut to clear valve stem and lift these parts out of the lifter barrel. Raise lifter barrel up until lower end clears hole in block, then tilt barrel and remove.

►**NOTE—**If lifter barrel cannot be removed in this manner, remove cylinder head and remove valve.

## OIL PAN REMOVAL

### 1947-48 MODELS

**OIL PAN REMOVAL:** Raise front end of car and support it securely on stands. Disconnect steering drag link at idler arm on frame, turn wheels to right and work drag link clear of oil pan. Drain oil, remove oil pan cap screws and lockwashers, slide pan to rear.

►**INSTALLATION NOTE—**Lower Filler Blocks (front and rear) must be removed to install new oil pan side gaskets. See "Front & Rear Filler Blocks" under Crankshaft & Main Bearings (above) for data.

## OIL PUMP

### 1947-48 MODELS

**OIL PUMP SERVICING:** Pump can be removed from engine (with oil pan off) by taking off retaining nut on stud on #3 main bearing cap and pulling pump straight down to disengage drive gear and distributor drive coupling. Service pump as follows:

**Disassembly—**Take out cotter pin and remove screen float assembly. Drive out pin holding drive gear on shaft (pin peened in place), remove gear. Take out lower cover cap screws, remove cover and gasket, lift out pump gears and shaft. Do not remove idler gear shaft unless shaft being replaced.

**Reassembly—**Install pump gears and shaft in housing, install lower cover using a new gasket. Position new drive gear on upper end of shaft so that clearance between gear and end of pump housing is .002-.004", drill 3/16" hole through pump shaft, install pin through gear and shaft, peen pin securely in place. Install oil screen float assembly.

**Oil Pump Installation:** Turn oil pump shaft so that driving tongue on upper end of shaft lines up with slot in distributor drive shaft (with pump held in proper position for installation on engine), install pump and tighten mounting nut.

►**CAUTION—**Check Ign. Timing after pump installed.

## RADIATOR

### 1947-48 MODELS

**RADIATOR REMOVAL:** Drain water, disconnect hose connections. Disconnect two tie rods at top of radiator. Remove nuts on mounting studs underneath radiator, lift radiator up and out.

## PROPELLER SHAFT

### 1947-48 MODELS

**CENTER SUPPORT BEARING:** Consists of a ball bearing on rear end of front propeller shaft mounted in rubber in steel plate mounted on frame.

**Removal & Disassembly—**Disconnect front and intermediate universal joints, take off nuts on center support frame mounting bolts, remove front shaft and support bearing assembly. Clamp front shaft in a vise, remove bolt, lockwasher, and plain washer on rear end of shaft (in universal joint companion flange), pull companion flange using Puller C-452. Pull support plate off bearing insulator. Use jaw type puller and clamp to pull bearing, shield, and insulator off shaft. Remove insulator with a clamp-on jaw type puller.

►**CAUTION—**Do not wash bearing in gasoline or solvent.

**Reassembly—**Press front bearing shield and new bearing on rear end of front propeller shaft, install new insulator and support plate (use liquid soap on outer surface of insulator to allow easy fit of insulator in support), rear bearing shield, universal joint yoke, plain washer, lockwasher, and bolt. Tighten bolt to 30-35 ft. lbs.

**Bearing Support Installation:** When installing front propeller shaft and support bearing assembly in car, install washers and insulators on each support stud on frame cross-member in the following order: Spacer, Bushing, Front Support Insulator (fluted end to rear), Front Support Washer (has large hole), Support Bearing Plate, Rear Support Insulator (fluted end forward), Rear Support Washer (has small hole), and nut (tighten to 15-20 ft. lbs.).

**HOOD REMOVAL & REPLACEMENT:** See "Hood Assembly" in Frazer Shop Notes.

## M DEL IDENTIFICATION

### STARTING SERIAL NUMBERS

Model	Serial Numbers
1947 Frazer F-47	F-47-001001 Up
1947 Frazer Manhattan F-47C	F-47C-1000001 Up
1948 Frazer F-485	F-485-001001 Up
1948 Frazer Manhattan F-486	F-486-001001 Up

**SERIAL NUMBER:** On left front door hinge post.

**Body Number Note:** Stamped on plate on left side of cowl or on right front face of dash.

**ENGINE NUMBER:** Stamped on pad on left front upper corner of engine block and on Engine Nameplate on left side of crankcase. NOTE—Numeral following Engine Model Designation (first part of Engine Number) indicates Engine Plant as follows: 4—Detroit, 8—Muskegon.

► **Engine Number Symbol (Special Bore & Bearing Sizes)** See "Original Bore & Pistons" & "Original Bearing Sizes" in Frazer Shop Notes. NOTE—Symbol consists of 1 or 2 letters following engine number

## TUNE-UP

**COMPRESSION PRESSURE:** 115-125 lbs. (6.86-1 Heads). 120-130 lbs. (7.3-1 Heads) at cranking speed of 140 RPM. (engine hot, all plugs out, throttle wide open). All cylinders must be equal within 10 lbs.

► **NOTE—7.3-1 Heads marked by "73" stamped on Head directly above engine number pad on block.**

**VACUUM READING:** 17½" steady idling at 550 RPM.

**FIRING ORDER:** 1-5-3-6-2-4.

**SPARK PLUG GAPS:** .032"

Plug Type—Auto-Lite A-5 (normal driving), A-7 (for short runs or to correct hard-starting in cold climates). 14 mm. metric type.

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.020" (.018-.022").

Cam Angle or Dwell—38° closed, 22° open.

Breaker Arm Spring Tension—17-20 ozs.

Automatic & Vacuum Advance—See Distributor.

**IGNITION TIMING:** TDC. (at Top Dead Center).

Timing Procedure—See Ignition Timing.

Timing Mark—Mark "DC" on flywheel (first cars), on vibration dampener (beginning Eng. No. 17160).

Octane Selector Setting—Set for slight ping when accelerating with wide open throttle.

**CARBURETION:** See Carburetor & Carb. Equipment.

Idle Setting—¾-1¼ turn open—one screw (W1 Carb.), 1¼-2¼ turns open—one screw (W1 Carb.), 1-1¾ turns open—2 screws (WCD Carb.). Turn screws out for richer mixture.

Idle Speed—550 RPM.

Float Level (W1 Carb.)—5/16" (610S), ¾" (622S with first Float and Inlet Valve), ½" (622SA, SB & 622S with late type Float and Inlet Valve). Measure from top of projection on bowl cover to top of soldered seam on free end of float with bowl cover assembly inverted.

Float Level (W1)—½" from top of float at free end to gasket seat on cover.

Float Level (WCD Carb.)—9/64" (685S with first type Inlet Valve), 1/16" (685S & 685SA with later type Inlet Valve) from top of each float to gasket seat on cover with valve closed (bowl cover assembly inverted).

**Accelerating Pump:** Lower hole (medium) Normal. NOTE—Pump on 574S has no seasonal adjustment.

**Fuel Pump Pressure:** 3½-4½ lbs. (for pump mounted at rear of engine), 3-4¼ lbs. (pump mounted at front of engine).  
► **CAUTION—Pump pressure must not exceed 4½ lbs.**

**MANIFOLD HEAT CONTROL:** Automatic thermostatic type. See that valve operates freely.

► **VALVE TAPPET CLEARANCE:** CAUTION—Two settings used.

Before Eng. No. 10769—.010" Int., .014" Exh. Cold.

After Eng. No. 10769—.014" All Valves, Cold.

NOTE—Remove splash shield under right front fender for convenience in adjusting valves.

Valve Timing Check—See Valve Timing.

**STARTING:** See Battery, Starter, Generator, Regulator.

## IGNITION

**IGNITION SWITCH:** Douglas or Mitchellock. Frazer No. 201354 (Before Frazer No. F47-36877, Manhattan No. F47C-1033604), No. 203186 (After Above Nos.). Lock Cylinder—Kaiser-Frazer No. 201898 (with key).

**COIL:** Auto-Lite Model IG-4093. On left side of engine opposite distributor.

**Ignition Current:** 3 amperes idling, 5 amperes at 6.4 volts (stopped).

**CONDENSER:** Auto-Lite No. IG-2671K.

Capacity—.20-.25 microfarad.

**DISTRIBUTOR:** Auto-Lite Model IGS-4211. Full automatic advance type with auxiliary vacuum spark control and octane selector adjustment.

Breaker Gap—.020" (.018-.022").

Cam Angle—38° closed, 22° open.

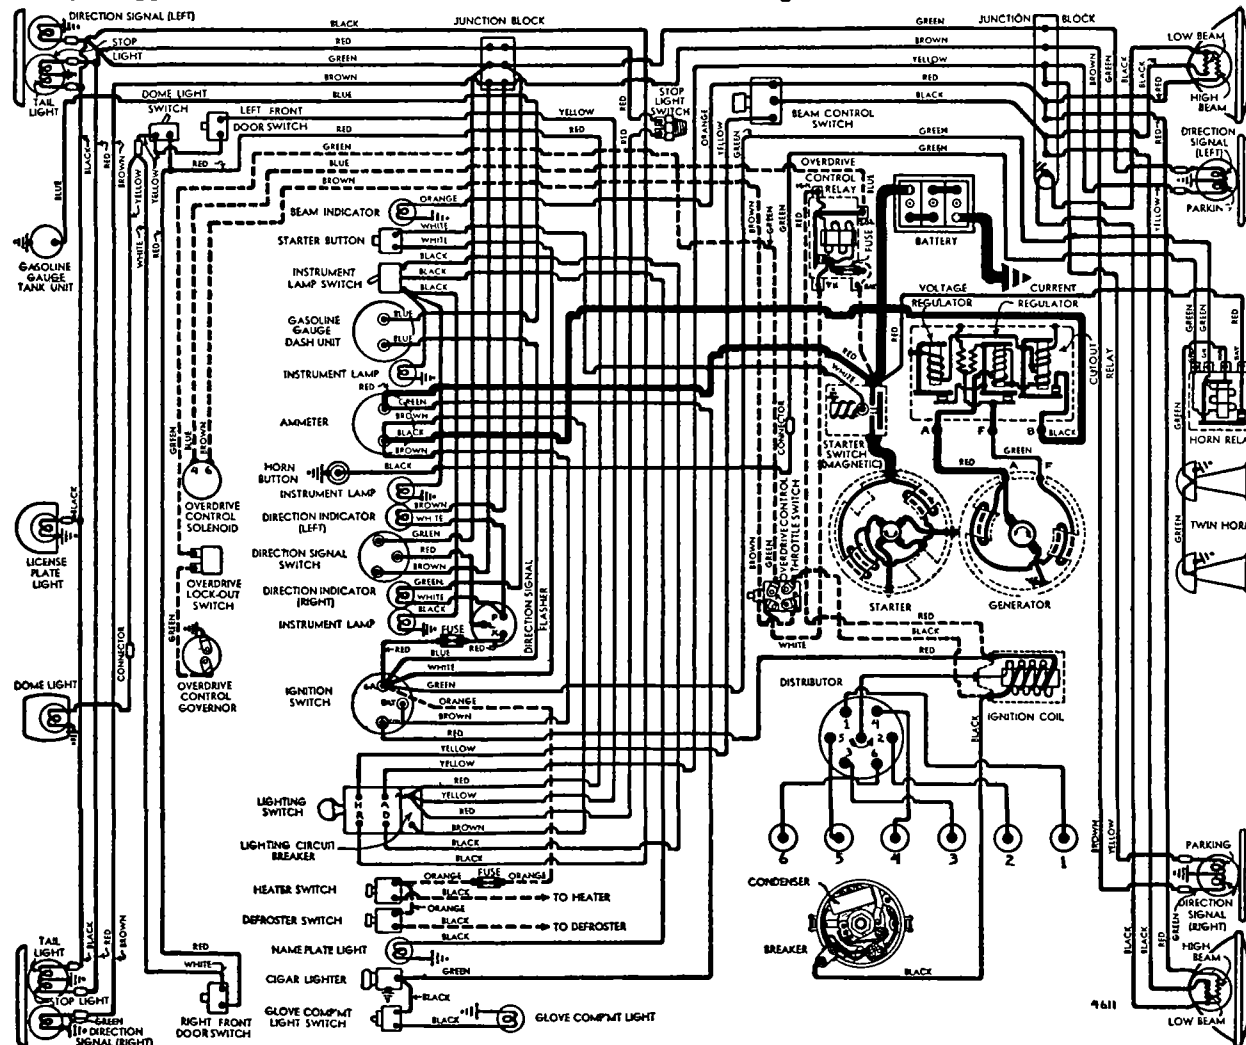

Breaker Arm Spring Tension—17-20 ounces.

Rotation—Counter-clockwise viewed from above.

### Automatic Advance

Distributor		Engine	
Degrees	RPM.	Degrees	R.P.M.
Start.....	350	0.....	700
1.....	365	2.....	730
3.....	400	6.....	800
7.....	1150	14.....	2300
10.....	1700	20.....	3400

**Octane Selector:** Manual adjustment at distributor providing 10° advance and retard. See Ignition Timing.

**Vacuum Spark Control:** Auto-Lite (integral type). Linked directly to breaker plate. Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle when spark retarded by return spring in unit.

Vacuum Advance		
Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start.....	0°	8"
4°	8°	11¼"
7.5°	15°	14"

**Distributor Removal:** On cylinder head between #4 and #5 cylinders. To remove, disconnect vacuum line, take out hold-down screw in advance arm.

## IGNITION TIMING

**Std. Setting**..... At TDC.  
**TIMING MARK NOTE**—Timing mark located on flywheel (before Eng. No. 17160), on vibration dampener (Eng. No. 17160 up). Consists of "DC" mark or "0" mark at top dead center with 1° graduations. **Timing (with Timing Light C-693)**—Mark "DC" or "0" top dead center mark on flywheel (before Eng. No. 17160), on vibration dampener (Eng. No. 17160 Up) with chalk or white paint. Connect timing light to #1 spark plug terminal and direct light at timing mark. Idle engine at 400 RPM. (back off throttle stopscrew to decrease normal idle speed of 550 RPM.). Loosen hold-down screw in advance arm, center screw in slot, tighten hold-down screw. Loosen clampscrew in end of arm under distributor, rotate distributor until timing mark appears in line with pointer, tighten clampscrew. Check octane selector setting.

► **CAUTION**—Reset engine idling speed at 550 RPM.  
**Octane Selector Setting**—Set for slight ping when accelerating with wide-open throttle. To adjust, loosen hold-down screw in advance arm, rotate distributor clockwise (if no ping noted), counter-clockwise (if ping too severe).

## CARBURETOR

### CARTER WA-1

Carter WA1 Type 622SB superseding 622S & 622SA (All Models). 1¼" Single Barrel, Downdraft type

► **NOTE**—622S carburetor can be converted to 622SA by installing new Float and Inlet Valve assembly and changing float level.  
*See Carburetor Section for complete data.*

**Settings (Idle Setting, Float Level, and Accelerating Pump):** *See Tune-Up data.*

**Metering Rods & Jets**—*See Carter Jet Table in Carburetor Section.*

**Fast Idle (WA1 Carburetors):** Carter Single Barrel type.

*See Carburetion Equipment Section for data.*  
**Setting**—¾" clearance between choke valve and air horn (Gauge T109-85) with throttle valve closed and stopscrew against (not on) first step of fast idle cam. Adjust by bending connector link at lower offset (Tool T109-41).

**Automatic Choke (WA1 Carburetors):** Carter Climatic Control (Single Carburetor Type).

*See Carburetion Equipment Section for complete data.*  
**Setting**—Centered (coil housing at index mark).

## CARBURETOR

### CARTER WCD

Carter WCD Type 685S superseded by 685SA (Optl. on Manhattan F-486). 1¼" Dual (double barrel), Downdraft type with Fast Idle and Climatic Control.

► **NOTE**—685S carburetor can be converted to 685SA by installing new intake Needle & Valve Assembly and resetting float level to 685SA specifications.  
*See Carburetor Section for complete data.*

**Settings (Idle Setting, Float Level, and Accelerating Pump):** *See Tune-Up data.*

**Metering Rods & Jets**—*See Carter Jet Table in Carburetor Section.*

**Fast Idle (WCD Carburetors):** Carter Dual (WCD) type.

*See Carburetion Equipment Section for complete data.*  
**Setting**—.016" throttle opening with choke valve held closed and throttle lever stopscrew backed off

**Automatic Choke (WCD Carburetors):** Carter Climatic Control (Dual Carburetor Type).

*See Carburetion Equipment Section for data.*

**Setting**—Centered (coil housing at index mark).

## CARBURETOR

### CARTER W1

Carter W1 Type 574S. 1¼" Single Barrel, downdraft type with manual choke.

**NOTE**—This carburetor used for part production starting with following numbers: F-47 30,770; F-47C 1021118.

*See Carburetor Section for complete data.*

**Settings (Idle Setting, Float Level, and Accelerating Pump):** *See Tune-Up data.*

**Metering Rods & Jets**—*See Carter Jet Table in Carburetor Section.*

## CARB. EQUIPMENT

**Air Cleaner:** AC. Oil-bath type. Kaiser-Frazer No. 200618 (All models with WA1 or W1 Carbs.), No. 203372 (F-486 Manhattan with WCD Carb.).

**Servicing**—Empty and clean reservoir, wash cleaner in kerosene, refill to indicator line with approx. 1 pint SAE No. 50 engine oil (No. 20 for below freezing tem.) at 1000 mile intervals or when engine tuned

**Fuel Pump (Early type—mounted at rear of engine):** AC No. 1539057, K-F No. 200281, Diaphragm type.

► **CAUTION**—Install this pump with rocker arm OVER camshaft eccentric.

*See Carburetion Equipment Section for data.*

**Pressure**—3½-4½ lbs. maximum.

**Fuel Pump (Later type—mounted at front of engine):** AC No. 1539073 (K-F No. 201509) Diaphragm type fuel pump or AC No. 1539074 (K-F No. 202319) combination Fuel-and-Vacuum Pump.

**Replacement Pump**—AC No. 574 (for 1539073), No. 582 (for 1539074 fuel-and-vacuum pump).

► **CAUTION**—Install these pumps with rocker arms UNDER camshaft eccentric.

*See Carburetion Equipment Section for data.*

**Pressure**—3-4¼ lbs.

**Gasoline Gauge:** Auto-Lite electric type.

**Dash Unit**—A-L No. NG-11104D, Frazer No. 200471.

**Tank Unit**—A-L No. NG-10987T, Frazer No. 200488.

*See Carburetion Equipment Section for data.*

## BATTERY

**Auto-Lite Type 1M-100D.** 6 Volt, 15 Plate, 105 Ampere Hour capacity (20 hour rate).

**Grounded Terminal**—Positive (+) terminal grounded at left front engine support. Engine ground cable connected at same point.

**Location**—In engine compt. on left side.

## STARTER

**Auto-Lite Model MAW-4043.** Armature MAW-2128.

**Drive**—Barrel type Bendix Drive No. A1792.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—42-53 ozs. (new brushes).

### Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	4900	5.5	65
2.75 "	1480	5.0	200
5.75 "	820	4.5	300
8.50 "	400	4.0	400
11.55 "	110	3.5	500
18.0 "	Lock	4.0	670

**Starting Switch:** Auto-Lite Model SS-4001 magnetic switch. Mounted on starter and controlled by push-button on instrument panel.

*See Electrical Equipment Section for complete data.*

**Removal:** Flange mounted on left front fac. of fly-wheel housing. To remove, disconnect cables, take out flange mounting screws.

## GENERATOR

**Auto-Lite Model GDZ-4818A.** Armature GDZ-2006F. Two brush type with voltage and current regulation.

**Maximum Charging Rate**—35 amperes, 8.0 volts, 1900 RPM. or approximately 20 MPH.

**Charging Rate Adjustment**—None (see Regulator).

Cold Performance Data			Hot		
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	925	0	6.4	1000
5	6.65	1060	5	6.65	1150
10	6.85	1200	10	6.85	1290
15	7.05	1340	15	7.05	1430
20	7.3	1480	20	7.3	1590
25	7.55	1620	25	7.55	1750
30	7.8	1760	30	7.8	1980
35①	8.0	1900	35	8.0	2250

①—Current Regulator setting. See Regulator data.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—35-53 ozs. (new brushes).

**Field Current**—1.60-1.78 amperes at 6.0 volts.

**Motoring Current**—4.16-4.60 amperes at 6.0 volts.

**Removal:** Pivot mounting at left front of engine. To remove, disconnect leads, take out clamp bolt and pivot bolts. **NOTE**—Remove battery for access.

**Belt Adjustment:** ⅜" belt deflection midway between generator and fan pulleys (adjust by pulling generator out with 15 lb. force with all mounting bolts loose).

## REGULATOR

**Auto-Lite Model VRP-4004F-2.** Vibrating type Voltage and current regulators with Cutout Relay.

*See Electrical Equipment Section for complete data.*

**NOTE**—Regulator cover sealed. Warranty void if seals broken.

### Cutout Relay

**Cuts In**—6.4-7.0 volts (set to 6.4-6.6 volts).

**Cuts Out**—4.1-4.8 volts (approx. 4-6 amps. disch.).

**Contact Gap**—.015" minimum.

**Air Gap**—.031-.034" with contacts open (check at hinge end of core).

### Voltage Regulator

**Setting**—7.2-7.5 volts at 70°F. *See Electrical Equipment Section for settings at other temperatures.*

**Checking (without breaking seal) & Adjustment**—*See Electrical Equipment Section.*

**Contact Gap**—.012" min. (armature against stop pin).

**Air Gap**—.048-.052" with contacts just opening.

### Current Regulator

**Setting**—34-36 amperes (marked '35' on the cover). **Checking (without breaking seal) & Adjustment**—*See Electrical Equipment Section.*

**Contact Gap & Air Gap**—Same as Voltage Regulator.

CONTINUED N NEXT PA E

## CONTINUED FROM PRECEDING PAGE

## LIGHTING

**Headlamps:** Hall "Sealed Beam" type. Upper and lower beams controlled by beam selector switch.

See *Electrical Equipment Section* for complete data.

**Adjustment:** Aim upper beam straight ahead (hot spot center 3" below lamp center height at 25 ft.).

**Beam Indicator:** Red jewel on left side of instrument panel (above starter button). Lighted when upper (country beams) in use.

**Direction Signal:** Mitchell (United Specialties) type. See *Electrical Equipment Section* for complete data.

**Direction Indicators:** Right and Left indicator lights above instrument dials. Lighted when direction signal on same side of car in operation.

## Switches

**Lighting:** Kaiser-Frazer No. 200819.

**Beam Selector:** Kaiser-Frazer No. 200863 (Frazer before No. F485-1838), No. 201605 (Frazer after above Nos. & All Manhattans).

**Direction Signal:** Kaiser-Frazer No. 201467 (Frazer before No. F485-1838), No. 202692 (Frazer after above Nos. & All Manhattans).

**Instrument (Rheostat Type):** K-F No. 200821.

## Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps	Sealed Beam	4030

## MISC. ELECTRICAL

**LIGHTING CIRCUIT BREAKER:** Thermostatic type. On back of lighting switch.

**FUSES:** Clock—2 ampere. In clock lead.

Overdrive—20 amperes. On relay on dash.

**Direction Signal:** 9 ampere. In flasher lead under instrument panel to left of steering column.

**HORNS:** Auto-Lite. Model HT-4021 or HT-4023 (Low Note), HT-4022 or HT-4024 (High Note). Twin horns.

**Horn Relay:** Auto-Lite Model HRL-4101. Relay connected through ignition switch (horns operative only with ignition switch "on").

**Contacts Close:** 1.5-3.0 volts (seal to core with 4.0 volts maximum).

**Contacts Open:** .5 volt min. (open from seal).

**Contact Gap:** .026". **Air Gap:** .016-.020" (armature air gap with contacts closed but not sealed), .015-.018" (between armature leg and yoke with armature sealed to core).

## ENGINE

**ENGINE SPECIFICATIONS:** Own (Continental). Six Cylinder, "L" head type.

**Bore:** 3 5/16". **Stroke:** 4 3/8".

**Displacement:** 228.2 cu. ins. **Rated HP:** 26.3.

**Developed Horsepower:** 100 at 3600 RPM.

**Compression Ratio:** 6.86-1 (First Cars), 7.3-1 (All Cars after Eng. No. 304305—Detroit, 66125—Muskegon).

**NOTE—7.3-1 Heads marked by "73" stamped on left front directly above engine number on block.**

**Compression & Vacuum Reading:** See *Tune Up data*.

**ORIGINAL BORE & BEARING SIZES:** See *Frazer*

*Shop Notes.*

**TIGHTENING TORQUES:** See *Frazer Shop Notes.*

**CYLINDER HEAD INSTALLATION:** See *Frazer Shop Notes.*

**ENGINE REMOVAL:** See *Frazer Shop Notes.*

**PISTONS:** Two types used. Aluminum alloy, Cam-ground, Tin-plated, strut type with split skirt, or T-slot type. Length 3 9/16" (both types).

**NOTE:** Pistons can be identified by drilled oil drain holes in fourth ring groove and strut within skirt at each pin boss (Strut Type), or by horizontal slot in fourth ring groove and short vertical slot on one side of skirt (T-slot Type).

► **CAUTION—Piston weight different on each type.**

**Weight:** 15.58 ozs. (strut type), 14.28 ozs. (T-slot). **Clearance:** .0255-.0315" (Top Land). See *Fitting new pistons.*

**Removal:** Pistons and rods removed from above.

**Fitting New Pistons:** Use .0015" feeler stock ½" wide inserted on side opposite slot. Pull to withdraw feeler must be 5-10 lbs.

**Replacement Pistons:** See *Frazer Shop Notes.*

**Installing Pistons:** Slot in skirt toward left or away from camshaft (all types). **NOTE:** On pistons marked by arrow on head, arrow toward front of car.

**PISTON RINGS:** Two compression, two slotted oil rings, all above pin. Third ring groove drilled for oil drainage (all types), fourth groove drilled (strut type pistons), slotted (T-slot pistons).

Ring	Width	End Gap	Side Clearance
Compr. (#1)	...0925-.0935"	...008-.016"	...0025-.004"
Compr. (#2)	...0925-.0935"	...008-.016"	...0015-.0035"
Oil (#3, 4)	...1550-.1545"	...008-.016"	...001-.0025"

**Installing Rings:** Side marked "TOP" (compression rings) upward.

**Replacement Rings:** See *Frazer Shop Notes.*

**PISTON PIN:** Diameter—55/64". Length—2 13/16". Floating type, with lock ring at each end.

**Pin Fit in Piston:** Tight fit (— .0003" clearance), or push fit with piston heated to 212°F. (heat piston in water at 212°F. to install new pins).

**Pin Fit in Rod Bushing:** +.0003" clearance. When installing oversize pins or new bushings, ream bushings for this clearance with DD-82-2 Reamer (used also to ream piston pin bore in piston).

**Replacement Pins:** Std. size and .003", .005" Oversize.

**CONNECTING ROD:** Length—7". Weight—29.6 ozs. **Crankpin Journal Diameter:** 2.0619-2.0627".

► **CAUTION—Special bearing size used in some engines.**

See *"Original Bearing Sizes" in Frazer Shop Notes.*

**Lower Bearing:** Removable steel-backed, babbitt-lined type. No shims.

**Clearance:** .0005-.0023". **Sideplay:** .006-.010".

**Bearing Adjustment:** None. Replace bearings. Do not file rods or bearing caps.

**Replacement Bearings:** Furnished Std. Size and .001", .002", .010", .012" Undersize.

**Installing Rods:** Rods and bearing caps marked. Install with marks together and toward camshaft in same order as when removed. Oil spray hole in lower end of rod toward camshaft. **NOTE:** Lower bearings offset with narrow side of rod toward nearest main bearing (#1, 3, 5 toward front; #2, 4, 6 toward rear of engine).

**CRANKSHAFT:** Four bearing, counterweighted type with vibration dampener on forward end.

**Journal Diameters:** 2 3/8" all bearings.

► **CAUTION—Special bearing size used in some engines.**

See *"Original Bearing Sizes" in Frazer Shop Notes.*

**Bearings:** Removable, steel-backed babbitt-lined.

**Clearance:** .0015-.002".

**Bearing Adjustment:** None (no shims). Replace bearings. Do not file bearing caps. Upper main bearing shells can be "rotated" out by installing tool KF-8 in crankshaft journal hole (lug on tool engages edge of bearing when crankshaft rotated).

**Filler Block (Front & Rear) Removal & Installation:** See *"Crankshaft & Main Bearings" in Frazer Shop Notes.*

**Replacement Bearings:** Furnished Std. size and .002", .004", .010" Undersize. **NOTE:** Two types of #1 bearings (flanged & unflanged). See *Endplay data.*

**End Thrust:** Taken by front (#1) bearing (special thrustwasher used with unflanged bearings). Controlled by shims installed between bearing journal and thrustwasher. **Endplay:** .004-.006".

**Endplay Adjustment:** See *"Crankshaft & Main Bearings" in Frazer Shop Notes.*

**CAMSHAFT:** Four bearing. Two-sprocket chain drive. **NOTE:** Two different camshafts used due to relocation of fuel pump. Camshaft No. 200113 (first cars—pump at rear), No. 203017 (later cars—pump at front).

**Journal Diameters:** #1, 1 7/8"; #2, 1 13/16"; #3, 1 3/4"; #4, 1 1/4".

**Bearings:** Steel-backed, babbitted bushings.

**Clearance:** .002-.004".

**Bearing Adjustment:** None. Replace bushings with camshaft removed.

**End Thrust:** Taken by thrust plate on front of engine (between front bearing journal and camshaft sprocket). **Endplay:** .003-.007".

**Camshaft Removal:** See *"Camshaft & Bearings" in Frazer Shop Notes.*

**Timing Chain:** Non-adjustable type. Width 1". Pitch .500", Length 23" or 46 links.

**Camshaft Setting:** Mesh chain with 9 links (or 10 link pins inclusive of pins opposite marks) between marks on sprockets with #6 piston at top dead center on compression stroke.

VALVES	Head Diameter	Stem Diameter	Length
Intake	1 33/64"	.3414-.3406"	5 3/16"
Exhaust	1 21/64"	.3395-.3387"	5 3/16"

	Seat Angle	Lift	Stem Clearance
Intake	30°	.3481"	.0008-.0026"
Exhaust	45°	.3315"	.0032-.0050"

**NOTE:** Valves with drilled stem (for lock pin) used on first cars, valves with grooved stem (for split type locks) used on later cars.

**Valve Guides:** Pressed in block. Replace when stem clearance exceeds maximum (above). Ream new guides for correct clearance using Reamer C-249.

**Valve Guide Installation:** Use Driver DD-849. Drive old guide down and out, drive new guide down into place (same height as old guide with mark on driver stem in line with top face of block). **NOTE:** Tapered end of guide must be upward.

**Valve Springs:** Check spring with tester C-647. Pressure should be 101 ± 3 lbs. at 1 3/8". Spring free length 1 15/16".

	Spring Pressure	Length
Valve Closed	51 lbs.	1 43/64"
Valve Open	113 lbs.	1 5/16"

**Valve Lifters:** Barrel type. **NOTE:** Lifters can be removed (some engines only) without disturbing cylinder head. See *"Valve System" in Frazer Shop Notes.*

**Clearance:** .0005-.0018". With correct clearance, lifter should rotate in bore with slight drag. Service by installing oversize lifter.

**Replacement Lifters:** Furnished Std. size and .0005", .001", .0015", .002" Oversize.

**VALVE TIMING**

- **Tappet Clearance:** **CAUTION**—Two settings used:  
Before Eng. No. 10769—.010" Int., .014" Exh. Cold.  
After Eng. No. 10769—.014" All Valves, Cold.
- Valve Timing:** See Camshaft Setting above.
- Intake Valves**—Open 10° BTDC, Close 60° ALDC.
- Exhaust Valves**—Open 55° BLDC, Close 10° ATDC.
- Valve Timing Check**—With tappet clearance set at .014" (running clearance), #1 exhaust valve should close with piston 10° or .045" after top dead center with the ten-degree mark after the dead center mark "DC" at indicator in flywheel housing inspection hole (before Eng. No. 17160). Beginning with Eng. No. 17160, marks located on dampener.

**LUBRICATION**

- Lubrication System:** Pressure to crankshaft, connecting rod, camshaft bearings, exhaust valve lifters, timing chain. Oil pump located in oil pan.
- Crankcase Capacity**—5 qts. (refill), 5½ (dry).
- Normal Oil Pressure**—35 lbs., 2000 RPM., 30 MPH.
- Oil Pressure Regulator**—Under plug on right side of crankcase between #4 & #5 cylinders. Opens at 35 lbs. Adjustable by adding or removing washer, No. 200272, between end of spring and plug.
- Oil Pan Removal:** See *Frazer Shop Notes*.
- Crankcase Ventilation:** Filter element in oil filler cap (air intake). Outlet pipe located on front valve cover plate on right side of engine.
- Oil Pump:** Gear Type. In crankcase.
- Oil Pump Servicing**—See *Frazer Shop Notes*.
- Oil Filter:** Replace cartridge at 10,000 mile intervals or more often if required by operating conditions.

**COOLING**

- Cooling System:** Sealed system (relief valve in filler cap) with positive circulation and thermostatic control. **NOTE**—Radiator changed—see Radiator.
- Capacity (First 22" Radiator)**—15 qts. (14 qts. at driving level). (Later 17" Radiator) 13½ qts. (13 qts. at driving level).
- Pressure Valve**—AC. No. 846740 (Radiator Filler Cap). Opens at 3¾ lbs. (3¼-4¼ lbs.).
- Radiator:** Two types used as follows:  
**First Cars**—No. 200445 (22" wide). Service by installing later type (No. 202906) and installing Radiator Shroud Side Panel Extension No. 203100 (two required), using No. 576 screws (10 required).  
**Later Cars**—Radiator No. 202906 (17" wide).  
**Radiator Removal**—See *Frazer Shop Notes*.
- Water Pump:** Centrifugal type with ball bearing shaft. See *Water Pump Section* for complete data.
- Belt Adjustment**—See *Generator Belt Adjustment*.
- Thermostat:** Kaiser-Frazer No. 200160 (Std.), No. 202349 (for Permanent Anti-freeze only). In water outlet elbow on cylinder head.
- Setting (Std. type)**—Begins to open at 148-155°F. Fully open at 173°F.
- Temperature Gauge:** Auto-Lite No. H-11103, Frazer No. 200453. Not electric.

**CLUTCH**

- Borg & Beck**.....Model 9A7  
**Auburn (Some Cars)**.....Model 9251-15
- Clutch Identification**—Types can be identified by number of pressure plate springs—3 (Auburn), 9 (Borg & Beck—cover also marked "951").
- See *Clutch Section* for complete data.
- Facings (Borg & Beck)**—Woven asbestos, 2 required. I.D. 6". O.D. 9¼". Thickness ⅛".

**Facings (Auburn)**—Moulded metallic or Raybestos, 2 required. I.D. 6". O.D. 9¼". Thickness .135".

**Pedal Adjustment:** Pedal free travel ¾-1". To adjust, position nut on pedal assist spring link (at rear end of spring) so that it is lined up with spring adjusting gauge, KF-10, installed on spring.

**Removal:** Remove transmission (see Transmission Removal below), remove clutch housing underpan, disconnect clutch pedal cross-shaft from pedal linkage. Install Clutch Plate Aligning Arbor, C-360, to hold clutch parts in alignment, take out mounting screws in clutch cover flange (rotate flywheel so that all screws accessible through pan opening). Remove aligning arbor, remove clutch cover assembly and driven member through underpan opening.

**TRANSMISSION**

**Warner Model AS11-T86E (Std.), Model AS12-T86E with new Type R10B Overdrive (Optl.).** Constant-mesh, synchro-mesh (Second & High), sliding gear (Low & Reverse).

See *Transmission Section* for complete data.

**Transmission Control:** Remote control type with gearshift lever mounted on steering column.

See *Transmission Section* for complete data.

**Removal:** Disconnect front propeller shaft at front universal joint (take out bolts in transmission companion flange), move shaft out of the way. Disconnect speedometer drive cable and transmission control levers at transmission case, free parking brake cable support bracket from frame cross-member. Remove four bolts mounting engine support on frame cross-member (support comes out with transmission). Loosen all four bolts mounting transmission on clutch housing, remove two lower bolts only (**CAUTION**—two upper bolts must support transmission until ready for removal). Remove flywheel housing underpan, raise rear end of engine (place jack under flywheel, use wood block between jack and flywheel) for sufficient clearance for transmission removal. Remove the two upper transmission mounting bolts, move transmission back until clear of clutch, slide transmission clear of cross-member and remove from beneath car.

**OVERDRIVE**

**Warner Type R10B (with special AS12-T86E Transmission).** Optl. Equipment. New Governor controlled type (no centrifugal pawls) with electrical solenoid operation and throttle controlled "kick-down".

See *Transmission Section* for complete data.

**Overdrive Solenoid**—Delco-Remy 1118132, Warner No. 3AR10B-62 Kaiser-Frazer No. 200911.

**Governor**—Kaiser-Frazer No. 200908.

**Control Relay**—Auto-Lite HRT-4001, Kaiser-Frazer No. 201636. On left side of dash.

**Kick-down Switch**—Kaiser-Frazer No. 201638. Adjust switch by means of nuts on threaded sleeve so switch actuating cam on accelerator lever just contacts plunger on switch at wide open throttle.

**Lock-out Switch**—Kaiser-Frazer No. 200915.

**Removal:** Disconnect all wiring at control units on overdrive case, disconnect control cable and speedometer cable. Remove Overdrive and Transmission as a unit (see Transmission Removal above).

**UNIVERSALS**

**Detroit Series 4200.** Ball-and-trunnion type or Mechanics. Roller bearing type. Three used with intermediate universal at propeller shaft support. See *Universals Section* for complete data.

**Propeller Shaft & Support Bearing:** Two shafts used: Propeller Shaft & Support Bearing Servicing—See "Propeller Shaft" in *Frazer Shop Notes*.

**REAR AXLE**

**Spicer (Salisbury) Model 41-2.** Semi-floating, Hypoid Gear type with Hotchkiss Drive.

See *Rear Axle Section* for complete data.

**Ratio (Without Overdrive)**—4.09-1 Std., 3.73-1 Optl.

**Ratio (With Overdrive)**—4.27-1.

**Backlash**—.003-.006". Shim adjustment.

**Removal:** Hoist rear end of car and place supports under frame. Remove rear wheels and drums (use Puller C-319). Disconnect propeller shaft at rear universal flange, disconnect hydraulic brake line at connector on axle housing, disconnect rear shock absorbers and sway eliminator links (when used) at spring seat, disconnect parking brake cables. Disconnect both springs at front hanger and rear shackle, remove axle and spring assembly from beneath car. **NOTE**—Axle can be removed without disturbing springs by taking out spring "U" bolts.

**Axle Shaft Removal**—Remove rear wheel and drum using puller C-319. Disconnect hydraulic brake line at backing plate and brake cable. Remove outer oil seal and backing plate (**CAUTION**—do not lose adjusting shims between backing plate and housing flange). Pull axle shaft and bearing assembly out.

**Wheel Bearing Adjustment:** Adjust endplay by adding or removing shims located between backing plate and axle housing flange (shims .003", .005", .010", .030" thick). Make certain that shim thickness at right wheel is .060" (to center thrust block on differential shaft), adjust endplay at left wheel.

**Endplay**—.001-.006".

**SHOCK ABSORBERS**

**Monroe.** Direct acting, hydraulic type. Serviced by replacement (mountings serviced separately).

See *Shock Absorber Section* for complete data.

	Front	Rear
Kaiser-Frazer No. (Std.)	201490	201493
Kaiser-Frazer No. (Exp.)	202864	202866

**FRONT SUSPENSION**

**Front Suspension:** Independent, linked parallelogram type with coil springs.

See *Front Suspension Section* for complete data.

**Kingpin Inclination**—4¾-5¾° crosswise.

**Caster**—0° preferred (—1° to +1°).

**Camber**—¼° preferred (0° to ¾°).

**Toe-In**—1/16". Adjust by turning both tie rods.

**Steering Geometry (Toe-out):** Inner wheel 23°.

Outer wheel 20°. No adjustment.

**STEERING GEAR**

**Gemmer Model 305.** Worm-and-Roller type with "push-pull" adjustments.

See *Steering Gear Section* for complete data.

**BRAKES**

**Service Brakes:** Bendix (Lockheed) Hydraulic type with floating self-centering shoes (no anchor pin adjustment). Hand lever applies rear service brakes.

See *Brake Section* for complete data.

**Drums**—Composite (cast-iron & steel). Diameter 11" Clearance—.008" at heel and toe of each shoe.

**Lining**—Molded type. Width 2". Thickness 13/64".

**Length** 12¼" (forward shoe—all wheels), 10 1/32" (rear shoe—all wheels).

**Hand Brake:** See Service brake data (above).

## CYLINDER HEAD

**CYLINDER HEAD INSTALLATION:** Use a Torque Indicating Wrench to tighten cylinder head stud nuts, tighten in correct sequence as shown in the diagrams. Procedure for tightening Cast Iron and Aluminum heads is as follows:

**Cast Iron Heads—**With engine cold, tighten all nuts evenly to correct tension. Then run engine until it is thoroughly warmed up and recheck all nuts (additional tightening may be necessary for correct tension).

**Aluminum Heads—**With the engine cold, tighten all nuts to correct tension. Run engine until thoroughly warm, allow engine to cool off, and then recheck all nuts. Do not tighten aluminum heads when warm.

GRAHAM

**Tightening Torque—**See Tightening (Torque Wrench) Specifications below.

### 1936-40 MODELS (EXCEPT HOLLYWOOD)

**CYLINDER HEAD REMOVAL ON SUPERCHARGER MODELS:**—Not necessary to remove Supercharger. Remove nuts holding supercharger bracket to cylinder block and at cylinder head, remove screws and nuts holding intake cross-tube to manifold and supercharger, disconnect gasoline line to carburetor, water pipes to supercharger, vacuum line to distributor. Tip supercharger away from engine block and proceed with cylinder head removal (do not disconnect carburetor throttle and choke connections).

## TIGHTENING (TORQUE WRENCH) SPECIFICATIONS

### ALL MODELS

	Ft. Lbs.	In. Lbs.
Aluminum Heads .....	40-45	480-540
Cast Iron Heads.....	55-60	660-720

## PISTONS

### 1937-41 MODELS

**PISTONS:**—Pistons are full skirt type (no slot) with special oil groove extending entirely around piston at lower end of skirt and four vertical grooves on one side (pistons must be installed with these grooves toward camshaft). These grooves are part of the piston and cylinder wall metered-lubrication system.

## CYLINDER WALL LUBRICATION

### 1937-41 MODELS

**PISTON & CYLINDER WALL LUBRICATION SYSTEM:**—Oil channel in block at side of lifter guide holes feeds oil from engine pressure system to oil groove on side of valve lifters (barrel type). When lifter raised by cam, this groove registers with drilled hole through cylinder wall and oil is fed to piston oil groove (see above) for piston and cylinder wall

lubrication. This action occurs twice for each stroke of the piston.

**Servicing—**Clean out oil channels and drilled holes when pistons and lifters removed.

## PISTON RINGS

### 1937-41 MODELS

**PISTON RINGS:**—Compression and top oil ring are special types and must be installed as follows:

**Installing Rings:**—Compression rings are taper-faced and must be installed with marks on edge of ring up. Top oil ring (wiper ring) is X-90 type. Install this ring with expander joint at back of ring, springs seated in notches at ring ends, word 'NO.' on expander right side up and visible in ring joint, and oil groove on ring face down.

**Replacement Rings:**—Compression and oil rings (except X-90) furnished standard and .010", .020", .030" oversize. X-90 ring furnished standard and .020" oversize.

## CRANKSHAFT & MAIN BEARINGS

### 1936-41 MODELS

**MAIN BEARING SERVICING:**—Front Bearing 1938-41. Consists of a special bushing (not split) inserted in hole in front face of crankcase. This bearing cannot be adjusted and must be replaced if clearance excessive.

**Front Bearing Replacement—**Remove radiator, vibration dampener, chain case cover. Remove nut holding camshaft sprocket, pull camshaft and crankshaft sprockets together (to avoid damage to chain), remove front bearing bushing.

**Bearing Replacement (All except No. 1 1938-41):**—To determine correct size for replacement bearing, install .003" feeler 1" long in bearing cap between bearing and crankshaft, tighten cap securely. If bearing is tight on this feeler, install standard replacement bearing. If crankshaft turns freely with this feeler in place, install .001" undersize bearing.

**NOTE—**No undersize bearings furnished on following models: 80, 80A, 85, 90, 90A, 110.

**Bearing Installation—**Not necessary to remove crankshaft. New upper bearing halves can be 'rotated' in place. Bearing caps are doweled to crankcase to insure alignment.

**Bearing Clearance—**Check clearance of new bearings by installing .002" feeler 1" long under bearing cap. With bearing cap tight, shaft should bind with feeler in place but should be free with feeler removed. Face bearing cap with emery cloth on surface plate to secure this fit.

**Endplay Adjustment:**—Remove radiator, vibration dampener, chain case cover. Check endplay with feeler gauge. To adjust, pull camshaft and crankshaft sprockets together, add or remove shims between crankshaft shoulder and steel thrust washer (furnished .002" & .008" thick). See that floating bronze thrust washer is in place between steel washer and main bearing.

## VALVE SYSTEM

### 1936-41 MODELS

**VALVE GUIDE REMOVAL & INSTALLATION:**—Use special puller mounted on top of block (install

steel plate under puller legs to distribute strain on block) and pull old guides up through top of block (if guides stick, use knock-out bar to loosen guide and avoid strain on puller draw-bar). Install new guides in same manner pulling guides up into holes in block from below.

## SUPERCHARGER

### 1936 MODELS

**SUPERCHARGER:** Driven by separate chain from sprocket on crankshaft at front of engine.

**Supercharger Drive Chain—**Link-Belt. Width 1½". Pitch ¾". Length 27¾" or 74 links.

**Chain Adjustment—**Chain adjusted by shifting supercharger drive sprocket. To adjust, loosen flange mounting screws, back off adjustment set-screw locknut, turn up adjustment setscrew until chain hums with engine running, back off screw until chain runs noiselessly, tighten locknut and mounting screws. This is the only adjustment necessary for supercharger operation.

### 1937-41 MODELS

**SUPERCHARGER:**—Supercharger is entirely separate unit mounted on left hand side of engine block and belt driven from the crankshaft.

**Supercharger Drive:**—Two exposed Vee belt drive taken from crankshaft pulley at front of engine. **Belt Adjustment—**None (automatic). Belt tension maintained by automatic take-up consisting of driven pulley mounted on pivoted arm with light coil spring pressing outward on arm and held by ratchet (allows outward movement to take up slack only).

### 1936-41 MODELS

**Supercharger Removal:**—Disconnect throttle and choke linkage, fuel line from pump, vacuum line to carburetor. Remove nuts holding supercharger bracket to cylinder block and at cylinder head, take out screws and nuts connecting cross-tube to supercharger cover at top and oil line to supercharger case at bottom, remove bolts in lower mounting bracket, lift supercharger and carburetor assembly out.

## BRAKE NOTES

**HAND BRAKE:**—Consists of an external-contracting band on a drum at rear of the transmission. Hand lever is linked directly to operating lever on band.

### 1935-36 MODELS

**Adjustment—**With lever in released position, remove anchor screw locking wire, turn anchor screw to give 1/32" clearance between lining and drum, lock the anchor screw with wire. Adjust guide bolt nut to give 1/32" clearance for lower half of band, secure with locknut. Finally, adjust brake adjusting bolt nut to give 1/32" clearance (as above) for upper portion of band.

### 1937-40 MODELS (EXCEPT HOLLYWOOD)

**Adjustment—**With hand lever in released position, remove anchor screw locking wire, turn anchor screw to give .025" clearance between lining and drum, lock anchor screw with wire. Back off brake adjusting bolt nut (at top), loosen locknut on guide bolt and adjust to give .025" clearance for lower portion of band, tighten locknut, finally turn adjusting bolt nut to .025" clearance for upper portion of band (tension in guide bolt should just be relieved).

**MODEL IDENTIFICATION**

**SERIAL NUMBER:**—First number 300,001 (80, 80A), 315,001 (85). On plate on floor inside right door.

**ENGINE NUMBER:**—First number 305,001 (80, 80A), 320,001 (85). Stamped on plate on right side of engine and on serial number plate.

**TUNE-UP**

**COMPRESSION:**—Ratio 6.8-1. Pressure 115 lbs. at 50 R.P.M.

**VACUUM READING:**—Gauge should show steady reading of 15-17" with engine idling at 5-7 M.P.H.

**FIRING ORDER:** 1-5-3-6-2-4. See diagram.

**SPARK PLUGS:** Champion Type C7. 18 mm. Metric. Gaps—.025". Limits .023-.027".

**IGNITION:** See Coil, Condenser, and Distributor. Breaker Gap—.018". Cam Angle 35° (closed). Automatic Advance—9° max. at 1400 RPM. (distr.). Vacuum Advance—5½° distr. with 9-13" vacuum (680-N Unit). 5° distr. with 13-16" vacuum (681-C Unit).

**IGNITION TIMING:** See Ignition Timing. Std. Setting—At TDC. with flywheel mark "DC.IGN" at indicator on housing.

**CARBURETION:** See Carburetor & Carb. Equipment. Idle Setting—Idle screw midway between "miss" and "roll" points Idle speed 300 RPM or 5-7 MPH. Float Level—1½" from gasket seat on cover to bottom of float at free end (invert to check). Accelerating Pump—#2 hole Normal, #3 cold weather. #1 (Summer), #4 (Winter) for extreme temperatures.

Fuel Pump Pressure: 3½ lbs. maximum.

**VALVES:** See Valve Timing.

Tappet Clearance—.010" All Valves, Engine Hot.

**STARTING:** See Battery, Starter, Generator, and Regulator (when used).

**IGNITION**

**Ignition Switch:**—Delco-Remy Model 431-U. Switch and cable assembly. Connected to coil by armored cable.

**COIL:** Delco-Remy Model 536-J. Mounted on dash. Ignition Current—2 amperes idling, 4 stopped.

**CONDENSER:** Delco-Remy Part No. 829092. Capacity—.20-.25 microfarad.

**DISTRIBUTOR:** Delco-Remy Model 623-A. Single breaker, 6 lobe cam, full automatic advance type with auxiliary vacuum spark control. Breaker Gap—Set at .018". Limits .018-.024". Cam Angle or Dwell—35° (closed), 25° (open). Breaker Arm Spring Tension—17-21 ounces.

Automatic Advance		Engine	
Distributor	R.P.M.	Distributor	R.P.M.
Degrees		Degrees	
Start	400	2	800
9	1400	18	2800

**Vacuum Spark Control Model 680-N, 681-C.** Provides additional advance for intermediate speeds above idling except when engine is suddenly accelerated or is operated with wide open throttle when spark will be retarded by return spring in unit.

**NOTE:**—680-N used on first 3000 cars Model 80, all cars Model 85. 681-C used on Model 80 after first 3000 cars.

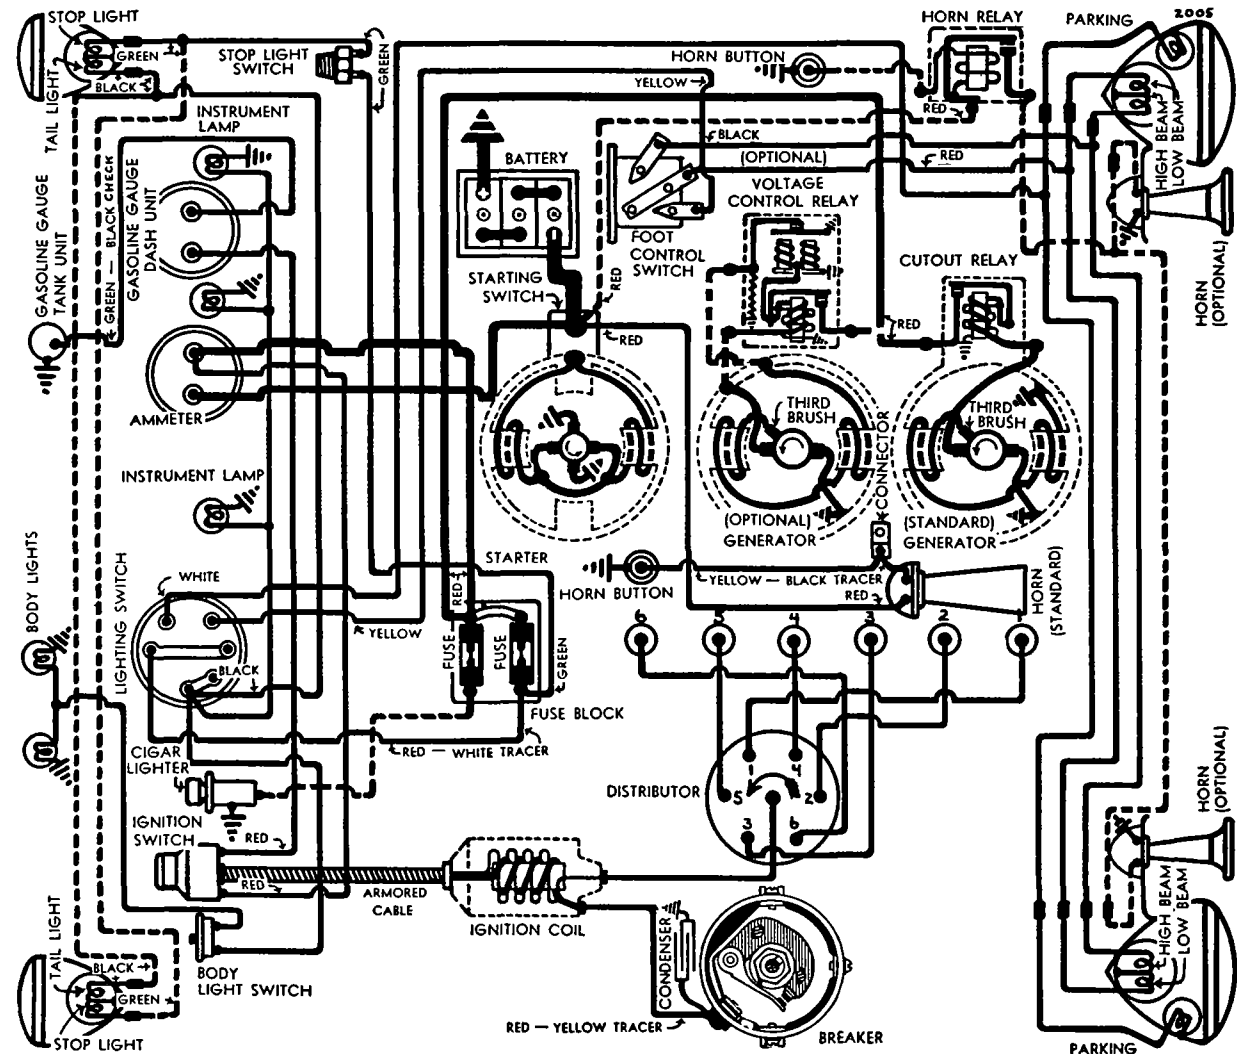

Vacuum Advance—680-N		
Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	7" Min.
5½°	11°	9-13"

Vacuum Advance—681-C		
Start	0°	5-7"
5°	10°	13-16"

**Distributor Removal:**—Mounted on cylinder head. To remove, take out hold-down screw in advance arm.

**IGNITION TIMING**

**IGNITION TIMING:**— Flywheel Degrees Piston Pos. All Engines ..... 0° TDC ..... 0000° TDC. To Set Timing—With #1 piston on compression, turn engine over until piston reaches top dead center, stop when the flywheel mark "DC.IGN" lines up with indicator on housing, loosen advance arm clamp bolt, rotate distributor until contacts begin to open, tighten clamp bolt, see that rotor is opposite #1 segment in distributor cap.

**CARBURETOR**

**CARBURETION:**—Carburetor—Marvel B-2-SU-10-1673 (80, 80A Before Engine No. 309995), 10-1690 (80, 80A After No. 309995, All 85). Downdraft type with manual choke control.

**NOTE:**—See Carburetion Section for recommended jet changes on 1673 ('36) carburetors before Carburetor Serial No. 5093894.

For complete data, refer to Carburetor Index.

**Idle Adjustment:**—With engine hot, close throttle, see that choke control button on instrument panel is pushed in, set throttle stop screw so that engine idles at 300 R.P.M. or 5-7 M.P.H., turn idle adjusting screw out until engine begins to roll, then turn screw in until engine begins to miss, finally turn screw out until engine fires smoothly. Readjust throttle stop screw for correct idling speed.

CONTINUED ON NEXT PAGE

## CONTINUED FROM PRECEDING PAGE

**Accelerating Pump Setting**—Pump lever has four holes for pump link engagement, set for seasonal requirements as follows:

- #1—(Min. stroke) High test fuel or hot climate.
- #2—Recommended for moderate climate.
- #3—Cold climate or low test fuel.
- #4—(Max. stroke) Extremely cold weather.

**Fast Idle**—Integral with carburetor. No adjustment.

**CARB. EQUIPMENT**

**Air Cleaner**—80, 80A—A.C. #1525951 oil-wetted type standard. Heavy duty oil bath type optional.  
85—Burgess oil-bath type standard.

**Fuel Pump**—A.C. Type P #1523008. Diaphragm type. For complete data, refer to Carburetion Equip. Index.

**Gasoline Gauge**—Motometer Electric. 80, 80A—Dash unit NG-7842D (Early 80, 80A), NG-8042D (Late 80, 80A; all 85). Tank Unit—NG-7823T (all models). For complete data, refer to Carburetion Equip. Index.

**BATTERY**

**BATTERY**—Willard, WHT-1-90, RHT-1-90 (Export). 6 volt, 13 plate, 90 ampere hour capacity (20 hour rate).

**Starting Capacity**—114 amperes for 20 minutes.  
**Zero Capacity**—300 amperes for 3.0 minutes.  
**Grounded Terminal**—Positive (+) terminal.  
**Location**—Under front seat.

**Cars with Radio**—Willard Type WHT-2-105, RHT-2-105 (Export). 6 volt, 13 plate, 105 ampere hour capacity (20 hour rate).

**Starting Capacity**—133 amperes for 20 minutes.  
**Grounded Terminal & Location**—Same as above.

**STARTER**

**Delco-Remy Model 738-J, 738-V. Armature 823881.**  
**Drive**—Manual pinion shift with overrunning clutch. Full travel— $\frac{1}{8}$ " clearance between pinion and housing.

**Cranking Engine**—60 R.P.M., 175 amperes.  
**Rotation**—Counter-clockwise at commutator end.  
**Brush Spring Tension**—24-28 ounces each.

Performance Data			
Torque	R.P.M.	Volts	Amperes
0 ft lbs.	5000	5.0	65
12 " "	Lock	3.37	525

**Removal**—Flange mounted on left front face of fly-wheel housing. To remove, take out flange mounting capscrews.

**Starting Switch**—Delco-Remy No. 820052. Mounted on starter field frame. Operated by pinion shift lever

**GENERATOR  
STANDARD**

**Delco-Remy Model 937-Y, Armature No. 1859794.** Model 936-L (Radio). Armature No. 1860284. Third brush control. External voltage (Step-voltage) control (936-L). Ventilated by fan on drive pulley.  
**Charging Rate Adjustment**—Connect test ammeter in charging line at 'BAT' terminal. On 936-L model short out Voltage Control Relay by connecting jumper wire from generator field 'F' terminal to frame. Loosen lock screw on commutator end plate, shift third brush by hand counter-clockwise to increase or clockwise to decrease charging rate, tighten lock screw. Remove jumper wire (936-L).

**Maximum Charging Rate (937-Y)**—18 amps. (cold), 15 amps. (hot), 8.3 volts, 2000 R.P.M., 22-23 M.P.H. (936-L)—23 amperes (cold) at 8.8 volts, 2800 R.P.M., 23-26 M.P.H., 20 amps. (hot) at 8.5 volts, 3100 R.P.M.

Performance Data—937-Y			
	Amperes	Volts	R.P.M.
Cold	15-18	7.9-8.3	2000
Hot	13-15	7.7-8.0	2400

Performance Data—936-L			
Cold	20-23	8.5-8.8	2800
Hot	16-20	8.1-8.5	3100

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—22-26 ounces (main), 16-20 ounces (third brush).

**Field Current**—(937-Y) 3.5-4.5 amperes, (936-L) 2.3-2.6 amperes, at 6 volts.

**Removal**—Cradle mounted at left front of engine with fan belt drive. To remove, slack off drive belt, disconnect water pump coupling, loosen mounting clamp band.

**Belt Adjustment**—Belt adjustment provided at fan bracket. With correct adjustment sideplay of belt should be 1" between pulleys.

**GENERATOR****SPECIAL EQUIPMENT**

**Delco-Remy Model 933-R (Special Police Service).** Two brush (shunt) type with external voltage and current regulation.

**Charging Rate Adjustment**—None. See Regulator.  
**Maximum Charging Rate**—As listed below.

Performance Data			
	Amperes	Volts	R.P.M.
Cold	22	8.0	1200

Current Regulator limits output to 22 amperes.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—25 ounces each.

**Field Current**—1.7-2.0 amperes at 6.0 volts.

**Removal & Belt Adjustment**—Same as Std. Gen.

**CUTOUT RELAY**

**Delco-Remy Model 265-B (937-Y Gen.).** Mounted on the generator.

For complete data, refer to Electrical Equipment Index.

**Cuts In**—6.75-7.5 volts.

**Cuts Out**—0-2.5 amperes discharge.

**Contact Gap**—.015-.025".

**Air Gap**—.012-.017" with contacts closed.

**REGULATOR****STANDARD**

**Delco-Remy Model No. 5585 (936-L Gen.).** Voltage Control Relay. Cutout Relay and non-vibrating type Voltage Regulator in single case on generator.

For complete data, refer to Electrical Equipment Index.

**Cutout Relay**

**Cuts In**—6.4-6.8 volts.

**Cuts Out**—3 amperes at 6.3 volts, discharge.

**Contact Gap**—.015-.025".

**Air Gap**—.012-.017" with contacts closed.

**Voltage Control Relay**

**Contacts Open**—8.35-8.65 volts at 70° F.

**Contacts Close**—7.3-7.7 volts at 70° F.

**Contact Gap**—.008-.013".

**Air Gap**—.028-.040" between armature and core (armature down against lower stop), .028-.040" armature travel (between armature and lower stop)

**REGULATOR****SPECIAL EQUIPMENT**

**Delco-Remy Model No. 5596 (Special 933-R Gen.).** Double Core Type Voltage & Current Regulator (With 'IGN' Terminal). Consists of Cutout Relay and vibrating type Voltage and Current Regulator. Refer to the Graham Model 110 article (following) for complete data on this Regulator.

**LIGHTING**

**LIGHTING**—Headlamps—Corcoran-Brown, Pre-focused type. Headlamps aimed straight ahead (upper beam with lenses in place). Upper and lower driving beams controlled by foot selector switch.

**Switches**

**Lighting**—Delco-Remy Model 481-Y.

**Foot Selector**—Delco-Remy Model 471-P.

**Bulb Specifications**

Position	Candlepower	Mazda No.
Headlamps	32-21	2320
Parking	1½	55
Stop and Tail	21-3	1158
Instrument, Body	3	63

**MISC. ELECTRICAL**

**FUSES**—Lighting—One 20 ampere fuse mounted on fuse block on rear side of dash panel. Extra fuse on fuse block.

**Cigar Lighter**—One 20 ampere fuse on fuse block.

**HORNS**—Klaxon Model K-16 Type 2001 Std. Twin horns optional. Twin horn set consists of Model K-33-B Type 1864 (80, 80A) 1873 (85) left hand—high note, K-33-C Type 2155 (80, 80A), 2156 (85)

	Current at 6 volts.	Air Gap
K33B 1864, 5	11-13 amperes	.036-.040"
K33C 2155, 6	11-13 amperes	.042-.046"

**Horn Relays**—80, 80A. Model 266-T. Requires .25 ampere at 2 volts minimum to close contacts.

**Contact Gap**—.015-.025". Spring Tension—6-8 ozs.

**Air Gap**—.012-.017" with contacts closed.

85—Model 271-A. Closes at 2.7-4.0 volts.

**Contact Gap**—.015-.025". Air Gap—.010-.014".

**ENGINE**

**ENGINE SPECIFICATIONS**—6 cylinder, 'L' head.

**Bore**—3". **Stroke**—4".

**Displacement**—169.6 cubic inches.

**Rated Horsepower**—21.6 (AMA).

**Developed Horsepower**—70 at 3500 R.P.M.

**Compression Ratio**—6.7-1 Std. 7.0-1 Optl.

**Compression Pressure**—115 lbs. at cranking speed.

**Vacuum Reading**—Gauge should show steady reading of 15-17" with engine idling at 5-7 M.P.H.

**PISTONS**—Bohn Bohnalite, aluminum alloy, Invar strut, split skirt type. Length—3 11/16".

**NOTE**—1937 pistons are plated (bearing metal bearing surface).

**Weight**—14 ozs. Held to two gram variation.

**Removal**—Pistons and rods removed from above.

**Clearance**—Skirt .002". See Fitting New Pistons.

**Replacement Pistons**—Finished replacement pistons furnished 2.997" to 3.006" (in .001" steps), 3.006" to 3.022" (in .002" steps) and 3.030" oversizes.

**Fitting New Pistons**—Use .002" feeler  $\frac{1}{2}$ " wide inserted between piston and cylinder wall on side opposite slot. Pull required to withdraw feeler should be 10-15 lbs.

**ENGINE**

C NTINUED FROM PRECEDING PAGE

**Installing New Pistons:**—Slot should be toward left or away from valves (on opposite side from head of piston pin clamp screw and oil hole in lower end of rod).

**PISTON RINGS:**—Two compression, one oil control ring per piston, all above pin. Lower ring groove drilled radially with eight 9/64" oil drain holes.

**NOTE**—Oil ring groove depth increased from .161" to .175" on 85, after engine number 320586.

Ring	Width	End Gap
Comp. all	1/8"	.008-.012"
Oil Cont.	3/16"	.008-.012"

**NOTE**—Side clearance for all rings .0015" min.

**Replacement Rings:**—Rings furnished standard and .010", .020", .030" oversize (Compression), standard and .020" oversize only (X-90 oil ring).

**PISTON PIN:**—Diameter 13/16". Length 2 3/8".

Pin is locked in connecting rod with clamp screw.

**Pin Fit in Piston:**—.0005" clearance (hand push fit).

**Replacement Pins:**—Pins furnished standard and .002", .005", .010" oversizes.

**NOTE**—Pin oiled by four 5/32" oil holes in upper part of piston bosses.

**CONNECTING ROD:**—Length 7". Bearing caps dowelled on rods and held by capscrews in blind tapped holes. Crankpin Journal Diameter—1 15/16".

**Lower Bearing:**—Removable steel-backed, cadmium-silver lined type.

**Clearance:**—.002". **Sideplay:**—.004-.006".

**Bearing Adjustment:** None (no shims). Replace bearings. New bearings should be tight with .002" feeler 1" long installed under cap (cap can be sanded on face plate to secure this fit). Install new bearings with tang engaging groove in rod and cap.

**Installing Rods:**—Lower bearings are offset. Install rods with widest half of bearing toward rear (#1, 3, 5) and toward front (#2, 4, 6). Oil hole in lower bearing upper half must be toward camshaft on all rods.

**NOTE**—Head of piston pin clamp screw should be toward camshaft on all rods.

**CRANKSHAFT:**—4 bearing. Integral counterweights. Journal Diameters—2 1/4" (all bearings).

**Bearing Type:**—Removable steel-backed, cadmium-silver lined.

**Clearance:**—.002".

**Bearing Adjustment & Replacement:**—See *Graham Special Shop Notes for Main Bearing Servicing*.

**End Thrust:**—Taken by thrust plate at front (#1) bearing. Adjusted by adding or removing shims. Endplay .004-.006".

**CAMSHAFT:**—4 bearing. Non-adjustable chain drive. Journal Diameters—#1, 1 7/8"; #2, 1 13/16"; #3, 1 3/4"; #4, 1 1/4".

**Bearing Type:**—Bronze.

**End Thrust:**—Taken by spring-loaded plunger in forward end of camshaft.

**NOTE**—Make certain that plunger and spring are in place when installing chain case cover.

**Timing Chain:**—Link-Belt. Width 1". Pitch .500". Length 23" or 46 links.

**Camshaft Setting:**—Sprockets are marked. Mesh chain so there are exactly 9 links between marks on sprockets or 10 pins inclusive of pins meshed opposite marks.

VALVES:	Head Diameter	Stem Diameter	Length
Intake	1 33/64"	.3145"	4 61/64"
Exhaust	1 13/64"	.3135"	4 61/64"
	Seat Angle	Lift	Stem Clearance
Intake	30°	5/16"	.001-.0026"
Exhaust	45°	5/16"	.002-.0036"

**Valve Guides:**—Length 2 3/4". Finished inside diameter .3164" for all guides. Guides counterbored to .329" for 11/32" at upper end.

**Valve Springs:**—Free length 1 15/16".

	Spring Pressure	Spring Length
Valve Closed	36 lbs.	1 21/32"
Valve Open	87 lbs.	1 3/8"

**Valve Lifters:**—Single piece cast-iron, cylindrical type 1" diameter. Lifter guides 1 21/32" long, integral with block. Finished to give .0005-.0015" clearance

**VALVE TIMING**

**Tappet Clearance:** .010" All Valves, Engine Hot.

**Valve Timing:**—See Camshaft Setting above.

**Intake Valves:**—Open 4 1/2° BTDC. Close 47 1/2° ALDC.

**Exh. Valves:**—Open 47 1/2° BLDC. Close 4 1/2° ATDC.

**To Check Valve Timing:**—Set tappet clearance #1 exhaust valve at .012". This valve should close with #1 piston .0079" past top dead center when flywheel mark 'EC-1' lines up with indicator in right front face of flywheel housing. Reset tappet clearance at .010" with engine hot.

**LUBRICATION**

**LUBRICATION:**—Pressure. Gear type oil pump located in crankcase.

**NOTE**—Ignition timing should be checked whenever oil pump is installed in engine.

**Normal Oil Pressure:**—40 lbs. at 30 M.P.H.

**Oil Pressure Regulator:**—Mounted on right hand side of crankcase. Opens at 50 lbs. Adjusted by adding or removing shims or washers above spring within cover plug.

**Crankcase Capacity:**—5 quarts (refill).

**CLUTCH**

**CLUTCH:**—Illinois (All '36 and first '37 models). Long Model 9CF-CS (Later '37 models). Single plate, dry disc type. Long Clutch is semi-centrifugal type.

See *Clutch Section for complete data*.

**Facings (Illinois)**—Moulded type, 2 required. Inside Diameter 5 1/8". Outside Diameter 7 7/8". Thickness 1/8".

**Facings (Long)**—Woven type, 2 required. Inside Diameter 5 3/4". Outside Diameter 9". Thickness .125". **Adjustment:**—Free movement of clutch pedal must be 1 1/4". To adjust, take out cotter pin at each end of clutch pedal connecting link, turn turnbuckle to secure correct lash, replace cotter pin, tighten turnbuckle locknut.

**NOTE**—On Illinois clutch when adjustment limit reached, loosen two capscrews in clutch mounting bracket slightly (reached through hand opening in bottom of clutch bell housing), pull out shim under bracket (shim holes are slotted—not necessary to take out capscrews completely), tighten bracket screws. This will provide new range of adjustment

**Removal:**—Remove transmission (see Transmission Section below), remove clutch bell housing, take out clutch bracket mounting bolts (Illinois) or clutch housing mounting screws, turning all screws out evenly to avoid distorting cover (Long).

**TRANSMISSION**

**TRANSMISSION:**—Warner Model AS4-TC84C (1937). Helical gear, constant mesh, synchro-mesh (second and high), sliding spur gear (low and reverse). See *Transmission Section for complete data*.

**Removal:**—Disconnect drive shaft front and rear universals, hand brake linkage and clutch linkage. Support engine at rear, remove rear engine mounting, take out transmission mounting bolts, pull transmission straight back and remove.

**UNIVERSALS**

**UNIVERSAL JOINTS:**—Spicer. Needle bearing type, 2 used.

See *Universals Section for complete data*.

**REAR AXLE**

**REAR AXLE:**—Spicer. Semi-floating, spiral bevel gear type with Hotchkiss drive.

See *Rear Axle Section for complete data*.

**Ratio:**—4.54-1 Std. 4.9-1 Optional.

**Backlash:**—.004-.008". Shim adjustment.

**Removal:**—Jack up rear of car, remove wheels, disconnect brake line and brake cables, disconnect rear shock absorbers, disconnect drive shaft at rear universal, take off spring bolts at axle housing, disconnect rear spring rear shackles, remove axle assembly.

**Wheel Bearing Adjustment:**—Before No. 315202 (std. ratio), 315529 (optl. ratio)—Jack up car, remove wheel and hub assembly, disconnect brake line, take out bolts and remove oil seal and backing plate. Remove shims between backing plate and axle housing flange until axle shaft clearance at thrust block in differential housing is .002-.007"

**Adjustment (After No. 315202 or 315529)**—No adjustment (New Departure sealed bearings used).

**SHOCK ABSORBERS**

**SHOCK ABSORBERS:**—Delco. Direct acting, hydraulic type. 1937 (Delco) Model Nos. 1165-L (frt.), 1165-K (rear).

See *Shock Absorber Section for complete data*.

**FRONT SUSPENSION**

**Front Suspension:**—Conventional 'I' beam section front axle with Reverse-Elliott ends and semi-elliptic springs.

**Kingpin Inclination:**—7 1/2° crosswise.

**Caster:**—4 1/2-5 1/2°. Use wedge shims inserted between spring pad on axle to correct caster.

**Camber:**—1°. Axle can be bent cold for minor corrections.

**Toe In:**—1/8-3/16". Adjust in usual manner by changing length of tie rod.

**STEERING GEAR**

**Steering Gear:** Ross Model S-14. Cam-and-Lever type. See *Steering Gear Section for complete data*.

**BRAKES**

**BRAKES:**—Service—Graham-Lockheed hydraulic, double anchor. Hand lever applies rear service brakes. See *Brake Section for complete data*.

**Drum Diameter:**—9".

**Lining:**—Moulded type. Width 1 3/4". Thickness 3/16". Length 18" per wheel.

**Clearance:**—.006" heel, .010" toe, for each shoe.

**Hand Brake:** See Service Brakes (above).

## MODEL IDENTIFICATION

**SERIAL NUMBER:** On plate on floor inside right rear door (Sedans), or under front seat (Coupes).  
1936 Nos.—(90, 90A) 200,001; (110) 100,101.  
1937 Nos.—(95) 215,001; (116) 130,001; (120 Sedans) 110,001; (120 Coupes) 120,001.

**ENGINE NUMBER:** On plate on right side of crankcase and on chassis serial number plate (above).  
1936 Nos.—(90) 205,001; (90A) 210,001; (110) 105,001.  
1937 Nos.—(95) 220,001; (116) 135,001; (120) 115,001.

## TUNE-UP

**COMPRESSION:**—Ratio 6.7-1 std. aluminum hd. Pressure 115 lbs. at cranking speed.

**VACUUM READING:**—Gauge should show steady reading of 15-17" with engine idling at 5-7 M.P.H.

**FIRING ORDER:** 1-5-3-6-2-4. See diagram.

**SPARK PLUG:** Champion Type J-9. 14 mm. Metric. Gaps—.025"

**IGNITION:** See Coil, Condenser, and Distributor.  
Breaker Gap—.018". Limits .018-.024".  
Cam Angle or Dwell—35° (closed), 25° (open).  
Breaker Arm Spring Tension—17-21 ounces.  
Automatic & Vacuum Advance—See Distributor.

**IGNITION TIMING:** See Ignition Timing.  
Std. Setting—At TDC. (95) 4° ATDC. (116, 120) with flywheel mark "IGN" at indicator on right front face of housing.

**CARBURETION:** See Carburetor & Carb. Equipment.  
Idle Setting—Idle screw midway between "miss" and "roll" points. Idle speed 350 RPM or 5-7 MPH.  
Float Level—1 $\frac{3}{8}$ " from gasket seat on cover to bottom of float at free end (invert to check).  
Accelerating Pump—#2 hole Normal, #3 cold weather, #1 (Summer), #4 (Winter) for extreme temperatures.

Fuel Pump Pressure: 3 $\frac{1}{2}$  lbs. maximum.

**VALVES:** See Valve Timing.

Tappet Clearance—.010" All Valves, Engine Hot.

**STARTING:** See Battery, Starter, Generator, and Regulator (when used).

## IGNITION

**Ignition Switch:** Delco-Remy 431-U, 435-P. Switch and cable assembly connected to coil by armored cable.

**COIL:** Delco-Remy 536-J (Non-supercharged Eng.), 536-M (Supercharger Eng.).  
Ignition Current—1.8 amperes idling, 3 stopped.

**CONDENSER:** Delco-Remy Part No. 829092.  
Capacity—20-25 microfarad.

**DISTRIBUTOR:** Delco-Remy. (90, 90A, 95) No. 623-A, (110) No. 623-E, (116, 120) No. 623-S. Single breaker, full automatic advance type with auxiliary vacuum spark control.

Rotation—Counterclockwise viewed from above.

Distributor Settings—See Tune-Up data.

Automatic Advance—623-A			
Distributor	R.P.M.	Engine	R.P.M.
Start	400	2	800
9	1400	18	2800

Automatic Advance—623-E			
Start	300	2	800
6	1000	12	2000

## Automatic Advance—623-S

Start	275	2.0	550
3.0	400	6.0	800
8.0	1000	16.0	2000

**Vacuum Spark Control 680-N, 681-C, 681-G.**  
Provides additional advance at all speeds above idling except when engine is suddenly accelerated or is operated with wide open throttle when spark will be retarded by return spring within unit.

## Vacuum Advance—Model 681-G

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	5-7"
5°	10°	14-18"

## Vacuum Advance 681-C (623-E Distr.)

Start	0°	5-7"
5°	10°	13-16"

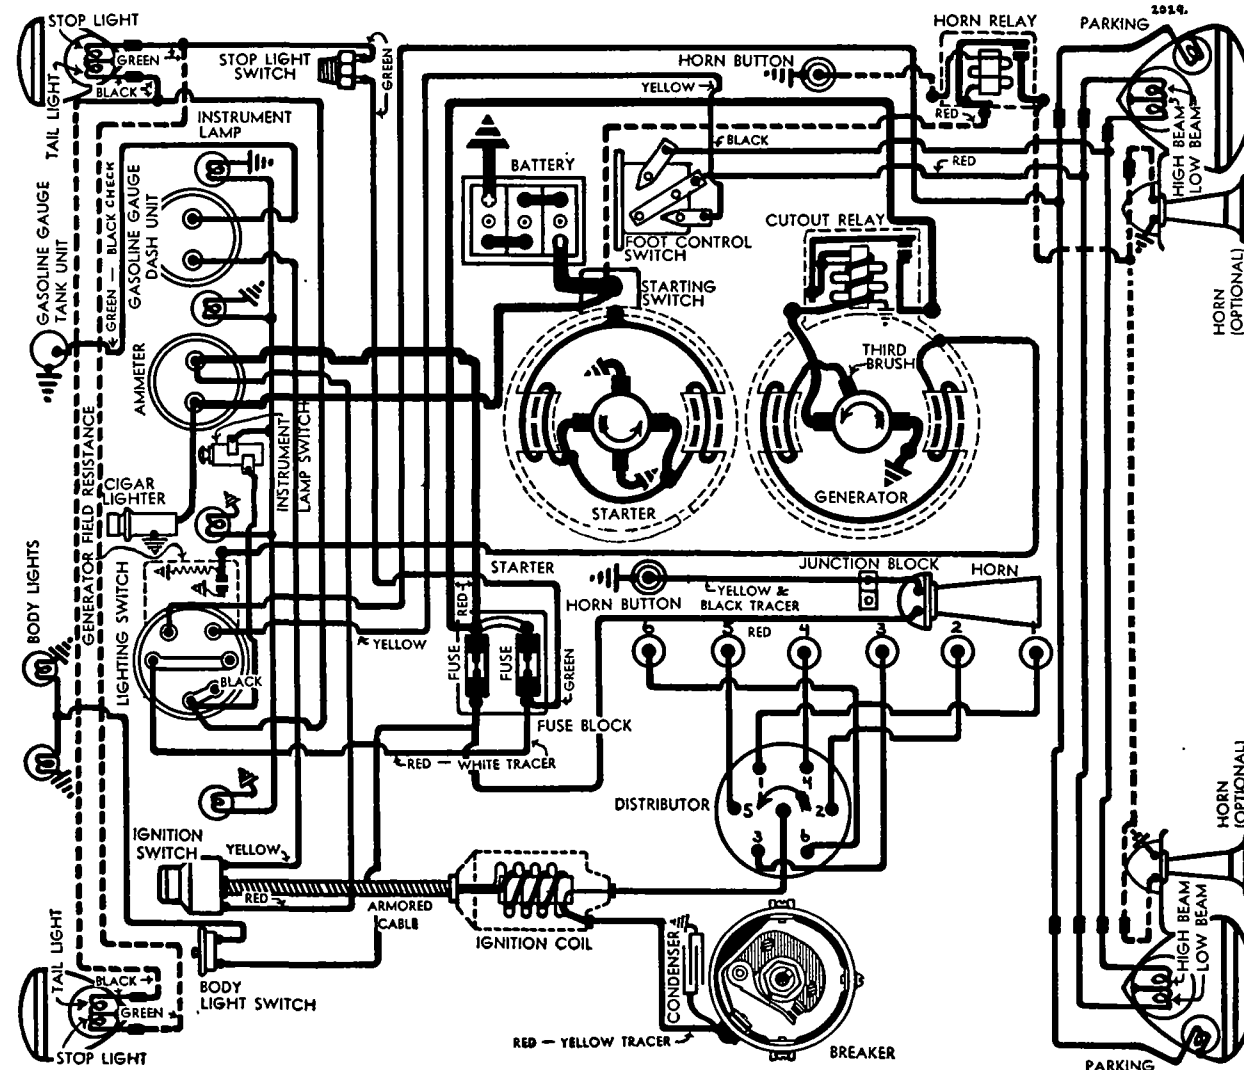

## Vacuum Advance—Model 681-C

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	5-7"
5°	10°	13-16"

**Distributor Removal:**—Mounted on cylinder head. To remove, disconnect vacuum line, take out hold-down screw in advance arm.

## IGNITION TIMING

**IGNITION TIMING:**— Flywheel Deg. Piston Position  
Other Engs.....TDC.....0000" TDC  
116 & 120 Engs.....4° ATDC.....0063" ATDC  
To Set Timing—With #1 piston on compression turn engine over until piston is 4° or .0063" after top dead center (116,120), top dead center (others), stop when flywheel mark "IGN" lines up with indicator (under cover) on right front face of housing, loosen advance arm clamp bolt, rotate distributor until contacts begin to open, tighten clamp bolt, see that rotor is opposite #1 segment in distributor cap.

1936 M DELS—WITH 948-B GENERATOR

**CARBURETOR**

1936 M DELS

**CARBURETION:**—Carburetors—Marvel Model B-2 No. 10-1678 (90, 90A First Cars) 10-1691 (90 After Eng. No. 207235, 90A After Eng. No. 215764). Model B3, No. 10-1680 (110 First Cars), 10-1692 (110 After Eng. No. 108175).

*For complete data, refer to Carburetor Index.*

**NOTE:**—See Carburetion Section for recommended jet changes on carburetors before carburetor No. 5092447 (90, 90-A), and No. 5090942 (110). Also changes in Accelerating Pump Assembly (after carburetor No. 6002388) and Vacuum Step-up Spring (after first 300 cars) on Supercharger models only. Settings (Idle Setting, Float Level and Accelerating Pump): *See Tune-Up data.*

**CARBURETOR**

1937 MODELS

Marvel Model B2 No. 10-1691 (95), Model B3 No.

10-1744 (116, 120). 1¼" (B2), 1½" (B3) Single Barrel, d wndraft types with manual choke control.

*For complete data, refer to Carburetor Index.*

**NOTE:**—See article in Carburetion Section for recommended changes on carburetors before car serial No. 217175 (95), 132010 (116), 115944 (120).

Settings (Idle Setting, Float Level, Accelerating Pump): *See Tune-Up data.*

Fast Idle:—Integral with carburetor. No adjustment.

**CARB. EQUIPMENT**

Air Cleaner: AC or Burgess. Oil-wetted type Std., Heavy-duty Oil-bath type Optl.

Fuel Pump: AC Diaphragm type. AC Nos. (Non-supercharged Eng.) Type P No. 1523008, (Supercharged Eng.) Type R No. 1523009.

*For complete data, refer to Carburetion Equip. Index.*

Gasoline Gauge (1936): Motometer Electric. First—NG-7842-D (dash), NG-7818-T (tank); Late type—NG-8042-D (dash), NG-7823-T (tank).

*For complete data, refer to Carburetion Equip. Index.*

Gasoline Gauge (1937): King-Seeley. Dash Unit—(gas & oil gauge assembly) K-S #6610 (Cabriolet), #6090 (others), Tank Unit K-S #6120 (all).

*For complete data, refer to Carburetion Equip. Index.*

**BATTERY**

**BATTERY:** Willard Type WHT-1-90 (Std.), RHT-1-90 (Exp.). 6 volt, 13 plate, 90 AH. capacity (20 hr. rate). Starting Capacity—114 amperes for 20 minutes. Zero Capacity—300 amperes for 3.0 minutes. Grounded Terminal—Positive (+) terminal. Location—Under drivers seat.

(116, 120) Willard WHT-1-105, RHT-1-105 (Exp.). 6 volt, 15 plate, 105 AH. capacity (20 hr. rate). Starting Capacity—133 amperes for 20 minutes. Zero Capacity—300 amperes for 3.9 minutes. Grounded Terminal and Location (as above).

**STARTER**

Delco-Remy Model 738-T, 738-X (RHD). Armature No. 823881.

Drive—Manual pinion shift (738-T), solenoid pinion shift (738-X), with overrunning clutch.

Cranking Engine—200 amperes at 5 volts.

Rotation—Counter-clockwise at commutator end.

Brush Spring Tension—24-28 ounces each.

**Performance Data**

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5000	5.0	65
12 ft. lbs.	Lock	3.37	525

**Removal:**—Flange mounted on left front face of fly-wheel housing. To remove, take out flange mounting screws.

**Starting Switch (738-T):**—Delco-Remy No. 820052. Mounted on starter field frame. Operated by pinion shift lever (starter pedal).

(738-X)—Solenoid Switch Type 1516. Starter Push Switch Type 1388. Solenoid switch controlled thru relay by push switch on instrument panel.

*For complete data, refer to Electrical Equipment Index.*

**GENERATOR**

MODELS 90, 90A, 95, 110, 116 (STD.)

Delco-Remy Model 948-B. Armature No. 1853593.

Third brush regulation, lighting switch control. Field resistance on switch is shorted out with lamps turned on, increasing generator output. Special switch position between 'Off' and 'Park' provides this high charging rate with lamps off. Generator is ventilated by fan on drive pulley.

*For complete data, refer to Electrical Equipment Index.*

**Charging Rate Adjustment:**—Ground generator 'F' terminal, connect test ammeter in charging line at Cutout Relay 'BAT' terminal on generator, loosen lockcrew on commutator endplate, shift third brush by hand counter-clockwise to increase, or clockwise to decrease charging rate, tighten lock-screw, restore original field connection.

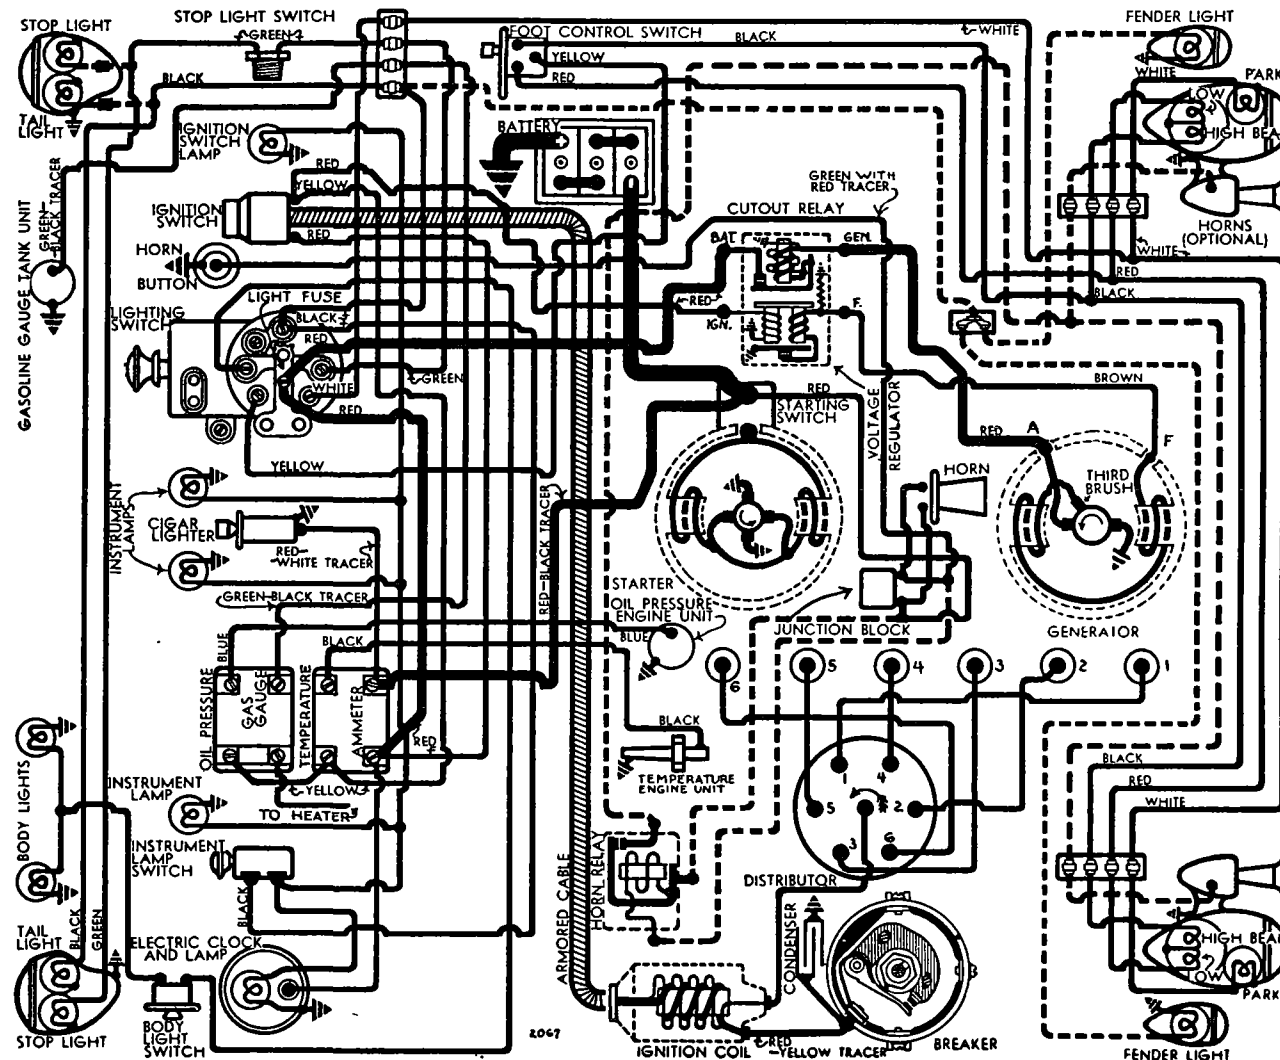

**Maximum Charging Rate:**—21 amperes (cold), 18 amperes (hot), 8.5 volts, 2400 R.P.M., 38-40 M.P.H.

**Performance Data**

	Amperes	Volts	R.P.M.
Cold	18-21	8.2-8.5	2400
Hot	15-18	7.9-8.3	2900

Rotation—Counter-clockwise at commutator end. Brush Spring Tension—22-26 zs. (main), 16-20 ozs. (third brush).

Field Current—2.3-2.6 amperes at 6 volts.

►SEE 1936 DIAGRAM FOR 948-B GENERATOR WIRING

CONTINUED ON NEXT PAGE

CONTINUED FR M PRECEDIN PAGE

**Removal:**—Generator pivot mounted at left front of engine. To remove, take out pivot bolts and clamp bolt.

**Belt Adjustment:**—Loosen mounting bolts, swing generator away from engine until belt sideplay midway between crankshaft and generator pulleys is 1", tighten mounting bolts.

## GENERATOR

MODEL 120 (STD), 95 & 116 (RADIO)

Delco-Remy Model 948-Z. Armature No. 1854856. Fixed third brush control with external vibrating voltage regulator. Ventilated by fan on drive pulley. NOTE—Third brush is clamped in position for maximum safe output and must not be disturbed.

**Charging Rate Adjustment:**—Adjusted by changing setting of voltage regulator. See Regulator Data. **Maximum Charging Rate:**—22 amperes at 8.0 volts (cold), 18 amperes at 8.0 volts (hot), 30-35 MPH.

### Performance Data

	Amperes	Volts	R.P.M.
Cold	22	8.0	3000
Hot	18	8.0	3500

**Rotation:**—Counter-clockwise at commutator end. **Brush Spring Tension:**—22-26 ounces (main), 16-20 ounces (third).

**Field Current:**—2.3-2.6 amperes at 6 volts.

**Removal & Belt Adjustment:** See 948B Gen. above.

## GENERATOR

SPECIAL EQUIPMENT

Delco-Remy Model 954-A, Armature No. 1865306; Model 934-F, Armature 1861851. (Police). Two brush (shunt) type with external voltage and current regulation.

**Charging Rate Adjustment:**—None. See Regulator.

**Maximum Charging Rate:**—As follows:

### Performance Data—954-A

	Amperes	Volts	R.P.M.
Cold	22	8.0	1800

### Model 934-F

	Amperes	Volts	R.P.M.
Cold	26	8.1-8.3	1325

**Rotation:**—Counter-clockwise at commutator end.

**Brush Spring Tension:**—25 ounces each.

**Field Current:**—2.3-2.6 amperes (954-A), 1.7-2.0 amperes (934-F) at 6.0 volts.

**Removal & Belt Adjustment:**—Same as Std. Gen.

## CUTOUT RELAY

WITH 948-B GENERATOR

Delco-Remy Model 265-H. On generator.

*For complete data, refer to Electrical Equipment Index.*

**Cuts In:**—6.75-7.5 volts, 11 M.P.H.

**Cuts Out:**—0-2.5 amperes discharge current.

**Contact Gap:**—.015-.025". **Air Gap:**—.012-.017".

## REGULATOR

WITH 948-Z GENERATOR

(948-Z Gen.)—Delco-Remy Model 5812. Double Core Type Voltage Regulator (With 'IGN' Terminal). Cutout Relay and vibrating type voltage regulator.

*For complete data, refer to Electrical Equipment Index.*

### Cutout Relay

**Cuts In:**—6.9-7.6 volts.

**Cuts Out:**—3 amperes discharge.

**Contact Gap:**—.018-.025".

**Air Gap:**—.018-.022" with contacts closed.

## Voltage Regulator

**Setting:**—7.5-7.9 volts at 70°F, 7.4-7.6 volts at 150°F. Regulator is over-compensated for temperature and must be checked at these points.

**Checking & Adjustment:**—See *Electrical Equipment Section*.

**Contact Gap:**—.015-.025".

**Contact Spring Tension:**—2.7-3.5 ounces.

**Air Gap:**—.060-.070" between armature and center of core with armature down and fibre bumper touching stop; .008-.013" between fibre bumper and stop with armature up.

## REGULATOR

WITH 934-F & 954-A GENERATOR

Delco-Remy Model 5596 (Special 954-A Gen.), 5597 (934-F Gen.). Double Core Type Voltage & Current Regulator (with 'IGN' Terminal). Cutout Relay and separate vibrating type Voltage and Current Regulator units in a single case.

*For complete data, refer to Electrical Equipment Index.*

### Cutout Relay

**Cuts In:**—6.9-7.6 volts at 70°F.

**Cuts Out:**—0-4.0 ampere discharge current.

**Contact Gap & Air Gap:**—.020".

### Voltage Regulator

**Setting:**—7.0-7.4 volts Cold (70°F), 6.95-7.15 volts Hot (150°F). Over-compensated for temperature.

**Checking & Adjustment:**—See *Electrical Equipment Section*.

**Contact Gap:**—.020". **Contact Spring Tension:**—3.5 oz. **Air Gap:**—.063" between armature and center of core with armature down, .010" between fibre bumper and stop with armature up.

### Current Regulator

**Setting:**—20-22 amperes (5596), 26-28 (for 5597).

**Checking & Adjustment:**—See *Electrical Equipment Section*.

**Contact Gap, Contact Spring Tension, Fibre Bumper Air Gap:**—Same as Voltage Regulator (above).

**Armature Air Gap:**—.075" between armature and center of core (armature down, fibre bumper against stop).

## LIGHTING

1936 MODELS

**LIGHTING:**—Headlamps—Corcoran—Brown, Pre-focused type. Headlamps aimed straight ahead (upper beams with lenses in place). Upper and lower driving beams controlled by foot selector switch.

### Switches

**Lighting:**—Delco-Remy Model 481-Z.

**Foot Selector:**—Delco-Remy Mod. 471-P, 471-U (RHD)

### Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps	32-32	2331
Parking, Instr., Body	3	63
Tail	3	63
Stop	15	87

## LIGHTING

1937 MODELS

**LIGHTING:**—Headlamps—Hall, pre-focused type. Headlamps aimed straight ahead (upper beams with lenses in place). Upper and lower driving beams controlled by foot selector switch mounted on floor board to left of clutch pedal.

### Switches

**Lighting:**—Delco-Remy Model 481-X.

**Dash Light Switch:**—Delco-Remy Model 1410.

**Foot Selector:**—Delco-Remy Model 471-P, 471-U

### Bulb Specification

Position	Candlepower	Mazda No.
Headlamps	32-32	2330
Tail, Dome, Fender	3	63
Parking, Instr.	1½	55
Stop	15	87

## MISC. ELECTRICAL

**FUSES (1936):** Lighting—20 ampere mounted on fuse block on dash.

**Body Lights and Standard Horn:**—20 ampere fuse on fuse block. One extra fuse mounted on fuse block.

**FUSES (1937):** Lighting—20 ampere on switch.

**HORNS:**—Klaxon Model K-26-L. Type 1608 (standard).

Twin horns K-33-B, type 1873 (right side—high note), K-33-C, type 2156 (left side—low note) or K-33-S type 2059 (low note), 2060 (high note). Twin horns with horn relay optional. All horns are vibrator type.

Horn Type	Current at 6 volts	Air Gap
1608 (std.)	6.5-8.5	.025-.029"
1873 (rt. side-high)	11-13	.036-.040"
2156 (left side-low)	11-13	.042-.046"
2059 (low)	11-13	.042-.046"
2060 (high)	10-12	.032-.036"

**Horn Relay:**—Model 271-A.

**Contact Point Opening:**—.015-.030".

**Points Close:**—2.7-4.0 volts.

**Air Gap:**—.010-.025" (closed).

## ENGINE

**ENGINE SPECIFICATIONS (90A, 95, 116):** Six cylinder, "L" head type. Supercharged (116 only).

**Bore:**—3¼". **Stroke:**—4".

**Displacement:**—199.1 cubic inches.

**Rated Horsepower:**—25.35 (AMA).

**Developed Horsepower:**—(90A) 80 at 3300 RPM., (95) 85 at 3300 RPM., (116) 106 at 4000 RPM.

**Compression Ratio:**—6.7-1 Std. 7.0-1 Optl.

**Compression & Vacuum Reading:**—See *Tune-Up data*.

**ENGINE SPECIFICATIONS (90, 110, 120):** Six cylinder, "L" head type. Supercharged (all models).

**Bore:**—3¼". **Stroke:**—4¾".

**Displacement:**—217.8 cubic inches.

**Rated Horsepower:**—25.35 (AMA).

**Developed Horsepower:**—(90) 85 at 3300 RPM., (110) 112 at 4000 RPM., (120) 116 at 4000 RPM.

**Compression Ratio:**—6.7-1 Std. 7.0-1 Optl.

**Compression & Vacuum Reading:**—See *Tune-Up data*.

**PISTONS:**—Bohn, Autothermic, Silicon alloy, cam ground, plated type with special cylinder wall lubrication system on 1937 models. See *"Cylinder Wall Lubrication"* in *Graham Shop Notes*.

**Weight:**—17 ozs. **Length:**—3¾".

**Removal:**—Pistons and rods removed from above. **Clearance:**—Top .024-.030". Skirt .0025". See *Fitting New Pistons*.

**Replacement Pistons:**—Finished pistons (with pins) furnished in oversizes of 3.247-3.252" (in .001" steps), 3.252-3.274" (in .002" steps), and 3.277".

**NOTE:**—Piston size stamped on head of piston.

**Fitting New Pistons:**—Pull required to withdraw .0025" feeler ½" wide from between piston and cylinder wall at right angles to pin must be within 10-15 lbs.

**Installing Pistons:**—Vent hole in oil groove in skirt should be away from camshaft.

**PISTON RINGS:**—Tw compression, tw oil control rings per piston, all above pin.

## ENGINE

C CONTINUED FROM PRECEDING PAGE

Ring	Width	End Gap
Compression	3/32"	.007-.017"
Oil (upper)	3/16"	.007-.017"
Oil (lower)	5/32"	.007-.017"

NOTE—Side clearance for all rings .0015" min.

Replacement Rings & Installation Directions:—See *Graham Special Shop Notes for data.*

PISTON PIN:—Diameter 13/16". Length 2 13/16".

Pin locked in rod by clampscrew. Pin holes in piston oiled by four 5/32" oil holes. Pins furnished standard and .002", .005", .010" oversize.

Pin Fit in Piston—.0005" clearance (hand push fit).

CONNECTING ROD:—Length 7". Bearing caps dowelled Crankpin Journal Diameter—(1936) 1 15/16", (1937) 2 1/16".

Lower Bearing—Removable steel-backed, cadmium-silver lined type. Bearings not grooved.

Clearance—.002". Sideplay—.004-.006".

Bearing Adjustment:—None (no shims). Replace bearings. New bearings should be tight with .002" feeler 1" long installed under cap (cap can be sanded on face plate to secure this fit). Install new bearings with tang engaging groove in rod and cap.

Installing Rods:—Lower bearings offset. Install rod with widest half of bearing toward rear (#1, 3, 5) and toward front (#2, 4, 6). No oil holes used.

CRANKSHAFT:—Four bearing. Integral counterweights. Lanchester type vibration dampener Journal Diameters—2 1/4" all bearings.

Bearing Type—Removable steel-backed, cadmium-silver-lined type. No shims.

Clearance—.002".

Bearing Adjustment & Replacement:—See *Graham Special Shop Notes for Main Bearing Servicing.*

End Thrust: At #1 front bearing. Endplay .004-.006". Adjusting shims furnished .002", .008", .036" thick.

CAMSHAFT:—4 bearing. Non-adjustable chain drive. Journal Diameters—#1, 1 7/8", #2, 1 13/16", #3, 1 3/4", #4, 1 1/4".

Bearing Type—Bronze bushings.

End Thrust:—Taken by spring-loaded plunger in forward end of camshaft.

Timing Chain:—Link-Belt. Width 1". Pitch .500". Length 23" or 46 links.

Camshaft setting:—Sprockets are marked. Mesh chain so that there are nine links between marks on sprockets or ten pins inclusive of pins meshed opposite marks.

VALVES: Head Diameter Stem Diameter Length  
Intake .....1 33/64".....3145".....4 61/64"  
Exhaust .....1 21/64".....3135".....4 61/64"Seat Angle Lift Stem Clearance  
Intake .....30".....5/16"......001-.0028"  
Exhaust .....45".....5/16"......002-.0036"

NOTE—Exhaust valve stem diameter increased to .3704" after Engine No. 221394 (95), 136292 (116), 115726 (120).

Valve Guides:—Length 2 3/4". Finished inside diameter .3164" for all guides. Guides counterbored to .329" NOTE—Counterbore increased to .356" and exhaust guide inside diam. increased to .3435" after engine No. 221394 (95), 136292 (116), 115726 (120).

Valve Springs:—Free length 1 15/16".  
Spring Pressure Spring Length  
Valve Closed ..... 36 lbs. .... 1 21/32"  
Valve Open ..... 87 lbs. .... 1 3/8"

Valve Lifters:—Cylindrical type. Diameter 1". Operate in guide holes 1 21/32" long finished directly

in block. Pressure lubricated. Lifter groove meters oil for piston and cylinder wall lubrication. Lifter Clearance in Guide—.0005-.0015".

## VALVE TIMING

Tappet Clearance:—.010" all valves, engine hot.

Valve Timing:—See Camshaft Setting above.

Models 90A, 95

Intake Valves—Open 2° ATDC. Close 54° ALDC.

Exhaust Valves—Open 41° BLDC. Close 11° ATDC.

Models 90, 110, 116, 120

Intake Valves—Open 4 1/2° BTDC. Close 47 1/2° ALDC.

Exh. Valves—Open 47 1/2° BLDC. Close 4 1/2° ATDC.

To Check Timing—Set tappet clearance #1 exhaust valve at .012". This valve should close with #1 piston 11° or .0472" (90A, 95), 4 1/2° (Other models) after top dead center when flywheel mark 'EC-1' lines up with indicator under cover in right front face of flywheel housing. Reset tappet clearance at .010" with engine hot.

## SUPERCHARGER

MODELS 110, 116, 120

Centrifugal Type. Supercharger located between carburetor and manifold (downdraft carburetor is mounted on top of supercharger).

See *Miscellaneous Section for complete data.*Supercharger Removal & Drive Data:—See *Graham Special Shop Notes for data.*

## LUBRICATION

LUBRICATION:—Pressure system. Gear type oil pump Normal Oil Pressure—40 lbs. at 30 M.P.H.

Oil Pressure Regulator—Located on right side of crankcase. Opens at 50 lbs. (overflow lubricates timing chain). Adjustable by adding or removing shims above spring within cover plug.

Oil Pressure Gauge (1937): King-Seeley electric. K-S No. 6090 (all except Cabriolet), 6610 (Cabriolet) dash unit, No. 6125 (engine unit).

See *Miscellaneous Section for complete data.*

Crankcase Capacity—5 qts.

## CLUTCH

1936 MODELS

CLUTCH:—Illinois. Single plate, dry disc type.

See *Clutch Section for complete data.*

Facings—Moulded type, 2 required. Inside Diam. 5 1/2". Outside Diam. 8 7/8". Thickness 1/8".

Adjustment:—Free movement of clutch pedal must be 1-1 1/4". To adjust, loosen locknut on left hand end of clutch pedal shaft at pedal, shift pedal on shaft (pedal threaded on shaft), tighten locknut. NOTE—For all car models equipped with Illinois clutch, when the limit of the Clutch adjustment is reached, loosen two capscrews in clutch mounting bracket, pull out shim under bracket, Removal—See 1937 type below.

## CLUTCH

1937 MODELS

CLUTCH:—Long Model 9CF-CS. Semi-centrifugal, single plate, dry disc type.

See *Clutch Section for complete data.*

Facings—Woven, 2 required. I.D. 5 3/4". O.D. 9". Thickness .125".

Adjustment:—Free movement of clutch pedal must be 1 1/4". To adjust, loosen locknut on left hand end of clutch pedal shaft at pedal, shift clutch pedal on shaft (pedal threaded on shaft), tighten locknut.

Removal:—Remove Transmission (see Transmission Section below), remove clutch bell housing, take out clutch housing mounting screws in flywheel, turning all screws out evenly to avoid distorting cover.

## TRANSMISSION

Warner Model (Std.) Overdrive Transmission (Optl.). Constant-mesh, synchro-mesh (Second &amp; High), sliding gear (Low &amp; Reverse).

See *Transmission Section for complete data.*

Removal:—Disconnect hand brake and clutch linkage. Drop driveshaft, support engine at rear, remove transmission mounting bolts, remove rear engine mounting, pull unit back and remove.

## OVERDRIVE

Warner (Optl. with Overdrive Transmission). Integral type (1936), Type R6 (1937).

See *Transmission Section for complete data.*

Removal: Same as for Std. Transmission (without Overdrive) after overdrive control has been disconnected.

## UNIVERSALS

(1936) Spicer. Needle bearing type.

(1937) Detroit Universal Series 4200. Ball-and-trunion type.

See *Universals Section for complete data.*

## REAR AXLE

REAR AXLE:—Spicer—Semi-floating, spiral bevel gear type with Hotchkiss drive.

See *Rear Axle Section for complete data.*

Std. Ratios—(90A, 95) 4.45-1. (90, 110) 4.7-1. (116, 120) 4.27-1. (Cars with Overdrive) 4.7-1.

Backlash—.004-.008". Shim adjustment.

Removal:—Holst rear of car, disconnect rear universal, brake line at housing, shock absorbers, remove spring U-bolts, disconnect rear spring shackles and withdraw assembly. Bleed brake lines when installing assembly.

Wheel Bearing Adjustment—None (sealed bearings).

## SHOCK ABSORBERS

SHOCK ABSORBERS:—Delco—Model 1166-K (front and rear). Two way direct acting, hydraulic type.

See *Shock Absorber Section for complete data.*

## FRONT SUSPENSION

Front Suspension:—Spicer, conventional 'T' beam section front axle with Reverse-Elliott ends and semi-elliptic springs.

Kingpin Inclination—7 1/2° crosswise.

Caster—(90, 90A, 110) 2 1/2°. (95) 4-4 1/2°. (116, 120) 3-4°. Adjust with wedge shims between spring and seat on axle.

Camber—1°.

Toe In—1/8-3/16". Adjust in usual manner by changing length of tie rod.

## STEERING GEAR

Ross. Cam-and-Lever or Cam-and-Twin Lever type. See *Steering Gear Section for complete data.*

## BRAKES

BRAKES: — Service — 'Graham-Lockheed' hydraulic type. Hand lever applies independent shaft brake.

See *Brake Section for complete data.*

Drum Diameter—(90A, 95) 9". (Others) 11".

Lining—Molded type. Width 1 3/4". Thickness 3/16" (90A, 95), 1/4" (Other models). Length per wheel 18" (90A, 95), 23" (Others).

Clearance—.006" heel, .010" toe, for each shoe.

Hand Brake:—External type on drum at rear of transmission.

Adjustment—See *Graham Shop Notes.*

Drum Diameter—6" (all models).

Lining—Width 2". Thickness 5/32". Length 17 1/4".

## MODEL IDENTIFICATION

**SERIAL NUMBER:**—Stamped on plate on floor inside right rear door (Sedans), on seat frame (Coupe).  

Year	Serial Number	Engine Number
1938	225000-140000	230000-145001
1939	600001-500001	610001-510001
1940	505001-605001	515001-615001

**ENGINE NUMBER:**—Stamped on plate on right side of crankcase and on Serial No. Plate (See above).

## TUNE-UP

**COMPRESSION:**—Ratio—6.7-1 Al. head Std. 96 ('38), 97 ('38-39), Optl. 96 ('39). 6.4-1, 6.6-1 Cast-iron head Std. 96 ('39), 6.65-1 Std. 107, 108. 7-1 or 7.25-1 optional on all models.  
**Pressure:**—120 lbs. (6.4-1, 6.6-1 hds.), 125 (6.65-1 hd. on 108), 130 lbs. (6.65-1 hd. on 107 and 6.7-1 head) at cranking speed.

**VACUUM READING:**—Gauge should show steady reading of 17" with engine idling at 5-7 M.P.H.

**FIRING ORDER:**—1-5-3-6-2-4. See wiring diagram.

**SPARK PLUGS:**—Champion J9 ('38), H10 ('39), J-10 ('40). 14 MM. Metric.

Gaps—.025" (or .033" for improved idling).

**IGNITION:** See Coil, Condenser, and Distributor.

**Breaker Gap:**—Set at .018". Limits .018-.024".

**Cam Angle or Dwell:**—35° (closed), 25° (open).

**Breaker Arm Spring Tension:**—20 ounces.

**Automatic & Vacuum Advance:**—See Distributor.

**IGNITION TIMING:** See Ignition Timing.

**Std. Setting:**—At TDC (96 & 108), 4½° ATDC (97 & 107) with flywheel mark "IGN" at indicator on right front face of housing.

**CARBURETION:** See Carburetor & Carb. Equipment.

**Idle Setting (Marvel Carb.):**—Idle screw set midway between miss and roll points. Idle speed 6-7 MPH.

**Idle Setting (Carter Carb.):**—Idle screw ½-1½ turn open. Idle speed 7-8 MPH.

**Float Level (Marvel Carb.):**—19/32" from gasket seat on cover to nearest point on float (invert to check).

**Float Level (Carter Carb.):**—¾" from projection on cover to top of seam on float at free end.

**Accelerating Pump (Marvel Carb.):**—#3 hole Normal, #2 hole Warm Temperatures, #1 hole (Summer), #4 (Winter) for extreme temperatures.

**Accelerating Pump (Carter Carb.):**—Center hole Normal, Inner hole (Summer), Outer hole (Winter)

**Fuel Pump Pressure:** 3½ lbs. maximum.

**MANIFOLD HEAT CONTROL:**—Special. Thermostatic spring coil type. Supercharger. Upper half of Supercharger housing and cross-passage between supercharger and manifold water-jacketed to heat fuel mixture. No adjustment required.

**VALVES:** See Valve Timing.

**Tappet Clearance:**—.010" All Valves, Engine Hot.

**STARTING:** See Battery, Starter, Generator, and Regulator (when used).

## IGNITION

**Ignition Switch:**—Delco-Remy Model 1116281. Connected to coil by armored cable.

**COIL:** Delco-Remy No. 1115022 (96, 108), 1115127 (97, 107). Mounted on engine side of dash.

**Ignition Current:**—1.8 amperes idling, 3.0 amperes stopped (1115022). 2 amps. idling, 4 stopped (1115127).

**CONDENSER:** Delco-Remy Part No. 829092.

Capacity—20-.25 microfarad.

**DISTRIBUTOR:** Delco-Remy Model 623-A (96, 108), 623-S (97, 107). Single breaker, 6 lobe cam, full automatic advance type with auxiliary vacuum spark control.

**Rotation:**—Counter-clockwise viewed from top.

**Distributor Settings:**—See Tune-Up data.

Automatic Advance—623-A			
Distributor	Engine	Distributor	Engine
Degrees	R.P.M.	Degrees	R.P.M.
Start	400	2	800
9	1400	18	2800

Automatic Advance—623-S			
Start	275	2	550
3	400	6	800
8	1000	16	2000

**Vacuum Spark Control 1116006 (623-A), 1116003 (623-S).** Provides additional advance at intermediate speeds above idling except when engine is suddenly accelerated or is operated with wide open throttle

**Vacuum Advance—1116006**

Distr. Degrees	Eng. Degrees	Vacuum (" of HG.)
Start	0°	5-7"
5° Max.	10° Max.	14-18"

**Vacuum Advance—1116003**

Start	0°	5-7"
5° Max.	10° Max.	13-16"

**Distributor Removal:**—Mounted on cylinder head. To remove, loosen advance arm clamp bolt and lift distributor up (without disconnecting vacuum line).

## IGNITION TIMING

**IGNITION TIMING: Flywheel Degrees Piston Position**

96, 108 ..... At TDC ..... 0000" TDC.

97, 107 ..... 4½° ATDC ..... 0088" ATDC.

**To Set Timing:**—With #1 piston on compression turn engine over until flywheel mark "IGN" lines up with indicator (under cover) on right front face of flywheel housing, loosen advance arm clamp bolt, rotate distributor until contacts begin to open, tighten clamp bolt.

**CARBURETOR**

MODELS 96 &amp; 97

**CARBURETION:**—Carburetor (96,97), Marvel Model C-2# 10-1808 (96), Model C-3 No. 10-1809 (97). 1¼" (96), 1½" (97) downdraft type with manual choke control. For complete data, refer to Carburetor Index.

Settings (Idle Setting, Float Level, Accelerating Pump Setting): See Tune-Up data.

**CARBURETOR**

MODELS 107 &amp; 108

Carburetor (107-108):—Carter Type WA-1, Model 473-S (107), 472-S (108). Downdraft types.

See Carburetor Section for complete data.

Settings (Idle Setting, Float Level, Accelerating Pump Setting): See Tune-Up data.

Choke Setting—1 Notch Rich (for 473-S only).

**CARB. EQUIPMENT**

**Air Cleaner:**—Burgess or AC #1528737 (Special), #1528738 (Supercharger) oil-wetted type standard.

**Fuel Pump:**—AC Type R #1523731 diaphragm type. For complete data, refer to Carburetion Equip. Index.

**Gasoline Gauge:**—King-Seeley Electric. K-S Nos. Dash Unit: 6923 (All '38, '39, '40), 7470 (97 '39), 7930 (107,108). Tank Unit: 6928 (96,97), 7916 (107,108). For complete data, refer to Carburetion Equip. Index.

**BATTERY**

**BATTERY (SPECIAL):**—Willard, WT-1-95 ('38), SW-1-95 ('39 & '40). 6 volt, 15 plate, 95 ampere hour capacity (20 hour rate).

Starting Capacity—117 amperes for 20 minutes.

Grounded Terminal—Positive (+) grounded to engine block (under starter) at forward end of clutch housing-to-engine brace.

Location—Left front of engine dash under hood.

**BATTERY (SUPERCHARGER):**—Willard, Type WHT-2-105 ('38), SW-2-105 ('39 & '40). 6 volt, 15 plate, 105 ampere hour capacity (20 hr. rate).

Starting Capacity—133 amperes for 20 minutes.

Grounded Terminal & Location—Same as above.

**STARTER**

Delco-Remy Model 738-T, 738-X (RHD). Armature No. 823881.

Drive—Manual pinion shift (738-T), solenoid pinion shift (738-X), with overrunning clutch.

Cranking Engine—140-145 amperes, 5 volts.

Rotation—Counter-clockwise at commutator end.

Brush Spring Tension—24-28 ounces each.

**Performance Data.**

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5000	5.0	65
12 ft. lbs.	Lock	3.37	525

**Removal:**—Flange mounted on left front face of fly-wheel housing. To remove, take out flange mounting screws.

**Starting Switch (738-T):**—Delco-Remy No. 820052, (738-X)—Solenoid Switch type 1546 controlled through relay by push switch on instrument panel. For complete data, refer to Electrical Equipment Index.

**GENERATOR**

MODEL 96 (STD.)

Delco-Remy No. 1100455. Armature No. 1854856. Armature Number—No. 1854856.

Third brush regulation, lighting switch control. refer to Electrical Equipment Index for 'Delco-Remy Lamp-Control (Switch) type' generator article.

**Charging Rate Adjustment:**—Ground field terminal at generator, check output with test ammeter. Loosen lock screw on commutator endplate, shift third brush by hand, counter-clockwise to increase, or clockwise to decrease charging rate, tighten lock screw. NOTE—Resistance on switch can be changed for various operating conditions.

**Maximum Charging Rate:**—As given below.

**Performance Data**

	Amperes	Volts	R.P.M.
Cold	18-21	8.2-8.5	2400
Hot	15-18	7.9-8.3	2900

**Rotation:**—Counter-clockwise at commutator end.

**Brush Spring Tension:**—22-26 ounces (main brush), 16-20 ounces (third brush).

**Field Current:**—2.3-2.6 amperes at 6 volts.

**Removal:**—Pivot mounted at left front of engine. To remove, take out pivot bolts and clamp bolt.

**Belt Adjustment:**—Loosen pivot bolts and clamp bolt, swing generator away from engine until belt side-play midway between crankshaft and generator pulleys is 1", tighten clamp bolt and pivot bolts.

**GENERATOR**

97, 107, 108 (STD), 96 (RADIO)

Delco-Remy No. 1100007. Armature No. 1966789. Fixed third brush control with external vibrating

Voltage Regulator (see Note). Ventilated by fan NOTE—'Double Core Type' Voltage Regulator (with

'IGN' terminal used on Models 96 & 97. 'Single Core Type' Voltage Regulator used on Models 107 & 108.

**Charging Rate Adjustment:**—Adjusted by changing voltage regulator setting. See Regulator data.

**Maximum Charging Rate:**—As given in table below.

NOTE—Do not operate generator on open-circuit.

**Performance Data**

	Amperes	Volts	R.P.M.
Cold	26-30	8.0	3400
Hot	25-28	8.0	3600

All other data as given for 1100455 generator above.

**CUTOUT RELAY**

WITH NO. 1100455 GENERATOR

Delco-Remy Model 265-H (Used with 1100455 Gen.). For complete data, refer to Electrical Equipment Index.

Cuts In—6.75-7.5 volts. 11 M.P.H.

Cuts Out—0-2.5 amperes discharge.

Contact Gap—.020". Air Gap—.015" (closed).

Armature Spring Tension—3.5 ounces.

**REGULATOR**

WITH NO. 1100007 GENERATOR

Delco-Remy Model 5827 (Used with 1100007 Gen.). Double Core Type Voltage Regulator (With 'IGN' Terminal). Cutout Relay and vibrating type Voltage Regulator in case on dash.

For complete data, refer to Electrical Equipment Index.

**Cutout Relay**

Cuts In—6.9-7.6 volts.

Cuts Out—0-3.0 amperes discharge.

Contact Gap—.020". Air Gap—.020" (closed).

**Voltage Regulator**

Setting—7.5-7.9 volts (70°F.), 7.4-7.6 volts (150°F.)

Regulator is over-compensated for temperature and must be checked at these points.

Checking & Adjustment—See Electrical Equipment Section.

Contact Gap—.020". Contact Sp. Tension—2.7-3.5 oz.

Air Gap—.063" between armature and center of core with armature down. .010" between fibre bumper and stop with armature up.

**REGULATOR**

MODELS 107 &amp; 108

Delco-Remy No. 1118204 (Used with 1100007 Gen.). Single Core Type Voltage Regulator. Cutout Relay and vibrating type Voltage Regulator in case. Refer to Graham 1940-41 Model 109 & 113 article (following) for complete data on this Regulator.

**LIGHTING**

**LIGHTING:**—Headlamps. Hall. Twin beam type with upper and lower beams controlled by selector switch

**Headlamp Adjustment:**—Aim each headlamp so that hot spot aimed straight ahead and upper edge at lamp center height at distance of 25 feet.

**Headlamp Beam Indicator:**—In upper half of speedometer dial. Lighted when upper beams in use.

**Switches**

**Lighting:**—Delco-Remy Model 481-X (96 with 1100455 generator), 478-H (all others).

**Beam Selector:**—Douglas No. 5544.

**Instrument Panel:**—Delco-Remy Model 1997706.

**Bulb Specifications**

Position	Candlepower	Mazda No.
Headlamps	32-32	2330
Parking (in headlamps)	1½	55
Stop-Tail	21-3	1158
License, Dome	3	63
Instrument, Indicator	1	51

**MISC. ELECTRICAL**

**FUSES:**—Lighting—20 ampere fuse capacity mounted on lighting switch. Clock—S.F.E. 4 amp. (on clock).

**HORNS:**—Klaxon—K-16-2003 (96 & 108), K-26-S-1576 (97&107), single horn standard. Twin Horns—Model K-33-S, Type 2087 (low note—left side), 2088 (high note—right side), vibrator type, blended tone with horn relay optional. NOTE—Twin horns mounted on either side of radiator under hood.

**Horn Type** **Current (at 6 volts)** **Air Gap**

K-16-2003 ..... 5-7.5 ..... .015-.017"

K-26-S-1576 ..... 6.5-8.5 ..... .025-.029"

2087 (Low Note) ..... 11-13 ..... .042-.046"

2088 (High Note) ..... 10-12 ..... .032-.036"

**Horn Relay:**—Delco-Remy Model 271-A or 1116775.

Contact Gap—.020".

Contacts Close—2.7-4.0 volts. Air Gap—.015".

**ENGINE**

**ENGINE SPECIFICATIONS:**—Six cylinder, 'L' head. Engines same for both models except that Supercharger installed on Models 97 and 107 only.

Bore—3¼". Stroke 4¾". Displacement 217.8 cu. ins.

Rated Horsepower—25.35 A.M.A.

Developed Horsepower—(96) 90 at 3600 RPM.; (108)

93@3800; (97) 116, (107) 120, at 4000 RPM.

Compression Ratio—6.7-1 aluminum, Std. 96('38), 97,

Optl. 96 ('39). 6.4 & 6.6-1 cast-iron, Std. 96 ('39).

6.65-1 Cast-iron, Std. 107 & 108. 7.0-1 & 7.25-1

Aluminum Optional on all models.

Compression & Vacuum Reading—See Tune-Up data.

**PISTONS:**—Bohn autothermic, aluminum alloy, cam ground, plated type with special cylinder wall lubrication system. See Graham Shop Notes for data.

Weight—14½ ozs. (stripped). Length—3¾".

**Removal:**—Pistons and rods removed from above.

Clearance—Top .024". Skirt .0025".

**Replacement Pistons:**—Finished pistons (with pins fitted) furnished in oversizes of 3.247" to 3.252" (in .001" steps), 3.252" to 3.274" (in .002" steps) and 3.277". NOTE—Piston size stamped on head.

CONTINUED N NEXT PA E

## ENGINE

## C NTINUED FROM PRECEDING PAGE

**Fitting New Pistons:**—Use .0025" feeler 1/2" wide inserted between piston and cylinder wall at right angles to pin. Pull required to withdraw feeler must be 10-15 lbs. at all points in cylinder.

**Installing Pistons:**—Install pistons with four vertical grooves on skirt toward camshaft (right side).

**PISTON RINGS:**—Two compression, two oil control rings per piston, all above pin.

Ring	Width	End Gap	Side Clearance
Compr.	3/32"	.007-.015"	.0015" Min.
Oil Cont.	5/32"	.007-.015"	.0015" Min.

**Replacement Rings & Installation Directions:**—See *Graham Shop Notes for data.*

**PISTON PIN:**—Diameter 13/16". Length 2 13/16". Pin locked in rod by clampscrew.

**Pin Fit in Piston:**—.0005" clearance (hand push fit).  
**Replacement Pins:**—Furnished Std. and .002", .005", .010" oversize (new pistons have fitted pins).

**CONNECTING ROD:**—Length 7". Bearing caps dowelled on rods and held by capscrews in blind tapped holes Crankpin Journal Diameters—2 1/16".

**Lower Bearing:**—Removable steel-backed, cadmium-silver-lined type (not grooved, no oil spray hole).  
Clearance—.0008-.0021". Sideplay—.004-.006".

**Bearing Adjustment:**—None (no shims). Replace bearings. New bearings should be tight with .002" feeler 1" long installed under cap (cap can be sanded on face plate to secure this fit). Install new bearings with tang engaging groove in rod and cap.

**Installing Rods:**—Lower Bearings offset. Install rod with widest half of bearing toward rear (#1, 3, 5), toward front (#2, 4, 6). Head of piston pin clampscrew should be toward camshaft on all rods.

**CRANKSHAFT:**—4 bearing, integral counterweights with Lanchester type Vibration dampener.  
Journal Diameters—2 3/8" all bearings.

**Bearing Type (Front):**—Cadmium-silver lined bushing inserted in hole in crankcase from forward end with bushing flange dowelled to crankcase.

**Bearing Type (Others):**—Conventional removable steel-backed, cadmium-silver lined type.  
Clearance (all Bearings)—.0008-.0021".

**Bearing Adjustment & Replacement:**—See *Graham Shop Notes for Crankshaft Bearing data.*

**End Thrust:**—Taken by front bearing. Adjusted by adding or removing shims furnished .002", .008" thick. Endplay—.004-.006".

**CAMSHAFT:**—4 Bearing. Non-adjustable Chain Drive.  
Journal Diameters—#1, 1 1/8"; #2, 1 13/16"; #3, 1 3/4"; #4, 1 1/4". Bearing Type—Bronze bushings.

**End Thrust:**—Taken by spring-loaded plunger in forward end of camshaft.

**Timing Chain:**—Link-Belt No. 336. Width 1". Pitch .500". Length 23" or 46 links.

**Camshaft Setting:**—Sprockets are marked. With #1 and #6 pistons on top dead center and marks on both sprockets on upper left side, mesh chain so there are exactly 9 links or 10 pins (inclusive of pins meshed opposite marks) between marks.

**VALVES:**—Head Diameter Stem Diameter Length  
Intake ..... 1 33/64" ..... 341" ..... 4 61/64"  
Exhaust ..... 1 21/64" ..... 341" ..... 4 61/64"

Seat Angle Lift Stem Clearance  
Intake ..... 30° ..... 5/16" ..... .002-.003"  
Exhaust ..... 45° ..... 5/16" ..... .002-.003"

**NOTE:**—96 & 97 stem diameter .3145" on Intake.  
**Valve Guides:**—Pressed in block. Ream after installation for correct clearance.

**Valve Springs:**—Free length 1 15/16" ('38), 2" ('39-40).  
1938 Pressure '39-40 Spring Length  
Valve Closed ..... 36 lbs. .... 44 lbs. .... 1 21/32"  
Valve Open ..... 87 lbs. .... 98 lbs. .... 1 3/8"  
**Valve Lifters:**—Cylindrical type. Diameter 1". Operate in guide holes 1 21/32" long finished in block.  
**Lifter Clearance in Guide:**—.0005-.0015".

## VALVE TIMING

**Tappet Clearance:**—.010" all valves, engine hot.

**Valve Timing:**—See Camshaft Setting above.

**Intake Valves:**—Open 4 1/2° BTDC. Close 47 1/2° ALDC.  
**Exhaust Valves:**—Open 47 1/2° BLDC. Close 4 1/2° ATDC.  
**To Check Timing:**—Set tappet clearance #6 exhaust valve at .012". This valve should close when flywheel mark 'EC-1' lines up with indicator under cover on right front face of flywheel housing. Reset tappet clearance at .010" with engine hot.

## SUPERCHARGER

**SUPERCHARGER:**—97 and 107 only. Centrifugal type. Carburetor mounted directly on top of case (Supercharger blower between carburetor and engine).

See *Miscellaneous Section for complete data.*

**Supercharger Removal & Drive Data:**—See *Graham Shop Notes for complete instructions.*

## LUBRICATION

**LUBRICATION:**—Pressure system. Gear type oil pump located in crankcase.

**Normal Oil Pressure:**—45 lbs. at 30 M.P.H.

**Oil Pressure Regulator:**—Located on right side of crankcase at rear of engine number plate. Opens at 50 lbs. Adjusted by adding or removing washers between spring and plunger.

**Oil Pressure Gauge:**—King-Seeley Electric, K-S Nos. Dash Unit: 6926 (All 1938, 96 '39), 7480 (97 '39), 7932 (107, 108), Engine Unit: 6125 (all models).

See *Miscellaneous Section for complete data.*

**Crankcase Capacity:**—5 quarts (refill).

## COOLING

**COOLING:**—Capacity—14 qts. (96, 108), 15 (97, 107).

**Water Pump:**—Packless type, sealed ball bearing shaft. See *Water Pump Section for complete data.*

**Thermostat:**—Fulton or Detroit Lubricator. Starts to open 140-150° (Fulton), 150° (Detroit Lubricator).

**Temperature Gauge:**—King-Seeley Electric, K-S Nos. Dash Unit—No. 6923 (All '38), 7490 (96 '39), 7465 (97 '39), 7934 (All '40). Engine Unit—No. 5700 ('38), 7000 (1939-40). **NOTE:**—Use No. 7000 Engine Unit to replace 5700 (requires new Dash Unit 7490).

See *Miscellaneous Section for complete data.*

## CLUTCH

**CLUTCH:**—Long Model 9 1/2 CF-CS. Semi-centrifugal, single plate, dry disc type.

See *Clutch Section for complete data.*

**Facings:**—Chevron or Spiral wound Moulded type, 2 required. I.D. 6". O.D. 9 1/2". Thickness .125".

**Adjustment:**—Free movement of clutch pedal must be about 1 1/4". To adjust, loosen lock nut above pivot block at pedal, turn adjusting nut below pivot block on connector rod until proper clearance obtained.

**Removal:**—Remove Transmission (See Transmission below), take off clutch housing underpan, take out clutch mounting screws in cover flange (turning all screws out evenly, remove clutch from below).

## TRANSMISSION

**TRANSMISSION:**—Warner. Horizontal type (shift lever and cover on side of case). All helical gear type.

See *Transmission Section for complete data.*

**Transmission Control:**—Evans-Graham vacuum type

(1938). Own remote control (1939-40).

See *Transmission Section for complete data.*

**Removal:**—Disconnect hand brake and clutch linkage, disconnect propeller shaft at front universal, support engine at rear, remove rear engine mounting cross-member, take out transmission mounting bolts, pull transmission straight back and remove. **NOTE:**—On cars with remote gear shift, disconnect shifter rods at side of transmission case.

## OVERDRIVE

**Overdrive:**—Warner type R6 ('38, early '39), AS9-T88 (late '39, all '40) with elec. 'kick-down' Optl.

See *Transmission Section for complete data.*

**Removal:** Same as std. transmission above after overdrive control has been disconnected.

## UNIVERSALS

**UNIVERSAL JOINTS:**—Detroit-Universal Series 4200. Ball-and-trunnion type with roller bearings, 2 used. See *Universals Section for complete data.*

## REAR AXLE

**REAR AXLE:**—Spicer Model 41-2. Semi-floating, Hypoid gear type with Hotchkiss drive.

See *Rear Axle Section for complete data.*

**Ratio:**—4.27-1 Standard. 4.55-1 Optional.

**Backlash:**—.004-.008" Shim adjustment.

**Removal:**—Hoist rear of car, disconnect propeller shaft at rear universal, brake line, and shock absorbers, remove spring U-bolts, disconnect rear spring shackles, withdraw axle assembly.

**Wheel Bearing Adjustment:**—Shims provided between flanged end of axle housing and brake backing plate. To adjust, remove wheel, hub, and drum assembly. Remove shims. Endplay .002-.007".

## SHOCK ABSORBERS

**SHOCK ABSORBERS:**—Delco. Direct acting, hydraulic.

Model	Front	Rear
96, 97 1938	B-1161-K	B-1163-P
96, 97 1939	1112-J	1120-N
107, 108 '40	1000 Type	1000 Type

See *Shock Absorber Section for complete data.*

## FRONT SUSPENSION

**Front Suspension:**—Spicer, conventional 'I' beam section front axle with Reverse-Elliott ends and semi-elliptic springs.

**Kingpin Inclination:**—7 1/2° crosswise.

**Caster:**—3 1/2°. Adjusted by inserting wedge shims between spring and spring pad on axle.

**Camber:**—1°.

**Toe In:**—1/8". Adjust in usual manner by changing length of tie rod.

## STEERING GEAR

**Steering Gear:** Ross Model T-14 Cam-and-Twin Lever  
See *Steering Gear Section for complete data.*

## BRAKES

**BRAKES:**—Service—'Graham-Lockheed' hydraulic type. Hand lever applies independent shaft brake. See *Brake Section for complete data.*

**Drum:**—11" centrifuse type.

**Lining:**—Moulded type. Width 1 3/4". Thickness 1/4". Length per wheel 23".

**Clearance:**—.006" heel, .010" toe, for each shoe.

**Hand Brake:**—On drum at rear of transmission.

**Adjustment:**—See *Graham Shop Notes for data.*

**Drum Diameter:**—6".

**Lining:**—Width 2". Thickness 5/32". Length 18 9/16"

**NoRol:** Optional equipment on all models.

See *Brake Section for complete data.*

**ENGINE HOOD NOTE:**—Hood is Alligator type with latch at forward end. To raise hood, press toward left on hood latch handle in lower left front hood louvre, raise hood slightly, reach under lower edge of hood and release safety catch, raise hood.

### MODEL IDENTIFICATION

**SERIAL NUMBER:**—First No. 700001 (109 '40), 700146 (109 '41), 900001 (113 '41). Stamped on plate on floor inside right rear door.

**ENGINE NUMBER:**—First No. 710001 (109 '40), 710222 (109 '41), 910001 (113 '41). On plate on right side of engine block and on Serial No. Plate (above).

### TUNE-UP

**COMPRESSION:**—Ratio—6.65-1 Std. 7.0-1 & 7.25-1 Optl. Pressure—125 lbs. (113), 130 lbs. (109) at cranking speed (Std. Hd.).

**VACUUM READING:**—17" steady at idling speed.

**FIRING ORDER:**—1-5-3-6-2-4. See diagram.

**SPARK PLUGS:**—Champion J-10. 14 MM. Metric. Gaps—.025"

**IGNITION:** See Coil, Condenser, and Distributor. Breaker Gap—Set at .018". Limits .018-.024". Cam Angle or Dwell—35° closed, 25° open. Breaker Arm Spring Tension—20 ounces. Automatic & Vacuum Advance—See Distributor.

**IGNITION TIMING:** See Ignition Timing. Std. Setting—At TDC (113), 4½° ATDC (109) with flywheel mark "IGN" at indicator on right front face of housing.

**CARBURETION:** See Carburetor & Carb. Equipment. Idle Setting—One idle screw (472-S), both screws (488-S) ½-1½ turn open. Idle speed 7-8 MPH.

**Float Level (472-S)**—¾" from top of float seam at free end to top of projection on bowl cover.

**Float Level (488-S)** 3/16" from top of float to gasket seat on bowl cover (invert to check).

**Accelerating Pump (472-S)**—Outer lower hole (medium stroke) Normal, Inner hole (Summer), Outer upper hole (Winter) for extreme hot & cold temperatures.

**Accelerating Pump (488-S)**—Inner hole—Summer, Outer hole—Winter.

**Fuel Pump Pressure:** 3½ lbs. maximum.

**MANIFOLD HEAT CONTROL:**—Model 109. Upper half of supercharger case and cross-passage between supercharger and manifold are water-jacketed for fuel mixture heating. No attention required.

Model 113. Heat control valve in manifold controlled by automatic thermostatic coil spring. No adjustment required.

**VALVES:** See Valve Timing.

**Tappet Clearance:**—.010" All Valves, Engine Hot.

**STARTING:** See Battery, Starter, Generator, Regulator.

### IGNITION

**Ignition Switch:**—Delco-Remy Model 1116261. Connected to ignition coil by armored cable.

**Ignition Lock:**—Chicago lock cylinder.

**COIL:** Delco-Remy No. 1115127 (109), 1115022 (113). Mounted on engine side of dash.

**Ignition Current:**—2 amperes idling, 4 stopped.

**CONDENSER:** Delco-Remy Part No. 829092. Capacity—.20-.25 microfarad.

**DISTRIBUTOR:** Delco-Remy Model 623-S (109), 623-A (113). Single breaker, 6 lobe cam, full automatic advance type with auxiliary vacuum spark control. Rotation—Counter-clockwise viewed from above. Distributor Settings—See Tune-Up data.

Automatic Advance—623-A			
Distributor	R.P.M.	Engine	R.P.M.
Degrees Start	400	Degrees Start	800
9	1400	18	2800

Automatic Advance—623-S			
Start	275	2	550
3	400	6	800
8	1000	16	2000

**Vacuum Spark Control Model 1116006 (623-A Dist.), 1116003 (623-S Dist.).** Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle when spark retarded by return spring within unit.

Vacuum Advance—1116006			
Dist. Degrees	Eng. Degrees	Vacuum (" of HG)	
Start	0°	5-7"	
5°	10°	14-18"	

Vacuum Advance—1116003			
Start	0°	5-7"	
5°	10°	12-16"	

**Distributor Removal:**—Mounted on cylinder head. To remove, loosen advance arm clamp bolt and lift distributor out (not necessary to disconnect vacuum line).

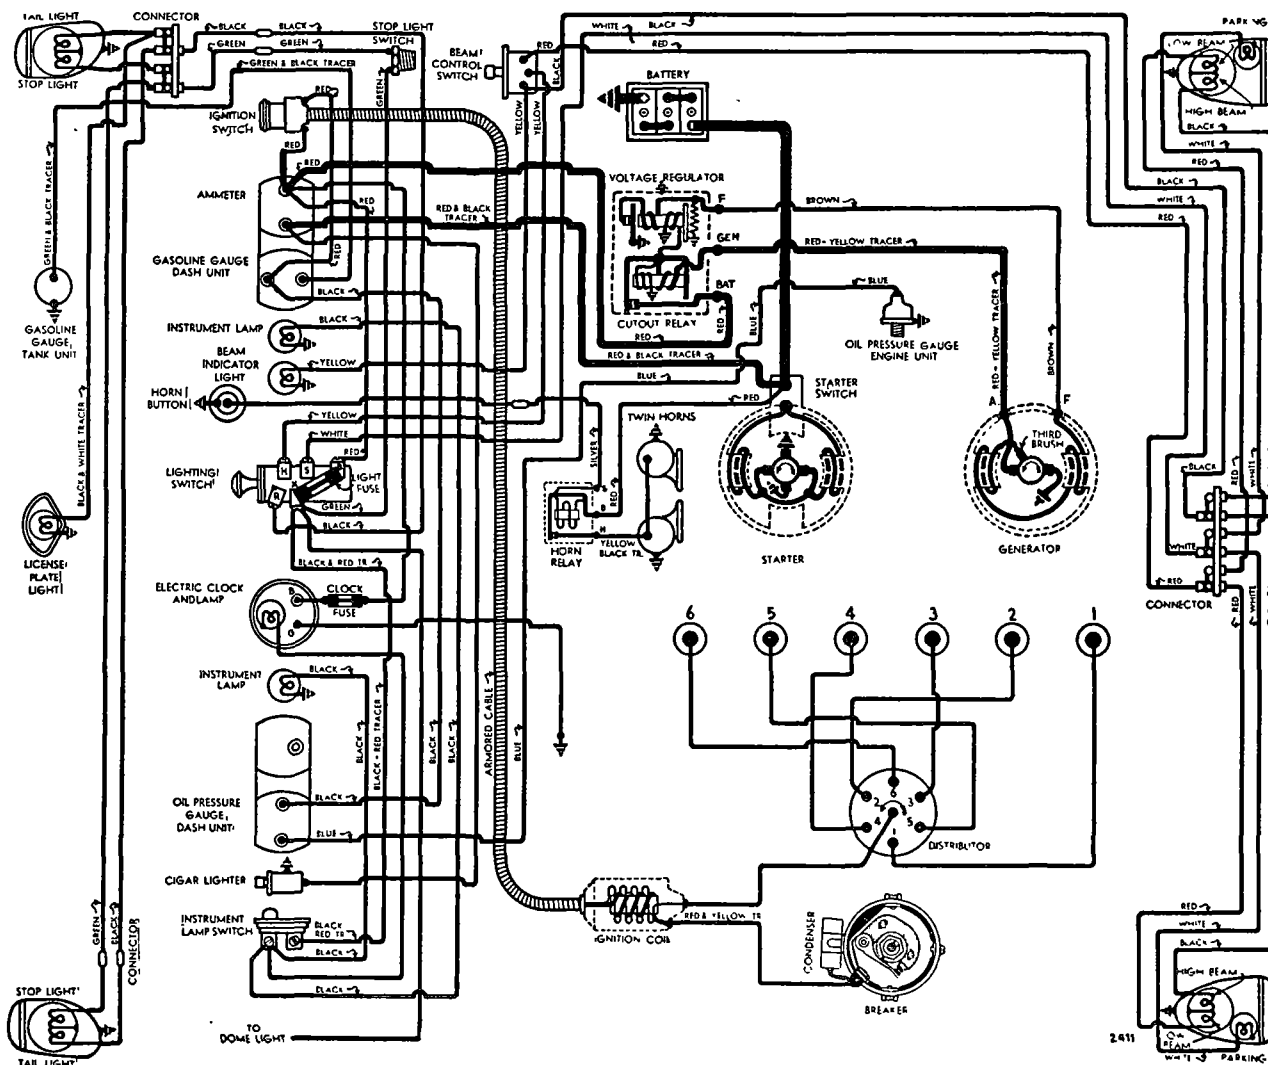

### IGNITION TIMING

**IGNITION TIMING:**—Flywheel Degrees Piston Position

109	4½° ATDC	.0088" ATDC
113	AT TDC	.0000" TDC

**To Set Timing:**—With #1 piston on compression stroke, turn engine over until 'IGN' mark on flywheel lines up with indicator on housing (under cover on right front face of flywheel housing). Loosen advance arm clamp bolt, rotate distributor until contacts begin to open, tighten clamp bolt. See that rotor is opposite #1 segment in distributor cap.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

**CARBURETOR****MODEL 109**

**CARBURETION:**—Carburetor (109)—Carter WDO, Model 488-S. 1" dual, downdraft type with Climatic Control.

*For complete data, refer to Carburetor Index.*

**Idle Setting:**—Both idle screws set alike and approx. ½-1¼ turns open (turn screws in for leaner mixture). Idle speed 7-8 MPH. (hot or slow idle).

**Accelerating Pump Setting:**—Two holes provided in pump arm for connector rod engagement. Connect rod in outer hole (long radius) for maximum stroke, inner hole (short radius) for minimum stroke.

**Float Level:**—3/16" from top of float to bowl cover with valve seated (remove gasket & invert to check).

**Metering Rods & Jets:**—See *Carter Jet Specification Table in Carburetor Section for complete data.*

**Fast Idle Setting:**—Set fast idle screw for .026" throttle opening with choke valve closed.

**Automatic Choke Setting:**—Center index mark in line with reference mark on housing.

**CARBURETOR****MODEL 113**

**Carburetor (113):**—Carter WA-1, Model 472-S, 1¼" single, downdraft type with Climatic Control.

*For complete data, refer to Carburetor Index.*

**Idle Setting:**—Idle screw approx. ½-1½ turns open (turn screw in for leaner mixture). Idle speed 7-8 MPH (hot or slow idle—fast idle inoperative).

**Accelerating Pump Setting:**—Three holes provided in pump arm (under dustcover on bowl cover) for connector rod engagement. Connect rod in inner hole (short radius) for minimum stroke, outer (upper hole) for maximum stroke, outer (lower) hole for medium stroke.

**Float Level:**—¾" from top of seam at free end to top of projection on bowl cover (invert to check).

**Metering Rods & Jets:**—See *Carter Jet Specification Table in Carburetor Section for complete data.*

**Fast Idle Setting:**—Adjust by bending connector rod offset so choke valve opening is ⅝" with stopscrew against (not on) first step of fast idle cam.

**Automatic Choke Setting:**—At Center Index mark.

**CARB. EQUIPMENT**

**Air Cleaner:**—AC oil-wetted type Std., Heavy duty oil-bath type Optl.

**Fuel Pump:**—AC Type R, #1523731. Diaphragm type.

*For complete data, refer to Carb. Equip. Index.*

**Gasoline Gauge:**—Stewart (Stewart-Warner) Electric.

*For complete data, refer to Carb. Equip. Index.*

**BATTERY**

**BATTERY:**—Willard Type SWB-100. 6 volt, 17 plate, 100 ampere hour capacity (20 hour rate).

**Starting Capacity:**—120 amperes for 20 minutes.

**Zero Capacity:**—300 amperes for 3.5 minutes at 0°. Five second voltage 4.3 volts.

**Grounded Terminal:**—Positive (+) terminal.

**Location:**—Under left front seat or under rear compartment floor on left side.

**Radio Battery:**—Willard Type HWB-110. 6 volt, 19 plate, 110 ampere hour capacity (20 hour rate).

**Starting Capacity:**—134 amperes for 20 minutes.

**Grounded Terminal, Dimensions, Location:**—Same as for Std. battery (above).

**STARTER**

**Delco-Remy Model 738-T, 738-X (RHD).** Armature No. 823881.

**Drive:**—Manual pinion shift (738-T), solenoid pinion shift (738-X), with overrunning clutch.

**Cranking Engine:**—140-145 amperes, 5 volts.

**Rotation:**—Counter-clockwise at commutator end.

**Brush Spring Tension:**—24-28 ounces each.

**Performance Data**

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5000	5.0	65
12 "	Lock	3.37	525

**Removal:**—Flange mounted on left front face of fly-wheel housing. To remove, take out flange mounting screws.

**Starting Switch (738-T):**—Delco-Remy No. 820052. Mounted on starter field frame. Operated by pinion shift lever (starter pedal).

**(738-X):**—Solenoid Switch type 1546. Solenoid switch controlled through relay by push switch on instrument panel.

*For complete data, refer to Electrical Equipment Index.*

**GENERATOR**

**Delco-Remy Model 1100007.** Armature No. 1966789. Fixed third brush control with external vibrating voltage regulator. Ventilated by fan on drive pulley.

**Charging Rate Adjustment:**—Adjusted by changing voltage regulator setting. See Regulator data.

**NOTE:**—Third brush clamped in position for maximum safe output and should not be disturbed.

**Maximum Charging Rate:**—As given in table below. To check charging rate, connect test ammeter in charging line at regulator 'BAT' terminal, voltmeter between 'BAT' terminal and ground, ground generator 'F' terminal to eliminate regulator action.

**NOTE:**—Do not operate generator on open-circuit. Restore original connections after completing test.

**Performance Data**

	Amperes	Volts	R.P.M.
Cold	26-30	8.0	3400
Hot	25-28	8.0	3600

**Rotation:**—Counter-clockwise at commutator end.

**Brush Spring Tension:**—25 ozs. (all brushes).

**Field Current:**—2.3-2.6 amperes at 6.0 volts.

**Removal:**—Pivot mounted at left front of engine. To remove, take out pivot bolts and clamp bolt.

**Belt Adjustment:**—Loosen pivot bolts and clamp bolt, swing generator away from engine until belt deflection is 1" midway between generator and fan pulleys (use straightedge across pulleys).

**REGULATOR**

**Delco-Remy Model 1118204.** "Single Core" Type. Vibrating Voltage Regulator in case on dash.

*For complete data, refer to Electrical Equipment Index.*

**CAUTION:**—Check generator for grounded field coils and leads before changing regulator settings to correct High Charging Rate or High Voltage.

**Cutout Relay**

**Cuts In:**—6.2-6.7 volts hot.

**Cuts Out:**—0-4.0 ampere discharge current.

**Contact Gap:**—.020" (same for both sets).

**Air Gap:**—.020" (with contacts just closed).

**Voltage Regulator**

**Setting:**—7.2-7.4 volts hot (operating temperature). Regulator over-compensated for temperature. Should be checked with cover in place and hot.

**Checking & Adjustment:**—See *Electrical Equipment Section.*

**Air Gap:**—.070" between center of core and armature with contacts just closing (press down on armature to open contacts, release pressure, check gap at point where contacts just close).

**LIGHTING**

**LIGHTING:**—Headlamps—Hall. Upper and lower beams controlled by beam selector switch on toe-board.

**Headlamp Adjustment:**—Aim each headlamp straight ahead with high intensity spot centered on vertical line directly ahead of each lamp center and upper edge of this high intensity spot on horizontal line at lamp-center height.

**Beam Indicator:**—In knob at right of ignition switch. Lighted when upper beams in use.

**Switches**

**Lighting:**—Soreng-Manegold.

**Beam Selector:**—R-B-M Model 1050.

**Instrument:**—Delco-Remy No. 1997706.

**Bulb Specifications**

Position	Candlepower	Mazda No
Headlights	32-32	2330
Parking	1½	55
Instrument, Beam Ind.	1	51
Stop & Tail	21-3	1158
License Plate, Dome	3	63

**MISC. ELECTRICAL**

**FUSES:**—Lighting—20 ampere. In lighting switch.

**Clock:**—SFE. 4 ampere. In clock lead.

**HORNS:**—Delco-Remy. Blended tone, twin horns No. 1999519 (109 Low Note), 1999520 (109 High Note), 1999531 (113 Low Note), 1999532 (113 High Note).

**Current (at 6 volts)**

1999519, 31 (low note)	18-20	.044-.049"
1999520, 32 (high note)	19-21	.034-.039"

**Horn Relay:**—Delco-Remy No. 1116775.

**Contact Gap:**—.025". **Air Gap:**—.015" (closed).

**Contacts Close:**—2.75-4.0 volts.

**ENGINE**

**ENGINE SPECIFICATIONS:**—Six cylinder, 'L' head. 109 engine equipped with Graham Supercharger.

**Bore:**—3¼". **Stroke:**—4¾".

**Displacement:**—217.8 cu. ins.

**Rated Horsepower:**—25.35 AMA.

**Developed Horsepower:**—93 at 3800 RPM (113), 120 at 4000 RPM (Supercharged 109).

**Compression Ratio:**—6.65-.1 Std. 7.0-1 & 7.25-1 Optl.

**Compression & Vacuum Reading:**—See *Tune-Up data.*

**PISTONS:**—Bohn autothermic, aluminum alloy, cam ground, plated type with special cylinder wall lubrication system. See *Graham Shop Notes for data.*

**Weight:**—14½ ozs. (stripped). **Length:**—3¾".

**Removal:**—Pistons and rods removed from above.

**Clearance:**—Top .024". Skirt .0025".

**Replacement Pistons:**—Finished pistons (with pins fitted) furnished in oversizes of 3.247" to 3.252" (in .001" steps), 3.252" to 3.274" (in .002" steps) and 3.277". **NOTE:**—Piston size stamped on head.

**Fitting New Pistons:**—Use .0025" feeler ½" wide inserted between piston and cylinder wall at right angles to pin. Pull required to withdraw feeler must be 10-15 lbs. at all points in cylinder.

**Installing Pistons:**—Install pistons with four vertical grooves on skirt toward camshaft (right side).

## ENGINE

CONTINUED FROM PRECEDING PAGE

**PISTON RINGS:**—Two compression, two oil control rings per piston, all above pin.

Ring	Width	End Gap	Side Clearance
Compr.	3/32"	.007-.015"	.0015" Min.
Oil Cont.	5/32"	.007-.015"	.0015" Min.

**Replacement Rings & Installation Directions:**—See *Graham Shop Notes* for data.

**PISTON PIN:**—Diameter 13/16". Length 2 13/16". Pin locked in rod by clampscrew.

**Pin Fit in Piston:**—.0005" clearance (hand push fit).

**Replacement Pins:**—Furnished Std. and .002", .005", .010" oversize (new pistons have fitted pins).

**CONNECTING ROD:**—Length 7". Bearing caps dowelled on rods and held by capscrews in blind tapped holes. Crankpin Journal Diameters—2 1/16".

**Lower Bearing:**—Removable steel-backed, cadmium-silver-lined type (not grooved, no oil spray hole). Clearance—.0008-.0021". Sideplay—.004-.006".

**Bearing Adjustment:**—None (no shims). Replace bearings. New bearings should be tight with .002" feeler 1" long installed under cap (cap can be sanded on face plate to secure this fit). Install new bearings with tang engaging groove in rod and cap.

**Installing Rods:**—Lower Bearings offset. Install rod with widest half of bearing toward rear (#1, 3, 5), toward front (#2, 4, 6). Head of piston pin clampscrew should be toward camshaft on all rods.

**CRANKSHAFT:**—4 bearing, integral counterweights with Lancashire type Vibration dampener.

**Journal Diameters:**—2 3/8" all bearings.

**Bearing Type (Front):**—Cadmium-silver lined bushing inserted in hole in crankcase from forward end with bushing flange doweled to crankcase.

**Bearing Type (Others):**—Conventional removable steel-backed, cadmium-silver lined type. Clearance (All Bearings)—.002".

**Bearing Adjustment & Replacement:**—See *Graham Shop Notes* for Crankshaft Bearing data.

**End Thrust:**—Taken by front bearing. Adjusted by adding or removing shims furnished .002", .008" thick. Endplay—.004-.006".

**CAMSHAFT:**—4 Bearing. Non-adjustable Chain Drive. Journal Diameters—#1, 1 1/8"; #2, 1 13/16"; #3, 1 3/4"; #4, 1 1/4". Bearing Type—Bronze bushings.

**End Thrust:**—Taken by spring-loaded plunger in forward end of camshaft.

**Timing Chain:**—Link-Belt No. 336. Width 1". Pitch .500". Length 23" or 46 links.

**Camshaft Setting:**—Sprockets are marked. With #1 and #6 pistons on top dead center and marks on both sprockets on upper left side, mesh chain so there are exactly 9 links or 10 pins (inclusive of pins meshed opposite marks) between marks.

VALVES:	Head Diameter	Stem Diameter	Length
Intake	1 33/64"	.341"	4 61/64"
Exhaust	1 21/64"	.341"	4 61/64"
	Seat Angle	Lift	Stem Clearance
Intake	30°	5/16"	.002-.003"
Exhaust	45°	5/16"	.002-.003"

**Valve Guides:**—Pressed in block. Ream after installation for correct clearance.

**Valve Springs:**—Spring free length 2".

	Spring Pressure	Length
Valve Closed	44 lbs.	1 21/32"
Valve Open	98 lbs.	1 11/32"

**Valve Lifters:**—Cylindrical type. Diameter 1". Operate in guide holes 1 21/32" long finished in block. Lifter Clearance in Guide—.0005-.0015".

## VALVE TIMING

**Tappet Clearance:**—.010" all valves, engine hot.

**Valve Timing:**—See Camshaft Setting above.

**Intake Valves:**—Open 4 1/2° BTDC. Close 47 1/2° ALDC.

**Exhaust Valves:**—Open 47 1/2° BLDC. Close 4 1/2° ATDC.

**To Check Valve Timing:**—Set tappet clearance #6 exhaust valve at .012". This valve should close with piston 4 1/2° or .0088" past top dead center when flywheel mark 'EC-1' lines up with indicator under cover on right front face of flywheel housing. Reset tappet clearance at .010" hot.

## SUPERCHARGER

**SUPERCHARGER (109):**—Own make, centrifugal type. Carburetor mounted directly on top of supercharger case (Supercharger blower between carburetor and manifold).

See *Miscellaneous Section* for complete data.

**Supercharger Removal & Drive Data:**—See *Graham Shop Notes* for complete instructions.

## LUBRICATION

**LUBRICATION:**—Pressure system. Gear type oil pump located in crankcase.

**Normal Oil Pressure:**—45 lbs. at 30 M.P.H.

**Oil Pressure Regulator:**—Located on right side of crankcase at rear of engine number plate. Opens at 50 lbs. Adjusted by adding or removing washers between spring and plunger.

**Oil Pressure Gauge:**—Stewart (Stewart-Warner) electric.

See *Miscellaneous Section* for complete data.

**Crankcase Capacity:**—5 quarts (refill).

## COOLING

**COOLING SYSTEM:**—Capacity—16 quarts.

**Water Pump:**—Packless type. Sealed ball bearings shaft. See *Water Pump Section* for complete data.

**Removal:**—Remove fan belt and pump mounting bolts, remove fan and pump as an assembly.

**Thermostat:**—Detroit Lubricator. In cyl. head outlet. Setting—Starts to open 150°F. Fully open at 180°.

## CLUTCH

**CLUTCH:**—Long Model 9 1/2 CF-CS. Semi-centrifugal, single plate, dry disc type.

See *Clutch Section* for complete data.

**Facings:**—Chevron or Spiral wound Moulded type, 2 required. I.D. 6". O.D. 9 1/2". Thickness .125".

**Adjustment:**—Free movement of clutch pedal must be about 1 1/4". To adjust, loosen lock nut above pivot block at pedal, turn adjusting nut below pivot block on connector rod until proper clearance obtained.

**Removal:**—Remove Transmission (See Transmission below), take off clutch housing underpan, take out clutch mounting screws in cover flange (turning all screws out evenly, remove clutch from below).

## TRANSMISSION

**TRANSMISSION:**—Warner. Constant-mesh, synchromesh, (Second & High), sliding gear (Low & Reverse), all helical gear type.

See *Transmission Section* for complete data.

**Transmission Control:**—Own remote control type mounted on steering column.

See *Transmission Section* for complete data.

**Removal:**—Disconnect hand brake and clutch linkage, disconnect propeller shaft at front universal, support engine at rear, remove rear engine mounting cross-member, disconnect transmission shift linkage. Take out transmission mounting bolts, pull transmission straight back and remove.

## UNIVERSALS

**UNIVERSAL JOINTS:**—Spicer 1271-101 (Frt.), 1278-101 (Rear). Needle bearing type.

See *Universals Section* for complete data.

## REAR AXLE

**REAR AXLE:**—Spicer Model 41-3. Semi-floating, hypoid gear type with Hotchkiss drive.

See *Rear Axle Section* for complete data.

**Ratio:**—4.09-1 Std., 4.55-1 Optl.

**Backlash:**—.004-.008". Shim adjustment.

**Removal:**—Disconnect shock absorbers, brake line and hand brake linkage. Hoist rear end of car, disconnect propeller shaft at rear universal. Remove rear spring U-bolts, disconnect spring shackles, withdraw axle assembly from under car.

**Wheel Bearing Adjustment:**—Shims provided between flanged end of axle housing and backing plate. To adjust, remove wheel, hub, and drum assembly, remove shims to decrease endplay. Endplay—.002-.007".

## SHOCK ABSORBERS

**SHOCK ABSORBERS:**—Delco. Direct acting, hydraulic. See *Shock Absorber Section* for complete data.

## FRONT SUSPENSION

**Front Suspension:**—Spicer, conventional 'I' beam section front axle with Reverse-Elliott ends and semi-elliptic springs.

**Kingpin Inclination:**—7 1/2° crosswise.

**Caster:**—3 1/2°. Adjust by inserting wedge shims between spring and spring pad on axle.

**Camber:**—1°. No adjustment.

**Toe In:**—1/8". Adjust in usual manner by loosening clamp bolts and turning tie rod to change length.

## STEERING GEAR

**Steering Gear:**—Gemmer Model 305 Worm-and-Roller type with "push-pull" adjustments.

See *Steering Gear Section* for complete data.

## BRAKES

**BRAKES:**—Service—Lockheed hydraulic type. Hand lever applies rear wheel service brakes.

See *Brake Section* for complete data.

**Drums:**—10". Cast iron type.

**Lining:**—Moulded type. Width 2". Thickness 1/4". Clearance—.006" heel, .010" toe for each shoe.

**Hand Brake:**—See Service Brakes above.

**NoRoll:**—Optional equipment on all cars. See *Brake Section* for complete data.

## HOOD ASSEMBLY

### 1938 MODELS

**ENGINE HOOD AND SIDE PANELS (112 Only):** Hood hinged at front. Secured by handle on each side panel. To raise, turn one handle (handles interconnected), grasp hood along edge and lift forward until self-locking hinge support locks hood in raised position. Hinge support released by raising hood slightly and pushing lower half to rear.

**Side Panels:** When removing panels, free hood handle from tie rod at clamp bolt on one panel, remove other panel with handle and tie rod attached as an assembly.

### 1939 MODELS

**ENGINE HOOD (BONNET) LOCK:** Hood hinged at front and secured by lock handle in driver's compartment on lower edge of instrument panel to left of steering column (operates rod on engine side of dash which engages each side of hood). To unlock hood, push down on handle. Hood can then be raised by lifting on either side at rear (press support hinge forward before releasing hood).

**Hood and Support Removal:** Remove front bumper. Raise hood, take out 3 cap screws and tapping plate at front hood hinge, hood support upper pin springs, pins and washers, freeing hood. Remove cotter pins and washers at ends of support lower rod, unhook springs freeing hood support.

**Hood Alignment:** Check alignment at cowl, side panels, and at name plate. To align, raise hood, loosen 3 cap screws at front hinge, shift hood at front end until aligned, raise hood, tighten screws.

**Side Panel Removal (91, 92, 93, 95, 97):** Raise hood, remove 3 bolts at shell extension and 1 cap-screw at cowl. Remove 1 cap-screw attaching fender to front lower frame bonnet side panel (accessible through hole in top of radiator shell after removing horn). Loosen but do not remove cap-screws on lower edge of panel (holes in panel slotted). Lift panel out. **CAUTION:** On cars equipped with bonnet side panel lamps, pull sockets out.

**Side Panel Removal (90 & 98):** Raise hood, remove bolts at radiator shell and along lower edge. Take out screw at cowl and lift panel out.

**Right Front Fender Dust Shield Removal (91, 92, 93, 95, 97):** For work on right side of engine (valves, etc.) remove shield as follows: Raise hood, remove 4 cap-screws along top edge of shield (in engine compartment), 4 cap-screws along front edge at radiator shell, and 3 cap-screws along frame side member. Jack up front end of car and remove right front wheel. Take off fender stone guard at fender and dust shield. Pull out lower edge and remove.

**Right Front Fender Dust Shield Removal (90 & 98):** Remove as follows: Raise hood, remove bolts at hood side panel, radiator shell and frame side member (in engine compartment). Jack up front end of car and remove right front wheel. Remove cap-screws at fender and one dust shield fender brace bolt. Pull out lower edge of shield and remove.

### 1940-47 MODELS

**ENGINE HOOD (BONNET) LOCK:** Alligator type hood (hinged at front) with integral side panels and instrument panel lock. To raise hood, push forward on lock handle located under edge of instrument panel to left of steering column, lift rear of hood.

**Hood (Bonnet) Removal:** Unlock and raise hood. Disconnect bonnet light wires from terminals on fender junction block. Remove bonnet-to-bonnet support bolts and bonnet-to-bonnet hinge bolts. Lift bonnet straight up and remove from car. Align

Hood and Front Fenders as directed below

**Radiator Louvre Panel Removal:** Remove panel-to-fender bolts from under fender. Remove front bumper bolt and and loosen rear bolt permitting bumper assembly to be lowered. Remove center front screw from under panel and lift panel off.

### 1940-41 MODELS

## HOOD (BONNET) & FRONT FENDER ALIGNMENT:

—U-shaped bonnet hinge consisting of cross-bar in back of grille with an upright arm at each end which attach to each side of hood. Hinge cross-bar equipped with loose fitting bracket at each end which is attached to frame bracket by screws. Frame and hood hinge brackets have serrated faces. Thick and thin hinge positioning washers assembled on each end of hinge cross-bar and are retained by a large cotter pin. Each front fender positioned by brace rod anchored to frame at lower end and to fender bracket on upper end by means of positioning nuts.

**Hood (Bonnet) Adjustments:** Bonnet alignment can be adjusted at three points as follows: For full fore-and-aft bonnet movement, loosen bonnet-to-bonnet hinge bolts (three on each side along lower edge of hood). For slight sidewise or lengthwise movement, loosen bonnet hinge frame bracket-to-frame bolts. To position bonnet hinge assembly for sidewise movement, take out large cotter pin in each end of hinge cross-bar and add or remove washers for correct fit.

**Fender Adjustment:** Fender fit can be adjusted by means of positioning nut on each side of fender bracket at upper end of brace rod. Separate brace rod for each fender located under bonnet behind radiator louvre panel.

**Radiator Louvre Panel Adjustment:** Louvre panel fit can be adjusted by loosening louvre-to-fender bolts on outer ends of panel. Bolts on back side of panel and are accessible from behind panel with bonnet raised. Louvre panel should be pushed forward as far as possible for correct fit.

### 1942 MODELS

## HOOD (BONNET) & FRONT FENDER ALIGNMENT:

—Bonnet alignment can be obtained by loosening fender bracket bolt at bonnet hinge (lower end of each bonnet hinge arm behind radiator louvre panel). Bolt hole in each fender is enlarged which permits bonnet being shifted until fitted properly. Hinge to fender bracket bolt should be installed as follows: Place flat washer on bolt, then rubber shouldered washer and assemble in bonnet hinge hole (see that rubber washer seats properly). slide second rubber shouldered washer, plain washer and spring over bolt, screw bolt in fender bracket and install locknut.

**Front Fender Alignment:** Fenders can be fitted for sidewise movement at front end by means of adjusting nut and locknut on fender brace rods under bonnet behind radiator louvre assembly. Adjust fenders to obtain proper fit along bonnet.

## FRONT FENDERS

### 1940-41 MODELS

## FRONT FENDER REMOVAL:

Unlock and raise hood. Disconnect headlamp wires at junction block, unclip wires from fender and dash and push headlamp cables through hole in fender (remove battery if left fender to be removed). Remove fender bolts at following points: running board, brace rod top nut, louvre panel, fender cross member (with spacers), brace to cross member screw, core baffle to fender screws (right fender only), radiator lower tank

shield screws, hood support screws, apron support to inspection cover screw, and horn bracket to frame screws. Lift fender off.

## Right Front Fender Inspection Hole Plate Removal

—This plate replaces fender dust shield (now welded to fender) used on 1939 models for access to valve tappets, fuel pump, and oil pump. To remove, unlock and raise hood, remove horn mounting bolts and push horns forward (in engine compartment). Raise front end of car, remove right front wheel and 12 cap screws along the top, bottom and front edge of plate (under fender).

### 1942 MODELS

**FRONT FENDER REMOVAL:** Remove wheel, raise bonnet and support in open position. Remove battery (if left fender being removed). Disconnect light wires at junction block on left fender (if right fender being removed pull wires back through hole in fender and remove grommet). Take off dust shield hole cover (right fender only). Remove fender screws and bolts as follows: 2 bolts at bonnet support, 2 Phillips head screws at radiator tank lower shield, all screws in radiator baffle and remove baffle, 2 hex head bolts in louvre end bracket, 1 hex head bolt at frame bracket (under car), 2 hex head bolts at frame cross member, 4 hex head bolts at front bumper splash guard, 6 hex head bolts at cowl, 2 hex head bolts at bonnet hinge bracket, and fender brace rod nut. Lift fender off car. Mouldings, lamp and brace can be disassembled from fender after fender removed from car. **NOTE:** When installing fender, assemble headlamp after fender installed on car. Fender to cowl bolts should not be tightened until bonnet fitted to fender.

## CYLINDER HEAD

### 1936-48 MODELS

**CYLINDER HEAD INSTALLATION:** Use Torque Indicating Wrench to tighten cylinder head stud nuts, tighten in correct sequence as shown in the diagrams. Procedure for tightening Cast Iron and Aluminum heads is as follows:

### HUDSON 6 & TERRAPLANE

### HUDSON 8

**Cast Iron Heads:** With engine cold, tighten all nuts evenly to correct tension. Then run engine until it is thoroughly warmed up and recheck all nuts

**Aluminum Heads:** With the engine cold, tighten all nuts to correct tension. Run engine until thoroughly warm, allow engine to cool off, and then recheck all nuts. Do not tighten aluminum heads when warm.

**Tightening Torque:** See Tightening (Torque Wrench) Specifications below.

## ENGINE REMOVAL

### 1939 MODELS

**ENGINE ASSEMBLY REMOVAL:** All engines can be removed as follows: Remove bonnet (see Hood and Support Removal) and radiator (see Radiator Core Removal). Disconnect generator, starter, temperature gauge and oil check valve wires. Remove wire harness along left side of engine, spark plug cables (with brackets) and distributor cap. Disconnect flexible fuel pump feed line and remove fuel line to carburetor. Disconnect throttle linkage and choke wire (if used). Remove accelerator cross shaft, carburetor and air cleaner. Disconnect exhaust pipe. Remove front motor support bolts, flywheel guard, accelerator pedal, floor mat, transmission hole cover, clutch housing-to-engine support bolts, engine ground strap and exhaust pipe bracket at rear engine support. Hoist engine out of car (move engine forward carefully to disconnect from trans-

mission mainshaft). Finally, remove distributor, generator, fuel pump and clutch.

**Installation—**Reverse procedure listed above and note following points. Wrap a piece of soft wire around clutch throwout bearing oil seal with ends of wire extending up through clutch housing, lower engine in place (use care not to damage clutch driving plate assembly when engaging transmission mainshaft), pull wire out (this will prevent edge of seal from being curled by clutch cover). Install starter after engine in place.

### 1940-47 MODELS

**ENGINE ASSEMBLY REMOVAL:** All engines can be removed as follows: Remove bonnet (see Hood Removal), front seat cushion, accelerator pedal, front floor mat, transmission hole cover, clutch housing to engine bolts, engine ground strap, radiator core (see Radiator Core Removal), radiator stay rods and horns. Disconnect generator, starter, temperature gauge, and oil check valve wires and remove wiring harness from clips on left side of engine. Disconnect flexible fuel pump feed line and remove fuel line to carburetor. Disconnect throttle linkage leading from accelerator cross shaft and remove cross shaft (pull shaft toward spring and slip shaft out of opposite bracket). Disconnect windshield wiper hose at manifold. Remove spark plug wires and bracket, distributor cap, carburetor and air cleaner. Disconnect exhaust pipe at manifold. Remove front engine support bolts and nuts. Hoist engine out of car (use Tool J-917 attached to engine) move engine forward carefully to disconnect from transmission mainshaft. Finally, remove distributor, generator, fuel pump and clutch.

**Installation—**Reverse procedure listed above and note following point. Wrap a piece of soft wire around clutch throwout bearing oil seal with ends of wire extending up through clutch housing, lower engine in place (use care not to damage clutch driving plate assembly when engaging transmission mainshaft), pull wire out (this will prevent edge of seal from curling over).

## ENGINE MOUNTINGS

### 1940-47 MODELS

**ENGINE FRONT SUPPORT REMOVAL:** Drain cooling system. Remove generator, fan belt, radiator outlet hose and raise front end of car. Remove radiator lower tank shield, vibration dampener (see Vibration Damper Removal) and timing gears (see Timing Gear Removal). Block up front end of engine and remove front engine mounting bolts and nuts. Take out engine support bolt and locks and remove plate.

**Installation—**Reverse procedure listed above, note the following points: Clean front face of cylinder block thoroughly and use new gaskets. When replacing engine mounting bolts, tighten nuts until upper and lower plates are against spacer.

## ORIGINAL BORE

### 1936-48 MODELS

**ORIGINAL BORE SIZE:** Original production (new engine) bore size indicated by code mark stamped on lower edge of valve chamber opposite cylinders. See table below for size and code marks.

### 1947 & EARLIER SIX CYLINDER BORE SIZE 1948 & EARLIER EIGHT CYLINDER B RE SIZE

Code Mark	Cylinder Diameter	Code Mark	Cylinder Diameter
	Standard Size		.010" Oversize
A.....	3.000"	AO.....	3.010"

**Note—**Recondition cylinders to size for which replacement pistons and rings available (see below).

**Original Piston Size—**Sizes and markings for original pistons same as for Replacement Pistons. See Replacement Piston Table and Piston Markings.

## PISTONS

### 1936-48 MODELS

**REPLACEMENT PISTONS:** Standard and oversize pistons marked by letter stamped on head and furnished for cylinder diameter sizes listed below. See Replacement Rings (following) for ring sizes.

**Piston Markings—**Code marks stamped on head of piston indicate the following: Letter indicates piston size and cylinder size for which piston to be fitted (see table below). Number indicates piston weight in ounces (if 2 numbers used, one over the other, top number indicates weight in ounces, lower number ¼ ounces). All pistons in one engine should be of same weight (carry same weight marks on head). **NOTE—**Original factory installed pistons carry two additional numbers, one number indicates cylinder in which piston installed, second number indicates cylinder block number.

## PISTON RINGS

## 1936-48 MODELS

**REPLACEMENT RINGS:** Use Standard or Oversize rings for replacement pistons listed above. Ring size and pistons for each size as follows:

Ring Size	Piston Mark	Ring Size	Piston Mark
Standard	B, D, F	.015" OS.	LO
.003" OS.	J	.020" OS.	BB, DD, FF
.005" OS.	L	.030" OS.	BOOO, E000
.010" OS.	BO, DO, FO		

**Piston Ring Sets**—Cast iron or steel segment types furnished standard size, .010" and .020" oversize.

**Note**—If rings filed, keep clearance at pin uniform with end gap (.005" minimum).

## 1939 MODELS

**PISTON RINGS:** Compression. "Granoseal" treated rings used starting with car number 25000.

**Oil Ring Width Change**—Lower oil ring (below pin) changed during production as follows: Ring width reduced to 5/32" starting with following car numbers: (90) 24626, (91) all cars, (92) 24903, (93) 24896, (95 & 97) 28659, (98) 24502. **NOTE**—Top oil ring width unchanged (3/16").

## PISTON PINS

## 1936-48 MODELS

**PISTON PIN REPLACEMENT:** When replacing pins, manufacturer recommends that oversize piston pins be fitted to the piston boss and new piston pin bushings be installed in rod. Piston pin bosses are diamond-bored and should not be reamed.

**Replacement Piston Pins**—Furnished in standard size and .002", .005", .010" oversize.

**Fitting Pins (1947 & Earlier)**—Hand press fit in piston with piston heated to 200°F. (heat in boiling water or electric furnace—do not use torch or direct heat). Replace pin bushing in rod and ream or burr-nish to .0003" greater diameter than pin (giving desired .0003" clearance on pin). To check pin fit in rod bushing, hold piston with rod in horizontal position, rod should just turn on pin of own weight.

**Fitting Pins (1948)**—Pins should be a hand press fit in piston with piston at 70°F.

**CAUTION**—Do not ream piston pin bosses in piston.

## ORIGINAL BEARING SIZES

## 1936-48 MODELS

**CRANKSHAFT SIZE CODE:** Cars equipped with .010" undersize main bearing pins and connecting rod pins identified by marks as follows:

MU—.010" undersize main bearing pins.

PU—.010" undersize connecting rod pins.

PMU—.010" undersize main and connecting rod pins.

**NOTE**—These pins require .010" undersize bearings.

**Location of Marks**—As follows:

All 1947 & Earlier Cars and 1948 Eight—On left front corner of cylinder block on bottom face beside oil pan gasket (visible from underneath without removing oil pan).

1948 Six Cylinder—On front face of No. 1 crankshaft counterweight.

## CONNECTING ROD &amp; BEARINGS

## 1938-39 MODELS

**CONNECTING ROD CHANGE:** On 1938 engines starting with following car numbers: (80 and 88) 54885, (81) 53909, (82) 54165, (83) 54382, (84, 85, 87) 54616 and all 1939 engines (except early '112' which started with car number 901625) new rods used. These connecting rods are drop forged steel with thinner (.015" thick) large end bearings ("Bermax" alloy). Thrust now taken by sides of rod (formerly by bearing flanges). These rods may be used for replacement on earlier cars either singly or in sets. **IMPORTANT**—Do not file rods or caps. If bearing clearance excessive, replace rods. No shims used.

## 1938-48 MODELS

**CONNECTING ROD & MAIN BEARING PALNUTS:** Palnut (locknut or companion nut) used in place of cotter pin to lock connecting rod bolt nuts (starting with 1938 models), and main bearing cap stud nuts (starting with 1941 models). Palnut consists of a small single thread nut stamped from light gauge tempered steel.

**Installation**—After tightening regular nuts (refer to Tightening Specifications-Torque Wrench data on preceding pages), install palnut with smooth face toward nut, turn palnut up finger tight, then lock in place with wrench an additional 1/4-1/3 turn. **NOTE**—Palnuts should not be re-used.

## CRANKSHAFT &amp; MAIN BEARINGS

## 1936-39 MODELS

**CRANKSHAFT REMOVAL:** 1936-38 Models. Crankshaft must be removed for main bearing replacement. To remove shaft, remove vibration dampener (following) and timing gear cover. Remove crankshaft gear with Gear Puller J-471, oil reservoir, transmission (see Car article for data) and clutch. Disconnect connecting rods. Remove main bearing caps (use Puller J-377 for removal of Front and Rear caps) and lower crankshaft out.

1939 Models—Remove engine (see Engine Assembly Removal), vibration dampener, timing gear cover and oil reservoir. Disconnect connecting rods and remove main bearing caps as directed above.

**Installation:**—Reverse procedure listed above for removal and note following points. Front and rear oil seal grooves in caps and case must be cleaned of all

oil packing. After caps secured in place, drive new packing in grooves using Tool J-392 (install in horizontal groove first on front cap). See Connecting Rod Palnuts (above) for 1938-39 models. Use Tool J-843 to press crankshaft gear and dampener in place. Check oil seal on timing gear cover and do not fold or damage when installing. See Checking Oiling System for oil reservoir installation.

## 1940-47 MODELS

**CRANKSHAFT REMOVAL:** Crankshaft can be removed with engine in chassis as follows: Remove bonnet (see Hood (Bonnet) Removal above), radiator (see Radiator Core Removal following), vibration dampener (see Vibration Dampener Removal following), timing gears (see Removal Instructions following), transmission and clutch (see Hudson 6 and 8 Car articles for data). Remove flywheel and engine oil pan and tray. Remove connecting rod bearing caps and push rods up clear of crankshaft. Remove front and rear main bearing caps with Puller Tool J-377. Remove center main bearing cap with care and take out crankshaft.

**Installation**—Reverse removal procedure listed above. Install new oil seals at front and rear main bearing cap (see Front and Rear Main Bearing Cap Installation following) and new palnuts on main and connecting rod bolts (see Connecting Rod and Main Bearing Palnut Installation above).

## 1936-40 MODELS

**MAIN BEARINGS:** Adjustment. Laminated shims are provided on top of caps. Remove caps (use Puller J-377 for front and rear caps) and remove shims until clearance is .001". See Crankshaft Installation

**Replacement Bearings:**—Finished bearings (with attaching screws) furnished standard and .010" undersize (see Crankpin Size Code for original bearing sizes). Unfinished bearings furnished with 1/32" extra stock and must be line-reamed (see below).

**Removal:**—Bearing shells are removable type and are held in case and caps by screws. To replace bearings, crankshaft must be removed (see Crankshaft Removal above). With shaft out, take out screws securing shells in cap and case.

**Installation:**—With crankshaft removed, secure bearing shells in case and cap with machine screws. If unfinished bearings installed, line-ream as directed below. Install crankshaft (see Crankshaft Installation). Add or remove shims on bearing caps until .001" clearance obtained. Secure caps in place.

**Line-Reaming Main Bearings:**—Where unfinished bearings used for replacement, bearings must be line-reamed to size as follows: install bearings in cap and case, place .021" shims between case and cap and tighten cap, then line ream bearings. Thrust flange on center (Six), #3 (Eight) bearing must be faced for .006" endplay.

## ALL 1941-47 MODELS

## 1948 EIGHT CYLINDER

**MAIN BEARINGS:** Removal and Installation (with engine in car). Bearing halves are retained in crankcase and caps by a machine screw in each half, requiring removal of crankshaft for access to screw in upper half. Remove crankshaft (see Crankshaft Removal above), take out machine screw in each bearing half in crankcase and caps, remove bearings. Reverse removal instructions to install bearings. **NOTE**—No shim pack used on 1941-42.

**Replacement Bearings**—Hudson replacement bearings furnished reamed (standard size or .010" undersize) and not reamed (see Line-Reaming data below). Reamed bearings carry punch marks on one side and when installed these marks should be together and on the same side for all bearings so that they will be in the same position as when reamed. **IMPORTANT**—Lower half of bearing shell extends .002" above surface of cap (allows bearing to seat in cap and crankcase when stud nuts tightened).

**Fitting Bearings**—See Replacement Bearings above. Bearings can be fitted with shims (do not file caps) as follows: Install bearing shells in caps and case and oil bearing surface. Fit each bearing separately. Install crankshaft and bearing cap (on front and rear bearings, caps should be centralized on studs by inserting 1/4" drill rod in vertical packing holes on each side of cap), tighten stud nuts to 75 ft. lbs. Test bearing fit by using two hand pull on crankshaft, shaft should start hard but be able to be turned over. If shaft cannot be moved, insert .005" shim between cap and case (trim shim flush with bearing shell). Repeat test until shaft turns easily. Shims are furnished .003" and .005" thick.

**Line-Reaming Bearings**—See Replacement Bearings above. Semi-finished bearings available for service which must be line-reamed on engine as follows: Place bearing shells in place in caps and crankcase, and secure with machine screws (see that screws are seated in countersink hole in shells), bearing shell in cap should project .002" above cap while shell in case should be flush, tighten caps to 75 ft. lbs. (front and rear caps should be centralized on studs by inserting 1/4" drill rod in vertical packing holes on each side of cap). Line-ream bearings for .001" maximum clearance on crankshaft and face flange on center bearing for .006" shaft endplay.

**Front and Rear Main Bearing Cap Removal and Installation**—These caps fit in machined openings in crankcase. Front cap has vertical and horizontal grooves, rear cap vertical grooves only, with packing installed in these grooves to seal caps in place. When removing these caps a special removing Tool J-377 must be used to pull caps out of engine. After caps removed, grooves in caps and crankcase must be cleaned of all old packing. If old packing not removed from crankcase, oil passages may be clogged. When installing main bearing caps, insert new packing in horizontal grooves in upper end of front cap first, using Crankshaft Bearing Packing Insert Tool J-392, then install packing in vertical grooves on each side of front and rear caps (horizontal grooves not used on rear cap). Lower half of oil retainer on rear cap should be a tight fit against upper half to prevent oil leaks at this point.

## VIBRATION DAMPENER

### 1935-39 MODELS

**VIBRATION DAMPENER REMOVAL:** 1936-38. Remove fan belt, radiator shell, and radiator. Unscrew starting jaw. Pull dampener using Tool J-676. Install dampener using Tool J-483.

**1939 Models**—Dampener can be removed from beneath car without removing radiator core or shell as follows: Remove fan belt, raise front end of car, unscrew starting jaw, pull dampener using Tool J-676 (set puller tool screw in place through starting crank hole in frame cross member) and remove from below. Install dampener using Tool J-483.

**Servicing**—No adjustment other than replacing 2 rubber discs (drive flywheel from hub) if worn.

### 1940-47 MODELS

**VIBRATION DAMPENER REMOVAL:** Dampener can be removed from beneath car without removing radiator louver panel or radiator (radiator must be removed on Eight only) as follows: Remove radiator louver panel center moulding, front bumper bracket bolts permitting bumper to drop down, and fan belt. On Eight only, remove radiator (see Radiator Core removal data above). Unscrew crankshaft starting jaw from end of crankshaft. Install jaw of special vibration dampener removal tool over dampener and place screw of tool through starting crank hole. Withdraw dampener by turning screw of dampener tool and remove from beneath car (6), or above (8).

## CAMSHAFT & BEARINGS

### 1940-47 SIX CYL. MODELS

**REPLACEMENT CAMSHAFT (6 CYL. ENGINES):** One type camshaft only furnished for service on all engines, Part No. 166195 (superseding first replacement camshaft 162962). This camshaft same as type used on small (3x4 1/8") engine beginning with part production 1941 and has special cam contours which require special tappet clearance (see Tappet Clearance Note below) and results in different valve timing (see Valve Timing Note below). Camshafts used originally on each model are as follows:

Model	Engine	Original Camshaft
40 ('40)	Small (3"x4 1/8")	159505
41, 42, 43, 48 ('40)	Large (3"x5")	159505
10 ('41) First	Small (3"x4 1/8")	159505
10 ('41) Later	Small (3"x4 1/8")	162962
10, 11, 12, 18 ('41)	Large (3"x5")	159505
20 ('42)	Small (3"x4 1/8")	162962
20, 21, 22, 28 ('42)	Large (3"x5")	159505
All ('46 On)	Large (3"x5")	166195①

①—Supersedes first type No. 162962.

**Camshaft Identification:** New type No. 166195 (and first type replacement camshaft 162962) camshaft has new cam contours which are not apparent to the eye and shaft is marked for identification by "X" on face of camshaft gear mounting flange and has shoulder (increased diameter section) 1/4" wide exactly midway between 2nd. and 3rd. cams from front end (visible from below with oil pan and upper tray removed).

**Installation Caution:** A Warning decalcomania is furnished with each of these camshafts and this should be placed on valve cover when camshaft installed in engine. This warning tag specifies the special tappet clearance required when these No. 162962 or 166195 camshafts are used.

### 1940-47 SIX CYL. MODELS

**Tappet Clearance (With No. 162962 or 166195 Camshaft):** Tappet clearance on all engines with either of these camshafts must be set as follows:

Intake Valves—.010"  
Exhaust Valves—.012"

Tappet clearance should be set with engine at normal operating temperatures.

**CAUTION**—This tappet clearance is essential for proper Idling and Low Speed operation.

**Valve Timing (With No. 162962 or 166195 Camshaft):** When either of these camshafts installed on 6 cyl. engines, valve timing will be as follows:

**Intake**—Opens 27°30' BTDC. Closes 68°10' ALDC.  
**Exhaust**—Opens 51°50' BLDC. Closes 32°10' ATDC.  
These figures correct with .010" tappet clearance.

### 1941 MODELS

**CAMSHAFT CHANGE ON 3" x 4 1/8" SMALL 6 CYLINDER ENGINE:**—New design camshaft used on Model 10 engine after car no. 6848. Cams machined to new contour, intake and exhaust cams alike, which requires new valve timing and tappet clearance. This camshaft is same type furnished for replacement on all 6 cylinder engines (see Replacement Camshaft data above).

**Identification**—New camshaft used after car no. 6848 and may be identified by letter 'X' stamped on front face of shaft behind camshaft gear. Engines with this camshaft carry a decalcomania on valve cover stating "Tappet Clearance Hot, Inlet .010", Exhaust .012".

**Interchangeability**—This new type camshaft can be installed on early 1941 engines and all 1940 engines (3" x 4 1/8"). See Replacement Camshaft data above. When installed on engine originally equipped with old style camshaft, a decalcomania with the new tappet clearance figures of .010" Inlet and .012" Exhaust Hot, should be installed on cover plate.

### 1939 MODELS

**CAMSHAFT REMOVAL:** Remove bonnet (see Hood and Support Removal) and radiator (see Radiator Core Removal). Raise front end of engine and remove front engine guard. Remove radiator center grille (all except 112) which is attached by 8 sheet metal screws. Remove radiator shell on 112 only. Unscrew starting crank jaw. Remove vibration dampener, timing gear case cover, and camshaft gear. Remove right front wheel and fender dust shield (see Right Front Fender Dust Shield Removal). Remove valve covers, cylinder head, valves, tappets, oil pump, fuel pump, distributor, camshaft, thrust button and spring. If camshaft will not clear radiator shell splash guard, guard can be pressed down until shaft clears.

### 1940 MODELS

**CAMSHAFT REMOVAL:** Remove bonnet (see Hood Removal), radiator (see Radiator Core Removal), radiator louver panel assembly, vibration dampener (see Vibration Dampener Removal), fan blades, fan belt, timing gear cover, camshaft gear (3 bolts), valve chamber cover, cylinder head, valves, tappets, oil pump, fuel pump and distributor (on Six cylinder cars, remove distributor shaft and support assembly). Loosen front engine support and raise front end of engine until camshaft clears radiator tank lower shield. Withdraw camshaft with thrust button and spring. **CAUTION**—Two special washer head timing gear cover bolts used at lower left corner of cover and must be re-installed in same holes when cover replaced.

**Camshaft Bearing Removal:**—Remove camshaft as directed above. Remove oil pan and bearings. See Rear Camshaft Bearing Installation for Six Cylinder Engines following.

**Replacement Camshaft Bearings:**—Finished bearings available which are reamed sufficiently oversize to provide correct running fit when installed in engine without reaming or scraping. Standard bearings with added wall thickness provided for instal-

CONTINUED ON NEXT PAGE

## C NTINUED FR M PRECEDIN PAGE

lations where reaming equipment to be used. These bearings must be line-reamed for .001" clearance.

**Rear Camshaft Bearing Installation (Six Cylinder only):**—Due to new location of distributor at top rear of cylinder block, distributor gear is now cut in rear bearing journal with a special cut-out machined in camshaft rear bushing for the distributor support shaft gear. Whenever rear bearing replaced, this cut-out must be in bearing after installing in engine as follows: With distributor drive shaft and support assembly off engine, remove driveshaft from support, insert cutting tool in support (making up cutting tool by mounting 1 1/8" hole saw on end of 12" length of 1/2" cold rolled stock, thread opposite end for hex nut), install support (with cutting tool) on engine and tighten support anchor bolt. Cut bearing (use nut on end of cutting tool and turn with ratchet wrench) using light pressure to give a clean cut. **IMPORTANT**—Place oil soaked rag under bearing to catch chips (avoiding necessity of removing crankshaft). Remove support (together with cutting tool). Drill hole in side of bearing for anchor plug by using 3/8" drill inserted in camshaft anchor plug hole on right side of engine. Install new anchor plugs. Remove oil soaked rag and use extreme care to remove all bearing chips and cuttings.

## 1941-47 MODELS

**CAMSHAFT SERVICING:** Camshaft Removal. Remove bonnet (see Hood (Bonnet) Removal above), radiator (see Radiator Core Removal following), radiator louvre panel, vibration dampener (see Vibration Dampener Removal above), fan blades, fan belt, timing gear cover and gasket, vibration dampener spacer, camshaft gear (3 bolts and lockwire), valve chamber cover, valves, tappets, oil pump, fuel pump, and distributor. Camshaft with thrust button and spring can then be withdrawn from engine by pressing down on radiator lower tank shield.

**Camshaft Installation**—See Timing Gear data below (note CAUTION on cover bolt installation).

**Camshaft Bearings**—New thin type steel-backed, babbitt-lined bushings used (cannot be used for service on earlier cars). Factory reamed bearings available for replacement which require no reaming or scraping. Standard bearings with extra wall thickness permitting line-reaming on engine also available (line-ream for .001" bearing clearance).

**Camshaft Bearing Removal & Installation**—Bearings can be removed as follows: Remove camshaft (see Camshaft Removal above), remove oil pan and tray, press old bearings out. New bearings can be installed as follows: Press new bearings in place with locating notch on front edge at top (back of bearing has 1/16" chamfer so that bearings can be readily installed in crankcase, bearing material on front of bearing has light chamfer at front). Coat bearings with light engine oil, install camshaft.

## TIMING GEARS

## 1936-47 MODELS

**REPLACEMENT TIMING GEARS:** Laminated Fibre. Starting with 1941 engines timing gears have new design 20° pressure angle teeth (formerly 14 1/2°) providing increased gear life and quieter operation. All other specifications (material and size) same as

for preceding gears. These new type gears can be used for replacement on 1940 & earlier cars in sets. **Identification Marking**—Figure '20' used to mark these gear types. Cast on front of crankshaft gear (also carries mark 'FRONT'), and moulded on front face of camshaft gear.

**REPLACEMENT TIMING GEARS: Aluminum Type.** A new aluminum Camshaft Gear has been used on all models beginning with 1946 engines (later cars only—first cars have laminated fibre type gear). This gear (and cast iron crankshaft gear used with it) have 20° pressure angle teeth and in addition, teeth have slight crown or curvature to improve quietness. These gears furnished for service in Matched Sets only. See Installation data below for changes necessary when aluminum camshaft gear used to replace the laminated fibre type.

**Identification Marking**—Both gears marked by figure "20" on front face of gear. Crankshaft gear has additional marking "FRONT" to insure correct installation.

**Camshaft Gear Installation (Aluminum Type):** When using aluminum gear to replace laminated fibre type, additional clearance must be provided for this gear as follows:

**Support Plate Screws**—With camshaft gear out, remove front support plate (see Engine Front Support Removal), countersink the two screw holes in the plate behind the camshaft gear, and the corresponding holes in the cylinder block, to take special countersunk head screws and lockwashers furnished for use at this point.

**Support Plate Cutout**—The cutout in the plate adjacent to the camshaft flange should be increased in size or chamfered to provide adequate clearance when aluminum gear installed.

## 1940-47 MODELS

**TIMING GEAR REMOVAL:** Drain cooling system. Remove fan belt, radiator outlet hose, vibration dampener (see Vibration Dampener Removal), timing gear cover bolts, cover, cover gasket and vibration dampener spacer. Turn engine over until timing marks (2 teeth mark on camshaft gear, 1 tooth mark on crankshaft gear) coincide. Remove camshaft gear (retained by 3 capscrews and lock wire). Remove crankshaft gear using Puller Tool J-471.

**Gear Installation**—Reverse removal procedure above (use Tool J-483 to replace camshaft gear). Use new timing cover gasket and check leather oil seal in timing gear cover. If new seal to be installed, coat seal seat in cover with red or white lead and press seal securely in place. Do not curl edge of seal over when cover installed. **CAUTION**—On 1940-41 engines, two special washer head timing gear cover bolts used at lower left corner of cover and must be re-installed in same holes when cover installed. All bolts are washer-head type beginning with 1942 engines.

**Replacement Camshaft Gear:**—A special .008" over-size camshaft gear (marked with daub of yellow paint on front face of gear) available for service.

## VALVE SYSTEM

## 1938-47 MODELS

**VALVE TOOLS:** Valve stem diameter reduced to 11/32" starting 1938 (was 3/8"). Due to this de-

crease in stem diameter, new pilot size necessary for valve servicing tools. Tool numbers as follows:

Tool	Tool No.
Valve Stem Guide Replacer Pilot.....	J883-6
Valve Stem Guide Reamer Pilot.....	J129-2
Valve Stem Guide Remover Pilot.....	J267
Valve Seat Reamer Pilot.....	J491-12

## ALL 1936-47 MODELS

## 1948 EIGHT CYLINDER

**VALVE LIFTER REMOVAL:** Valve lifters may be removed without removing cylinder head as follows: Remove Right Front Fender Dust Shield on '39 cars, Right Front Fender Inspection Hole Plate on '40-'42 cars (see first page). Remove valve cover, break loose tappet adjusting screws, remove spring seat retainer using Tool J-915, remove tappet adjusting screw, spring seats, spring dampeners, tappet guide clamp screws and clamps. Take out tappet and guide assemblies.

## OILING SYSTEM

## ALL 1936-47 MODELS

## 1948 EIGHT CYLINDER

**CHECKING OILING SYSTEM:** See that oil lines securely in place and not bent or damaged. Drop oil reservoir and clean thoroughly every six months. When installing oil reservoir, check flapper valve on rear main bearing oil return tube (soldered in rear of reservoir). Valve must work freely and should be slightly open with reservoir level. Holes in gaskets between crankcase and oil dipper tray and between tray and reservoir must align with oil return tube and register with hole in bearing cap.

**NOTE**—Beginning with 1942 engines, oil suction pipe was redesigned and lower end extended into center of oil reservoir to insure constant supply of oil to oil pump.

## 1939 MODELS

**OILING SYSTEM CHANGES ON "112" & SIX CYLINDER ENGINES:**—Oil passages from oil pump through cylinder block to front and rear of engine have been relocated. Front line now delivers oil directly to #1 trough in oil tray (formerly directed oil to timing gear compartment). Timing gears now lubricated by splash from connecting rods and higher oil level in gear compartment maintained by use of baffle on timing gear cover and elimination of oil drain hole in front main bearing cap (formerly used to supply oil to front of oil pan). Rear line from oil pump delivers oil to check valve (operates oil signal on instrument panel) which has been relocated farther forward in cylinder block allowing direct oil passage to #6 trough in oil tray.

**Oil Pan Tray ('112' Engine)**—New type conveyors used at front and rear ends of tray. Oil dams now used opposite #1 and #2 troughs and #5 and #6 troughs which direct oil draining from right side of cylinder block directly into #1 and #6 troughs.

**REPLACEMENT NOTE**—1939 trays can be used on earlier cars. Old type cannot be used on 1939 cars.

**Oil Pan Tray (Six Engine)**—New baffles used between #1 and #2 troughs and between #5 and #6 troughs which maintain higher oil levels in #1 and #6 troughs and overflow from these troughs fed to remaining troughs. **REPLACEMENT NOTE**—Same as for '112' above.

**1939-47 MODELS**

**OIL SUCTION PIPE SEAL:** Synthetic rubber suction pipe oil seal fitted in counter-bore in cylinder block flange at point where suction pipe passes through oil pan flange. Seal fitted around pipe and compressed by pan (pan gasket widened at this point).  
**NOTE—**Use new seal whenever pan installed.

**OIL PAN REMOVAL****1948 MODELS**

**OIL PAN REMOVAL:** Raise front end of the car. Drain the oil pan. Take out Center Steering Bracket bolts and move bracket aside. Remove oil pan bolts. Slide pan out to rear and down. **NOTE—**No special tools required.

**RADIATOR****1939 MODELS**

**RADIATOR CORE REMOVAL:** Remove hood and support (see Hood and Support Removal). Drain cooling system. Remove shell extension-to-side panel bolts and spacers (except 90, 98) and radiator hoses. Take out shell-to-core bolts. Remove water pump, fan belt, front engine splash guard and 2 radiator anchor bolt nuts. Lift out radiator core. **IMPORTANT—**When reassembling, reverse procedure listed above. Install water pump after core installed.

**1940-47 MODELS**

**RADIATOR CORE REMOVAL:** Drain radiator and remove upper and lower hoses. Disconnect radiator stay rod bolts at radiator and remove 2 radiator mounting bolts. Lift core out of car.

**CLUTCH NOTES****1936-48 MODELS**

**CLUTCH OIL SERVICING:** Hudsonite (oil) in clutch must be renewed every 5000 miles. Turn engine over until hexagonal drain plug on front face of flywheel is visible in timing inspection hole on left side of motor rear support above starting motor. Remove hex head drain plug with a socket wrench, turn engine over  $\frac{1}{3}$  revolution until star on flywheel is at inspection hole, allow engine to stand in this position one minute to drain old oil, turn engine over until filler plug is again at inspection hole, insert  $\frac{1}{2}$  pint Hudsonite (use J-485 gun) replace plug. Capacity & Oil— $\frac{1}{2}$  pt. Hudsonite Clutch Compound.

**FRONT SUSPENSION NOTES****1936-39 MODELS**

**TORQUE ARMS:** Assembled between bracket on each frame siderail and rear of front axle. When removing axle, disconnect each torque arm at frame bracket (use Bolt Press J-885 to remove bolts from rubber grommets) and remove axle with torque arms attached. When assembling axle to springs (with torque arms mounted on axle), adjust U-bolt nuts so torque arms will fall slowly of own weight when raised at rear end, install jam nuts on U-bolts. Finally connect torque arms to frame brackets by assembling rubber grommets in eye of each arm (immerse rubber in gasoline before installing to allow bolt to enter freely), insert bolt through bracket and arm, tighten nut.

**1938-39 MODELS**

**KING PIN THRUST BEARING:** King pin end thrust taken by 5 loose balls in upper bushing above king pin. Ball seat in bushing and on king pin end.

**Installation—**To install king pin, insert king pin from below until it enters top bushing (with keyways aligned and 'Corprene' seal in place under top bushing). Drop 5 loose balls through lubrication fitting hole on top of bushing, insert driver J-479-1 in hole to position balls, drive king pin into place (keyways aligned).

**1939-47 MODELS**

**AUTOPOISE CONTROL:** Used On All Passenger Cars—New type linkage (similar to stabilizer) connecting front wheels together and helps maintain front wheels in straight ahead position. Consists of transverse bar suspended in rubber bushings mounted in brackets bolted to frame (ahead of front axle). Ends of bar curve to rear and are attached to brackets bolted to spindles by rubber bushed link at each end. In operation, bar is twisted or sprung whenever wheels turned away from straight ahead position which results in wheels being returned to straight ahead position when turning force on steering wheel released. A slight increase in force required to turn wheel results.

**NOTE—**Autopoise Control may be installed on all 1937-38 Hudson and Terraplane models.

**CAUTION—**Autopoise control must be centralized (to avoid tendency to turn front wheels in one di-

rection to the other). Check and adjust Autopoise as follows:

**Checking Autopoise Centralization—**Jack up front of car so that front wheels are free. Disconnect drag link at steering gear pitman arm. Note position of front wheels (wheels should point straight ahead). Any tendency of wheels to turn right or left indicates Autopoise bar not centralized and has greater projection on side toward which wheels tend to turn.

**Adjusting Autopoise—**Loosen frame bracket bolt nuts at each Autopoise bushing bracket to relieve tension on bushings, turn front wheels to extreme right and left positions (this will cause Autopoise bar to centralize itself in brackets). Wheels should return to straight ahead position of own accord when released. Tighten frame bracket mounting bolts. Recheck Autopoise action with bracket bolts tight.

**NOTE—**Autopoise should be adjusted whenever bar removed or brackets disturbed.

**Autopoise Servicing: Removal—**Disconnect Autopoise bar from links at each side (remove nut on upper end of links). Lift engine hood. Remove bolts from Autopoise frame brackets on each side. Cut one rubber bushing off Autopoise bar (slice bushing neatly from end-to-end so that it may be re-used). Work bar out of hole in fender on opposite side from which bushing was cut, remove bar from the opposite fender and lift bar out through engine hood opening. **NOTE—**Bushings cannot be pulled through holes in fenders.

**Installation—**With one bushing off Autopoise bar, insert bar through engine hood opening, installing the end without a bushing through hole in fender first, then maneuver opposite end into place. Install rubber bushing and both frame brackets, tighten bracket bolts loosely. Connect Autopoise links. Adjust Autopoise as directed above before tightening bracket bolts securely.

**BRAKE NOTES****1939 MODELS**

**BRAKE LINING CHANGE:** Later cars use new type primary shoe lining. This lining is harder than first type and provides less sensitive brake. New lining should be installed on first cars in complete sets only (Brake Shoe and Lining Sets).

## MODEL IDENTIFICATION

**SERIAL NUMBER:**—First number—63-101. Stamped on plate on dash under engine hood.

**ENGINE NUMBER:**—First number—79,000. Stamped on left side of cylinder block opposite #6 cylinder.

## TUNE-UP

**COMPRESSION:**—Ratio 6.25-1 Std cast-iron head, 7.0-1 Optl. high compression aluminum head. Check compression pressure by removing all spark plugs and cranking engine with throttle wide open.

<b>Cylinder Head</b>	<b>Compression Pressure</b>
Std. 6.25-1	116 lbs. at 219 R.P.M.
Optl. 7.0-1	127 lbs. at 207 R.P.M.

**VACUUM READING:**—Gauge should show steady reading of 18-20" of HG. with engine idling at 350 R.P.M.

**FIRING ORDER:** 1-5-3-6-2-4. See Diagram.

**SPARK PLUGS:** Champion Type J-8 (Std. 6.25-1 Eng.), Type J-9 (Optl. 7.0-1 Eng.) 14mm. Metric.  
Gaps—.025" (Std. Eng.), .022" (H. C. Eng.).

**IGNITION:** See Coil, Condenser, and Distributor.  
Breaker Gap—.020" Cam Angle 38° (closed).  
Automatic Advance—14° max. at 1580 RPM (distr.).

**IGNITION TIMING:** See Ignition Timing.  
Std. Setting—At TDC. with flywheel mark "UDC. 1-6/" at indicator on left front face of housing.

**CARBURETION:** See Carburetor & Carb. Equipment.  
Idle Setting—Idle screw ½-1 turn open. Idle speed 350 RPM or 7 MPH.

Float Level—¾" from gasket seat on cover to nearest point on float (top at free end).

Accelerating Pump—Center hole Normal. Inner hole (Summer), Outer hole (Winter) for temperature extremes.

Fuel Pump Pressure: 3½ lbs. maximum.

**VALVES:** See Valve Timing.  
Tappet Clearance—.006" Int. .008" Exh. Hot.

**STARTING:** See Battery, Starter, Generator, Regulator.

## IGNITION

**Ignition Switch:**—Mitchellock Model 24-B, Type 6696. Connected to coil by armored cable.

**Ignition Lock:**—Briggs & Stratton No. 50184, Mitchell No. 6095.

**COIL:** Auto-Lite Model IG-4633. Resistor unit mounted on distributor terminal is connected in series with coil primary.

Coil Draw—2.5 amperes idling, 4.5 stopped.

**CONDENSER:** Auto-Lite Part No. IGB-1025J.  
Capacity—.20-.25 microfarad.

**DISTRIBUTOR:** Auto-Lite Model IGB-4301-B. Single breaker, 6 lobe cam, full automatic advance type.  
Breaker Gap—Set at .020". Limits .018-.020".  
Cam Angle or Dwell—38° closed, 22° open (distr.).  
Breaker Arm Spring Tension—16-20 ounces.

Automatic Advance			
Distributor	R.P.M.	Engine	R.P.M.
Degrees Start	300	Degrees 0	600
3	400	6	800
5	615	10	1230
10	1150	20	2300
14	1580	28	3160

**Distributor Removal:**—Mounted on right side of crankcase. To remove, take out hold-down screw in advance arm.

## IGNITION TIMING

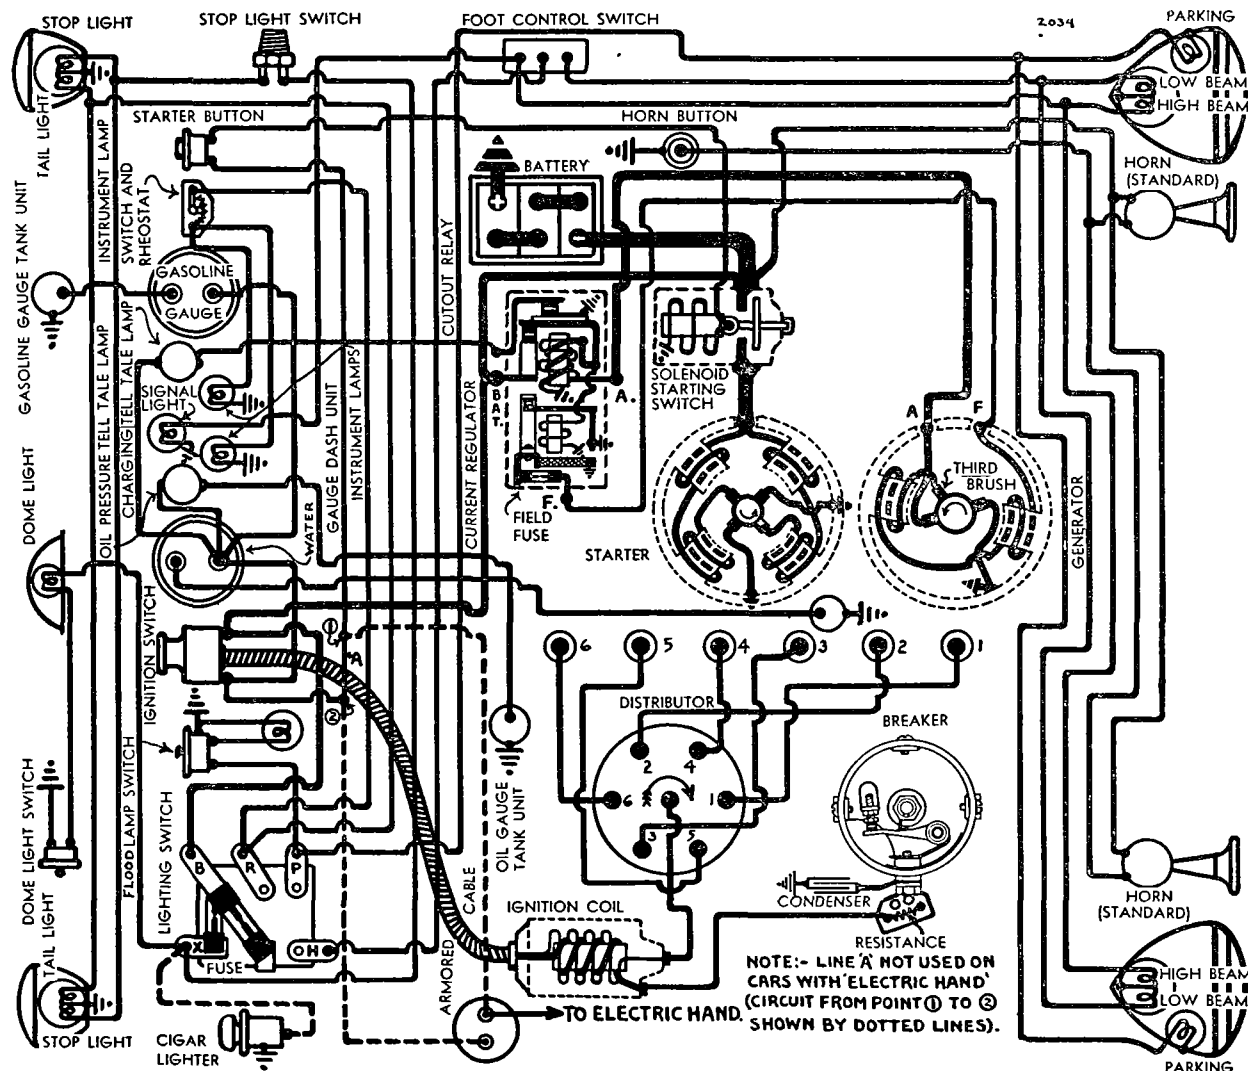

**IGNITION TIMING:**—Initial setting for all engines as shown. See Final Setting section for adjustment in accordance with octane rating of fuel used.

**Flywheel Degrees**                      **Piston Position**  
At TDC                                      .000" TDC.

**NOTE:**—High octane type fuel must be used in engines with high compression 7.0-1 aluminum head.

**To Set Timing (Initial Setting)**—With #1 piston on compression, turn engine over until flywheel mark "UDC.1-6/" lines up with pointer in inspection hole in left front face of flywheel housing above starter. Loosen hold-down screw in advance arm, rotate distributor clockwise to limit of advance arm slot, then slowly rotate distributor counter-clockwise until contacts begin to open, tighten hold-down screw.

**Final Setting**—Check ignition setting by road testing car. With engine warm and running in high gear on level road, a slight spark knock should be evident when car is accelerated from 10-15 M.P.H. with wide open throttle. Adjust by loosening hold-down screw in advance arm and rotating distributor one graduation on scale counter-clockwise (if no knock evident) or clockwise (if knock too severe). Repeat test until slight knock is evident. Final setting must not be more than ¾" on flywheel before "UDC.1-6/" mark.

## CARBURETOR

**CARBURETION:**—Carburetor—Carter Mod. 329-S, 1¼" downdraft type. See Carburetion Section for complete adjustment, overhaul, and Jet Specifications. *For complete data, refer to Carburetor Index.*

**NOTE:**—Do not adjust carburetor until engine is warmed up so that choke valve is wide open and engine idling at slow or hot idling speed.

**Idle Adjustment:**—Adjust throttle stopscrew so that speed is 350 R.P.M. or 7 M.P.H. Turn idle adjusting screw in until engine begins to miss, then turn screw out until engine begins to roll, finally turn screw in slowly until engine fires smoothly. Final setting should be ½-1 turn open from seated position. Readjust throttle stopscrew for correct idling speed.

**Accelerating Pump Setting:**—Pump lever (under dust cover at top of carburetor) has three holes for pump link engagement. Change for seasonal requirements as follows:

Center Hole—Normal summer temperatures.

Inner Hole (Min. stroke)—Extreme hot weather.

Upper Hole (Max. stroke)—Extreme cold weather.

**Fast Idle:**—Integral with carburetor. No adjustment required. See article on Carter Fast Idle in Carburetion Section.

*For complete data, refer to Carburetion Equip. Index.*

**Automatic Choke:**—Carter Climatic Control. See article in Carburetion Section.

*For complete data, refer to Carburetion Equip. Index.*

## CARB. EQUIPMENT

**Air Cleaner:**—AC. #1526650 Std. #1526651 on cars with Electric Hand. Heavy duty oil-bath type optl.

**Fuel Pump:**—AC. Type R #1521450. Diaphragm type. See article in Carburetion Section.

See 'Servicing AC Fuel Pumps' in Carburetion Equipment Section for recommended replacement pumps. *For complete data, refer to Carburetion Equip. Index.*

**Gasoline Gauge:**—King-Seeley Electric K-S #5820 (dash unit—stamped 'G' on case), #5835 (tank unit).

*For complete data, refer to Carburetion Equip. Index.*

## BATTERY

**BATTERY:**—National. Type ST-317X. 6 volt, 17 plate, 96 ampere hour (20 hour rate).

**Starting Capacity:**—120 amperes for 20 minutes.

**Zero Capacity:**—300 amperes for 3.2 minutes.

**Grounded Terminal:**—Positive (+) terminal.

**Location:**—On left hand side under front floor board.

## STARTER

**Auto-Lite Model MAB-4075 Armature MAB-2113.**

**Drive:**—Inboard Bendix, Type A-1673.

**Cranking Engine:**—150 R.P.M. 120-125 amps. at 5 vs.

**Rotation:**—Counter-clockwise at commutator end.

**Brush Spring Tension:**—42-53 ozs. (new brushes).

Performance Data			
Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	3700	5.5	60
.6 "	1910	5.5	100
3.4 "	1100	5.0	200
6.6 "	695	4.5	300
10.15 "	420	4.0	400
15.8 "	Lock	3.	582
22.5 "	Lock	4.	775

**NOTE:**—Lock torque figures correct without switch.

**Removal:**—Flange mounted on left front face of fly-wheel housing. To remove, take out flange mounting bolts.

**Starting Switch:**—Solenoid Switch Type SS-4001. Controlled by pushbutton switch (R.B.M. Model 1800) on dash. Operative with ignition turned 'on'. On cars with Electric Hand clutch must be disengaged also. See article in Equipment Section.

*For complete data, refer to Electrical Equipment Index.*

## Solenoid Switch

Closes with terminal voltage of 4 volts or less and will remain closed until voltage drops to .75-2.0 volts. Current draw 3 amperes at 6 volts.

## GENERATOR

### STANDARD

**Auto-Lite Model GAR-4701-6. Armature GAR-2077.** Third brush control in conjunction with Current Regulator (two-rate charging control). Ventilated by fan on drive pulley.

**Charging Rate Adjustment:**—Use test meters to check generator output. Short out current regulator by connecting jumper wire from 'F' terminal on generator to ground. Take off commutator cover band, shift third brush by hand counter-clockwise to increase or clockwise to decrease charging rate until output is 22.8 amperes at 8.0 volts with generator at room temperature. Third brush held in position by friction. Remove jumper.

**Maximum Charging Rate:**—As given above. Do not exceed.

Performance Data					
Cold			Regulator Inoperative		
Amps.	Volts	R.P.M.	Amps.	Volts	R.P.M.
0	6.4	780	0	6.4	820
4	6.7	930	4	6.8	1000
8	6.95	1060	8	7.1	1180
12	7.25	1210	12	7.35	1400
16	7.6	1440	16	7.8	1790
22.8	8.0	2400	18.4	8.0	2700

**Rotation:**—Counter-clockwise at commutator end.

**Brush Spring Tension:**—18-22 ozs. (new brushes).

**Field Current:**—3.51-3.89 amperes at 6.0 volts.

**Motoring Current:**—5.32-5.88 amperes at 6 volts.

**Field Fuse:**—5 ampere in knurled cup on side of regulator case.

**Removal:**—Pivot mounted at left front of engine with fan belt drive. To remove, take out two pivot bolts, one clamp bolt.

**Belt Adjustment:**—Swing generator away from engine until slack on belt midway between fan pulley and generator pulley is 1¼" (measure from straightedge across pulleys).

## GENERATOR

### SPECIAL EQUIPMENT

**SPECIAL GENERATORS:**—Other Makes—*Refer to Electrical Equipment Index for 'Special Generators' for data on special Generators and Regulators which may be found installed on these models.*

## REGULATOR

**Auto-Lite Model TC-4304A. Two Charge Type.** On engine side of dash. Consists of Cutout Relay and Current Regulator (two-rate charging control). See Equipment Section article for complete data. Cutout Relay has extra set of ground contacts for generator charging tell-tale signal light control.

*For complete data, refer to Electrical Equipment Index.*

## Cutout Relay

**Cuts In:**—6.5-7.25 volts. 8 M.P.H.

**Cuts Out:**—5-2.5 ampere discharge current.

**Contact Gap:**—.015-.045" (with upper or ground contacts closed—ground contacts must be open with main contacts closed).

**Air Gap:**—.010-.030" with contacts closed.

## Current Regulator

**Contacts Open:**—8.0-8.50 volts at 70° F.

**Contacts Close:**—1.2-1.4 volts below opening point.

**Contact Gap:**—.005" minimum.

**Air Gap:**—.045" with contacts closed.

## LIGHTING

**LIGHTING:**—Headlamps—Hall, Pre-focused type. Head lamps aimed straight ahead (upper beam with lenses in place). Upper and lower beams controlled by foot selector switch.

**Headlamp Beam Indicator:**—In lower portion of speedometer dial. Lighted when upper beams in use.

## Switches

**Lighting:**—R.B.M. Model 1650.

**Foot Selector:**—R.B.M. Model 1082.

**Instrument Lights:**—Soreng-Manegold Mod. K2060A.

**Stop Light:**—Motometer Model 58012-C hydraulic type mounted in brake line on left frame side rail in channel at rear.

## Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps	32-32	2331
Parking, Instrument	1	55
Signal Lights	1	51
Stop and Tail	21-3	1158
Dome	15	87

## MISC. ELECTRICAL

**SIGNAL LIGHTS:**—Battery Charge Telltale and Oil Pressure Tell-tale lights mounted on instrument panel. See Equipment Section for complete data.

*For complete data, refer to Electrical Equipment Index.*

**FUSES:**—Lighting—Two 20 ampere capacity on switch. Generator Field—5 ampere in regulator.

**HORNS:**—E.A. Vibrator type. Twin horns.

## ENGINE

**ENGINE SPECIFICATIONS:**—Type—6 cyl., 'L' head.

**Bore:**—3". **Stroke:**—5".

**Displacement:**—212 cubic inches. **Rated H.P.**—21.6.

**Developed Horsepower:**—93 at 3800 R.P.M. (Std. 6.25-1 head), 100 at 3800 R.P.M. (Optl. 7.0-1 head).

**Compression Ratio & Pressure:**—To check pressures, remove spark plugs, crank engine with throttle wide open.

Std. 6.25-1 Head.....116 lbs. at 219 R.P.M.

Optl. 7.0-1 Head.....127 lbs. at 207 R.P.M..

**Vacuum Reading:**—Gauge should show steady reading of 18-19" of HG. with engine idling at 350 R.P.M. or 7 M.P.H.

**PISTONS:**—Own Lo-Ex aluminum alloy, 'T' slot, Cam ground type. Use finished replacement pistons when reconditioning engine. See Reconditioning paragraph.

**Weight:**—10.5 ozs. stripped. Stamped on piston head.

**Length:**—3 3/16".

**Removal:**—Pistons and rods removed from above.

**Clearance:**—Top .016". Skirt .002". See Fitting new Pistons.

## ENGINE

## CONTINUED FROM PRECEDING PAGE

**Reconditioning Cylinders:**—Size of original bore indicated by letter stamped on lower edge of valve chamber opposite cylinder as follows: A-3.000", B-3.0005", C-3.001", D-3.0015", E-3.002", AO-3.010", BO-3.0105", CO-3.011", DO-3.0115", EO-3.012". Recondition cylinder to standard oversize for which replacement piston and rings are available (see piston and ring data below).

**Replacement Pistons:**—Standard and oversize pistons marked by letter on head available for cylinder bores of size indicated: 'B'-3.000 & 3.0005", 'D'-3.001 & 3.0015", 'F'-3.002 & 3.0025", 'J'-3.004", 'L'-3.005", 'BO'-3.010 & 3.0105", 'DO'-3.011 & 3.0115", 'FO'-3.012 & 3.0125", 'LO'-3.015", 'BB'-3.020", 'DD'-3.021", 'FF'-3.022". All pistons installed in engine must be of same weight as indicated by mark on head.

**Fitting New Pistons:**—Use .0015" feeler  $\frac{1}{2}$ " wide on side opposite slot at right angles to pin bosses to check clearance. Tension to withdraw feeler must be 3-4 lbs.

**Installing Pistons:**—Slot toward left or away from camshaft.

**PISTON RINGS:**—Two compression, one oil ring above pin, one oil ring below pin per piston. Upper oil ring groove drilled with twelve  $\frac{5}{16}$ " oil drain holes and two  $\frac{5}{16}$ " holes to pins. Lower oil ring groove drilled with four  $\frac{5}{16}$ " holes and two oil drain slots. Rings are straight cut and are positioned by pin in piston ring groove.

Ring	Width	End Gap	Wall Thickness
Comp.	$\frac{3}{32}$ "	.005" Min.	.123"
Oil (both)	$\frac{3}{16}$ "	.005" Min.	.128"

**NOTE:**—Use standard or oversize rings of size indicated for replacement pistons (see replacement piston section above): 3.000"—B, D, F; 3.003"—J; 3.005"—L; 3.010"—BO, DO, FO; 3.015"—LO; 3.020"—BB, DD, FF. If rings are filed, clearance at pin must be kept uniform with end gap.

**PISTON PIN:**—Diameter  $\frac{3}{4}$ ". Length 2  $\frac{7}{16}$ ".

Pin floats in piston and rod. Held by locking ring at each end. Pin hole in rod is bronze-bushed. Pins furnished standard, .002", .005", .010" oversize.

**Pin Fit in Piston:**—Hand push fit with piston heated to 200° F.

**Pin Fit in Rod Bushing:**—.0003" clearance. With this clearance, rod will just turn of own weight.

**CONNECTING ROD:**—Weight 29.4 ozs. Length 8  $\frac{3}{16}$ ". Crankpin Journal Diameter—1  $\frac{15}{16}$ ".

**Lower Bearing:**—Spun-babbitt lined type. Rods serviced on 'exchange' basis.

**Clearance:**—.001". **Sideplay:**—.008-.010".

**Bearing Adjustment:**—Laminated shims. Do not file rods or caps.

**Installing Rods:**—Lower bearings are offset. Install rods with right hand offset (widest half of bearing toward rear) in cylinders #1, 2, 4, and rods with left hand offset (widest half of bearing toward front) in cylinders #3, 5, 6. Oil scoop on bearing must be toward camshaft on all rods.

**CRANKSHAFT:**—Three bearing. Integral counterweights. See Hudson Shop Notes for Crankshaft and Vibration Dampener removal, Main Bearing Removal, Installation and Line-Reaming data.

**Journal Diameters:**—#1, 2  $\frac{11}{32}$ "; #2, 2  $\frac{3}{8}$ "; #3, 2  $\frac{13}{32}$ ".

**Bearings:**—Bronze backed, babbitt lined type. Bearings secured in cap and crankcase by brass screws. **Clearance:**—.001".

**Bearing Adjustment:**—Shims. See Hudson Shop Notes.

**CAUTION:**—Replacement of main bearings requires removal of crankshaft. Bearings retained by brass screws.

**Replacement Bearings:** See Hudson Shop Notes.

**End Thrust:**—Taken by flanges on #2 (center) main bearing. Endplay .006-.012". Adjusted by replacing bearing.

**CAMSHAFT:**—Three bearing. Gear driven.

**Journal Diameters:**—#1, 2"; #2, 1  $\frac{31}{32}$ ". #3,  $\frac{1}{2}$ ".

**Bearing Clearance:**—.0015".

**End Thrust:**—Taken by spring loaded plunger in end of camshaft and thrust plate on gear case cover.

**NOTE:**—If gear case cover removed, see that spring and plunger are in place when cover replaced.

**Timing Gears:**—Crankshaft gear cast-iron. Camshaft gear GE. or Continental Diamond Fibre Bakelite. 1941 Type Timing Gear Set can be installed on these models (tooth angle redesigned to provide quieter operation). Refer to Hudson Shop Notes.

**Camshaft Setting:**—Gears are marked. Mesh marked tooth of crankshaft gear between two marked teeth on camshaft gear.

VALVES:	Head Diameter	Stem Diameter	Length
All Valves	1 $\frac{3}{8}$ "	$\frac{3}{8}$ "	5 $\frac{11}{32}$ "
	Seat Angle	Lift	Stem Clearance
Intake	45°	$\frac{11}{32}$ "	.0015-.003"
Exhaust	45°	$\frac{11}{32}$ "	.003-.005"

**Valve Guides:**—Removable type. Pressed in block. Finish ream guides after installation to size giving correct clearance.

**Valve Springs:**—Dampeners originally used on bottom of all springs. Car manufacturer recommends that they be omitted when servicing valves.

	Spring Pressure	Spring Length
Valve Closed	44 lbs.	2"
Valve Open	102 lbs.	1 $\frac{21}{32}$ "

**Valve Lifters:**—Slipper-type operating in individual removable guides. Lifter is prevented from turning by pin in guide.

## VALVE TIMING

**Tappet Clearance:**—.006" Intake, .008" Exhaust (hot).

**Valve Timing:**—See Camshaft Setting above.

**Intake Valves:**—Open 10°40' BTDC. Close 60° ALDC.

**Exhaust Valves:**—Open 50° BLDC. Close 18°44' ATDC.

These figures correct with .010" tappet clearance. To Check Timing—Set tappet clearance #1 intake valve at .010". This valve should open with piston 10°40' or .0562" before top dead center when point on flywheel approximately 3.94 teeth before UDC. 1-6" mark lines up with indicator in hole in left front face of flywheel housing. Reset tappet clearance at .006" hot.

## LUBRICATION

**LUBRICATION:**—Duo-flow (splash) system. Force feed by oil pump to connecting rod troughs and timing gears. Splash to all other bearing points from troughs.

**Normal Oil Pressure:**—3 lbs.

**Oil Pressure Regulator:**—Operates at 3 lbs. Located on right side of crankcase. Not adjustable.

**Crankcase Capacity:**—6 qts. refill.

**Oil Pump:**—Oscillating plunger type pump mounted on right side of crankcase and driven by gears from the camshaft.

**Oil Pressure Indicator:**—Consists of signal light on instrument panel and switch built in oil pressure regulator.

For complete data, refer to Electrical Equipment Index.

## CLUTCH

**CLUTCH:**—Own Make—Single plate, cork insert type operating in oil. Driven plate can be recorked but is customarily replaced.

See Clutch Section for complete data.

**Clutch Plate:**—Thickness .203". Inside diameter 5.375". Outside diameter 8.625". Facing consists of 90 cork inserts.

**Adjustment:**—Free movement of clutch pedal must be  $\frac{1}{2}$ " at all times. To adjust, remove clevis pin in clutch pedal link rod (between frame and leg of 'X' member below clutch pedal shaft), loosen locknut at top of clevis, turn clevis to shorten or lengthen rod as required, tighten locknut, replace clevis pin. On cars with automatic clutch control, check linkage whenever clutch is adjusted.

**Automatic Clutch Linkage Adjustment:**—Hold accelerator pedal in depressed position, pull backward on clutch control power unit rod at left of engine. With rod in extreme rear position check clearance between back of slot in rod yoke and clevis pin which attaches it to operating lever. Clearance at this point must be  $\frac{7}{8}$ ".

See Clutch Section for complete data.

**Clutch Oil Servicing:**—See Hudson Shop Notes for data.

## FRONT SUSPENSION

**Front Suspension:**—Conventional 'T' beam section front axle with Elliott type ends and semi-elliptic springs. Torque arm at each end of axle connected to frame at rear by rubber-bushed bolt maintains axle alignment.

**Specifications & Adjustment:**—Kingpin Inclination, Caster, Camber, Toe In, Steering Geometry, and Kingpin thrust bearing specifications and adjustment same as for Hudson Eight (following article).

## STEERING GEAR

**Steering Gear:** Gemmer Model. Worm-and-Sector type

See Steering Gear Section for complete data.

**NOTE:**—An adjustable drag link with  $\frac{3}{4}$ " adjustment (made by shifting shims from front to rear of pitman arm ball seat) is used on cars after #633110 (except 633153 to 633185 inclusive).

## BRAKES

**BRAKES:**—Service—Bendix Hydraulic, Duo-Servo, Single Anchor type. Brake pedal connected to rear wheel brakes through cable linkage for additional reserve mechanical application of brakes. Hand lever applies rear brakes through same linkage.

See Brake Section for complete data.

**Brake Drum Diameters:**—10  $\frac{1}{16}$ ".

**Brake Lining:**—Moulded & Woven type. Width  $1\frac{1}{4}$ ". Thickness  $\frac{7}{32}$ ". Length  $22\frac{1}{8}$ " per wheel.

**Brake Clearance:**—.010" heel and toe of each shoe.

**Brake Pedal Adjustment:**—For correct mechanical follow-up feature, adjust position of nut on connecting rod so that clearance between face of nut and end of push rod is 1  $\frac{29}{32}$ " with equalizer against stop.

**Hand Brake:**—See Service Brakes above.

## MISC. MECHANICAL

**AUTOMATIC SHIFT (ELECTRIC HAND):**—Bendix electro-pneumatic type. Optl. Equipment.

See Transmission Section for complete data.

**MODEL IDENTIFICATION**

**SERIAL NUMBER:**—First number (64) 64101, (65) 65101, (66) 66101, (67) 67101. On plate on engine side of dash. All model numbers will carry these prefixes: '64', '65', '66', or '67'.

**ENGINE NUMBER:**—First number—1000 (all models). Stamped on left side of engine block near top.

**TUNE-UP**

**COMPRESSION:**—Ratio 6.0-1 Std. cast-iron head, 7.0-1 Optl. high compression aluminum head. Check compression pressure by removing all spark plugs and cranking engine with throttle wide open.

<b>Cylinder Head</b>	<b>Compression Pressure</b>
Std. 6.0-1 .....	110 lbs. @ 150 R.P.M.
Optl. 7.0-1 .....	128 lbs. @ 150 R.P.M.

**VACUUM READING:**—Gauge should show steady reading of 18-20" of HG. with engine idling at 350 R.P.M.

**FIRING ORDER:** 1-6-2-5-8-3-7-4. See diagram.

**SPARK PLUGS:** Champion Type J-8 (Std. 6.0-1 Eng.), Type J-9 (Optl. 7.0-1 Eng.). 14 mm. Metric. Gaps—.025" (Std. Eng.), .022" (Optl. Eng.).

**IGNITION:** See Coil, Condenser, and Distributor. Breaker Gap—.017" Cam Angle 27½° (closed). Automatic Advance—17.5° at 1700 RPM (distr.).

**IGNITION TIMING:** See Ignition Timing. Std. Setting—At TDC, with flywheel mark "UDC 1-8/" at indicator on left front face of housing.

**CARBURETION:** See Carburetor & Carb. Equipment. Idle Setting—Idle screw ½-1 turn open. Idle speed 350 RPM or 7 MPH. Float Level—¾" from gasket seat on cover to nearest point on float (top at free end). Accelerating Pump—Center hole Normal. Inner hole (Summer), Outer hole (Winter) for temperature extremes.

**Fuel Pump Pressure:** 3½ lbs. maximum.

**VALVES:** See Valve Timing. Tappet Clearance—.006" Int. .008" Exh. Hot.

**STARTING:** See Battery, Starter, Generator, Regulator.

**IGNITION**

**Ignition Switch:**—Mitchellock Model 24-B, Type 6696. Connected to coil by armored cable.

**Ignition Lock:**—Briggs & Stratton No. 50184, Mitchell No. 6095.

**COIL:** Auto-Lite Model CE-4617. Resistor unit mounted on distributor terminal is connected in series with coil primary.

**Resistance Unit:**—Part No. SP-4009.

**Coil Draw:**—2.5 amperes idling, 4.5 amps. stopped.

**CONDENSER:** Auto-Lite Part No. IG-2671.

**Capacity:**—.20-.25 microfarad.

**DISTRIBUTOR:** Auto-Lite Model IGP-4001-B. Single breaker, 8 lobe cam, full automatic advance type.

**Breaker Gap:**—Set at .017".

**Cam Angle or Dwell:**—27½° (closed), 17½° (open).

**Breaker Arm Spring Tension:**—18 ozs. minimum, 20 ozs. maximum.

Automatic Advance			
Distributor	Engine	Distributor	Engine
Degrees	R.P.M.	Degrees	R.P.M.
Start	300	0	600
3	400	6	800
5	575	10	1150
10	1025	20	2050
15	1475	30	2950
17.5	1700	35	3400

**Distributor Removal:**—Mounted on right side of crankcase. To remove take out hold-down screw in advance arm.

**IGNITION TIMING**

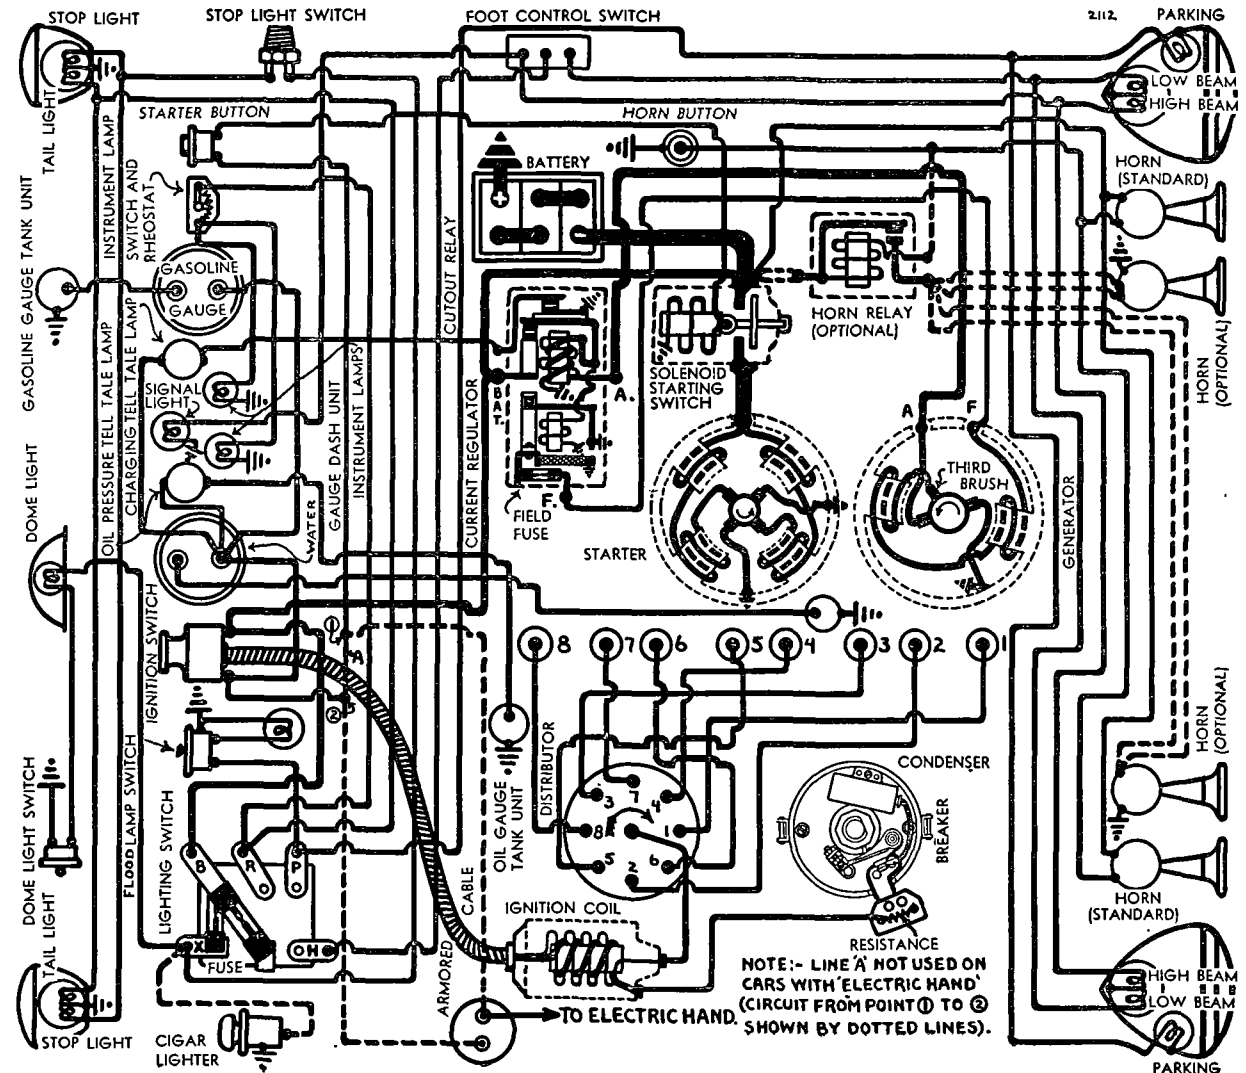

**IGNITION TIMING:**—Initial setting for all engines as shown. See Final Setting Section for adjustment in accordance with octane rating of fuel used.

<b>Flywheel Degrees</b>	<b>Piston Position</b>
At TDC	.00" TDC

**NOTE:**—High octane type fuel must be used in engines with high compression 7.0-1 aluminum head.

**To Set Timing (Initial Setting)**—With #1 piston on compression turn engine over until flywheel mark 'UDC 1-8/' lines up with pointer in inspection hole in left front face of flywheel housing above starter. Loosen hold-down screw in advance arm, rotate distributor clockwise to limit of advance arm slot, then slowly rotate distributor counter-clockwise until contacts begin to open. Tighten hold-down screw. **Final Setting**—Check ignition setting by road testing car. With engine warm and running in high gear on level road, a slight spark knock should be evident when car is accelerated from 10-15 M.P.H. with wide open throttle. Adjust by loosening hold-down screw in advance arm and rotating distributor one graduation on scale counter-clockwise (if no knock evident) or clockwise (if knock too severe). Repeat test until slight knock is evident. Final setting must not be more than ¾" on flywheel before 'UDC 1-8/' mark.

CONTINUED N NEXT PA E

C NTINUED FR M PRECEDIN PAGE

**CARBURETOR**

**CARBURETION:**—Carburetor—Carter Model 330-S, 1¼" downdraft type. See Carburetion Section for complete adjustment, overhaul, and Jet Specifications.

For complete data, refer to Carburetor Index.

**NOTE:**—Do not adjust carburetor until engine warmed up so that choke valve is wide open and engine idling at slow or hot idling speed.

**Idle Adjustment:**—Adjust throttle stopscrew so that speed is 350 R.P.M. or 7 M.P.H. Turn idle adjusting screw in until engine begins to miss, then turn screw out until engine begins to roll, finally turn screw in slowly until engine fires smoothly. Final setting should be ½-1 turn open from seated position. Readjust throttle stopscrew for correct idling speed.

**Accelerating Pump Setting:**—Pump lever (under dust cover at top of carburetor) has three holes for pump link engagement. Change for seasonal requirements as follows:

Center Hole—Normal summer temperatures.

Inner Hole (Min. stroke)—Extreme hot weather.

Upper Hole (Max. stroke)—Extreme cold weather.

**Fast Idle:**—Integral with carburetor. No adjustment required. See article on Carter Fast Idle in Carburetion Section.

For complete data, refer to Carburetion Equip. Index.

**Automatic Choke:**—Carter Climatic Control. See article in Carburetion Section.

For complete data, refer to Carburetion Equip. Index.

**CARB. EQUIPMENT**

**Air Cleaner:**—AC. #1526650 Std. # 1526651 on cars with Electric Hand. Heavy duty oil-bath type optl.

**Fuel Pump:**—AC. Type R #1521450. Diaphragm type. See article in Carburetion Section.

See 'Servicing AC Fuel Pumps' in Carburetion Equipment Section for recommended replacement pumps.

For complete data, refer to Carburetion Equip. Index.

**Gasoline Gauge:**—King-Seeley Electric K-S #5820 (dash unit—stamped 'G' on case), #5835 (tank unit).

For complete data, refer to Carburetion Equip. Index.

**BATTERY**

**BATTERY:**—National, Type ST-319X. 6 volt, 19 plate, 108 ampere hour (20 hour rate).

Starting Capacity—135 amperes for 20 minutes.

Zero Capacity—300 amperes for 4.3 minutes.

Grounded Terminal—Positive (+) terminal.

Location—On left hand side under front floor bds.

**STARTER**

Auto-Lite Model MAB-4075 Armature MAB-2113.

Drive—Inboard Bendix (barrel) Type A-1673.

Cranking Engine—150 R.P.M. 120-125 amps., at 5 v.

Rotation—Counter-clockwise at commutator end.

Brush Spring Tension—42-53 ozs. (new brushes).

**Performance Data**

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	3700	5.5	60
6 "	1910	5.5	100
3.4 "	1100	5.0	200
6.6 "	695	4.5	300
10.15 "	420	4.0	400
15.8 "	Lock	3.	582
22.5 "	Lock	4.	775

**NOTE:**—Lock torque figures correct without switch.

**Removal:**—Flange mounted on left front face of fly-wheel housing. To remove, take out flange mounting bolts.

**Starting Switch:**—Solenoid Switch Type SS-4001. Controlled by pushbutton switch (R.B.M. Model 1800) on dash. Operative with ignition turned 'on.' On cars with Electric Hand clutch must be disengaged also. See article in Equipment Section.

For complete data, refer to Electrical Equipment Index.

**Solenoid Switch**

Closes with terminal voltage of 4 volts or less and will remain closed until voltage drops to .75-2.0 volts. Current draw 3 amperes at 6 volts.

**GENERATOR****STANDARD**

Auto-Lite Model GAR-4701-6. Armature GAR-2077. Third brush control in conjunction with Current Regulator (two-rate charging control). Ventilated by fan on drive pulley.

**Charging Rate Adjustment:**—Use test meters to check generator output. Short out current regulator by connecting jumper wire from 'F' terminal on generator to ground. Take off commutator cover band, shift third brush by hand counter-clockwise to increase or clockwise to decrease charging rate until output is 22.8 amperes at 8.0 volts with generator at room temperature. Third brush held in position by friction. Remove jumper.

**Maximum Charging Rate:**—As given above. Do not exceed.

**Performance Data**

Performance Data					
Cold — Regulator Inoperative			Hot		
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	780	0	6.4	820
4	6.7	930	4	6.8	1000
8	6.95	1060	8	7.1	1180
12	7.25	1210	12	7.35	1400
16	7.6	1440	16	7.8	1790
22.8	8.0	2400	18.4	8.0	2700

**Rotation:**—Counter-clockwise at commutator end.

**Brush Spring Tension:**—18-22 ozs. (new brushes).

**Field Current:**—3.51-3.89 amperes at 6.0 volts.

**Motoring Current:**—5.32-5.88 at 6.0 volts.

**Field Fuse:**—5 ampere in knurled cup on side of regulator case.

**Removal:**—Pivot mounted at left front of engine with fan belt drive. To remove, take out two pivot bolts, one clamp bolt.

**Belt Adjustment:**—Swing generator away from engine until slack on belt midway between fan pulley and generator pulley is 1¼" (measure from straight-edge across pulleys).

**GENERATOR****SPECIAL EQUIPMENT**

**SPECIAL GENERATORS:**—Other Makes—Refer to Electrical Equipment Index for 'Special Generators' for data on special Generators and Regulators which may be found installed on these models.

**REGULATOR**

Auto-Lite Model TC-4304A. Two Charge Type. On engine side of dash. Consists of Cutout Relay and Current Regulator (two-rate charging control). See Equipment Section article for complete data. Cutout Relay has extra set of ground contacts for generator charging tell-tale signal light control.

For complete data, refer to Electrical Equipment Index.

**Carburetion—Electrical—Engine****Cutout Relay**

Cuts In—6.5-7.25 volts, 8 M.P.H.

Cuts Out—5-2.5 ampere discharge current.

Contact Gap—.015-.045" (with upper or ground contacts closed—ground contacts must be open with main contacts closed).

Air Gap—.010-.030" with contacts closed.

**Current Regulator**

Contacts Open—8.0-8.50 volts at 70° F.

Contacts Close—1.2-1.4 volts below opening point.

Contact Gap—.005" minimum.

Air Gap—.045" with contacts closed.

**LIGHTING**

**LIGHTING:**—Headlamps—Hall, Pre-focused type.

Headlamps aimed straight ahead (upper beam with lenses in place). Upper and lower beams controlled by foot selector switch.

**Headlamp Beam Indicator:**—In lower portion of speedometer dial. Lighted when upper beams in use.

**Switches**

Lighting—R.B.M. Model 1650.

Foot Selector—R.B.M. Model 1082.

Instrument Lights—Soreng-Manegold Model K2060A.

**Stop Light:**—Motometer Model 58012-C hydraulic type mounted in brake line on left frame side rail in channel at rear.

**Bulb Specifications**

Position	Candlepower	Mazda No.
Headlamps	32-32	2331
Parking, Instrument	1	55
Signal Lights	1	51
Stop and Tail	21-3	1158
Dome	15	87

**MISC. ELECTRICAL**

**SIGNAL LIGHTS:**—Battery Charge Telltale and Oil Pressure Tell-tale lights mounted on instrument panel. See Equipment Section for complete data.

For complete data, refer to Electrical Equipment Index.

**FUSES:**—Lighting—Two 20-ampere capacity on switch. Generator Field—5 ampere in regulator.

**HORNS:**—E. A. Vibrator type. Twin horns.

**ENGINE**

**ENGINE SPECIFICATIONS:**—Type—8 cyl., 'L' head.

Bore—3". Stroke 4½".

Displacement—254 cubic inches.

Rated Horsepower—28.8 (AMA).

Developed Horsepower—113 at 3800 R.P.M. (Std. 6.0-1 head), 124 at 4000 R.P.M. (Optl. 7.0-1 head).

Compression Ratio & Pressure—To check pressures, remove spark plugs, crank engine with throttle wide open.

Std. 6.0-1 Head.....110 lbs. at 150 R.P.M.

Optl. 7.0-1 Head .....128 lbs. at 150 R.P.M.

**NOTE:**—High Octane fuel must be used in engines with high compression 7.0-1 heads.

**Vacuum Reading:**—Gauge should show steady reading of 18-19" of HG. with engine idling at 350 R.P.M. or 7 M.P.H.

**PISTONS:**—Own Lo-Ex aluminum alloy, 'T' slot, Cam ground type. Use finished replacement pistons when reconditioning engine. See Reconditioning Section. Weight—10.88 ozs. stripped. Stamped on piston head. Length—3 3/16".

Removal—Pistons and rods removed from above.

**ENGINE**

CONTINUED FROM PRECEDING PAGE

**Clearance**—Top .016". Skirt .0015". See Fitting New Pistons.

**Reconditioning Cylinders**—Original cylinder size marking same as for Hudson Six and should be reconditioned in same manner (see previous page).

**Replacement Pistons**—Furnished in same sizes as for 1936 Hudson Six (see preceding article).

**Fitting New Pistons**—Pistons fitted in same manner as on 1936 Hudson Six (see preceding article).

**Installing Pistons**—Slot toward left or away from camshaft.

**PISTON RINGS**—Two compression, one oil ring above pin, one oil ring below pin per piston. Upper oil ring groove drilled with twelve 5/16" oil drain holes and two 5/16" holes to pins. Lower oil ring groove drilled with four 5/16" holes and two oil drain slots. Rings are straight cut and positioned by pin in groove.

Ring	Width	End Gap	Wall Thickness
Comp.	3/32"	.005" Min.	.123"
Oil (both)	3/16"	.005" Min.	.128"

NOTE—See Hudson Six (previous page) for ring oversizes and pistons for which used. If rings are filed, clearance at pin must be kept uniform with end gap.

**PISTON PIN**—Diameter 3/4". Length 2 7/16". Pin floats in piston and rod. Held by locking ring at each end. Pin hole in rod is bronze-bushed. Pins furnished standard, .002", .005", .010" oversize. Pin Fit in Piston—Hand push fit with piston heated to 200° F. Pin Fit in Rod Bushing—.0003" clearance.

**CONNECTING RODS**—Weight 29.4 ozs. Length 8 3/16". Crankpin Journal Diameter—1 15/16".

**Lower Bearing**—Spun-babbitt lined type. Rods serviced on 'exchange' basis.

**Clearance**—.001". Sideplay—.006-.010".

**Bearing Adjustment**—Laminated shims. Do not file rods or caps.

**Installing Rods**—Lower bearings are offset. Install rods with right hand offset (widest half of bearing toward rear) in cylinders #1, 3, 5, 7 and rods with left hand offset (widest half of bearing toward front) in cylinders #2, 4, 6, 8. Oil scoop on bearing cap must be toward camshaft on all rods.

**CRANKSHAFT**—Five bearing. Integral counterweights. See Hudson Shop Notes for Crankshaft and Vibration Damper Removal, Main Bearing Removal, Installation and Line-Reaming data.

**Journal Diameters**—#1, 2 9/32"; #2, 2 5/16"; #3, 2 11/32"; #4, 2 3/8"; #5, 2 13/32".

**Bearings**—Bronze backed, babbitt lined type. Bearings secured in cap and crankcase by brass screws. Clearance—.001".

**Bearing Adjustment**—Shims. See Hudson Shop Notes.

► **CAUTION**—Replacement of main bearings requires removal of crankshaft. Bearings retained by brass screws.

**Replacement Bearings**: See Hudson Shop Notes.

**End Thrust**—Taken by flanges on #3 center bearing. Endplay .006-.012". Adjusted by replacing bearing.

**CAMSHAFT**—Five bearing. Gear driven.

**Journal Diameters**—#1, 2 1/32"; #2, 2"; #3, 1 31/32"; #4, 1 15/16"; #5, 1 1/2".

**Bearing Clearance**—.0015".

**End Thrust**—Taken by spring loaded plunger in end of gear and thrust plate on gear case cover.

NOTE—If gear case cover removed, see that spring and plunger are in place when cover replaced.

**Timing Gears**—Crankshaft gear cast-iron. Camshaft gear GE. or Continental Diamond Fibre Bakelite. 1941 Type Timing Gear Set can be installed on these models (tooth angle redesigned to provide quieter operation). Refer to Hudson Shop Notes.

**Camshaft Setting**—Gears are marked. Mesh marked tooth of crankshaft gear between two marked teeth on camshaft gear.

VALVES:—	Head Diam.	Stem Diam.	Length
Intake	1 1/2"	3/8"	5 3/32"
Exhaust	1 3/8"	3/8"	5 3/32"

	Seat Angle	Lift	Stem Clearance
Intake	45°	11/32"	.0015-.003"
Exhaust	45°	11/32"	.003-.005"

**Valve Guides**—Removable. Pressed in block. Finish ream after installation to size for correct clearance.

**Valve Springs**—Dampeners originally used on bottom of all springs. Car manufacturer recommends that they be omitted when servicing valves.

Spring Pressure Spring Length

Valve Closed	44 lbs.	2"
Valve Open	102 lbs.	1 21/32"

**Valve Lifters**—Slipper type operating in individual removable guides. Lifter is prevented from turning by pin in guide.

**VALVE TIMING**

**Tappet Clearance**—.008" intake, .008" exhaust hot. **Valve Timing**—See Camshaft Setting above.

**Intake Valves**—Open 10°40' BTDC. Close 60° ALDC.

**Exhaust Valves**—Open 50° BLDC. Close 18°44' ATDC.

**To Check Valve Timing**—Set tappet clearance #1 intake valve at .010". This valve should open with piston 10°40' or .0494" BTDC. when point on flywheel approximately 3.97 teeth before 'UDC. 1-8/' mark lines up with indicator in hole in left front face of flywheel housing. Reset tappet clearance at .006".

**LUBRICATION**

**LUBRICATION**—Duo-flow (splash) system. Force feed by oil pump to connecting rod troughs and timing gears. Splash to all other points from troughs.

**Normal Oil Pressure**—3 lbs.

**Oil Pressure Regulator**—Operates at 3 lbs. Not adjustable. Located on right side of crankcase at rear.

**Crankcase Capacity**—9 qts.

**Oil Pump**—Oscillating plunger type pump mounted on right side of crankcase and driven by gears from camshaft.

**Oil Pressure Indicator**—Consists of signal light on instrument panel and switch built in oil pressure regulator.

For complete data, refer to Electrical Equipment Index.

**CLUTCH**

**CLUTCH**—Own Make—Single plate, cork insert type operating in oil. Driven plate can be recorked but is customarily replaced.

See Clutch Section for complete data.

**Clutch Plate**—Thickness .203". Inside diameter 6.375". Outside diameter 9.75". Facing consists of 108 cork inserts.

**Adjustment**—Free movement of clutch pedal must be 1 1/2" at all times. To adjust, remove clevis pin in clutch pedal link rod (between frame and leg of 'X' member below clutch pedal shaft), loosen locknut at top of clevis, turn clevis to shorten or lengthen rod as required, tighten locknut, replace clevis pin. On cars with automatic clutch control, check linkage whenever clutch is adjusted.

**Automatic Clutch Linkage Adjustment**—Hold accelerator pedal in depressed position, pull backward on clutch control power unit rod at left of engine. With rod in extreme rear position check clearance between back of slot in rod yoke and clevis pin which attaches it to operating lever. Clearance at this point must be 7/8".

See Clutch Section for complete data.

**Clutch Oil Servicing**—See Hudson Shop Notes for data.

**FRONT SUSPENSION**

**Front Suspension**—Conventional 'I' beam section front axle with Elliott type ends and semi-elliptic springs. Torque arm at each end of axle connected to frame by rubber-bushed bolt used to maintain axle alignment.

**King Pin Inclination**—7° crosswise.

NOTE—Kingpin end thrust taken by five loose balls in upper bushing above king pin. Ball seat formed in bushing and on king pin end. To install king pin, assemble sufficient shims to allow .006-.010" endplay below spindle, insert king pin until it enters top bushing, drop 5 loose balls through lubrication fitting hole on top of bushing, insert driver J-479-1 in hole to position balls, drive king pin up into place. Caster—3 1/2-4 1/2°. To adjust, loosen nut on horizontal arm attaching torque arm to axle yoke, take out capscrew between arm and yoke at top, decrease shim thickness between arm and yoke to increase caster, or increase shim thickness to decrease caster. .060" difference in shim thickness changes caster 1°. Shim thickness on both sides of car must be kept equal.

**Camber**—1-1 1/2°. No adjustment. Axle may be bent cold for minor corrections.

**Toe In**—1/8" (0-1/8"). Adjusted in usual manner by loosening clamp nuts and turning tie rod.

**Steering Geometry**—Inner wheel turned 20°, outer wheel 17°. Check tie rod ends and steering arms for looseness, replace steering arms if bent.

**STEERING GEAR**

**Steering Gear**: Gemmer Model. Worm-and-Sector type. See Steering Gear Section for complete data.

NOTE—An adjustable drag link with 3/4" adjustment made by shifting shims from front to rear of pitman arm ball seat is used on cars after #641008 (except 641134 to 641135 inclusive), #65374, #661791, and #671681.

**BRAKES**

**BRAKES**—Service—Bendix Hydraulic, Duo-Servo, Single Anchor type. Brake pedal connected to rear wheel brakes through cable linkage for additional reserve mechanical application of brakes. Hand lever applies rear brakes through same linkage.

See Brake Section for complete data.

**Brake Drum Diameters**—11 1/16".

**Brake Lining**—Moulded & Woven type. Width 1 3/4". Thickness 7/32". Length 23 15/16" per wheel.

**Brake Clearance**—.010" heel and toe of each shoe.

**Brake Pedal Adjustment**—For correct mechanical follow-up feature. See article in Brake Section.

**Hand Brake Adjustment**—See Service Brakes.

**MISC. MECHANICAL**

**AUTOMATIC SHIFT (ELECTRIC HAND)**—Bendix electro-pneumatic type. Optional equipment. See Transmission Section for complete data.

## MODEL IDENTIFICATION

**SERIAL NUMBER:** First No. 73-101 (1937), 83-101 (1938). Stamped on plate on right front door hinge pillar post. Number prefix (73-, 83-) indicates model.

**ENGINE NUMBER:** First No. 73-101 (1937), 83-101 (1938). Stamped on left side of cylinder block opposite #6 cylinder (1937), top of block between #1 and #2 exhaust flanges (1938). Number prefix (73-, 83-) indicates model.

## TUNE-UP

**COMPRESSION:** Compression Pressure  
6.25-1 std. CI. hd. 103 lbs. @ 170 R.P.M.  
7.0-1 Optl. Al. hd. 119 lbs. @ 170 R.P.M.  
NOTE—7.0-1 aluminum head—Super Power Dome.

**VACUUM READING:**—Gauge should show steady reading of 18-21" with engine idling at 350 R.P.M.

**FIRING ORDER:** 1-5-3-6-2-4. See diagram.

**SPARK PLUGS:** Champion Type J-8A (Std. 6.25-1 Eng.), Type H-10 (Optl. 7.0-1 Eng.). 14 mm. Metric. Gaps—.032"

**IGNITION:** See Coil, Condenser, and Distributor. Breaker Gap—.020" Cam Angle 35° (closed). Automatic Advance—14° max. at 1580 RPM (distr.).

**IGNITION TIMING:** See Ignition Timing. Std. Setting—At TDC. Flywheel mark "UDC.1-6/" at indicator in left front face of housing.

**CARBURETION:** See Carburetor & Carb. Equipment. Idle Setting—Both idle screws ¼-¾ turn open. Idle speed 7 MPH.

**Accelerating Pump:**—Inner hole Warm Temperatures, Outer hole—Cold Temperatures. Float Level—15/64" from gasket seat on cover to top of float (not soldered seam). Invert to check.

**Fuel Pump Pressure:** 4½ lbs. maximum. **MANIFOLD HEAT CONTROL:**—Thermostatic coil type. Located within manifold housing behind carburetor. No adjustment required.

**VALVES:** See Valve Timing. Tappet Clearance—.006" Int., .008" Exh. Hot. **STARTING:** See Battery, Starter, Generator, Regulator.

## IGNITION

**IGNITION SWITCH:** Mitchellock Model 24-B, Type 7063 (1937), 7642 (1938). Connected to coil by armored cable.

**Ignition Lock:**—Briggs & Stratton, Mitchell No. 6095. B&S No. 50184. Key Series—H601-H1100.

**COIL:** Auto-Lite Model IG-4644 (1937), IG-4650 (1938). Service Coil (less Switch & Cable) IG-3224JS.

**Ignition Current:**—2.5 amperes idling, 4.5 stopped. **CONDENSER:** Auto-Lite Part No. IGB-1025 (1937), IGB-1025J (1938). Capacity—.20-.25 microfarad.

**DISTRIBUTOR:** Auto-Lite Model IGW-4013-A (1937), IGW-4103-A (1938). Single breaker, 6 lobe cam, full automatic advance type. Breaker Gap—Set at .020". Cam Angle or Dwell—35° (closed), 25° (open). Breaker Arm Spring Tension—16-20 ounces. Rotation—Clockwise viewed from the top.

Automatic Advance			
Distributor	Engine	Distributor	Engine
Degrees	R.P.M.	Degrees	R.P.M.
Start	300	0	600
3	400	6	800
4	500	8	1000
9	1040	18	2080
14	1580	28	3160

**Fuel Compensator:**—Provides manual adjustment at distributor for octane rating of fuel used. See Fuel Compensator Setting (following).

**Distributor Removal:**—Mounted on right side of crankcase. To remove, take out hold-down screw in advance arm.

## IGNITION TIMING

**IGNITION TIMING:**—Initial Setting as shown. See Fuel Compensator Setting following.

Flywheel Degrees Piston Position

All engines 0° TDC. 000° TDC.

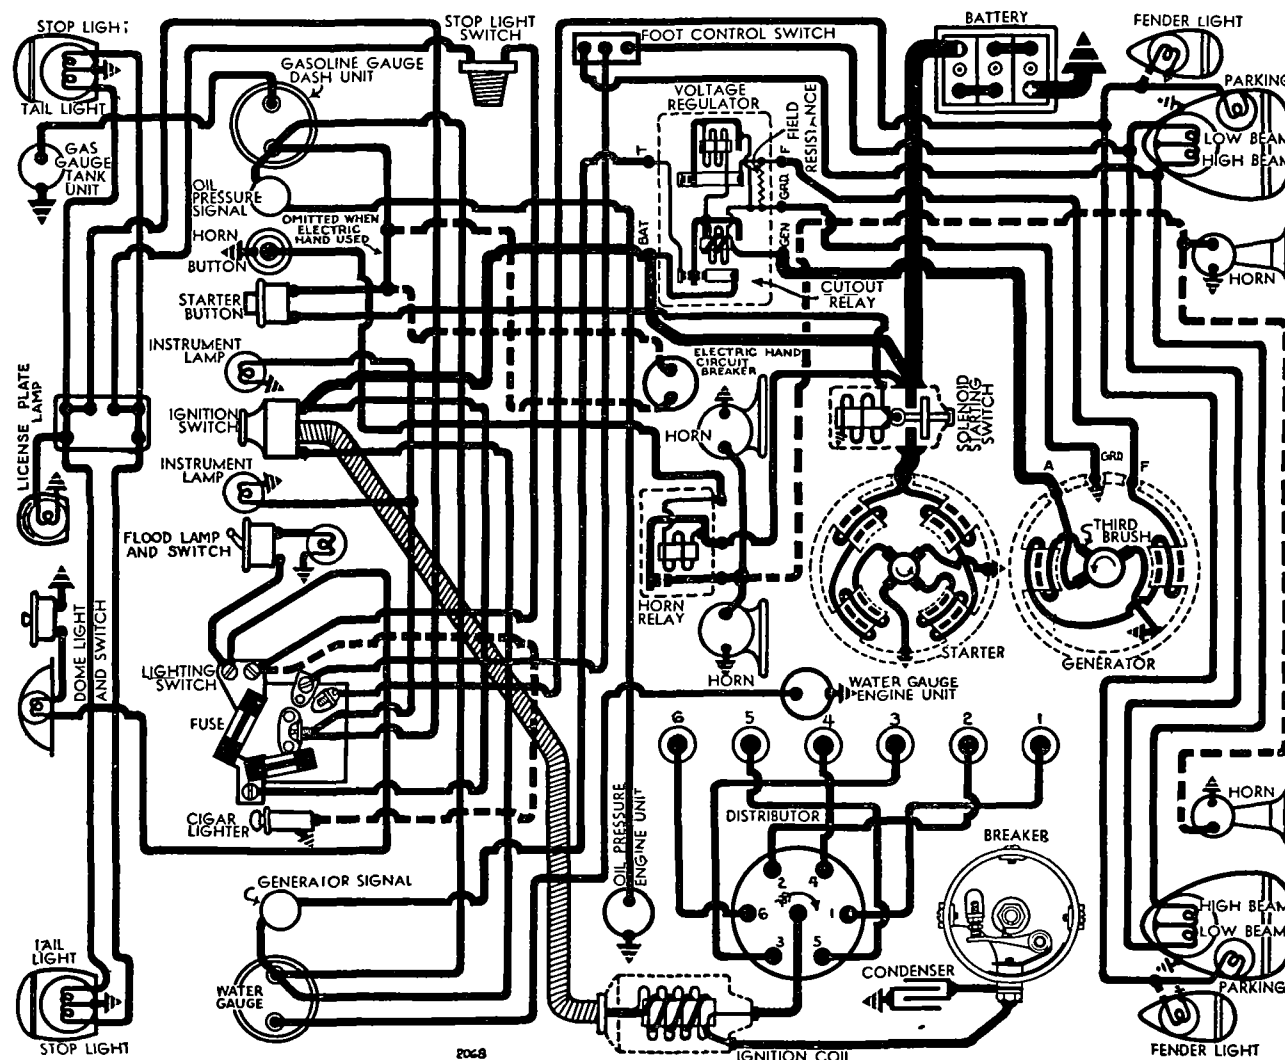

NOTE—High octane fuel must be used in engines with 7.0-1 'Super Power Dome' head.

**To Set Timing:**—With #1 piston on compression, turn engine over until flywheel mark "UDC.1-6/" lines up with pointer in left front face of flywheel

housing. Loosen hold-down screw in advance arm, rotate distributor clockwise to limit of slot, then slowly rotate distributor counter-clockwise until contacts begin to open, tighten hold-down screw.

**To Set Timing (Using Synchroscope):**—Car manufacturer recommends this method. Clip lead to #6 spark plug, fill in timing mark with white chalk and direct light on flywheel through hole in housing.

**Fuel Compensator Setting:**—Road test car and note performance when accelerating from 10-15 M.P.H. with wide open throttle on level road (engine must be warm). Slight spark knock should be evident. Adjust by loosening hold-down screw and rotating distributor one graduation on scale counter-clockwise (if no knock), clockwise (if knock too severe). Repeat test. Final setting must not be advanced beyond ¾" before "UDC.1-6/" mark on flywheel.

1937 MODEL 73

**CARBURETOR**

Carter Model WDO, Type 344-S & 377-S (1937), 402-S (1938). 1" Dual (double barrel), downdraft type with Automatic Choke.

For complete data, refer to Carburetor Index.

**Idle Adjustment**—Engine must be warm so that fast idle and automatic choke control inoperative. Set throttle lever stopscrew so that idling speed is 7 MPH. Turn each idle adjusting screw, in succession, in until engine begins to miss, then slowly out until engine fires smoothly. Final setting should be ¼-¾ turn out from inner seated position and screws must be adjusted equally so that engine fires smoothly on all cylinders. Readjust throttle stop-screw if necessary.

**Accelerating Pump Setting**—Adjustable for minimum and maximum stroke as follows:

Short stroke (inner hole) Hot temperatures.  
Long stroke (outer hole)—Cold temperatures.

**Fast Idle:** Integral with carburetor.

For complete data, refer to Carburetion Equip. Index.

**Setting**—.018" throttle opening with choke valve closed (T109-44 checking gauge).

**CARB. EQUIPMENT**

**Air Cleaner**—AC. #1528161 (std.), #1528160 (with Electric Hand) oil-wetted type. United (oil-bath type) optional.

**Fuel Pump**—AC. Type AK #1523289 (LHD), #1523313 (RHD), diaphragm type, standard. Type AB #1523290 (LHD), #1523314 (RHD), combination fuel-and-vacuum pump optional.

For complete data, refer to Carburetion Equip. Index.

**Gasoline Gauge**—King-Seeley Electric type. K-S No. Dash Unit—No. 6190 (1937—Black Dial, Early Cars), 6570 (1937—Tan Dial, Later Cars), 6756 (1938).

**Tank Unit**—No. 5835 (1937-38).

For complete data, refer to Carburetion Equip. Index.

**BATTERY**

National, Type ST-317X (1937), HT-17 (1938 Orig. Equip.), L-17-1F (1938 Replacement). 6 volt, 17 plate, 96 ampere hour (ST-317X), 100 ampere hour (HT-17 & L-17-1F) capacity (20 hour rate).

**Starting Capacity**—120 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 3.2 minutes (ST-317X), 3.5 minutes (HT-17 & L-17-1F).

**Grounded Terminal**—Positive (+) terminal. Grounded to left front fender support bracket. Engine grounded to frame by ground strap at bell housing.

**Dimensions**—Length 10 9/16". Width 7 1/4". Height 7 15/16".

**Location**—In left front fender under hood. Accessible from engine compartment by taking out 3 slotted screws in cover flange (2 top, 1 rear) and removing cover.

**STARTER**

Auto-Lite Model MAB-4075. Armature MAB-2113. Drive—Inboard Barrel Type Bendix No. A-1673.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—42-53 ozs. (new brushes).

**Cranking Engine**—150 RPM., 120-125 amperes, 5 v.

**Performance Data**

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	3700	5.5	60
.6 "	1910	5.5	100
3.4 "	1100	5.0	200
6.6 "	695	4.5	300
10.15 "	420	4.0	400
15.8 "	Lock	3	582
22.5 "	Lock	4	775

NOTE—Lock torque figures correct without switch.

**Removal**—Starter flange mounted on left front face of flywheel housing. To remove, take out flange mounting screws.

**Starting Switch**—Type SS-4001. Magnetic solenoid type mounted on starter. Controlled by pushbutton on instrument board (RBM Model 1815). Operative only with ignition on (and clutch disengaged on cars with Electric Hand).

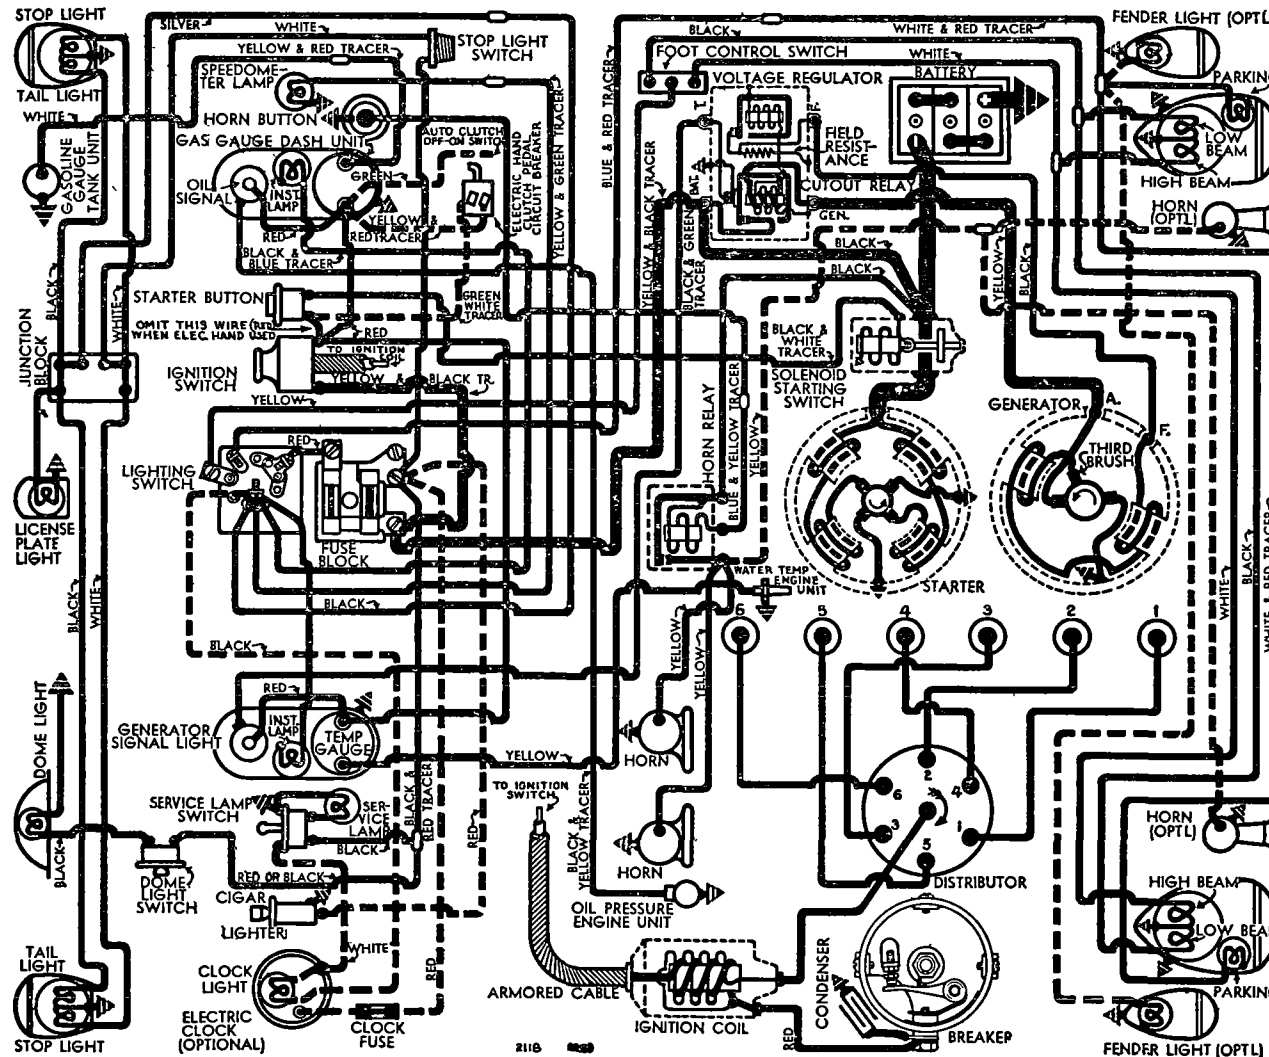

For complete data, refer to Electrical Equipment Index.

**GENERATOR****MODEL 73**

Auto-Lite Model GCJ-4803A. Armature No. GCJ-2006. Third brush control type with external voltage regulation. Ventilated by fan on drive pulley. **Maximum Charging Rate**—25 amperes (cold), 22 amperes (hot), 8.0 volts, 2500 R.P.M. Actual charging rate controlled by Voltage Regulator and dependent on battery condition.

**Charging Rate Adjustment**—Maximum output controlled by third brush. Do not adjust third brush for output greater than shown in table below (with field terminal grounded to render regulator inoperative). Actual charging rate controlled by regulator setting. See Regulator Section below.

Cold Performance Data				Hot Performance Data			
Amperes	Volts	R.P.M.		Amperes	Volts	R.P.M.	
0	6.4	760		0	6.4	850	
4	6.65	920		4	6.7	1020	
8	6.9	1080		8	7.0	1240	
12	7.2	1240		12	7.3	1400	
16	7.45	1400		16	7.6	1650	
20	7.7	1580		20	7.9	2100	
25	8.0	2500		22	8.0	2700	

## CONTINUED FROM PRECEDING PAGE

Rotation—Counter-clockwise at commutator end.  
Brush Spring Tension—53 ozs. max. (new brushes).  
Field Current—1.9-2.1 amperes at 6.0 volts.

Motoring Current—4.0-4.4 amperes at 6.0 volts.  
Removal:—Generator pivot mounted at left front of engine with fan belt drive. To remove, take out clamp bolt and two pivot bolts.

Belt Adjustment:—Loosen clamp bolt and pivot bolts, swing generator out until slack in belt midway between generator and fan pulleys is  $\frac{3}{4}$ - $1\frac{1}{4}$ " (measured with straightedge across pulleys).

## GENERATOR

## MODEL 83

Auto-Lite Model GDF-4802A. Armature No. GDF-2006. Third brush control type with external voltage regulation. Ventilated by fan on drive pulley.

Maximum Charging Rate—32.0 amperes (cold), 29.5 amperes (hot) at 8.0 volts, 3100 R.P.M., 30-35 M.P.H. Actual charging rate controlled by Voltage Regulator and dependent on battery condition.

Charging Rate Adjustment—Maximum output controlled by third brush. Do not adjust third brush for output greater than shown in table below (with field terminal grounded to render regulator inoperative). See Regulator Section below.

NOTE—Standard third brush setting  $2\frac{1}{8}$  commutator bars from nearest main brush.

## Performance Data

Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	920	0	6.4	1000
4	6.6	1030	4	6.6	1140
8	6.8	1140	8	6.85	1280
12	7.0	1300	12	7.1	1440
16	7.25	1460	16	7.3	1640
20	7.45	1650	20	7.55	1840
24	7.65	1880	24	7.75	2220
28	7.9	2220	28.2	8.0	3200
32	8.0	3100			

Rotation—Counter-clockwise at commutator end.  
Brush Spring Tension—53 ozs. max. (new brushes).  
Field Current—1.90-2.10 amperes at 6.0 volts.

Motoring Current—5.3-5.9 amperes at 6.0 volts.  
Removal:—Generator pivot mounted at left front of engine with fan belt drive. To remove, take out clamp bolt and two pivot bolts.

Belt Adjustment:—Loosen clamp bolt and pivot bolts, swing generator out until slack in belt midway between generator and fan pulleys is  $\frac{3}{4}$ - $1\frac{1}{4}$ " (measured with straightedge across pulleys).

## GENERATOR

## SPECIAL EQUIPMENT

SPECIAL GENERATORS:—Other Makes—Refer to Electrical Equipment Index for 'Special Generators' for data on special Generators and Regulators which may be found installed on these models.

## REGULATOR

Auto-Lite Model VRD-4003A, 4003B (GCJ-4803A Gen.), VRD-4008A (GDF-4802A Gen.). Voltage Type. Cutout Relay and vibrating type Voltage Regulator in case on dash. Cutout Relay has extra set of ground contacts for generator charge signal control. For complete data, refer to Electrical Equipment Index.

NOTE—Regulator case cover is sealed. Serviced on exchange basis if seals not broken. Cover must be removed to make adjustments.

## Cutout Relay

Cuts In—6.4-7.0 volts Cold. Approx. 10 MPH.

Cuts Out—5-3.0 ampere discharge (Before Serial No. 2T-000001), 1.5-4.5 amperes (After 2T-000001).

Contact Gap—.015" minimum (with ground contacts closed—ground contacts must be open with main contacts closed).

Air Gap—.034" Min., .038" Max. with contacts open. Measure at hinge end of core.

## Voltage Regulator

Setting (VRD-4003-A)—7.5-7.8 volts at 70°F (Before #8R-000001), 7.35-7.65 volts at 70°F (After #8R-000001).

Setting (VRD-4003-B)—7.8-8.1 volts at 70°F (Before #8R-000001), 7.35-7.65 volts at 70°F (After #8R-000001).

Setting (VRD-4008A)—7.35-7.65 volts at 70°F.

See Electrical Equipment Section for complete settings and changes on these Regulator models.

To Check—Connect ammeter in charging line at 'B' terminal on regulator (use short heavy leads), connect voltmeter between regulator 'B' and 'GD' terminals. Operate generator, charging fully charged battery, at speed equivalent to 30 MPH. car speed until voltage is steady. Voltmeter reading should be within limits of 7.4-7.9 volts (VRD-4003-A before #8R-000001), 7.8-8.1 volts (VRD-4003-B before #8R-000001), 7.1-7.8 volts (all models after #8R-000001). If outside these limits, regulator is defective.

To Adjust—Change regulator armature spring tension by bending lower spring hanger. See Electrical Equipment Section for complete instructions.

Contact Gap—.010" Min., .020" Max. with armature against stop pin.

Air Gap—.0595-.0625" with contacts just opening.

## LIGHTING

LIGHTING:—Headlamps—Hall, pre-focused type with interchangeable lenses. Upper and lower beams (lower beam deflected slightly to right) controlled by foot selector switch with lighting switch in driving (right hand) position.

Headlamp Adjustment—Aim headlamps straight ahead with top of beam at lamp center height at 25' (car unloaded, upper beams lighted). Headlamps aimed by means of two screws on underside of headlamp body. Vertical movement obtained by turning both screws equally in or out, horizontal movement by turning one screw in until half desired movement obtained and completing movement by turning opposite screw out an equal amount.

## Switches

Lighting—R.B.M.

Foot Selector—R.B.M. No. 1076.

Dome Light—R.B.M. No. 1220.

Stop Light—R.B.M. No. 965.

## Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps	32-32	2331
Headlamps (export)	21-50	2520D
Park, Instrument, Service	$1\frac{1}{2}$	55
License, Fender	3	63
Stop—Tail	21-3	1158
Dash Signals	1	51
Dome	15	87

## MISC. ELECTRICAL

SIGNAL LIGHTS:—Teleflash Generator Charging Indicator and Oil Pressure Indicator mounted on instrument panel.

For complete data, refer to Electrical Equipment Index.

FUSES:—Lighting—Two 20 ampere capacity mounted on lighting switch (1937), on fuse block on lower flange of instrument panel on left side (1938).

HORNS: Standard—Klaxon (Delco-Remy) Model K-33-S (1937), Sparton (1938). Twin Horns operated by Delco-Remy or R-B-M relay.

Optl.—Klaxon K-33-F. Type 2117 (left—low note), 2118 (right—high note), twin horns, blended tone with Delco-Remy horn relay (optional—outside mounting).

NOTE—Data below for Delco-Remy equipment.

Horn	Current (6 volts)	Air Gap
K-33-S, 2051 (low note)	11-13 amps	.042-.046"
K-33-S, 2052 (high note)	10-12 "	.032-.036"
K-33-F, 2117 (low note)	11-13 "	.040-.044"
K-33-F, 2118 (high note)	9-11 "	.032-.036"

Horn Relay:—Model 271-A (with Klaxon horns). Contacts close 2.7-4.0 volts.

Contact Gap—.020". Air Gap—.015".

NOTE—R.B.M. Model 780 horn relay also used.

## ENGINE

ENGINE SPECIFICATIONS:—6 cylinder, 'L' head type. Bore—3". Stroke—5". Displacement—212 cu. ins.

Rated Horsepower—21.6 A.M.A.

Developed Horsepower—101 (Std. 6.25-1 Head), 107 (Optl. 7.0-1 head) at 4000 R.P.M.

Compression Ratio & Pressure—Check at cranking speed, spark plugs removed, throttle wide open.

Std. 6.25-1 head ..... 103 lbs. at 170 R.P.M.

Optl. 7.0-1 head ..... 119 lbs. at 170 R.P.M.

Vacuum Reading—18-21" at 350 R.P.M. or 7 MPH.

PISTONS:—Own Lo-Ex aluminum alloy, 'T' slot, cam ground type. Use finished replacement pistons.

Weight—10.5 ozs. stripped. Length—3  $\frac{3}{16}$ ".

Removal—Pistons and rods removed from above.

Clearance—.016" top, .002" skirt (see below).

Original Bore Size:—See Hudson Shop Notes.

Replacement Pistons:—See Hudson Shop Notes.

Fitting New Pistons:—3-4 lb. tension should be required to withdraw .0015" feeler  $\frac{1}{2}$ " wide from between piston and cylinder wall on side opposite slot at right angles to pin bosses.

Installing Pistons:—Slot away from camshaft side.

PISTON RINGS:—Two compression, one oil ring above pin, one oil ring below pin. Rings positioned by pin in groove.

## Model 73 (1937)

Ring	Width	End Gap	Side Clearance
Compression	$\frac{3}{32}$ "	.009-.011"	.001"
Oil (both)	$\frac{3}{16}$ "	.009-.011"	.001"

## Model 83 (1938)

Ring	Width	End Gap	Side Clearance
Compression	$\frac{3}{32}$ "	.005-.010"	.001"
Oil (both)	$\frac{3}{16}$ "	.005"	.001"

Replacement Rings:—See Hudson Shop Notes.

PISTON PIN:—Diameter— $\frac{3}{4}$ ". Length—2  $\frac{7}{16}$ ".

Pin floats in piston and rod, held by locking rings. Pin hole in rod bronze-bushed. Pins furnished std., .002", .005", .010" oversize.

Pin Fit in Piston—.0003" clearance or hand push fit with piston heated to 200° F.

Pin Fit in Rod Bushing—.0003" clearance.

**ENGINE**

CONTINUED FROM PRECEDING PAGE

**CONNECTING ROD:** Length—8 3/16".

Weight—29.4 ozs. (1937), 30.3 ozs. (1938).

Crankpin Journal Diameter—1 15/16".

See *Hudson Shop Notes for Connecting Rod change.*

Lower Bearing—Spun-babbitt. Rods exchanged.

Clearance—.001". Sideplay—.006-.010".

**Bearing Adjustment:** Laminated shims (1937), No adjustment (1938—no shims). Replace rods.See *Hudson Shop Notes for connecting rod pin nut (locknut) installation instructions.***Installing Rods:**—Offset. Install rods with widest half of bearing toward rear (#1, 2, 4), toward front (#3, 5, 6). Oil scoop on all rods toward camshaft.**CRANKSHAFT:**—3 bearing, integral counterweights. See *Hudson Shop Notes for Crankshaft and Vibration Dampener removal, Main Bearing Removal, Installation and Line-Reaming data.*

Journal Diameters—#1, 2 11/32"; #2, 2 3/8"; #3, 2 13/32".

Bearings—Bronze backed, babbitt lined type. Bearings secured in cap and crankcase by brass screws. Clearance—.001".

**Bearing Adjustment:**—Shims. See *Hudson Shop Notes.*► **CAUTION**—Replacement of main bearings requires removal of crankshaft. Bearings retained by brass screws.Replacement Bearings: See *Hudson Shop Notes.***End Thrust:**—Taken by center bearing. Replace bearing to adjust. Endplay .006-.012".**CAMSHAFT:**—Three bearing. Gear driven.

Journal Diameters—#1, 2"; #2, 1 31/32"; #3, 1 1/2". Bearing Clearance—.0025".

**End Thrust:**—Taken by thrust washer assembled between front face of crankcase and rear side of camshaft front flange, and by spring-loaded button in camshaft hub and thrust plate on gear cover. See that spring and button in place under cover.**Timing Gears:**—Crankshaft gear cast-iron. Camshaft gear GE. or Continental Diamond Fibre Bakelite. 1941 Type Timing Gear Set can be installed on these models (tooth angle redesigned to provide quieter operation). Refer to *Hudson Shop Notes.***Camshaft Setting:**—Mesh marked crankshaft gear tooth between two marked teeth on camshaft gear.**VALVES:**—Lighter valves (smaller stem diameter) used, than on previous models. New pilot size necessary for servicing tools. See *Hudson Shop Notes for data.*

Head Diameter Stem Diameter Length

All Valves.....1 3/8".....3/8" (37), 11/32" (38).....5 11/32"

Seat Angle Lift Stem Clearance

Intake .....45°.....11/32"......0015-.003"

Exhaust .....45°.....11/32"......003-.005"

**Valve Guides:**—2 9/16" long. Top 1 1/16" below top of block. Finish ream to size after installation.**Valve Springs:**—Springs are cadmium plated, Dampeners originally used on bottom of all springs, but should be discarded when valves serviced.

Valve Spring Check—34 lbs. min. at 2".

Spring Pressure Spring Length

Valve Closed .....44 lbs.....2"

Valve Open .....102 lbs.....2 1/2"

**Valve Lifters:**—Roller shoe type, fitted in removable guides. See *Hudson Shop Notes for lifter removal.***VALVE TIMING**

Tappet Clearance—.006" Int., .008" Exh., engine hot.

Valve Timing:—See camshaft setting above.

Intake Valves—Open 10°40' BTDC. Close 60° ALDC.

Exhaust Valves—Open 50° BLDC. Close 18°44' ATDC.

These figures correct with .010" tappet clearance. To Check Timing—Set tappet clearance #1 intake valve at .010". This valve should open with piston 10°40' or .0562" BTDC. when point on flywheel approximately 3.94 teeth before 'UDC.1-6/' mark lines up with pointer in hole in left front face of flywheel housing. Reset tappet clearance at .006" hot.

**LUBRICATION****LUBRICATION:**—Duo-flo (pressure & positive splash).

Oil Pump:—Oscillating plunger type, gear driven by camshaft. Mounted on right side of crankcase.

Normal Oil Pressure—3 lbs. (no gauge).

Oil Pressure Regulator:—Located on right side of crankcase at rear. Opens at 3 lbs. Not adjustable.

Oil Pressure Indicator:—Teleflash Oil Pressure Indicator. For data, refer to *Electrical Equip. Index.*Checking Oiling System:—See *Hudson Shop Notes.*

Crankcase Capacity:—5 qts. (refill), 6 qts. (dry).

NOTE—Capacity decreased 1/2 qt. after car #43845. in 1938.

**COOLING****COOLING SYSTEM:**—Water Pump. Centrifugal, belt-driven, packless type.See *Water Pump Section for complete data.*

Removal—With water drained and fan belt removed, disconnect two inlet and one outlet hoses, remove mounting bolts and lift off fan and pump.

**Thermostat:**—Mounted in cylinder head water outlet.

Setting—Start to open 150-155°F. Fully open 185°F.

Water Capacity: 13 quarts (1937), 12 1/2 quarts (1938).

**CLUTCH****CLUTCH:**—Own make. Single plate, cork insert type, operating in oil.See *Clutch Section for complete data.*

Driven Member (1937)—Inside Diam. 5.375", Outside Diam. 8.625". Thickness .203". Facing 90 cork inserts.

Driven Member (1938)—Inside Diam. 6.375". Outside Diam. 9.75". Thickness .203". Facing 108 cork inserts.

Automatic Clutch Control:—Optional equipment.

See *Clutch Section for complete data.*

Adjustment:—Pedal free movement must be 1 1/2". To adjust, remove clevis pin at lower end of connecting link on throw-out shaft lever, loosen locknut, turn clevis. On cars with Automatic Clutch control, check setting whenever clutch adjusted.

Clutch Oil Servicing:—See *Hudson Shop Notes for data.*

Removal:—Remove transmission (see Transmission Removal following), take out 16 clutch cover cap screws and remove clutch assembly from below.

**TRANSMISSION****TRANSMISSION:**—Own make. Constant-mesh, helical gear (second & high), sliding spur (low & reverse).

NOTE—Shifter Rail Locks used to prevent gear engagement with clutch engaged.

See *Transmission Section for complete data.*

Electric Hand Transmission Control—Optl.

See *Transmission Section for complete data.*

Removal:—Remove Electric Hand and Automatic Clutch Control units and wiring from transmission first, if car model so equipped. See separate articles in Clutch and Transmission Sections for all necessary adjustments on these units when reinstalling.

Disconnect transmission side bumpers, interlock straps, speedometer cable, driveshaft at front universal. Support engine at rear and free rear engine mounting. Take out bell housing-to-engine mounting bolts, pull transmission straight back and remove.

**UNIVERSALS****UNIVERSAL JOINTS:**—Spicer. 1271 (front), 1278 (rear).

Needle bearing type.

See *Universals Section for complete data.***REAR AXLE****REAR AXLE:**—Own make. Semi-floating, spiral bevelSee *Rear Axle Section for complete data.*

Ratios (1937)—4.11-1 Std., 4.56-1, 3.89-1, 3.56-1 Optl.

Ratios (1938)—4 1/9-1 Std., 4 5/9-1, 3 5/9-1, 3 8/9-1 Optl.

Backlash—.0005-.003". Screw adjustment.

Removal:—Remove rear wheel and hub assembly (use screw type hub puller only), take out four nuts on bearing cap bolts, push bolts out through backing plate (allows cap removal without disturbing hand brake operating link), remove shims, pull wheel bearing and axle shaft, disconnect drive shaft at rear universal joint, remove 8 nuts from axle housing stud bolts, withdraw differential carrier.

Wheel Bearing Adjustment:—Controlled by shims under bearing cap. To adjust, remove bearing caps (as directed above), add or remove shims equally at both wheels. Endplay—.004-.010".

**SHOCK ABSORBERS**

Delco. Direct acting hydraulic types. As follows:

Front—Model 1175S (1937), 1164S (1938).

Rear—Model 1174T (1937), 1163T (1938).

See *Shock Absorber Section for complete data.***FRONT SUSPENSION****Front Suspension:**—Conventional 'I' beam section front axle with Elliott type ends and semi-elliptic springs. Axle alignment maintained by torque arm at each end (rubber-bushed bolt at frame).Torque Arms—See *Hudson Special Shop Notes.*Kingpin Inclination—7° crosswise. See *Hudson Shop Notes for Kingpin Thrust Bearing data.*

Caster—1-2° and equal within 1/2° for both wheels. To adjust, loosen cap screws at forward end of torque arm, insert shim between arm and axle at upper screw, or remove shim at lower screw to decrease caster, remove shim at upper screw or insert shim at lower screw to increase caster. Shims .020" thick, change caster 1/2°.

Camber—1-1 1/2°. No adjustment. Make minor corrections by bending axle cold.

Toe In—0-1/8" measured 10" up from ground. Adjust by loosening clamp bolts and turning tie rod.

Steering Geometry—Inner wheel 20°. Outer 17 3/4°.

**STEERING GEAR****Steering Gear:** Gemmer Model 305 Worm-and-Roller type with "push-pull" adjustments.See *Steering Gear Section for complete data.***BRAKES****BRAKES:**—Service—Bendix hydraulic, Duo-Servo, Single anchor type. Mechanical follow-up (pedal linked to hand brake cables) provided. Hand lever applies rear service brakes.See *Brake Section for complete data.*

Drum—Alloy-steel. Diameter—10 1/16".

Lining—Moulded (primary), woven (secondary).

Width 1 3/4". Thickness 7/32" (1937), 3/16" (1938).

Length per wheel 22 1/8".

Clearance—.010" heel and toe of each shoe.

Hand Brake:—See *Service Brakes* above.Hill-Holder: Optional. See *article in Brake Section.*

## MODEL IDENTIFICATION

**SERIAL NUMBER:** First No. 101 (1937), 101 (1938) with prefix indicating model (74-, 75-, 76-, 77- for 1937; 84-, 85-, 87- for 1938). Stamped on plate on right front door hinge pillar post.

**ENGINE NUMBER:** First No. 18000 (1937—All Models), 101 (1938 with prefix indicating model 84-, 85-, 87-). Stamped on left side of engine block near front end or on top of block between #1 and #2 exhaust manifold flanges.

## TUNE-UP

**COMPRESSION:**—Ratio—6.25-1 cast-iron head. No optional ratios.

**Pressure:**—103 lbs. at 170 RPM. Check with all plugs removed, crank engine with wide open throttle.

**VACUUM READING:**—18-20" steady reading with engine idling at 350 RPM or 7 MPH.

**FIRING ORDER:** 1-6-2-5-8-3-7-4. See diagram.

**SPARK PLUGS:** Champion Type J-8A. 14 mm. Metric. Gaps—.032"

**IGNITION:** See Coil, Condenser, and Distributor. Breaker Gap—.017" Cam Angle 31° (closed). Automatic Advance—17.5° max. at 1700 RPM (distr.).

**IGNITION TIMING:** See Ignition Timing. Std. Setting—At TDC. Flywheel mark "UDC. 1-8/" at indicator in left front face of housing.

**CARBURETION:** See Carburetor & Carb. Equipment. Idle Setting—Both idle screws ¼-¾ turn open. Idle speed 7 MPH.

**Accelerating Pump:**—Inner hole Warm Temperatures. Outer hole—Cold Temperatures.

**Float Level:**—15/64" from gasket seat on cover to top of float (not soldered seam). Invert to check.

**Fuel Pump Pressure:** 4½ lbs. maximum.

**MANIFOLD HEAT CONTROL:**—Thermostatic coil type. Located within manifold housing behind carburetor. No adjustment required.

**VALVES:** See Valve Timing. Tappet Clearance—.006" Int., .008" Exh. Hot.

**STARTING:** See Battery, Starter, Generator, Regulator.

## IGNITION

**IGNITION SWITCH:** Mitchellock Model 24-B, Type 7063 (1937), 7642 (1938). Connected to coil by armored cable.

**Ignition Lock:**—Briggs & Stratton, Mitchell No. 6095. B&S No. 50184. Key Series—H601-H1100.

**COIL:** Auto-Lite Model CE-4625 (1937), CE-4629 (1938). Service Coil (less Switch & Cable) CE-3224JS. Ignition Current—2.5 amperes idling, 4.5 stopped.

**CONDENSER:** Auto-Lite Part No. IG-2671. Capacity—.20-.25 microfarad.

**DISTRIBUTOR:** Auto-Lite Model IGP-4008-A. Single breaker, 8 lobe cam, full automatic advance type. Breaker Gap—Set at .017". Cam Angle or Dwell—31° closed, 14° open (distr.). Breaker Arm Spring Tension—18-20 ounces. Rotation—Clockwise viewed from top.

Automatic Advance			
Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start	300	0	600
3.0	400	6.0	800
8.5	900	17.0	1800
13.0	1300	26.0	2600
17.5	1700	35.0	3400

**Distributor Removal:**—Mounted on right side of engine. To remove, take out hold-down screw in advance arm, lift off.

**Fuel Compensator:**—Provides manual adjustment at distributor for octane rating of fuel used. See Fuel Compensator Setting (following).

## IGNITION TIMING

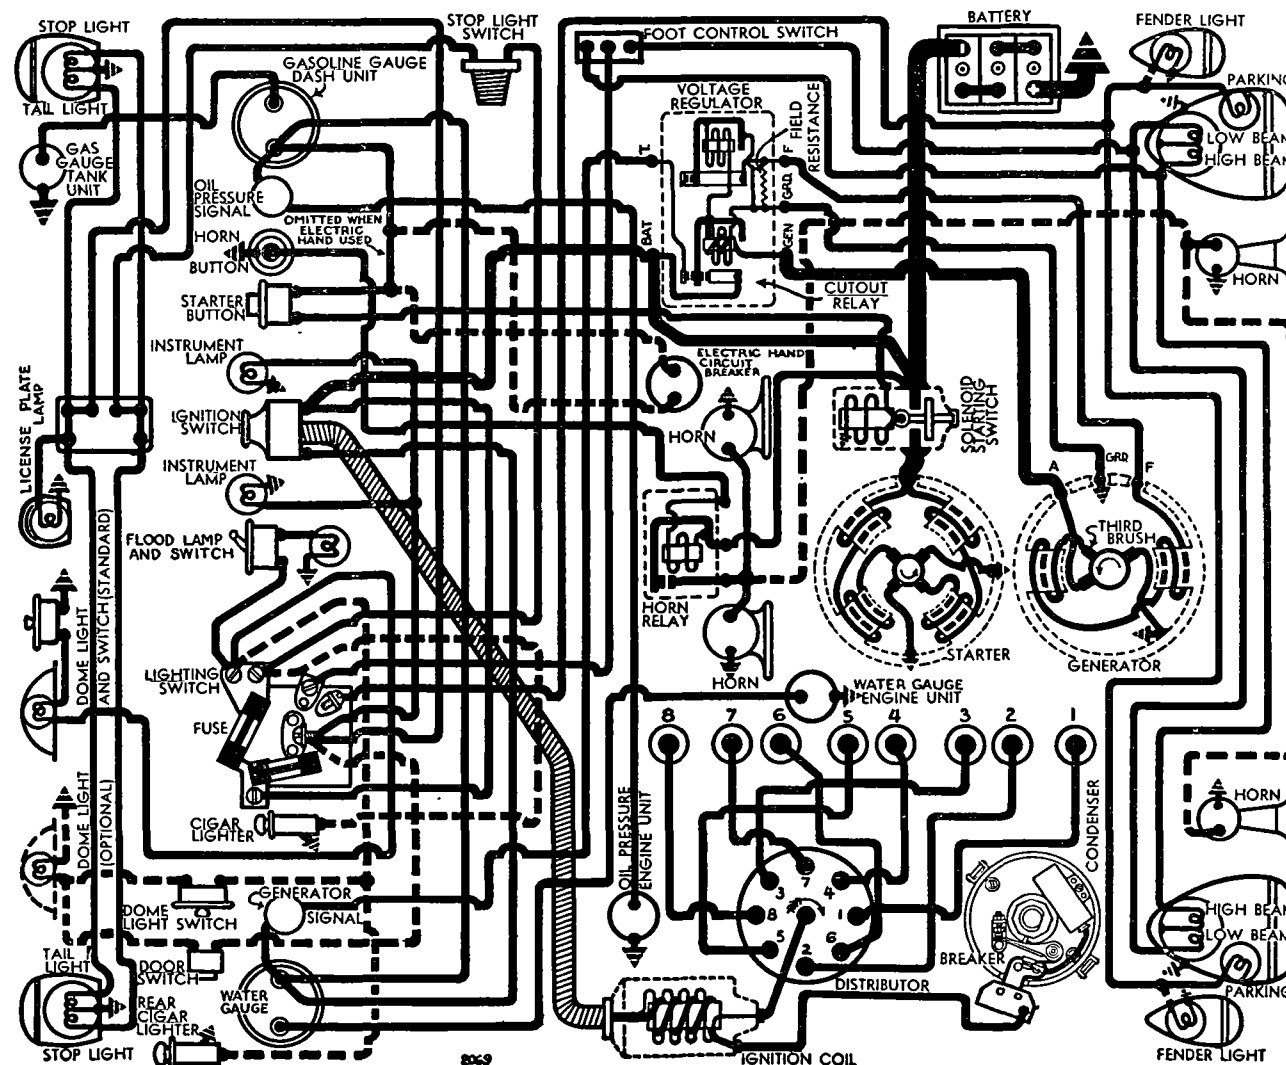

**IGNITION TIMING:**—Initial Setting as shown. See Fuel Compensator Setting following.

## Flywheel Degrees Piston Position

All engines ..... 0° TDC ..... 000° TDC.  
To Set Timing—With #1 piston on compression, turn engine over until flywheel mark "UDC.1-8/", lines up with pointer in left front face of flywheel housing. Loosen hold-down screw in advance arm, rotate distributor clockwise to limit of slot, then slowly rotate distributor counter-clockwise until contacts begin to open, tighten hold-down screw.

**To Set Timing (Using Synchroscope)**—Car manufacturer recommends this method. Clip lead to #8 spark plug, fill in timing mark with white chalk and direct light on flywheel through hole in housing.

**Fuel Compensator Setting**—Road test car and note performance when accelerating from 10-15 M.P.H. with wide open throttle on level road (engine must be warm). Slight spark knock should be evident. Adjust by loosening hold-down screw and rotating

1937 MODELS 74, 75, 76, 77

distributor one graduation on scale counter-clockwise (if no knock), clockwise (if knock too severe). Repeat test. Final setting must not be advanced beyond  $\frac{3}{4}$ " before 'UDC.1-8/' mark on flywheel.

### CARBURETOR

Carter Model WDO, Type 344-S & 377-S (1937), 402-S (1938). 1" Dual (double barrel), downdraft type with Automatic Choke.

For complete data, refer to Carburetor Index.

**Idle Adjustment**—Engine must be warm so that fast idle and automatic choke control inoperative. Set throttle lever stop screw so that idling speed is 7 MPH. Turn each idle adjusting screw, in succession, in until engine begins to miss, then slowly out until engine fires smoothly. Final setting should be  $\frac{1}{4}$ – $\frac{3}{4}$  turn out from inner seated position and screws must be adjusted equally so that engine fires smoothly on all cylinders. Readjust throttle stop screw if necessary.

**Accelerating Pump Setting**—Adjustable for minimum and maximum stroke as follows:  
Short stroke (inner hole)—Hot temperatures.  
Long stroke (outer hole)—Cold temperatures.

**Fast Idle**: Integral with carburetor.

For complete data, refer to Carburetion Equip. Index.

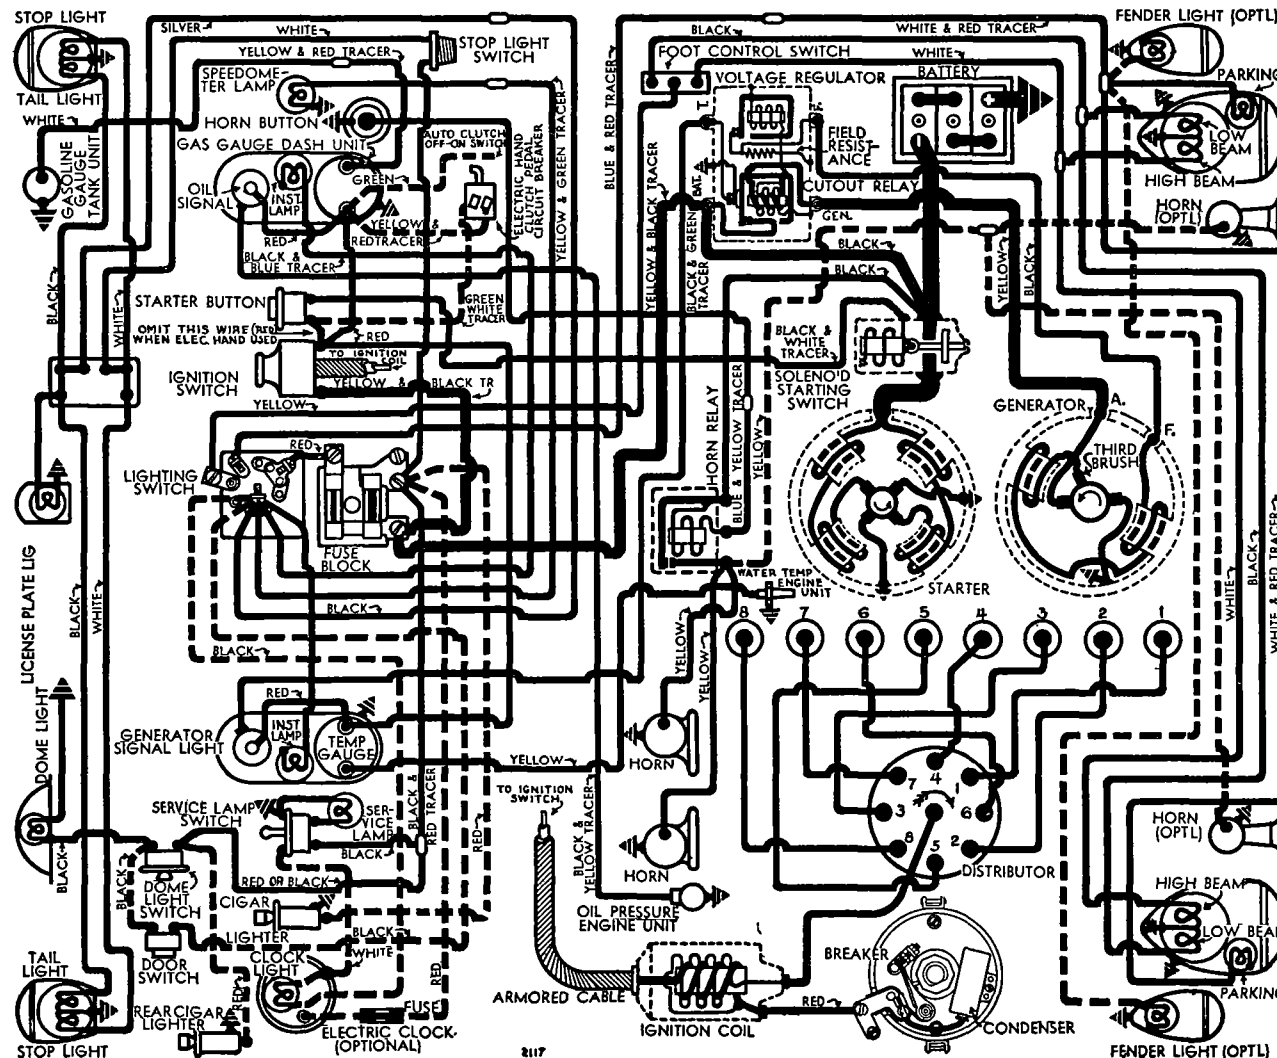

**Setting**—.018" throttle opening with choke valve closed (T109-44 checking gauge).

### CARB. EQUIPMENT

**Air Cleaner**:—AC. #1528161 (std.), #1528160 (with Electric Hand) oil-wetted type. United (oil-bath type) optional.

**Fuel Pump**:—AC. Type AK #1523289 (LHD), #1523313 (RHD), diaphragm type, standard. Type AB #1523290 (LHD), #1523314 (RHD), combination fuel-and-vacuum pump optional.

For complete data, refer to Carburetion Equip. Index.

1938 MODELS 84, 85, 87

**Gasoline Gauge**:—King-Seeley Electric type. K-S No. Dash Unit—No. 6190 (1937—Black Dial, Early Cars), 6570 (1937—Tan Dial, Later Cars), 6756 (1938).  
**Tank Unit**—No. 5835 (1937-38).  
For complete data, refer to Carburetion Equip. Index.

### BATTERY

National, Type ST-319X (1937), HT-19 (1938 Orig. Equip.), L-19-2F (1938 Replacement). 6 volt, 19 plate, 108 ampere hour (ST-319X), 115 ampere hour (HT-19 & L-19-2F) capacity (20 hour rate).

**Starting Capacity**—135 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 4.3 minutes.

**Grounded Terminal**—Positive (+) terminal.

Grounded to left front fender support bracket. Engine grounded to frame by ground strap at bell housing.

**Dimensions**—Length 11 $\frac{3}{4}$ ". Width 7 $\frac{1}{4}$ ". Height 7 15/16".

**Location**—In left front fender under hood. Accessible from engine compartment by taking out 3 slotted screws in cover flange (2 top, 1 rear) and removing cover.

### STARTER

Auto-Lite Model MAB-4075. Armature MAB-2113.

**Drive**—Inboard Barrel Type Bendix No. A-1673.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—42-53 ozs. (new brushes).

**Cranking Engine**—150 R.P.M., 120-125 amperes, 5 v.

Performance Data			
Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	3700	5.5	80
.6 "	1910	5.5	100
3.4 "	1100	5.0	200
6.6 "	695	4.5	300
10.15 "	420	4.0	400
15.8 "	Lock	3.	582
22.5 "	Lock	4.	775

**NOTE**—Lock torque figures correct without switch.

**Removal**:—Starter flange mounted on left front face of flywheel housing. To remove, take out flange mounting screws.

**Starting Switch**:—Type SS-4001. Magnetic solenoid type mounted on starter. Controlled by pushbutton on instrument board (RBM Model 1815). Operative only with ignition on (and clutch disengaged in cars with Electric Hand).

For complete data, refer to Electrical Equipment Index.

### Switch Specifications

Closes with terminal voltage of 4.0 volts or less.

Remains closed until voltage drops to .75-2.0 volts.

Current draw, 3 amperes at 6.0 volts.

### GENERATOR

MODELS 74, 75, 76, 77

Auto-Lite Model GCJ-4803A. Armature No. GCJ-2006. Third brush control type with external voltage regulation. Ventilated by fan on drive pulley.

**Maximum Charging Rate**—25 amperes (cold), 22 amperes (hot), 8.0 volts, 2500 R.P.M. Actual charging rate controlled by Voltage Regulator and dependent on battery condition.

**Charging Rate Adjustment**—Maximum output controlled by third brush. Do not adjust third brush for output greater than shown in table below (with field terminal grounded to render regulator inoperative). Actual charging rate controlled by regulator setting. See Regulator Section below.

CONTINUED N NEXT PAGE

## CONTINUED FROM PRECEDING PAGE

Cold Performance Data			Hot		
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	760	0	6.4	850
4	6.65	920	4	6.7	1020
8	6.9	1080	8	7.0	1240
12	7.2	1240	12	7.3	1400
16	7.45	1400	16	7.6	1650
20	7.7	1580	20	7.9	2100
25	8.0	2500	22	8.0	2700

**Rotation**—Counter-clockwise at commutator end.  
**Brush Spring Tension**—53 ozs. max. (new brushes).  
**Field Current**—1.9-2.1 amperes at 6.0 volts.  
**Motoring Current**—4.0-4.4 amperes at 6.0 volts.

**Removal**—Generator pivot mounted at left front of engine with fan belt drive. To remove, take out clamp bolt and two pivot bolts.

**Belt Adjustment**—Loosen clamp bolt and pivot bolts, swing generator out until slack in belt midway between generator and fan pulleys is  $\frac{3}{4}$ - $1\frac{1}{4}$ " (measured from straightedge across pulleys).

## GENERATOR

MODELS 84, 85, 87

**Auto-Lite Model GDF-4802A.** Armature No. GDF-2006. Third brush control type with external voltage regulation. Ventilated by fan on drive pulley.  
**Maximum Charging Rate**—32.0 amperes (cold), 29.5 amperes (hot), 8.0 volts, 3100 R.P.M., 30-35 M.P.H. Actual charging rate controlled by Voltage Regulator and dependent on battery condition.  
**Charging Rate Adjustment**—Maximum output controlled by third brush. Do not adjust third brush for out put greater than shown in table below (with field terminal grounded to render regulator inoperative). See Regulator Section below.  
**NOTE**—Standard third brush setting  $2\frac{1}{8}$  commutator bars from nearest main brush.

## Performance Data

Cold			Hot		
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	920	0	6.4	1000
4	6.6	1030	4	6.6	1140
8	6.8	1140	8	6.85	1280
12	7.0	1300	12	7.1	1440
16	7.25	1460	16	7.3	1640
20	7.45	1650	20	7.55	1840
24	7.65	1880	24	7.75	2220
28	7.9	2220	28.2	8.0	3200
32	8.0	3100			

**Rotation**—Counter-clockwise at commutator end.  
**Brush Spring Tension**—53 ozs. max. (new brushes).  
**Field Current**—1.90-2.10 amperes at 6.0 volts.  
**Motoring Current**—5.3-5.9 amperes at 6.0 volts.

**Removal**—Generator pivot mounted at left front of engine with fan belt drive. To remove, take out clamp bolt and two pivot bolts.

**Belt Adjustment**—Loosen clamp bolt and pivot bolts, swing generator out until slack in belt midway between generator and fan pulleys is  $\frac{3}{4}$ " (measured with straightedge across pulleys).

## GENERATOR

## SPECIAL EQUIPMENT

**SPECIAL GENERATORS**—Other Makes—Refer to Electrical Equipment Index for 'Special Generators' for data on special Generators and Regulators which may be found installed on these models.

## REGULATOR

**Auto-Lite Model VRD-4003A, 4003B (GCJ-4803A Gen.), VRD-4008A (GDF-4802A Gen.).** Voltage Type. Cutout Relay and vibrating type Voltage Regulator in case on dash. Cutout Relay has extra set of ground contacts for generator charge signal control. For complete data, refer to Electrical Equipment Index.  
**NOTE**—Regulator case cover is sealed. Serviced on exchange basis if seals not broken. Cover must be removed to make adjustments.

## Cutout Relay

**Cuts In**—6.4-7.0 volts Cold. Approx. 10 MPH.

**Cuts Out**—5-3.0 ampere discharge (Before Serial No. 2T-000001), 1.5-4.5 amperes (After 2T-000001).

**Contact Gap**—.015" minimum (with ground contacts closed—ground contacts must be open with main contacts closed).

**Air Gap**—.034" Min., .038" Max. with contacts open. Measure at hinge end of core.

## Voltage Regulator

**Setting (VRD-4003-A)**—7.5-7.8 volts at 70°F (Before #8R-000001), 7.35-7.65 volts at 70°F (After #8R-000001).

**Setting (VRD-4003-B)**—7.8-8.1 volts at 70°F (Before #8R-000001), 7.35-7.65 volts at 70°F (After #8R-000001).

**Setting (VRD-4008A)**—7.35-7.65 volts at 70°F. See Electrical Equipment Section for complete settings and changes on these Regulator models.

**To Check**—Connect ammeter in charging line at 'B' terminal on regulator (use short heavy leads), connect voltmeter between regulator 'B' and 'GD' terminals. Operate generator, charging fully charged battery, at speed equivalent to 30 MPH. car speed until voltage is steady. Voltmeter reading should be within limits of 7.4-7.9 volts (VRD-4003-A before #8R-000001), 7.8-8.1 volts (VRD-4003-B before #8R-000001), 7.1-7.8 volts (all models after #8R-000001). If outside these limits, regulator is defective.

**To Adjust (with cover removed)**—Change regulator armature spring tension slightly by bending lower spring hanger. Check setting as directed above. See Electrical Equipment Section for complete directions.

**Contact Gap**—.010" Min., .020" Max. with armature against stop pin.

**Air Gap**—.0595-.0625" with contacts just opening.

## LIGHTING

**LIGHTING**—Headlamps—Hall, pre-focused type with interchangeable lenses. Upper and lower beams (lower beam deflected slightly to right) controlled by foot selector switch with lighting switch in driving (right hand) position.

**Headlamp Adjustment**—Aim headlamps straight ahead with top of beam at lamp center height at 25' (car unloaded, upper beams lighted). Headlamps aimed by means of two screws on underside of headlamp body. Vertical movement obtained by turning both screws equally in or out, horizontal movement by turning one screw in until half desired movement obtained and completing movement by turning opposite screw out an equal amount.

## Switches

**Lighting**—R.B.M.

**Foot Selector**—R.B.M. No. 1076.

**Dome Light**—R.B.M. No. 1220.

**Stop Light**—R.B.M. No. 965.

## Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps	32-32	2331
Headlamps (export)	21-50	2520D
Park, Instrument, Service	1½	55
License, Fender	3	63
Stop-Tail	21-3	1158
Dash Signals	1	51
Dome	15	87

## MISC. ELECTRICAL

**SIGNAL LIGHTS**—Teleflash Generator Charging Indicator and Oil Pressure Indicator mounted on instrument panel.

For complete data, refer to Electrical Equipment Index.

**FUSES**—Lighting—Two 20 ampere capacity mounted on lighting switch (1937), on fuse block on lower flange of instrument panel on left side (1938).

**HORNS**—Standard—Klaxon (Delco-Remy) Model K-33-S (1937), Sparton (1938). Twin Horns operated by Delco-Remy or R-B-M relay.

**Optl.**—Klaxon K-33-F. Type 2117 (left—low note), 2118 (right—high note), twin horns, blended tone with Delco Remy horn relay (optional—outside mounting).

**NOTE**—Data below for Delco-Remy equipment.

Horn	Current (6 volts)	Air Gap
K-33-S, 2051 (low note)	11-13 amps	.042-.046"
K-33-S, 2052 (high note)	10-12 "	.032-.036"
K-33-F, 2117 (low note)	11-13 "	.040-.044"
K-33-F, 2118 (high note)	9-11 "	.032-.036"

**Horn Relay**—Model 271-A (with Klaxon horns).

Contacts close 2.7-4.0 volts.

**Contact Gap**—.020". **Air Gap**—.015".

**NOTE**—R.B.M. Model 780 horn relay also used.

## ENGINE

**ENGINE SPECIFICATIONS**—8 cylinder, 'L' head type.

**Bore**—3". **Stroke**— $4\frac{1}{2}$ ".

**Displacement**—254 cubic inches. **Rated HP**—28.8.

**Developed Horsepower**—122 HP. at 4200 R.P.M.

**Compression Ratio**—6.25-1 No Optl. Ratios.

**Compression Pressure**—103 lbs. at 170 R.P.M. cranking speed (plugs removed, throttle wide open).

**Vacuum Reading**—18-21" at 350 RPM. or 7 MPH.

**PISTONS**—Own Lo-Ex aluminum alloy, 'T' slot, cam ground type. Use finished replacement pistons.

**Weight**—10.5 ozs. stripped. **Length**—3  $\frac{3}{16}$ ".

**Removal**—Pistons and rods may be removed from above or below.

**Clearance**—.016" top, .002" skirt (see below).

**Original Bore Size**—See Hudson Shop Notes.

**Replacement Pistons**—See Hudson Shop Notes.

**Fitting New Pistons**—3-4 lbs. tension should be required to withdraw .0015" feeler  $\frac{1}{2}$ " wide from between piston and cylinder wall on side opposite slot at right angles to pin bosses.

**Installing Pistons**—Slot away from camshaft side.

**PISTON RINGS**—Two compression, one oil ring above pin, one oil ring below pin. Rings positioned by pin in groove.

## Models 74, 5, 6, 7 (1937)

Ring	Width	End Gap	Side Clearance
Compression	3/32"	.009-.011"	.001"
Oil (both)	3/16"	.009-.011"	.001"

## Models 84, 5, 7 (1938)

Ring	Width	End Gap	Side Clearance
Compression	3/32"	.005-.010"	.001"
Oil (both)	3/16"	.005"	.001"

**Replacement Rings**—See Hudson Shop Notes.

**PISTON PIN**—Diameter— $\frac{3}{4}$ ". **Length**—2  $\frac{7}{16}$ ".

Pin floats in piston and rod, held by locking rings.

**ENGINE****CONTINUED FROM PRECEDING PAGE**

Pin hole in rod bronze-bushed. Pins furnished std., .002", .005", .010" oversize.

Pin Fit in Piston—.0003" clearance or hand push fit with piston heated to 200° F.

Pin Fit in Rod Bushing—.0003" clearance.

**CONNECTING ROD:** Length—8 3/16".

Weight—29.4 ozs. (1937), 30.3 ozs. (1938).

Crankpin Journal Diameter—1 15/16".

See Hudson Shop Notes for Connecting Rod change.

Lower Bearing—Spun babbitt. Rods exchanged.

Clearance—.001". Sideplay—.006-.010".

**Bearing Adjustment:** Laminated shims (1937), No adjustment (1938—no shims). Replace rods.

See Hudson Shop Notes for connecting rod pinnut (locknut) installation instructions.

**Installing Rods:**—Offset. Install rods with widest half of bearing toward rear (#1, 3, 5, 7), toward front (#2, 4, 6, 8). Oil scoop on all rods toward camshaft.

**CRANKSHAFT:**—5 bearing with integral counterweights. See Hudson Shop Notes for Crankshaft and Vibration Damper removal, Main Bearing Removal, Installation and Line-Reaming data.

Journal Diameters—#1, 2 9/32"; #2, 2 5/16"; #3, 2 11/32"; #4, 2 3/8"; #5, 2 13/32".

Bearings—Bronze backed, babbitt lined type. Bearings secured in cap and crankcase by brass screws. Clearance—.001".

**Bearing Adjustment:**—Shims. See Hudson Shop Notes.

► **CAUTION**—Replacement of main bearings requires removal of crankshaft. Bearings retained by brass screws.

Replacement Bearings: See Hudson Shop Notes.

**End Thrust:**—Taken by center bearing. Replace bearing to adjust. Endplay .006-.012".

**CAMSHAFT:**—Five bearing. Gear driven.

Journal Diameters—#1, 2 1/32"; #2, 2"; #3, 1 31/32"; #4, 1 15/16"; #5, 1 1/2".

Bearing Clearance—.0025".

**End Thrust:**—Taken by thrust washer assembled between front face of crankcase and rear side of camshaft front flange, and by spring-loaded button in camshaft hub and thrust plate on gear cover. See that spring and button in place under cover.

**Timing Gears:**—Crankshaft gear cast-iron. Camshaft gear GE. or Continental Diamond Fibre Bakelite. 1941 Type Timing Gear Set can be installed on these models (tooth angle redesigned to provide quieter operation). Refer to Hudson Shop Notes.

**Camshaft Setting:**—Mesh marked crankshaft gear tooth between two marked teeth on camshaft gear.

**VALVES:**—Lighter valves (smaller stem diameter) used, than on previous models. New pilot size necessary for servicing tools. See Hudson Shop Notes for data.

Head Diameter Stem Diameter Length

Intake ..... 1 1/2" ..... 3/8" ('37), 11/32" ('38) ..... 5 3/32"

Exhaust ..... 1 3/8" ..... 3/8" ('37), 11/32" ('38) ..... 5 3/32"

Seat Angle Lift Side Clearance

Intake ..... 45° ..... 11/32" ..... .0015-.003"

Exhaust ..... 45° ..... 11/32" ..... .003-.005"

**Valve Guides:**—2 9/16" long. Top 15/16" below top of block. Finish ream to size after installation.

**Valve Springs:**—Springs are cadmium plated, Dampeners originally used on bottom of all springs, but should be discarded when valves serviced.

Valve Spring Check—34 lbs. min. at 2".

Spring Pressure Spring Length

Valve Closed ..... 44 lbs. .... 2"

Valve Open ..... 102 lbs. .... 1 21/32"

**Valve Lifters:**—Roller shoe type, fitted in removable guides. See Hudson Shop Notes for lifter removal.

**VALVE TIMING**

**Tappet Clearance:**—.006" Int., .008" Exh., engine hot.

**Valve Timing:**—See Camshaft Setting above.

**Intake Valves:**—Open 10°40' BTDC. Close 60° ALDC.

**Exhaust Valves:**—Open 50° BLDC. Close 18°44' ATDC. These figures correct with .010" tappet clearance.

**To Check Timing:**—Set tappet clearance #1 intake valve at .010". This valve should open with piston 10°40' or .0494" BTDC. when point on flywheel approximately 3.97 teeth before 'UDC.1-8/' mark lines up with pointer in hole in left front face of flywheel housing. Reset tappet clearance at .006" hot.

**LUBRICATION**

**LUBRICATION:**—Duo-flo (pressure & positive splash).

**Oil Pump:**—Oscillating plunger type, gear driven by camshaft. Mounted on right side of crankcase.

**Normal Oil Pressure:**—3 lbs. (no gauge).

**Oil Pressure Regulator:**—Located on right side of crankcase at rear. Opens at 3 lbs. Not adjustable.

**Oil Pressure Indicator:**—Teleflash Oil Pressure indicator. For data, refer to Electrical Equipment Index.

**Checking Oiling System:**—See Hudson Shop Notes.

**Crankcase Capacity:**—7 qts. (refill), 9 qts. (dry).

**COOLING**

**COOLING SYSTEM:**—Water Pump. Centrifugal, belt-driven, packless type.

See Water Pump Section for complete data.

**Removal:**—With water drained and fan belt removed, disconnect pump hoses, remove mounting bolts and lift off fan and pump assembly.

**Thermostat:**—Mounted in cylinder head water outlet.

**Setting:**—Start to open 150-155°F. Fully open 185°F.

**Water Capacity:** 20 quarts (1937), 17 1/2 quarts (1938).

**CLUTCH**

**CLUTCH:**—Own make. Single plate, cork insert type operating in oil.

See Clutch Section for complete data.

**Automatic Clutch Control:**—Optional equipment.

See Clutch Section for complete data.

**Driven Member:**—Thickness .203". Inside Diameter 6.375", Outside Diam. 9.75". Facing 108 Cork Inserts.

**Adjustment:**—Pedal free movement must be 1 1/2". To adjust, remove clevis pin at lower end of connecting link on throw-out shaft lever, loosen locknut, turn clevis. On cars with Automatic Clutch control, check setting whenever clutch adjusted.

**Clutch Oil Servicing:**—See Hudson Shop Notes.

**Removal:**—Remove transmission (see Transmission Removal following), take out 16 clutch cover cap screws and remove clutch assembly from below.

**TRANSMISSION**

**TRANSMISSION:**—Own Make. Constant-mesh, helical gear (second & high), sliding spur (low & reverse).

**NOTE:**—Shifter Rail Locks used to prevent gear engagement with clutch engaged.

See Transmission Section for complete data.

**Electric Hand Transmission Control:**—Optl.

See Transmission Section for complete data.

**Removal:**—Remove Electric Hand and Automatic Clutch Control units and wiring from transmission first, if car model so equipped. See separate articles in Clutch and Transmission Sections for necessary adjustments on these units when reinstalling. Disconnect transmission side bumpers, interlock straps, speedometer cable, drive shaft at front universal. Support engine at rear, free rear engine mounting. Take out bell housing-to-engine mounting bolts, pull transmission straight back and remove.

**UNIVERSALS**

**UNIVERSAL JOINTS:**—Spicer, 1281 (front), 1288 (rear). See Universals Section for complete data.

**REAR AXLE**

**REAR AXLE:**—Own make. Semi-floating, spiral bevel. See Rear Axle Section for complete data.

**Ratios (1937)**—4.11-1 Std., 4.56-1, 3.89-1, 3.56-1 Optl.

**Ratios (1938)**—4 1/9-1 Std., 4 5/9-1, 3 5/9-1, 3 8/9-1 Optl.

**Backlash:**—.0005-.003". Screw adjustment.

**Removal:**—Remove rear wheel and hub assembly (use screw type hub puller only), take out four nuts on bearing cap bolts, push bolts out through backing plate (allows cap removal without disturbing hand brake operating link), remove shims, pull wheel bearing and axle shaft, disconnect driveshaft at rear universal joint, remove 8 nuts from axle housing stud bolts, withdraw differential carrier.

**Wheel Bearing Adjustment:**—Controlled by shims under bearing cap. Measure endplay by dial indicator clamped to backing plate with plunger against end of axle shaft. To adjust, remove bearing caps (as directed above), add or remove shims equally at both wheels. Endplay—.004-.010".

**SHOCK ABSORBERS**

Delco. Direct acting hydraulic types. As follows:

Front—Model 1175S (1937), 1164S (1938).

Rear—Model 1174T (1937), 1163T (1938).

See Shock Absorber Section for complete data.

**FRONT SUSPENSION**

**Front Suspension:**—Conventional 'I' beam section front axle with Elliott type ends and semi-elliptic springs. Axle alignment maintained by torque arm at each end (rubber-bushed bolt at frame).

**Torque Arms:**—See Hudson Special Shop Notes.

**Kingpin Inclination:**—7° crosswise. See Hudson Shop Notes for Kingpin Thrust Bearing data.

**Caster:**—1-2° and equal within 1/2° for both wheels. To adjust, loosen capscrews at forward end of torque arm, insert shim between arm and axle at upper screw or remove shim at lower screw to decrease caster, remove shim at upper screw or insert shim at lower screw to increase caster. Shims .020" thick, change caster 1/2°.

**Camber:**—1-1 1/2°. Not adjustable.

**Toe In:**—0-1/8" measured 10" up from ground. Adjust by loosening clamp bolts and turning tie rod.

**Steering Geometry:**—Inner wheel 20°. Outer 17 3/4°.

**STEERING GEAR**

**Steering Gear:** Gemmer Model 305 Worm-and-Roller type with "push-pull" adjustments.

See Steering Gear Section for complete data.

**BRAKES**

**BRAKES:**—Service—Bendix Hydraulic, Duo-servo, Single anchor type. Mechanical follow-up (pedal linked to hand brake cables) provided. Hand lever applies rear service brakes.

See Brake Section for complete data.

**Drum:**—Alloy-steel. Diameter—11 1/16".

**Lining:**—Moulded (primary), woven (secondary).

**Width:** 1 3/4". Thickness 7/32" (1937), 3/16" (1938).

**Length per wheel:** 23 15/16".

**Clearance:**—.010" at heel and toe of each shoe.

**Hand Brake:**—See Service Brakes above.

**Hill-Holder:** Optional. See article in Brake Section..

**ENGINE HOOD:**—Hood hinged at front. Secured by handle on each side panel. To raise, turn one handle (handles inter-connected), grasp hood along edge and lift forward until self-locking hinge support locks hood in raised position. Hinge support released by raising hood slightly and pushing lower half to rear.

**Hood Side Panels:**—When removing panels, free hood handle from tie rod at either end. Clamp bolt provided on tie rod.

### MODEL IDENTIFICATION

**SERIAL NUMBER:**—First number 8928566. Stamped on plate on right front door hinge pillar post.

**ENGINE NUMBER:**—First number 8928566. Stamped on top of cylinder block between #1 and #2 exhaust manifold flanges.

### TUNE-UP

**COMPRESSION:**—Ratio—6.50-1 Std. No Optl. ratios. Pressure—Approx. 100-105 lbs. at 170 R.P.M.

**VACUUM READING:**—Gauge should show steady reading of 18-21" with engine idling at 7 M.P.H.

**FIRING ORDER:** 1-5-3-6-2-4. See diagram.

**SPARK PLUGS:** Champion Type J-8A. 14 mm. Metric. Gaps—.032".

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.020" Cam Angle 35° (closed).

Automatic Advance—14° max. at 1580 RPM (distr.).

**IGNITION TIMING:** See Ignition Timing.

Std. Setting— $\frac{1}{4}$ " (flywheel travel) BTDC. with flywheel mark "UDC.1-6/"  $\frac{1}{4}$ " before indicator on left front face of rear motor support (housing).

**CARBURETION:** See Carburetor & Carb. Equipment. Idle Setting—Idle screw  $\frac{3}{4}$ -1 $\frac{1}{2}$  turns open. Idle speed 7 MPH.

**Float Level:**— $\frac{3}{8}$ " from gasket seat on cover to nearest point on float (top at free end).

**Accelerating Pump:**—Lower hole (medium) Normal. Inner hole (Summer), Outer upper hole (Winter) for temperature extremes.

**Fuel Pump Pressure:** 3 lbs. maximum.

**MANIFOLD HEAT CONTROL:**—Manual adjustment type located at center of exhaust manifold behind carburetor. Setting should be changed for seasonal requirements.

**Setting:**—To adjust, loosen nuts on strut bar on face of valve cover, turn cover so that pointer is in line with 'W' mark on manifold (Winter temperatures), straight up (Normal summer temperatures), toward front in line with 'S' mark (Extremely hot temperatures). Tighten strut nuts securely to prevent exhaust gas leaks.

**VALVES:** See Valve Timing.

**Tappet Clearance:**—.008" Intake, .008" Exhaust, (hot). NOTE—For access to valve compartment, remove fender dust shield as follows: Remove shield bolts along frame side member and at radiator shell (in engine compartment), remove right front wheel, take out shield capscrews under fender and fender brace bolt. Lower shield out by grasping lower edge.

**STARTING:** See Battery, Starter, Generator, and Regulator (when used).

### IGNITION

**Ignition Switch:**—Mitchellock Model 24-B, Type 7642.

**Ignition Lock:**—Briggs & Stratton, Mitchell No. 6095.

**COIL:** Auto-Lite Model IG-4650. Service Coil (less Switch & Cable) IG-3224JS.

**Ignition Current:**—5-6 amperes stopped.

**CONDENSER:** Auto-Lite Part No. IGB-1025J.

**Capacity:**—20-25 microfarad.

**DISTRIBUTOR:** Auto-Lite Model IGW-4104-A. Single breaker, 6 lobe cam, full automatic advance type.

NOTE—Resistor unit (mounted on distributor terminal connected in primary circuit) must be removed when radio generator with regulator installed or replace with IGW-4103A (no resistor).

**Breaker Gap:**—Set at .020".

**Cam Angle or Dwell:**—35° (closed), 25° (open).

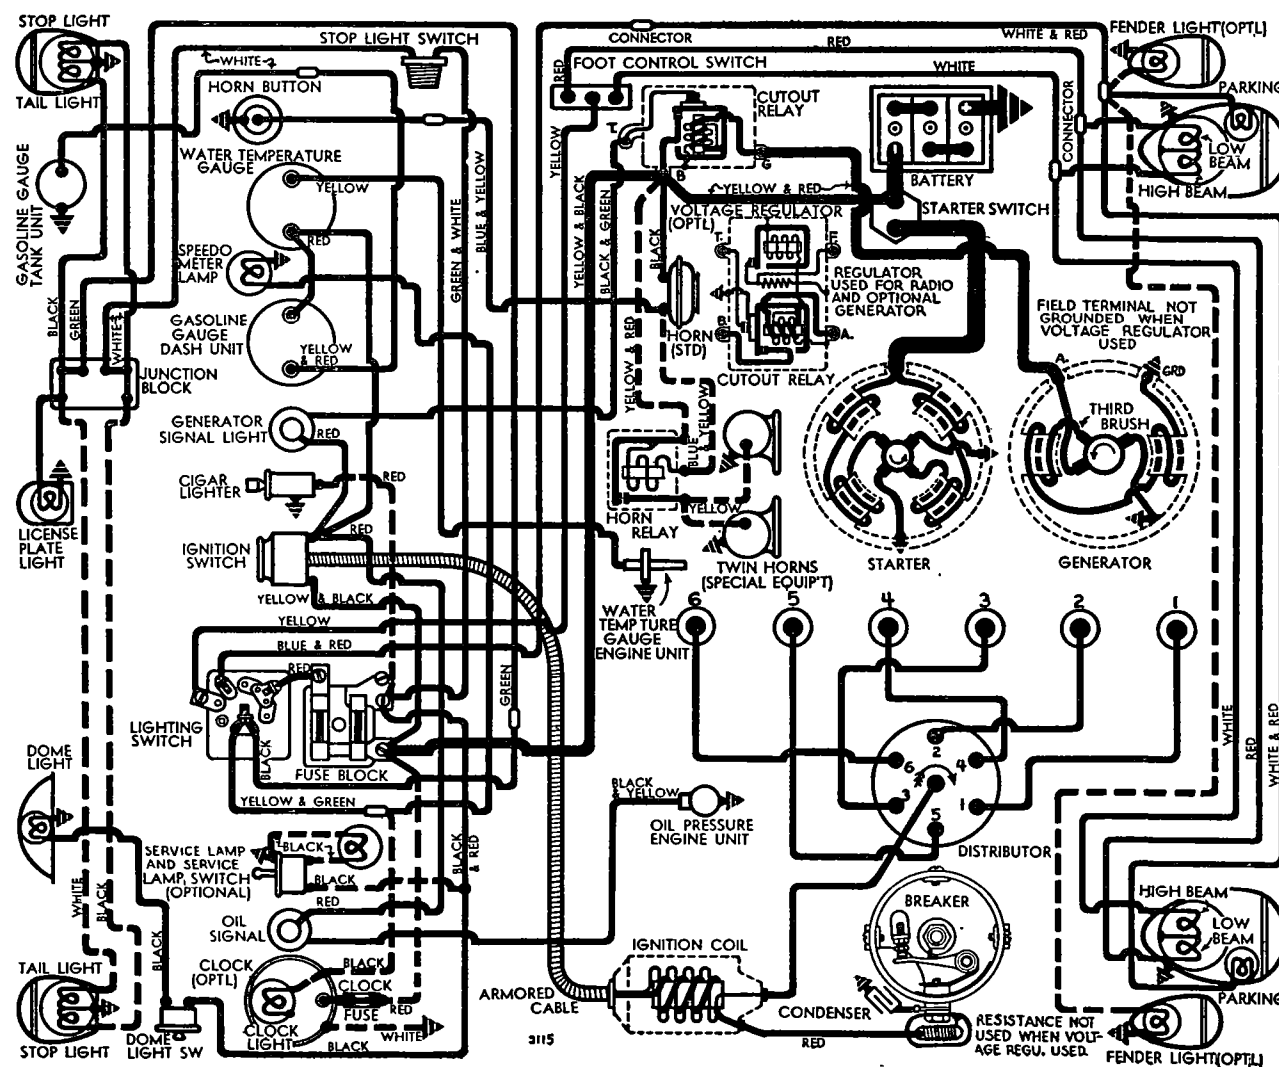

**Breaker Arm Spring Tension:**—16-20 ounces.

**Rotation:**—Clockwise viewed from top.

Automatic Advance			
Distributor	Engine	Distributor	Engine
Degrees	R.P.M.	Degrees	R.P.M.
Start.....	300	0.....	600
3.....	400	6.....	800
4.....	500	8.....	1000
9.....	1040	18.....	2080
14.....	1580	28.....	3160

**Fuel Compensator:**—Provides manual adjustment at distributor for octane rating of fuel used. See Fuel Compensator Setting (following).

**Distributor Removal:**—Mounted on right side of engine. To remove, take out hold-down screw in advance arm.

## IGNITION TIMING

**IGNITION TIMING:**—Initial setting given below. See Fuel Compensator (following) for final setting.

All Engines ..... Flywheel Travel  
..... 1/4" BTDC.

**To Set Timing**—With #1 piston on compression turn engine over until a point 1/4" before the top dead center mark 'U.D.C.1-6/' lines up with pointer in front face of left rear motor support. Loosen hold-down screw in advance arm, rotate distributor clockwise to limit of slot, then slowly rotate distributor counter-clockwise until contacts begin to open, tighten hold-down screw.

**To Set Timing (Using Synchroscope)**—Car manufacturer recommends this method. Mark flywheel 1/4" before 'U.D.C.1-6/' mark with white chalk or paint. Clip lead to #6 spark plug wire, insert other lead in distributor cap from which #6 spark plug wire removed. Direct light on flywheel through hole on front face of left rear engine support.

**Fuel Compensator Setting**—Road test car and note performance when accelerating from 10-15 MPH. with wide open throttle on level road (engine must be warm). Slight spark knock should be evident. Adjust by loosening hold-down screw and rotating distributor one graduation on scale counter-clockwise (if no knock), clockwise (if knock too severe). Repeat test. Final setting must not be advanced beyond 3/4" before 'U.D.C.1-6/' mark on flywheel.

## CARBURETOR

**CARBURETION:**—Carburetor—Carter Model W1, Type 411-S (first cars), 417-S (after Serial & Engine number 8936572 and up). 1 1/4" single barrel, down-draft, vacuum type. NOTE—Types may be identified by Casting No. on face of flange: 411-S (359), 417-S (362).

For complete data, refer to Carburetor Index.

**Idle Adjustment**—Engine must be warm so that choke valve is wide open and throttle cracker in-operative. Set throttle lever stopscrew to idle engine at 7 MPH. Turn idle adjusting screw in until engine begins to miss, then turn screw out until engine begins to roll, finally turn screw in slowly until engine fires smoothly. Final setting should be 3/4-1 1/2 turns open from innerseated position. Readjust throttle stopscrew for correct idle speed.

**Accelerating Pump Setting**—Pump lever (under dust cover at top of carburetor) has three holes for pump link engagement. Set as follows:

Lower Hole (medium stroke)—Normal setting.  
Inner Hole (min. stroke)—Hot temp., hi-test fuel.  
Outer Hole (max. stroke)—Cold temp., low-test fuel.

**Throttle Cracker:**—With choke valve closed, throttle opening should be .036-.040"

## CARB. EQUIPMENT

**Air Cleaner:**—AC #1528159 oil-wetted type Std., United (oil-bath type) Optl.

**Fuel Pump:**—AC Type AF #1523753, diaphragm type. For complete data, refer to Carburetion Equip. Index.

**Gasoline Gauge:**—King-Seeley Electric Type. K-S No. 7085 (dash unit), No. 5835 (tank unit). For complete data, refer to Carburetion Equip. Index.

## BATTERY

**BATTERY:**—National, Type HT-17 (original equipment), L-17-1F (replacement).

Starting Capacity—120 amperes for 20 minutes.

Zero Capacity—300 amperes for 3.5 minutes.

Grounded Terminal—Positive (+) terminal.

Battery grounded to left front fender support bracket. Engine grounded to frame by ground strap at bell housing.

Dimensions—Length 10 9/16". Width 7 1/4". Height 7 15/16".

Location—In left front fender under hood.

## STARTER

Auto-Lite Model MAJ-4057. Armature MAJ-2062.

Drive—Inboard Barrel type Bendix No. A-1673.

Rotation—Counter-clockwise at commutator end.

Brush Spring Tension—42-53 ounces.

Cranking Engine—150 R.P.M., 125 amps. at 5.4 volts.

### Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	4100	5.5	67
.3 " "	2500	5.5	100
2.25 " "	1450	5.0	200
4.6 " "	960	4.5	300
7.3 " "	575	4.0	400
10.3 " "	225	3.5	500
12. " "	Lock	3.	550
17. " "	Lock	4.	750

**Removal:**—Starter flange mounted on left rear corner of engine. To remove, take out flange mounting bolts.

**Starting Switch:**—SW-4010. Mounted on side of steering gear housing. Controlled by shaft extending to toeboard.

## GENERATOR

### STANDARD

Auto-Lite Model GBM-4609A. Armature No. GBM-2065. Third brush control type. Ventilated by fan on drive pulley.

**Charge Rate Adjustment**—Remove commutator cover band, shift third brush by hand counter-clockwise to increase, or clockwise to decrease charging rate (brush held in position by friction).

**Maximum Charging Rate**—20 amperes (cold), 18 amperes (hot), 8.5 volts, 30-35 MPH. Use test ammeter connected in charging line at battery terminal of cutout relay to check generator output.

### Performance Data

Cold			Hot		
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	760	0	6.4	800
4	6.8	920	4	6.9	960
8	7.25	1050	8	7.35	1150
12	7.65	1240	12	7.8	1360
16	8.1	1450	16	8.3	1750
20	8.5	2150	18	8.5	2450

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—50-60 ozs. (new brushes).

**Field Current**—3.80-4.20 amperes at 6.0 volts.

**Motoring Current**—5.7-6.3 amperes at 6.0 volts.

**Removal:**—Generator pivot mounted at left front of engine with fan belt drive. To remove, take out clamp and pivot bolts.

**Belt Adjustment:**—Loosen clamp and pivot bolts, swing generator out until slack in belt midway between generator and fan pulleys is 3/4" (measured with straight edge across pulleys).

## GENERATOR

### CARS WITH RADIO

Auto-Lite Model GDF-4802A. (Cars with Radio). Armature No. GDF-2006. Third brush control type with external voltage regulator. Ventilated by fan on drive pulley.

**Maximum Charging Rate**—32.0 amperes (cold), 29.5 amperes (hot), at 8.0 volts, 35 MPH. Actual charging rate controlled by Voltage Regulator and dependent on battery condition.

**Charging Rate Adjustment**—Maximum output controlled by third brush. Do not adjust third brush for output greater than shown in table below (with field terminal grounded to render regulator inoperative). See Regulator Section below.

NOTE—Standard third brush setting 2 1/8 commutator bars from nearest main brush.

### Performance Data

Cold			Hot		
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	920	0	6.4	1000
4	6.6	1030	4	6.6	1140
8	6.8	1140	8	6.85	1280
12	7.0	1300	12	7.1	1440
16	7.25	1460	16	7.3	1640
20	7.45	1650	20	7.55	1840
24	7.65	1880	24	7.75	2220
28	7.9	2220	28.2	8.0	3200
32	8.0	3100			

**Rotation**—Counter-clockwise at commutator end.  
**Brush Spring Tension**—53 ozs. max. (new brushes).

**Field Current**—1.90-2.10 amperes at 6.0 volts.

**Motoring Current**—5.3-5.9 amperes at 6.0 volts.

**Removal & Belt Adjustment:**—As given for std. generator.

## GENERATOR

### SPECIAL EQUIPMENT

**SPECIAL GENERATORS:**—Other Makes—Refer to Electrical Equipment Index for 'Special Generators' for data on special Generators and Regulators which may be found installed on these models.

## CUTOUT RELAY

Auto-Lite Model CBA-4003. (Used with Std. GBM-4609A Generator). Mounted on engine side of dash. Relay has extra set of contacts for Teleflash Generator Charging Indicator.

For complete data, refer to Electrical Equipment Index.

**Cuts In**—6.75-7.5 volts. Approx. 10 M.P.H.

**Cuts Out**—1.5-4.5 amperes discharge current (after charging at 16 amperes).

**Contact Gap**—.015-.045" with upper ground contacts closed (upper contacts must open when main contacts close).

**Air Gap**—.010-.030" with contacts closed.

CONTINUED ON NEXT PAGE

## C NTINUED FROM PRECEDING PAGE

## REGULATOR

## CARS WITH RADIO

Auto-Lite Model VRD-4008A (Used with Gen. GDF-4802A). Voltage type. Consists of Cutout Relay & vibrating Voltage Regulator in case on dash. Cut-out Relay has extra set of contacts for Teleflash Generator Charging Indicator.

NOTE—See distributor note for change to be made when this unit installed in field.

For complete data, refer to *Electrical Equipment Index*.

NOTE—Regulator case cover is sealed. Serviced on exchange basis if seals not broken.

## Cutout Relay

Cuts In—6.4-7.0 volts Cold. Approx. 10 MPH.

Cuts Out—.5-3.0 ampere discharge (Before Serial No. 2T-000001), 1.5-4.5 amperes (After 2T-000001).

Contact Gap—.015" minimum (with ground contacts closed—ground contacts must be open with main contacts closed).

Air Gap—.034" min., .038" max. with contacts open. Measure at hinge end of core.

## Voltage Regulator

Setting—7.35-7.65 volts at 70°F. (after 15 minutes operation charging at 10 amperes).

To Check (without breaking seal)—Connect ammeter in charging line at 'BAT' terminal on regulator, connect voltmeter between 'BAT' terminal and ground. Operate generator at speed equivalent to 30 MPH., charging fully charged battery until voltage is constant. Voltmeter reading should be within 7.1-7.8 volts (high limit cold, low limit hot). If outside these limits regulator is defective.

To Adjust (with cover removed)—Change regulator armature spring tension slightly by bending lower spring hanger. Check setting as above.

Contact Gap—.010" min., .020" max. with armature against stop pin.

Air Gap—.0595-.0625" with contacts just opening.

## LIGHTING

LIGHTING:—Headlamps—Hall, pre-focused type with interchangeable lenses. Upper and lower beams (lower beams deflected slightly to right) controlled by foot selector switch with lighting switch in driving (right hand) position.

Headlamp Adjustment—Aim headlamps straight ahead with top of beam 38 13/16" above floor level on screen placed at 25' (car unloaded and upper beams lighted). Headlamps aimed by loosening mounting stud on inside of radiator shell (reached by raising hood and working through opening in top radiator tank shield) and shifting lamp by hand.

## Switches

Lighting—R.B.M. Model 1725.

Foot Selector—R.B.M. Model 1076.

## Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps	32-32	2331
Headlamps (export)	21-50	2520D
Parking, Instrument	1 1/2	55
Dash Signals	1	51
Stop and Tail	21-3	1158
License, Fender	3	63
Dome	15	87

## MISC. ELECTRICAL

SIGNAL LIGHTS:—Teleflash Generator Charging Indicator and Oil Pressure Indicator mounted on instrument panel.

For complete data, refer to *Electrical Equipment Index*.

FUSES:—Lighting—20 ampere capacity mounted on fuse block on lower flange of instrument panel.

Accessory—20 ampere capacity on same fuse block—has two terminals for accessory connections.

HORN:—Single horn standard. Sparton twin horns with R.B.M. horn relay optional (engine dash mounting). R.B.M. Model 780 horn relay optl. (dash mounted).

## ENGINE

ENGINE SPECIFICATIONS:—6 cylinder, 'L' head type.

Bore—3". Stroke—4 1/8".

Displacement—175 cubic inches.

Rated Horsepower—21.6 (A.M.A.)

Developed Horsepower—83 HP at 4000 R.P.M.

Compression Ratio—6.50-1 cast-iron head.

Compression Pressure—Approx. 100-105 lbs. at 170 R.P.M. Check with plugs removed and wide open throttle.

Vacuum Reading—18-21" steady at 7 M.P.H.

PISTONS:—Own Lo-Ex aluminum alloy, 'T' slot, cam ground type. Use finished replacement pistons.

Weight—10.5 ozs. (stripped). Length—3 3/16".

Removal—Pistons and rods removed from above.

Clearance—Top .016". Skirt .002".

Original Bore Sizes & Replacement Pistons:—See *Hudson Shop Notes* for complete data.

Fitting New Pistons:—Insert .0015" feeler 1/2" wide in extreme right of cylinder, insert piston with slot to left and pin bosses parallel to crankshaft. Tension to withdraw feeler must be within 3-4 lbs.

Installing Pistons:—Slot away from camshaft side.

PISTON RINGS:—Pinned type, 2 compression, 1 oil ring above pin, one oil ring below pin. 5/16" oil drain holes, 12 drain holes (2 to pin bosses) in upper oil ring groove, 4 holes and 2 slots drilled in lower groove. Rings positioned by pin in grooves.

Ring	Width	End Gap	Side Clearance
Compression	3/32"	.005-.010"	.001"
Oil (both)	3/16"	.005"	.001"

Replacement Rings:—See *Hudson Shop Notes*.

PISTON PIN:—Diameter—3/4". Length—2 7/16".

Pin floats in piston and rod, held by locking rings. Pin hole in rod bronze bushed. Pins furnished standard and .002", .005" and .010" oversize.

Pin Fit in Piston—.0003" clearance (hand push fit) with piston heated to 200°F.

Pin Fit in Rod Bushing—.0003" clearance.

CONNECTING ROD:—Weight 30 1/2 oz. Length 8 5/8".

Crankpin Journal Diameter—1 15/16".

See *Hudson Shop Notes* for Connecting Rod change.

Lower Bearing—Spun-babbitt. Rods exchanged. Finished bearings furnished standard and undersize (special order).

Clearance—.001". Sideplay—.006-.010".

Bearing Adjustment:—None (no shims). Replace rods. After tightening bolt nuts, install new palnut (smooth face to nut), turn palnut on bolt with fingers until tight, then lock in place by turning with wrench an additional 1/4-1/3 turn.

Installing Rods:—Offset. Install rods with widest half of bearing toward rear (#1, 2, 4). toward front (#3, 5, 6). Oil scoop on all rods toward camshaft.

CRANKSHAFT:—3 bearing, integral counterweights. See *Hudson Shop Notes* for Crankshaft and Vibration Dampener removal, Main Bearing Removal, Installation and Line-Reaming data.

Journal Diameters—#1, 2 11/32"; #2, 2 3/8"; #3, 2 13/32".

Bearings—Bronze backed, babbitt lined type. Bearings secured in cap and crankcase by brass screws.

Clearance—.001".

Bearing Adjustment:—Shims. See *Hudson Shop Notes*.

►CAUTION—Replacement of main bearings requires removal of crankshaft. Bearings retained by brass screws. Replacement Bearings: See *Hudson Shop Notes*.

End Thrust:—Taken by center bearing. Replace bearing to adjust. Endplay—.006-.012".

CAMSHAFT:—Three bearing. Gear driven.

Journal Diameters—#1, 2"; #2, 1 31/32"; #3, 1 1/2". Bearing Clearance—.0025".

End Thrust:—Taken by thrust washer assembled between front face of crankcase and rear side of camshaft front flange, and by spring loaded button in camshaft hub and thrust plate on gear cover. See that spring and button in place under cover.

Timing Gears:—Crankshaft gear cast-iron. Camshaft gear GE. or Continental Diamond Fibre Bakelite. 1941 Type Timing Gear Set can be installed on these models (tooth angle redesigned to provide quieter operation). Refer to *Hudson Shop Notes*.

Camshaft Setting:—Gears marked. Mesh marked tooth of crankshaft gear between two marked teeth on camshaft gear.

VALVES:—	Head Diameter	Stem Diameter	Length
All valves	1 1/8"	11/32"	5 11/32"
	Seat Angle	Lift	Stem Clearance
Intake	45°	11/32"	.0015-.003"
Exhaust	45°	11/32"	.003-.005"

See *Hudson Shop Notes* for valve tool data.

Valve Guides: 2 9/16" long. Top 1 1/16" below top of block. Finish ream to size after installation.

Valve Springs:—Springs are cadmium plated, Dampeners originally used on bottom of all springs, but car manufacturer recommends that they be omitted whenever valves are serviced. Spring check (out of engine)—34 lbs. min. at 2".

	Spring Pressure	Spring Length
Valve Closed	44 lbs.	2"
Valve Open	102 lbs.	1 21/32"

Valve Lifters:—Roller shoe type, fitted in removable guides. See *Hudson Shop Notes* for valve lifter removal instructions.

## VALVE TIMING

**Tappet Clearance**—.006" Int., .008" Exh., engine hot.

**Valve Timing**:—See Camshaft Setting above.

**Intake Valves**—Open 10°40' BTDC. Close 60° ALDC.

**Exhaust Valves**—Open 50° BLDC. Close 18°44' ATDC. These figures correct with .010" tappet clearance.

**To Check Timing**—Set tappet clearance #1 intake valve at .010". This valve should open with piston 10°40' or .0441" before top dead center when a point on the flywheel approximately 3.97 teeth before dead center mark 'U.D.C.1-6/' lines up with pointer in inspection hole in front face of left rear motor support. Reset tappet clearance at .006" with engine warm.

## LUBRICATION

**LUBRICATION**:—Duo-flow (pressure and positive splash) system. Force feed by oil pump to connecting rod oil troughs and timing gears, splash to all other bearing points.

**Oil Pump**:—Oscillating plunger type, gear driven by camshaft. Mounted on right center of crankcase. **Normal Oil Pressure**—3 lbs. (no gauge).

**Oil Pressure Regulator**:—Located at right side of crankcase at rear. Opens at 3 lbs. Not adjustable.

**Oil Pressure Indicator**:—Teleflash Oil Pressure indicator. Operated by oil pressure regulator.

*For complete data, refer to Electrical Equipment Index.*

**Checking Oiling System**:—See Hudson Shop Notes.

**Crankcase Capacity**:—5½ qts. (dry), 4½ qts. (refill).

## COOLING

**COOLING SYSTEM**:—Water Pump. Centrifugal, belt-driven, packless type.

*See Water Pump Section for complete data.*

**Removal**—With water drained and fan belt removed, disconnect hoses at pump, remove mounting bolts, lift fan and pump assembly off.

**Thermostat**:—Mounted in cylinder head water outlet.

**Setting**—Start to open 150-155°F. Fully open 185°F.

**Water Capacity**:—12 quarts.

## CLUTCH

**CLUTCH**:—Own make. Single plate, cork insert type operating in oil.

*See Clutch Section for complete data.*

**Driven Member**—Thickness .203". Inside Diameter 5.375". Outside Diam. 8.625". Facing 90 cork inserts.

**Adjustment**:—Pedal free movement must be 1½". To adjust, remove clevis pin at lower end of connecting link on throw-out shaft lever, loosen locknut, turn clevis for proper clearance.

**Clutch Oil Servicing**:—See Hudson Shop Notes.

**Removal**:—Remove transmission (see Transmission Removal following), take out 16 clutch cover cap-screws and remove clutch assembly from below.

## TRANSMISSION

**TRANSMISSION**:—Own make. Constant-mesh, helical gears (Second & High), sliding spur gears (Low & Reverse).

*See Transmission Section for complete data.*

**Removal**:—Disconnect speedometer cable and drive shaft at front universal. Support engine at rear and take out rear mounting bolts. Remove bell housing to engine mounting bolts, pull transmission straight back and remove.

## UNIVERSALS

**UNIVERSAL JOINTS**:—Spicer, 1271 (front), 1278 (rear).

Needle bearing type.

*See Universals Section for complete data.*

## REAR AXLE

**REAR AXLE**:—Own make. Semi-floating, spiral bevel gear type.

*See Rear Axle Section for complete data.*

**Ratio**—4 1/9 Std. 4 5/9 optional.

**Backlash**—.0005-.003". Screw adjustment.

**Removal**:—Remove rear wheel and hub assembly (use screw type puller only), take out four nuts on bearing cap bolts, push bolts out through backing plate (allows cap removal without disturbing hand brake operating link), remove shims, pull wheel bearing and axle shaft, disconnect drive shaft at rear universal joint, remove 8 nuts from axle housing-to-carrier stud bolts, withdraw differential carrier assembly without disturbing axle housing.

**Wheel Bearing Adjustment**:—Controlled by shims under bearing cap. Measure endplay by dial indicator clamped to backing plate with plunger against end of axle shaft. To adjust, remove bearing caps (as directed above), add or remove shims equally at both wheels. Endplay—.004-.010".

## SHOCK ABSORBERS

**SHOCK ABSORBERS**:—Monroe—156778 (front), 156578 or 156779 (rear). Hydraulic, direct acting type.

*See Shock Absorber Section for complete data.*

## FRONT SUSPENSION

**Front Suspension**:—Conventional 'I' beam front axle with Elliott ends and semi-elliptic springs.

**Kingpin Inclination**—7° crosswise. See Kingpin Thrust bearing data in Hudson Shop Notes.

**Caster**—2-2½° and equal within ½° for both wheels. Adjusted in usual manner by wedge shims between spring seat on axle and spring.

**Camber**—1-1½°. No adjustment. Make minor corrections by bending axle cold.

**Toe In**—0-⅛". Measured 10" up from ground. Adjust by loosening clamp bolts and turning tie rod.

**Steering Geometry**—Inner wheel 20°. Outer wheel 17¾°.

## STEERING GEAR

**Steering Gear**: Gemmer Model 305. Worm-and-Roller type with "push-pull" adjustments.

*See Steering Gear Section for complete data.*

## BRAKES

**BRAKES**:—Service—Bendix Hydraulic, Duo-Servo, double anchor type. Mechanical follow-up (pedal linked to hand brake cables) provided. Hand lever applies rear service brakes.

*See Brake Section for complete data.*

**Drum**—Alloy-steel. Diameter—9 1/16".

**Lining**—Moulded (primary), woven (secondary). Width 1¾". Thickness 3/16". Length per wheel 19".

**Clearance**—.010" at heel and toe of each shoe.

**Hand Brake**:—See Service Brakes above.

**ENGINE BONNET LOCK, HOOD, SIDE PANEL AND DUST SHIELD REMOVAL:**—See *Hudson Shop Notes***MODEL IDENTIFICATION****SERIAL NUMBER:** First No. 90-101 (1939), 40-101 (1940).  
On plate on right front door hinge pillar post.**ENGINE NUMBER:**—Same as Serial Number (above).  
Stamped on top of cylinder block between #1 & #2 exhaust manifold flanges.**TUNE-UP****COMPRESSION PRESSURE:** 115 lbs. (1939), 125 lbs. (1940) at cranking speed of 125 R.P.M.**VACUUM READING:** Steady 18-21" idling at 7 MPH.**FIRING ORDER:** 1-5-3-6-2-4. See diagram.**SPARK PLUGS:** Champion Type J-8. 14 mm. Metric.  
Gaps—.032"**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.020" Cam Angle 35° (closed).

Automatic &amp; Vacuum Advance—See tables below.

**IGNITION TIMING:** See Ignition Timing.Std. Setting— $\frac{1}{4}$ " flywheel travel BTDC. (1939),  
At TDC. (1940) with flywheel mark "UDC. 1-6/"  $\frac{1}{4}$ "  
ahead (1939), or at indicator (1940) in inspection  
hole in left front face of rear motor support.**CARBURETION:** See Carburetor & Carb. Equipment.Idle Setting—Idle screw  $\frac{1}{4}$ -1 turn open (1939),  
 $\frac{3}{4}$ -1 $\frac{1}{2}$  turn open (1940). Idle speed 7 MPH.Float Level (1939)— $\frac{3}{8}$ " from gasket seat on cover  
to top of float at free end (invert to check)Float Level (1940)— $\frac{3}{8}$ " from top of machined pro-  
jection on bowl cover to top of soldered seam on  
free end of float (invert to check).Accelerating Pump—Lower hole Normal Inner hole  
(Summer), Outer hole (Winter) for temp. extremes.

Fuel Pump Pressure: 3 lbs. maximum.

**MANIFOLD HEAT CONTROL:**—Manual adjustment on  
center of manifold behind carburetor. Change set-  
ting for seasonal requirements as follows:Setting—Arrow on valve should be lined up with 'W'  
on manifold for winter temperatures, 'S' for sum-  
mer temperatures. For high speed driving in ex-  
tremely hot weather, line arrow up with boss ahead  
of 'S' mark. To adjust, loosen two nuts on valve bar  
to release valve, turn valve by hand, tighten nuts**VALVES:** See Valve Timing.►Tappet Clearance: **CAUTION**—2 settings used:

- 1)—.006" Intake, .008" Exhaust, hot & idling for All 1939 Engines (& 1940 with Original Camshaft).
  - 2)—.010" Intake, .012" Exhaust, hot & idling for All 1940 Engines with Replacement Camshaft.
- These engines should carry decalcomania on valve cover specifying this .010" & .012" setting.

See *Hudson Shop Notes* for Replacement Camshaft data.**STARTING:** See Battery, Starter, Generator, Regulator.**IGNITION****IGNITION SWITCH:** Mitchellock. Model 24-B. Type 8062  
(1939), 8273 (1940). Coil connection armored.Ignition Lock—Briggs & Stratton. Mitchell No. 6095.  
B & S #50184 Key Series H601-H1100. Groove #1.**COIL:** Auto-Lite Model IG-4656 (1939), IG-4662 (1940).  
Service Coil (less Switch & Cable) IG-3224JS.

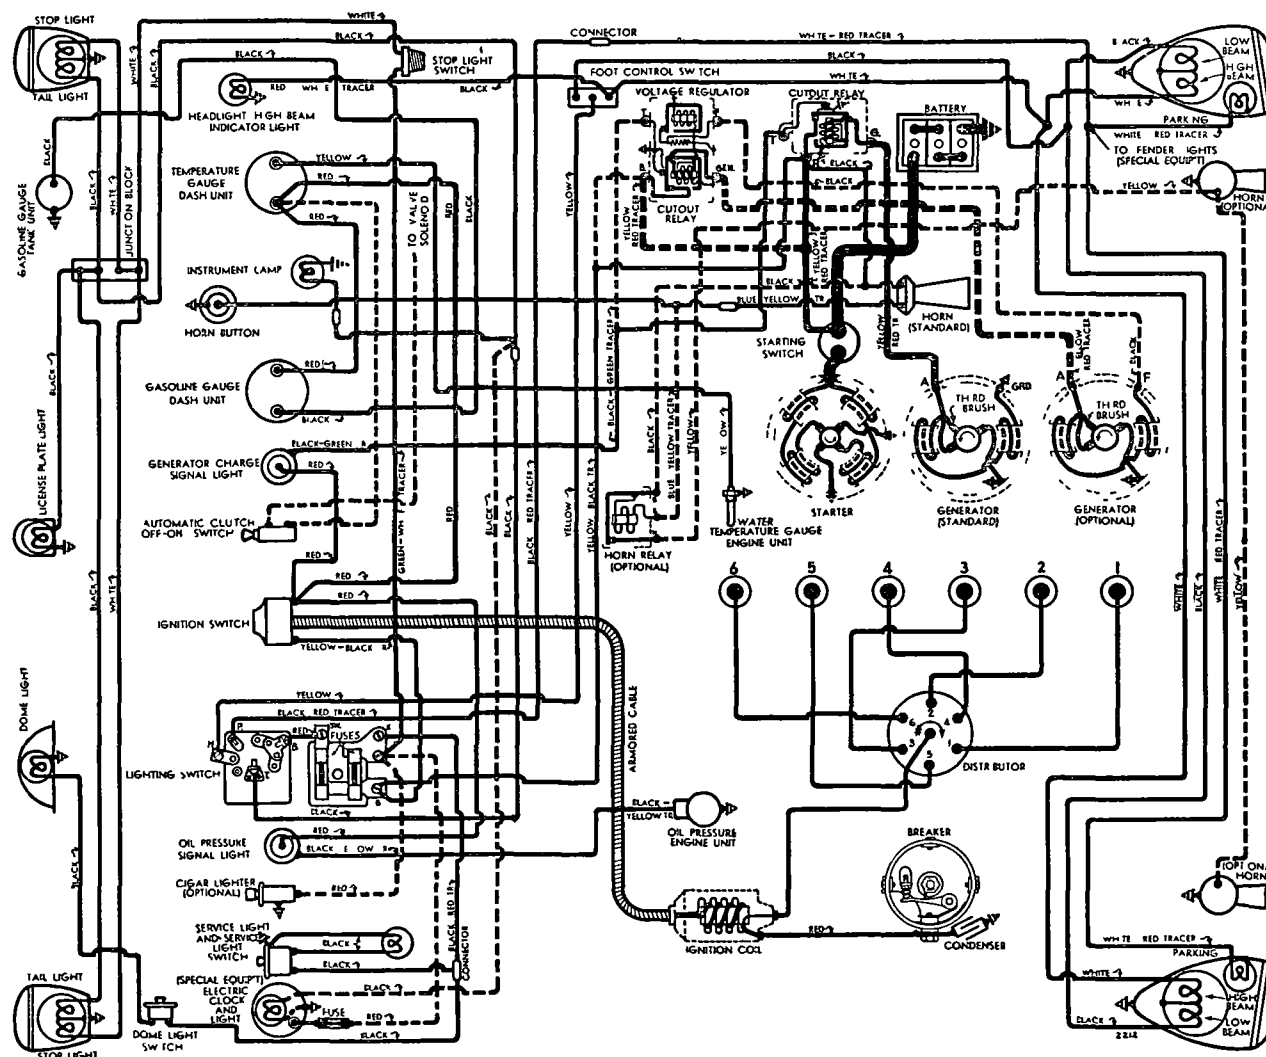

Ignition Current—2.5 amperes idling, 4.5 stopped.

**CONDENSER:** Auto-Lite Part No. IGW-3075B (IGW-  
4125A & IGW-4202A), IGW-3075C (IGW-4203).  
Capacity—.20-.25 microfarad.**DISTRIBUTOR:** Auto-Lite Model IGW-4125A (1939—  
First 6493 Cars), IGW-4202A (1939—6493 Up), IGW-  
4203 (1940). Single Breaker, 6 lobe cam, full auto-matic advance type with Fuel Compensator adjust-  
ment. Model IGW-4203 has auxiliary vacuum spark  
NOTE—Primary circuit resistor on '39 distributor  
(used only with low-rate generator without regula-  
tor). Resistor must be removed or IGW-4201A dis-  
tributor installed when regulator installed.**Breaker Gap**—.020"**Cam Angle or Dwell**—35° closed, 25° open (distr.).**Breaker Arm Spring Tension**—16-20 ounces.**Rotation**—Clockwise (for 1939 cars), counter-clock-  
wise (1940), viewed from above.

Distributor Automatic Advance Engine			
Degrees	R.P.M.	Degrees	R.P.M.
Start	300	0	600
3	400	6	800
6	720	12	1440
9	1040	18	2080
12	1360	24	2720
14	1580	28	3160

**Vacuum Spark Control (IGW-4203 Distr.)**—Mounted  
on distributor hold-down plate and linked to quad-  
rant scale on side of distributor. Provides additional  
advance at speeds above idling except when engine  
is accelerated or operated at wide open throttle  
when spark is retarded by return spring within unit.**Vacuum Advance (IGW-4203 Distr. only)**

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	5 $\frac{7}{8}$ "
4°	8°	9 $\frac{1}{4}$ "
7.5°	15°	11 $\frac{1}{4}$ "

**Fuel Compensator Adjustment**—Manual adjust-  
ment for octane rating of fuel. See Ignition Timing.**Removal (1939):** Distributor mounted on right side of  
crankcase. To remove, take out hold-down screw  
in advance arm.

1939 "112" M DEL 90

FOR 1940 MODELS 40, 40P, 40T—SEE 1940 DIAGRAM FOLLOWING

**Removal (1940):** Distributor mounted at top rear of cylinder block. To remove, disconnect vacuum line, take out cylinder head stud nuts on hold-down plate.

### IGNITION TIMING

**IGNITION TIMING:**—Initial setting as given. See Fuel Compensator setting (following) for correction.

**Model Flywheel Degrees**  
90 (1939) ..... 1/4" BTDC.  
40 (1940) ..... 0° At TDC.

**Timing:**—With #1 piston on compression, turn engine over until piston reaches firing position with flywheel mark "UDC.1-6" 1/4" before indicator (90), at indicator (40) in inspection hole in front face of left rear motor support above starter. Loosen advance arm hold-down screw, rotate distributor clockwise to limit of slot, then slowly rotate distributor counter-clockwise until contacts begin to open, tighten hold-down screw. Check Fuel Compensator Timing (Using Synchroscope)—Recommended by manufacturer. Mark flywheel with white chalk or paint, connect at #6 spark plug. Idle engine and adjust distributor as directed above.

**Fuel Compensator Setting:**—Road test car and note performance when accelerating from 10-15 M.P.H. with wide open throttle on level road (warm engine). Slight ping should be evident. To adjust, loosen hold-down screw, rotate distributor one graduation on scale counter-clockwise (if no ping), clockwise (if ping too severe), repeat test. Final setting must not be more than 3/4" before "UDC.1-6" mark on flywheel.

### CARBURETOR

(1939)—Carter Model W1 Vacuumer Type 438-S (Std.), 437-S (With Automatic Clutch Control). 1 1/4" Single Barrel, Downdraft type.

(1940)—Carter Model WA-1 Type 454-S. 1 1/4" Single Barrel, Downdraft type with Fast Idle and Automatic Choke.

*For complete data, refer to Carburetor Index.*

**Idle Adjustment:**—With engine warmed up, choke valve wide open and throttle-cracker inoperative, set throttle lever stop screw to idle engine at 7 MPH. Turn idle adjusting screw in until engine begins to miss, then out until engine begins to roll, finally turn screw in slowly until engine fires smoothly. Final setting should be 1/4-1 turn (1939), 3/4-1 1/2 turn (1940) out from inner seated position. Readjust throttle stop screw for correct idle speed.

**Accelerating Pump Setting:**—Pump lever (under dust cover on float bowl cover) has three holes for pump link engagement. Adjust as follows:

Lower Hole (Med. Stroke)—Normal setting.  
Inner Hole (Min.)—Hot weather, high-test fuel.  
Outer Hole (Max.)—Cold weather, low-test fuel.

**Throttle Cracker (1939):** Connecting linkage between choke valve and throttle lever, opens throttle valve .036-.040" with choke valve fully closed.

**Fast Idle (1940):** Integral type (part of carburetor). *For complete data, refer to Carburetion Equip. Index.*  
**Setting:**—Adjust by bending connecting link offset for 5/8" choke valve opening with stop screw against (not on) first step of fast idle cam.

**Automatic Choke (1940):** Carter Climatic Control. *For complete data, refer to Carburetion Equip. Index.*  
**Setting:**—Centered (at index).

### CARB. EQUIPMENT

**Air Cleaner:** AC No. 1528159 Std. Oil-wetted type. United heavy duty oil-bath type Optl.

**Fuel Pump:**—AC Type AF #1523753 Std., Type #1523937 combination fuel-and-vacuum pump Optl. *For complete data, refer to Carburetion Equip. Index.*

**Gasoline Gauge:**—King-Seeley Electric. K-S Nos. Dash Unit—7175 (Pass. Cars), 7098 (Comm'l.), 6783 (Sta. Wagon), 8118 (1940 Early—White lines), 7752 (1940 Later Cars—White Diamonds).

**Tank Unit:**—5835 (1939 First Cars), 7500 (1939 Later Cars & Service Unit), 7550 (1940).

*For complete data, refer to Carburetion Equip. Index.*

### BATTERY

**BATTERY:**—National Type HT-17. 6 volt, 17 plate, 96 A.H. capacity (20 hour rate).

**Starting Capacity:**—120 amperes for 20 minutes.

**Zero Capacity:**—300 amperes for 3.5 minutes. Five second voltage 4.24 volts.

**Grounded Terminal:**—Positive (+) to frame.

**Engine Ground:**—Strap connector from rear motor support plate to frame.

**Dimensions:**—Length 10 9/16". Width 7 1/4". Height 7 11/16".

**Location:**—In engine compartment on left side.

### STARTER

**Auto-Lite Model MAJ-4057 (1939 First Cars), MAJ-4061 (1939 Later Cars), MZ-4079 & 4079A (1940). Armature MAJ-2062 (MAJ-4057 & 4061), MZ-2138 (MZ-4079 & 4079A).**

**Drive:**—Inboard Barrel type Bendix No. A-1673 (MAJ-4057), No. A-1684 (all others).

**Rotation:**—Counter-clockwise at commutator end.

**Brush Spring Tension:**—42-53 ozs. (new brushes).

**Cranking Engine:**—150 RPM., 125 amperes, 5 volts.

*Performance Data.*

Torque		R.P.M.		Volts		Amperes	
0 ft. lbs.		4100		5.5		87	
3 "		2500		5.5		100	
2.25 "		1450		5.0		200

10.3 "		225		3.5		500	
12.0 "		Lock		3.0		550	
17.0 "		Lock		4.0		750	

*MZ-4079, 4079A*

0 ft. lbs.	4300	5.5	70
2.55 "	1325	5.0	200
4.95 "	750	4.5	300
7.65 "	220	4.0	400
7.8 "	Lock	3.0	420
11.8 "	Lock	4.0	560

**Removal:**—Starter flange mounted on left front face of rear motor support. To remove, take out flange mounting screws.

**Starting Switch (1939):** Auto-Lite Model SW-4010. Manual type. Operated by button directly below steering column.

**Starting Switch (1940):** R-B-M Model 5607. Magnetic type. On starter. Controlled by pushbutton on instrument panel, Douglas No. 5751.

### GENERATOR

*STANDARD (1939)*

**Auto-Lite Model GBM-4609A. Armature Number GBM-2065. Third brush control type. Ventilated by fan on drive pulley.**

**Charging Rate Adjustment:**—Remove commutator cover band, shift third brush by hand counter-clockwise to increase, or clockwise to decrease, charging rate. Brush held in position by friction.

**Maximum Charging Rate:**—20 amperes (cold), 18

amperes (hot), 8.5 volts, 30-35 M.P.H. Use test ammeter connected in charging line to check output.

*Performance Data—GBM-4609A*

Cold			Hot		
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	760	0	6.4	800
4	6.8	920	4	6.9	960
8	7.25	1050	8	7.35	1150
12	7.65	1240	12	7.8	1360
16	8.1	1450	16	8.3	1750
20	8.5	2150	18	8.5	2450

**Rotation:**—Counter-clockwise at commutator end.

**Brush Spring Tension:**—50-60 ozs. (new brushes).

**Field Current:**—3.80-4.20 amperes at 6.0 volts.

**Motoring Current:**—5.7-6.3 amperes at 6.0 volts.

**Removal:**—Pivot mounted at left front of engine. To remove, take out pivot and clamp bolts.

**Belt Adjustment:**—Swing generator out until possible belt deflection midway between generator and fan pulleys is 3/4" (use straightedge across pulleys).

### GENERATOR

*OPTL. (1939), STD. (1940)*

**Auto-Lite Models GDS-4801A. Armature Number GDF-2006. Third brush control type with external voltage regulator. Ventilated by fan on pulley.**

**Maximum Charging Rate:**—33 amperes cold, 27.5 amperes (hot), 8.0 volts, 30-35 MPH. Actual charging rate controlled by Voltage Regulator and dependent on battery condition.

**Charging Rate Adjustment:**—Maximum output controlled by third brush and secured with standard setting of 1 commutator bar from nearest (insulated) main brush. Do not exceed output shown in table below. See Regulator data below for adjustment. To check output, connect ammeter in charging line at regulator "BAT" terminal, ground "F" terminal to eliminate regulator action.

*Performance Data—GDS-4801A*

Cold			Hot		
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	920	0	6.4	960
4	6.6	1050	4	6.6	1120
8	6.8	1175	8	6.85	1280
12	7.0	1300	12	7.1	1430
16	7.2	1450	16	7.3	1640
20	7.4	1600	20	7.55	1900
24	7.6	1820	24	7.75	2320
28	7.9	2075	27.5	8.0	3200
33	8.0	2900			

**Rotation:**—Counter-clockwise at commutator end.

**Brush Spring Tension:**—53 ozs. max. (new brushes).

**Field Current:**—1.65-1.82 amperes at 6.0 volts.

**Motoring Current:**—5.10-5.45 amperes at 6.0 volts.

**Removal & Belt Adjustment:**—Same as std. generator.

### GENERATOR

*SPECIAL EQUIPMENT*

**SPECIAL GENERATORS:**—Other Makes—Refer to Electrical Equipment Index for "Special Generators" for data on special Generators and Regulators which may be found installed on these models.

### CUTOUT RELAY

**Auto-Lite Model CBA-4003 (Used with GBM-4609A Gen.). Mounted on engine side of the dash.**

Relay has extra set of contacts for Generator Tele-flash Charging Indicator Control.

*For complete data, refer to Electrical Equipment Index.*

**Cuts In:**—6.75-7.5 volts.

**Cuts Out:**—1.5-4.5 amp. discharge after 16 amp. charge.

CONTINUED ON NEXT PAGE

## C NTINUED FR M PRECEDING PAGE

**Contact Gap**—.015-.045" with upper ground contacts closed (Upper contacts must open when main contacts close).

**Air Gap**—.010-.030" with contacts closed.

**REGULATOR**

**Auto-Lite Model VRD-4008A (1939), VRD-4008B (1940 First Cars), VRR-4001A (1940 Later Cars).** Used with GDS-4801A Gen. Cutout Relay and vibrating Voltage Regulator in case on dash. Cutout Relay has special upper contacts for Generator Teleflash Signal control.

*For complete data, refer to Electrical Equipment Index.*  
**NOTE**—Regulator cover sealed. Serviced on exchange basis if seals not broken.

**Cutout Relay**

**Cuts In**—6.4-7.0 volts (VRD), 6.4-6.6 volts (VRR).  
**Cuts Out**—5-3.0 amperes (before Regulator Serial No. 2T-000001), 1.5-4.5 amperes (after No. 2T-000001). (VRD); 4.2-4.8 volts with approximately 4-6 ampere discharge current (VRR).

**Contact Gap**—.015" min. with ground contacts closed (ground contacts must open when main contacts close).

**Air Gap**—.034-.038" (VRD), .031-.034" (VRR) at hinge end of core with contacts open (ground contacts closed).

**Voltage Regulator**

**Setting**—7.1-7.4 volts at 110°F (all models).

**Checking (without breaking seal) & Adjustment**—See *Electrical Equipment Section*.

**Contact Gap**—.010-.020" (VRD), .012" Min. (VRR) with armature against stop pin.

**Air Gap**—.0595-.0625" (VRD), .048-.052" (VRR) with contacts just opening.

**LIGHTING**

**Headlamps**—Hall Pre-focused type (1939), Hall "Sealed Beam" type (1940). Upper and lower beams controlled by Beam Selector Switch on toeboard.

**Headlamp Adjustment**—Aim upper beam of each headlamp straight ahead with hot spot centered on horizontal line 3" below lamp center height.

**Beam Indicator**—On upper left hand corner of instrument panel. Lighted whenever upper beams on.

**Switches**

**Lighting**—R-B-M No. 1725 (1939), Cole-Hersee (1940).

**Beam Selector**—Douglas or R-B-M No. 1076 (1939), R-B-M No. 2467 (1940).

**Instrument**—Douglas.

**MISC. ELECTRICAL**

**SIGNAL LIGHTS**—Generator Charge, and Oil Pressure Indicators. Hudson Teleflash Electric type.

*For complete data, refer to Electrical Equipment Index.*

**FUSES**—Lighting—20 ampere. On fuse block on lower flange of instrument panel at center.

**Accessory**—20 ampere. On fuse block.

**Twin Horns**—30 ampere on block on engine dash.

**Transmission Overdrive Control**—20 ampere.

**Direction Indicator**—10 ampere.

**Electric Clock**—2 ampere. On back of clock.

**HORNS**—Std. Single Horn—Schwartz Model 42 (Before #7418), Model EX3099 (After #7418).

**Optl. Dual Horns**—Delco-Remy Air-trumpet type or Sparton Air-Electric, vibrator type with relay.

**Horn Relay**—R-B-M Model 4751 (1939), 4790 (1940).

**Contacts Close**—3.5-4.5 volts. Current Draw  $\frac{3}{4}$  amp.

**ENGINE**

**ENGINE SPECIFICATIONS**—6 cylinder, 'L' head type.

**Bore**—3". **Stroke**—4 $\frac{1}{8}$ ".

**Displacement**—175 cu. ins. **Rated HP**—21.6.

**Developed Horsepower**—86 (1939), 92 (1940) at 4000 RPM.

**Compression Ratio**—6.5-1 '39, 7.0-1 '40. Iron heads.

**Compression & Vacuum Reading**—See *Tune-up data*.

**PISTONS**—Own Lo-Ex aluminum alloy, "T" slot, cam ground type. Use finished replacement pistons.

**Weight**—10.5 ozs. (stripped). **Length**—3  $\frac{3}{16}$ ".

**Removal**—Pistons and rods removed from above.

**Clearance**—Top .016". Skirt .001-.002".

**Original Bore Sizes & Replacement Pistons**—See *Hudson Shop Notes for complete data*.

**Fitting New Pistons**—Use .0015" feeler  $\frac{1}{2}$ " wide inserted between piston and cylinder wall on side opposite slot at right angles to pin. Pull to withdraw feeler must be within 3-4 lbs.

**Installing Pistons**—Slot away from camshaft.

**PISTON RINGS**—2 compression, 2 oil rings (1 above pin, 1 below pin). Rings positioned by pin in groove.

**Model 90 (1939)**

Ring	Width	End Gap	Side Clearance
Compression	3/32"	.005-.010"	.001"
Oil Control①	3/16"	.005-.010"	.001"
Oil Control②	5/32"	.005-.010"	.001"

①—Both rings on early cars, top ring on later cars.

②—Lower oil ring on later cars. See *Hudson Shop Notes for complete data on Oil Ring Width change*.

**Model 40 (1940)**

Ring	Width	End Gap	Side Clearance
Compression	3/32"	.009-.011"	.001"
Oil Cont. (#1)	3/16"	.009-.011"	.001"
Oil Cont. (#2)	5/32"	.009-.011"	.001"

**Replacement Rings**—See *Hudson Shop Notes for data*.

**PISTON PIN**—Diameter— $\frac{3}{4}$ ". **Length**—2  $\frac{7}{16}$ ".

**Floating Type**. Retained by locking rings. See *Hudson Shop Notes for Pin Servicing data*.

**Pin Fit in Piston**—.0003" clearance (hand push fit) with piston heated to 200°F.

**Pin Fit in Rod Bushing**—.0003" clearance.

**Replacement Pins**—Std., .002", .005", .010" oversize.

**CONNECTING ROD**—Weight—30 $\frac{3}{4}$ ". **Length**—8 $\frac{5}{8}$ ".

**Crankpin Journal Diameter** 1  $\frac{15}{16}$ ".

**Lower Bearing**—'Bermax' alloy spun type. Exchange rods furnished Std. & .010" undersize. See *Crankshaft Size Code in Hudson Shop Notes for bearing sizes*.

**Clearance**—.001". **Sideplay**—.006-.010".

**Bearing Adjustment**—None (no shims). Replace rods. See *Hudson Shop Notes for Pinnut (locknut) data*.

**Installing Rods**—Offset. Install rods with widest half of bearing toward rear (#1, 2, 4), toward front (#3, 5, 6). Oil scoop on all rods toward camshaft.

**CRANKSHAFT**—3 bearing, integral counterweights.

See *Hudson Shop Notes for Crankshaft and Vibration Damper Removal, Main Bearing Removal, Installation, Replacement Bearings and Line-reaming data*.

**Journal Diameters**—#1, 2 1 $\frac{13}{32}$ "; #2, 2 $\frac{3}{8}$ "; #3, 2 13/32".

See *Crankshaft Size Code Note in Hudson Shop Notes for original bearing sizes*.

**Bearings**—Bronze backed, Bermax alloy. Bearings secured in cap and crankcase by brass screws.

**Clearance**—.001".

**Bearing Adjustment**—Shims. See *Hudson Shop Notes*.

►**CAUTION**—Replacement of main bearings requires removal of crankshaft. Bearings retained by brass screws.

**Replacement Bearings**: See *Hudson Shop Notes*.

**End Thrust**—Taken by center bearing. Replace bearing if endplay excessive. **Endplay**—.006-.012".

**CAMSHAFT**—3 bearing, gear driven. See *Hudson Shop Notes for Camshaft Removal & Special Bearing Installation (Cutout must be made in rear bearing on 1940 cars)*.

**Journal Diameters** #1, 2"; #2, 1  $\frac{31}{32}$ "; #3 (1939) 1 $\frac{1}{2}$ "; #3 (1940), 1  $\frac{9}{16}$ ".

**Bearings**—Babbitt type. **Clearance**—.0025".

►**Replacement Camshaft for 1940 Engines**: Original 159505 camshaft superseded by new re-designed camshaft with new cam contours.

►**CAUTION**—When above shaft installed, Tappet Clearance and Valve Timing changed. See Valve Timing (following) or see *Replacement Camshaft in Hudson Shop Notes*.

**End Thrust**—Thrust washer between camshaft flange and crankcase. Spring loaded button in camshaft hub bears against thrust plate on gear cover.

**Timing Gears**—Crankshaft gear cast-iron. Camshaft gear GE or Continental Diamond Fibre Bakelite.

**1941 Type Timing Gear Set can be installed on these models. Refer to Hudson Shop Notes for data.**

**Camshaft Setting**—Mesh marked crankshaft gear tooth between two marked teeth on camshaft gear.

**VALVES**—

Head Diameter	Stem Diameter	Length
All valves	1 $\frac{3}{8}$ "	11/32".....5 11/32"

Seat Angle	Lift	Stem Clearance
Intake	45°	11/32".....0025"
Exhaust	45°	11/32".....004"

**Valve Guides**—2  $\frac{9}{16}$ " long. Install with top 1  $\frac{1}{16}$ " below top of block and finish ream to size.

**Valve Springs**—Dampeners (originally used on bottom of spgs.) should be omitted when valves serviced. Free length 2  $\frac{17}{64}$ ". **Spring Pressure** **Length**

Valve Closed ..... 40 lbs. .... 2"

Valve Open ..... 80 lbs. .... 1  $\frac{21}{32}$ "

**NOTE**—Replace if pressure below 34 lbs. at 2".

**Valve Lifters**—Roller shoe type, fitted in removable guides. See *Hudson Shop Notes for lifter removal*.

**VALVE TIMING**

►**Tappet Clearance: CAUTION**—2 settings used:

1)—.006" Intake, .008" Exhaust, hot & idling for All 1939 Engines (& 1940 with Original Camshaft).

2)—.010" Intake, .012" Exhaust, hot & idling for All 1940 Engines with Replacement Camshaft.

*These engines should carry decalcomania on valve cover specifying this .010" & .012" setting.*

**Valve Timing**:—See Camshaft Setting above.

►**1940 Valve Timing Change**: On 1940 engines when new replacement camshaft installed, intake opening point advanced to 27°30' BTDC. or 10 flywheel teeth ahead of 'UDC. 1-6/' flywheel mark.

**ORIGINAL VALVE TIMING SPECIFICATIONS**

►**for All 1939 Engines (& 1940 with Original Camshaft)**

**Intake Valves**—Open 10°40' BTDC. Close 60° ALDC.

**Exhaust Valves**—Open 50° BLDC. Close 18°44' ATDC.

*These figures correct with .010" tappet clearance.*

**NEW VALVE TIMING SPECIFICATIONS**

►**for 1940 Engines with new Replacement Camshaft**

**Intake**—Open 27°30' BTDC. Close 68°10' ALDC.

**Exhaust**—Open 51°50' BLDC. Close 32°10' ATDC.

*These figures correct with .010" tappet clearance.*

**Valve Timing Check (All 1939 Engines; 1940 with original camshaft)**—With .010" tappet clearance #1 intake valve should open with piston 10°40' or .0441" BTDC. when point on flywheel approx. 3.95 teeth before 'UDC.1-6/' lines up with indicator in hole above starter. Reset tappet cl. .006" Hot.

(1940 Engines with new replacement camshaft)—With .010" tappet clearance #1 intake valve should open with piston 27°30' BTDC. when point on flywheel 10 teeth before 'UDC. 1-6/' lines up with indicator in hole above starter.

## LUBRICATION

**LUBRICATION:**—Duo-flo (pressure & positive splash).  
**Oil Pump:**—Oscillating plunger type, gear driven by camshaft. Mounted on right side of crankcase.  
**Normal Oil Pressure:**—3 lbs. (no gauge).  
**Oil Pressure Regulator:**—Located on right side of crankcase at rear. Opens at 3 lbs. Not adjustable.  
**Oil Pressure Indicator:**—Teleflash Oil Pressure indicator. For data, refer to *Electrical Equipment Index*.  
**Checking Oiling System:**—See *Hudson Shop Notes*.  
**Crankcase Capacity:**—4½ qts. (refill), 5½ (dry).  
**NOTE:**—Whenever pan installed, place 1½ qts. in upper tray, then 4 qts. through filler.

## COOLING

**Capacity:** 12½ qts. (1939), 13 qts. (1940).  
 See *Hudson Shop Notes for radiator core removal*.  
**Water Pump:**—Centrifugal, belt driven, packless type. See *Water Pump Section for complete data*.  
**Removal:**—Drain water, remove fan belt, disconnect pump hoses, remove mounting bolts and lift off.  
**Thermostat:**—Fulton. In cylinder head water outlet.  
**Setting:**—Starts to open 150-155°F. Fully open 185°.  
**Temperature Gauge:**—King-Seeley Electric K-S Nos. Dash Unit—7170 (1939 Pass. Cars), 7096 (1939 Comm.), 7121 (1939 Sta. Wagon), 8120 (1940 Early—White Lines), 7755 (1940 Later—White Diamonds).  
**Engine Unit:**—No. 7000 (All Models).  
 See *Miscellaneous Section for complete data*.

## CLUTCH

**CLUTCH:**—Own make. Single plate, cork insert type operating in oil. Overdrive Cars—equipped with heavier clutch housing and larger (10") clutch.  
 See *Clutch Section for complete data*.  
**Driven Member:**—Cork Insert type (operates in oil).  

	Inside—Diameter	Outside	No. Corks
1939	5⅜"	8 23/32"	90
1940 Std.	5⅜"	9"	90
1940 With OD.	6½"	10"	108

Corks are .244-.255" thick (1939), .077" thick (1940).  
**Pedal Adjustment:**—1½" free travel. Adjust yoke on lower end of pedal connector link. Check Automatic Clutch Control & Hill-holder (if used).  
**Clutch Oil Servicing:**—See *Hudson Shop Notes*.  
**Removal:**—Remove transmission (see below), drain clutch oil, take out mounting screws in clutch cover rim, remove clutch assembly from below.  
**Automatic Clutch Control:**—Electric type. Optl.  
 See *Clutch Section for complete data*.

## TRANSMISSION

**TRANSMISSION:**—Own Make. Constant-mesh, helical gear (second & high), sliding spur (low & reverse).  
 See *Transmission Section for complete data*.  
**Transmission Control:**—Hudson 'Handy-Shift' type. See *Transmission Section for complete data*.  
**Removal (1939):** Disconnect the "Handy-Shift" at transmission and remove Automatic Clutch Control unit (if used)—see articles in Clutch and Transmission Sections for adjustment of these units when re-installed. On cars with standard shift, remove transmission cover (install temporary cover to keep transmission clean until removed from car). Disconnect speedometer cable and front universal. Remove transmission side bumpers. Raise front end of car, support engine at rear. Remove flywheel guard, rear engine mounting bolts, clutch cross shaft (2 screws in bracket), shift engine to right. Take out clutch housing-to-engine support bolts.

**Removal (1940):** Remove front cushion and push seat back, remove accelerator pedal. Remove floor mat and transmission hole cover. Disconnect front universal joint. Remove clutch pedal return spring, assist spring, and cross-shaft. Release transmission side bumpers and rods, disconnect handy-shift controls at transmission, remove speedometer cable. Raise front end of car, remove lower flywheel guard and engine rear mounting bolts, raise rear end of engine off frame. Remove clutch housing-to-engine mounting bolts, pull transmission back and lift out.  
**NOTE:**—Transmission can be taken out without disturbing clutch housing by taking out transmission-to-clutch housing bolts.  
**Installation Note:**—Wrap one strand of soft wire around throw-out bearing oil seal to prevent leather curling over when transmission installed. Remove wire after transmission installed.

## OVERDRIVE

**Overdrive:**—Warner Model AS13-R6 with electrical 'Kick-down' control optional.  
 See *Transmission Section for complete data*.  
**Overdrive Transmission Removal:**—Same as Std. Transmission (above) except overdrive solenoid wires and control cable must also be disconnected.  
**Overdrive Solenoid:**—Delco-Remy No. 1569.  
**Throttle Control Switch:**—R-B-M Model 6013. Adjust so contact washer on accelerator linkage just contacts switch plunger with throttle wide open.  
**Control Relay:**—Auto-Lite Model HR-4201.

## UNIVERSALS

Spicer. Needle Bearing type. Model Nos. as follows:  
 Front—1271-01X (1939 Early Cars), 1261-01X (1939 Later Cars), 1261-101 (1940 Std.), 1271-101 (1940 with Overdrive).  
 Rear—1278-01X (1939 Early Cars), 1268-01X (1939 Later Cars), 1268-101 (1940 Std.), 1278-101 (1940 with overdrive).  
 See *Universals Section for complete data*.

## REAR AXLE

**REAR AXLE:**—Own Make. Semi-floating spiral bevel gear & Hotchkiss drive. See *Rear Axle Section*.  
**Ratio (1939):**—4 1/9-1 (Std. Pass Cars, Optl. Business Cars), 4 5/9-1 (Std. Business, Optl. Pass. Cars)  
**Ratio (1940):**—4 5/9-1 (Std.—Optl. with Overdrive), 4⅞-1 (Std. with Overdrive, Optl. without Overdrive), 4 1/9-1 (Optl. all models).  
**Backlash:**—.0005-.003". Screw adjustment.  
**Removal:**—Disconnect drive shaft at rear universal. Remove axle shafts (see below) and capscrews on carrier flange. Pull carrier assembly out.  
**Axle Shaft Removal:**—Remove wheel and hub (use screw type puller only), remove 4 nuts on bearing cap bolts, push bolts out of backing plate, remove cap (without disturbing brake link), remove shims, pull shaft & wheel bearing (do not drag on seal).  
**Wheel Bearing Adjustment:**—Controlled by shims under bearing cap. To adjust, remove bearing cap (see Removal directions above), add or remove shims equally at both wheels. Endplay—.002-.004".

## SHOCK ABSORBERS

**Monroe.** Direct Acting, Hydraulic type. Rear Shock Absorbers Optl. on 1939 Business Cars (not Std.).  
 Front—Monroe No. 156778 (1939), 160101 (1940—Std. Springs), 160102 (1940—Heavy Duty Springs).  
 Rear—Monroe No. 157800 (1939), 160107 (1940—Std. Springs), 160108 (1940—Heavy Duty Springs).  
 See *Shock Absorber Section for complete data*.

## FRONT SUSPENSION

### 1939 MODELS

**Front Axle:** Conventional "I" beam section axle with Elliott type ends, semi-elliptic springs.  
**Autopoise Control:**—See *Hudson Shop Notes*.  
**Kingpin Inclination:**—7° crosswise. See *Hudson Shop Notes for Kingpin Thrust Bearing servicing data*.  
**Caster:**—1-2° (equal for both wheels within ½°). Adjust with wedge shims between axle and spring.  
**Camber:**—1-1½°. Bend axle cold for minor changes.  
**Toe-In:**—0-½". Measure on inside of rims 10" above ground. Adjust by turning tie rod.  
**Steering Geometry:**—Inner Wheel 20°. Outer 17¼°.

## FRONT SUSPENSION

### 1940 MODELS

**Front Suspension (1940):** Independent, linked parallelogram type with coil springs & Autopoise control. See *Front Suspension Section for complete data*.  
**Kingpin Inclination:**—4°36' crosswise.  
**Caster:**—0° (Neg. ¼° to Pos. ¼°). Adjustable.  
**Camber:**—Positive ¼° to Pos. ¾°. Adjustable.  
**Toe In:**—0-1/16". Adjust each tube equally.  
**Steering Geometry:**—Inner wheel 24°. Outer 20°50'.

## STEERING GEAR

**Steering Gear:** Gemmer Model 305 Worm-and-Roller with "push-pull" adjustments. NOTE—1940 Cars have new Center Point Steering Linkage (for Suspension) See *Steering Gear Section for complete data*.

## BRAKES

### 1939 MODELS

**BRAKES:**—Service—Bendix Hydraulic, duo-servo, Double Anchor (90 pass. cars, Utility Coach and Coupe), Single Anchor (90 others, 98) with mechanical follow-up (pedal linked to hand brake cables). Hand lever applies rear service brakes. See *Brake Section for complete data*.  
**Drum:**—Alloy steel. Diameter 9 1/16" (90 pass. cars, Utility Coach & Coupe), 10 1/16" (90 others, 98).  
**Lining:**—Moulded (primary), woven (secondary). Thickness 7/32". Width 1¾". Length per wheel 19" (90 pass., Util. Coach & Coupe), 22½" (Others).  
 See *Hudson Shop Notes for Brake Lining change*.  
**Clearance:**—.010" at heel and toe of each shoe.

**Hand Brake:**—See Service Brakes above.

**Hill-Holder:** Optional. See article in *Brake Section*.

## BRAKES

### 1940 MODELS

**BRAKES (40T,40P):**—Service—Bendix hydraulic, Double Anchor, duo-servo type with Mechanical Follow-up. Hand lever applies rear service brakes. See *Brake Section for complete data*.  
**Drums:**—Alloy steel. Diameter—9 1/16".  
**Lining:**—Moulded (primary), woven (secondary). Width 1¾". Thickness 7/32". Length per wheel 19".  
**Clearance:**—.010" at heel and toe of each shoe.

**Hand Brake:**—See Service Brakes above.

**Hill-Holder:** Optional. See article in *Brake Section*.

**BRAKES (40 BUSINESS CARS):** Service—Same as Model 40 (above) except for: **Drums:**—Diam. 10 1/16".  
**Lining:**—Length per wheel 22½".

**ENGINE HOOD (BONNET) LOCK & FENDER PLATE REMOVAL:**—See Hudson Shop Notes.

### MODEL IDENTIFICATION

**SERIAL NUMBER:** Stamped on plate on right front door hinge pillar post First Nos. as follows:

	1939	1940
Pacemaker Six	9132576	
Six	92101	41101
Country Club Six	93101	43101
Business Cars	98101	48101

**ENGINE NUMBER:**—Same as Serial No. On top of cylinder block between #1 and 2 exhaust flanges.

### TUNE-UP

**COMPRESSION PRESSURE:** 120 lbs at 125 RPM  
**VACUUM READING:** Steady 18-21" idling at 7 MPH.

**FIRING ORDER:** 1-5-3-6-2-4. See diagram.

**SPARK PLUGS:** Champion Type J-8. 14 mm. Metric. Gaps—.032"

**IGNITION:** See Coil, Condenser, and Distributor.

**Breaker Gap**—.020" **Cam Angle** 35° (closed).

**Automatic & Vacuum Advance**—See Distributor.

**IGNITION TIMING:** See Ignition Timing.

**Std. Setting**—At TDC. with flywheel mark "UDC. 1-6/1" at indicator in inspection hole in left front face of rear motor support

**CARBURETOR:** See Carburetor & Carb. Equipment.

**Idle Setting (Single Carb.)**—Idle screw ¼-1 turn (437-S, 438-S), ¾-1½ turn (454-S) open. Idle speed 7 MPH.

**Idle Setting (Dual Carb.)**—Both idle screws ¼-1 turn (430-S), ¼-1¼ turn (430-SV, 461-S) open. Idle speed 7 MPH.

**Float Level (437-S, 438-S)**—¾" from gasket seat on cover to top of float at free end.

**Float Level (454-S)**—¾" from top of machined projection on bowl cover to top of soldered seam on free end of float.

**Float Level (430-S, 430-SV, 461-S)**—3/32" from gasket seat on cover to top of float at each end.

**Accelerating Pump (Single Carb.)**—Lower hole Normal. Inner hole (Summer), Outer hole (Winter).

**Accelerating Pump (Dual Carb.)**—Outer hole Normal. Inner hole (min stroke) when required.

**Fuel Pump Pressure:** 3 lbs. max. (98, 48), 4½ (Others).

**MANIFOLD HEAT CONTROL:** (91, 92, 98, 48)—Manual adjustment type on center of manifold behind carburetor. 1939 type should be adjusted for seasonal requirements as follows:

**Setting (91, 92, 98)**—Arrow on valve should be lined up with "W" on manifold for winter temperatures, "S" for summer temperatures. For high speed driving in extremely hot weather, line arrow up with boss ahead of "S" mark. To adjust, loosen two nuts on valve bar, turn valve by hand, tighten nuts.

**Setting (48)**—Valve set at factory with pointer toward rear in "W" position. Correct for all seasons (Models 93, 41, 43)—Automatic thermostatic coil type.

No adjustment. See that valve operates freely.

**VALVES:** See Valve Timing.

►Tappet Clearance: **CAUTION**—2 settings used:

1)—.006" Intake, .008" Exhaust, hot & idling for All 1939 Engines (& 1940 with Original Camshaft).

2)—.010" Intake, .012" Exhaust, hot & idling for All 1940 Engines with Replacement Camshaft.

These engines should carry decalcomania on valve cover specifying this .010" & .012" setting.

See Hudson Shop Notes for Replacement Camshaft data.

**STARTING:** See Battery, Starter, Generator, Regulator.

## IGNITION

**IGNITION SWITCH:** Mitchellock. Model 24-B. Type 8062 (1939), 8273 (1940). Coil connection armored.

**Ignition Lock**—Briggs & Stratton B & S No. 50184. Key Series—H601 to H1100. Groove—No. 1.

**COIL:** Auto-Lite Model IG-4656 (1939), IG-4662 (1940). Service Coil (less Switch & Cable) IG-3224JS.

**Ignition Current**—2.5 amperes idling, 4.5 stopped.

**CONDENSER:** Auto-Lite Part No. IGW-3075A (IGW-4125A, 4126A, 4201A, 4202A), IGW-3075C (IGW-4203). Capacity—.20-.25 microfarad.

**DISTRIBUTOR:** Auto-Lite Model IGW-4202A (91—see Note), IGW-4126A (92, 93 before No. 5146), IGW-4201A (91, 93 No. 5146 Up), IGW-4125A (98 before No. 6493—see Note), IGW-4202A (98 No. 6493 Up—see Note), IGW-4203 (41, 43, 48). Single breaker, 6 lobe cam, full automatic advance type. 1940 distributor (IGW-4203) has vacuum spark control.

Model 91, 98 Note—Has resistor for primary circuit (used only with low-rate generator without regulator). Resistor must be removed or IGW-4201A distributor installed when regulator used.

1940 Note—Distributor mounted at top of cylinder block at rear and driven through offset tongue-and-slot coupling by intermediate shaft. Rotation is now counter-clockwise (reversed from 1939 models).

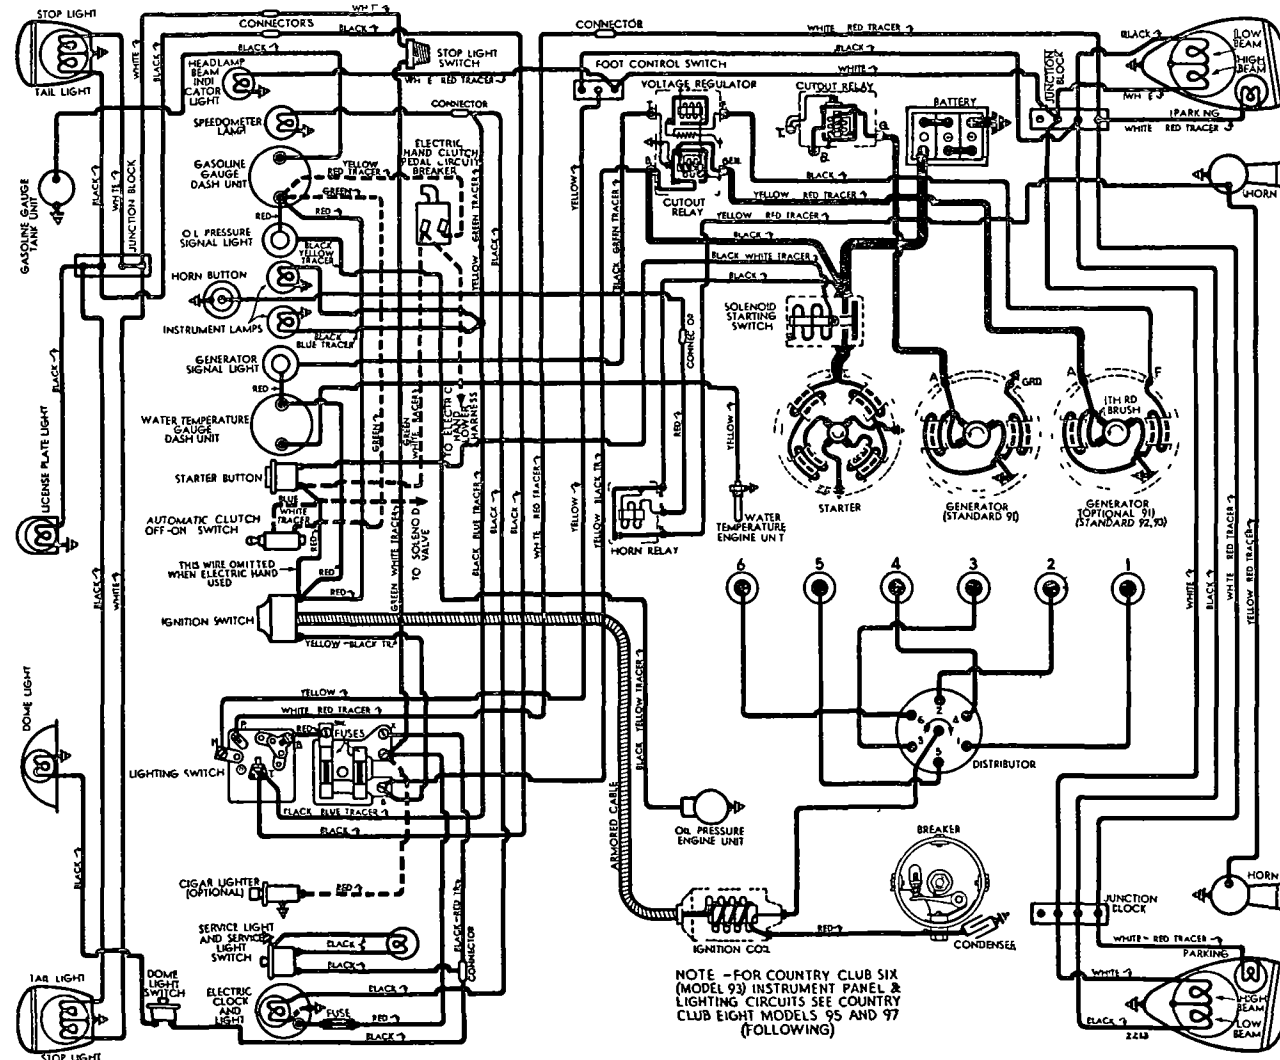

**Breaker Gap**—.020".

**Cam Angle or Dwell**—35° closed, 25° open (dist.).

**Breaker Arm Spring Tension**—17-20 ounces.

**Rotation**—Clockwise (for 1939 cars), counter-clockwise (1940), viewed from above.

Automatic Advance		Engine	
Distributor	Engine	Distributor	Engine
Degrees	R.P.M.	Degrees	R.P.M.
Start	300	0	600
3	400	6	800
7	825	14	1650
11	1255	22	2510
14	1580	28	3160

**Vacuum Spark Control (IGW-4203)**—On distributor hold-down plate and linked to quadrant scale on side of distributor. Provides additional advance at speeds above idling (vacuum port in carburetor above throttle) except when engine is accelerated or operated with wide open throttle when spark is retarded by return spring within unit.

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start.....	0°	5 7/8"
4°	8°	9 1/4"
7 5/8°	15°	11 1/4"

**Fuel Compensator**—Manual adjustment for octane rating of fuel used. See Ignition Timing.

**Removal (1939)**: Distributor mounted on right side of crankcase. To remove, take out hold-down screw in advance arm.

**Removal (1940)**: Distributor mounted at top rear of cylinder block. To remove, disconnect vacuum line, take out cylinder head stud nuts on hold-down plate.

## IGNITION TIMING

**IGNITION TIMING**:—Initial setting (for 70 octane fuel). See Fuel Compensator Setting following.

**Flywheel Degrees**      **Piston Position**

All engines ..... 0° at TDC..... .0000" TDC

**Timing**—With #1 piston on compression, turn engine over until piston reaches top dead center, when flywheel mark 'UDC.1-6/' lines up with pointer in left front face of rear motor support above starter. Loosen advance diaphragm screw (at rear end of link), rotate distributor counter-clockwise to limit of slot, then slowly rotate clockwise until contacts begin to open, tighten diaphragm screw securely. Check Fuel Compensator Setting below.

**Timing (Using Synchroscope)**—Recommended by manufacturer. Mark flywheel with white chalk or paint, connect at #6 spark plug. Idle engine and adjust distributor as directed above.

**Fuel Compensator Setting**—Road test car with engine at normal operating temperature. With car running at 7 MPH slight ping should occur between 10-15 MPH when accelerating with wide open throttle. To adjust, loosen advance diaphragm screw, rotate distributor one graduation on quadrant scale clockwise (if no ping), counter-clockwise (if ping too severe), repeat test. Final setting not more than 3/4" before 'UDC.1-6/' mark.

## CARBURETOR

### SINGLE BARREL

(Model 91, 92—First Cars, 98): Carter Model W1 Vacuum Type 438-S (Std.), 437-S (Cars with Automatic Clutch Control). 1 1/4" Single barrel down-draft types. NOTE—Model 92 (after No. 31834) fitted with Carter WDO dual carburetor.

(Model 48)—Carter Model WA-1 Type 454-S. 1 1/4" single barrel down-draft type with Fast Idle and Automatic Choke.

For complete data, refer to Carburetor Index.

**Idle Adjustment**—With engine warm and running at slow idle speed (choke valve wide open, fast idle inoperative), set throttle stop screw for 7 MPH idle speed. Adjust idle adjusting screw until engine fires smoothly—idle screw approximately 1/4-1 turn open (437-S, 438-S), 3/4-1 1/2 turn open (454-S)—turn screw in for leaner mixture. Readjust idle speed.

**Accelerating Pump Setting**—Pump arm has 3 holes for pump link. Set as follows:

Lower Hole (med. stroke)—Normal setting.

Inner Hole (min.)—Hot weather, high-test fuel.

Upper Hole (max.)—Cold weather, low-test fuel.

**Float Level (437-S, 438-S)**—3/8" from gasket seat on cover to top of float at free end (invert to check).

**Float Level (454-S)**—3/8" from top of machined projection on bowl cover to top of soldered seam on free end of float (invert to check).

**Throttle Cracker (437-S, 438-S only)**:—Connecting linkage between choke valve and throttle lever. Opens throttle .036-.040" with choke valve closed.

**Fast Idle (454-S)**: Integral with carburetor.

For complete data, refer to Carburetion Equip. Index. Setting—Adjust by bending connecting link offset for 5/8" choke valve opening with stop screw against (not on) first step of fast idle cam.

NOTE—With choke valve fully closed and pin on fast idle cam at bottom of slot in fast idle link, clearance between top of fast idle cam (behind link) and trip lever should be .010". To adjust, bend trip lever stop (on engine side of link).

**Automatic Choke (454-S)**: Carter Climatic Control (Single Carburetors).

See Carburetion Equipment Section for complete data. Setting—Centered (at index mark).

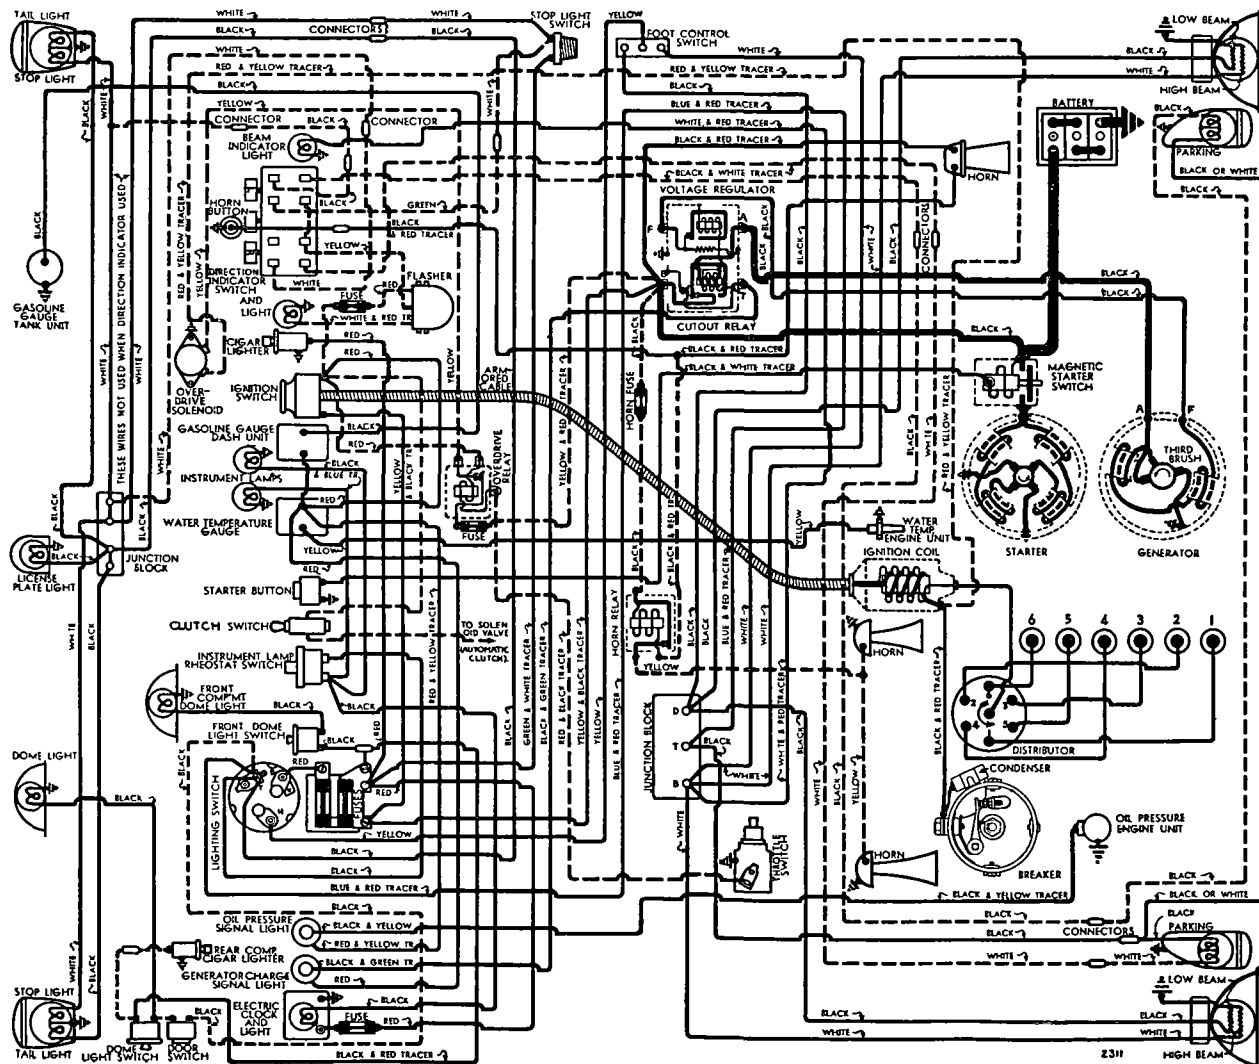

## CARBURETOR

### DUAL (DOUBLE BARREL)

(Model 92—After No. 31834, 93, 41, 43): Carter Model WDO Type 430-S (1939), 430-SV (1940 before Eng. No. 3116), 461-S (1940 after Eng. No. 3116). 1" Dual (double barrel) down-draft types with Fast Idle and Automatic Choke.

For complete data, refer to Carburetor Index.

**Idle Adjustment**—With engine warm and running at slow idle speed (Fast Idle and Automatic Choke inoperative), set throttle stop screw to idle engine at

## CONTINUED FROM PRECEDING PAGE

7 MPH. Turn each idle adjusting screw (in succession) in until engine begins to miss, then turn screw out until engine begins to roll, finally turn screw in until engine fires smoothly. Final setting of both screws should be  $\frac{1}{4}$ -1 turn open (1939),  $\frac{1}{4}$ -1 $\frac{1}{4}$  turn open (1940). Readjust for 7 MPH idle speed.

**Accelerating Pump Setting**—Pump lever (under dust cover on top of bowl) has two holes for pump link engagement. Adjust as follows:

Outer Hole (max. stroke)—Normal setting.

Inner Hole (min. stroke)—If less charge required.

**Float Level**— $\frac{3}{32}$ " from gasket seat on cover to top of float at each end (invert to check).

**Fast Idle** (430-S, 430-SV, 461-S): Integral with carburetor.

For complete data, refer to Carburetor Index.

**Setting**—Adjust fast idle screw so that throttle opening is .018" with choke valve tightly closed.

**Automatic Choke**: Carter Climatic Control (Dual Carburetors).

For complete data, refer to Carburetion Equip. Index.

**Setting**—Center thermostatic coil housing.

## CARB. EQUIPMENT

**Air Cleaner**: AC No. 1528161 (Std. 91, 92, 93, 41, 43), 1528160 (91, 92, 93 with Electric Hand), 1528159 (Std. 98, 48), 1523937 (98 with Electric Hand), Oil-wetted type. United heavy duty Oil-bath type Optl.

**Fuel Pump**: AC Type AK, No. 1523289 (Std. 91, 92, 93, 41, 43); Type AF, No. 1523753 (Std. 98, 48). Diaphragm type fuel pump. Combination Fuel-and-Vacuum Pump No. 1523297 (91, 92, 93), 1523937 (98) Optl.

For complete data, refer to Carburetion Equip. Index.

**Gasoline Gauge**:—King-Seeley Electric. K-S Nos. Dash Unit—No. 6783 (91, 92), 7415 (93), 7175 (98 Pass. Cars), 7098 (98 Comm.), 8118 (1940 Early—White Lines), 7752 (1940 Later—White Diamonds). Tank Unit—No. 5835 (1939 First), 7500 (1939 Later & Service Unit), 7550 (1940 All Models).

For complete data, refer to Carburetion Equip. Index.

## BATTERY

**BATTERY**:—National, Type HT-17. 6 volt, 17 plate, 96 ampere hour capacity (20 hour rate).

**Starting Capacity**—120 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 3.5 minutes. Five second voltage—4.24 volts.

**Grounded Terminal**—Positive (+) grounded to frame. Engine Ground—Strap connector from rear motor support to frame.

**Location**—Left side of engine comp't. (under hood).

## STARTER

**Auto-Lite Model MAB-4075** (92, 93 Early), MAB-4100 (91 All; 92, 93 Later), MAJ-4057 (98 Early), MAJ-4061 (98 Later Cars), MZ-4079 or 4079A (1940 All Models).

**Armature**—Auto-Lite MAB-2113 (All MAB- Starters), MAJ-2062 (All MAJ- Starters), MZ-2138 (All MZ- Starters).

**Drive**—Inboard Barrel Type Bendix Drives Nos. A-1673 (MAB-4075, MAJ-4057), No. A-1684 (All others).

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—42-53 ozs. (new brushes).

**Cranking Engine**—150 RPM., 125 amperes, 5.4 volts.

## Performance Data

## MAJ-4057, 4061

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	4100	5.5	67
3 "	2500	5.5	100
2.25 "	1450	5.0	200
4.6 "	960	4.5	300
7.3 "	575	4.0	400
10.3 "	225	3.5	500
12.0 "	Lock	3.0	550
17.0 "	Lock	4.0	750

## MAB-4075, 4100

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	3700	5.5	60
3.4 "	1100	5.0	200
6.6 "	695	4.5	300
10.15 "	420	4.0	400
15.8 "	Lock	3.0	582
22.5 "	Lock	4.0	775

## MZ-4079, 4079A

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	4300	5.5	70
.65 "	2500	5.5	100
2.55 "	1325	5.0	200
4.95 "	750	4.5	300
7.65 "	220	4.0	400
7.8 "	Lock	3.0	420
11.8 "	Lock	4.0	560

**Removal**:—Flange (new heavier casting) mounted on left front face of rear motor support. To remove, take out flange mounting screws.

**Starting Switch** (MAB-4075, 4100): Auto-Lite Model SS-4001. Magnetic type. Mounted on starter and controlled by pushbutton on instrument panel. Operative only with ignition "on" and clutch disengaged on cars with Electric Hand.

(MAJ-4057, 4061)—Auto-Lite Model SW-4010. Manual type. Mounted on starter and operated by button directly below steering column.

(MZ-4079, 4079A)—R-B-M Model 5607. Magnetic type. On starter, controlled by pushbutton on instrument panel Douglas #5751. NOTE—Switch is new type.

## GENERATOR

## MODELS 91 &amp; 98

**Auto-Lite Model GDF-4803A-1** (91 First 15000 Cars), GDS-4803A-1 (91 After 15000 Cars, 98 Optl.), GBM-4609A (98 Std.). Third brush control type. Used with Cutout Relay. Ventilated by fan on drive pulley.

**Armature**—Auto-Lite No. GBM-2065 (GBM-4609A), GDF-2006 (GDF-4803A-1 & GDS-4803A-1).

**Charging Rate Adjustment**—Remove commutator cover band, shift third brush by hand counter-clockwise to increase, or clockwise to decrease charging rate. Brush held in position by friction.

**Maximum Charging Rate**—As given in table below.

## Performance Data—GBM-4609A

Cold			Hot

16	7.7	1775	16	7.8	1960
20	8.0	2550	18.5	8.0	2600

**Rotation**—Counter-clockwise at commutator end. **Brush Spring Tension**—50-60 ozs. (GBM- Gen.), 53 ozs. (GDF- Gen.) for new brushes.

**Field Current**—3.8-4.2 amperes (GBM- Gen.), 1.90-2.10 amperes (GDF- Gen.), 1.65-1.82 amperes (GDS- Gen.) at 6.0 volts.

**Motoring Current**—5.7-6.3 amperes (GBM- Gen.), 4.6-5.2 amperes (GDF- Gen.), 4.8-5.0 amperes (GDS- Gen.) at 6.0 volts.

**Removal**:—Pivot mounted at left front of engine. To remove, take out pivot and clamp bolts.

**Belt Adjustment**:—Swing generator out until possible belt deflection midway between generator and fan pulleys is  $\frac{3}{4}$ " (measure with straightedge).

## GENERATOR

## MODELS 92, 93, 41, 43, 48

**Auto-Lite Model GDS-4801A** (92, 93, 48 Std.; 98 Optl.), GEC-4801A (41, 43 Std.). Third brush control with external vibrating voltage regulation. Ventilated by fan on drive pulley.

**Armature**—GDF-2006F (GDS), GDZ-2006F (GEC). **Maximum Charging Rate**—GDS—32-34 amperes (cold), 8.0 volts, 2900 RPM or approx. 35 MPH. GEC—39-44 amperes (cold), 8.0 volts, 3350 RPM or approx. 43 MPH. Actual charging rate controlled by Voltage Regulator and dependent on battery condition. See Regulator. To check output, ground generator "F" terminal (to eliminate regulator).

**Charging Rate Adjustment**—See Regulator data. Third brush setting: GDS—1 commutator bar minus 1 mica strip minimum, 1 commutator bar maximum from insulated (nearest) main brush. GEC—1 commutator bar Min., 1 comm. bar plus 1 mica strip Max. Setting adjustable by shifting third brush.

## Performance Data—GDS-4801A

## Performance Data—GEC-4801A

Cold			Hot		
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	960	0	6.4	1040
4	6.55	1060	4	6.6	1140
8	6.7	1180	8	6.8	1280
12	6.85	1280	12	6.95	1440
16	7.0	1400	16	7.15	1600
20	7.15	1550	20	7.35	1820
24	7.25	1700	24	7.55	2090
28	7.5	1890	28	7.75	2440
32	7.65	2100	32	7.9	3000
36	7.8	2375	34	8.0	3800
41	8.0	3350			

**Rotation**—Counter-clockwise at commutator end. **Brush Spring Tension**—53 ozs. max. (new brushes). **Field Current**—1.65-1.82 amperes (GDS), 1.60-1.78 amperes (GEC) at 6.0 volts.

**Motoring Current**—5.10-5.45 (GDS), 4.85-5.4 (GEC) amperes at 6.0 volts.

**Removal & Belt Adjustment:** Same as 91 & 98 above.

## GENERATOR

### SPECIAL EQUIPMENT

**SPECIAL GENERATORS:**—Auto-Lite GEG-4801A, GEA-4803B, GEB-4802B (Police etc.). Used with Regulator Models VRP-4008A (GEG Gen.), VRP-4008B (GEA Gen.), VRP-4008C (GEB Gen.). Refer to 1940 Hudson Eight article (following) for complete data.

**SPECIAL GENERATORS:**—Other Makes—Refer to Electrical Equipment Index for 'Special Generators' for data on special Generators and Regulators which may be found installed on these models.

## CUTOUT RELAY

**Auto-Lite Model CBA-4003** (Used with GBM-4609A, GDF-4803A-1, GDS-4803A-1 Gen.). Mounted on engine side of dash. Relay has extra set of contacts for Generator "Teleflash" signal Charging Indicator. For complete data, refer to Electrical Equipment Index.

**Cuts In**—6.75-7.5 volts.

**Cuts Out**—1.5-4.5 ampere discharge current (after charging at 16 amperes).

**Contact Gap**—.015-.045" with upper ground contacts closed (upper contacts must open when main contacts close).

**Air Gap**—.010-.030" with contacts closed.

## REGULATOR

**Auto-Lite Model VRD-4008A** (1939), VRD-4008-B (1940 First Cars), VRR-4001A (1940 Later Cars). Used with GDS-4801A & GEC-4801A Gen. Cutout Relay and vibrating Voltage Regulator in case on dash. Cutout Relay has special upper contacts for Generator Teleflash Signal control.

For complete data, refer to Electrical Equipment Index. NOTE—Regulator case cover is sealed. Serviced on exchange basis if seals not broken.

### Cutout Relay

**Cuts In**—6.4-7.0 volts (VRD), 6.4-6.6 volts (VRR) 825 RPM., 9.4 MPH.

**Cuts Out**—5-3.0 amperes (before Regulator Serial No. 2T-000001), 1.5-4.5 amperes (after No. 2T-000001) (VRD); 4.2-4.8 volts with approximately 4-6 amperes discharge current (VRR).

**Contact Gap**—.015" minimum with ground contacts closed (must open when main contacts close).

**Air Gap**—.034-.038" (VRD), .031-.034" (VRR), at hinge end of core (contacts open, ground contacts closed).

### Voltage Regulator

**Setting**—7.1-7.4 volts at 110° F. (all models).

**Checking** (without breaking seal) & Adjustment—See Electrical Equipment Section.

**Contact Gap**—.010-.020" (VRD), .012" Min. (VRR) (armature against stop pin).

**Air Gap**—.0595-.0625" (VRD), .048-.052" (VRR) with contacts just opening.

## LIGHTING

**Headlamps**—Hall Pre-focused type (1939), Hall "Sealed Beam" type (1940).

For complete data, refer to Electrical Equipment Index.

**Headlamp Adjustment**—Aim upper beam of each headlamp straight ahead with hot spot centered on horizontal line 3" below lamp center height.

**Beam Indicator**—Red pilot bulb on speedometer dial. Lighted with Country (upper) beam in use.

**Direction Indicator**—Standard equipment on 43, Optl. on 40, 41, 48. See Electrical Equipment Section.

### Switches

**Lighting**—R-B-M No. 1725 (1939), Cole-Hersee (1940).

**Beam Selector**—Douglas or R-B-M No. 1076 (1939), R-B-M No. 2467 (1940).

**Instrument** (43 only)—R-B-M Model 5203.

## MISC. ELECTRICAL

**SIGNAL LIGHTS:**—Generator Charge and Oil Pressure Indicators. Hudson Teleflash Electric type.

For complete data, refer to Electrical Equipment Index.

**FUSES:**—Lighting—20 ampere. Lower fuse on fuse block on lower edge of instrument panel to right of steering column. Accessory—20 amperes. Top fuse on fuse block. NOTE—Silver-plated fuses used.

**Twin Horns**—30 ampere on block on engine dash. Transmission Overdrive Control—20 amp. On Relay.

**Direction Indicator**—10 ampere. In case on back of instrument panel near speedometer.

**Electric Clock**—2 ampere on back of clock.

**HORNS:** Single—Schwarze Type 42 (98 before #7418), EX3099 (98 After #7418), Schwarze Electric type (48).

**Dual Horns**—Vibrator type twin horns operated by relay. Delco-Remy K-33 (92), Sparton (93, 41, 43).

**Horn Relay:** R-B-M Model 4751 (1939), 4790 (1940).

**Contacts Close**—3.5-4.5 volts. Current Draw ¾ amp.

## ENGINE

**ENGINE SPECIFICATIONS:**—6 cylinder, 'L' head type.

**Bore**—3". **Stroke**—5".

**Displacement**—212 cubic inches. Rated HP 21.6.

**Developed Horsepower**—For each model as follows:

91, 92, 98 (Single Carb.) ..... 96 HP. at 3900 RPM.

92, 93 (Dual Carb.) ..... 101 HP. at 4000 RPM.

48 (Single Carb.) ..... 98 HP. at 4000 RPM.

41, 43 (Dual Carb.) ..... 102 HP. at 4000 RPM.

**Compression Ratio**—6.25-1 '39, 6.5-1 '40 Iron heads.

**Compression & Vacuum Reading**—See Tune-up data.

**PISTONS:**—Own Lo-Ex aluminum alloy, "T" slot, cam ground type. Use finished replacement pistons.

**Weight**—10.5 ozs. (stripped). Length—3 3/16".

**Removal**—Pistons and rods removed from above.

**Clearance**—Top .016". Skirt .001-.002".

**Original Bore Sizes & Replacement Pistons:**—See Hudson Shop Notes for complete data.

**Fitting New Pistons:**—Use .0015" feeler ½" wide inserted between piston and cylinder wall on side opposite slot at right angles to pin. Pull to withdraw feeler must be within 3-4 lbs.

**Installing Pistons:**—Slot away from camshaft.

**PISTON RINGS:**—2 compression, 2 oil rings (1 above pin, 1 below pin). Rings positioned by pin in groove.

Models 91, 92, 93, 98 (1939)

Ring	Width	End Gap	Side Clearance
Compression	3/32"	.005-.010"	.001"
Oil Control①	3/16"	.005-.010"	.001"
Oil Control②	5/32"	.005-.010"	.001"

①—Both rings on early cars, top ring on later cars.

②—Lower oil ring on later cars. See Hudson Shop

Notes for complete data on Oil Ring Width change.

Models 41, 43, 48 (1940)

Ring	Width	End Gap	Side Clearance
Compression	3/32"	.009-.011"	.001"
Oil Cont. (#1)	3/16"	.009-.011"	.001"
Oil Cont. (#2)	5/32"	.009-.011"	.001"

**Replacement Rings:**—See Hudson Shop Notes for data.

**PISTON PIN:**—Diameter—¾". Length—2 7/16".

**Floating Type.** Retained by locking rings. See Hudson Shop Notes for Pin Servicing data.

**Pin Fit in Piston**—.0003" clearance (hand push fit) with piston heated to 200°F.

**Pin Fit in Rod Bushing**—.0003" clearance.

**Replacement Pins:**—Std., .002", .005", .010" oversize.

**CONNECTING ROD:**—Weight 30 ozs. Length 8 3/16".

**Upper Bearing** (Piston Pin Bushing)—Bronze.

**Crankpin Journal Diameter** 1 15/16".

**Lower Bearing**—'Bermax' alloy spun type. Exchange rods furnished Std. & .010" undersize. See Crankshaft

Size Code in Hudson Shop Notes for bearing sizes.

**Clearance**—.001". **Sideplay**—.006-.010".

**Bearing Adjustment:**—None (no shims). Replace rods. See Hudson Shop Notes for Palnut (locknut) data.

**Installing Rods:**—Offset. Install rods with widest half of bearing toward rear (#1, 2, 4), toward front (#3, 5, 6). Oil scoop on all rods toward camshaft.

**CRANKSHAFT:**—3 bearing, integral counterweights. See Hudson Shop Notes for Crankshaft and Vibration

Dampener Removal, Main Bearing Removal, Installation, Replacement Bearings and Line-reaming data.

**Journal Diameters**—#1, 2 11/32"; #2, 2 3/8"; #3, 2 13/32".

See Crankshaft Size Code Note in Hudson Shop Notes for original bearing sizes.

**Bearings**—Bronze backed, Bermax alloy. Bearings secured in cap and crankcase by brass screws.

**Clearance**—.001".

**Bearing Adjustment:**—Shims. See Hudson Shop Notes.

► **CAUTION**—Replacement of main bearings requires removal of crankshaft. Bearings retained by brass screws.

**Replacement Bearings:** See Hudson Shop Notes.

**End Thrust:**—Taken by center bearing. Replace bearing if endplay excessive. Endplay—.006-.012".

**CAMSHAFT:**—3 bearing, gear driven. See Hudson Shop Notes for Camshaft Removal & Special Bearing Installation

(Cutout must be made in rear bearing on 1940)

**Journal Diameters** #1, 2"; #2, 1 31/32"; #3 (1939) 1 1/2"; #3 (1940), 1 9/16".

**Bearings**—Babbitt type. Clearance—.0025".

► **Replacement Camshaft for 1940 Engines:** Original 159505 camshaft superseded by new re-designed camshaft with new cam contours.

► **CAUTION**—When above shaft installed, Tappet Clearance and Valve Timing changed. See Valve

Timing (following) or see Replacement Camshaft in Hudson Shop Notes.

**End Thrust:**—Thrust washer between camshaft flange and crankcase. Spring loaded button in camshaft hub bears against thrust plate on gear cover.

**Timing Gears:**—Crankshaft gear cast-iron. Camshaft gear GE or Continental Diamond Fibre Bakelite.

1941 Type Timing Gear Set can be installed on these models. Refer to Hudson Shop Notes for data.

**Camshaft Setting:**—Mesh marked crankshaft gear tooth between two marked teeth on camshaft gear.

**VALVES:**—Head Diameter Stem Diameter Length

All valves	1 1/2"	1 1/32"	5 11/32"
Seat Angle	45°	45°	45°
Lift	11/32"	11/32"	11/32"
Stem Clearance	.0025"	.0025"	.004"

Intake ..... 45° ..... 11/32" ..... .0025"

Exhaust ..... 45° ..... 11/32" ..... .004"

**Valve Guides:**—2 9/16" long. Install with top 1 1/16" below top of block and finish ream to size.

**Valve Springs:**—Dampeners (originally used on bottom of spgs.) should be omitted when valves serviced.

**Free length** 2 17/64". **Spring Pressure** Length

Valve Closed ..... 40 lbs. .... 2"

Valve Open ..... 80 lbs. .... 1 21/32"

NOTE—Replace if pressure below 34 lbs. at 2".

**Valve Lifters:**—Roller shoe type, fitted in removable guides. See Hudson Shop Notes for lifter removal.

## CONTINUED FR M PRECEDING PA E

## VALVE TIMING

▶Tappet Clearance: CAUTION—2 settings used:

- 1)—.006" Intake, .008" Exhaust, hot & idling for All 1939 Engines (& 1940 with Original Camshaft).
- 2)—.010" Intake, .012" Exhaust, hot & idling for All 1940 Engines with Replacement Camshaft.  
These engines should carry decalcomania on valve cover specifying this .010" & .012" setting.

VALVE TIMING: See Camshaft Setting above.

▶1940 Valve Timing Change: On 1940 engines when new replacement camshaft installed, intake opening point advanced to 27°30' BTDC. or 10 flywheel teeth ahead of 'UDC. 1-6/' flywheel mark.

## ORIGINAL VALVE TIMING SPECIFICATIONS

▶for All 1939 Engines (& 1940 with Original Camshaft)  
Intake Valves—Open 10°40' BTDC. Close 60° ALDC.  
Exhaust Valves—Open 50° BLDC. Close 18°44' ATDC.

## NEW VALVE TIMING SPECIFICATIONS

▶for 1940 Engines with new Replacement Camshaft

Intake—Open 27°30' BTDC. Close 68°10' ALDC.  
Exhaust—Open 51°50' BLDC. Close 32°10' ATDC.  
These figures correct with .010" tappet clearance.

Valve Timing Check (All 1939 Engines; 1940 with original camshaft)—With .010" tappet clearance #1 intake valve should open with piston 10°40' or .0562" BTDC when a point on the flywheel approx. 3.94 teeth before 'UDC. 1-6/' lines up with indicator in hole above starter. Reset tappet cl. .006" Hot.

(1940 Engines with new replacement camshaft)—With .010" tappet clearance #1 intake valve should open with piston 27°30' BTDC. when point on flywheel 10 teeth before 'UDC. 1-6/' lines up with indicator in hole above starter.

## LUBRICATION

LUBRICATION:—Duo-flo (pressure &amp; positive splash).

Oil Pump:—Oscillating plunger type, gear driven by camshaft. Mounted on right side of crankcase.  
Normal Oil Pressure—3 lbs. (no gauge).

Oil Pressure Regulator:—Located on right side of crankcase at rear. Opens at 3 lbs. Not adjustable.

Oil Pressure Indicator:—Teleflash Oil Pressure indicator. For data, refer to Electrical Equipment Index.

Checking Oiling System:—See Hudson Shop Notes.

Crankcase Capacity:—4½ qts. (refill), 5½ (dry).

NOTE—If pan off, install 1½ qts. in upper tray.

## COOLING

Capacity: 12½ qts. (1939), 13 qts. (1940).

See Hudson Shop Notes for radiator core removal.

Water Pump:—Centrifugal, belt driven, packless type.  
See Water Pump Section for complete data.

Thermostat:—Fulton. In cylinder head water outlet.

Setting—Starts to open 150-155°F. Fully open 185°.

Temperature Gauge:—King-Seeley Electric K-S Nos.

Dash Unit—No. 7121 (91, 92), 7420 (93), 7170 (98

Pass. Cars), 7096 (98 Comm.), 8120 (1940 Early—

White Lines), 7755 (1940 Later—White Diamonds).

Engine Unit—No. 7000 (1939-40 All Models).

See Miscellaneous Section for complete data.

## CLUTCH

CLUTCH:—Own make. Single plate, cork insert type operating in oil. Overdrive Cars—equipped with heavier clutch housing and larger redesigned disc  
See Clutch Section for complete data.

Driven Member—Cork Insert type (operates in oil).

Inside—Diameter	Outside	No. Corks
91,92,98 (Sedan) 5½"	8 23/32"	90
93,98 (Comm.) 6½"	9 27/32"	108
41 (without OD) 5½"	9"	90
41 OvDr, 43, 48... 6½"	10"	108

Corks are .244-.255" thick (1939), .077" (1940).

Pedal Adjustment:—1½" free travel. Adjust yoke on lower end of pedal connector link. Check Automatic Clutch Control &amp; Hill-holder (if used).

Clutch Oil Servicing:—See Hudson Shop Notes.

Removal:—Remove transmission (see below), drain clutch oil, take out mounting screws in clutch cover rim, remove clutch assembly from below.

Automatic Clutch Control:—Electric type. Optl.

See Clutch Section for complete data.

## TRANSMISSION

TRANSMISSION:—Own Make. Constant-mesh, helical gear (second & high), sliding spur (low & reverse).  
See Transmission Section for complete data.Transmission Control:—Hudson 'Handy-Shift' type.  
See Transmission Section for complete data.

Removal (1939): Disconnect "Handy-shift" controls at transmission, remove Automatic Clutch Control unit and Electric Hand power unit after disconnecting all wires and vacuum and air hoses if car is so equipped (NOTE—See Clutch and Trans. Sections for necessary adjustments on these units when re-installed). Disconnect transmission side bumpers, interlock straps, and speedometer cable. Disconnect drive shaft at front universal, support engine at rear, free rear engine mounting. Take out bell housing-to-engine mounting bolts, pull transmission straight back and remove.

Removal (1940): Remove front cushion and push seat back, remove accelerator pedal. Remove floor mat and transmission hole cover. Disconnect front universal joint. Remove clutch pedal return spring, assist spring, and cross-shaft. Release transmission side bumpers and rods, disconnect handy-shift controls at transmission, remove speedometer cable. Raise front end of car, remove lower flywheel guard and engine rear mounting bolts, raise rear end of engine off frame. Remove clutch housing-to-engine mounting bolts, pull transmission back and lift out. NOTE—Transmission can be taken out without disturbing clutch housing by taking out transmission-to-clutch housing bolts.

Installation Note—Wrap one strand of soft wire around throw-out bearing oil seal to prevent leather curling over when transmission installed. Remove wire after transmission installed.

## OVERDRIVE

Overdrive:—Warner Model AS13-R6 with electrical 'Kick-down' control optional.

See Transmission Section for complete data.

Overdrive Transmission Removal—Same as Std. Transmission (above) except overdrive solenoid wires and control cable must also be disconnected.

Overdrive Solenoid—Delco-Remy No. 1569.

Throttle Control Switch—R-B-M Model 6013. Adjust so contact washer on accelerator linkage just contacts switch plunger with throttle wide open.

Control Relay—Auto-Lite Model HR-4201.

## UNIVERSALS

Spicer. Needle bearing type. Model Nos. as follows:  
Front—1271-01X (91,92,93), 1281-01X (98), 1271-101 (41,43,48). Rear—1278-01X ('39), 1278-101 ('40).  
See Universals Section for complete data.

## REAR AXLE

REAR AXLE:—Own Make. Semi-floating spiral bevel gear & Hotchkiss drive. See Rear Axle Section.  
Ratio—4 1/9-1 (Std., Optl. on Overdrive), 4 5/9-1 (Std. on Overdrive, Optl. reg. transmission).  
Backlash—.0005-.003". Screw adjustment.

Removal:—Remove wheel and hub assembly (use screw type puller), remove nuts on 4 bearing cap bolts, push bolts back through backing plate, remove cap (without disturbing brake link), remove shims, pull axle shaft and wheel bearing. Disconnect drive shaft at rear universal, remove nuts on housing to carrier studs, withdraw carrier.

Wheel Bearing Adjustment:—Controlled by shims under bearing cap. To adjust, remove bearing cap (see Removal directions above), add or remove shims equally at both wheels. Endplay—.002-.004".

## SHOCK ABSORBERS

SHOCK ABSORBERS:—Direct acting, hydraulic types.

Car Model	Make	Front	Rear
91, 92.....	Monroe.....	157400.....	157801.....
93 (Dom. & Exp.).....	Delco.....	1113-R.....	1120-S.....
41, 48 (std. springs).....	Monroe.....	160101.....	160107.....
41, 48 (hvy. springs).....	Monroe.....	160102.....	160108.....
43 (Dom. & Exp.).....	Delco.....	1007-C.....	1008-S.....

See Shock Absorber Section for complete data.

## FRONT SUSPENSION

## 1939 MODELS

Front Suspension (1939): Conventional "T" beam section front axle with Elliott type ends and semi-elliptic springs with Autopulse Control.

Autopulse Control—See Hudson Shop Notes.

Kingpin Inclination—7° crosswise. See Hudson Shop Notes for Kingpin Thrust Bearing data.

Caster—1-2° and equal within ½° for both wheels. To adjust, loosen capscrews at forward end of torque arm, insert shim between arm and axle at upper screw, or remove shim at lower screw to decrease caster, remove shim at upper screw or insert shim at lower screw to increase caster. Shims .020" thick, change caster ½°.

Camber—1-1½°. Bend axle cold for minor changes.

Toe In—0-1/8" measured 10" up from ground.

Steering Geometry—Inner wheel 20°. Outer 17¼°.

## 1940 MODELS

Front Suspension (1940): Independent, linked parallelogram type with coil springs & Autopulse control.  
See Front Suspension Section for complete data.

Kingpin Inclination—4°36' crosswise.

Caster—0° (Neg. ¼° to Pos. ¼°). Adjustable.

Camber—Positive ¼° to Pos. ¾°. Adjustable.

Toe In—0-1/16". Adjust each tube equally.

Steering Geometry—Inner wheel 24°. Outer 20°50'.

## STEERING GEAR

Steering Gear: Gemmer Model 305 Worm-and-Roller  
See Steering Gear Section for complete data.

## BRAKES

BRAKES:—Service. Bendix hydraulic, duo-servo, single anchor type with eccentric adjustment. Mechanical follow-up (pedal linked to hand brake cables) provided. Hand lever applies rear service brakes.  
See Brake Section for complete data.

Drums Steel. Diam 11 1/16" (43), 10 1/16" (others).

Lining—Moulded (primary), woven (secondary).

Thickness 7/32". Width 1¾". Length per wheel 22½".

(except 43), 23 15/16" (43).

Clearance—.010" at heel and toe of each shoe.

Hand Brake:—See Service Brakes above.

Hill-Holder: Optional. See article in Brake Section..

**ENGINE HOOD (BONNET) LOCK & FENDER PLATE REMOVAL:**—See *Hudson Shop Notes*.

### MODEL IDENTIFICATION

**SERIAL NUMBER:** Stamped on right front door hinge pillar post. First Nos. as follows:

	1939	1940
Eight .....		44101
Deluxe Eight .....		45101
Country Club Eight .....	95101	47101
Country Club Cust. Sedan .....	97101	

**ENGINE NUMBER:**—Same as Serial No. On top of engine block between #1 & 2 exhaust flanges.

### TUNE-UP

**COMPRESSION:** Ratio—6.25-1 (1939), 6.5-1 (1940).

Pressure—118 lbs. (1939), 120 lbs. (1940) at cranking speed of 125 RPM.

**VACUUM READING:**—18-21" steady idling at 7 MPH.

**FIRING ORDER:** 1-6-2-5-8-3-7-4. See diagram.

**SPARK PLUGS:** Champion Type J-8. 14 mm. Metric. Gaps—.032"

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.017" Cam Angle 31° (closed).

Automatic Advance—17.5° max at 1700 RPM (distr.).

**IGNITION TIMING:** See Ignition Timing.

Std. Setting—At TDC. with flywheel mark "UDC. 1-8/" at indicator in inspection hole in left front face of rear motor support.

**CARBURETION:** See Carburetor & Carb. Equipment.

Idle Setting—Both idle screws ¼-1 turn open (430-S), ½-1½ turns open (455-S). Idle speed 7 MPH.

Float Level—3/32" from gasket seat on cover to top of float at each end (invert to check).

Accelerating Pump—Outer hole (max. stroke) Normal. Inner hole (min. stroke) when required.

Fuel Pump Pressure: 4 lbs. max. (Comb. fuel & vacuum pump), 4½ lbs. max. (fuel pump only).

**MANIFOLD HEAT CONTROL:**—Automatic thermostat coil type. No adjustment required.

**VALVES:** See Valve Timing.

Tappet Clearance:—.006" Intake, .008" Exhaust (with engine hot and idling). Remove right front fender plate for access to valves. See *Hudson Shop Notes for Fender Plate removal*.

**STARTING:** See Battery, Starter, Generator, Regulator.

### IGNITION

**IGNITION SWITCH:** Mitchellock. Model 24-B, Type 8062 (1939), 8273 (1940). Connected to coil by armored cable.

Ignition Lock—Briggs & Stratton. B & S No. 50184. Key Series—H601 to H1100. Groove—No. 1.

**COIL:** Auto-Lite Model 4635 (1939), 4641 (1940). Service Coil (less Switch & Cable) CE-3224JS. Ignition Current—2.5 amperes idling, 4.5 stopped.

**CONDENSER:** Auto-Lite Part No. IG-2671. Capacity—.20-.25 microfarad.

**DISTRIBUTOR:** Auto-Lite Model IGP-4008A. Full auto-automatic advance type with manual (octane selector) adjustment. No vacuum spark control.

Breaker Gap—.017".

Cam Angle or Dwell—31° closed, 14° open (dist.).

Breaker Arm Spring Tension—17-20 ounces.

Rotation—Clockwise viewed from above.

#### Automatic Advance

Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start .....	300	0 .....	600
3 .....	400	6 .....	800
8 .....	850	16 .....	1700
13 .....	1300	26 .....	2600
17.5 .....	1700	35 .....	3400

**Fuel Compensator Adjustment:**—Manual adjustment for octane rating of fuel. See Ignition Timing.

**Removal:**—Mounted on right side of crankcase. To remove take out hold-down screw in advance arm.

### IGNITION TIMING

**IGNITION TIMING:**—Initial Setting (for 70 octane rating fuel). See Fuel Compensator setting following.

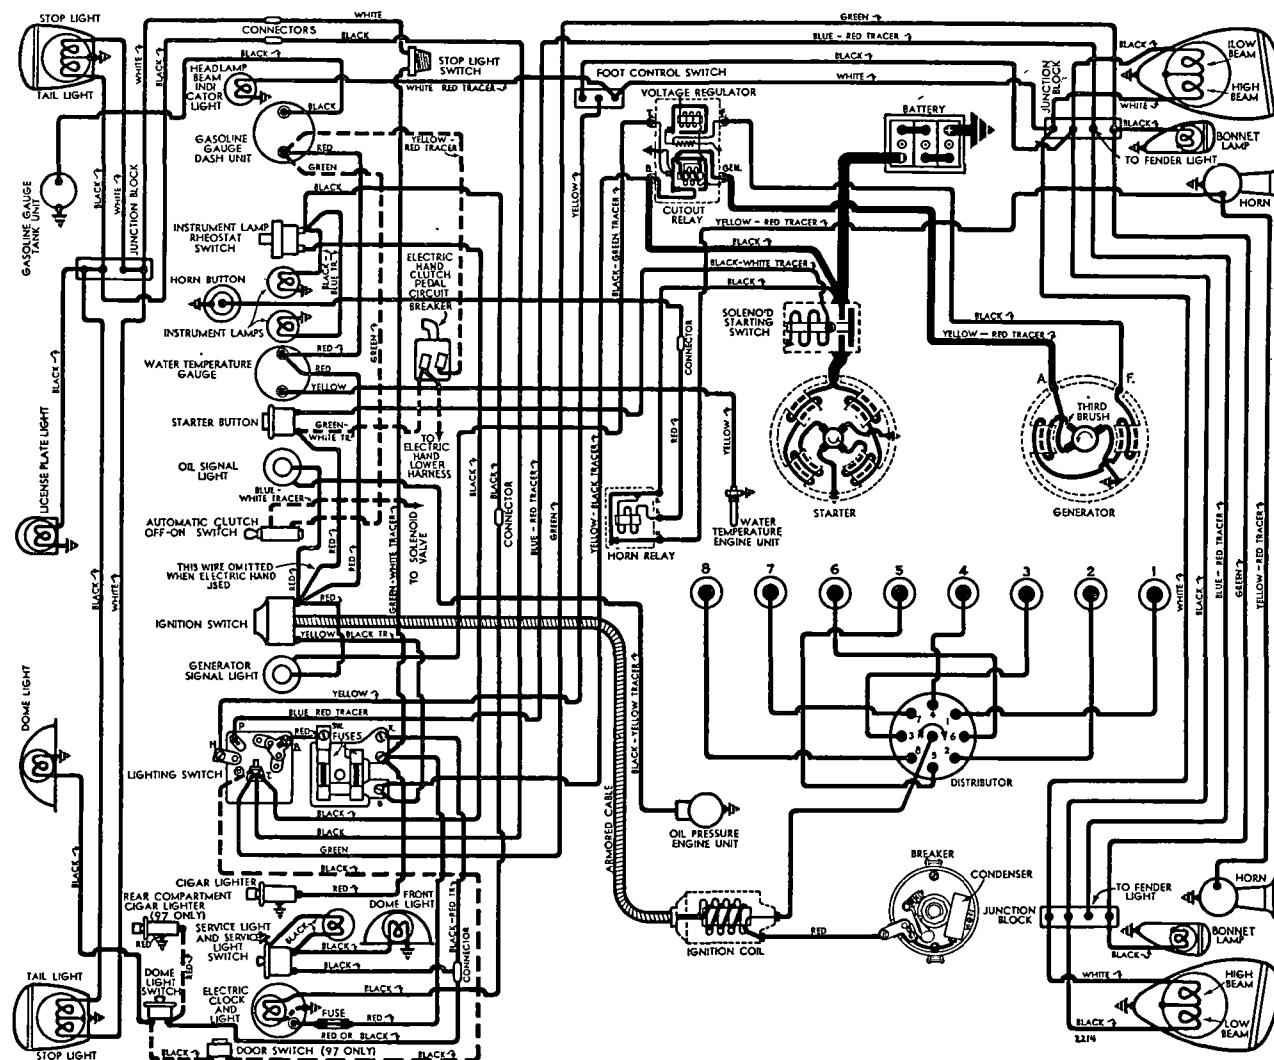

**Flywheel Degrees Piston Position**

All Engines ..... 0° at TDC ..... .0000" TDC

**Timing:**—With #1 piston on compression, turn engine over until piston reaches top dead center when flywheel mark "UDC.1-8/" lines up with pointer in left front face of rear motor support. Loosen hold-down screw in advance arm, rotate distributor clockwise to limit of advance arm slot, then slowly rotate distributor counter-clockwise until contacts begin to open, tighten hold-down screw. Check Fuel Compensator setting.

**Timing (Using Synchroscope):**—Recommended by manufacturer. Mark flywheel with white chalk or

CONTINUED N NEXT PAGE

# C NTINUED FROM PRECEDING PAGE

paint, connect at #8 spark plug. Idle engine and adjust distributor as directed above.

**Fuel Compensator Setting**—Road test car and note performance when accelerating from 10-15 M.P.H. with wide open throttle on level road (warm engine). Slight ping should be evident. To adjust, loosen hold-down screw, rotate distributor one graduation on scale counter-clockwise (if no ping), clockwise (if ping, too severe), repeat test. Final setting should not be more than 3/4" before UDC. 1-8/ mark on flywheel.

## CARBURETOR

**Carter Model WDO, Type 430-S (1939), 455-S (1940).** 1" (430-S), 1 1/4" (455-S), Dual (double barrel), downdraft type with Fast Idle & Automatic Choke. For complete data, refer to Carburetor Index.

**Flange Gasket Note**—Eight gaskets now used (was two in 1939) on all carburetors.

**Idle Adjustment**—With engine warm and running at slow idle speed (choke valve wide open, fast idle inoperative), set throttle stopscrew for 7 MPH idle speed. Adjust idle adjusting screws (2 used, 1 for each barrel) in succession until engine fires smoothly. Final setting should be 1/4-1 turn (430-S), 1/2-1 1/2 turns (455-S) open for each idling adjusting screw. Readjust idle speed. NOTE—Car manufacturer recommends use of vacuum gauge. Adjust one screw at a time for highest steady gauge reading.

**Accelerating Pump Setting**—Pump lever (under dust cover at top of carburetor) has 2 holes for pump link engagement. Adjust as follows: Outer Hole (Max. stroke)—Normal setting. Inner Hole (Min. stroke)—If less charge required.

**Float Level**—3/32" from top of float to gasket seat on cover (invert to check).

**Fast Idle**—Integral type (built-in carburetor).

For complete data, refer to Carburetion Equip. Index. **Fast Idle Setting**—Turn fast idle adjusting screw in to secure .018" throttle opening with choke valve tightly closed.

**Automatic Choke**—Carter Climatic Control.

For complete data, refer to Carburetion Equip. Index. **Choke Setting**—Thermostatic coil housing centered on piston plate housing reference mark.

## CARB. EQUIPMENT

**Air Cleaner**—AC #1528161 oil-wetted type Std. #1628160 (1939 Cars with Electric Hand). United heavy duty Oil-bath type Optl.

**Fuel Pump**—AC Type AK #1523289 diaphragm type Std.—Type AJ #1523936 fuel & vacuum pump Optl. Type AK, #1533313 Pump used on 1939 RHD. cars. For complete data, refer to Carburetion Equip. Index.

**Gasoline Gauge**—King-Seeley Electric, K-S Nos. Dash Unit—No. 7415 (1939), 8118 (1940 Early—White Lines), 7752 (1940 Later—White Diamonds). Tank Unit—No. 5835 (1939 First Cars), 7550 (1939 Later Cars & 1940).

For complete data, refer to Carburetion Equip. Index.

## BATTERY

**BATTERY**—National Type HT-19. 6 volt, 19 plate, 108 ampere hour capacity (20 hour rate).

**Starting Capacity**—135 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 4.0 minutes. Five second voltage—4.43 volts.

**Grounded Terminal**—Positive (+) grounded to frame. Engine Ground—Strap connector from rear motor support to frame.

**Dimensions**—Length 11 3/4". Width 7 1/4". Height 7 11/16".

**Location**—In engine compartment on left side.

## STARTER

**Auto-Lite Model MAB-4075 (1939 First Cars), MAB-4100 (1939 Later Cars), MAB-4103 & 4103A (1940).** Armature—Auto-Lite MAB-2113 (All Models).

**Drive**—Inboard Barrel Type Bendix Drive, No. A-1673 (MAB-4075), A-1684 (Others).

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—42-53 ozs. (new brushes).

**Cranking Engine**—150 RPM, 120-125 amperes, 5 v.

### Performance Data

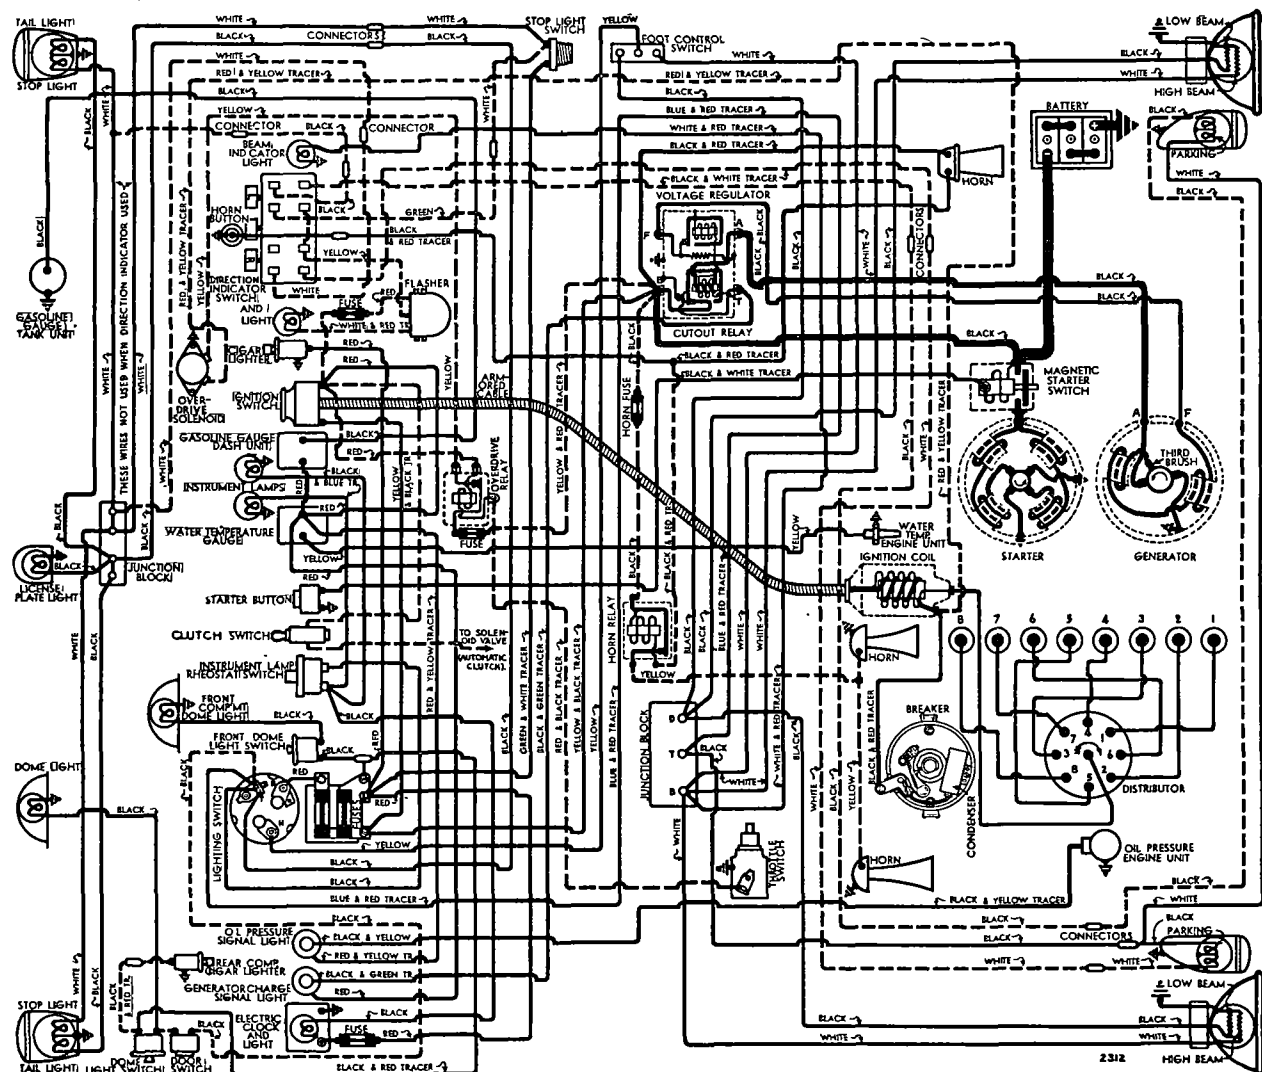

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	3700	5.5	60
.6 "	1910	5.5	100
3.4 "	1100	5.0	200
6.6 "	695	4.5	300
10.15 "	420	4.0	400
15.8 "	Lock	3.0	582
22.5 "	Lock	4.0	775

NOTE—Lock torque figures correct without switch.

**Removal**—Flange (new heavier casting) mounted on left front face of rear motor support. To remove, take out flange mounting screws.

**Starting Switch (1939)**: Auto-Lite Model SS-4001. Magnetic type. Mounted on starter and controlled by pushbutton on instrument panel. Operative only with ignition "on" (and clutch disengaged on cars with Electric Hand).

For complete data, refer to Electrical Equipment Index. 1940—R-B-M Model 5607. Magnetic type switch. On starter, controlled by pushbutton on instrument panel Douglas #5751. NOTE—Switch is new type.

**CONTINUED      N   NEXT PAGE**

C NTINUED FROM PRECEDING PAGE

Bulb Specifications		
Position	Candlepower	Mazda No.
Headlamps (1939)	32-32	2331
Headlamps (Export)	21-50	2520
Headlamps (1940)	Sealed Beam	
Bonnet Side Panel, Radio	1½	55
Instr., Spdmtr., Service	1½	55
Beam Indicator & Signals	1	51
Stop & Tail	21-3	1158
License, Fender	3	63
Dome	15	87

Front Direction Signal bulb (1940) is 21-3 cp. Mazda No. 1154. The 3 cp. filament of this bulb is used in place of the regular parking (bonnet side panel) bulb (No. 55).

### MISC. ELECTRICAL

**SIGNAL LIGHTS:**—Generator Charge and Oil Pressure Indicators. Hudson Teleflash Electric type. For complete data, refer to *Electrical Equipment Index*.

**FUSES:**—Lighting—20 ampere. Lower fuse on fuse block on lower edge of instrument panel to right of steering column. Accessory—20 amperes. Top fuse on fuse block. NOTE—Silver-plated fuses used.

Twin Horns—30 ampere on block on engine dash. Transmission Overdrive Control—20 amp. On Relay. Direction Indicator—10 ampere. In case on back of instrument panel near speedometer. Electric Clock—2 ampere on back of clock.

**HORNS:**—Sparton—Twin, vibrator type, air trumpet horns standard. Operated by relay.

Horn Relay: R-B-M Model 4751 (1939), 4790 (1940). Mounted on horn bracket.

Contacts Close—3.5-4.5 volts. Current Draw ¾ amp.

### ENGINE

**ENGINE SPECIFICATIONS:**—8 cylinder, 'L' head type.

Bore—3". Stroke—4½".

Displacement—254 cubic inches. Rated HP—28.8.

Developed Horsepower—128 at 4200 RPM.

Compression Ratio—6.25-1 (1939), 6.5-1 (1940). Heads are Cast Iron.

Compression Pressure—118 lbs. (1939), 120 lbs. (1940) at cranking speed of 125 RPM.

Vacuum Reading—Steady 18-21" idling at 7 MPH.

**PISTONS:**—Own Lo-Ex aluminum alloy, "T" slot, cam ground type. Use finished replacement pistons.

Weight—10.5 ozs. (stripped). Length—3 3/16".

Removal—Piston and rod assemblies may be removed from above or below.

Clearance—Top .016". Skirt .001-.002".

Original Bore Sizes & Replacement Pistons:—See *Hudson Shop Notes* for complete data.

Fitting New Pistons:—Use .0015" feeler ½" wide inserted between piston and cylinder wall on side opposite slot at right angles to pin. Pull to withdraw feeler must be within 3-4 lbs.

Installing Pistons:—Slot away from camshaft.

**PISTON RINGS:**—2 compression, 2 oil rings (1 above pin, 1 below pin). Rings positioned by pin in groove.

Models 95, 97 (1939)			
Ring	Width	End Gap	Side Clearance
Compression	3/32"	.005-.010"	.001"
Oil Control①	3/16"	.005-.010"	.001"
Oil Control②	5/32"	.005-.010"	.001"
①—Both rings on early cars, top ring on later cars.			
②—Lower oil ring on later cars. See <i>Hudson Shop Notes</i> for complete data on Oil Ring Width change.			

Models 44, 45, 47 (1940)			
Ring	Width	End Gap	Side Clearance
Compression	3/32"	.009-.011"	.001"
Oil Cont. (#1)	3/16"	.009-.011"	.001"
Oil Cont. (#2)	5/32"	.009-.011"	.001"

Replacement Rings:—See *Hudson Shop Notes* for data.

**PISTON PIN:**—Diameter—¾". Length—2 7/16". Floating Type. Retained by locking rings. See *Hudson Shop Notes* for Pin Servicing data. Pin Fit in Piston—.0003" clearance (hand push fit) with piston heated to 200°F. Pin Fit in Rod Bushing—.0003" clearance.

Replacement Pins:—Std., .002", .005", .010" oversize.

**CONNECTING ROD:**—Weight 30 ozs. Length 8 3/16". Upper Bearing (Piston Pin Bushing)—Bronze. Crankpin Journal Diameter 1 15/16". Lower Bearing—"Bermax" alloy spun type. Exchange rods furnished Std. & .010" undersize. See *Crankshaft Size Code* in *Hudson Shop Notes* for bearing sizes. Clearance—.001". Sideplay—.006-.010".

Bearing Adjustment:—None (no shims). Replace rods. See *Hudson Shop Notes* for Palnut (locknut) data.

Installing Rods:—Offset. Install rods with widest half of bearing toward rear (#1, 3, 5, 7), toward front (#2, 4, 6, 8). Oil scoop on all rods toward camshaft.

**CRANKSHAFT:**—5 bearing, integral counterweights. See *Hudson Shop Notes* for Crankshaft and Vibration Damper Removal, Main Bearing Removal, Installation, Replacement Bearings and Line-reaming data. Journal Diameters—#1, 2 9/32"; #2, 2 5/16"; #3, 2 11/32"; #4, 2 3/8"; #5, 2 13/32". See *Crankshaft Size Code* Note in *Hudson Shop Notes* for original bearing sizes.

Bearings—Bronze-backed, 'Bohnalloy' type. Bearings secured in cap and crankcase by brass screws. Clearance—.001".

Bearing Adjustment:—Shims. See *Hudson Shop Notes*.

►CAUTION—Replacement of main bearings requires removal of crankshaft. Bearings retained by brass screws.

Replacement Bearings: See *Hudson Shop Notes*.

End Thrust:—Taken by center bearing. Replace bearing if endplay excessive. Endplay—.006-.012".

**CAMSHAFT:**—5 bearing, gear driven. See *Hudson Shop Notes* for Camshaft Removal.

Journal Diameters (1939)—#1, 2 1/32"; #2, 2"; #3, 1 31/32"; #4, 1 15/16"; #5, 1½".

Journal Diameters (1940)—#1, 2.029"; #2, 1.998"; #3, 1.966"; #4, 1.935"; #5, 1.498".

Bearings—Babbitt type. Clearance—.0025".

End Thrust:—Thrust washer between camshaft flange and crankcase. Spring loaded button in camshaft hub bears against thrust plate on gear cover.

Timing Gears:—Crankshaft gear cast-iron. Camshaft gear GE or Continental Diamond Fibre Bakelite. 1941 Type Timing Gear Set can be installed on these models (tooth angle redesigned to provide quieter operation). Refer to *Hudson Shop Notes*.

Camshaft Setting:—Mesh marked crankshaft gear tooth between two marked teeth on camshaft gear.

VALVES:	Head Diameter	Stem Diameter	Length
Intake	1½"	11/32"	5 3/32"
Exhaust	1⅜"	11/32"	5 3/32"

Seat Angle Lift Stem Clearance

Intake .....45°.....11/32"......0025"

Exhaust .....45°.....11/32"......004"

Valve Guides: 2 9/16" long. Install with top 1 1/16" (1939), 15/16" (1940) below top of block and finish ream to size.

Valve Springs:—Dampeners (originally used on bottom of spgs.) should be omitted when valves serviced. Free length 2 17/64". Spring Pressure Length

Valve Closed .....40 lbs.....2"

Valve Open .....80 lbs.....1 21/32"

NOTE—Replace if pressure below 34 lbs. at 2".

Valve Lifters:—Roller shoe type, fitted in removable guides. See *Hudson Shop Notes* for lifter removal.

### VALVE TIMING

Tappet Clearance:—.006" Int., .008" Exh., hot & idling. See *Hudson Shop Notes* for Fender Plate Removal.

Valve Timing:—See Camshaft Setting above.

Intake Valves—Open 10°40' BTDC. Close 60° ALDC.

Exhaust Valves—Open 50° BLDC. Close 18°44' ATDC. These figures correct with .010" tappet clearance.

Valve Timing Check—With .010" tappet clearance #1 intake valve should open with piston 10°40' or .0494" BTDC when a point on the flywheel approx. 3.97 teeth before 'UDC.1-8/' mark lines up with indicator. Reset tappet clearance .006" hot and idling.

### LUBRICATION

**LUBRICATION:**—Duo-flo (pressure & positive splash).

Oil Pump:—Oscillating plunger type, gear driven by camshaft. Mounted on right side of crankcase.

Normal Oil Pressure—3 lbs. (no gauge).

Oil Pressure Regulator:—Located on right side of crankcase at rear. Opens at 3 lbs. Not adjustable.

Oil Pressure Indicator:—Teleflash Oil Pressure indicator. For data, refer to *Electrical Equipment Index*.

Checking Oiling System:—See *Hudson Shop Notes*.

Crankcase Capacity:—7 qts. (refill). NOTE—Install 2 qts. add'l oil in upper tray when pan installed.

### COOLING

Water Capacity: 17½ qts. (1939), 18 qts. (1940).

See *Hudson Shop Notes* for radiator core removal.

Water Pump:—Centrifugal, belt driven, packless type. See *Water Pump Section* for complete data.

Removal—Drain water, remove fan belt, disconnect pump hoses, remove mounting bolts and lift off fan and pump assembly.

Thermostat:—Fulton. In cylinder head water outlet. Setting—Starts to open 150-155°F. Fully open 185°.

Temperature Gauge:—King-Seeley Electric K-S Nos. Dash Unit—No. 7420 (1939), 8120 (1940 Early—White Lines), 7755 (1940 Later—White Diamonds).

Engine Unit—No. 7000 (1939-40 models). See *Miscellaneous Section* for complete data.

**CLUTCH**

**CLUTCH:**—Own make. Single plate, cork insert type operating in oil. Overdrive Cars—equipped with heavier clutch housing and larger redesigned disc. *See Clutch Section for complete data.*

**Driven Member**—Cork Insert type. Cork thickness .244-.255" (1939), .077" (1940). Inside Diameter 6½". Outside Diameter 9 27/32" (1939), 10" (1940). No. of corks 108.

**Pedal Adjustment:**—1½" free travel. Adjust yoke on lower end of pedal connector link. Check Automatic Clutch Control & Hill-holder (if used).

**Clutch Oil Servicing:**—*See Hudson Shop Notes.*

**Removal:**—Remove transmission (see below), drain clutch oil, take out mounting screws in clutch cover rim, remove clutch assembly from below.

**Automatic Clutch Control:**—Electric type. Optl. *See Clutch Section for complete data.*

**TRANSMISSION**

**TRANSMISSION:**—Own Make. Constant-mesh, helical gear (second & high), sliding spur (low & reverse). *See Transmission Section for complete data.*

**Transmission Control:**—Hudson 'Handy-Shift' type. *See Transmission Section for complete data.*

**Removal (1939):** Disconnect "Handy-shift" controls at transmission, remove Automatic Clutch Control unit and Electric Hand power unit after disconnecting all wires and vacuum and air hoses if car is so equipped (NOTE—See Clutch and Trans. Sections for necessary adjustments on these units when re-installed). Disconnect transmission side bumpers, interlock straps, and speedometer cable. Disconnect drive shaft at front universal, support engine at rear, free rear engine mounting. Take out bell housing-to-engine mounting bolts, pull transmission straight back and remove.

**Removal (1940):** Remove front cushion and push seat back, remove accelerator pedal. Remove floor mat and transmission hole cover. Disconnect front universal joint. Remove clutch pedal return spring, assist spring, and cross-shaft. Release transmission side bumpers and rods, disconnect handy-shift controls at transmission, remove speedometer cable. Raise front end of car, remove lower flywheel guard and engine rear mounting bolts, raise rear end of engine off frame. Remove clutch housing-to-engine mounting bolts, pull transmission back and lift out. NOTE—Transmission can be taken out without disturbing clutch housing by taking out transmission-to-clutch housing bolts.

**Installation Note**—Wrap one strand of soft wire around throw-out bearing oil seal to prevent leather curling over when transmission installed. Remove wire after transmission installed.

**OVERDRIVE**

**Overdrive:**—Warner Model AS13-R6 with electrical 'kick-down' control. Optional equipment. *See Transmission Section for complete data.*

**Overdrive Transmission Removal**—Same as Std. Transmission (above) except overdrive solenoid wires and control cable must also be disconnected.

**Overdrive Solenoid**—Delco-Remy No. 1569.

**Throttle Control Switch**—R-B-M Model 6013. Adjust so contact washer on accelerator linkage just contacts switch plunger with throttle wide open.

**Control Relay**—Auto-Lite Model HR-4201.

**UNIVERSALS**

**Spicer.** Needle Bearing type. Model Nos. as follows: Front—1281-01X (1939), 1271-101 (1940 exc. 47 with-out Overdrive), 1281-101 (1940 47 Std.).

Rear—1278-01X (1939), 1278-101 (1940).

*See Universals Section for complete data.*

**REAR AXLE**

**REAR AXLE:**—Own Make. Semi-floating spiral bevel gear type with Hotchkiss drive. *See Rear Axle Section for complete data.*

**Ratio**—4 1/9-1 (Std., Optl. on Overdrive), 4 5/9-1 (Std. on Ovdr., Optl. on reg. transmission).

**Backlash**—.0005-.003". Screw adjustment.

**Removal:**—Disconnect drive shaft at rear universal. Remove axle shafts (see below) and capscrews on carrier flange. Pull carrier assembly out.

**Axle Shaft Removal:**—Remove wheel and hub (use screw type puller only), remove 4 nuts on bearing cap bolts, push bolts out of backing plate, remove cap (without disturbing brake link), remove shims, pull axle shaft and wheel bearing out.

**Wheel Bearing Adjustment:**—Controlled by shims under bearing cap. To adjust, remove bearing cap (see Removal directions above), add or remove shims equally at both wheels. Endplay—.002-.004".

**SHOCK ABSORBERS**

**Delco.** Direct Acting, Hydraulic type. Model Nos. as follows: Front—1113-R (1939 Std.), 1132-S (1939 Exp.), 1007-C (1940). Rear—1120-S (1939 Std.), 1131-T (1939 Exp.), 1008-S (1940).

*See Shock Absorber Section for complete data.*

**FRONT SUSPENSION****1939 MODELS**

**Front Suspension (1939):** "T" beam section type front axle with Elliott type ends and semi-elliptic springs. Axle alignment maintained by torque arm at side of each spring seat and held by rubber-bushed bolt at frame rail.

**Autopoise Control**—*See Hudson Shop Notes.*

**Kingpin Inclination**—7° crosswise. *See Hudson Shop Notes for Kingpin Thrust Bearing data.*

**Caster**—1-2° and equal within ½° for both wheels. To adjust, loosen capscrews at forward end of torque arm, insert shim between arm and axle at upper screw, or remove shim at lower screw to decrease caster, remove shim at upper screw or insert shim at lower screw to increase caster. Shims .020" thick, change caster ½°.

**Camber**—1-1½°. Bend axle cold for minor changes.

**Toe In**—0-½" measured 10" up from ground. Adjust by loosening clamp bolts and turning tie rod.

**Steering Geometry**—Inner wheel 20°. Outer 17¾°.

**FRONT SUSPENSION****1940 MODELS**

**Front Suspension (1940):** Independent, linked parallelogram type with coil springs and Autopoise Control.

*See Front Suspension Section for complete data.*

**Kingpin Inclination**—4°36' crosswise.

**Caster**—0° (Neg. ¼° to Pos. ¼°). Adjustable.

**Camber**—Positive ¼° to Pos. ¾°. Adjustable.

**Toe In**—0-1/16". Loosen clamp at outer end of each tube (adjust tubes equally).

**Steering Geometry**—Inner wheel 24°. Outer 20°50'.

**STEERING GEAR**

**Steering Gear:** Gemmer Model 335 Worm-and-Roller type with "push-pull" adjustments.

*See Steering Gear Section for complete data.*

**BRAKES**

**BRAKES:**—Service. Bendix hydraulic, duo-servo, single anchor type with eccentric adjustment. Mechanical follow-up (pedal linked to hand brake cables) provided. Hand lever applies rear service brakes.

*See Brake Section for complete data.*

**Drums**—Alloy steel. Diameter—11 1/16".

**Lining**—Moulded (primary), woven (secondary).

**Thick.** 7/32". **Width** 1¾". **Length per whl.** 23 15/16".

**Clearance**—.010" at heel and toe of each shoe.

**Hand Brake:**—*See Service Brakes above.*

**Hill-Holder:** Optional. *See article in Brake Section..*

**ENGINE HOOD (BONNET) LOCK, HOOD REMOVAL AND ADJUSTMENT:**—See Hudson Shop Notes.

### MODEL IDENTIFICATION

	1941	1942
	Model Serial No.	Model Serial No.
Six Traveler	10T①.....10101.....	20T②.....20101
Six Deluxe	10P①.....10101.....	20P②.....20101
Super Six	11.....11101.....	21.....21101
Commodore Six	12.....12101.....	22.....22101
Business Cars	10C①.....10101.....	20C②.....20101
Big Boy	18.....18101.....	28.....28101

①—See Model 10 Note (below).

②—See Model 20 Note (below).

**MODEL 10 NOTE:**—3"x5" engine optional (when this engine used all equipment listed below for Model 11 used on these cars). Serial No. plate carries identification prefixes as follows: 3"x4½" Eng. 'T' (Traveler), 'P' (Deluxe), 'C' (Commercial). 3"x5" Engine additional letter 'L' thus: 'TL', 'PL', 'CL'.

**MODEL 20 NOTE:**—3"x5" engine optional (when this engine used all equipment listed below for Model 21 used on these cars). Serial No. plate carries identification prefixes as follows: 3"x4½" Eng. 'T' (Six), 'P' (Deluxe), 'C' (Commercial). 3"x5" Engine an additional letter 'L' thus: 'TL', 'PL', 'CL'.

**SERIAL NUMBER:** First No. for each model as shown in table above. Stamped on plate on right front door hinge pillar post. NOTE—First two figures of number indicate model thus: 10-101.

**ENGINE NUMBER:**—Same as Serial No. On top of cylinder block between #1 and 2 exhaust flanges.

### TUNE-UP

**COMPRESSION: Ratio & Pressure—As follows:**

Model	Ratio	Pressure (At 125 RPM)
10, 20	7.25-1	125 lbs.
10, 20 (3"x5" Eng.)	6.5-1	120 lbs.
11, 12, 18 ('41)	6.5-1	120 lbs.
21, 22, 28 ('42)	6.5-1	120 lbs.

**VACUUM READING:**—18-21" steady idling at 600 RPM.

**FIRING ORDER:**—1-5-3-6-2-4. See diagram.

**SPARK PLUGS:**—Champion Spec. J9 Hudson. 14 MM. Gaps—.032"

Optl. Plug Note—Champion J-5 (Hotter) for continuous slow speed service or J-10 Commercial (Cooler) for continuous high speed service.

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.020" Cam Angle 35° (Closed).

Automatic & Vacuum Advance—See Distributor.

**IGNITION TIMING:** See Ignition Timing.

Std. Setting—½" flywheel travel BTDC. with 2nd graduation on flywheel ahead of mark "UDC.1-6/" at indicator on left front face of rear motor support above starter.

**CARBURETION:** See Carburetor & Carb. Equipment.

Idle Setting (Single Carb.)—Idle screw ¾-1½ turn open. Idle speed 580-600 RPM.

Idle Setting (Dual Carb.)—Both idle screws ¼-1¼ turn open (461-S), ½-1½ turn open (501-S). Idle speed 580-600 RPM.

Float Level (Single Carb.)—¾" from top of bowl cover projection to top of soldered seam on free end of float with valve seated (invert to check).

Float Level (Dual Carb.)—3/32" (461-S), ½" (501-S) from gasket seat on bowl cover to top of float at each end (invert to check).

**Accelerating Pump (Single Carb.)**—Lower hole (medium stroke) Normal. Inner hole (Summer), Upper hole (Winter) for temperature extremes.  
**Accelerating Pump (Dual Carb.)**—Outer hole (max. stroke) Normal. Inner hole (min.) when required.  
**Fuel Pump Pressure:** 3½ lbs. max. (AF), 4½ lbs. max. (AK).

**MANIFOLD HEAT CONTROL:** Models 10, 18 ('41), 20, 28 ('42). Manual type. Located on manifold behind carburetor.

Setting—Arrow on valve cover pointing to "W" cast on top of manifold. Correct for Summer & Winter. Models 11, 12 ('41), 21, 22 ('42)—Automatic thermostatic type. No adjustment. See that valve operates freely. NOTE—This type used on Models 10 and 20 with 3"x5" Engine.

**VALVES:** See Valve Timing.

1941 M DELS

**Tappet Clearance: CAUTION—2 settings used:**

1)—.006" Intake, .008" Exhaust, hot & idling for

a) 1941-42 3" x 5" engine with original camshaft.  
 b) 1941 3" x 4½" engine up to car no. 6848 with original camshaft.

2)—.010" Intake, .012" Exhaust, hot & idling for

a) 1941 Small 3"x4½" Engine after car No. 6848.  
 b) 1942 Small 3"x4½" Engine.  
 c) All 1941-42 engines with new design replacement camshaft (Valve Cover Plate should carry decalcomania specifying this .010" Int., .012" Exh. setting where replacement camshaft installed).

See Hudson Shop Notes for data on this new Camshaft.

**STARTING:** See Battery, Starter, Generator, Regulator.

**IGNITION**

**Ignition Switch:**—Mitchellock Model 24-B, No. 8797.

**Ignition Lock:**—Briggs & Stratton B & S No. 50184.

**Key Series:**—H601 to H1100. Groove—No. 1.

**COIL:** Auto-Lite Model IG-4098. Mounted on the dash. **IMPORTANT**—Coil is hooked up reversed from conventional manner (as shown on 1940 diagram) with switch lead connected to terminal on high tension terminal end of coil, breaker lead to terminal on opposite end. Will not operate satisfactorily if connected otherwise.

**Ignition Current:**—2.5 amperes idling, 4.5 stopped.

**CONDENSER:** Auto-Lite Part No. IGW-3075C.

**Capacity:**—20-25 microfarad.

**DISTRIBUTOR:** Auto-Lite Model IGW-4203A. Single breaker, 6 lobe cam, full automatic advance type with auxiliary vacuum spark control.

**Breaker Gap:**—.020".

**Cam Angle or Dwell:**—35° closed, 25° open (distr. °).

**Breaker Arm Spring Tension:**—17-20 ounces.

**Rotation:**—Counter-clockwise viewed from above.

Distributor Automatic Advance		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start	400	0	800
3	700	6	1400
6	1000	12	2000
9	1300	18	2600
11.75	1570	23.5	3140

**Vacuum Spark Control:**—On distributor hold-down plate, linked to quadrant scale on distributor. Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle (spark retarded by return spring within unit).

**Vacuum Advance**

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	5 7/8"
4°	8°	9 1/4"
7.5°	15°	11 1/4"

**Fuel Compensator:**—Manual adjustment for octane rating of fuel used. See Ignition Timing for setting.

**Distributor Removal:**—Mounted at top rear of cylinder head. To remove, disconnect vacuum line, take out cyl. head stud nuts on hold-down plate.

**IGNITION TIMING**

**IGNITION TIMING:**—Initial Setting—1/2" (two spaces) BTDC. for fuel of approximately 72 Octane rating.

**Flywheel Marks:**—'UDC.1-6/' at TDC with 4 graduations (1/4" apart) ahead of this mark.

**Timing:**—With #1 piston on compression, turn engine over until second graduation before flywheel mark 'UDC.1-6/' lines up with pointer on left front face of rear motor support above starter. Loosen vacuum advance diaphragm screw on quadrant scale, rotate distributor counter-clockwise to limit of slot, then slowly rotate clockwise until contacts begin to open, tighten diaphragm screw securely. Check Fuel Compensator Setting below.

**Timing (Using Synchroscope):**—Recommended by car manufacturer. Mark flywheel with white chalk or paint. Idle engine, adjust distributor (above).

**Fuel Compensator Setting:**—Road test car (engine warm). When running at 8 MPH slight ping should occur between 10-15 MPH when accelerating with wide open throttle. To adjust, loosen vacuum unit link screw on distributor quadrant, rotate distributor one graduation on quadrant scale clockwise (if no ping), counter-clockwise (if ping too severe). Final setting must not be more than 1" (4th graduation) before 'UDC.1-6/' flywheel mark.

**CARBURETOR****SINGLE BARREL**

(Models 10—see Note, 18, 20—see Note, 28)—Carter Model WA-1, Type 454-S. 1 1/4" Single Barrel, down-draft type with Fast Idle and Carter Climatic Control (automatic choke).

**Model 10, 20 Note:**—Cars with 3"x5" Engine have dual carburetor (same as Models 11, 21 below).

**For complete data, refer to Carburetor Index.**

**Idle Adjustment:**—With engine warm, set throttle stop screw for 600 RPM hot or slow idle speed (fast idle inoperative), adjust idle adjusting screw so engine fires smoothly and vacuum reading at maximum (screw 3/4-1 1/2 turns open—turn screw in for leaner setting), recheck idle speed.

**Accelerating Pump Setting:**—Pump arm has three holes for pump link engagement. Set as follows: Lower Hole (med. stroke)—Normal setting.

Inner Hole (min.)—Hot weather or hi-test fuel.

Upper Hole (max.)—Cold weather or low-test fuel.

**Float Level:**—3/8" from top of bowl cover projection to top of soldered seam on float at free end.

**Metering Rods & Jets:**—See Carter Jet Table in Carburetor Section for complete data.

## CONTINUED FROM PRECEDING PAGE

**Fast Idle (454-S):** Integral with carburetor.

For complete data, refer to Carburetion Equip. Index.  
**Setting**—Adjust by bending connecting link offset for  $\frac{5}{8}$ " choke valve opening with throttle stop screw against (not on) first step of fast idle cam.

**Automatic Choke (454-S):** Carter Climatic Control (Single Carburetors).

See Carburetion Equipment Section for complete data.  
**Setting**—Centered (at index mark).

**CARBURETOR****DUAL (DOUBLE BARREL)**

(Models 11, 12, 21, 22): Carter Model WDO, Type 461-S (1941 before No. 2150), Type 501-S (1941 After No. 2150 & 1942). 1" Dual (double barrel), downdraft types with Fast Idle and Carter Climatic Control (automatic choke). NOTE—Type 461-S, only, has "Slow-Closing Throttle" dashpot device.

**Idle Adjustment**—With engine warm, set throttle stop screw for 580-600 RPM hot or slow idle speed (fast idle inoperative). Adjust both idle screws (two used, one for each barrel) in succession until engine fires smoothly. Final setting should be  $\frac{1}{4}$ - $1\frac{1}{4}$  turn open (461-S),  $\frac{1}{2}$ - $1\frac{1}{2}$  turn open (501-S) from inner seated position. Turn screws in for leaner mixture. If vacuum gauge used, adjust for highest steady reading of the gauge. Readjust stop screw for correct idling speed.

**Accelerating Pump Setting**—Pump lever (under dust cover on bowl cover) has two holes for pump link engagement. Adjust as follows:

Outer Hole (max. stroke)—Normal Setting.

Inner Hole (min. stroke)—If less charge required.  
**Float Level**— $3\frac{3}{32}$ " (461-S),  $\frac{1}{8}$ " (501-S) from top of float to bowl cover with valve seated.

**Fast Idle (461-S, 501-S):** Integral with carburetor.

For complete data, refer to Carb. Equip. Index.

**Setting (461-S)**—With choke valve closed, adjust fast idle screw for .018" throttle opening.

**Setting (501-S)**—With choke valve closed and fast idle screw on high lobe of fast idle cam, turn fast idle screw in until throttle opening is .045".

**Automatic Choke:**—Carter Climatic Control.

For complete data, refer to Carburetion Equip. Index.  
**Setting (461-S)**—Centered (at index mark).

**Setting (501-S)**—One Notch Lean (supersedes "Centered" setting originally specified for this model).

**CARB. EQUIPMENT****Air Cleaner:**—AC oil wetted types.

Car Model	Cars with Standard	Replacement Drive-Master	Filter Elem.
10, 18, 20, 28	1528159	1542384	Type #1
11, 12, 21, 22	1528161	1542385	Type #2

**Fuel Pump:** AC Type AF, No. 1523753 (10, 18, 20, 28 Pass. Cars); Type AK, No. 1523289 (All others). Pump Exchange No. 509 (Type AF), 499 (Type AK).

For complete data, refer to Carburetion Equip. Index.

**Gasoline Gauge:**—King-Seeley Electric. K-S No. 8305 (Dash Unit—stamped 'G'), No. 7550 (Tank Unit).

For complete data, refer to Carburetion Equip. Index.

**BATTERY**

**BATTERY:**—National, Type HT-17. 6 volt, 17 plate, 96 ampere hour capacity (20 hour rate).

**Starting Capacity**—120 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 3.5 minutes. Five second voltage—4.24 volts.

**Grounded Terminal**—Positive (+) to frame. Engine

Ground—Strap (rear motor support to frame).

**Dimensions**—Lgth. 10 9/16". W. 7 1/4". Hght. 7 13/16".

**Location**—On left side under engine hood.

**STARTER**

**Auto-Lite Model MZ-4092.** Armature No. MZ-2138.

**Drive**—Inboard Barrel type Bendix No. A-1684.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—42-53 ozs. (new brushes).

**Cranking Engine**—150 RPM, 125 amperes, 5.4 volts.

**Performance Data**

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	4300	5.5	70
2.55 "	1325	5.0	200
4.95 "	750	4.5	300
7.65 "	220	4.0	400
7.8 "	Lock	3.0	420
11.8 "	Lock	4.0	560

**Removal:**—On left front face of rear motor support. To remove, take out flange mounting screws.

**Starting Switch:**—A-L Model SS-4001. Magnetic type. For complete data, refer to Electrical Equipment Index.

**GENERATOR****STANDARD**

**Auto-Lite Model GDS-4801A** (Std. 10, 18, 20, 28); **GEC-4801A** (Std. 11, 12, 21, 22, 20P Conv. Sedan, 20 with 3" x 5" Eng., All Cars with DriveMaster). Third brush control type with vibrating voltage regulator. Ventilated by fan on drive pulley.

**Armature**—GDF-2006F (GDS), GDZ-2006F (GEC).

**Maximum Charging Rate (GDS)**—32-34 amperes (cold), 8.0 volts, 2900 RPM or approx. 35 MPH.

(GEC) 39-43 amperes (cold), 8.0 volts, 3350 RPM or approx. 43 MPH. Actual charging rate controlled by Voltage Regulator (see Regulator). Ground generator 'F' terminal when checking generator output.

**Charging Rate Adjustment**—See Regulator. Third brush setting (GDS) 1 comm. bar minus 1 mica strip min., 1 comm. bar max. from insulated (nearest main brush). (GEC) 1 comm. bar min., 1 comm. bar plus 1 mica strip max. Adjust by shifting 3rd brush.

**Performance Data—GDS-4801A**

Cold			Hot		
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	920	0	6.4	960
4	6.6	1050	4	6.65	1120
8	6.8	1175	8	6.9	1280

36	7.8	2375	34	8.0	3800
41	8.0	3350			

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—53 ozs. max. (new brushes).

**Field Current**—1.65-1.82 amperes (GDS), 1.60-1.78 amperes (GEC) at 6.0 volts.

**Motoring Current**—5.10-5.45 (GDS), 4.85-5.4 (GEC) amperes at 6.0 volts.

**Removal:**—Pivot mounted at left front of engine. To remove, take out pivot and clamp bolts.

**Belt Adjustment:**— $\frac{3}{4}$ " slack midway between pulleys.

**GENERATOR****SPECIAL EQUIPMENT**

**SPECIAL GENERATORS:**—Police & Spec. Service—Refer to 1941-42 Hudson Eight article (following) for complete data on these Generators and Regulators.

**REGULATOR**

**REGULATOR:**—Auto-Lite VRR-4001A. Cutout Relay and vibrating Voltage Regulator in case on dash. Cutout Relay has extra set of contacts for Generator Teleflash Indicator control. NOTE—Regulator enclosed in close-fitting metal cover on dash.

For complete data, refer to Electrical Equipment Index.

NOTE—Regulator case cover is sealed. Serviced on exchange basis if seals not broken.

**Cutout Relay**

Cuts In—6.4-6.6 volts, 825 RPM. 9.4 MPH.

Cuts Out—4.2-4.8 volts (approx. 4-6 amps. disch.).

Contact Gap—.015" min. ground contacts closed (ground contacts open when main contacts close).

Air Gap—.031-.034" at hinge end of core with contacts open (ground contacts closed).

**Voltage Regulator**

Setting—7.1-7.4 volts at 70°F.

To Check (without breaking seals)—Connect ammeter in charging line at regulator 'B' terminal, voltmeter between this terminal and ground. Operate generator at speed of 30 MPH charging battery until voltage is constant. Voltmeter reading should be within limits of 7.1-7.4 volts at 70°F. See Electrical Equipment Section for other temperatures.

To Adjust (with cover removed)—Change regulator armature spring tension by bending lower spring hanger slightly. See Electrical Equipment Section.

Contact Gap—.012" Min. (armature against stop).

Air Gap—.048-.052" with contacts just opening.

**LIGHTING**

**LIGHTING:**—Headlamps—Hall 'Sealed Beam' type.

For complete data, refer to Electrical Equipment Index.

**Headlamp Adjustment**—Aim upper beam of each headlamp straight ahead with hot spot centered on horizontal line 3" below lamp center height.

**Beam Indicator**—Red pilot bulb on speedometer dial. Lighted with Country (upper) beam in use.

**Direction Indicator**—Optional equipment.

For complete data, refer to Electrical Equipment Index.

**Switches—1941**

**Lighting**—Douglas. Hudson No. 147835.

**Beam Selector**—R-B-M Model 2484.

**Instrument**—R-B-M. Hudson No. 160092.

**Switches—1942**

**Lighting**—Douglas. Hudson Part No. 200417.

**Beam Selector**—R-B-M. Hudson Part No. 164439.

**Instrument**—R-B-M. Hudson Part No. 160092.

Bulb Specifications—1941		
Position	Candlepower	Mazda No.

NOTE—No. 1158 21-3 cp. used with Direction Indic.		

### MISC. ELECTRICAL

**SIGNAL LIGHTS:**—Generator Charge and Oil Pressure Indicators used. Hudson Teleflash Electric type. For complete data, refer to *Electrical Equipment Index*.

**FUSES:**—Lighting—30 ampere. Lower fuse on fuse block on lower edge of instrument panel to right of steering column. Accessory—30 amp. Top fuse on block. NOTE—Silver-plated fuses used. 30 amp. fuse supersedes 20 ampere fuse used on early cars. Twin Horns (1939)—30 ampere. On engine dash. Direction Indicator—10 amp. near speedometer. Electric Clock—2 amp. in case behind clock. NOTE—Feed wire for electric clock on early cars connected to fuse block 'Bat' terminal. Should be changed to accessory 'X' terminal (as shown).

**CIRCUIT BREAKER:**—Used on Drive-Master Cars only. On fuse block. Protects Drive-Master circuit only.

**HORNS:** Single—Schwarze Electric type. Std. on Models 10T, 18 (1939), 20T, 28 (1940).

Twin—Sparton air electric type operated by relay. Fuse on dash. (Air Gap) .026-.030" high pitch (short), .032-.035" low pitch (long).

**Horn Relay:**—R-B-M Model 6004. On dash. Contacts Close 3-4 volts (relay upright, terminals down).

### ENGINE

**ENGINE SPECIFICATIONS (10T, 10P, 10C '41; 20T, 20P, 20C '42):** 6 Cylinder, "L" Head type.

Bore—3". Stroke—4½".

Displacement—175 cubic inches.

Rated Horsepower—21.6.

Developed Horsepower—92 at 4000 RPM.

Compression Ratio—7.25-1 cast-iron head.

Compression Pressure—125 lbs. at 125 RPM (cranking speed). 90 lbs. minimum (10 lbs. max. variation).

Vacuum Reading—Steady 18-21" idling at 600 RPM.

**ENGINE SPECIFICATIONS (10TL, 10PL, 10CL, 11, 12, 18 '41; 20TL, 20PL, 20CL, 21, 22, 28 '42):** 6 Cylinder, "L" Head type.

Bore—3". Stroke—5".

Displacement—212 cubic inches. Rated HP—21.6.

Developed Horsepower—102 at 4000 RPM (all models except Models 18, 28), 98 at 4000 RPM (Models 18, 28 only). NOTE—Model 18 & 28 Engines equipped with

single carburetor. Dual carburetor used on all other models.

**Compression Ratio**—6.50-1 cast-iron head.

**Compression Pressure**—120 lbs. at 125 RPM (cranking speed). 90 lbs. minimum (10 lbs. max. variation).

**Vacuum Reading**—Steady 18-21" idling at 600 RPM.

See *Hudson Shop Notes for Engine Removal instructions and Engine Front Support Removal and Installation*.

**PISTONS:** Lo-Ex aluminum alloy (1941), Cast Alloy (1942), cam ground type. Use finished replacement pistons.

**Weight**—10.5 ozs. (stripped). Length—3 3/16".

**Removal**—Pistons and rods removed from above.

**Clearance**—Top .016". Skirt .0005-.001". See Fitting New Pistons below.

**Original Bore & Piston Sizes, Replacement Pistons:**—See *Hudson Shop Notes for sizes and markings*.

**Fitting New Pistons:**—Use .0015" feeler ½" wide inserted between piston and cylinder wall on side opposite slot at right angles to pin. Pull to withdraw feeler must be within 3-4 lbs. Use Tool J-888-A Piston Feeler Scale to measure pull.

**Installing Pistons:** Slot away from camshaft.

**PISTON RINGS:**—Two compression, two oil rings (one above pin, one below pin) per piston. Rings are square end type. Rings pinned to prevent rotation. Rings cut and notched to fit pin (clearance on pin equal to ring end gap).

Ring	Width	End Gap	Side Clearance
Compression	3/32"	.009-.011"	.001"
Oil (upper)	3/16"	.009-.011"	.001"
Oil (lower)	5/32"	.009-.011"	.001"

**Replacement Rings:**—See *Hudson Shop Notes for data*.

**PISTON PIN:**—Diameter—¾". Length—2 7/16".

Floating type. Retained by locking rings.

See *Hudson Shop Notes for Pin Servicing data*.

**Pin Fit in Piston**—.0003" clearance (hand push fit) with piston heated to 200°F.

**Pin Fit in Rod Bushing**—.0003" clearance.

**Replacement Pins:**—Standard and .002", .005", .010" oversize.

**CONNECTING ROD:**—Weight—30¾ ozs. (3" x 4½" engines), 30 ozs. (3" x 5" engines).

**Length**—8½" (3" x 4½" engines), 8 3/16" (3" x 5" engines).

**Crankpin Journal Diameter**—1 15/16".

See *Crankshaft Size Code Note in Hudson Shop Notes for Original Connecting Rod Bearing sizes*.

**Lower Bearing**—Lead alloy-lined (1941), babbitt-lined (1942), Spun type. Exchange Rods furnished Standard Size and .010" Undersize.

**Clearance**—.001". Sideplay—.006-.010".

**Bearing Adjustment:**—None (no shims). Do not file rods or caps. See *Hudson Shop Notes for Palnut (rod bolt nut locknut) installation data*.

**Installing Rods:**—Lower end of rods offset. Install rods with widest half of bearing toward the rear (#1, 2, 4), toward front (#3, 5, 6). Oil scoop on lower end of rod toward camshaft.

**CRANKSHAFT:**—3 bearing, integral counterweights. See *Hudson Shop Notes for Crankshaft and Vibration Dampener Removal, Main Bearing Removal and Installation, Replacement Bearings & Line-Reaming data*.

**Journal Diameters**—#1, 2 11/32"; #2, 2 3/8"; #3, 2 13/32".

See *Crankshaft Size Code Note in Hudson Shop Notes for Original Main Bearing Sizes*.

**Bearings**—Bronze backed, babbitt lined type. Bearings secured in cap and crankcase by brass screws. NOTE—No shim pack is used. Palnuts used in place of cotter pins to lock bearing cap nuts.

**Clearance**—.001".

**Bearing Adjustment:**—None (no shims). Do not file caps. See *Hudson Shop Notes for Bearing Adjustment and Palnut (locknut) Tightening procedure*.

► **CAUTION**—Replacement of main bearings requires removal of crankshaft. Bearings retained by brass screws.

**Replacement Bearings:** See *Hudson Shop Notes*.

**End Thrust:**—Taken by center bearing. Replace bearing if endplay excessive. NOTE—If new unfinished bearings installed, thrust face for center bearing must be faced for proper endplay.

**Endplay**—.006-.012".

► **CAMSHAFT:** **CAUTION**—Two types of production camshafts used as follows:

1)—Part No. 159505. For all 1941-42 3" x 5" engines, and up to car no. 6848 on 1941 3" x 4½" engines.

2)—Part No. 162962. For all 1942 3" x 4½" engines, and after car no. 6848 on 1941 3" x 4½" engines.

► **CAUTION**—Different Tappet Clearance Settings and Valve Timing used with each camshaft listed above. See Valve Timing (following).

**1942 Note**—Camshaft Bearing Clearance and Timing Gear Backlash reduced from that used on previous models for quieter operation of valve mechanism. No valve spring dampeners used.

**Journal Diameters**—#1, 2.000"; #2, 1.968"; #3, 1.5625".

**Bearings**—New type steel-backed, 'Bermox' (babbitt) lined bushings (formerly solid type babbitt).

**Clearance**—.002-.0025" (1941), .001-.0025" (1942).

See *Hudson Shop Notes for Camshaft Removal and Camshaft Bearing installation instructions*.

► **Replacement Camshaft for ALL ENGINES:** New replacement camshaft no. 166195 (similar to No. 2 Production Camshaft listed above). See *Replacement Camshaft in Hudson Shop Notes for changes and identification*.

► **CAUTION**—When replacement camshaft installed on engines with No. 1 (159505) production camshaft (listed above), Tappet Clearance Settings and Valve Timing changed. See Valve Timing (following) or see *Replacement Camshaft in Hudson Shop Notes*.

**End Thrust:**—Thrust washer between camshaft flange and crankcase. Spring loaded button in camshaft hub bears against thrust plate on gear cover. NOTE—Service thrust washer available which can be split and installed without removing camshaft.

**Timing Gears:**—Crankshaft gear cast-iron, camshaft gear laminated fibre. Tooth shape changed to 20° pressure angle (was 14½°) to provide quieter operation and longer gear life. Gears can be identified by figure 20 stamped on front face (crankshaft gear carries additional FRONT mark to insure correct installation). Gears may be installed in sets only (not singly) on earlier car models (new type gears similar to previous type except for tooth pressure angle).

C NTINUED ON NEXT PAGE

## ENGINE

## CONTINUED FROM PRECEDING PAGE

**NOTE**—Camshaft gear available in .008" Oversize (can be distinguished from Std. Size by spot of yellow paint on front face).

**Backlash**—.002-.004".

*See Hudson Shop Notes for Timing Gear removal and installation instructions.*

**Camshaft Setting**:—Mesh marked crankshaft gear tooth between two marked teeth on camshaft gear.

VALVES:—	Head Diameter	Stem Diameter	Length
All valves	13/16"	11/32"	5 11/32"
	Seat Angle	Lift	Stem Clearance
Intake	45°	11/32"	.0025"
Exhaust	45°	11/32"	.004"

**Valve Guides**: Removable type. New longer exhaust guide used in 1942 (counterbore at top increased) and lengthened approx. 3/8", lower end of guide has been lengthened approx. 3/8" to compensate for increased length of counterbore at top). This new guide designed to reduce tendency of exhaust valves to stick due to fuel or oil gum formations at upper end of valve stem.

**Servicing**—Use Tool J-1188 to drive guides out. Install guides with Tool J-883-A with top of guide 1 1/16" below top of cylinder block. With guides installed, ream guides with Tool J-129-2 to .3437" (11/32") which will provide proper valve stem-to-guide clearance. **NOTE**—Car manufacturer recommends that guides be cleaned with Tool KMO-122

**Valve Springs**:—Cadmium plated springs used with dampener installed on bottom with open side toward cylinder (Dampener used on 1941 cars only). Use Tool J-587-A to install valve spring and seat **NOTE**—Car manufacturer recommends that dampeners be omitted whenever valves are serviced.

**Spring Free Length**—2 17/64".

	Spring Pressure	Spring Length
Valve Closed	40 lbs.	2"
Valve Open	80 lbs.	1 21/32"

**NOTE**—When springs removed, test for pressure (Tool U-15). Replace if pressure below 34 lbs. at 2".

**Valve Lifters**:—Roller shoe type, fitted in removable guides. *See Hudson Shop Notes for lifter removal.*

## VALVE TIMING

► **Tappet Clearance**: **CAUTION**—2 settings used:

- 1)—.006" Intake, .008" Exhaust, hot & idling for
  - a) 1941-42 3" x 5" engine with original camshaft.
  - b) 1941 3" x 4 1/8" engine up to car no. 6848 with original camshaft.
- 2)—.010" Intake, .012" Exhaust, hot & idling for
  - a) 1941 Small 3"x4 1/8" Engine after car No. 6848.
  - b) 1942 Small 3"x4 1/8" Engine.
  - c) All 1941-42 engines with new design replacement camshaft (Valve Cover Plate should carry decalcomania specifying this .010" Int., .012" Exh. setting where replacement camshaft installed).

**NOTE**—See Replacement Camshaft data on preceding page for data.

*See Hudson Shop Notes for Fender Plate Removal for access to valve compartment.*

**VALVE TIMING**: See Camshaft Setting above.

## ORIGINAL VALVE TIMING SPECIFICATIONS

► for 1941-42 3" x 5" Engines

► for 1941 3" x 4 1/8" Engines up to car no. 6848 (with production 159505 camshaft)

**Intake Valves**—Open 10°40' BTDC. Close 60° ALDC.  
**Exhaust Valves**—Open 50° BLDC. Close 18°44' ATDC. These figures correct with .010" tappet clearance.

► for 1941-42 3" x 4 1/8" Engines after '41 car no. 6848 (with production 162962 camshaft)

**Intake Valves**—Open 28°30' BTDC. Close 68°30' ALDC.  
**Exhaust Valves**—Open 52°40' BLDC. Close 32°40' ATDC. These figures correct with .010" tappet clear.

## NEW VALVE TIMING SPECIFICATIONS

► for all 1941-42 Engines

(with replacement 166195 camshaft)

**Intake**—Open 27°30' BTDC. Close 68°10' ALDC.  
**Exhaust**—Open 51°50' BLDC. Close 32°10' ATDC. These figures correct with .010" tappet clearance.

**Valve Timing Check** (for engines with production 159505 camshaft)—With .010" tappet clearance, #1 intake valve should open with piston 10°40' BTDC. when point on flywheel 4 teeth before "UDC. 1-6/" lines up with indicator in hole in support above starter. Reset tappet clearance to .006" Intake.

(for engines with production 162962 camshaft or replacement 166195 camshaft)—With .010" tappet clearance, #1 intake valve should open with piston 27°30' BTDC. when point on flywheel 10 teeth before "UDC. 1-6/" lines up with indicator in support above starter.

## LUBRICATION

**LUBRICATION**:—Duo-flo (pressure and positive splash) lubricating system.

**Oil Pump**:—Oscillating plunger type, gear driven by camshaft. Mounted on right side of crankcase.

**Normal Oil Pressure**—4-12 lbs. with hot oil. No gauge used (see Oil Pressure Indicator below).

**NOTE**—On 1942 engines, lower end of oil reservoir suction pipe (from oil pan to crankcase wall) extends to center of oil reservoir to insure constant oil supply to pump.

**Oil Check Valve**:—Located on right side of crankcase at rear. Opens at 4-12 lbs. with hot oil. Operates dash signal to indicate oil flow.

**Oil Pressure Indicator**:—Hudson Teleflash Oil Pressure Indicator. Consists of signal light on instrument panel operated by switch mounted on oil check valve.

*For complete data, refer to Electrical Equipment Index.*

**Checking Oiling System**:—*See Hudson Shop Notes.*

**Crankcase Capacity**:—4 1/2 quarts (refill), 5 1/2 (dry).  
**Servicing Note**—When changing oil without removing oil pan, refill with 4 1/2 quarts. If oil pan removed, place 1 1/2 quarts in upper tray before oil pan installed, then 4 quarts through filler with pan in place.

## COOLING

**COOLING SYSTEM**:—Capacity—13 quarts.

*See Hudson Shop Notes for radiator core removal.*

**Water Pump**:—Centrifugal, belt-driven, packless type with single outlet (no by-pass). Grease fitting provided for front & rear bearing lubrication.

*See Water Pump Section for complete data.*

**Thermostat**:—Fulton. Choke type located in cylinder head water outlet.

**Setting**—Starts to open 150-155°F. Fully open 185°. **NOTE**—Special high temperature thermostats available for use with ethylene glycol type anti-freeze. Starts to open 160-165°F. Fully open 190°F.

**Temperature Gauge**:—King-Seeley Electric. K-S Nos. 8310 (Dash Unit—stamped 'T'), 7000 (Eng. Unit). *See Miscellaneous Section for complete data.*

**NOTE**—Temperature gauge inoperative with ignition 'off'. Pointer returns to 'H' (hot) position.

## CLUTCH

**CLUTCH**:—Own Make. Single plate, cork insert type operating in oil.

*See Clutch Section for complete data.*

**Driven Member**—Cork Insert type (90 cork inserts on 9" size, 108 cork inserts on 10" size). Corks are .203" thick.

	Inside—Diameter—Outside
10, 10L, 11 (no O.D.)	5 1/4".....9"
10, 10L, 11 (With O.D.)	6 3/8".....10"
12, 18	6 3/8".....10"
20, 21 (no O.D.)	5 1/4".....9"
20, 21 (with O.D.)	6 3/8".....10"
22, 28	6 3/8".....10"

**Pedal Adjustment (1941)**: Setting used dependent on connector link position on cross shaft lever. Normal setting (with connector link in center hole on cross shaft lever) 1 1/2" clearance between underside of toeboard and center of clutch pedal clamp bolt. Second setting (with connector link in lower hole— for lighter clutch pedal pressure) clearance increased to 2". To adjust, loosen lock nut on connector link above clevis, take out clevis pin and turn clevis in or out for correct clearance. Check Automatic Clutch Control adjustment if used.

**Pedal Adjustment (1942)**: Clearance between underside of toeboard and top of pedal shaft should be 1 1/2" with link engaged in pedal and cross-shaft levers as given in table below. To adjust, loosen locknut on adjusting link above clevis, take out clevis pin (at lower end of link), adjust length of rod for proper clearance by turning clevis in or out on adjusting link.

Model	Top	Bottom
20T, 20P, 20C.....	Inner Hole.....	Outer Hole
20TL, 20PL, 20CL; 21.....	Outer Hole.....	Outer Hole
22, 24, 25, 27, 28 & ①.....	Outer Hole.....	Center Hole

①—All Six & Eight cylinder cars with Vacuumotive Drive, Drive-Master, or Overdrive.

**Clutch Oil Servicing**:—*See Hudson Shop Notes for data.*

**Removal**:—Remove transmission (see Transmission Removal following). Drain clutch oil by turning engine over until plug on flywheel is accessible through timing inspection hole in rear engine support plate above starter, remove plug, turn engine over 1/2 revolution until star on flywheel visible through timing hole (drain hole then at bottom), allow lubricant to be drained. Loosen mounting bolts in clutch cover rim to release spring tension, remove bolts and lift clutch assembly off car.

**NOTE**—See Installation Note following Transmission Removal for Clutch Throwout Bearing Oil Seal

## VACUOTIVE DRIVE

**Vacuotive Drive**: Automatic clutch control. Optl. **NOTE**—Governor switch changed during production.

*See Clutch Section for complete data.*

## TRANSMISSION

**TRANSMISSION:**—Own Make. New all helical gear, constant-mesh type with synchro-mesh (Second and High), sliding gears (Low & Reverse) and steering column gear shift. NOTE—External shift rail locks not used but are available in Accessory Kits for installation on cars operated in mountainous regions where Second Gear operation required for long periods.

See Transmission Section for complete data.

**Transmission Control:**—Hudson 'Handy-Shift' type. See Transmission Section for complete data.

**Removal:**—Transmission can be removed from inside car as follows: Take off accelerator pedal by removing cotter pins in anchor bracket and bell crank link clevis pins. Move steering column rubber hole cover up out of way. Remove floor mat by taking out screws at kick pads on dash and mat trim clips. Remove front seat cushion and transmission floor opening cover (CAUTION—Accelerator pedal operating rod should be secured so as not to drop on starter switch). Disconnect front universal by taking out four nuts and lock plates on U-bolts. Release clutch pedal return spring. Remove two cross shaft bracket bolts, clutch control link clevis pin and clutch pedal assisting spring. Remove Handy Shift control tube-to-transmission shift rod cotter pin, washer and grommet; transmission casing lower anchor bracket screws and anchor bracket; transmission case outer lever retainer nut and retainer nut washer; and lever. Remove two flywheel guard-to-clutch housing screws and two rear engine mounting bolts (CAUTION—Do not remove rear engine mounting-to-clutch housing bolt). Jack rear of engine up ½" off frame. Remove clutch housing to transmission bolts. Disconnect speedometer cable from transmission. Pull transmission back and lift out.

**Installation Note:**—Wrap one strand of soft wire around throw-out bearing oil seal to prevent leather curling over when transmission installed (twist wire with ends extending up through clutch housing so that it will come off the seal after transmission installed).

## DRIVE-MASTER TRANSMISSION

**Drive-Master:**—Conventional 3-speed transmission with automatic gearshifting between second and high gears in conjunction with Vacuum Drive (automatic clutch control). Optl. equipment. See Transmission Section for complete data.

## OVERDRIVE

**Overdrive:**—Warner Model AS1-R9B with electrical 'kick-down' control (new type—no centrifugal clutch pawls used). Optional equipment.

**1941 Governor Switch Change to Correct Late Cut-In:**—New Governor Switch Part No. 162867 with purple dots on terminal screw heads and purple band around switch has reversed oil threads in shaft bushings to keep transmission lubricant out of switch, overcoming improper operation of switch. Used on Late '41 cars.

See Transmission Section for complete data.

**Overdrive Transmission Removal:**—Same as standard transmission removal (above) except that overdrive control and wiring connections must be dis-

connected. Special Tool J-1502-H (hoist and dolly) should be used to lift transmission and lower onto dolly. Transmission and overdrive assembly can then be rolled out from beneath car.

**Overdrive Solenoid:**—Delco-Remy. Hudson #163305. **Throttle Switch:**—Cole-Hersee. Hudson No. 162594. Adjust position of contact washer on accelerator pedal rod so that it just contacts switch plunger with carburetor throttle in wide open position. **Governor Switch:**—Bendix No. 162867. NOTE—Changed to new type with purple dots on terminals.

## UNIVERSALS

**UNIVERSAL JOINTS:**—Spicer. Needle bearing type.

Car Model	Spicer Model No.	Front	Rear
10, 20 Std.	1261-101	1268-101	
11, 12, 21, 22 Std.	1271-101	1278-101	
18, 28 Std.	1281-101	1278-101	
All Models (with Overdrive)	1281-101	1278-101	

See Universals Section for complete data.

## REAR AXLE

**REAR AXLE:**—Own Make. Semi-floating, spiral bevel gear type with Hotchkiss drive.

See Rear Axle Section for complete data.

Ratios	4 1/9-1	4 5/9-1	4 7/8-1
10 Std.	Optl.	Std.	Optl.
10 With Overdrive	Optl.	Optl.	Std.

28 Comml. With O.D.		Std.	

Backlash—.0005-.0035". Screw adjustment.

**Removal:**—Disconnect rear universal by taking out four nuts and lock plates on U-bolts, drop rear end of propeller shaft. Remove axle shafts (see instructions below). Remove bolts nuts on carrier flange, pull carrier assembly out of axle housing.

**Axle Shaft Removal:**—Hoist rear of car. Remove rear wheels. Remove axle shaft nut and washer (use Tool J-351). Remove hub and drum assembly using screw type wheel puller (Tool J-736—CAUTION—Car manufacturer recommends that screw type puller be used, if knock out type puller is used serious damage to differential parts may result). Remove 4 nuts on bearing cap bolts, push bolts out of backing plate, remove bearing cap and shims (without disturbing hand brake link). Take out rear wheel bearing and axle shaft using puller Tool J-352. Do not drag axle shaft on oil seal assembly in housing.

**Wheel Bearing Adjustment:**—Controlled by shims under bearing cap. To adjust, remove bearing cap (see directions above under Axle Shaft Removal), add or remove shims equally at both wheels (necessary to keep thrust spacer centered on differential pinion shaft—if adjustment made at one wheel only spacer will bind on shaft).

Endplay—.002-.004".

## SHOCK ABSORBERS

**SHOCK ABSORBERS:**—Direct acting, hydraulic types.

Car Model	Make	Front	Rear
10, 11, 18 Std. Springs	Monroe	160101	160107
10, 11, 18 Hvy. Springs	Monroe	161636	160108

20, 21, 22, 28	Monroe	164547	164548
20, 21, 28	Monroe	164786	164787
①—All Sedans.	②—Coupes (3 & 4 Pass.).		
③—Early Sedans (exc. 22), Late 3 Pass. & Club Coupe.			
④—Early 3 Pass. & Club Coupe.			
⑤—Late Sedans.			

See Shock Absorber Section for complete data.

## FRONT SUSPENSION

**Front Suspension:**—Independent, linked parallelogram type with coil springs and Autopole Control. See Front Suspension Section for complete data.

**Kingpin Inclination:**—4°36' crosswise.

**Caster:**—0° (Neg. ¼° to Pos. ¼°). Adjustable.

**Camber:**—Positive ¼° to Positive ¾°. Adjustable.

**Toe In:**—0-1/16". Center steering arm on frame must be at center of car. To adjust, loosen clamps at ends of each tie rod and adjust tubes equally (to increase toe-in turn rods in direction of wheel travel, to decrease, turn in opposite direction).

**Steering Geometry (Toe-out on Turns):**—With outer wheel turned 25°. Inner wheel turn should be 30°.

## STEERING GEAR

**Steering Gear:** Gemmer Model 305. Worm-and-Roller type with "push-pull" adjustments. All models have Center Point steering linkage.

See Steering Gear Section for complete data.

## BRAKES

**BRAKES:**—Service. Bendix hydraulic, duo-servo, single anchor type without eccentric adjustment. Mechanical follow-up (pedal linked to rear wheel brakes through hand brake cables) provided. Hand lever applies rear wheel service brakes.

See Brake Section for complete data.

**Commercial Cars Model 10C Note:**—Early 1941 Model 10C cars (up to Car No. 1054730) equipped with 11" brakes (see 1941 Hudson 8 page following for 11" brake specifications). Data below applies to Model 10C starting with Car No. 1054731 & all other Sixes.

**Drums:**—New centrifuse type. Diameter 10".

**Lining:**—Multibestos molded (primary), Ferodo woven (secondary). Width 1¾". Thickness 7/32". Length per wheel 22⅞".

**Clearance:**—.015" at each end of secondary shoe with primary shoe forced out against drum.

**Hand Brake:**—See Service Brakes above.

## MISC. MECHANICAL

**CONVERTIBLE TOP CONTROL:** Hydro-electric type (hydraulic actuation with motor-driven hydraulic pump). Used on Convertible models.

See Miscellaneous Section for complete data.

**Top Control Motor:**—Auto-Lite Model MBM-4001.

**ENGINE HOOD (BONNET) LOCK, HOOD REMOVAL AND ADJUSTMENT:**—See *Hudson Shop Notes*.

## MODEL IDENTIFICATION

	1941	1942
Model Serial No.	Model Serial No.	
Commodore Eight.....14.....14101.....24.....24101		
Commo. Cust. Coupe 15.....15101.....25.....25101		
Commo. Cust. Sedan 17.....17101.....27.....27101		

**SERIAL & ENGINE NUMBER:**—See Model Notation for first Nos. (first 2 figures indicate model thus: 14-101). Stamped on plate on right front door hinge pillar post and on top of engine block between #1 and #2 exhaust manifold flanges.

## TUNE-UP

**COMPRESSION:**—Ratio—6.5-1 Std. No Optl. ratios.  
Pressure—120 lbs. at 125 RPM cranking speed.

**VACUUM READING:**—18-21" steady idling at 600 RPM.

**FIRING ORDER:**—1-6-2-5-8-3-7-4. See diagram.

**SPARK PLUGS:**—Champion Spec. J9 Hudson, 14 MM.  
Gaps—.032"

**Optional Plugs:**—Champion J5 (hotter plug) for continuous low speed service or J10 Commercial (cooler plug) for continuous high speed service.

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.017" Cam Angle 31° (closed).

Automatic Advance—17.5° max. at 1700 RPM (distr.).

**IGNITION TIMING:** See Ignition Timing.

Std. Setting—At TDC. with flywheel mark "UDC. 1-8/" at indicator in inspection hole in left rear motor support.

**CARBURETION:** See Carburetor & Carb. Equipment.

Idle Setting—Both idle screws ½-1½ turn open. Idle speed 580-600 RPM.

Float Level—3/32" (455-S), 1/8" (502-S) from gasket seat on cover to top of float (valve seated).

Accelerating Pump—Outer hole (max. stroke) Normal. Inner hole (min. stroke) when required.

Fuel Pump Pressure: 4½ lbs. max. (AK), 4 lbs. (AJ).

**MANIFOLD HEAT CONTROL:**—Automatic thermostatic type. No adjustment required.

**VALVES:** See Valve Timing.

Tappet Clearance:—.006" Intake, .008" Exhaust (with engine hot and idling). Remove right front fender plate for access to valves. See *Hudson Shop Notes* for Fender Plate Removal.

**STARTING:** See Battery, Starter, Generator, Regulator.

## IGNITION

**Ignition Switch:**—Mitchellock Model 24-B, No. 8797.

**Ignition Lock:**—Briggs & Stratton. B & S No. 50184.

**Key Series:**—H601 to H1100. Groove—No. 1.

**COIL:** Auto-Lite Model CE-4029. Mounted on dash. Service Coil (less switch & cable) CE-3224JS.

**Ignition Current:**—2.5 amperes idling, 4.5 stopped.

**CONDENSER:** Auto-Lite Part No. IG-2671.

Capacity—20-25 microfarad.

**DISTRIBUTOR:** Auto-Lite Model IGP-4008A. Single breaker, 8 lobe cam, full automatic advance type.

Breaker Gap—.017".

Cam Angle or Dwell—31° closed, 14° open (dist.).

Breaker Arm Spring Tension—17-20 ounces.

Rotation—Clockwise viewed from above.

### Automatic Advance

Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start.....	300	0.....	600
3.....	400	6.....	800
8.....	850	16.....	1700
13.....	1300	26.....	2600
17.5.....	1700	35.....	3400

**Fuel Compensator:**—Manual adjustment for octane rating of fuel used. See Ignition Timing for setting.

**Removal:**—Mounted on right side of crankcase. To remove take out hold-down screws in advance arm.

## IGNITION TIMING

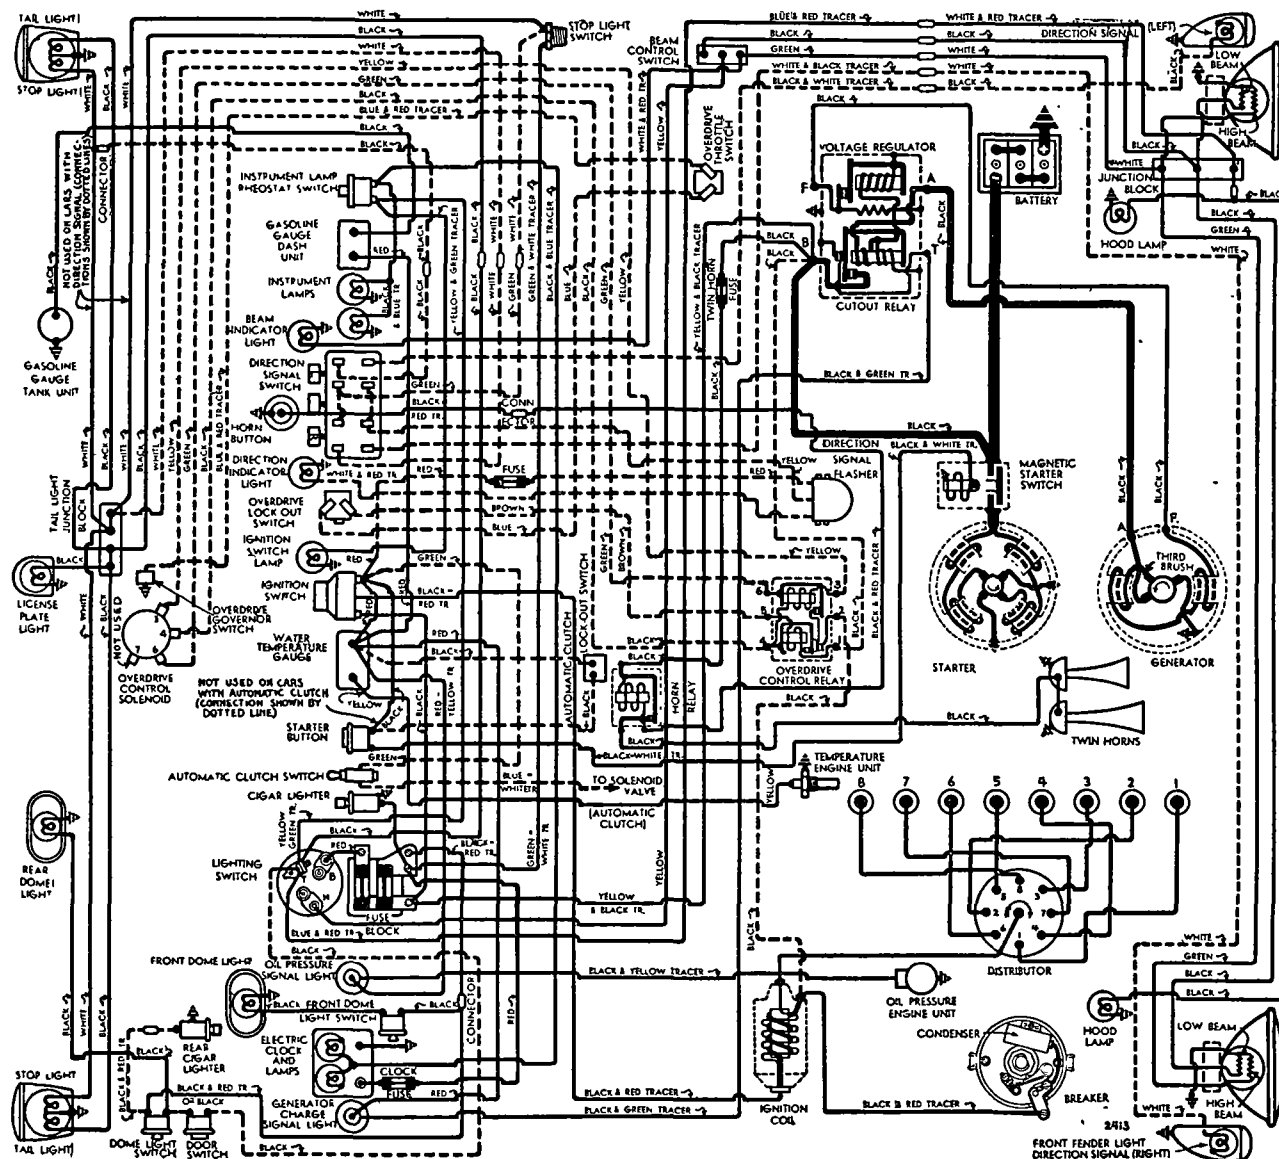

**IGNITION TIMING:**—Initial Setting (for 72 octane rating fuel). See Fuel Compensator setting following.

Flywheel Degrees Piston Position

All Engines ..... 0° at TDC ..... .0000" TDC

**Flywheel Marks:**—'UDC.1-8/' at TDC with 4 graduations (¼" apart) ahead of this mark.

**Timing:**—With #1 piston on compression, turn engine over until piston reaches top dead center when

flywheel mark 'UDC.1-8/' lines up with pointer in left front face of rear motor support. Loosen hold-down screw in advance arm, rotate distributor clockwise to limit of advance arm slot, then slowly rotate distributor counter-clockwise until contacts begin to open, tighten hold-down screw. Check Fuel Compensator setting.

**Timing (Using Synchroscope)**—Recommended by manufacturer. Mark flywheel with white chalk or paint, connect at #1 spark plug. Idle engine and adjust distributor as directed above.

**Fuel Compensator Setting**—Road test car (engine warm). When running at 8 MPH slight ping should occur between 10-15 MPH when accelerating with wide open throttle. To adjust, loosen hold-down screw, rotate distributor one graduation on scale

counter-clockwise (if no ping), clockwise (if ping to severe). Final setting must not be more than  $\frac{3}{4}$ " (3rd graduation) before 'UDC.1-8/' mark.

## CARBURETOR

**CARBURETION (EIGHT)**—Carburetor—Carter Type WDO Model 455-S (before Serial & Engine No. 7293), Model 502-S (1941 after No. 7293 and 1942 Models).  $1\frac{1}{4}$ " dual downdraft types. #279 cast on face of carburetor flange (both carburetors). Slow closing throttle 'dashpot' device used on Model 455-S only. For complete data, refer to Carburetor Index.

**Idle Adjustment**—With engine warm and running at slow idle speed (choke valve wide open, fast idle inoperative), set throttle stopscrew for 600 RPM

idle speed. Adjust idle adjusting screws (2 used, 1 for each barrel) in succession until engine fires smoothly. Final setting should be  $\frac{1}{2}$ - $1\frac{1}{2}$  turns open for each screw (turn screws in for leaner mixture). If vacuum gauge used, adjust for highest steady reading of gauge. Readjust throttle stopscrew for correct idling speed.

**Accelerating Pump Setting**—Pump lever (under dust cover at top of carburetor) has 2 holes for pump link engagement. Adjust as follows:  
Outer Hole (Max. stroke)—Normal setting.  
Inner Hole (Min. stroke)—If less charge required.

**Float Level**— $\frac{3}{32}$ " (455-S),  $\frac{1}{8}$ " (502-S) from top of float to bowl cover with valve seated.

**Fast Idle**—Integral type (part of carburetor).

For complete data, refer to Carb. Equip. Index.

**Setting (455-S)**—With choke valve closed, adjust fast idle screw for .018" throttle opening.

**Setting (502-S)**—With choke valve closed and fast idle screw on high lobe of fast idle cam, turn fast idle screw in until throttle opening is .053".

**Automatic Choke**—Carter Climatic Control.

For complete data, refer to Carb. Equip. Index.

**Setting**—Centered (at index mark) for 455-S, 1 Notch Lean for 502-S (supersedes "Centered" setting originally specified for 502-S).

## CARB. EQUIPMENT

**Air Cleaner**—AC #1528161 oil-wetted type Std. #1542385 (Cars with Drive Master) Oil-wetted type. Replacement Filter Element Assembly Type #1. United heavy duty oil-bath type cleaner Optl.

**Fuel Pump**: AC Type AK, No. 1523289 diaphragm type fuel pump Std. Type AJ combination fuel-and-vacuum pump Optl. Replacement Exchange Pump (AK) No. 499.

For complete data, refer to Carb. Equip. Index.

**Gasoline Gauge**—King-Seeley Electric. K-S No. 8305 (Dash Unit—stamped 'G'), No. 7550 (Tank Unit).

For complete data, refer to Carb. Equip. Index.

## BATTERY

**BATTERY**—National, Type HT-19. 6 volt, 19 plate, 108 ampere hour capacity (20 hour rate).

**Starting Capacity**—135 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 4.0 minutes. Five second voltage—4.43 volts.

**Grounded Terminal**—Positive (+) to frame. Engine Ground—Strap (rear motor support to frame).

**Dimensions**—Lgth.  $11\frac{3}{4}$ ". Width  $7\frac{1}{4}$ ". Hgt.  $7\frac{13}{16}$ ".

**Location**—On left side under engine hood.

## STARTER

**STARTER**—Auto-Lite MAB-4100. Armature MAB-2113.

**Drive**—Inboard Barrel type Bendix No. A-1684.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—42-53 ozs. (new brushes).

**Cranking Engine**—150 RPM, 120-125 amperes, 5 v.

## CONTINUED FROM PRECEDING PAGE

## Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	3700	5.5	60
0.6 "	1910	5.5	100
3.4 "	1100	5.0	200
6.8 "	695	4.5	300
10.15 "	420	4.0	400
15.2 "	Lock	3.0	575
21.5 "	Lock	4.0	750

NOTE—Lock torque figures correct with switch.

Removal:—On left front face of rear motor support. To remove, take out flange mounting screws.

Starting Switch:—A-L Model SS-4001. Magnetic type. Mounted on starter, controlled by switch on instrument panel. Operative only with ignition on (and clutch disengaged on cars with Vacuumotive Drive or Hudson Drive Master). Starter pushbutton Douglas, Hudson No. 147834 (1941).

For complete data, refer to Electrical Equipment Index.

## GENERATOR

## STANDARD

GENERATOR:—Auto-Lite GEG-4801A. Armature GDZ-2006F. Third brush control with voltage regulation. Ventilated by fan on drive pulley.

Maximum Charging Rate—39-43 amperes (cold), 3350 RPM, 39 MPH ('41), 43 MPH ('42). Charging rate controlled by Voltage Regulator and dependent on battery. See Regulator. Ground generator 'F' terminal when checking generator output.

Charging Rate Adjustment—See Regulator data. Third brush setting 1 commutator bar minimum, 1 commutator bar plus 1 mica strip maximum, from nearest (insulated) main brush. Setting adjustable by shifting third brush.

## Performance Data

Cold		Hot	
Amperes	R.P.M.	Amperes	R.P.M.
0	6.4	0	6.4
4	6.55	4	6.6
8	6.7	8	6.8
12	6.85	12	6.95
16	7.0	16	7.15
20	7.15	20	7.35
24	7.25	24	7.55
28	7.5	28	7.75
32	7.65	32	7.9
36	7.8	34	8.0
41	8.0		

Rotation—Counter-clockwise at commutator end.  
Brush Spring Tension—53 ozs. max. (new brushes).  
Field Current—1.60-1.78 amperes at 60 volts.  
Motoring Current—4.85-5.4 amperes at 60 volts.

Removal:—Pivot mounted at left front of engine. To remove, take out pivot and clamp bolts.

Belt Adjustment:—Swing generator out until possible belt deflection midway between generator and fan pulley is  $\frac{3}{4}$ " (use straightedge across pulleys).

Field Current—1.57-1.75 amperes (for GEA Gen), 1.60-1.78 amperes (for GEB, GEG Gen) at 60 volts  
Motoring Current—4.45-4.9 amperes (GEA Gen), 4-4.5 amps (GEB), 4.7-5.2 amps (GEG) at 60 volts.  
Removal & Belt Adjustment: Same as for Std. Gen.

## REGULATOR

## STANDARD

REGULATOR:—Auto-Lite VRR-4001A. Cutout Relay and vibrating Voltage Regulator in case on dash. Cutout Relay has extra set of contacts for Generator Teleflash Indicator control. NOTE—Regulator

enclosed in tight fitting metal cover on dash. For complete data, refer to Electrical Equipment Index. NOTE—Regulator case cover is sealed. Serviced on exchange basis if seals not broken.

## Cutout Relay

Cuts In—6.4-6.6 volts, 825 RPM 9.4 MPH.

Cuts Out—4.2-4.8 volts (approx. 4-6 amps. disch.).

Contact Gap—.015" min. ground contacts closed (ground contacts open when main contacts close).

Air Gap—.031-.034" at hinge end of core with contacts open (ground contacts closed).

## Voltage Regulator

Setting—7.1-7.4 volts at 70°F.

To Check (without breaking seals)—Connect ammeter in charging line at regulator 'B' terminal, voltmeter between this terminal and ground. Operate generator at speed of 30 MPH charging battery until voltage is constant. Voltmeter reading should be within limits of 7.1-7.4 volts at 70°F. See Electrical Equipment Section for other temperatures.

To Adjust (with cover removed)—Change regulator armature spring tension by bending lower spring hanger slightly. See Electrical Equipment Section.

Contact Gap—.012" Min. (armature against stop).

Air Gap—.048-.052" with contacts just opening.

## REGULATOR

## SPECIAL EQUIPMENT

Auto-Lite Regulator	Generator Used On
VRP-4008-A	GEG-4801-A
VRP-4008-B	GEA-4803-B
VRP-4008-C	GEB-4802-A
VRP-4008-C	①GEB-4802-B
VRP-4008-D	②GEB-4802-B
VRP-4008-D	GEB-4802-B2

①—Before Generator Serial Number 2V-000001.

②—After Generator Serial Number 2V-000001.

Type—Cutout Relay and vibrating type Voltage & Current Regulator units in a single case on dash. Same design as Std. VRR Regulator except for the additional Current Regulator.

For complete data, refer to Electrical Equipment Index.

## Cutout Relay &amp; Voltage Regulator

All specifications same as for Std. VRR type (above).

## Current Regulator

Setting—39-41 amps. marked '40' VRP-4008-A  
34-36 amps. marked '35' VRP-4008-B&D  
31-33 amps. marked '32' VRP-4008-C

To Check—Connect test meters as for voltage check (above), operate generator at speed for maximum output, turn on lights so that generator charges at peak rate and current regulator operates, check ammeter reading, should agree with setting above. Adjustment, Contact Gap, Air Gap—Same as for VRR Voltage Regulator unit data as given above.

## LIGHTING

Headlamps—Hall "Sealed Beam" type.

For complete data, refer to Electrical Equipment Index.

Headlamp Adjustment—Aim upper beam of each headlamp straight ahead with hot spot centered on horizontal line 3" below lamp center height.

**Beam Indicator**—Red Pilot bulb on speedometer dial. Lighted when Country (upper) beams in use.  
**Direction Indicator**—Optional Equipment.  
*For complete data, refer to Electrical Equipment Index.*

#### Switches—1941

**Lighting**—Douglas. Hudson No. 147835.  
**Beam Selector**—R-B-M Model 2484.  
**Instrument**—R-B-M. Hudson No. 160092.

#### Switches—1942

**Lighting**—Douglas. Hudson No. 200417.  
**Beam Selector**—R-B-M. Hudson No. 164439.  
**Instrument**—R-B-M. Hudson No. 160092.

#### Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps	Sealed Beam	
Bonnet Side Panel (Park)	1.5	55
Fender Lamp (See Note)	3	63
Ign. Lock ('42), Clock	1.5	55
Speedometer ('41)	1.5	55
Spdmtr. ('42), Ign. Lock ('41)	1	51
Gen. & Oil Signal ('41)	1.5	55
Gen. & Oil Signal ('42)	1	51
Beam & Direction Ind.	1	51
Stop & Tail	21-3	1154
Rear License	3	63
Dome & Courtesy	15	88

NOTE—Front Direction Indicator bulb is separate 21 cp. Mazda No. 1129 (1941), combined with Fender Lamp in 21-3 cp. Mazda No. 1158 bulb (1942).

### MISC. ELECTRICAL

**SIGNAL LIGHTS**—Generator Charge and Oil Pressure Indicators used. Hudson Teleflash Electric type.  
*For complete data, refer to Electrical Equipment Index.*

**FUSES**—**Lighting**—30 ampere. Lower fuse on fuse block on lower edge of instrument panel to right of steering column. Accessory—30 amp. Top fuse on block. NOTE—Silver-plated fuses used. 30 amp. fuse supersedes 20 ampere fuse used on early cars.

**Twin Horns (1941)**—30 ampere. On engine dash.

**Direction Indicator**—10 amp. near speedometer.

**Electric Clock**—2 amp. in case behind clock.

NOTE—Feed wire for electric clock on early cars connected to battery 'B' terminal on fuse block. Car manufacturer recommends that feed be connected to accessory 'X' terminal (see diagram).

**HORNS**—**Sparton**—Twin air electric type operated by relay. 30 amp. fuse in case on dash.

**Air Gap**—.026-.030" high pitch (short horn), .032-.035" low pitch (long horn).

**Horn Relay**—R-B-M Model 6004. On engine dash.

**Contacts Close**—3 volts min., 4 volts, max.

**Open**—2 volts min. (relay upright, terminals down).

### ENGINE

**ENGINE SPECIFICATIONS**—8 cylinder, 'L' head type.

**Bore**—3". **Stroke**—4½".

**Displacement**—254 cubic inches. **Rated HP.**—28.8.

**Developed Horsepower**—128 at 4200 RPM.

**Compression Ratio**—6.50-1 cast-iron head.

**Compression Pressure**—120 lbs. at 125 RPM.

**Vacuum Reading**—Steady 18-21" idling at 600 RPM.

*See Hudson Shop Notes for Engine Removal data.*

**PISTONS**: Lo-Ex aluminum alloy (1941), Cast Alloy (1942), cam ground type. Use finished replacement pistons.

**Weight**—10.5 ozs. (stripped). **Length**—3 3/16".

**Removal**—Piston and rod assemblies may be removed from above or below.

**Clearance**—Top .016". Skirt .0005-.001".

**Original Bore & Piston Sizes, Replacement Pistons**:—*See Hudson Shop Notes for sizes and markings.*

**Fitting New Pistons**:—Use .0015" feeler ½" wide (Piston Feeler Scale Tool J-888-A) inserted between piston and cylinder wall on side opposite slot 90° from pin. Pull to withdraw feeler 3-4 lbs.

**Installing Pistons**: Slot away from camshaft.

**PISTON RINGS**:—2 compression, 2 oil rings (1 above pin, 1 below pin). Rings positioned by pin in groove.

Ring	Width	End Gap	Side Clearance
Compression	3/32"	.009-.011"	.001"
Oil Cont. (#1)	3/16"	.009-.011"	.001"
Oil Cont. (#2)	5/32"	.009-.011"	.001"

**Replacement Rings**:—*See Hudson Shop Notes for data.*

**PISTON PIN**:—**Diameter**—¾". **Length**—2 7/16".

Floating type. Retained by locking rings.

*See Hudson Shop Notes for Pin Servicing data.*

**Pin Fit in Piston**—.0003" clearance (hand push fit) with piston heated to 200°F.

**Pin Fit in Rod Bushing**—.0003" clearance.

**Replacement Pins**:—Std., .002", .005", .010" oversize.

**CONNECTING ROD**:—**Weight** 30 ozs. **Length** 8 3/16".

**Crankpin Journal Diameter**—1 15/16". *See Crankshaft Size Code Note in Hudson Shop Notes for original bearing size.*

**Lower Bearing**—Lead alloy-lined (1941), babbitt-lined (1942), Spun type. Exchange Rods furnished Standard Size and .010" Undersize.

**Clearance**—.001". **Sideplay**—.006-.010".

**Bearing Adjustment**:—None (no shims). Replace rods. *See Hudson Shop Notes for Palnut (locknut) data.*

**Installing Rods**:—Offset. Install rods with widest half of bearing toward rear (#1, 3, 5, 7), toward front (#2, 4, 6, 8). Oil scoop on all rods toward camshaft.

**CRANKSHAFT**:—5 bearing, integral counterweights. *See Hudson Shop Notes for Crankshaft and Vibration Dampener Removal, Main Bearing Removal and Installation, Replacement Bearings & Line-Reaming data.*

**Journal Diameters**—#1, 2 9/32"; #2, 2 5/16"; #3, 2 11/32"; #4, 2 3/8"; #5, 2 13/32". *See Crankshaft Size Code in Hudson Shop Notes for original bearing sizes.*

**Bearings**—Bronze backed, babbitt lined type. Bearings secured in cap and crankcase by brass screws.

NOTE—No shim pack is used. Palnuts used in place of cotter pins to lock bearing cap nuts.

**Clearance**—.001".

**Bearing Adjustment**:—None (no shims). Do not file caps. *See Hudson Shop Notes for Bearing Adjustment and Palnut (locknut) tightening procedure.*

►**CAUTION**—Replacement of main bearings requires removal of crankshaft. Bearings retained by brass screws.

**Replacement Bearings**: *See Hudson Shop Notes.*

**End Thrust**:—Taken by center bearing. Replace bearing if endplay excessive. **Endplay**—.006-.012".

**CAMSHAFT**:—Five bearing, gear driven type with new type bearings and timing gears. *See Hudson Shop Notes for Camshaft Removal and Bearing Installation.*

**1942 Note**—Camshaft Bearing Clearance and Timing Gear Backlash reduced from that used on previous models for quieter operation of valve mechanism. No valve spring dampeners used.

**Journal Diameters**—#1, 2.029"; #2, 1.998"; #3, 1.968"; #4, 1.935"; #5, 1.498".

**Bearings**—New type steel-backed, 'Bermox' (babbitt) lined bushings (formerly solid type babbitt).

**Clearance**—.002-.0025" (1941), .001-.0025" (1942).

**End Thrust**:—Thrust washer between camshaft flange and crankcase. Spring loaded button in camshaft hub bears against thrust plate on gear cover. NOTE—Service thrust washer available which can be split and installed without removing camshaft.

**Timing Gears**: Crankshaft gear Cast Iron, camshaft gear Laminated Fibre. Tooth shape changed to 20° pressure angle (was 14½°) to provide quieter operation and longer gear life. Gears can be identified by figure 20 stamped on front face (crankshaft gear carries additional FRONT mark to insure correct installation). Gears may be installed in sets only (not singly) on earlier car models (new type gears similar to previous type except for pressure angle).

NOTE—Camshaft gear available in .008" Oversize (can be distinguished from Std. Size by spot of yellow paint on front face).

**Camshaft Setting**:—Mesh marked crankshaft gear tooth between two marked teeth on camshaft gear.

VALVES:	Head Diameter	Stem Diameter	Length
Intake	1½"	11/32"	5 3/32"
Exhaust	1¾"	11/32"	5 3/32"

	Seat Angle	Lift	Stem Clearance
Intake	45°	11/32"	.0025"
Exhaust	45°	11/32"	.004"

**Valve Guides**: Removable type. New longer exhaust guide used in 1942 (counterbore at top increased and lengthened approx. 3/8", lower end of guide has been lengthened approx. 3/8" to compensate for increased length of counterbore at top.) This new guide designed to reduce tendency of exhaust valves to stick due to fuel or oil gum formations at upper end of valve stem.

**Servicing**—Use Tool J-1188 to drive guides out. Install guides with Tool J-883-A with top of guide 15/16" below top of cylinder block. With guides installed, ream guides with Tool J-129-2 to .3437" (11/32") which will provide proper valve stem-to-guide clearance. NOTE—Car manufacturer recommends that guides be cleaned with Tool KMO-122 to remove carbon and scale out of guides (pay particular attention to carbon in counterbore at top of exhaust guide).

**Valve Springs**:—Cadmium plated springs used with dampener installed on bottom with open side toward cylinder (Dampener used on 1941 cars only). Use Tool J-587-A to install valve spring and seat assembly.

C NTINUED N NEXT PAGE

**ENGINE**

C NTINUED FROM PRECEDIN PA E

NOTE—Car manufacturer recommends that dampeners be omitted whenever valves are serviced.

	Spring Pressure	Spring Length
Valve Closed	40 lbs.	2"
Valve Open	80 lbs.	1 21/32"

NOTE—Replace if pressure below 34 lbs. at 2".

Valve Lifters:—Roller shoe type, fitted in removable guides. See Hudson Shop Notes for lifter removal.

**VALVE TIMING**

Tappet Clearance:—.006" Int., .008" Exh., hot & idling. See Hudson Shop Notes for Fender Plate Removal.

Valve Timing:—See Camshaft Setting above.

Intake Valves—Open 10°40' BTDC. Close 60° ALDC.

Exhaust Valves—Open 50° BLDC. Close 18°44' ATDC. Above figures correct with .010" tappet clearance.

Valve Timing Check—With .010" tappet clearance #1 intake valve should open with piston 10°40' or .0494" BTDC when a point on the flywheel approximately 3.97 teeth before UDC. 1-8' mark lines up with indicator in inspection hole above starter. Reset tappet clearance at .006" hot and idling.

**LUBRICATION**

LUBRICATION:—Duo-flo (pressure & positive splash). NOTE—On 1942 engines, lower end of oil reservoir suction pipe (from oil pan to crankcase wall) extends to center of oil reservoir to insure constant oil supply to pump.

Oil Pump:—Oscillating plunger type, gear driven by camshaft. Mounted on right side of crankcase.

Normal Oil Pressure—4-12 lbs. with hot oil. No gauge used (see Oil Pressure Indicator below).

Oil Check Valve:—Located on right side of crankcase at rear. Opens at 4-12 lbs. with hot oil. Operates dash signal to indicate oil flow.

Oil Pressure Indicator:—Hudson Teleflash Oil Pressure Indicator. For data, refer to Elec. Equip. Index.

Checking Oiling System:—See Hudson Shop Notes.

Crankcase Capacity:—7 qts. (refill), 9 qts. (dry).

Servicing Note—Whenever pan removed, install 2 qts. in upper tray before pan installed, then add 7 qts. through oil filler after pan in place on engine.

**COOLING**

COOLING SYSTEM:—Capacity—18 quarts.

See Hudson Shop Notes for radiator core removal.

Water Pump:—Centrifugal, belt-driven, packless type with single outlet (no by-pass) on Models 14 & 24, double outlet (with by-pass) on Models 15, 17, 25, 27. See Water Pump Section for complete data.

Thermostat: Fulton. Choke type (Models 14, 24), By-pass type (Models 15, 17, 25, 27). In cylinder head water outlet.

Setting—Starts to open 150-155°F. Fully open 185°F.

NOTE—Special high temperature thermostats available for use with ethylene glycol type anti-freeze. Starts to open 160-165°F (14, 24), 135-170°F (15, 17, 25, 27); Fully open 190°F (14, 24), 195°F (15, 17, 25, 27).

Temperature Gauge:—King-Seeley Electric. K-S Nos. 8310 (Dash Unit—stamped "T"), 7000 (Eng. Unit). See Miscellaneous Section for complete data.

NOTE—Gauge reads HOT with ignition 'off'.

**CLUTCH**

CLUTCH:—Own Make. Single plate, cork insert type operating in oil.

See Clutch Section for complete data.

Driven Member—Cork insert type. Inside Diam. 6 3/8". Outside Diam. 10". Facing 108 corks .203" thick.

Pedal Adjustment (1941): Two settings used dependent on connector link position on cross-shaft lever. Normal setting (with connector link in center hole on cross-shaft lever) 1 1/2" clearance between underside of toeboard and center of clutch pedal clamp bolt. Second setting (with connector link in lower hole for lighter clutch pedal pressure) clearance increased to 2". To adjust, loosen locknut on connector link above clevis, remove clevis pin, turn clevis in or out for correct clearance. Check Automatic Clutch Control adjustment (if used).

Pedal Adjustment (1942): Clearance between underside of toeboard and top face of pedal shaft should be 1 1/2" with adjusting link engaged in pedal and cross-shaft levers as listed in table below. To adjust, loosen locknut on adjusting link above clevis, remove clevis pin at lower end of link, turn clevis in or out for correct clearance.

Model	Top	Bottom
24, 25, 27	Outer Hole	Center Hole

Clutch Oil Servicing:—See Hudson Shop Notes for data.

Removal:—Remove transmission (see Transmission Removal following). Drain clutch oil by turning engine over until plug on flywheel is accessible through timing inspection hole in rear engine support plate above starter, remove plug, turn engine over 1/2 revolution until star on flywheel visible through timing hole (drain hole then at bottom), allow lubricant to be drained. Loosen mounting bolts in clutch cover rim to release spring tension, remove bolts and lift clutch assembly off car.

NOTE—See Installation Note following Transmission Removal for Clutch Throwout Bearing Oil Seal

**VACUMOTIVE DRIVE**

Vacumotive Drive:—Automatic clutch control. Optl.

NOTE—Governor switch changed during production.

See Clutch Section for complete data.

**TRANSMISSION**

TRANSMISSION:—Own Make. New all helical gear, constant-mesh type with synchro-mesh (Second & High), sliding gears (Low & Reverse) and steering column gear shift. NOTE—External shift rail locks are not used.

See Transmission Section for complete data.

Transmission Control:—Hudson 'Handy-Shift' type.

See Transmission Section for complete data.

Removal:—Transmission can be removed from inside car as follows: Take off accelerator pedal by removing cotter pins in anchor bracket and bell crank link clevis pins. Move steering column rubber hole

cover up out of way. Remove floor mat by taking out screws at kick pads on dash and mat trim clips. Remove front seat cushion and transmission floor opening cover (CAUTION—Accelerator pedal operating rod should be secured so as not to drop on starter switch). Disconnect front universal by taking out four nuts and lock plates on U-bolts. Release clutch pedal return spring. Remove two cross shaft bracket bolts, clutch control link clevis pin and clutch pedal assisting spring. Remove Handy Shift control tube-to-transmission shift rod cotter pin, washer and grommet; transmission casing lower anchor bracket screws and bracket, shift shaft outer lever nut, washer and lever. Remove two flywheel guard-to-clutch housing screws and two rear engine mounting bolts (CAUTION—Do not remove rear engine mounting-to-clutch housing bolt). Jack rear of engine up 1/2" off frame. Remove clutch housing to transmission bolts. Disconnect speedometer cable from transmission. Pull transmission back and lift out.

Installation Note—Wrap one strand of soft wire around throw-out bearing oil seal to prevent leather curling over when transmission installed (twist wire with end extending up through clutch housing so that it will come off the seal after transmission installed).

**DRIVE-MASTER TRANSMISSION**

Drive-Master: Conventional 3-speed transmission with automatic gear shifting between second and high gears in conjunction with Vacumotive Drive (automatic clutch control). Optl. equipment. See Transmission Section for complete data.

**OVERDRIVE**

Overdrive:—Warner Model AS1-R9B with electrical 'kick-down' control (new type—no centrifugal clutch pawls used). Optional equipment.

1941 Governor Switch Change to Correct Late Cut-In—New Governor Switch Part No. 162867 with purple dots on terminal screw heads and purple band around switch has reversed oil threads in shaft bushings to keep transmission lubricant out of switch, overcoming improper operation of switch. Used on Late '41 cars.

See Transmission Section for complete data.

Overdrive Transmission Removal—Same as standard transmission removal (above) except that overdrive control and wiring connections must be disconnected. Special Tool J-1502-H (hoist and dolly) should be used to lift transmission and lower onto dolly. Transmission and overdrive assembly can then be rolled out from beneath car.

Overdrive Solenoid—Delco-Remy. Hudson #163305.

Throttle Switch—Cole-Hersee. Hudson No. 162594. Adjust position of contact washer on accelerator pedal rod so that it just contacts switch plunger with carburetor throttle in wide open position.

Governor Switch—Bendix No. 162867.

NOTE—Switch changed to Part No. 162867 during production (identified by purple dots on terminal screw heads & purple band around switch body).

**UNIVERSALS**

Spicer. Needle bearing type. Spicer Model Nos.: Front—1271-101 (14, 15, 24, 25), 1281-101 (17, 27). Rear—1278-101 (All Models).

See Universals Section for complete data.

## REAR AXLE

**REAR AXLE:**—Own Make. Semi-floating, spiral bevel gear type with Hotchkiss drive.

*See Rear Axle Section for complete data.*

**Ratio**—4 1/9-1 (Standard, Optl. on Overdrive), 4 5/9-1 (Std. with Ovdr., Optl. on reg. transmission).

**Backlash**—.0005-.0035". Screw adjustment.

**Removal:**—Disconnect rear universal by taking out four nuts and lock plates on U-bolts, drop rear end of propeller shaft. Remove axle shafts (see instructions below). Remove bolt nuts on carrier flange, pull carrier assembly out of axle housing.

**Axle Shaft Removal:**—Hoist rear of car. Remove rear wheels. Remove axle shaft nut and washer (use Tool J-351). Remove hub and drum assembly using screw type wheel puller (Tool J-736—CAUTION—Car manufacturer recommends that screw type puller be used, if knock-out type puller is used serious damage to differential parts may result). Remove 4 nuts on bearing cap bolts, push bolts out of backing plate, remove bearing cap and shims (without disturbing hand brake link). Take out rear wheel bearing and axle shaft, using puller Tool J-352. Do not drag axle shaft on oil seal assembly in housing.

**Wheel Bearing Adjustment:**—Controlled by shims under bearing cap. To adjust, remove bearing cap

(see directions above under Axle Shaft Removal), add or remove shims equally at both wheels (necessary to keep thrust spacer centered on differential pinion shaft). **Endplay**—.002-.004".

## SHOCK ABSORBERS

**SHOCK ABSORBERS:**—Delco—Sedans & Club Coupes: 1007-C (front), 1008-S (rear). Monroe—3 & 4 passenger Coupes: (Front) 161657 (1941), 164547 (1942 Early Cars), 164545 (1942 Later Cars). (Rear) 161658 (1941), 164548 (1942 Early Cars), 164546 (1942 Later Cars). All shock absorbers are Direct Acting, Hydraulic type.

*See Shock Absorber Section for complete data.*

## FRONT SUSPENSION

**Front Suspension:**—Independent, linked parallelogram type with coil springs and Autopoise Control.

*See Front Suspension Section for complete data.*

**Kingpin Inclination**—4°36' crosswise.

**Caster**—0° (Neg. 1/4° to Pos. 1/4°). Adjustable.

**Camber**—Positive 1/4° to Positive 3/4°. Adjustable

**Toe In**—0-1/16". Loosen clamps at ends of each tie rod (adjust rods equally with steering arm centered).

**Steering Geometry**—Inner wheel 30°. Outer 25°.

## STEERING GEAR

**Steering Gear:** Gemmer Model 335. Worm-and-Roller type with "push-pull" adjustments and Center Point steering linkage.

*See Steering Gear Section for complete data.*

## BRAKES

**BRAKES:**—Service. Bendix hydraulic, duo-servo, single anchor type without eccentric adjustment. Mechanical follow-up (pedal linked to hand brake cables) provided. Hand lever applies rear service brakes.

*See Brake Section for complete data.*

**Drums**—Centrifuse. Diameter 11".

**Lining**—Multibestos molded (primary), Ferodo woven (secondary). Width 1 3/4". Thickness 7/32". Length per wheel 23 15/16".

**Clearance**—.015" at both ends of secondary (rear) shoe with primary shoe forced out against drum.

**Hand Brake:**—See Service Brakes above.

## MISC. MECHANICAL

**CONVERTIBLE TOP CONTROL:** Hydro-electric type (hydraulic actuation with motor-driven hydraulic pump). Used on Convertible models.

*See Miscellaneous Section for complete data.*

**Top Control Motor**—Auto-Lite Model MBM-4001.

**HOOD LOCK:** Hood is Reverse Alligator type hinged at radiator. To raise hood, press in on lock handle to left of steering column, raise rear end of hood.

### MODEL IDENTIFICATION

	Super 6	Commodore 6	Bus. Cars
Model Ser.No.	Model Ser.No.	Model Ser.No.	
1946	51 .. 31-101	52 ... 32-101	58 .. 38-101
1947	171 171-101	172 .. 172-101	178 ... 178-101

**SERIAL & ENGINE NUMBER:** See model notation above for First No. and prefix (first two figures indicate model thus: 31-101). Stamped on plate on right front door hinge pillar post and on top of engine block between #1 and #2 exhaust flanges.

### TUNE-UP

**COMPRESSION:** Pressure—120 lbs. at 125 RPM.

**VACUUM READING:** Steady 18-21" idling 7½-8 MPH.

**FIRING ORDER:** 1-5-3-6-2-4.

**SPARK PLUGS:** Champion Special J-9 Hudson. 14 mm. Gaps—.032"

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap .020". Cam Angle 35° (closed).

Breaker Arm Spring Tension—17-20 ozs.

Automatic & Vacuum Advance See tables following.

**IGNITION TIMING:** See Ignition Timing.

Std. Setting—½" on flywheel before TDC.

**Timing Mark—Flywheel** marked "UDC.1-6/" with four graduations ¼" apart ahead of this mark. Set timing with the 3rd white line aligned with pointer in inspection hole in motor support above starter, then adjust Fuel Compensator as follows:

**Fuel Compensator Setting—Advance spark** (loosen vacuum unit link screw on distributor quadrant) until slight ping noted accelerating with wide open throttle between 10-15 MPH. Final setting must not be more than 1" before "UDC.1-6/".

**CARBURETION:** See Carburetor & Carb. Equipment.

**Idle Setting—Set both idle adjusting screws** for smooth running and highest steady vacuum gauge reading (each screw ½-1½ turns open—turn screws in for leaner mixture). Idle speed 7½-8 MPH.

**Float Level—¼"** from top of float to gasket seat on cover with valve seated (invert to check).

**Accelerating Pump—Outer hole (max.) Normal.**

**Fuel Pump Pressure:** 3-4 lbs. (AC. mechanical type), 2½-3 lbs. (Autopulse electrical type).

**MANIFOLD HEAT CONTROL:** Automatic thermostatic type (no adj.). Valve must operate freely.

**VALVES:** See Valve Timing.

**Tappet Clearance—.010"** Intake, .012" Exhaust, engine idling at normal operating temperatures.

**STARTING:** See Battery, Starter, Generator and Regulator.

### IGNITION

**IGNITION SWITCH:** Mitchellock 24-B, No. E8996.

Ignition Lock—Briggs & Stratton. B & S No. 50184.

Key Series—H601 to H1100. Groove—No. 1.

**COIL:** Auto-Lite Model IG-4098. Service Coil IG-4098S. Mounted on dash. NOTE—Coil connections are reversed (breaker connection at base of coil).

Ignition Current—2½ amperes idling, 5 stopped.

**CONDENSER:** Auto-Lite Part No. IGW-3075C. Capacity—20-25 microfarad.

**DISTRIBUTOR:** Auto-Lite Model IGW-4203-A with separate VC-3060ES Vacuum unit. Full automatic advance type with auxiliary vacuum spark control and Fuel Compensator adjustment.

Breaker Gap—.020". Limits .020-.024".

Cam Angle or Dwell—35° closed, 25° open.

Breaker Arm Spring Tension—17-20 ozs.

Rotation—Counter-clockwise viewed from above.

Distributor Degrees	Automatic Advance R.P.M.	Engine Degrees	Engine R.P.M.
Start	400	0	800
3	700	6	1400
6	1000	12	2000
9	1300	18	2600
11.75	1570	23.5	3140

**Fuel Compensator—Manual adjustment** for octane rating of fuel used. See Ignition Timing for setting.

**Vacuum Spark Control:** Auto-Lite No. VC-3060ES Unit. Separate unit mounted on distrib. hold-down plate, linked to quadrant scale on distributor. Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle (spark retarded by return spring within unit).

### Vacuum Advance

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	5⅞"
4°	8°	9¼"
7.5°	15°	11¼"

**Distributor Removal:**—Mounted at top rear of cylinder head. To remove, disconnect vacuum line, take out cyl. head stud nuts on hold-down plate.

## IGNITION TIMING

**Std. Setting** .....  $\frac{1}{2}$ " On Flywheel BTDC  
This setting correct for fuel of approximately 72 Octane Rating. See Fuel Compensator Setting for fuel and operating condition correction.

**Flywheel Marks**—UDC.1-6/' at TDC with 4 white graduations ( $\frac{1}{4}$ " apart) ahead of this mark.

**Timing**—With #1 piston on compression, turn engine over until second graduation before flywheel mark 'UDC.1-6/' lines up with pointer on left front face of rear motor support above starter. Loosen vacuum advance diaphragm screw on quadrant scale, rotate distributor counter-clockwise to limit of slot, then slowly rotate clockwise until contacts begin to open, tighten diaphragm screw securely. Check Fuel Compensator Setting below.

**Timing (Using Synchroscope)**—Recommended by car manufacturer. Mark flywheel with white chalk or paint. Idle engine, adjust distributor (above).

**Fuel Compensator Setting**—Road test car (engine warm). When running at 8 MPH slight ping should occur between 10-15 MPH when accelerating with wide open throttle. To adjust, loosen vacuum unit link screw on distributor quadrant, rotate distributor one graduation on quadrant scale clockwise (if no ping), counter-clockwise (if ping too severe). **Final setting must not be more than 1" (4th graduation) before 'UDC.1-6/' flywheel mark.**

## CARBURETOR

**Carter Model WDO, Type 501S, 1" Dual** (double barrel) downdraft type with Carter Climatic Control. See Carburetor Section for complete data.

**Idle Adjustment**—With engine warm (Fast Idle and Automatic Choke inoperative), set throttle stop-screw for idle speed of  $7\frac{1}{2}$ -8 MPH. Adjust both idle adjusting screws (two used—one for each barrel), in succession until engine fires smoothly. Final setting of each screw should be  $\frac{1}{2}$ - $1\frac{1}{2}$  turns open from inner seated position (turn screws in for leaner mixture). Recheck idle speed.

**Accelerating Pump Setting**—Pump lever (under dust cover at top of bowl cover) has two holes for pump link engagement. Set as follows:

**Outer Hole** (Max. stroke)—Normal setting.

**Inner Hole** (Min. stroke)—If less charge required.

**Float Level**— $\frac{1}{8}$ " from top of float to bowl cover with valve seated (remove gasket, invert to check). **Metering Rods & Jets**—Refer to Carburetor Index for Carter Downdraft Carburetor Jet Specification Table.

**Fast Idle**—Integral type (part of carburetor).

See Carburetion Equipment Section for data.

**Setting**—With choke valve closed and fast idle screw on high lobe of fast idle cam, turn fast idle screw in until throttle opening is .045".

**Automatic Choke**: Carter Climatic Control.

See Carburetion Equipment Section for data.

**Setting**—1 Point Lean.

## CARB. EQUIPMENT

**Air Cleaner**: AC. Oil-wetted type Std., United Oil-bath type Optl.

**Servicing (Oil-wetted type)**—Clean and re-oil filter element (use same grade engine oil used in crankcase) at 2000 mile intervals or more often if required by operating conditions.

**Servicing (Oil-bath type)**—Remove filter element, clean sump with kerosene (clean filter element with

kerosene also if necessary), refill with 1 Pint engine oil (service same as for Oil-wetted type).

**Fuel Pump**: AC. Type AK Diaphragm type mechanical pump or Autopulse electric pump Std., AC. Type AJ combination fuel and vacuum pump Optl. See Carburetion Equipment Section for data.

**Pressure**—3-4 lbs. (Type AK),  $2\frac{1}{2}$ -3 (Autopulse).

**Gasoline Gauge**: King-Seeley Electric type. K-S Nos. 41050 (dash unit), 7550 (tank unit).

See Carburetion Equipment Section for data.

## BATTERY

**National Type HT-17, 6 Volt, 17 Plate, 96 Ampere** Hour Capacity (20 hour rate).

**Starting Capacity**—120 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 3.5 minutes. Five second voltage—4.24 volts.

**Grounded Terminal**—Positive (+) to frame. Engine Ground—Strap (rear motor support to frame).

**Dimensions**—Lgth. 10 9/16". W. 7 1/4". Hght. 7 13/16".

**Location**—On left side under engine hood.

## STARTER

**Auto-Lite Model MZ-4092, Armature MZ-2138.**

**Drive**—Inboard Barrel type Bendix No. A-1684.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—42-53 ozs. (new brushes).

**Cranking Engine**—150 RPM, 125 amperes, 5.4 volts.

### Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	4300	5.5	70
2.55 "	1325	5.0	200
4.95 "	750	4.5	300
7.65 "	220	4.0	400
7.8 "	Lock	3.0	420
11.8 "	Lock	4.0	560

**Removal**—On left front face of rear motor support. To remove, take out flange mounting screws.

**Starting Switch**—A-L Model SS-4001. Magnetic type. Mounted on starter, controlled by switch on instrument panel. Operative only with ignition on (and clutch disengaged on cars with Vacuum Drive or Drive-Master).

See Electrical Equipment Section for complete data.

## GENERATOR

**Auto-Lite Model GEC-4801A, Armature GDZ-2006F.**

SEE 1946-47 HUDSON 8 CAR PAGES FOR DATA

## REGULATOR

**Auto-Lite Model VRR-4001A, Voltage Regulator.**

SEE 1946-47 HUDSON 8 CAR PAGES FOR DATA

## LIGHTING

**Headlamps**: Hall "Sealed Beam" type with upper lower beams controlled by Beam Selector Switch on toeboard.

See Electrical Equipment Section for complete data.

**Adjustment**—Aim upper beams straight ahead (hot spot centers 3" below lamp center height at 25 ft.).

**Beam Indicator**—Red pilot bulb on speedometer dial. Lighted with Country (upper) beam in use.

**Direction Signal**: See Electrical Equipment Section.

**Direction Signal Indicator**—At extreme left hand side of instrument panel. Flashes whenever Right or Left Direction Signal is operating.

## Switches

**Lighting**—Hudson No. 200417.

**Beam Selector**—Hudson No. 164439.

**Instrument**—Hudson No. 160092.

## Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps	35-45 watts	Sealed Beam
Front Bonnet (Park)	$1\frac{1}{2}$	55
Fender (no Dir. Sig.)	3	63
Fender (with Dir. Sig.)	21-3	1158
Beam & Dir. Sig. Indicator	1	51

Spdmtr. (51, 58)	1	51
Spdmtr. (54), Clock	$1\frac{1}{2}$	55
Courtesy, Dome	15	88
Ignition Lock	$1\frac{1}{2}$	55
Stop & Tail	21-3	1154
Rear License	3	63
Fog Lamp	50	1211S
Spot Lamp	32	1209S

## MISC. ELECTRICAL

**GENERATOR CHARGE SIGNAL**: Red indicator on right hand side of instrument panel (to right of clock). Should light when ignition turned on and should go out when generator begins to charge. See Electrical Equipment Section for complete data.

**OIL PRESSURE SIGNAL**: Red indicator on right hand side of instrument panel (to left of clock). Should light when ignition turned on and go out as soon as engine is started.

See Electrical Equipment Section for complete data.

**FUSES**: Lighting—30 ampere. Bottom fuse on fuse block to right of steering column behind instrument panel. Accessory—30 ampere. Top fuse on fuse block. NOTE—Silver-plated fuses used.

**Direction Indicator**—10 ampere. Near flasher.

**Electric Clock**—3 ampere. In lead behind clock.

**Weathermaster**—14 ampere.

**Radio**—20 ampere.

**CIRCUIT BREAKER**: Drive-Master Cars only. Thermostatic type. Mounted on fus block. Protects Drive-Master circuits only.

**HORNS**: Sparton. Twin type air electric horns operated by horn relay.

**Air Gap**—.026-.030" high pitch (short horn), .032-.035" low pitch (long horn).

**Horn Relay**—R-B-M Model 6004. On dash. Contacts Close 3-4 volts (relay upright, terminals down).

## ENGINE

**ENGINE SPECIFICATIONS**: Own Make, Six Cylinder, "L" Head type.

**Bore**—3". **Stroke**—5".

**Displacement**—212 cubic inches.

**Rated Horsepower**—21.6.

**Developed Horsepower**—102 at 4000 RPM.

**Compression Ratio**—6.5-1 Std. Cast Iron Head.

**Compression & Vacuum Reading**—See Tune-up data.

**ENGINE REMOVAL**: See Hudson Shop Notes.

**ENGINE FRONT SUPPORT REMOVAL & INSTALLATION**: See Hudson Shop Notes.

**ORIGINAL BORE & PISTONS**: See Hudson Shop Notes.

**TIGHTENING TORQUES**: See Hudson Shop Notes.

C NTINUED N NEXT PAGE

## ENGINE

C NTINUED FR M PRECEDIN PAGE

**CYLINDER HEAD:** Tightening Torque & Cylinder Head Diagram—See *Hudson Shop Notes*.

**PISTONS:** Aluminum alloy, Cam ground, T-slot type. Use finished replacement pistons.

Weight—10.5 ozs. (stripped). Length—3 3/16".

Removal—Pistons and rods removed from above.

Clearance—Top .016". Skirt .0005-.001". See Fitting New Pistons below.

Replacement Pistons: See *Hudson Shop Notes*.

**Fitting New Pistons:**—Use .0015" feeler 1/2" wide inserted between piston and cylinder wall on side opposite slot at right angles to pin. Pull to withdraw feeler must be within 3-4 lbs. Use Tool J-888-A Piston Feeler Scale to measure pull.

**Installing Pistons:**—Slot away from camshaft.

**PISTON RINGS:** Two compression, two oil rings (one above pin, one below pin) per piston. Rings are square end type. Rings pinned to prevent rotation. Rings cut and notched to fit pin (clearance on pin equal to ring end gap).

Ring	Width	End Gap	Side Clearance
Compression	3/32"	.009-.011"	.001"
Oil (upper)	3/16"	.009-.011"	.001"
Oil (lower)	5/32"	.009-.011"	.001"

Replacement Rings:—See *Hudson Shop Notes* for data.

**PISTON PIN:** Diameter—3/4". Length—2 7/16".

Floating type with diamond-drilled pin holes in piston and bronze bushing in connecting rod. Pin retained by lock ring at each end.

**Piston Pin Servicing:**—See *Hudson Shop Notes*.

Pin Fit in Piston—.0003" clearance (hand push fit) with piston heated to 200°F.

Pin Fit in Rod Bushing—.0003" clearance.

Replacement Pins:—Std., .002", .005", .010" oversize.

**CONNECTING ROD:** Weight 29.75 ozs. Length 8 3/16". Lower Bearing Diameter—1 15/16".

See *Crankshaft Size Code Note in the Hudson Shop Notes for Original Connecting Rod Bearing sizes*.

Lower Bearing—Babbitt lined, spun type.

Clearance—.001". Sideplay—.007-.013".

**Bearing Adjustment:** None (no shims). Install replacement rods furnished on exchange basis. Do not file rods or bearing caps. Palnuts used on bolt nuts.

**Palnut Installation:**—See *Hudson Shop Notes*.

**Replacement Rods:** Exchange rods furnished Std. size and .010" Undersize.

**Installing Rods:**—Lower end of rods offset. Install rods with widest half of bearing toward the rear (#1,2,4), toward front (#3,5,6). Oil scoop on lower end of rod toward camshaft.

**CRANKSHAFT:** Three bearing type with integral counterweights and vibration dampener on forward end.

**Vibration Dampener Removal:**—See *Hudson Shop Notes*.

**Crankshaft & Main Bearing Removal & Installation:**—See *Hudson Shop Notes*.

**Bearing Diameters**—#1, 2 11/32"; #2, 2 3/8"; #3, 2 13/32".

See *Crankshaft Size Code Note in the Hudson Shop Notes for original Main Bearing Sizes*.

**Bearings:**—Bronze backed, babbitt lined type. Bearings secured in cap and crankcase by brass screws.

Clearance—.001".

**Bearing Adjustment:**—None (no shims). Do not file bearing caps. Palnuts used on bearing cap bolt nuts. See *Palnut Installation in Hudson Shop Notes*.

► **CAUTION**—Replacement of main bearings requires removal of crankshaft. Bearings retained by brass screws.

Replacement Bearings: See *Hudson Shop Notes*.

**End Thrust:**—Taken by center bearing. Replace bearing if endplay excessive. NOTE—If new unfinished bearings installed, thrust face for center bearing must be faced for proper endplay.

Endplay—.006-.012".

**CAMSHAFT:** Three bearing type. Helical gear drive. New design camshaft used. See *Hudson Shop Notes for Replacement Camshaft data*.

**CAUTION**—Special tappet clearance required for this camshaft. See *Tappet Clearance in "Tune-up" and "Valve Timing"*.

**Camshaft Removal:**—See *Hudson Shop Notes*.

**Bearing Diameters**—#1, 2"; #2, 1 31/32"; #3, 1 9/16".

**Bearings:**—Steel-backed, babbitt-lined bushings.

Clearance—.001-.002".

**Bearing Removal & Installation:** See *Hudson Shop Notes*.

**End Thrust:**—Thrust washer between camshaft flange and crankcase. Spring loaded button in camshaft hub bears against thrust plate on gear cover. NOTE—Service thrust washer available which can be split and installed without removing camshaft.

**Timing Gears:**—Crankshaft gear cast-iron, camshaft gear Laminated Fibre (first cars), Aluminum (Later Cars). All gears have 20° pressure angle teeth. Aluminum gears (and crankshaft gear used with them) have teeth slightly crowned to improve quietness.

NOTE—Gears have figure 20 on front face (crankshaft gear carries additional FRONT mark to insure correct installation). NOTE—Camshaft gear available in .008" oversize and can be distinguished from std. size by spot of yellow paint on front face.

**Replacement Gear Caution:**—Aluminum Camshaft Gear furnished in Matched Sets only with crankshaft gear (aluminum gear has slight crown or curvature of teeth for quietness and must be used with similarly crowned teeth type crankshaft gear).

Backlash—.002-.004".

**Timing Gear Removal & Installation:**—See *Hudson Shop Notes*.

**Camshaft Setting:**—Mesh marked crankshaft gear tooth between two marked teeth on camshaft gear.

VALVES:	Head Diameter	Stem Diameter	Length
All Valves	1 3/8"	11/32"	5 11/32"
	Seat Angle	Lift	Stem Clearance
Intake	45°	11/32"	.0025"
Exhaust	45°	11/32"	.004"

**Valve Guides:** Removable type pressed in block.

**Servicing:**—Use Tool J-1188 to drive guides out. Install guides with Tool J-883-A with top of guide 1 1/16" below top of cylinder block. With guides installed, ream guides with Tool J-129-2 to .3437" (11/32") which will provide proper valve stem-to-guide clearance. NOTE—Car manufacturer recommends that guides be cleaned with Tool KMO-122.

**Valve Springs:**—Cadmium plated springs are used. Use tool J-587-A to install valve spring and seat

Spring Free Length—2 17/64".

Spring Pressure Spring Length

Valve Closed .....40 lbs.....2"

Valve Open .....80 lbs.....1 21/32"

NOTE—When springs removed, test for pressure (Tool U-15). Replace if pressure below 34 lbs. at 2".

**Valve Lifters:**—Roller shoe type, fitted in removable guides in cylinder block.

**Valve Lifter Removal:**—See *Hudson Shop Notes*.

## VALVE TIMING

**Tappet Clearance:** .010" Intake, .012" Exhaust with engine at operating temperature.

**CAUTION**—This tappet clearance required by new camshaft. See Camshaft data above.

**Valve Timing:**—See Camshaft Setting above.

**Intake Valves Open** 27°30' BTDC. Close 68°10' ALDC.

**Exhaust Valves—Open** 51°50' BLDC. Close 32°10' ATDC. These figures correct with .010" tappet clear.

**Valve Timing Check:**—With .010" tappet clearance No. 1 intake valve opens 27°30' BTDC. with point on flywheel approximately 10 1/2 teeth before top dead center mark "UDC. 1-6/" in line with indicator in inspection hole in flywheel housing above starter.

## LUBRICATION

**Engine Oiling System:** Duo-flow (pressure and positive splash) system. Pump delivers oil to front and rear ends of upper tray in oil reservoir. Connecting rod bearings are lubricated by dippers on caps which dip into troughs in this upper tray and also splash oil inside crankcase. Part of this oil is caught in channels inside crankcase and fed into reservoirs directly over each camshaft and crankshaft bearing from which it flows into the bearings.

NOTE—Lower end of oil reservoir suction pipe (from oil pan to crankcase wall) now extends to center of oil reservoir to insure constant oil supply to pump.

**Crankcase Capacity:**—5 1/2 qts. (dry), 4 1/2 (refill).

**Servicing Note:**—When changing oil without removing oil pan, refill with 4 1/2 quarts. If oil pan removed, place 1 1/2 quarts in upper tray before oil pan installed, then 4 quarts through filler with pan in place.

**Normal Oil Pressure:**—4-12 lbs. with hot oil. No gauge used (see Oil Pressure Indicator below).

**Oil Pump:**—Oscillating plunger type, gear driven by camshaft. Mounted on right side of crankcase.

**Oil Filter:** Special Hudson type. Optl. equipment.

**Servicing:**—Replace filter cartridge at 5000 mile intervals.

**Oil Check Valve:**—Located on right side of crankcase at rear. Opens at 4-12 lbs. with hot oil. Operates dash signal to indicate oil flow.

**Oil Pressure Indicator:**—Hudson Teleflash Oil Pressure Indicator. Consists of signal light on instrument panel operated by switch mounted on oil check valve.

See *Electrical Equipment Section for complete data*.

**Checking Oiling System:**—Refer to *Hudson Shop Notes*.

## COOLING

**Cooling System:** Positive circulation type with the water pump at water inlet on front of engine.

Capacity—13 quarts.

**Water Pump:**—Centrifugal, belt-driven, packless type with single outlet (no by-pass). Grease fitting provided for front and rear bearing lubrication.

See *Water Pump Section for complete data*.

**Belt Adjustment:**—See *Generator Belt Adjustment*.

**Thermostat:**—Fulton Choke type. In cyl. head outlet.  
**Setting:**—Starts to open 150-155°F. Fully open 185°.  
**Temperature Gauge:**—King-Seeley Electric. K-S Nos. 41053 (dash unit), No. 41085 (engine unit).  
*See Miscellaneous Section for complete data.*

### CLUTCH

**Own Make.** Single plate, fluid cushioned type (cork insert type driven member operating in oil). 9" Type Std. on Passenger Cars, 10" Type Std. on Commercial (Business) Cars and all Passenger Cars with Vacumotive Drive, Overdrive, or Drive-Master.

*See Clutch Section for complete data.*

**Facings:**—Cork Insert type as follows:

	No. Corks	Inside Diam.	Outside Diam.
9" Type	90	5 1/4"	9"
10" Type	108	6 3/8"	10"

**Pedal Adjustment:** Clearance between underside of toeboard and top face of pedal shank must be 1 1/2". To adjust, loosen locknut above clevis, remove clevis pin in throw-out lever at lower end of connector link, turn clevis in or out of link, tighten locknut after re-connecting clevis. **CAUTION**—Make certain that clevis pin inserted in same hole in lever.

**Clutch Oil Servicing:**—*See Hudson Shop Notes.*

**Removal:**—Remove transmission (see Transmission Removal following). Drain clutch oil by turning engine over until plug on flywheel is accessible through timing inspection hole in rear engine support plate above starter, remove plug, turn engine over 1/2 revolution until star on flywheel visible through timing hole (drain hole then at bottom), allow lubricant to be drained. Loosen mounting bolts in clutch cover rim to release spring tension, remove bolts and lift clutch assembly off car. **NOTE**—See Installation Note following Transmission Removal for Clutch Throwout Bearing Oil Seal.

### VACUMOTIVE DRIVE

**Vacumotive Drive:**—Automatic clutch control. Optl. *See Clutch Section for complete data.*

### TRANSMISSION

**Own Make.** All helical gear type. Constant-mesh, synchro-mesh (Second & High), sliding gear (Low & Reverse) with remote (steering column) shift. *See Transmission Section for complete data.*

**NOTE**—External shift rail lock accessory kits available for installation on cars operated in mountainous regions where long 2nd gear operation required.

**Transmission Control:** Handy-Shift remote control type with shift lever mounted on steering column. *See Transmission Section for complete data.*

**Removal:**—Transmission can be removed from inside car as follows: Take off accelerator pedal by removing cotter pins in anchor bracket and bell crank link clevis pins. Move steering column rubber hole cover up out of way. Remove floor mat by taking out screws at kick pads on dash and mat trim clips. Remove front seat cushion and transmission floor opening cover (**CAUTION**—Accelerator pedal operating rod should be secured so as not to drop on starter switch). Disconnect front universal by taking out four nuts and lock plates on U-bolts. Release clutch pedal return spring. Remove two cross shaft bracket bolts, clutch control link clevis pin and clutch pedal assisting spring. Remove Handy Shift control tube-to-transmission shift rod cotter pin, washer and grommet; transmission casing lower anchor bracket screws and bracket, shift shaft

outer lever nut, washer and lever. Remove two flywheel guard-to-clutch housing screws and two rear engine mounting bolts (**CAUTION**—Do not remove rear engine mounting-to-clutch housing bolt). Jack rear of engine up 1/2" off frame. Remove clutch housing to transmission bolts. Disconnect speedometer cable from transmission. Pull transmission back and lift out.

**Installation Note:**—Wrap one strand of soft wire around throw-out bearing oil seal to prevent leather curling over when transmission installed (twist wire with end extending up through clutch housing so it will come off after transmission installed).

### OVERDRIVE

**Warner Model AS2-R9B.** Optl. equipment, used with Hudson Transmission. Overdrive is solenoid operated type (no centrifugal pawls) with Governor control and throttle operated "kick-down".

*See Transmission Section for complete data.*

**Overdrive Solenoid:**—Delco-Remy. Hudson #163305. **Throttle Switch:**—R-B-M. Hudson No. 164438. On toeboard under accelerator pedal. Not adjustable.

**Governor Switch:**—Auto-Lite Model TGA-4002 (two terminal type), Model TGB-4002 (five terminal type) used on cars with Hudson Drive-Master transmsn.).

**Removal:** Same as standard transmission removal (above) except that overdrive control and wiring connections must be disconnected. Special Tool J-1502-H (hoist and dolly) should be used to lift transmission and lower onto dolly for removal.

### DRIVE-MASTER TRANSMISSION

**Drive-Master Transmission:** Optl. Conventional 3-speed transmission with automatic gear shifting between Second & High Gears. Used in conjunction with Vacumotive Drive (automatic clutch control). *See Transmission Section for complete data.*

### UNIVERSALS

**Spicer.** Needle bearing type. Two used.

	Front — Spicer Model	Rear
Standard	1261-101X	1268-101X
With Overdrive	1261-101X	1278-101X
Commercial	1281-101X	1278-101X
" with OD.	1261-101X	1268-101X

*See Universals Section for complete data.*

### REAR AXLE

**Own Make.** Semi-floating type with Spiral Bevel Gears and Hotchkiss Drive.

*See Rear Axle Section for complete data.*

Ratios	Pass. Cars	Comm'l.
Standard	4 1/9-1	4 5/9-1
Optl.	4 5/9-1	4 5/9-1
Std. with Overdrive	4 5/9-1	4 5/9-1
Optl. with Overdrive	4 1/9-1	4 5/9-1
Std. with Drive-Master	4 5/9-1	4 5/9-1
Optl. with Drive-Master	4 1/9-1	4 5/9-1

**Backlash:**—.0005-.003". Screw adjustment.

**Removal:**—Disconnect rear universal by taking out four nuts and lock plates on U-bolts, drop rear end of propeller shaft. Remove axle shafts (see instructions below). Remove bolt nuts on carrier flange, pull carrier assembly out of axle housing.

**Axle Shaft Removal:**—Hoist rear of car. Remove rear wheels. Remove axle shaft nut and washer (use Tool J-351). Remove hub and drum assembly using screw type wheel puller (Tool J-736—**CAUTION**—Car manufacturer recommends that screw type puller be used, if knock-out type puller is used serious

damage to differential parts may result). Remove 4 nuts on bearing cap bolts, push bolts out of backing plate, remove bearing cap and shims (without disturbing hand brake link). Take out rear wheel bearing and axle shaft, using puller Tool J-352. Do not drag axle shaft on oil seal assembly in housing.

**Wheel Bearing Adjustment:**—Controlled by shims under bearing cap. To adjust, remove bearing cap (see directions above under Axle Shaft Removal), add or remove shims equally at both wheels (necessary to keep thrust spacer centered on differential pinion shaft). **Endplay:**—.004-.010".

### SHOCK ABSORBERS

**Delco or Monroe.** Direct acting, hydraulic type.

**Delco Model 1037-C** (front), 1041-S (rear).

**Monroe Model 18076** (front), 18077 (rear).

*See Shock Absorber Section for complete data.*

### FRONT SUSPENSION

**Front Suspension:**—Independent, linked parallelogram type with coil springs and Autopoise Control. *See Front Suspension Section for complete data.*

**Kingpin Inclination:**—4°36' crosswise.

**Caster:**—0° (Neg. 1/4° to Pos. 1/4°). Adjustable.

**Camber:**—Positive 1/4° to Positive 3/4°. Adjustable.

**Toe In:**—0-1/16". Center steering arm on frame must be at center of car. To adjust, loosen clamps at ends of each tie rod and adjust tubes equally (to increase toe-in turn rods in direction of wheel travel, to decrease, turn in opposite direction).

**Steering Geometry (Toe-out on Turns):**—With outer wheel turned 25°, inner wheel turn should be 30°.

### STEERING GEAR

**Gemmer Model 305.** Worm-and-Roller type with "push-pull" adjustments.

*See Steering Gear Section for complete data.*

### BRAKES

**Service:** Bendix Hydraulic, 4-wheel, Duo-servo, Single anchor type without eccentric adjustment. Mechanical follow-up (pedal linked to hand brake cables) provided. Hand lever applies rear service brakes.

*See Brake Section for complete data.*

**Drums:**—Centrifuse type. Diameter 10" (Std. on Pass. Cars), 11" (Comm'l Cars & Optl. for Police Car & Taxicab).

**Lining:**—Multibestos molded (primary), Ferodo woven (secondary). Width 1 3/4". Thickness 7/32". Length per wheel 22 1/8" (10" type), 23 15/16" (11" type).

**Clearance:**—.0075" at each end of each shoe, (.015" at each end of secondary or rear shoe with primary shoe forced out against drum).

**Mechanical Follow-up (Reserve):** Over-running linkage between brake pedal and parking (hand-brake) linkage which causes rear wheel brakes to be applied mechanically by pedal if hydraulic system not operating.

*See Brake Section for complete data.*

**Setting:**—1 1/4" clearance between face of pedal pushrod and end of actuating tube with brakes released.

**Hand Brake:** See Service Brakes above.

### MISC. MECHANICAL

**CONVERTIBLE TOP CONTROL:** Hydraulic (hydro-electric) type with hydraulic power cylinders actuated by motor driven hydraulic pump.

*See Miscellaneous Section for complete data.*

**HOOD LOCK:** Hood is Reverse Alligator type hinged at radiator. To raise hood, press in on lock handle to left of steering column, raise rear end of hood.

### MODEL IDENTIFICATION

Super Eight Commodore Eight  
Model Ser.No. Model Ser.No.  
1946 ..... 53..... 33-101..... 54..... 34-101  
1947 ..... 173..... 173-101..... 174..... 174-101

**SERIAL & ENGINE NUMBER:** See model notation above for first No. and prefix (first two figures indicate model thus: 33-101). Stamped on plate on right front door hinge pillar post and on top of engine block between #1 and #2 exhaust flanges.

### TUNE-UP

**COMPRESSION:** Pressure—120 lbs. at cranking speed of 125 RPM.

**VACUUM READING:** Steady 18-21" idling 7½-8 MPH.

**FIRING ORDER:** 1-6-2-5-8-3-7-4.

**SPARK PLUGS:** Champion Special J-9 Hudson. 14 mm. Gaps—.032"

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.017" Cam Angle 31° (closed).

Breaker Arm Spring Tension—17-20 OZS.

Automatic Advance—Starts at 300 RPM., 3° at 400 RPM., Maximum 17.5° at 1700 RPM (Distr. ° & RPM)

**IGNITION TIMING:** See Ignition Timing.

Std. Setting—At Top Dead Center.

Timing Mark—Flywheel marked "UDC.1-8" with four graduations ¼" apart ahead of this mark. Set timing with first white line aligned with pointer in inspection hole in motor support above starter, then adjust Fuel Compensator as follows:

**Fuel Compensator Setting:** Advance spark (loosen hold-down screw and rotate distributor) until slight ping noted when accelerating with wide open throttle between 10-15 MPH. Final setting must not be more than ¼" before "UDC.1-8".

**CARBURETION:** See Carburetor & Carb. Equipment.

**Idle Setting:** Set both idle adjusting screws for smooth running and highest steady vacuum gauge reading (each screw ½-1½ turns open—turn screws in for leaner mixture). Idle speed 7½-8 MPH.

**Float Level:** ⅛" from top of float to gasket seat on cover with valve seated (invert to check).

**Accelerating Pump:** Outer hole (max.) Normal.

**Fuel Pump Pressure:** 3-4 lbs. (AC. mechanical type), 2½-3 lbs. (Autopulse electrical type).

**MANIFOLD HEAT CONTROL:** Automatic thermostatic type (no adj.). Valve must operate freely.

**VALVES:** See Valve Timing.

**Tappet Clearance:**—.008" Intake, .008" Exhaust, engine idling at normal operating temperatures.

**STARTING:** See Battery, Starter, Generator and Regulator.

### IGNITION

**IGNITION SWITCH:** Mitchellock 24-B, No. E8996.

Ignition Lock—Briggs & Stratton. B & S No. 50184.

Key Series—H601 to H1100. Groove—No. 1.

**COIL:** Auto-Lite Model CE-4029. Service Coil CE-3224JS. Mounted on the dash.

Ignition Current—2½ amperes idling, 5 stopped.

**CONDENSER:** Auto-Lite Part No. IG-2871.

Capacity—20-25 microfarad.

**DISTRIBUTOR:** Auto-Lite Model IGP-4008-A or IGP-4008-B. Full automatic advance type (no vacuum control) with Fuel Compensator adjustment.

Breaker Gap—.017".

Cam Angle or Dwell—31° closed, 14° open.

Breaker Arm Spring Tension—18-20 ozs.

Rotation—Clockwise viewed from above.

Distributor Automatic Advance Engine			
Degrees	R.P.M.	Degrees	R.P.M.
Start.....	300	0.....	600
3.....	400	6.....	800
8.....	850	16.....	1700
13.....	1300	26.....	2600
17.5.....	1700	35.....	3400

**Fuel Compensator:** Manual adjustment for octane rating of fuel used. See Ignition Timing for setting.

**Removal:** Mounted on right side of crankcase. To remove take out hold-down screws in advance arm.

manufacturer. Mark flywheel with white chalk or paint, connect at #1 spark plug. Idle engine and adjust distributor as directed above.

**Fuel Compensator Setting**—Road test car (engine warm). When running at 8 MPH slight ping should occur between 10-15 MPH when accelerating with wide open throttle. To adjust, loosen hold-down screw, rotate distributor one graduation on scale counter-clockwise (if no ping), clockwise (if ping too severe). Final setting must not be more than  $\frac{3}{4}$ " (3rd graduation) before "UDC.1-8/" mark.

## CARBURETOR

**Carter Model WDO, Type 502S.**  $1\frac{1}{4}$ " Dual (double barrel), downdraft type with Carter Climatic Control.

See Carburetor Section for complete data.

**Idle Adjustment**—With engine warm and running at slow idle speed (choke valve wide open, fast idle inoperative), set throttle stopscrew for  $7\frac{1}{2}$ -8 MPH. Idling speed. Adjust both idle adjusting screws (2 used, one for each barrel) in succession until engine fires smoothly. Final setting should be  $\frac{1}{2}$ - $1\frac{1}{2}$  turns open for each screw (turning screws in gives leaner mixture) to give highest reading on vacuum gauge. Recheck idle speed.

**Accelerating Pump Setting**—Pump lever (under dust cover at top of carburetor) has two holes for pump link engagement. Set as follows:

Outer Hole (Max. stroke)—Normal setting.

Inner Hole (Min. stroke)—If less charge required.

**Float Level**— $\frac{1}{8}$ " from top of float to bowl cover with valve seated (remove gasket, invert to check).

**Metering Rods & Jets**—Refer to Carburetor Index for Carter Downdraft Carburetor Jet Specification Table.

**Fast Idle**—Integral (built-in each carburetor).

See Carburetion Equipment Section for complete data.

**Fast Idle Setting**—With choke valve closed and fast idle screw on high lobe of fast idle cam, turn fast idle screw in until throttle valve opening is .053".

**Automatic Choke**—Carter Climatic Control.

See Carburetion Equipment Section for complete data.

**Setting**—Set coil housing 1 Notch Lean.

## CARB. EQUIPMENT

**Air Cleaner**: AC. Oil-wetted type Std., United Oil-bath type Optl.

**Servicing (Oil-wetted type)**—Clean and re-oil filter element (use same grade engine oil used in crankcase) at 2000 mile intervals or more often if required by operating conditions.

**Servicing (Oil-bath type)**—Remove filter element, clean sump with kerosene (clean filter element with kerosene also if necessary), refill with 1 Pint engine oil of same grade used in crankcase at 2000 mile intervals or more often if required by operating conditions.

**Fuel Pump**: AC. Type AK Diaphragm type mechanical pump or Autopulse electric pump Std., AC. Type AJ combination fuel and vacuum pump Optl.

See Carburetion Equipment Section for data.

**Pressure**—3-4 lbs. (AC. Type AK),  $2\frac{1}{2}$ -3 lbs. (Autopulse type).

**Gasoline Gauge**: King-Seeley Electric type, K-S Nos. 41050 (dash unit), 7550 (tank unit).

See Carburetion Equipment Section for complete data.

## BATTERY

**National Type HT-19.** 6 Volt, 19 Plate, 108 Ampere Hour Capacity (20 hour rate).

**Starting Capacity**—135 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 4.0 minutes. Five second voltage—4.43 volts.

**Grounded Terminal**—Positive (+) to frame. Engine Ground—Strap (rear motor support to frame).

**Dimensions**—Lgth.  $11\frac{3}{4}$ ". Width  $7\frac{1}{4}$ ". Hght.  $7\frac{13}{16}$ ".

**Location**—On left side under engine hood.

## STARTER

**Auto-Lite Model MAB-4100.** Armature MAB-2113. Drive—Inboard Barrel type Bendix No. A-1684.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—42-53 ozs. (new brushes).

**Cranking Engine**—150 RPM, 120-125 amperes, 5 v.

### Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	3700	5.5	60
0.6 "	1910	5.5	100
3.4 "	1100	5.0	200
6.6 "	695	4.5	300
10.15 "	420	4.0	400
15.2 "	Lock	3.0	575
21.5 "	Lock	4.0	750

NOTE—Lock torque figures correct with switch.

**Removal**—On left front face of rear motor support. To remove, take out flange mounting screws.

**Starting Switch**—A-L Model SS-4001. Magnetic type. Mounted on starter, controlled by switch on instrument panel. Operative only with ignition on (and clutch disengaged on cars with Vacuumotive Drive or Hudson Drive-Master).

See Electrical Equipment Section for complete data.

## GENERATOR

**Auto-Lite Model GEC-4801A.** Armature No. GDZ-2006F. Third brush control with voltage regulation. Ventilated by fan on drive pulley.

**Maximum Charging Rate**—44 amperes (Cold), 38 amperes (hot), 35 MPH. Actual charging rate controlled by Voltage Regulator and dependent on battery condition. See Regulator data. When checking generator output, ground "F" terminal.

**Charging Rate Adjustment**—See Regulator data. Third brush setting 1 commutator bar minimum, 1 commutator bar plus 1 mica strip maximum, from nearest (insulated) main brush. Setting adjustable

### Performance Data

Cold		Hot	
Amperes	Volts	Amperes	Volts
0	6.4	0	6.4
4	6.55	4	6.6
8	6.7	8	6.8
12	6.85	12	6.95
16	7.0	16	7.15
20	7.15	20	7.35
24	7.25	24	7.55
28	7.5	28	7.75
32	7.65	32	7.9
36	7.8	34	8.0
41	8.0		

**Rotation**—Counter-clockwise at commutator end. **Brush Spring Tension**—53 ozs. max. (new brushes).

**Field Current**—1.60-1.78 amperes at 6.0 volts.

**Motoring Current**—4.85-5.4 amperes at 6.0 volts.

**Removal**—Pivot mounted at left front of engine. To remove, take out pivot and clamp bolts.

**Belt Adjustment**—Swing generator out until possible belt deflection midway between generator and fan pulley is  $\frac{3}{4}$ " (use straightedge across pulleys).

## REGULATOR

**Auto-Lite Model VRR-4001A.** Voltage Type. Cutout Relay and Voltage Regulator in case on dash.

**NOTE**—Cutout Relay has extra set of contacts for Generator "Teleflash" Indicator control.

See Electrical Equipment Section for complete data.

**NOTE**—Regulator case cover is sealed. Serviced on exchange basis if seals not broken.

### Cutout Relay

**Cuts In**—6.4-6.6 volts, 825 RPM, 9.4 MPH.

**Cuts Out**—4.2-4.8 volts (approx. 4-6 amps. disch.).

**Contact Gap**—.015" min. ground contacts closed (ground contacts open when main contacts close).

**Air Gap**—.031-.034" at hinge end of core with contacts open (ground contacts closed).

### Voltage Regulator

**Setting**—7.1-7.4 volts at 70°F.

**To Check (without breaking seals)**—Connect ammeter in charging line at regulator "B" terminal, voltmeter between this terminal and ground. Warm up generator by running engine at speed of 20 MPH for 15 minutes. Then increase speed to 30 MPH charging battery until voltage is constant. Voltmeter reading should be within limits of 7.1-7.4 volts at 70°F. See Electrical Equipment Section for voltages at other temperatures.

**To Adjust (with cover removed)**—Change regulator armature spring tension by bending lower spring hanger slightly. See Electrical Equipment Section. **Contact Gap**—.012" Min. (armature against stop). **Air Gap**—.048-.052" with contacts just opening.

## LIGHTING

**Headlamps**: Hall "Sealed Beam" type with upper lower beams controlled by Beam Selector Switch. See Electrical Equipment Section for complete data.

**Adjustment**—Aim upper beams straight ahead (hot spot centers 3" below lamp center height at 25 ft.). **Beam Indicator**—Red pilot bulb at upper center of speedometer dial. Lights with Upper Beam "on".

**Direction Signal**: See Electrical Equipment Section.

**Direction Signal Indicator**—At extreme left hand side of instrument panel. Flashes whenever Right or Left Direction Signal is operating.

### Switches

**Lighting**—Hudson No. 200417.

**Beam Selector**—Hudson No. 164439.

**Instrument**—Hudson No. 160092.

### Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps	35-45 watts	Sealed Beam

CONTINUED N NEXT PAGE

CONTINUED FROM PRECEDIN PAGE

**MISC. ELECTRICAL**

**GENERATOR CHARGE SIGNAL:** Red indicator on right hand side of instrument panel (to right of clock). Should light when ignition turned on and should go out when generator begins to charge. See *Electrical Equipment Section* for complete data.

**OIL PRESSURE SIGNAL:** Red indicator on right hand side of instrument panel (to left of clock). Should light when ignition turned on and go out as soon as engine is started. See *Electrical Equipment Section* for complete data.

**FUSES:** Lighting—30 ampere. Bottom fuse on fuse block to right of steering column behind instrument panel. Accessory—30 ampere. Top fuse on fuse block. NOTE—Silver-plated fuses used. Direction Indicator—10 ampere. Near flasher. Electric Clock—3 ampere. In lead behind clock.

**CIRCUIT BREAKER:** Drive-Master Cars only. Thermostatic type. Mounted on fuse block. Protects Drive-Master circuits only.

**HORNS:** Sparton. Twin type air electric horns operated by horn relay. Air Gap—.026-.030" high pitch (short horn), .032-.035" low pitch (long horn).

**Horn Relay:**—R-B-M Model 6004. On engine dash. Contacts Close—3 volts min., 4 volts, max. Open—2 volts min. (relay upright, terminals down).

**ENGINE**

**ENGINE SPECIFICATIONS:** Own Make. Eight Cylinder "L" Head type. Bore—3". Stroke—4½". Displacement—254 cubic inches. Rated HP—28.8. Developed Horsepower—128 at 4200 RPM. Compression Ratio—6.50-1 cast-iron head. Compression & Vacuum Reading—See *Tune-up data*.

**ENGINE REMOVAL:** See *Hudson Shop Notes*.

**ENGINE FRONT SUPPORT REMOVAL & INSTALLATION:** See *Hudson Shop Notes*.

**ORIGINAL BORE & PISTONS:** See *Hudson Shop Notes*.

**TIGHTENING TORQUES:** See *Hudson Shop Notes*.

**CYLINDER HEAD:** Tightening Torque & Cylinder Head Diagram—See *Hudson Shop Notes*.

**PISTONS:** Aluminum alloy, Cam ground, T-slot type. Use finished replacement pistons.

Weight—10.5 ozs. (stripped). Length—3 3/16".

Removal—Piston & rod removed from above or below. Clearance—Top .016". Skirt .0005-.001".

**Replacement Pistons:** See *Hudson Shop Notes*.

**Fitting New Pistons:**—Use .0015" feeler ½" wide (Piston Feeler Scale Tool J-888-A) inserted between piston and cylinder wall on side opposite slot 90° from pin. Pull to withdraw feeler 3-4 lbs.

**Installing Pistons:**—Slot away from camshaft.

**PISTON RINGS:** Two compression, two oil rings (one oil ring above piston, second ring on skirt below pin). All rings are positioned by pin in ring groove.

Ring	Width	End Gap	Side Clearance
Compression	3/32"	.009-.011"	.001"
Oil (upper)	3/16"	.009-.011"	.001"
Oil (lower)	5/32"	.009-.011"	.001"

**Replacement Rings:**—See *Hudson Shop Notes* for data.

**PISTON PIN:** Diameter—¾". Length—2 7/16".

Floating type with diamond-drilled pin holes in piston and bronze bushing in connecting rod. Pin retained by lock ring at each end.

**Piston Pin Servicing:**—See *Hudson Shop Notes*.

**Pin Fit in Piston:**—.0003" clearance (hand push fit) with piston heated to 200°F.

**Pin Fit in Rod Bushing:**—.0003" clearance.

**Replacement Pins:**—Std., .002", .005", .010" oversize.

**CONNECTING ROD:** Weight 29.75 oz. Length 8 3/16".

**Lower Bearing Diameter:**—1 15/16".

See *Crankshaft Size Code Note in Hudson Shop Notes* for *Original Connecting Rod Bearing sizes*.

**Lower Bearing:**—Babbitt lined, spun type.

**Clearance:**—.001". Sideplay—.007-.013".

**Bearing Adjustment:**—None (no shims). Install replacement rods furnished on exchange basis. Do not file rods or bearing caps. Palnuts used on bolt nuts.

**Palnut Installation:**—See *Hudson Shop Notes*.

**Replacement Rods:** Exchange rods furnished Std. size and .010" Undersize.

**Installing Rods:**—Offset. Install rods with widest half of bearing toward rear (#1, 3, 5, 7), toward front (#2, 4, 6, 8). Oil scoop on all rods toward camshaft.

**CRANKSHAFT:** Five bearing type with integral counterweights and vibration dampener on forward end. Vibration Dampener Removal—See *Hudson Shop Notes*.

**Crankshaft & Main Bearing Removal & Installation:**—See *Hudson Shop Notes*.

**Bearing Diameters:**—#1, 2 9/32"; #2, 2 5/16"; #3, 2 11/32"; #4, 2 3/8"; #5, 2 13/32". See *Crankshaft Size Code in Hudson Shop Notes* for original bearing sizes.

**Bearings:**—Bronze backed, babbitt lined type. Bearings secured in cap and crankcase by brass screws. Clearance—.001".

**Bearing Adjustment:**—None (no shims). Do not file bearing caps. Palnuts used on bearing cap bolt nuts. See *Palnut Installation in Hudson Shop Notes*.

► **CAUTION:**—Replacement of main bearings requires removal of crankshaft. Bearings retained by brass screws.

**Replacement Bearings:** See *Hudson Shop Notes*.

**End Thrust:**—Taken by center bearing. Replace bearing if endplay excessive. Endplay—.006-.012".

**CAMSHAFT:** Five bearing type. Helical gear drive.

**Camshaft Removal:**—See *Hudson Shop Notes*.

**Bearing Diameters:**—#1, 2 1/32"; #2, 2"; #3 1 31/32"; #4, 1 15/16"; #5, 1 1/2".

**Bearings:**—Steel-backed, babbitt-lined bushings.

**Clearance:**—.001-.002".

**Bearing Removal & Installation:**—See *Hudson Shop Notes*.

**End Thrust:**—Thrust washer between camshaft flange and crankcase. Spring loaded button in camshaft hub bears against thrust plate on gear cover.

**Timing Gears:** Crankshaft gear Cast Iron, camshaft gear Laminated Fibre (first cars), Aluminum (later cars). All gears have 20° pressure angle teeth. Aluminum gears (and crankshaft gears used with them) have teeth slightly crowned to improve quietness. NOTE—Gears have figure "20" on front face for identification (crankshaft gear also marked "FRONT" to insure correct installation). **Replacement Gear Caution:**—Aluminum Camshaft Gear furnished in Matched Sets only with crankshaft gear (aluminum gear has slight crown or curvature of teeth for quietness and must be used with similarly crowned teeth type crankshaft gear).

**Backlash:**—.002-.004".

**Timing Gear Removal & Installation:**—See *Hudson Shop Notes*.

**Camshaft Setting:**—Mesh marked crankshaft gear tooth between two marked teeth on camshaft gear.

**VALVES:** Head Diameter Stem Diameter Length

Intake ..... 1½" ..... 11/32" ..... 5 3/32"

Exhaust ..... 1¾" ..... 11/32" ..... 5 3/32"

Seat Angle Lift Stem Clearance

Intake ..... 45° ..... 11/32" ..... .0025"

Exhaust ..... 45° ..... 11/32" ..... .004"

**Valve Guides:** Removable type pressed in block.

**Servicing:**—Use Tool J-1188 to drive guides out. Install guides with Tool J-883-A with top of guide 15/16" below top of cylinder block. With guides installed, ream guides with Tool J-129-2 to .3437" (11/32") which will provide proper valve stem-to-guide clearance. NOTE—Car manufacturer recommends that guides be cleaned with Tool KMO-122

**Valve Springs:** Cadmium plated springs are used. Use tool J-587-A to install valve spring and seat assembly. Spring Free Length—2 17/64".

Spring Pressure Spring Length

Valve Closed ..... 40 lbs ..... 2"

Valve Open ..... 80 lbs ..... 1 21/32"

NOTE—When springs removed, test for pressure (Tool U-15). Replace if pressure below 34 lbs. at 2".

**Valve Lifters:** Roller shoe type, fitted in removable guides in cylinder block.

**Valve Lifter Removal:**—See *Hudson Shop Notes*.

**VALVE TIMING**

**Tappet Clearance:**—.006" Int., .008" Exh., hot & idling.

**Valve Timing:**—See *Camshaft Setting* above.

**Intake Valves:**—Open 10°40' BTDC. Close 60° ALDC.

**Exhaust Valves:**—Open 50° BLDC. Close 18°44' ATDC.

Above figures correct with .010" tappet clearance.

**Valve Timing Check:**—With .010" tappet clearance #1 intake valve should open with piston 10°40' or .0494" BTDC when a point on the flywheel approximately 3.97 teeth before 'UDC.1-8/' mark lines up with indicator in inspection hole above starter. Reset tappet clearance at .006" hot and idling.

**LUBRICATION**

**Engine Oiling System:** Duo-flow (pressure and positive splash) system. Pump delivers oil to front and rear ends of upper tray in oil reservoir. Connecting rod bearings are lubricated by dippers on caps which dip into troughs in this upper tray and also splash oil inside crankcase. Part of this oil is caught in channels inside crankcase and fed into reservoirs directly over each camshaft and crankshaft bearing from which it flows into the bearings.

NOTE—Lower end of oil reservoir suction pipe (from oil pan to crankcase wall) now extends to center of oil reservoir to insure constant oil supply

**Crankcase Capacity:**—9 qts. (dry), 7 (refill).

**Servicing Note:**—Whenever pan removed, install 2 qts. in upper tray before pan installed, then 7 qts. through oil filler after pan in place on engine.

**Oil Filter:** Special Hudson type. Optl. equipment.

**Servicing:**—Replace filter cartridge at 5000 mile intervals.

**Normal Oil Pressure:**—4-12 lbs. with hot oil. No gauge used (see Oil Pressure indicator below).

**Oil Check Valve:**—Located on right side of crankcase at rear. Opens at 4-12 lbs. with hot oil. Operates dash signal to indicate oil flow.

**Oil Pump:**—Oscillating plunger type, gear driven by camshaft. Mounted on right side of crankcase.

**Oil Pressure Indicator:**—Hudson Teleflash Oil Pressure Indicator. For data, refer to Elec. Equip. Index.

**Checking Oiling System:**—See Hudson Shop Notes.

### COOLING

**Cooling System:** Positive circulation type with water pump at water inlet on front of engine. On Commodore Eight only, by-pass passage between outlet elbow on head and water pump inlet provides recirculation of water through block with thermostat closed.

Capacity—18 quarts.

**Water Pump:** Centrifugal, belt driven, packless type. NOTE—Pump used on Commodore Eight has double inlet (for by-pass).

See Water Pump Section for complete data.

**Belt Adjustment:**—See Generator Belt Adjustment.

**Thermostat:** Fulton. Choke type (Super Eight), By-pass type (Commodore Eight). In cylinder head water outlet elbow.

Setting—Starts to open 150-155°F. Fully open 185°F.

**Temperature Gauge:**—King-Seeley Electric. K-S Nos. 41053 (dash unit), No. 41085 (engine unit).

See Miscellaneous Section for complete data.

NOTE—Gauge reads HOT with ignition 'Off'.

### CLUTCH

**Own Make.** Single plate, fluid cushioned type (cork insert type driven member operating in oil). 10" type used on all models.

See Clutch Section for complete data.

**Driven Member:**—Cork insert type. Inside Diam. 6 $\frac{3}{8}$ ". Outside Diam. 10". Facing 108 corks, .203" thick.

**Pedal Adjustment:** Clearance between underside of toeboard and top face of pedal shank must be 1 $\frac{1}{2}$ ". To adjust, loosen locknut above clevis, remove clevis pin in throw-out lever at lower end of connector link, turn clevis in or out of link, tighten locknut after re-connecting clevis. CAUTION—Make certain that clevis pin inserted in same hole in throw-out lever from which removed.

**Clutch Oil Servicing:**—See Hudson Shop Notes.

**Removal:**—Remove transmission (see Transmission Removal following). Drain clutch oil by turning engine over until plug on flywheel is accessible through timing inspection hole in rear engine support plate above starter, remove plug, turn engine over  $\frac{1}{2}$  revolution until star on flywheel visible through timing hole (drain hole then at bottom), allow lubricant to be drained. Loosen mounting bolts in clutch cover rim to release spring tension, remove bolts and lift clutch assembly off car. NOTE—See Installation Note following Transmission Removal for Clutch Throwout Bearing Oil Seal.

### VACUMOTIVE DRIVE

**Vacumotive Drive:**—Automatic clutch control. Optl. See Clutch Section for complete data.

### TRANSMISSION

**Own Make.** All helical gear type. Constant-mesh, synchro-mesh (Second & High), sliding gear (Low & Reverse) with remote (steering column) shift. See Transmission Section for complete data.

**Transmission Control:** Handy-Shift remote control type with shift lever mounted on steering column.

See Transmission Section for complete data.

**Removal:**—Transmission can be removed from inside car as follows: Take off accelerator pedal by removing cotter pins in anchor bracket and bell crank link clevis pins. Move steering column rubber hole cover up out of way. Remove floor mat by taking out screws at kick pads on dash and mat trim clips. Remove front seat cushion and transmission floor opening cover (CAUTION—Accelerator pedal operating rod should be secured so as not to drop on starter switch). Disconnect front universal by taking out four nuts and lock plates on U-bolts. Release clutch pedal return spring. Remove two cross shaft bracket bolts, clutch control link clevis pin and clutch pedal assisting spring. Remove Handy Shift control tube-to-transmission shift rod cotter pin, washer and grommet; transmission casing lower anchor bracket screws and bracket, shift shaft outer lever nut, washer and lever. Remove two flywheel guard-to-clutch housing screws and two rear engine mounting bolts (CAUTION—Do not remove rear engine mounting-to-clutch housing bolt). Jack rear of engine up  $\frac{1}{2}$ " off frame. Remove clutch housing to transmission bolts. Disconnect speedometer cable from transmission. Pull transmission back and lift out.

**Installation Note:**—Wrap one strand of soft wire around throw-out bearing oil seal to prevent leather curling over when transmission installed (twist wire with end extending up through clutch housing so that it will come off the seal after transmission installed).

### DRIVE-MASTER TRANSMISSION

**Drive-Master Transmission:** Optl. Conventional 3-speed transmission with automatic gear shifting between Second & High Gears. Used in conjunction with Vacumotive Drive (automatic clutch control). See Transmission Section for complete data.

### OVERDRIVE

**Warner Model AS2-R9B.** Optl. equipment, used with Hudson Transmission. Overdrive is solenoid operated type (no centrifugal pawls) with Governor control and throttle operated "kick-down".

See Transmission Section for complete data.

**Overdrive Solenoid:**—Delco-Remy. Hudson #163305.

**Throttle Switch:**—R-B-M. Hudson No. 164438. On toeboard under accelerator pedal. Not adjustable.

**Governor Switch:**—Auto-Lite Model TGA-4002 (two terminal type), Model TGB-4002 (five terminal type used on cars with Hudson Drive-Master transmsn.).

**Removal:** Same as standard transmission removal (above) except that overdrive control and wiring connections must be disconnected. Special Tool J-1502-H (hoist and dolly) should be used to lift transmission and lower onto dolly. Transmission and overdrive assembly can then be rolled out from beneath car.

### UNIVERSALS

Spicer. Needle bearing type. Two used.

Front—Spicer Model—Rear

Std. ....1261-101X.....1268-101X

With Overdrive ....1261-101X.....1278-101X

See Universals Section for complete data.

### REAR AXLE

**Own Make.** Semi-floating, Spiral Bevel gear type with Hotchkiss Drive.

See Rear Axle Section for complete data.

Ratio—	Standard	Optional
Std. Transmission .....	4 1/9-1.....	4 5/9-1
With Overdrive .....	4 5/9-1.....	4 1/9-1
With Drive-Master .....	4 1/9-1.....	4 5/9-1

FOR OTHER REAR AXLE DATA  
SEE 1946-47 HUDSON SIX CAR PAGES

### SHOCK ABSORBERS

Delco Model 1037-C (front), Model 1041-S (rear). Direct acting, hydraulic types.

See Shock Absorber Section for complete data.

### FRONT SUSPENSION

**Front Suspension:**—Independent, linked parallelogram type with coil springs and Autopulse Control. See Front Suspension Section for complete data.

**Kingpin Inclination:**—4°36' crosswise.

**Caster:**—0° (Neg.  $\frac{1}{4}$ ° to Pos.  $\frac{1}{4}$ °). Adjustable.

**Camber:**—Positive  $\frac{1}{4}$ ° to Positive  $\frac{3}{4}$ °. Adjustable.

**Toe In:**—0-1/16". Loosen clamps at ends of each tie rod (adjust rods equally with steering arm centered).

**Steering Geometry:**—Inner wheel 30°, Outer 25°.

### STEERING GEAR

Gemmer Model 335. Worm-and-Roller type with "push-pull" adjustments.

See Steering Gear Section for complete data.

### BRAKES

**Service:** Bendix Hydraulic, 4-wheel, Duo-servo, Single anchor type without eccentric adjustment. Mechanical follow-up (pedal linked to hand brake cables) provided. Hand lever applies rear service brakes.

See Brake Section for complete data.

**Drums:**—Centrifuse. Diameter 11".

**Lining:**—Multibestos molded (primary), Ferodo woven (secondary). Width 1 $\frac{3}{4}$ ". Thickness 7/32". Length per wheel 23 15/16".

**Clearance:**—.0075" at each end of each shoe, (.015" at each end of secondary or rear shoe with primary shoe forced out against drum).

**Mechanical Follow-up (Reserve):** Over-running linkage between brake pedal and parking (hand-brake) linkage which causes rear wheel brakes to be applied mechanically by pedal if hydraulic system not operating.

See Brake Section for complete data.

**Setting:**—1 $\frac{1}{4}$ " clearance between face of pedal pushrod & end of actuating tube with brakes off.

**Hand Brake:** See Service Brakes above..

### MISC. MECHANICAL

**CONVERTIBLE TOP CONTROL:** Hydraulic (hydro-electric) type with hydraulic power cylinders actuated by motor driven hydraulic pump.

See Miscellaneous Section for complete data.

**Distributor Removal:** On left side of engine. Disconnect vacuum line, take out hold-down screw in advance arm. Lift off.

## IGNITION TIMING

**Std. Setting**.....At Top Dead Center

**NOTE**—Modify this setting for special fuel and altitude conditions. See Fuel Compensator Setting.

**Flywheel Mark**—"UDC-1-6" (#1 and #6 piston top dead center position) with 4 short marks ( $\frac{1}{4}$ " apart) ahead of this mark. Visible in opening behind starter.

**Timing**—With #1 piston at firing position and long line of "UDC-1-6/" flywheel mark aligned with lower edge of opening in rear engine support plate behind starter, loosen hold-down screw in Fuel Compensator. Rotate distributor until contacts begin to open, tighten hold-down screw. Check spark plug connections (see diagram), see that rotor at #1 segment in cap. Check Fuel Compensator setting.

**Timing (with Neon Timing Light)**—Mark long line of "UDC-1-6/" flywheel mark with white paint, connect timing light to #1 spark plug. Idle engine below 800 RPM, adjust distributor (as directed above) until mark lines up with lower edge of opening behind starter.

**Fuel Compensator Setting**—Set for slight ping at 15 MPH. when accelerating from 10 MPH. with wide open throttle. To adjust, loosen hold-down screw, rotate distributor counter-clockwise (if ping too severe), clockwise (if no ping). Final setting must not be more than 1" (4th short line) ahead of "UDC-1-6/" flywheel mark.

## CARBURETOR

**Carter WDO, No. 647S.**  $1\frac{1}{4}$ " dual barrel downdraft type with Carter Climatic Control.

**Casting No. on Flange**—542.

See Carburetor Section for complete data.

**Settings (Idle Setting, Float Level, and Accelerating Pump:** See Tune-Up data.

**Metering Rods & Jets**—See Carter Jet Table in Carburetor Section.

**Fast Idle:** Carter Dual (WDO) Carburetor type.

See Carburetion Equipment Section for complete data.

**Setting**—.054" throttle opening with choke valve closed. Adjust by turning fast idle screw on high step of cam.

**Automatic Choke:** Carter Climatic Control (Dual Carbs.).

See Carburetion Equipment Section for complete data.

**Setting**—Set coil housing 1 point lean.

## CARB. EQUIPMENT

**Fuel Pump (std.):** AC Type AH No. 1539109.

**Optl. (Fuel-& Vacuum)**—AC Type AJ No. 1539108.

**Replacement Pump**—No. 584 (for AH), 583 (AJ).

**Pressure**— $3\frac{1}{2}$ -4 $\frac{1}{2}$  lbs.

**RHD NOTE**—AC No. 1539255 (std.), No. 1539254 (comb. fuel-& vacuum). Repl. No. 9255 (std.), 9254 (comb.).

See Carburetion Equipment Section for complete data.

**Gasoline Gauge:** King-Seeley Electric.

**Dash Unit**—K-S No. 42120 (481), 42135 (482).

**Tank Unit**—K-S No. 41765.

See Carburetion Equipment Section for complete data.

**Air Cleaner (std.—oil wetted):** AC #1544265 (element Type #5), Hudson No. 301136 (301261 for Drive-Master).

**Optl. (oil bath)**—AC #1544266 (element #1542245), Hudson No. 300824 (301384 for Drive-Master).

**Servicing (oil-wetted type)**—Clean and re-oil filter element (use same grade engine oil used in crankcase) at 2000 mile intervals or more often if required by operating conditions.

**Servicing (oil-bath type)**—Service same as oil-wetted type except that filter element not oiled and 1 pint engine oil used in cleaner body.

## BATTERY

**National Type S17-2HF.** 6 Volt, 17 Plate, 120 Ampere Hour Capacity (20 hour rate).

**Zero Capacity**—300 amperes for 4.3 minutes. Five second voltage—4.35 volts.

**Grounded Terminal**—Positive (+) to frame and engine by a single strap.

**Dimensions**—Lgth. 10 9/16". W. 7 1/8". H. 9 1/16".

**Location**—On left side under engine hood.

## STARTER

**Auto-Lite Model MCL-6006.** Armature MCH-2023.

**Drive**—Bendix No. A-1806. Inboard Barrel type.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—42-53 ozs. (new brushes).

**Cranking Engine**—Approx. 160 amperes at 150 RPM.

### Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5500	5.5	65
8.0 "	Lock	2.0	410

**Removal:** On left front face of rear motor support. To remove, take out flange mounting bolts.

**Starting Switch:** Auto-Lite Magnetic type SS-4001 on starter with pushbutton (Hudson No. 300646) on instrument panel. Operative only with ignition "on" (and clutch disengaged on cars with Vacuumotive Drive or Drive-Master).

See Electrical Equipment Section for complete data.

## GENERATOR

**Auto-Lite Model GEC-4801A.** Armature GDZ-2006F. Third brush control with voltage regulation.

**Maximum Charging Rate**—44 amperes (Cold), 37 amperes (Hot), at approx. 35 MPH. Ground "F" terminal when checking generator output.

**Charging Rate Adjustment**—See Regulator data.

Third brush setting 1 commutator bar minimum, 1 commutator bar plus 1 mica strip maximum, from nearest (insulated) main brush. Adjust 3rd brush.

Cold		Performance Data		Hot	
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	960	0	6.4	1040
4	6.55	1060	4	6.6	1140
8	6.7	1160	8	6.8	1280
12	6.85	1280	12	6.95	1440
16	7.0	1400	16	7.15	1600
20	7.15	1550	20	7.35	1820
24	7.25	1700	24	7.55	2090
28	7.5	1890	28	7.75	2440
32	7.65	2100	32	7.9	3000
36	7.8	2375	34	8.0	3800
41	8.0	3350			

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—53 ozs. max. (new brushes).

**Field Current**—1.60-1.78 amperes at 6.0 volts.

**Motoring Current**—4.85-5.4 amps. at 6.0 volts.

**Removal:** Pivot mounted at left front of engine. To remove, take out pivot and clamp screws and nuts.

**Belt Adjustment:**  $\frac{3}{4}$ " belt deflection between generator and pump pulleys. Loosen bolts, swing generator out.

## REGULATOR

**Auto-Lite Model VRR-4001A.** Voltage type.

**NOTE**—Cutout Relay has extra set of contacts for Generator "Teleflash" Indicator control.

See Electrical Equipment Section for complete data.

**NOTE**—Regulator cover sealed. Warranty void if seals broken.

### Cutout Relay

**Cuts In**—6.4-6.6 volts.

**Cuts Out**—4.2-4.8 volts (approx. 4-6 amps. disch.).

**Contact Gap**—.015" min., ground contacts closed (ground contacts open when main contacts closed).

**Air Gap**—.013-.034" at hinge end of core with contacts open (ground contacts closed).

### Voltage Regulator

**Voltage Setting**—7.1-7.4 volts at 70°F.

**Contact Gap**—.012" Min. (armature against stop).

**Air Gap**—.048-.052" with contacts just opening.

**Checking (without breaking seals) & Adjustment**—See Electrical Equipment Section for complete data.

## LIGHTING

**Headlamps:** Hall "Sealed Beam" type.

See Electrical Equipment Section for complete data.

**Adjustment**—Aim upper beams straight ahead (hot spot centers 3" below lamp center height at 25 ft.).

**Beam Indicator**—Red pilot bulb at lower center of speedometer dial. Lights when Upper Beam "on".

**Direction Signal:** Optl. See Electrical Equipment Section.

**Direction Signal Indicator**—At left end of instrument panel. Flashes when Signal in use.

**Direction Signal Flasher**—Hudson No. 300877.

### Switches

**Lighting**—Hudson No. 300641 (with Circuit Breaker), No. 300642 (switch only).

**Beam Selector**—Hudson No. 300799.

**Instrument (Commodore)**—Hudson No. 160092.

**Door Switch**—Hudson No. 300796.

**Front Dome Light**—Hudson No. 211312.

**Rear Quarter Pillar**—Hudson No. 160091.

**Stop Light**—Hudson No. 300356.

**Direction Signal**—Hudson No. 300875 (with wires).

### Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps	Sealed Beam	4030
Parking (no Dir. Signal)	3	63
Parking & Dir. Signal	21-3	1154
Rear Direction Signal	21	1129
Stop & Tail	21-3	1154
Rear License	3	63
All Instrument Lights	1 $\frac{1}{2}$	55
Dir. Sig. Indicator	1	51
Front Dome & Courtesy	15	87
Rear Qtr. Dome (Cmdre.)	6	81
Bonnet (Hood) Light	1 $\frac{1}{2}$	55

## MISC. ELECTRICAL

**CIRCUIT BREAKERS:** Vibrating thermostatic types.

**Lighting**—Hudson No. 300643. 30 ampere. On lighting switch.

**Misc. Lighting**—Hudson No. 301853. 20 ampere. On steering support bracket behind instrument panel.

**Convertible Top & Hydraulic Window Regulators**—Hudson No. 300626. 30 ampere. On steering support bracket behind instrument panel.

**FUSES:** Electric Clock—3 ampere. Behind clock.

**Direction Signal**—10 ampere. On Direction Signal Harness behind instrument panel.

**Drive-Master**—10 ampere. On Drive-Master Switch.

**Weather Control**—14 ampere. On heater.

**Radio**—14 ampere. In lead wire to radio.

CONTINUED N NEXT PAGE

## CONTINUED FR M PRECEDING PA E

**GENERATOR CHARGE SIGNAL:** Red indicator on instrument panel (to right of temperature gauge). Should light when ignition turned on and should go out when generator begins to charge.

See *Electrical Equipment Section* for complete data.

**OIL PRESSURE SIGNAL:** Red indicator on instrument panel (to left of gas gauge). Should light with ignition on, go out as soon as engine started.

**Oil Pressure Warning Switch—**Carter No. A658S. Hudson No. 300828. On right side of engine above oil pump. Contacts open at 11-15 lbs. Switch sealed. Not adjustable. See *Electrical Equip. Section* for data.

**HORNS: Spartan.** Dual horns operated by relay.

**Air Gap—.026-.030"** for high pitch (short horn), .032-.035" low pitch (long horn).

**Horn Relay: Hudson No. 164401.** On engine dash.

Contacts Close—3 volts min., 4 volts max.

Open—2 volts min. (relay upright, terminals down).

## ENGINE

**ENGINE SPECIFICATIONS:** Own Make. Six cylinder, "L" head type.

Bore—3 9/16". Stroke—4 3/8".

Displacement—262 cu. ins. Rated HP—30.4.

Developed Horsepower—121 at 4000 RPM.

Compression Ratio (std.)—6.50-1 cast-iron head.

Compression Ratio (optl.)—7.00-1 aluminum head.

Compression & Vacuum Reading—See *Tune-Up*.

**ORIGINAL BORE & PISTONS:** See *Hudson Shop Notes*.

**ORIGINAL BEARING SIZES:** See *Hudson Shop Notes*.

**TIGHTENING TORQUES:** See *Hudson Shop Notes*.

**OIL PAN REMOVAL:** See *Hudson Shop Notes*.

**PISTONS:** Aluminum alloy, Cam ground, T-slot type.

Weight—18 1/8 ozs. (stripped). Length—3 3/4".

Removal—Pistons and rods removed from above.

Clearance—.001 to .0015" (skirt).

**Replacement Pistons:** See *Hudson Shop Notes*.

**Installing Pistons:** Slot away from camshaft.

**PISTON RINGS:** Two compression, two oil rings (one above pin, one below pin) per piston. Rings are square end type. Rings pinned to prevent rotation. Rings cut and notched to fit pin (clearance on pin equal to ring end gap).

Ring	Width	End Gap	Side Clearance
Compression	5/64"	.007-.012"	.001"
Oil (upper)	3/16"	.007-.012"	.001"
Oil (lower)	5/32"	.007-.012"	.001"

**Replacement Rings:** See *Hudson Shop Notes*.

**PISTON PIN:** Diameter—31/32". Length—2 15/16".

Floating type with diamond-drilled pin holes in piston and rolled steel babbitt faced bearing in connecting rod. Pin retained by lock ring at each end. Pin fit in Piston—.0000-.0003" at 70°F.

Pin fit in Rod Bushing—Hand push fit at 70°F.

**Piston Pin Replacement:** See *Hudson Shop Notes*.

Pin Sizes—Std., .002", .005", .010" oversize.

**CONNECTING ROD:** Length—8 1/8".

Weight—34.23 ozs. (without bearings).

Lower Bearing Diameter—2 1/8".

For Original Connecting Rod Bearing Sizes, see "Crankshaft Size Code Note" in *Hudson Shop Notes*.

**Lower Bearing—**Steel-backed, babbitt-lined type with upper and lower halves interchangeable. No shims.

Clearance—.0005-.0015". Sideplay—.007-.013".

**Bearing Adjustment:** None (no shims). Replace bearings. Do not file rods or bearing caps.

**NOTE—**Identifying nibs on side of cap and rod must be together when cap installed on rod.

**Pinnut Installation—**See *Hudson Shop Notes*.

**Replacement Bearings:** Large std., small std., .010" US.

**Installing Rods:** Not offset. Oil spit hole in lower end of rod must be toward valve side of engine.

**CRANKSHAFT:** Four bearing type with integral counterweights. Vibration dampener on front end.

**Bearing Diameter—**2 1/2" all bearings.

**Bearings—**Removable steel-backed, babbitt-lined type. Upper and lower halves of each bearing are interchangeable.

**Clearance—.0005-.0015".**

**Oil Seals—**Wood packing wedges used at front and rear main bearings. Graphite impregnated wiper seal fitted in groove (formed between engine rear support plate and rear of block for upper half, and in rear groove in bearing cap for lower half) behind oil slinger groove. Cap has oil return hole at bottom.

**Bearing Adjustment:** None (no shims). Replace bearings. Do not file bearing caps.

**NOTE—**Bearing shells positioned in cap and crankcase by tang on edge of shell.

**Pinnut Installation—**See *Hudson Shop Notes*.

**Replacement Bearings:** Std., optl. std., .010" US.

**End Thrust:** Taken by #3 bearing. Replace bearing if endplay excessive.

**Endplay—.003-.009".**

**CAMSHAFT:** 4 bearing type. Non-adjustable chain

**Bearing Diameters—**#1, 2 3/8"; #2, 2"; #3, 1 31/32";

#4, 1 1/2".

**Bearings—**Steel-backed, babbitt-lined bushings.

**Clearance—.001-.002".**

**Replacement Bearings:** Furnished reamed or unfinished.

**End Thrust:** Steel thrust plate fitted between front end of camshaft and sprocket. Plate attached to crankcase by two capscrews and locks.

**Timing Chain:** Morse. Hudson No. 300186. 60 links. 3/8" pitch.

**Chain Tension Shoe—**Fibre shoe backed by synthetic rubber plunger mounted inside timing chain cover at top. Holds chain in close mesh with sprockets and prevents whip.

**Camshaft Setting:** Sprockets marked. Two chain guide links marked with center holes. Mesh chain with center hole in each link opposite "O" mark on each sprocket with #1 piston at top dead center (crankshaft sprocket keyway at top with #1 piston at TDC). **NOTE—**With this setting, there should be 6 full links plus two half-links between marks on sprockets (half-links opposite sprocket marks).

VALVES:	Head Diameter	Stem Diameter	Length
Intake	1 53/64"	11/32"	5 47/64"
Exhaust	1 9/16"	11/32"	5 47/64"

**Seat Angle**

**Lift**

**Stem Clearance**

Intake ..... 45° ..... 11/32" ..... .0015-.003"

Exhaust ..... 45° ..... 11/32" ..... .002-.004"

**Valve Guides:** Removable, one-piece, cast-iron

Exhaust guides counterbored at upper end. Install guides as follows:

**Intake Guide—**Upper end 1 7/16" below top of valve seat. Finish ream to .3432-.3442".

**Exhaust Guides—**Upper end 1 3/32" below top of valve seat. Finish ream to .3432-.3442". Counterbored

9/16" deep to diameter of 25/64".

**Valve Springs:** Cadmium plated springs are used.

	Spring Pressure	Length
Valve Closed	77 lbs.	2 3/16"

**Valve Lifters:** Mushroom type fitted directly in crankcase. Removed from below with camshaft out.

## VALVE TIMING

**Tappet Clearance:** .008" Intake, .010" Exhaust, Hot.

► **CAUTION—**This figure supersedes earlier data.

Self-locking tappet screws are used. Remove right front fender apron for access to valve compartment.

**Valve Timing:** See *Camshaft Setting* above.

**Intake Valves—**Open 7°18' BTDC. Close 53°42' ALDC.

**Exhaust Valves—**Open 53°18' BLDC. Close 7°42' ATDC. These figures correct with .010" tappet clear.

**Valve Timing Check—**With .010" tappet clearance No. 1 intake valve opens 7°18' BTDC. with point on flywheel approximately 2 3/4 teeth before top dead center mark "UDC-1-6/" in line with lower edge of opening in rear engine support plate behind starter.

## LUBRICATION

**Engine Oiling System:** Pressure to crankshaft, connecting rod, and camshaft bearings, piston pins, valve lifters, and to timing chain at crankshaft sprocket. Rotor type oil pump angle mounted on right side of engine.

**Crankcase Capacity—**7 qts. (refill), 7 1/2 qts. (dry).

**Normal Oil Pressure—**No gauge used. See *Oil Pressure Indicator* below.

**Oil Pressure Relief Valve—**Non-adjustable release valve and spring under plug on left side of engine ahead of starter.

**Oil Pan Removal:** See *Hudson Shop Notes*.

**Oil Pump:** Rotor type consisting of inner and outer rotor, shaft, body, and cover. Angle mounted on right side of crankcase and driven from camshaft.

**Oil Filter:** Optl. Replace cartridge every 5000 miles or when oil shows signs of being dirty.

**Oil Pressure Indicator:** Hudson Signal Light with new Oil Pressure Warning Switch. Consists of light on instrument panel operated by switch as follows:

**Oil Pressure Warning Switch—**Carter No. A658S. Hudson No. 300828. On right side of engine above oil pump. Contacts open at 11-15 lbs. Switch sealed. No adjustment. See *Electrical Equip. Section* for data.

**Crankcase Ventilation:** Oil-wetted type filter element in oil filler cap (air intake). Outlet pipe in rear valve compartment cover on right side of engine.

**Servicing—**Wash filter element in gasoline and re-oil when changing oil.

## COOLING

**Cooling System:** Positive circulation with pump on front of engine, by-pass type thermostat, and brass water distribution tube in cylinder block.

**Capacity—**17 quarts.

**Water Pump:** Centrifugal, belt-driven, packless type. Shaft mounted on sealed duplex ball bearing.

See *Water Pump Section* for complete data.

**Belt Adjustment—**See *Generator Belt Adjustment*.

**Thermostat:** Hudson No. 166272. By-pass type in water outlet on cylinder head.

**Setting—**Starts to open 150-155°F. Fully open 185°.

**Temperature Gauge:** King-Seeley Electric.

**Dash Unit—**K-S No. 42125 (481), 42140 (482).

**Engine Unit—**K-S No. 41085.

See *Miscellaneous Section* for complete data.

## CLUTCH

**Own Make.** Single plate, fluid cushioned type (cork insert type driven member operating in Hudsonite oil, 10" type used on all models).

*See Clutch Section for complete data.*

**Facings**—Cork insert type. Inside Diameter  $6\frac{3}{8}$ ". Outside Diam. 10". 108 corks, .203" thick.

**Pedal Adjustment:** Clearance between underside of toeboard and top face of pedal shank must be  $1\frac{1}{2}$ ". To adjust, loosen locknut above clevis, remove clevis pin, turn clevis in or out of link, tighten locknut after re-connecting clevis.

**Clutch Oil Servicing:** *See Hudson Shop Notes.*

**Removal:** Remove transmission (see Transmission Removal following). Drain clutch oil by turning engine over until plug on flywheel is accessible through timing inspection hole in rear engine support plate behind starter, remove plug, turn engine over  $\frac{1}{2}$  revolution until star on flywheel visible through timing hole (drain hole then at bottom), allow lubricant to be drained. Loosen mounting bolts in clutch cover rim to release spring tension, remove bolts and lift clutch assembly off car.

## VACUMOTIVE DRIVE

**Vacumotive Drive:** Automatic clutch control. Optl. *See Clutch Section for complete data.*

## TRANSMISSION

**Own Make.** All helical gear type. Constant-mesh, synchro-mesh (Second & High), sliding gear (Low & Reverse) with remote (steering column) shift.

**Identification**—Metal tag attached by a cover bolt screw carries second speed ratio 1.65:1 (std.), 1.82:1 (cars with Drive-Master).

*See Transmission Section for complete data.*

**Transmission Control:** Handy-shift remote control type with shift lever mounted on steering column. *See Transmission Section for complete data.*

**Transmission Removal:** Remove front seat cushion, disconnect front seat from track, disconnect seat adjusting lever and remove seat back from car. Disconnect accelerator pedal at accelerator rod, brake pedal rod at lever. Remove floor mat, remove Weather Control blower unit (2 screws each side), disconnect bowden wire at control valve at cylinder head. Remove floor opening cover over transmission. Disconnect front universal joint at transmission (wire bearings on universal joint spider). Remove bolts attaching center bearing support bracket, move propeller shaft to rear to clear companion flange at transmission. Disconnect clutch pedal lever return spring, remove clutch cross-shaft and bracket, disconnect clutch control link clevis. Disconnect Handy Shift by removing shifter shaft outer lever, nut, and washer. Remove flywheel guard from bottom of clutch housing. Remove two engine rear mounting bolts and nuts, jack up rear end of engine about  $\frac{1}{2}$ " off frame cross-member (CAUTION—use block of wood on jack to prevent damage to oil pan). Disconnect speedometer cable at transmission case, plug hole with wood plug. Remove two top screws attaching clutch housing to engine, install guide studs (headless screws) in these holes to support transmission, remove remaining screws. Remove breather pipe bracket from clutch housing

and bolt attaching breather pipe and rear valve cover. Pull transmission straight back on guide studs, lift transmission out through floor opening (NOTE—Holst J-1502 can be used to lift transmission out).

## DRIVE-MASTER TRANSMISSION

**Drive-Master Transmission:** Optl. Conventional 3-speed transmission with automatic gear shifting between Second & High Gears. Used in conjunction with Vacumotive Drive (automatic clutch control).

**Identification**—Metal tag attached by a cover bolt screw carries second speed ratio 1.82:1.

*See Transmission Section for complete data.*

## OVERDRIVE

**Warner Model AS1-R10D.** Optl. equip. used with the Hudson Transmission. Overdrive is solenoid operated type (no centrifugal pawls) with Governor control and throttle operated "kick-down".

*See Transmission Section for complete data.*

**Overdrive Solenoid**—Hudson No. 301757.

**Lock-Out Switch**—Hudson No. 301755.

**Throttle Switch**—Hudson No. 164438.

**Governor**—Hudson No. 165829 (standard), Hudson No. 165831 (cars with Drive-Master).

**Relay**—Hudson No. 165826. On left fender shield.

**Removal:** Same as standard transmission removal (above) except that overdrive control cable and wiring must also be disconnected.

## UNIVERSALS

**Spicer.** Needle bearing type. Three used with intermediate universal to rear of propeller shaft center bearing.

*See Universals Section for complete data.*

**Propeller Shaft & Center Bearing:** Two shafts used:  
1) Front shaft supported by sealed ball-bearing just ahead of rear coupling flange (no slip joint).  
2) Rear shaft with slip joint at forward end.

**Center Bearing**—Prelubricated sealed annular ball bearing fitted in cast steel housing bolted to support mounting which is secured to underside of frame cross members. Housing cradle mounted on two rubber supports and forward end of support mounting fitted with rubber cushion.

## REAR AXLE

**Own Make.** Semi-floating, hypoid gear type with Hotchkiss drive.

*See Rear Axle Section for complete data.*

**Ratio**—Std. or Drive-Master Cars: 4.1-1 standard, 4 5/9-1 Optl. Overdrive Cars: 4 5/9-1 std., 4.1-1 Optl.

**Backlash**—.004-.006". Screw adjustment.

**Removal:** Disconnect rear universal by taking out four nuts and lock plates on U-bolts, drop rear end of propeller shaft. Remove axle shafts (see instructions below). Remove bolt nuts on carrier flange, pull carrier assembly out of axle housing.

**Axle Shaft Removal:** Holst rear of car. Remove rear wheels. Remove axle shaft nut and washer (use Tool J-351). Remove hub and drum assembly using screw type wheel puller (Tool J-736—CAUTION—Car manufacturer recommends that screw type

puller be used, if knock-out type puller is used serious damage to differential parts may result). Remove 4 nuts on bearing cap bolts, push bolts out of backing plate, remove bearing caps and shims (without disturbing hand brake link). Take out rear wheel bearing and axle shaft, using puller Tool J-352. Do not drag axle shaft on oil seal assembly in housing.

**Wheel Bearing Adjustment:** Controlled by shims (.003", .005", or .015" thick) under bearing cap. To adjust, remove bearing cap (see directions above under Axle Shaft Removal), add or remove shims equally at both wheels (necessary to keep thrust spacer centered on differential pinion shaft). Endplay—.001-.004".

## SHOCK ABSORBERS

**Delco or Monroe.** Direct acting, hydraulic types. Hudson Nos. for cars with light control (std.) springs: Front 301240 (Delco), 300350 (Monroe). Rear 301241 (Delco), 300351 (Monroe).

*See Shock Absorber Section for complete data.*

## FRONT SUSPENSION

**Front Suspension:** Independent, linked parallelogram type with coil springs and lateral stabilizer.

*See Front Suspension Section for complete data.*

**Kingpin Inclination**—3°36' crosswise.

**Caster**— $\frac{1}{2}$ - $1\frac{1}{2}$ ". Eccentric adjustment.

**Camber**— $\frac{1}{2}$ - $1\frac{1}{2}$ ". Eccentric adjustment.

**Toe In**— $1\frac{1}{32}$ "  $\pm$   $1\frac{1}{32}$ ". Center steering arm on frame must be at center of car. To adjust, loosen clamps at ends of each tie rod and adjust tubes equally (to increase toe-in turn rods in direction of wheel travel, to decrease, turn in opposite direction).

**Steering Geometry (Toe-out on Turns)**—With Inner wheel turned 30°, Outer Wheel should be turned 25°. No adjustment.

## STEERING GEAR

**Gemmer Model 335.** "3-tooth" Worm-and-Roller type with "push-pull" adjustments.

*See Steering Gear Section for complete data.*

## BRAKES

**Service:** Bendix Hydraulic, Duo-Servo, Single Anchor type without eccentric adjustment. Mechanical follow-up (pedal linked to hand brake cables) provided. Hand lever applies rear wheel service brakes. *See Brake Section for complete data.*

**Wheel Cylinders**—Diameters: Front wheel  $1\frac{1}{8}$ ", Rear wheel  $15\frac{1}{16}$ ".

**Drums**—11" centrifuse type.

**Lining**—Moulded. Width  $2\frac{1}{4}$ " (front wheels),  $1\frac{3}{4}$ " (rear wheels). Length 20.87" per wheel.

**Clearance**—.010" at both ends of brake shoe.

**Mechanical Follow-Up (Reserve):** Over-running linkage between brake pedal and parking (hand-brake) linkage which causes rear wheel brakes to be applied mechanically by pedal if hydraulic system not operating.

*See Brake Section for complete data.*

**Setting**— $1\frac{1}{4}$ " clearance between clevis pin and rear end of slot in pedal rod rear clevis.

**Hand Brake:** See Service Brakes above.

**HOOD LOCK:** Pull handle under edge of instrument panel on left side, pull forward on safety catch under front edge of hood, raise front end of hood.

### MODEL IDENTIFICATION

**SERIAL & ENGINE NUMBER:** Stamped on plate on right front door hinge pillar post and stamped on top of cylinder block between No. 1 and No. 2 exhaust manifold flanges.

1948 Numbers—483101 Up (483), 484101 Up (484).

**Identification:** First three figures of number indicate models as follows: 483101 or 484101.

### TUNE-UP

**COMPRESSION PRESSURE:** 100 lbs. min. at 150 RPM.  
**VACUUM READING:** 18-21" idling at 550-575 RPM. (std.), 575-600 RPM. (with Vacumotive or Drive-Master).

**FIRING ORDER:** 1-6-2-5-8-3-7-4. See diagram.

**SPARK PLUG GAPS:** .032".

Plugs for Cast-iron Head—Champion J-7 (old marking Champion J-9), 14 mm.

Plugs for Aluminum Head—Champion H-10, 14 mm.

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.017". Limits .015-.019".

Cam Angle or Dwell—27° closed with .017" gap.

Breaker Arm Spring Tension—17-20 ounces.

Automatic & Vacuum Advance—See Distributor.

**IGNITION TIMING:** TDC (top dead center).

Timing Procedure—See Ignition Timing.

Flywheel Mark—"UDC-1-8/" aligned with lower edge of rear engine support plate opening behind starter.

Fuel Compensator Setting—Slight ping at 15 MPH. when accelerating from 10 MPH. in high gear.

**CARBURETION:** See Carburetor & Carb. Equipment.

Idle Setting—1-1½ turns open. Two screws—turn screws out for richer mixture.

Idle Speed (standard)—550-575 RPM.

Idle Speed (with Vacumotive or Drive-Master)—575-600 RPM.

Float Level—13/64". Measured from top of float to gasket seat (machined surface) on bowl cover with needle valve seated (invert when checking).

Accelerating Pump—Outer hole (Normal). Inner Hole if less charge required.

Fuel Pump Pressure—3½-4½ lbs.

**MANIFOLD HEAT CONTROL:** Automatic. No adjustment. Valve must operate freely.

**VALVE TAPPET CLEARANCE:** .006" Int., .008" Exh.

Hot.

NOTE—Remove apron in right front fender for access to valve compartment.

Valve Timing Check—See Valve Timing.

**STARTING:** See Battery, Starter, Generator, Regulator.

### IGNITION

**IGNITION SWITCH:** Mitchellock, Hudson No. 300644, 301826 (RHD). Ignition Lock Case and Bracket.

Ignition Lock—Briggs & Stratton, B & S No. 50184.

Key Series—H601 to H1100, Groove No. 1.

**COIL:** Auto-Lite No. CE-6006.

Location—Right side of engine above distributor.

Ignition Current—2½ amperes idling, 5 stopped.

**CONDENSER:** Auto-Lite No. IG-2671G.

Capacity—20-25 microfarad.

**DISTRIBUTOR:** Auto-Lite Model IGT-4204A-1. Automatic advance type with Vacuum Spark Control and Fuel Compensator adjustment.

**Breaker Plate Identification:**No. 8.5 stamped on plate (vacuum advance limiting slot size).

**Rotation:**Clockwise viewed from above.

**Breaker Gap:**—.017". Limits .015-.019".

**Cam Angle:**—27° closed with .017" gap.

**Breaker Arm Spring Tension:**—17-20 ounces.

#### Automatic Advance

Degrees	Distr.	R.P.M.	Degrees	Eng.	R.P.M.
Start	.....	300	0	.....	600
3	.....	400	6	.....	800
8	.....	850	16	.....	1700
13	.....	1300	26	.....	2600
17.5	.....	1700	35	.....	3400

**Fuel Compensator:** 10° adjustment at distributor. See Ignition Timing for adjustment and setting.

**Vacuum Spark Control:** Auto-Lite. Integral type. Linked directly to breaker plate. Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle when spark retarded by return spring in unit.

#### Vacuum Advance

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	9½"
2°	4°	10½"
4°	8°	11½"
6°	12°	12½"
8.5°	17°	14"

**Distributor Removal:** On right side of engine. Disconnect vacuum line, take out hold-down screw in advance arm. Lift off.

## IGNITION TIMING

**Std. Setting.** ..... **At Top Dead Center**  
NOTE—Modify this setting for special fuel and altitude conditions. See Fuel Compensator Setting.

**Flywheel Mark**—"UDC-1-8/" (#1 and #8 piston top dead center position) with 4 short marks (1/4" apart) ahead of this mark. Visible in opening behind starter.

**Timing**—With #1 piston at firing position and long line of "UDC-1-8/" flywheel mark aligned with lower edge of opening in rear engine support plate behind starter, loosen hold-down screw in Fuel Compensator. Rotate distributor until contacts begin to open, tighten hold-down screw. Check spark plug connections (see diagram), see that rotor at #1 segment in cap. Check Fuel Compensator setting.

**Timing (with Neon Timing Light)**—Mark long line of "UDC-1-8/" flywheel mark with white paint, connect timing light to #1 spark plug. Idle engine below 600 RPM, adjust distributor (as directed above) until mark lines up with lower edge of opening behind starter.

**Fuel Compensator Setting**—Set for slight ping at 15 MPH. when accelerating from 10 MPH. with wide open throttle. To adjust, loosen hold-down screw, rotate distributor counter-clockwise (if ping too severe), clockwise (if no ping). **Final setting must not be more than 1" (4th short line) ahead of "UDC-1-8/" flywheel mark.**

## CARBURETOR

**Carter WDO, No. 648S, 1 1/4" dual barrel downdraft type with Carter Climatic Control.**

**Casting No. on Flange**—542.

*See Carburetor Section for complete data.*

**Settings (Idle Setting, Float Level, and Accelerating Pump:** *See Tune-Up data.*

**Metering Rods & Jets**—*See Carter Jet Table in Carburetor Section.*

**Fast Idle:** Carter Dual (WDO) Carburetor type.

*See Carburetion Equipment Section for complete data.*

**Setting**—.054" throttle opening with choke valve closed. Adjust by turning fast idle screw on high step of cam.

**Automatic Choke:** Carter Climatic Control (Dual Carbs.).

*See Carburetion Equipment Section for complete data.*

**Setting**—Coil housing centered (at index).

## CARB. EQUIPMENT

**Fuel Pump (std.):** AC Type AH No. 1539109.

**Optl. (Fuel-& Vacuum)**—AC Type AJ No. 1539108.

**Replacement Pump**—No. 584 (for AH), 583 (AJ).

**Pressure**—3 1/2-4 1/2 lbs.

**RHD NOTE**—AC No. 1539255 (std.), No. 1539254 (comb. fuel-&-vacuum). Repl. No. 9255 (std.), 9254 (comb.).

*See Carburetion Equipment Section for complete data.*

**Gasoline Gauge:** King-Seeley Electric.

**Dash Unit**—K-S No. 42120 (483), 42135 (484).

**Tank Unit**—K-S No. 41765.

*See Carburetion Equipment Section for complete data.*

**Air Cleaner (std.—oil wetted):** AC #1544265 (element Type #5), Hudson No. 301136 (301261 for Drive-Mstr.).

**Optl. (oil bath)**—AC #1544266 (element #1542245), Hudson No. 300824 (301384 for Drive-Master).

**Servicing (oil-wetted type)**—Clean and re-oil filter element (use same grade engine oil used in crankcase) at 2000 mile intervals or more often if required by operating conditions.

**Servicing (oil-bath type)**—Service same as oil-wetted type except that filter element not oiled and 1 pint engine oil used in cleaner body.

## BATTERY

**National Type S17-2HF, 6 Volt, 17 Plate, 120 Ampere Hour Capacity (20 hour rate).**

**Zero Capacity**—300 amperes for 4.3 minutes. Five second voltage—4.35 volts.

**Grounded Terminal**—Positive (+) to frame and engine by a single strap.

**Dimensions**—Lgth. 10 9/16". W. 7 1/8". H. 9 1/16".

**Location**—On left side under engine hood.

## STARTER

**Auto-Lite Model MCL-6006, Armature MCH-2023.**

**Drive**—Bendix No. A-1806. Inboard Barrel type.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—42-53 ozs. (new brushes).

**Cranking Engine**—Approx. 160 amperes at 150 RPM.

### Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5500	5.5	65
8.0 "	Lock	2.0	410

**Removal:** On left front face of rear motor support. To remove, take out flange mounting bolts.

**Starting Switch:** Auto-Lite Magnetic type SS-4001 on starter with pushbutton (Hudson No. 300646) on instrument panel. Operative only with ignition "on" (and clutch disengaged on cars with Vacuumotive Drive or Drive-Master).

*See Electrical Equipment Section for complete data.*

## GENERATOR

**Auto-Lite Model GEC-4801A, Armature GDZ-2006F.** Third brush control with voltage regulation.

**Maximum Charging Rate**—44 amperes (Cold), 37 amperes (Hot), at approx. 35 MPH. Ground "F" terminal when checking generator output.

**Charging Rate Adjustment**—*See Regulator data.* Third brush setting 1 commutator bar minimum, 1 commutator bar plus 1 mica strip maximum, from nearest (insulated) main brush. Adjust 3rd brush.

Cold Performance Data				Hot			
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.	Amperes	Volts
0	6.4	960	0	6.4	1040		
4	6.55	1060	4	6.6	1140		
8	6.7	1160	8	6.8	1280		
12	6.85	1280	12	6.95	1440		
16	7.0	1400	16	7.15	1600		
20	7.15	1550	20	7.35	1820		
24	7.25	1700	24	7.55	2090		
28	7.5	1890	28	7.75	2440		
32	7.65	2100	32	7.9	3000		
36	7.8	2375	34	8.0	3800		
41	8.0	3350					

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—53 ozs. max. (new brushes).

**Field Current**—1.60-1.78 amperes at 6.0 volts.

**Motoring Current**—4.85-5.4 amps. at 6.0 volts.

**Removal:** Pivot mounted at left front of engine. To remove, take out pivot and clamp screws and nuts.

**Belt Adjustment:** 3/4" belt deflection between generator and pump pulleys. Loosen bolts, swing generator out.

## REGULATOR

**Auto-Lite Model VRR-4001A, Voltage type.**

**NOTE**—Cutout Relay has extra set of contacts for Generator "Teleflash" Indicator control.

*See Electrical Equipment Section for complete data.*

**NOTE**—Regulator cover sealed. Warranty void if seals broken.

### Cutout Relay

**Cuts In**—6.4-6.6 volts.

**Cuts Out**—4.2-4.8 volts (approx. 4-6 amps. disch.).

**Contact Gap**—.015" min., ground contacts closed (ground contacts open when main contacts closed).

**Air Gap**—.013-.034" at hinge end of core with contacts open (ground contacts closed).

### Voltage Regulator

**Voltage Setting**—7.1-7.4 volts at 70°F.

**Contact Gap**—.012" Min. (armature against stop).

**Air Gap**—.048-.052" with contacts just opening.

**Checking (without breaking seals) & Adjustment**—

*See Electrical Equipment Section for complete data.*

## LIGHTING

**Headlamps:** Hall "Sealed Beam" type.

*See Electrical Equipment Section for complete data.*

**Adjustment**—Aim upper beams straight ahead (hot spot centers 3" below lamp center height at 25 ft.).

**Beam Indicator**—Red pilot bulb at lower center of speedometer dial. Lights when Upper Beam "on".

**Direction Signal:** Optl. *See Electrical Equipment Section.*

**Direction Signal Indicator**—At left end of instrument panel. Flashes when Signal in use.

**Direction Signal Flasher**—Hudson No. 300877.

### Switches

**Lighting**—Hudson No. 300641 (with Circuit Breaker), No. 300642 (switch only).

**Beam Selector**—Hudson No. 300799.

**Instrument (Commodore)**—Hudson No. 160092.

**Door Switch**—Hudson No. 300796.

**Front Dome Light**—Hudson No. 211312.

**Rear Quarter Pillar**—Hudson No. 160091.

**Stop Light**—Hudson No. 300356.

**Direction Signal**—Hudson No. 300875 (with wires).

### Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps	Sealed Beam	4030
Parking (no Dir. Signal)	3	63
Parking & Dir. Signal	21-3	1154
Rear Direction Signal	21	1129
Stop & Tail	21-3	1154
Rear License	3	63
All Instrument Lights	1 1/2	55
Dir. Sig. Indicator	1	51
Front Dome & Courtesy	15	87
Rear Qtr. Dome (Cmdre.)	6	81
Bonnet (Hood) Light	1 1/2	55

## MISC. ELECTRICAL

**CIRCUIT BREAKERS:** Vibrating thermostatic types. **Lighting**—Hudson No. 300643. 30 ampere. On lighting switch.

**Misc. Lighting**—Hudson No. 301853. 20 ampere. On steering support bracket behind instrument panel.

**Convertible Top & Hydraulic Window Regulators**—Hudson No. 300626. 30 ampere. On steering support bracket behind instrument panel.

**FUSES:** Electric Clock—3 ampere. Behind clock.

**Direction Signal**—10 ampere. On Direction Signal Harness behind instrument panel.

**Drive-Master**—10 ampere. On Drive-Master Switch.

**Weather Control**—14 ampere. On heater.

**Radio**—14 ampere. In lead wire to radio.

**CONTINUED ON NEXT PAGE**

## CONTINUED FROM PRECEDING PAGE

**GENERATOR CHARGE SIGNAL:** Red indicator on instrument panel (to right of temperature gauge). Should light when ignition turned on and should go out when generator begins to charge.  
See *Electrical Equipment Section for complete data.*

**OIL PRESSURE SIGNAL:** Red indicator on instrument panel (to left of gas gauge). Should light with ignition on, go out as soon as engine started.  
See *Electrical Equipment Section for complete data.*

**HORNS:** Sparton. Dual horns operated by relay.  
Air Gap—.026-.030" for high pitch (short horn), .032-.035" low pitch (long horn).

**Horn Relay:** Hudson No. 164401. On engine dash.

Contacts Close—3 volts min., 4 volts max.

Open—2 volts min. (relay upright, terminals down).

## ENGINE

**ENGINE SPECIFICATIONS:** Own Make. 8 cylinder, "L" head type.

Bore—3". Stroke—4½".

Displacement—254 cubic inches. Rated HP—28.8.

Developed Horsepower—128 at 4200 RPM.

Compression Ratio (std.)—6.50-1 cast-iron head.

Compression Ratio (optl.)—7.00-1 aluminum head.

Compression & Vacuum Reading—See *Tune-Up.*

**ORIGINAL BORE & PISTONS:** See *Hudson Shop Notes.*

**ORIGINAL BEARING SIZES:** See *Hudson Shop Notes.*

**TIGHTENING TORQUES:** See *Hudson Shop Notes.*

**CYLINDER HEAD DIAGRAM:** See *Hudson Shop Notes.*

**OIL PAN REMOVAL:** See *Hudson Shop Notes.*

**PISTONS:** Aluminum alloy, Cam ground, T-slot type.

Weight—10¼ ozs. (stripped). Length—3 3/16".

Removal—Pistons and rods removed from above or below.

Clearance—.0005-.001" Skirt. See *Fitting New Pistons.*

**Replacement Pistons:** See *Hudson Shop Notes.*

**Fitting New Pistons:** Use .0015" feeler ½" wide inserted between piston and cylinder wall on side opposite slot at right angles to pin. Pull to withdraw feeler must be within 3-4 lbs. Use Tool J-888-A Piston Feeler Scale to measure pull.

**Installing Pistons:** Slot away from camshaft.

**PISTON RINGS:** Two compression, two oil rings (one above pin, one below pin) per piston. Rings are square end type. Rings pinned to prevent rotation. Rings cut and notched to fit pin (clearance on pin equal to ring end gap).

Ring	Width	End Gap	Side Clearance
Compression	3/32"	.004-.009"	.001"
Oil (upper)	3/16"	.004-.009"	.001"
Oil (lower)	5/32"	.004-.009"	.001"

**Replacement Rings:** See *Hudson Shop Notes.*

**PISTON PIN:** Diameter—¾". Length—2 7/16". Floating type with diamond-drilled pin holes in piston and bronze bushing (with oil grooves at sides) in connecting rod. Lock ring used at each end of pin.  
Pin Fit in Piston—.0000-.0003" at 70°F.

Pin Fit in Rod Bushing—Hand push fit at 70°F.

**Piston Pin Replacement:** See *Hudson Shop Notes.*

Pin Sizes—Std., .002", .005", .010" oversize.

**CONNECTING ROD:** Length—8 3/16".

Weight—31.36 ozs. (with bearings).

Lower Bearing Diameter—1 15/16".

For *Original Connecting Rod Bearing Sizes*, see "Crankshaft Size Code Note" in *Hudson Shop Notes.*

Lower Bearing—Babbitt-lined, spun type.

Clearance—.0003-.0007". Sideplay—.007-.013".

**Bearing Adjustment:** None (no shims). Install re-

placement rods furnished on exchange basis. Do not file rods or caps. Palnuts used on bolt nuts.

**Palnut Installation:** See *Hudson Shop Notes.*

**Replacement Rods:** Std. size and .010" undersize.

**Installing Rods:** Offset. Install rods with widest half of bearing toward rear (#1, 3, 5, 7), toward front (#2, 4, 6, 8). Oil scoop on all rods toward camshaft.

**CRANKSHAFT:** Five bearing type with integral counterweights and vibration dampener on forward end.

► **CAUTION—Crankshaft not interchangeable with earlier 8 cylinder shaft. 1948 shaft longer at rear end between oil slinger and flywheel flange.**

**Bearing Diameters:** #1, 2 9/32"; #2, 2 5/16"; #3, 2 11/32"; #4, 2 3/8"; #5, 2 13/32".

For *Original Main Bearing Sizes*, see "Crankshaft Size Code Note" in *Hudson Shop Notes.*

**Bearings:** Bronze backed, babbitt lined type. Bearings secured in cap and crankcase by brass screws. Clearance—.001".

**Bearing Adjustment:** None (no shims). Replace bearings. Do not file bearing caps.

► **CAUTION—Replacement of main bearings requires removal of crankshaft. Bearing shells retained by brass screws.**

**Palnut Installation:** See *Hudson Shop Notes.*

**Replacement Bearings:** Reamed bearings furnished standard size and .010" Undersize. Unfinished bearings also supplied. For *Line-Reaming of Unfinished Replacement Bearings*, see "Crankshaft & Main Bearings" in *Hudson Shop Notes.*

**End Thrust:** Taken by center (#3) bearing. Replace bearing if endplay excessive.

Endplay—.006-.012".

**CAMSHAFT:** Five bearing type. Helical gear drive.

**Bearing Diameters:** #1, 2 1/32"; #2, 2"; #3, 1 31/32"; #4, 1 15/16"; #5, 1 1/2".

**Bearings:** Steel-backed, babbitt-lined bushings.

Clearance—.001-.002".

**End Thrust:** Bakelite thrust washer between gear and crankcase. Spring loaded button in front end of camshaft bears against hardened plate on gear cover.

**Timing Gears:** Crankshaft gear Cast-iron, camshaft gear Aluminum. Teeth have 20° pressure angle and are slightly crowned for quiet operation.

**Identification of Gears:** Figure "20" on front face of gears (crankshaft gear also marked "FRONT").

**Replacement Gear Caution:** Camshaft gear not furnished singly (set only). Crankshaft gear furnished singly or in matched set.

Backlash—.002-.004".

**Camshaft Setting:** Mesh marked crankshaft gear tooth between two marked teeth on camshaft gear.

VALVES:	Head Diameter	Stem Diameter	Length
Intake	1½"	11/32"	5 3/32"
Exhaust	1⅞"	11/32"	5 3/32"

	Seat Angle	Lift	Stem Clearance
Intake	45°	11/32"	.0015-.003"
Exhaust	45°	11/32"	.003-.005"

**Valve Guides:** Removable type pressed in block.

**Guide Removal & Installation:** Use Tool J-1188 to drive guides out. Install guides with Tool J-883-A with top of guide 15/16" below top of cylinder block. With guides installed, ream guides with Tool J-129-2 to .3437" (11/32") which will provide proper valve stem-to-guide clearance. NOTE—Car manufacturer recommends that guides be cleaned with Tool KMO-122 to remove carbon and scale out of guides (pay particular attention to carbon in counterbore at top of exhaust guide).

**Valve Springs:** Cadmium plated springs are used.

Use tool J-587-A to install valve spring and seat assembly. Spring Free Length—2 17/64".

	Spring Pressure	Spring Length
Valve Closed	40 lbs.	2"
Valve Open	80 lbs.	1 21/32"

NOTE—When springs removed, test for pressure (Tool U-15). Replace if pressure below 34 lbs. at 2"

**Valve Lifters:** Roller shoe type, fitted in removable guides in cylinder block.

**Valve Lifter Removal:** See *Hudson Shop Notes.*

## VALVE TIMING

**Tappet Clearance:** .006" Intake, .008" Exh. Hot.

NOTE—Remove apron in right front fender for access to valve compartment.

**Valve Timing:**—See *Camshaft Setting* above.

**Intake Valves:** Open 10°40' BTDC. Close 60° ALDC.

**Exhaust Valves:** Open 50° BLDC. Close 18°44' ATDC.

Above figures correct with .010" tappet clearance.

**Valve Timing Check:** With .010" tappet clearance #1 intake valve should open with piston 10°40' or .0494" BTDC when a point on the flywheel approximately 3.97 teeth before 'UDC.1-8/' mark lines up with indicator in inspection hole above starter. Reset tappet clearance at .006" hot and idling.

## LUBRICATION

**Engine Oiling System:** Duo-flow (pressure and positive splash) system. Pump delivers oil to front and rear ends of upper tray in oil reservoir. Connecting rod bearings are lubricated by dipper on caps which dip into troughs in this upper tray and also splash oil inside crankcase. Part of this oil is caught in channels inside crankcase and fed into reservoirs directly over each camshaft and crankshaft bearing from which it flows into the bearings.

**Crankcase Capacity:** 9 qts. (dry), 7 (refill).

**Oil Filling Note:** Whenever pan removed, install 2 qts. in upper tray before pan installed, then 7 qts. through oil filler after pan in place on engine.

**Oil Pan Removal:** See *Hudson Shop Notes.*

**Oil Filter:** Special Hudson type. Optl. equipment.

**Servicing:** Replace filter cartridge at 5000 mlie intervals.

**Normal Oil Pressure:** 4-12 lbs. with hot oil. No gauge used (see Oil Pressure Indicator below).

**Oil Check Valve:**—Located on right side of crankcase at rear. Opens at 4-12 lbs. with hot oil. Operates dash signal to indicate oil flow.

**Oil Pump:**—Oscillating plunger type, gear driven by camshaft. Mounted on right side of crankcase.

**Oil Pressure Indicator:**—Hudson Teleflash Oil Pressure Indicator. See *Electrical Equipment Section for complete data.*

**Checking Oiling System:**—See *Hudson Shop Notes.*

**Crankcase Ventilation:** Outlet pipe in rear valve compartment cover on right side of engine.

## COOLING

**Cooling System:** Positive circulation with pump on front of engine and by-pass type thermostat.

**Capacity:** 18 quarts.

**Water Pump:** Centrifugal, belt-driven, packless type. Shaft mounted on sealed duplex ball bearing.

See *Water Pump Section for complete data.*

**Belt Adjustment:**—See *Generator Belt Adjustment.*

**Thermostat:** Hudson No. 166272. By-pass type in water outlet on cylinder head.

**Setting:** Starts to open 150-155°F. Fully open 185°.

**Temperature Gauge:** King-Seeley Electric.

**Dash Unit—K-S No. 42125 (483), 42140 (484).**

**Engine Unit—K-S No. 41085.**

*See Miscellaneous Section for complete data.*

## CLUTCH

**Own Make.** Single plate, fluid cushioned type (cork insert type driven member operating in Hudsonite oil. 10" type used on all models.

*See Clutch Section for complete data.*

**Facings—Cork insert type.** Inside Diameter 6 $\frac{3}{8}$ ". Outside Diam. 10". 108 corks, .203" thick.

**Pedal Adjustment:** Clearance between underside of toeboard and top face of pedal shank must be 1 $\frac{1}{2}$ ". To adjust, loosen locknut above clevis, remove clevis pin, turn clevis in or out of link, tighten locknut after re-connecting clevis.

**Clutch Oil Servicing:** *See Hudson Shop Notes.*

**Removal:** Remove transmission (see Transmission Removal following). Drain clutch oil by turning engine over until plug on flywheel is accessible through timing inspection hole in rear engine support plate behind starter, remove plug, turn engine over  $\frac{1}{2}$  revolution until star on flywheel visible through timing hole (drain hole then at bottom), allow lubricant to be drained. Loosen mounting bolts in clutch cover rim to release spring tension, remove bolts and lift clutch assembly off car.

## VACUMOTIVE DRIVE

**Vacumotive Drive:** Automatic clutch control. Optl.

*See Clutch Section for complete data.*

## TRANSMISSION

**Own Make.** All helical gear type. Constant-mesh, synchro-mesh (Second & High), sliding gear (Low & Reverse) with remote (steering column) shift.

**Identification—Metal tag attached by a cover bolt screw carries second speed ratio 1.65:1 (std.), 1.82:1 (cars with Drive-Master).**

*See Transmission Section for complete data.*

**Transmission Control:** Handy-shift remote control type with shift lever mounted on steering column. *See Transmission Section for complete data.*

**Transmission Removal:** Remove front seat cushion, disconnect front seat from track, disconnect seat adjusting lever and remove seat back from car. Disconnect accelerator pedal at accelerator rod, brake pedal rod at lever. Remove floor mat, remove Weather Control blower unit (2 screws each side), disconnect bowden wire at control valve at cylinder head. Remove floor opening cover over transmission. Disconnect front universal joint at transmission (wire bearings on universal joint spider). Remove bolts attaching center bearing support bracket, move propeller shaft to rear to clear companion flange at transmission. Disconnect clutch pedal lever return spring, remove clutch cross-shaft and bracket, disconnect clutch control link clevis. Disconnect Handy Shift by removing shifter shaft outer lever, nut, and washer. Remove flywheel guard from bottom of clutch housing. Remove two engine rear mounting bolts and nuts, jack up rear end of engine about  $\frac{1}{2}$ " off frame cross-member (CAU-

TION—use block of wood on jack to prevent damage to oil pan). Disconnect speedometer cable at transmission case, plug hole with wood plug. Remove two top screws attaching clutch housing to engine, install guide studs (headless screws) in these holes to support transmission, remove remaining screws. Remove breather pipe bracket from clutch housing and bolt attaching breather pipe and rear valve cover. Pull transmission straight back on guide studs, lift transmission out through floor opening (NOTE—Hoist J-1502 can be used to lift transmission out).

## DRIVE-MASTER TRANSMISSION

**Drive-Master Transmission:** Optl. Conventional 3-speed transmission with automatic gear shifting between Second & High Gears. Used in conjunction with Vacumotive Drive (automatic clutch control). **Identification—Metal tag attached by a cover bolt screw carries second speed ratio 1.82:1.**

*See Transmission Section for complete data.*

## OVERDRIVE

**Warner Model AS1-R10D.** Optl. equip. used with the Hudson Transmission. Overdrive is solenoid operated type (no centrifugal pawls) with Governor control and throttle operated "kick-down".

*See Transmission Section for complete data.*

**Overdrive Solenoid—Hudson No. 301757.**

**Lock-Out Switch—Hudson No. 301755.**

**Throttle Switch—Hudson No. 164438.**

**Governor—Hudson No. 165829 (standard), Hudson No. 165831 (cars with Drive-Master).**

**Relay—Hudson No. 165826.** On left fender shield.

**Removal:** Same as standard transmission removal (above) except that overdrive control cable and wiring must also be disconnected.

## UNIVERSALS

**Spicer.** Needle bearing type. Three used with intermediate universal to rear of propeller shaft center bearing.

*See Universals Section for complete data.*

**Propeller Shaft & Center Bearing:** Two shafts used:

- 1) Front shaft supported by sealed ball-bearing just ahead of rear coupling flange (no slip joint).
- 2) Rear shaft with slip joint at forward end.

**Center Bearing—Prelubricated sealed annular ball bearing fitted in cast steel housing bolted to support mounting which is secured to underside of frame cross members. Housing cradle mounted on two rubber supports and forward end of support mounting fitted with rubber cushion.**

## REAR AXLE

**Own Make.** Semi-floating, hypoid gear type with Hotchkiss drive.

*See Rear Axle Section for complete data.*

**Ratio—Std. or Drive-Master Cars: 4.1-1 standard, 4 5/9-1 Optl. Overdrive Cars: 4 5/9-1 std., 4.1-1 Optl.**

**Backlash—.004-.006".** Screw adjustment.

**Removal:** Disconnect rear universal by taking out four nuts and lock plates on U-bolts, drop rear end of propeller shaft. Remove axle shafts (see instructions below). Remove bolt nuts on carrier flange, pull carrier assembly out of axle housing.

**Axle Shaft Removal:** Hoist rear of car. Remove rear wheels. Remove axle shaft nut and washer (use Tool J-351). Remove hub and drum assembly using screw type wheel puller (Tool J-736—CAUTION—Car manufacturer recommends that screw type puller be used, if knock-out type puller is used serious damage to differential parts may result). Remove 4 nuts on bearing cap bolts, push bolts out of backing plate, remove bearing caps and shims (without disturbing hand brake link). Take out rear wheel bearing and axle shaft, using puller Tool J-352. Do not drag axle shaft on oil seal assembly in housing.

**Wheel Bearing Adjustment:** Controlled by shims (.003", .005", or .015" thick) under bearing cap. To adjust, remove bearing cap (see directions above under Axle Shaft Removal), add or remove shims equally at both wheels (necessary to keep thrust spacer centered on differential pinion shaft). **Endplay—.001-.004".**

## SHOCK ABSORBERS

**Delco or Monroe.** Direct acting, hydraulic types. Hudson Nos. for cars with light control (std.) springs: Front 301240 (Delco), 300350 (Monroe). Rear 301241 (Delco), 300351 (Monroe).

*See Shock Absorber Section for complete data.*

## FRONT SUSPENSION

**Front Suspension:** Independent, linked parallelogram type with coil springs and lateral stabilizer.

*See Front Suspension Section for complete data.*

**Kingpin Inclination—3°36'** crosswise.

**Caster— $\frac{1}{2}$ -1 $\frac{1}{2}$ °.** Eccentric adjustment.

**Camber— $\frac{1}{2}$ -1 $\frac{1}{2}$ °.** Eccentric adjustment.

**Toe In—1 $\frac{32}{32}$ "  $\pm$  1 $\frac{32}{32}$ ".** Center steering arm on frame must be at center of car. To adjust, loosen clamps at ends of each tie rod and adjust tubes equally (to increase toe-in turn rods in direction of wheel travel, to decrease, turn in opposite direction). **Steering Geometry (Toe-out on Turns)—With Inner wheel turned 30°, Outer Wheel should be turned 25°.** No adjustment.

## STEERING GEAR

**Gemmer Model 335.** "3-tooth" Worm-and-Roller type with "push-pull" adjustments.

*See Steering Gear Section for complete data.*

## BRAKES

**Service:** Bendix Hydraulic, Duo-Servo, Single Anchor type without eccentric adjustment. Mechanical follow-up (pedal linked to hand brake cables) provided. Hand lever applies rear wheel service brakes. *See Brake Section for complete data.*

**Wheel Cylinders—Diameters:** Front wheel 1 $\frac{1}{8}$ ". Rear wheel 15/16".

**Drums—11"** centrifuse type.

**Lining—Moulded.** Width 2 $\frac{1}{4}$ " (front wheels), 1 $\frac{3}{4}$ " (rear wheels). Length 20.87" per wheel.

**Clearance—.010"** at both ends of brake shoe.

**Mechanical Follow-Up (Reserve):** Over-running linkage between brake pedal and parking (hand-brake) linkage which causes rear wheel brakes to be applied mechanically by pedal if hydraulic system not operating.

*See Brake Section for complete data.*

**Setting—1 $\frac{1}{4}$ "** clearance between clevis pin and rear end of slot in pedal rod rear clevis.

**Hand Brake:** See Service Brakes above.

## MODEL IDENTIFICATION

**Model** First Number  
 Aerodynamic Six 618G (1936) ..... G-5001  
 Six 822E (1938) ..... ES-35001 & E-50001  
 Senior Six 922E (1939) ..... E-72001  
 Skylark Model R (1939-40) ..... R-100501  
**SERIAL NUMBER:** Stamped on plate on right side of engine dash under hood. First Nos. listed above.  
**ENGINE NUMBER:**—First number same as Serial Number (above). Stamped on boss on left side of crankcase just ahead of distributor.

## TUNE-UP

**COMPRESSION:**—Ratio—5.75-1 Standard. 6.25-1 Optl. Pressure—141 lbs. at 3000 R.P.M. or 107 lbs. at 160 R.P.M. (cranking speed) for standard head, 110 lbs. at 350 R.P.M. for optl. 6.25-1 head.

**VACUUM READING:**—18-20" steady reading at idling speed.

**FIRING ORDER:** 1-5-3-6-2-4. See diagram.

**SPARK PLUGS:** Champion No. 7, 18 mm. Metric type. Gaps—.0275-.030"

**IGNITION:** See Coil, Condenser, and Distributor.

**Breaker Gap:**—Set at .020". Limits .018-.020".

**Cam Angle or Dwell:**—(IGC-4277) 40° closed, 20° open. (IGB-4319) 38° closed, 22° open (distr.). (IGW-4141) 35° closed, 25° open (distr.).

**Breaker Arm Spring Tension:**—17-20 ounces.

**Automatic Advance:**—7° max. at 1400 RPM (distr.).

**IGNITION TIMING:** See Ignition Timing.

**Std. Setting:**—7° BTDC. with ignition mark on flywheel (7° ahead of dead center mark "DC/1-6") at indicator on right front face of housing.

**CARBURETION:** See Carburetor & Carb. Equipment.

**Idle Setting:**—Idle adjusting screw  $\frac{3}{8}$ -1 turn open (333S),  $\frac{3}{4}$ -1 $\frac{1}{4}$  turn open (398S).

**Idle Speed:**—300 RPM.

**Float Level:**— $\frac{3}{8}$ " from gasket seat on cover to top of float at free end with valve seated.

**Accelerating Pump:**—Lower hole (medium stroke) Normal. Inner hole (Summer), Upper hole (Winter) for temperature extremes.

**Fuel Pump Pressure:**— $\frac{3}{2}$  lbs. maximum.

**MANIFOLD HEAT CONTROL:**—Thermostatic coil type. No adjustment required. Make certain that balance spring is correctly installed and that shaft turns freely.

**VALVES:** See Valve Timing.

**Tappet Clearance:**—.010" Int., .013" Exh. running clearance with engine warm.

**STARTING:** See Battery, Starter, Generator, Regulator.

## IGNITION

**IGNITION SWITCH:** Mitchellock. As follows:

1936—Model 24B, Type 6702. (1938-39) Model 24B, Type 7644. (1939-40) Model 24R Type 8182 or Delco-Remy No. 1116300. All models connected to coil by armored cable.

**Ignition Lock:**—Briggs & Stratton No. 50184 (Lock cylinder). Key Series—5 digits. Groove—#1.

**COIL:** Auto-Lite. (1936) Model IG-4619, (1938-39) Model IG-4651, (1939-40) Model IG-4659. Service Coil (less switch & cable) IG-3224JS (1936-39), IG-3224ES (1939-40).

**Ignition Current:**—2 amperes idling, 5 stopped.

**CONDENSER:** Auto-Lite Part No. IG-2671 (IGC-4277 & IGW-4141 Distr.), IGB-1025 (IGB-4319 Distr.).

**Capacity:**—20-.25 microfarad.

**DISTRIBUTOR:** Auto-Lite. (1936) IGB-4319, (1938-39) IGC-4277, (1939-40) IGW-4141. Single breaker, full automatic advance type with manual adjustment.

**Rotation:**—Counter-clockwise viewed from top.

**Distributor Settings:**—See Tune-up data.

### Automatic Advance

Automatic Advance		Engine	
Distributor	R.P.M.	Degrees	R.P.M.
Degrees Start	400	0	800
2	680	4	1360
4	975	8	1950
6	1265	12	2530
7	1400	14	2800

**Manual Adjustment:**—Provides means for slight changes in ignition timing at distributor (advance or retard from center '0' position on scale). See Ignition Timing for adjustment.

**Removal:**—Mounted on left side of crankcase. To remove, take out hold-down screw in advance arm.

## IGNITION TIMING

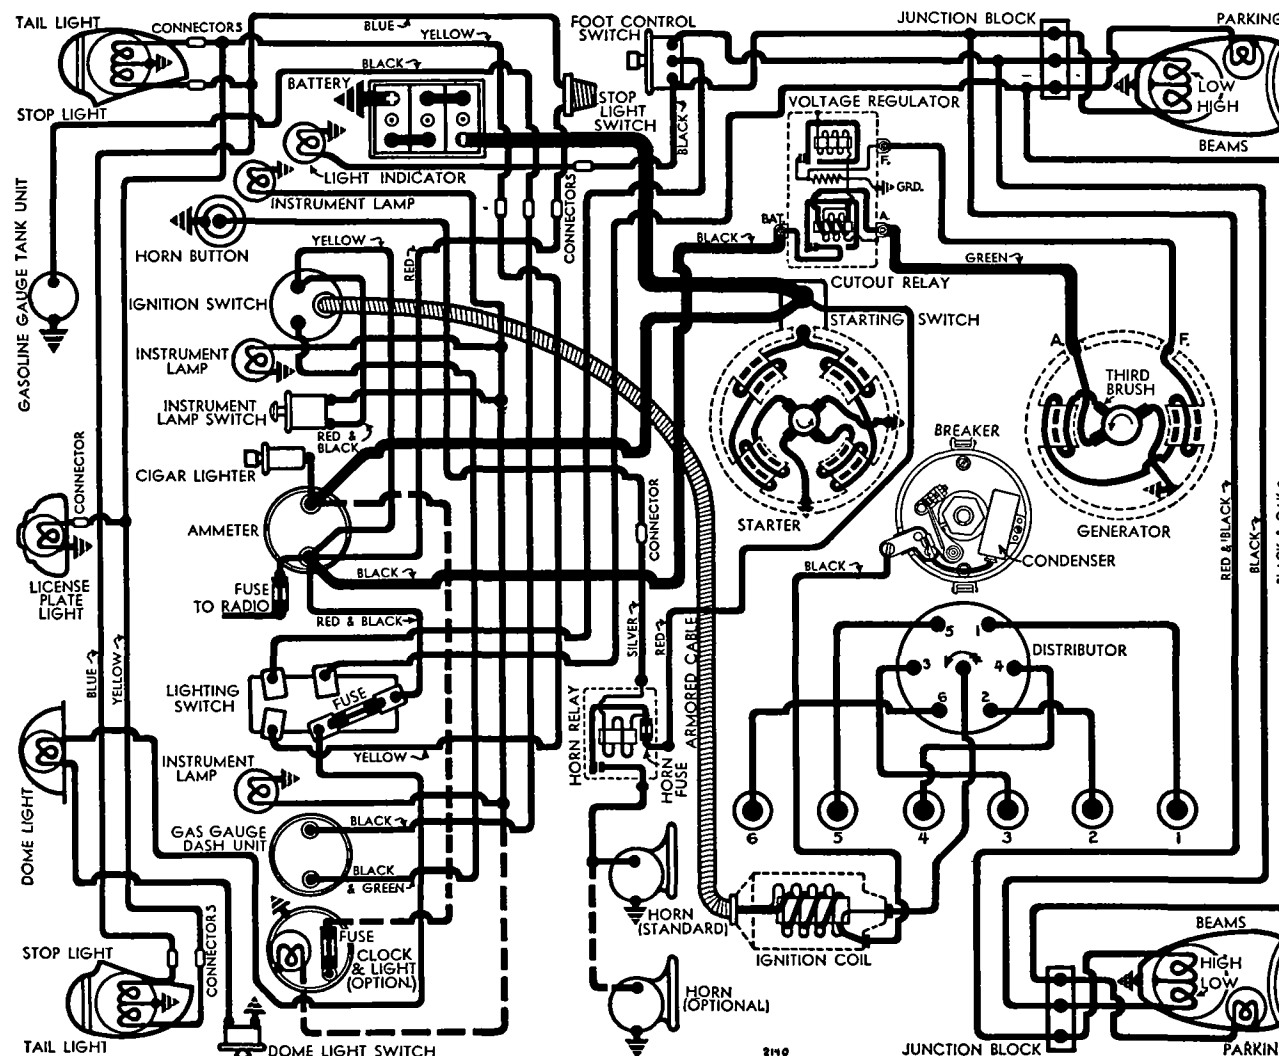

**IGNITION TIMING:**—Setting listed below correct for std. and HC. heads. See Manual Adjustment Setting (following) for final ignition setting.

### Flywheel Degrees Piston Position

All engines ..... 7° BTDC ..... .022" BTDC

**To Set Timing:**—With #1 piston on compression, turn engine over until piston is 7° or .022" before top dead center, stop when ignition mark on flywheel lines up with finished bosses on right hand front face of clutch housing (this mark located 7° before top dead center mark 'D-C/1-6'). Loosen hold-down screw in advance arm, center pointer on scale, tighten hold-down screw. Loosen advance arm clamp bolt, rotate distributor until contacts begin to open, tighten clamp bolt.

**Manual Adjustment Setting:**—Road test car with engine warm and using fuel regularly used. Note performance when accelerating car with wide open

## CONTINUED FROM PRECEDING PAGE

## Performance Data

Cold			Hot		
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	850	0	6.4	875
4	6.7	1000	4	6.8	1040
8	7.05	1165	8	7.2	1200
12	7.4	1320	12	7.55	1480
16	7.7	1550	16	7.9	1980
20	8.0	2250	17	8.0	2400

Rotation—Counter-clockwise at commutator end.  
Brush Spring Tension—18-22 ozs. each.  
Field Current—3.94-4.36 amperes at 6.0 volts.  
Field Fuse—5 ampere (under cover on top of generator frame).

Motoring Current—4.56-5.04 amperes at 6.0 volts.

Removal & Belt Adjustment: Same as 1938-40 model.

## GENERATOR

## 1938-40 MODELS

Auto-Lite Model GDF-4804-A. Armature No. GDF-2006. Third brush control in conjunction with external vibrating voltage regulator. Generator ventilated by fan on drive pulley.

Charging Rate Adjustment—Maximum charging rate controlled by third brush. Shift third brush counter-clockwise to increase or clockwise to decrease charging rate (brush held in position by friction. Maximum must not exceed figure given below which is equivalent to third brush position  $2\frac{1}{2}$  commutator bars away from insulated (nearest) main brush.

Maximum Charging Rate—31 amperes (cold), 28.3 (hot), 8.0 volts, 3200 R.P.M., 34 M.P.H. Actual charging rate controlled by voltage regulator and dependent on battery condition. To check charging rate, connect ammeter in charging line at 'BAT' terminal on regulator, connect voltmeter between 'BAT' terminal and ground, disconnect lead at 'F' terminal, ground generator 'F' terminal. Operate generator. Output must not exceed figure given above.

## Performance Data

Cold			Hot		
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	920	0	6.4	1000
4	6.6	1030	4	6.6	1140
8	6.8	1140	8	6.85	1280
12	7.0	1300	12	7.1	1440
16	7.25	1460	16	7.3	1640
20	7.45	1650	20	7.55	1840
24	7.65	1880	24	7.75	2220
28	7.9	2220	28.3	8.0	3200
32	8.0	3100			

Rotation—Counter-clockwise at commutator end.  
Brush Spring Tension—53 ozs. max. (new brushes).  
Field Current—1.90-2.10 amperes at 6.0 volts.  
Motoring Current—5.3-5.9 amperes at 6.0 volts.

Removal:—Generator pivot mounted at left front of engine. To remove, take out pivot and clamp bolts.  
Belt Adjustment:—Loosen pivot and clamp bolts, move generator out until all slack is taken up.

## CUTOUT RELAY

## WITH "GBK" GENERATOR

Auto-Lite Model CB-4023. Mounted on generator.  
For complete data, refer to Electrical Equipment Index.  
Cuts In—6.5-7.25 volts.  
Cuts Out—5-2.5 ampere discharge current.  
Contact Gap—.015-.045".  
Air Gap—.010-.030" with contacts closed.

## REGULATOR

## WITH "GDF" GENERATOR

Auto-Lite Model VRD-4009A r VRR-4005A. Cutout Relay and vibrating type Voltage Regulator in case on dash in engine compartment.

For complete data, refer to Electrical Equipment Index.

NOTE—Regulator cover is sealed. Serviced on exchange basis if seals unbroken. Cover must be removed to make adjustments.

## Cutout Relay

Cuts In—6.4-7.0 volts Cold, 870 RPM (gen.), 9.5 MPH.  
Cuts Out—5-3.0 amperes discharge (VRD), 6.0 amperes maximum discharge (VRR).

Contact Gap—.015" Minimum.

Air Gap—.034" Min., .038" Max. measured at hinge end of core with contacts open.

## Voltage Regulator

Setting—7.3-7.6 volts at 70°F.

To Check (Without Breaking Seal)—Connect ammeter in charging line at 'BAT' terminal on regulator, connect voltmeter between 'BAT' terminal and ground. Operate generator at speed equivalent to 30-35 MPH., charging fully charged battery until voltage is constant. Voltmeter reading should be 7.3-7.6 volts (cold—70°F), 7.4-7.6 volts (hot—140°F).  
To Adjust (with cover removed)—Change regulator armature spring tension slightly by bending lower spring hanger. Check setting as directed above. See Electrical Equipment Section for complete instructions.

Contact Gap—.010-.020" (VRD), .012" minimum (VRR) with armature against stop pin.

Air Gap—.0595-.0625" (VRD), .048-.052" (VRR) with contacts just opening.

## LIGHTING

LIGHTING:—Headlamps—Hall 'Depress Beam' type. Upper and lower beams controlled by selector switch on toeboard.

Headlamp Adjustment—With car on level floor 25' from screen and with upper beams lighted, aim each headlamp so that upper edge of bright spot is on horizontal line at lamp-center height, and centered on vertical line directly ahead of lamp center.  
Beam Indicator—Located at bottom of speedometer dial. Lighted whenever upper or driving beams lighted.

## Switches

Lighting—(1936) Cole-Hersee, (1938-39) R. B. M., (1939-40) Soreng-Manegold.

## Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps	32-21	2320
Parking, License	3	63
Instrument	$1\frac{1}{2}$	55
Clock, Beam Indicator	1	51
Stop & Tail	21-3	1158

## MISC. ELECTRICAL

FUSES:—Lighting—20 ampere. On back of lighting switch.

Horn—30 ampere. In plug on base of horn relay.

Clock—2 ampere. On back of clock.

Field Fuse (GBK Generator)—5 ampere.

HORNS:—Auto-Lite Horn Set Model HC-5105. Single horn std., Twin horns Optl. Vibrator type. Operated by horn relay. Current draw 12 amperes (each).

Single Horn—Auto-Lite Model HB-4001. Standard Horn Relay: Auto-Lite HR-4002 or HR-4101.

Contacts Close—2.5-3.5 volts.

Contact Gap—.026". Air Gap—.012" Min., .017" Max. with contacts closed.

## ENGINE

ENGINE SPECIFICATIONS:—Six cylinder, 'L' head type.

Bore— $3\frac{1}{2}$ ". Stroke— $4\frac{1}{4}$ ".

Displacement—245.3 cubic inches.

Rated Horsepower—29.4.

Developed Horsepower—101 at 3600 R.P.M.

Compression Ratio—5.75-1 Std. 6.25-1 Optl.

Compression & Vacuum Reading—See Tune-Up data.

PISTONS:—Bohn, aluminum alloy, Invar Strut. split skirt type. Length— $4\frac{3}{32}$ ".

Weight—21.7 ozs. without rings or pin.

Removal—Pistons and rods removed from above Clearance—See Fitting New Pistons.

Original Bore Sizes:—Mark opposite each bore indicate original bore size as follows:

## 1938-39 Models

1st Standard		2nd Standard	
Marking	Cyl. Size	Marking	Cyl. Size
.001" under.	'A'—3.4990"	'AA'—3.5190"	
.0005" under.	'B'—3.4995"	'BB'—3.5195"	
Standard	'C'—3.5000"	'CC'—3.5200"	
.0005" over.	'D'—3.5005"	'DD'—3.5205"	
.001" over.	'E'—3.5010"	'EE'—3.5210"	

## 1939-40 Skylark Model R

1st Standard		2nd Standard	
Marking	Cylinder Size	Marking	Cylinder Size
(A)	3.500"	(AA)	3.520"
(B)	3.5005"	(BB)	3.5205"
(C)	3.501"	(CC)	3.521"
(D)	3.5015"	(DD)	3.5215"
(E)	3.502"	(EE)	3.522"
(F)	3.5025"	(FF)	3.5225"

Replacement Pistons:—Finished pistons furnished standard (3.499") and .001", .002", .003", .005", .010", .020", .025", .032" oversize. Semi-finished in one size only (3.542").

Fitting New Pistons:—Use .002" feeler gauge inserted between piston and cylinder wall on side opposite slot. Pull required to remove feeler must be within 10-13 lbs. (1936-39), 13-15 lbs. (1939-40).

Installing Pistons:—Slot on left side (away from valves).

NOTE—Piston pin offset in piston toward right or camshaft side of engine.

PISTON RINGS:—Two compression, two oil control rings per piston, all above pin.

Ring Width End Gap Side Clearance

Comp.  $\frac{1}{8}$ " .007-.012" .0005"

Oil Cont.  $\frac{5}{32}$ " .007-.015" .0005"

Replacement Rings:—Furnished in standard and .005", .010", .020", .030" oversize.

PISTON PIN:—Diameter— $\frac{7}{16}$ ". Length— $2\frac{15}{16}$ ". Pin floats in piston and rod. Held by locking ring at each end. Pin hole in connecting rod bronze bushed. Pin Fit in Piston—.0005" clearance or hand push fit with piston heated to 212° F.

Pin Fit in Rod Bushing—.0005" clearance.

Replacement Pins:—Std. & .003", .008" oversize.

CONNECTING ROD:—Weight—35 ozs. Length— $8\frac{1}{4}$ ".

Crankpin Journal Diameter— $2\frac{1}{8}$ ".

Lower Bearing—Steel-backed, babbitt-lined type.

Clearance—.001-.0025". Sideplay—.005-.010".

Bearing Adjustment:—None (no shims). Replace bearings. Do not file rods or bearing caps.

Replacement Bearings:—Std. and .001" undersize.

Installing Rods:—Lower bearings offset. Install rods with narrow half of bearing toward nearest main bearing or pointing toward front of engine for #1, 3, 5 and toward rear for #2, 4, 6.

## ENGINE

CONTINUED FROM PRECEDING PAGE

**CRANKSHAFT:**—Four bearing. Integral counterweights.**Journal Diameters**—2.560" all bearings.**NOTE**—Journals "stepped" type on early 1936 cars.**Bearing Type**—Steel-backed, babbitt-lined.**Clearance**—.001-.003".**Bearing Adjustment:**—None (no shims). Replace bearings. Do not file bearing caps.**NOTE**—Bearings may be rotated out.**Replacement Bearings:**—Std. and .001" undersize.**End Thrust:**—Taken by #2 main bearing. Not adjustable (replace bearing). Endplay—.004-.008".**CAMSHAFT:**—4 bearing. Non-adjustable chain drive.**Journal Diameters:**—#1, 2.186"; #2, 2.076"; #3, 2.060"; #4, 1.498".**Bearing Type**—Leaded-bronze bushings.**Clearance**—.0015".**End Thrust**—Taken by thrust plate at rear of camshaft sprocket. Adjustable by adding or removing shims. Endplay—.004".**Timing Chain:**—Morse. Width 1". Pitch .500". Length 25½" or 51 links.**Camshaft Setting:**—Sprockets are marked. Mesh chain with sprockets turned so that marks are adjacent & in line with straightedge across shafts.

VALVES:	Head Diameter	Stem Diameter	Length
Intake	1 21/32"	.3405-.3415"	4 7/16"
Exhaust	1 17/32"	.3405-.3415"	4 7/16"
	Seat Angle	Lift	Stem Clearance
All Valves	45°	11/32"	.001-.0015"

**Valve Guides:**—Pressed in block from above. To remove guides, work from lifter opening and press guides out from below.

Valve Springs:	Damper installed on all springs at top.	Spring Pressure	Length
Valve Closed		40 lbs.	1 13/16"
Valve Open		100 lbs.	1 15/32"

**Valve Lifters:**—Mushroom type. Removable from below only. Guides must be removed first. Lifters furnished .002", .004" oversize. Lifters must be free fit in guide at room temperature.

## VALVE TIMING

**Tappet Clearance:**—.010" Intake, .013" Exhaust, running clearance with engine warm.**NOTE**—Tappet clearance for timing is .014" (Intake—opening side), .018" (Intake—closing side), .017" (Exhaust—opening side), .021" (Exhaust—closing).

**Valve Timing:**—See Camshaft Setting above.

**Intake Valves**—Open 2° BTDC. Close 51° ALDC.

**Exhaust Valves**—Open 44° BLDC. Close 3° ATDC.

**To Check Valve Timing**—Set tappet clearance #1 intake valve at .014", #1 exhaust valve at .021". With this clearance, intake valve will open and exhaust valve will close with piston at top dead center when flywheel mark 'D-C/1-6' lines up with finished bosses on right front face of clutch housing. Reset tappets for correct running clearance (see above).

## LUBRICATION

**LUBRICATION:**—Pressure system. Gear type oil pump located on right hand side of crankcase.**Oil Pump Installation:**—Whenever oil pump removed, turn engine over to firing position for #1 piston (see Ignition Timing), rotate oil pump shaft so that tongue-and-slot drive connection will mesh without disturbing distributor when pump replaced.**Normal Oil Pressure:**—3-5 lb. idling, 30 lb. @ 30 MPH.**Oil Pressure Regulator:**—Located on oil pump cover. Adjustable by turning screw which controls regulator valve spring tension (turn screw in to increase, or out to decrease pressure).**Crankcase Capacity**—6½ qts. (dry), 6 qts. (refill).

## COOLING

**COOLING SYSTEM:**—Capacity—18 quarts.**Water Pump:**—Belt-driven, adjustable packing type.*See Water Pump Section for complete data.***Removal**—Drain cooling system, remove fan belt, take out pump mounting bolts. Lift off pump.**Thermostat:**—Fulton. In water outlet on cyl. head.**Setting**—Opening temperature 145-160°F.

## CLUTCH

**Borg & Beck.** (1936) Model 10A6, (1938-39) 10A7, (1939-40) 9A6. Single plate, dry disc type.*See Clutch Section for complete data.***Facings** (10A6, 7)—Molded (flywhl), molded-woven type (pressure plate side), one of each required. 6⅞" Inside Diam., 9⅞" Outside Diam., ⅛" thick (fly-wheel side), .133" thick (pressure plate side).**Facings** (9A6)—Molded (flywhl. side), woven (pressure plate side). I. D. 6⅞", O. D. 9⅞", Thickness ⅛". **Adjustment**—Pedal free movement should be ¾-1". Adjustment provided on connecting link. Turn screw in or out for proper clearance.**Removal**—Remove transmission (see Transmission Removal below), take off clutch housing pan, punch mark clutch cover and flywheel (to insure replacing in same position to maintain balance), take out mounting screws in clutch cover flange turning all screws out evenly, remove clutch from below.

## TRANSMISSION

**TRANSMISSION:**—Warner Model T-86 Std. Special transmission with Superdrive (Overdrive) Optl. on 1938-39 models only.*See Transmission Section for complete data.***Transmission Control:**—Remote steering column type. Optl. (1938-39), Std. (1939-40 Skylark).*See Transmission Section for complete data.***Removal**—Disconnect clutch linkage and drive shaft at front universal joint. Install pilot studs in upper transmission mounting bolt holes, take out lower mounting bolts and pull transmission back.

## OVERDRIVE

1936-39 MODELS

**Warner Type R6.** Optl. with special "Superdrive" Transmission.*See Transmission Section for complete data.***Removal:** Same as for standard transmission (above) after overdrive control has been disconnected.

## UNIVERSALS

**UNIVERSAL JOINTS:**—Spicer Model 1281-1288. Needle bearing type, 2 used.*See Universals Section for complete data.*

## REAR AXLE

**Spicer** (Salisbury). Spiral Bevel (1936-39), Hypoid Gear (1939-40 Skylark), semi-floating type with Hotchkiss drive.*See Rear Axle Section for complete data.***Std. Ratio**—(1938-39) 4.545-1, (1939-40) 4.27-1.**Backlash**—.004-.007". Shim adjustment.**Removal:**—Disconnect hand brake cables, brake line, and drive shaft at rear universal joint. Remove wheels, take off spring clips at axle housing, remove axle from beneath car.**Axle Shaft Removal:**—Remove wheel, hub, drum and backing plate. Pull axle shaft & wheel bearing.**Wheel Bearing Adjustment**—Shims provided between flanged end of axle housing and brake backing plate. To adjust, remove wheel, hub and drum assembly. Remove shims to decrease endplay, add shims to increase. Endplay—.003-.006".

## SHOCK ABSORBERS

**Gabriel**, Hydraulic, double acting type (1938), direct acting type (1939 on).

1938—Model KT (front &amp; rear).

1939—Model B-6002 (front), B-7006 (rear).

1939-40 Skylark—B-7005 (front), B-7504 (rear).

*See Shock Absorber Section for complete data.*

## FRONT SUSPENSION

**Front Suspension:**—Conventional 'T' beam section front axle with Reverse-Elliott ends and semi-elliptic springs.**Kingpin Inclination**—7½° crosswise.**Caster**—1½° (1936-39), 2° (1939-40) plus or minus ½°. Adjust by installing wedge shims between spring and axle.**Camber**—1°. No adjustment provided.**Toe In**—1/16-3/16". Adjust in usual manner by loosening clamp bolts and turning tie rod.

## STEERING GEAR

(1936)—Ross Model S14. Cam-and-Lever type.

(1938-40)—Gemmer Model 305. Worm-and-roller type with "push-pull" adjustments.

*See Steering Gear Section for complete data.*

## BRAKES

**BRAKES:**—Service—Hupp-Lockheed hydraulic type. Hand lever applies rear service brakes.*See Brake Section for complete data.***Brake Drums**—Cast-iron. Diameter—10".**Lining**—Moulded type. Width 2". Thickness 3/16". Length 20⅞" per wheel.**Clearance**—.010" toe, .005" heel for each shoe.**Hand Brake:**—See service brakes above.

**ENGINE HOOD & SIDE PANEL REMOVAL:**—To raise hood, turn lock handle to left as far as possible, raise hood slightly, reach under front edge and release safety catch.

**Side Panels**—With hood up, move locking handle (at top center inside panel) toward front of car, disengage rear end of panel, slide panel out toward rear.

### MODEL IDENTIFICATION

Model	First Number
Aerodynamic Eight 621N (1936)	N-5001
Eight, 825H (1938)	H-25001
Eight, 925H (1939)	H-30001

**SERIAL NUMBER:** Stamped on plate on right side of dash under engine hood. First Nos. listed above.

**ENGINE NUMBER:**—First number same as Serial Number (above). Stamped on left side of crankcase.

### TUNE-UP

**COMPRESSION:**—Ratio—5.8-1 Std. No Optl. ratios.  
Pressure—113 lbs. at cranking speed of 160 R.P.M.

**VACUUM READING:**—18-20" steady reading at idling speed.

**FIRING ORDER:** 1-4-7-3-8-5-2-6. See diagram.

**SPARK PLUGS:** Champion No. 7. 18 mm. Metric type.

Gaps—.0275-.030"

**IGNITION:** See Coil, Condenser, and Distributor.

**Breaker Gap**—Set at .015". Limits .017" Max.

**Cam Angle or Dwell**—(IGT-4008) 27° Closed, 18° Open, (IGP-4003) 27.5° Closed, 17.5° Open. With .017" gap.

**Breaker Arm Spring Tension**—18-20 ounces.

**Automatic Advance**—6.5° max. at 1600 RPM (distr.).

**Vacuum Advance** (IGT-4008 Distr.)—8° max. (distr.) with 14" vacuum.

**IGNITION TIMING:** See Ignition Timing.

**Std. Setting**—7° BTDC. with straight line mark on flywheel (7° before dead center mark "1-8") at indicator in inspection hole in right front face of housing.

**CARBURETION:** See Carburetor & Carb. Equipment.

**Idle Setting**—Both idle screws ¼-1 turn open. Idle speed 350 RPM or 6 MPH.

**Float Level**—3/16" from top of float to gasket seat on cover with valve seated (invert to check).

**Accelerating Pump**—Not adjustable.

**Fuel Pump Pressure:** 4¼ lbs. maximum.

**VALVES:** See Valve Timing.

**Tappet Clearance:**—.006" Int., .013" Exh. (eng. warm).

**STARTING:** See Battery, Starter, Generator, Regulator.

### IGNITION

**IGNITION SWITCH:** Mitchellock. Model 24-B (1936) Type 6704, (1938-39) Type 7644. Connected to coil by armored cable.

**Ignition Lock**—Briggs & Stratton No. 50184 (Lock cylinder). Key Series—5 digits. Groove—#1.

**COIL:** Auto-Lite. (1936) Model CE-4611, (1938-39) Model CE-4630. Service Coil (less switch & cable) Auto-Lite CE-3224JS.

**Ignition Current**—2 amperes idling, 5 stopped.

**CONDENSER:** Auto-Lite Part No. IG-3927 (IGT-4008 Distr.), IG-2671 (IGP-4003 Distr.).  
Capacity—25-28 mfd. (IG-3927), .20-.25 mfd. (IG-2671).

**DISTRIBUTOR:** Auto-Lite. (1936) Model IGP-4003, (1938-39) IGT-4008. Single breaker, full automatic advance type with auxiliary vacuum spark control (IGT-4008 only) and manual adjustment. See Electrical Equipment Section for special Distributor Servicing data.

**Rotation**—Clockwise viewed from the top.

**Distributor Settings**—See Tune-Up data.

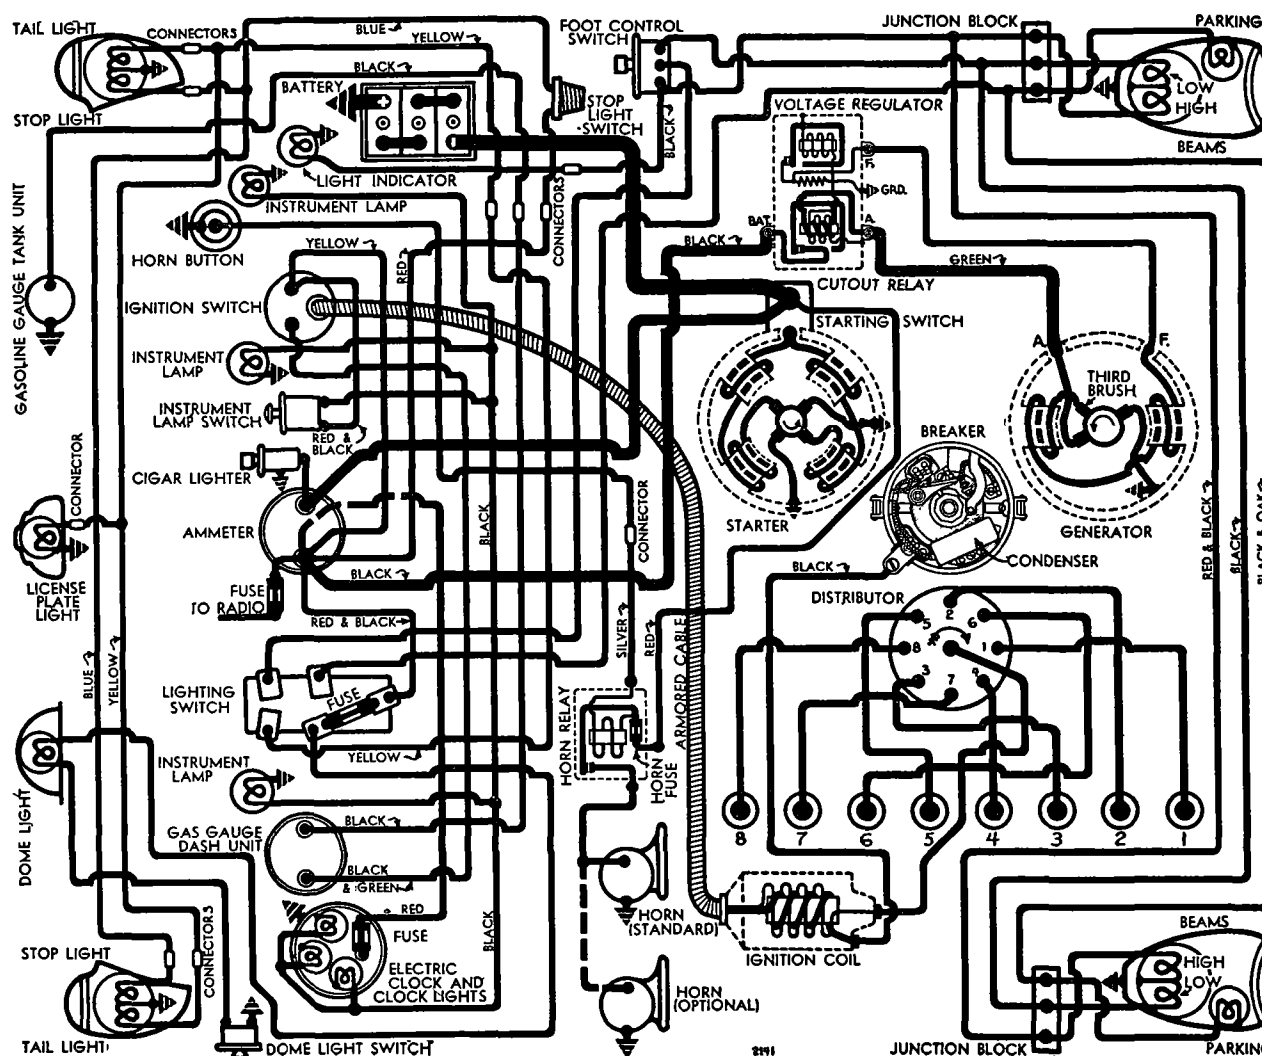

Automatic Advance			
Distributor	Engine	Distributor	Engine
Degrees	R.P.M.	Degrees	R.P.M.
Start	400	0	800
.6	500	1.2	1000
2	750	4	1500
4	1150	8	2300
6.5	1600	13	3200

**Vacuum Spark Control (IGT-4008)**—Mounted on distributor cup and linked directly to breaker plate. Provides additional advance except when engine accelerated or operated with wide open throttle when spark retarded by return spring within unit.

### Vacuum Advance

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	5"
2°	4°	7-7.5"
4°	8°	9.5"
6°	12°	11.5-12"
8°	16°	14"

**Removal:**—Distributor mounted on right hand side of cylinder head. To remove, disconnect vacuum line (IGT-4008 only), take out hold-down screw in advance arm.

**IGNITION TIMING**

**IGNITION TIMING:**— Flywheel Degrees Piston Pos.  
All Engines ..... 7° BTDC.....0221° BTDC.  
**To Set Timing**—With #1 piston on compression, turn engine over until piston is 7° or .0221° before top dead center, stop when straight line mark '1' on flywheel, which is 7° before top dead center mark '1'8', lines up with indicator in inspection hole in right front of flywheel housing. Loosen advance arm clamp bolt, rotate distributor until breaker contacts begin to open, tighten clamp bolt, check spark plug cable connections.

**CARBURETOR**

Carter Model WDO, (1936) Type 317S, (1938-39) Type 399S. 1" Dual downdraft type with Climatic Control and Fast Idle.

*For complete data, refer to Carburetor Index.*

**Idle Adjustment**—With engine warm and idling at hot or slow idle speed (Automatic Choke and Fast Idle inoperative), set throttle stop screw so that engine idles at 350 R.P.M., turn idle adjusting screw for each carburetor barrel (in succession) in until engine begins to hesitate or miss, then turn screw out slowly until engine fires smoothly. Readjust throttle stop screw for correct idle speed.

**Accelerating Pump Setting**—Not adjustable.

**Fast Idle:**—Integral with carburetor. See article on Carter Fast Idle in Carburetion Section.

*For complete data, refer to Carburetion Equip. Index.*

**Automatic Choke:**—Carter Climatic Control. See article in Carburetion for servicing directions.

*For complete data, refer to Carburetion Equip. Index.*

**CARB. EQUIPMENT**

**Air Cleaner:**—AC #1528757 heavy duty oil-bath type.

**Fuel Pump:**—AC. Type D #1523014. Diaphragm type.

*For complete data, refer to Carburetion Equip. Index.*

**Gasoline Gauge:** Stewart Electric type.

*For complete data, refer to Carburetion Equip. Index.*

**BATTERY****1936 MODELS**

**BATTERY:**—Willard, Type WH-2-15, RH-2-15 (Export). 6 volt, 15 plates, 119 ampere hours (20 hour rate).  
**Starting Capacity**—140 amperes for 20 minutes.  
**Zero Capacity**—300 amperes for 4.3 minutes.  
**Grounded Terminal**—Positive (+) terminal.  
**Location**—On left side under driver's seat.

**BATTERY****1938-39 MODELS**

**BATTERY:**—Willard, Type WHT-2-120. 6 volt, 17 plate, 120 ampere hour capacity (20 hour rate).  
**Starting Capacity**—152 amperes for 20 minutes.  
**Zero Capacity**—300 amperes for 4.9 minutes. Five Second Voltage—4.46 volts.  
**Grounded Terminal**—Positive (+) terminal.  
**Dimensions**—Width 7 1/16". Length 10 5/16". Height 8 13/16".  
**Location**—On left hand side under front seat.

**STARTER**

Auto-Lite (1936) MAB-4081, (1938-39) MAB-4095.

**Armature**—Auto-Lite No. MAB-2046.

**Drive**—Outboard Bendix Type RCD10FXD-9.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—42-53 ozs. (new brushes).

**Cranking Engine**—160 R.P.M., 100 amperes, 5.5 volts.

**Performance Data**

Torque	R.P.M.	Volts	Amperes
0 ft. lb. ....	3700 .....	5.5 .....	60
.6 " " .....	1910 .....	5.5 .....	100
3.4 " " .....	1100 .....	5.0 .....	200
6.6 " " .....	695 .....	4.5 .....	300
10.15 " " .....	420 .....	4.0 .....	400
15.8 " " .....	Lock .....	3.0 .....	582
22.5 " " .....	Lock .....	4.0 .....	775

Lock torque figures correct without Starting Switch.

**Removal:**—Starter sleeve mounted on right front face of flywheel housing. To remove, take out pilot mounting screw in flywheel housing above starter sleeve, remove starter and switch as an assembly.

**Starting Switch:**—Model SW-3737CS. Mounted on starter field frame and operated through flexible cable by pull-button on instrument panel. Pull to close switch contacts must not be less than 5 1/2 lbs. (measured at right angles to switch lever at hole in outer end).

**GENERATOR****1936 MODELS**

Auto-Lite Model GAR-4620-5. Armature No. GAR-2116-B (Export Car Equip.). Third brush control type in conjunction with non-vibrating Current Regulator (two-rate charge control). Ventilated by fan on drive pulley.

**Charging Rate Adjustment**—Use test meters to check generator output. Connect jumper between fuse cup on regulator and ground to cut out regulator action. Shift third brush counter-clockwise to increase, or clockwise to decrease output (brush held in position by friction). Remove jumper wire.  
**Maximum Charging Rate**—22 amperes (cold), 19 amperes (hot), 8.8 volts, 2200 R.P.M.

**Performance Data**

Cold (Regulator Inoperative) Hot			
Amperes	Volts	R.P.M.	Amperes
0 .....	6.4 .....	720 .....	0 .....
4 .....	6.8 .....	860 .....	4 .....
8 .....	7.25 .....	1000 .....	8 .....
12 .....	7.7 .....	1160 .....	12 .....
16 .....	8.1 .....	1360 .....	16 .....
20 .....	8.5 .....	1660 .....	19.2 .....
22.5 .....	8.8 .....	2200 .....	8.4 .....

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—50-60 ozs. (new brushes).

**Field Current**—3.51-3.89 amperes at 6.0 volts.

**Field Fuse**—5 ampere (in fuse cup on regulator).

**Motoring Current**—5.03-5.57 amperes at 6.0 volts (1/2 ampere additional if relay and regulator in circuit).

**Removal:**—Pivot mounted at left front of engine with fan belt drive. To remove, take out two pivot bolts and one clamp bolt.

**Belt Adjustment:**—Inspect at 1000-mile intervals. Adjust in usual manner by loosening pivot and clamp bolts and swinging generator away from engine to take up all slack in belt.

**GENERATOR****1938-39 MODELS**

Auto-Lite Model GDF-4804-A. Armature No. GDF-2066. Third brush control in conjunction with external vibrating voltage regulator. Generator ventilated by fan on drive pulley.

**Charging Rate Adjustment**—Maximum charging rate controlled by third brush. Shift third brush counter-clockwise to increase or clockwise to decrease charging rate (brush held in position by friction. Maximum must not exceed figure given below which is equivalent to third brush position 2 1/8 commutator bars away from insulated (nearest) main brush.

**Maximum Charging Rate**—31 amperes (cold), 28.3 (hot), 8.0 volts, 3200 R. P. M., 31.8 M.P.H. Actual charging rate controlled by voltage regulator and dependent on battery condition. To check charging rate, connect ammeter in charging line at 'BAT' terminal on regulator, connect voltmeter between 'BAT' terminal and ground, disconnect lead at 'F' terminal, ground generator 'F' terminal. Operate generator. Output must not exceed figure given above.

**Performance Data**

Cold			Hot		
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0 .....	6.4 .....	920 .....	0 .....	6.4 .....	1000 .....
4 .....	6.6 .....	1030 .....	4 .....	6.6 .....	1140 .....
8 .....	6.8 .....	1140 .....	8 .....	6.85 .....	1280 .....
12 .....	7.0 .....	1300 .....	12 .....	7.1 .....	1440 .....
16 .....	7.25 .....	1460 .....	16 .....	7.3 .....	1640 .....
20 .....	7.45 .....	1650 .....	20 .....	7.55 .....	1840 .....
24 .....	7.65 .....	1880 .....	24 .....	7.75 .....	2220 .....
28 .....	7.9 .....	2220 .....	28.3 .....	8.0 .....	3200 .....
32 .....	8.0 .....	3100 .....			

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—53 ozs. max. (new brushes).

**Field Current**—1.90-2.10 amperes at 6.0 volts.

**Motoring Current**—5.3-5.9 amperes at 6.0 volts.

**Removal:**—Generator pivot mounted at left front of engine. To remove, take out pivot and clamp bolts.

**Belt Adjustment:**—Loosen pivot and clamp bolts, swing generator out until all slack in belt taken up.

**REGULATOR****WITH "GAR" GENERATOR**

Auto-Lite Model TC-4302A. (Used with GAR-4620-5 Gen.). "Two Charge" Type. Consists of Cutout Relay and non-vibrating regulator in a single case.

*For complete data, refer to Electrical Equipment Index.*

**Cutout Relay**

**Cuts In**—6.5-7.25 volts (5 ampere max. charging current).

**Cuts Out**—5-2.5 ampere discharge current.

**Contact Gap**—.015-.045".

**Air Gap**—.010-.030" with contacts closed.

**Regulator**

**Contacts Open**—8.25-8.75 volts at 70°F.

**Contacts Close**—1.2-1.4 volts below opening point.

**Contact Gap**—.005" minimum.

**Air Gap**—.045" with contacts closed.

C NTINUED FROM PRECEDING PAGE

**REGULATOR****WITH "GDF" GENERATOR**

Auto-Lite Model VRD-4009A (With GDF-4804-A Std. Gen.). Cutout Relay and vibrating type Voltage Regulator in case on engine compartment dash.

For complete data, refer to *Electrical Equipment Index*.

NOTE—Regulator cover is sealed. Serviced on exchange basis if seals unbroken. Cover must be removed to make adjustments.

**Cutout Relay**

Cuts In—6.4-7.0 volts Cold, 9.5 M.P.H.

Cuts Out—.5 ampere min., 3.0 amperes max. (cold).

Contact Gap—.015" Minimum.

Air Gap—.034" Min., .038" Max. measured at hinge end of core with contacts open.

**Voltage Regulator**

Setting—7.3-7.6 volts at 70°F. (Regulator Serial No. 8R-000001 Up). See *Electrical Equipment Section* for settings and changes on units before this serial no.

To Check (Without Breaking Seal)—Connect ammeter in charging line at 'BAT' terminal on regulator, connect voltmeter between 'BAT' terminal and ground. Operate generator at speed equivalent to 30-35 M.P.H., charging fully charged battery until voltage is constant. Voltmeter reading should be within limits of 7.3-7.6 volts (cold—70°F), 7.1-7.4 volts (hot—140°F). See Regulator Setting above.

To Adjust (with cover removed)—Change regulator armature spring tension slightly by bending lower spring hanger. Check setting as directed above. See *Electrical Equipment Section* for complete instructions.

Contact Gap—.010" Min., .020" Max. with armature against stop pin.

Air Gap—.0595-.0625" with contacts just opening.

**LIGHTING**

**LIGHTING:**—Headlamps—Hall 'Depress Beam' type. Upper and lower beams controlled by selector switch on toeboard.

**Headlamp Adjustment:**—With car on level floor 25' from screen and with upper beams lighted, aim each headlamp so that upper edge of bright spot is on horizontal line at lamp-center height, and center bright spot on vertical line directly ahead of lamp center. Adjusting screws (accessible after removing headlamp door) located at each side of lens (for side motion), and at top (one screw for vertical motion).

**Beam Indicator:**—Located at bottom of speedometer dial. Lighted whenever upper or driving beams lighted.

**Switches**

Lighting—(1936) Clum Model 9526, (1938-39) R.B.M.

**Bulb Specifications**

Position	Candlepower	Mazda No.
Headlamps	32-21	2320
Parking, License	3	63
Instrument	1½	55
Clock, Beam Indicator	1	51
Stop & Tail	21-3	1158
Dome	6	81

**MISC. ELECTRICAL****1936 MODELS**

**FUSES:**—Lighting—15 amperes on fuse block behind instrument panel.

Stop Light—15 amperes on fuse block behind instrument panel.

Generator Field—5 amperes in knurled cup on regulator case.

**HORN:**—Sparton—Vibrator type. Horn current 15 amp.

**MISC. ELECTRICAL****1938-39 MODELS**

**FUSES:**—Lighting—20 ampere. On back of lighting switch.

Horn—30 ampere. In plug on base of horn relay.

Clock—2 ampere. On back of clock.

Radio—15 ampere. In power line plug.

Field Fuse—(Spec. Exp. Generator only)—5 ampere.

**HORNS:**—Auto-Lite Horn Set Model HC-5105. Single horn std., Twin horns Optl. Vibrator type. Operated by horn relay. Current draw 12 amperes (each).

Horn Relay Model HR-4002:—Contacts Close—3.0 volts Min., 4.0 volts Max. Contacts Open—1.5-2.0 volts.

Contact Gap—.026". Air Gap—.012" Min., .017" Max. with contacts closed.

**ENGINE**

**ENGINE SPECIFICATIONS:**—8 Cylinder, 'L' head type.

Bore—3 3/16". Stroke—4¾".

Displacement—303.2 cubic inches.

Rated Horsepower—32.51.

Developed Horsepower—120 at 3500 R.P.M.

Compression Ratio—5.8-1 Std. No Optl. heads.

Compression Pressure—142 lbs. at 2000 R.P.M. or 113 lbs. at cranking speed of 160 R.P.M.

Vacuum Reading—18-20" steady at idling speed.

**PISTONS:**—Bohn, aluminum alloy, Invar Strut, split skirt type. Length—3¾".

Weight—18.4 ozs. without rings or pin.

Removal—Pistons and rods removed from below.

Clearance—See Fitting New Pistons.

**Original Bore Sizes:**—Mark opposite each bore indicates original bore size as follows:

First Standard		Second Standard	
Marking	Cyl. Size	Marking	Cyl. Size
.001" under.	'A'.....3.1865"	'AA'.....	3.2065"
.0005" under.	'B'.....3.1870"	'BB'.....	3.2070"
Standard	'C'.....3.1875"	'CC'.....	3.2075"
.0005" over.	'D'.....3.1880"	'DD'.....	3.2080"
.001" over.	'E'.....3.1885"	'EE'.....	3.2085"

**Replacement Pistons:**—Finished pistons furnished standard (3.187"), and .001", .002", .003", .005", .010", .020", .022", .025", .032" oversize. Semi-finished pistons furnished in one size only (3.230").

**Fitting New Pistons:**—Use .002" feeler gauge inserted between piston and cylinder wall on side opposite slot. Pull required to remove feeler must be within 6-8 lbs.

**Installing Pistons:**—Slot to left (away from valves). NOTE—Piston pin offset in piston toward right or camshaft side of engine.

**PISTON RINGS:**—Two compression, two oil control rings per piston, all above pin. Both oil ring grooves drilled with oil drain holes.

Ring	Width	End Gap	Side Clearance
Comp.	⅛"	.007-.012"	.0005"
Oil Cont.	5/32"	.007-.015"	.0005"

**Replacement Rings:**—Furnished in standard and .005", .010", .020", .030" oversize.

**PISTON PIN:**—Diameter—⅞". Length—2 15/16". Pin floats in piston and rod. Held by locking ring at each end. Pin hole in connecting rod bronze bushed. Pin Fit in Piston—.0005" clearance or hand push fit with piston heated to 212°F.

Pin Fit in Rod Bushing—.0005" clearance.

**Replacement Pins:**—Std. & .003", .006" oversize.

**CONNECTING ROD:**—Weight 39.4 ozs. Length 9½".

Crankpin Journal Diameter—2¼".

Lower Bearing—Steel-backed, babbitt-lined type.

Clearance—.0008-.0026". Sideplay—.005-.010".

**Bearing Adjustment:**—None (no shims). Replace bearings. Do not file rods or bearing caps.

**Replacement Bearings:**—Std. and .001" undersize.

**Installing Rods:**—Lower bearings offset. Install rods with narrow half of bearing toward nearest main bearing or pointing toward front of engine for #1, 3, 5, 7 and toward rear for #2, 4, 6, 8.

**CRANKSHAFT:**—Five bearing. Integral counterweights.

Journal Diameters—2.665" all bearings.

Bearing Type—Steel-backed, babbitt-lined.

Clearance—.001-.003".

**Bearing Adjustment:**—None (no shims). Replace bearings. Do not file bearing caps.

NOTE—Bearings can be 'rotated' out without removing crankshaft.

**Replacement Bearings:**—Std. and .001" undersize.

**End Thrust:**—Taken by #3 main bearing. Not adjustable (replace bearing). Endplay—.004-.008".

**CAMSHAFT:**—Six bearing. Non-adjustable chain drive.

Journal Diameters—#1, 2.186"; #2, 2.166"; #3, 2.146"; #4, 2.126"; #5, 2.106"; #6, 1.622".

Bearing Type—Leaded-bronze bushings.

Clearance—.001".

**End Thrust:**—Taken by thrust plate at rear of camshaft sprocket. Adjustable by adding or removing shims. Endplay—.004".

**Timing Chain:**—Morse. Width 1¼". Pitch .375". Length 23¾" or 66 links.

**Camshaft Setting:**—Sprockets are marked. Turn crankshaft so that keyway is straight up, mesh chain so there are exactly 15 links (or 16 teeth inclusive of teeth meshed opposite marks) between marks on sprockets.

VALVES:	Head Diameter	Stem Diameter	Length
Intake	1 17/32"	3405-.3415	5½"
Exhaust	1 13/32"	3405-.3415	5½"
	Seat Angle	Lift	Stem Clearance
All Valves	45°	.325"	.0015" Max.

**ENGINE**

CONTINUED FROM PRECEDING PAGE

**Valve Guides:**—Pressed in block from above. To remove guides, work from lifter opening and press guides out from below.

**Valve Springs:**—Damper installed on all springs at top.

	Spring Pressure	Length
Valve Closed .....	40 lbs.....	1 13/16"
Valve Open .....	100 lbs.....	1 15/32"

**Valve Lifters:**—Mushroom type. Removable from below only. Guides must be removed first. Lifters furnished .002", .004" oversize.

**Lifter Clearance in Guide:**—Free fit in guide at room temperature (move through guide of own weight without oil when cold).

**VALVE TIMING**

**Tappet Clearance:**—.006" Int., .013" Exh. running clearance with engine warm.

**NOTE:**—Tappet cl. for timing .010" Int., .017" Exh.

**Valve Timing:**—See Camshaft Setting above.

**Intake Valves:**—Open 1° ATDC. Close 49° ALDC.

**Exhaust Valves:**—Open 45° BLDC. Close 3° ATDC.

**To Check Valve Timing:**—Set tappet clearance #1 intake valve at .010", #1 exhaust valve at .017". With this clearance, intake valve will open and exhaust valve close at top dead center when flywheel mark '1-8' lines up with indicator in inspection hole in right top face of flywheel housing. Reset tappet clearance at .006" Int., .013" Exh. with engine warm.

**LUBRICATION**

**LUBRICATION:**—Pressure type. Gear type oil pump located in crankcase (driven by vertical shaft).

**Oil Pump Installation:**—Whenever oil pump removed, turn engine over to firing position for #1 piston (see Ignition Timing), rotate oil pump shaft so that tongue-and-slot drive connection will mesh without disturbing distributor driveshaft.

**Normal Oil Pressure:**—3-5 lbs. idling, 30 lbs. at 30MPH.

**Oil Pressure Regulator:**—Operates at 35-45 lbs. Located on left side of crankcase at approximate center of engine. Adjustable by turning screw in (clockwise) to increase pressure, or out to decrease.

**Crankcase Capacity:**—8½ qts. (dry), 8 qts. (refill).

**COOLING**

**COOLING SYSTEM:**—Water Pump. Centrifugal, belt-driven, packless type.

*See Water Pump Section for complete data.*

**Thermostat:**—Bishop & Babcock. In water outlet.

**Setting:**—Opening temperature 145-160°F.

**Cooling System Capacity:**—21½ quarts.

**CLUTCH**

**CLUTCH:**—Long Model 10CF-CL. Semi-centrifugal, single plate, dry disc type.

*See Clutch Section for complete data.*

**Facings:**—Woven, spiral wound type, 2 required. Inside Diam. 6". Outside Diam. 10". Thickness .125".

**Adjustment:**—Pedal free movement should be 1¼-1½". Adjustment provided on connecting link. Turn screw in or out for proper clearance.

**Removal:**—Remove transmission (see Transmission Removal below), take off clutch housing pan, punchmark clutch cover and flywheel (to insure replacing in same position to maintain balance), take out mounting screws in clutch cover flange turning all screws out evenly, remove clutch from below through pan opening.

**TRANSMISSION**

**TRANSMISSION:**—Warner Model T-85. Superdrive (Overdrive) is standard equipment. Constant-mesh, synchro-mesh (second and high), sliding helical gear (low and reverse).

*See Transmission Section for complete data.*

**Transmission Control:**—Own steering column type remote control. Optl. on 1939 models.

*See Transmission Section for complete data.*

**Removal:**—Disconnect clutch linkage and drive shaft at front universal joint. Install pilot studs in upper transmission mounting bolt holes, take out lower mounting bolts and pull transmission back to free clutch shaft from driven disc.

**OVERDRIVE**

**Warner Type R1.** Separate type in case on rear of transmission.

*See Transmission Section for complete data.*

**UNIVERSALS**

**UNIVERSAL JOINTS:**—Detroit (Universal Products) Series 5150. Roller bearing 'cross' type. 2 used.

*See Universals Section for complete data.*

**REAR AXLE**

**REAR AXLE:**—Spicer. Hypoid Gear, semi-floating type with Hotchkiss drive.

*See Rear Axle Section for complete data.*

**Ratio:**—4.545-1 Std., 4.27-1 and 4.09-1 Optl.

**Backlash:**—.004-.007". Shim adjustment.

**Removal:**—Disconnect hand brake cables, brake line, and drive shaft at rear universal joint. Remove wheels, take off spring clips at axle housing, remove axle from beneath car.

**Axle Shaft Removal:**—Remove wheel, hub, drum and backing plate. Pull axle shaft and wheel bearing. **Wheel Bearing Adjustment:**—Shims provided between flanged end of axle housing and brake backing plate. To adjust, remove wheel, hub and drum assembly. Remove shims to decrease endplay, add shims to increase. Endplay—.003-.006".

**SHOCK ABSORBERS**

**SHOCK ABSORBERS:**—Gabriel Model OT (front), KT (rear). Double acting, hydraulic type with thermostatic control.

*See Shock Absorber Section for complete data.*

**FRONT SUSPENSION**

**Front Suspension:**—Conventional 'I' beam section front axle with Reverse-Elliott ends and semi-elliptic springs.

**Kingpin Inclination:**—8½° crosswise.

**Caster:**—1½°. Adjust by installing wedge shims between spring and spring seat on axle.

**Camber:**—1¼°. No adjustment provided.

**Toe In:**—1/16-3/16". Adjust in usual manner by loosening clamp bolts and turning tie rod.

**STEERING GEAR**

**Steering Gear:** Gemmer Model 300. Worm-and-Roller type.

*See Steering Gear Section for complete data.*

**BRAKES**

**BRAKES:**—Service—Hupp-Lockheed hydraulic type. Hand lever applies rear service brakes.

*See Brake Section for complete data.*

**Brake Drum:**—Cast-iron. Diameter—12".

**Lining:**—Moulded type. Width 2". Thickness 3/16". Length per wheel 24¾".

**Clearance:**—.010" toe, .005" heel for each shoe.

**Braking Power:**—55% Front, 45% Rear.

**Hand Brake:**—See Service Brakes above.

## MODEL IDENTIFICATION

**NOTE:** Army designation for this model is "¼ Ton 4x4 Truck." Built by Ford and Willys to same design under the following model designations which are stamped on name plate on right hand side of instrument panel:

**Ford.....GPW.      Willys.....MB.**

**SERIAL NUMBER:** Stamped on Name Plate on right hand side of instrument panel.

**ENGINE NUMBER:** Stamped on boss on right front upper corner of engine block near water pump.

## TUNE-UP

**COMPRESSION:** Pressure—110 lbs. at cranking speed of 185 RPM for Std. 6.48-1 Cast Iron Head.

**VACUUM READING:** Steady 21-23" Idling at 8 MPH.

**FIRING ORDER: 1-3-4-2.** See diagram.

**SPARK PLUGS:** Auto-Lite Type AN-7 or A-7. 14 mm. Gaps—.030".

**IGNITION:** See Coil, Condenser, and Distributor.  
Breaker Gap—.020". Cam Angle 47° closed (IGC-4705). 41° closed (IAD-4008).

**Automatic Advance**—Starts at 250 RPM. Maximum advance 11° at 1500 RPM (Distr. degrees & RPM).

**IGNITION TIMING:** See Ignition Timing.

**Std. Setting**—5° BTDC (72 Octane Fuel), At TDC (68 Octane Fuel) with flywheel mark "IGN" (5° BTDC setting), "TC" (TDC setting) at center of inspection hole in right front face of housing.

**CARBURETION:** See Carburetor & Carb. Equipment.  
**Idle Setting**—Idle screw 1-2 turns open (turn screw out for richer mixture). Idle speed 8 MPH.

**Float Level**— $\frac{3}{8}$ " from top of float at free end to machined surface (gasket seat) on bowl cover. Invert assembly to check. Do not compress spring in valve stem.

**Accelerating Pump**—No seasonal adjustment.

**Fuel Pump Pressure: 4½ lbs. maximum.**

**MANIFOLD HEAT CONTROL:** Automatic thermostatic type. No adjustment required. When installing assembly, see that thermostatic spring end rests on top of spring stop bracket on manifold.

**CAUTION**—Check valve for free operation when tuning up engine.

**CRANKCASE VENTILATOR:** Remove and clean Vacuum Control Valve on manifold. See *Crankcase Ventilator (following CARB. EQUIPMENT)* for data.

**VALVES:** See Valve Timing.

**Tappet Clearance—.014"** All Valves, Hot or Cold.  
NOTE—Adjusting screws are self-locking type (no locknuts).

**STARTING:** See Battery, Starter, Generator, Regulator.

## IGNITION

**IGNITION SWITCH:** Douglas Model 6282.

**COIL: Auto-Lite No. IG-4070L. Service Coil IG-4070NS, or No. IG-4070U. Service Coil IG-4070. Mounted on right side of engine block near distributor.**  
**Ignition Current—2.5 amperes idling, 5 stopped.**

**CONDENSER:** Auto-Lite Part No. IGW-3139.  
Capacity—.18-.26 microfarad.

**DISTRIBUTOR:** Auto-Lite Model IGC-4705 or IAD-4008. Single breaker, 4 lobe cam, full automatic advance type.  
Breaker Gap—.020". Limits .020-.024".

**Cam Angle (IGC-4705)—**47° (closed), 43° (open).  
**Cam Angle (IAD-4008)—**41° (closed), 49° (open).

**Breaker Arm Spring Tension—17-20 ozs.**

**Rotation**—Counter-clockwise viewed from

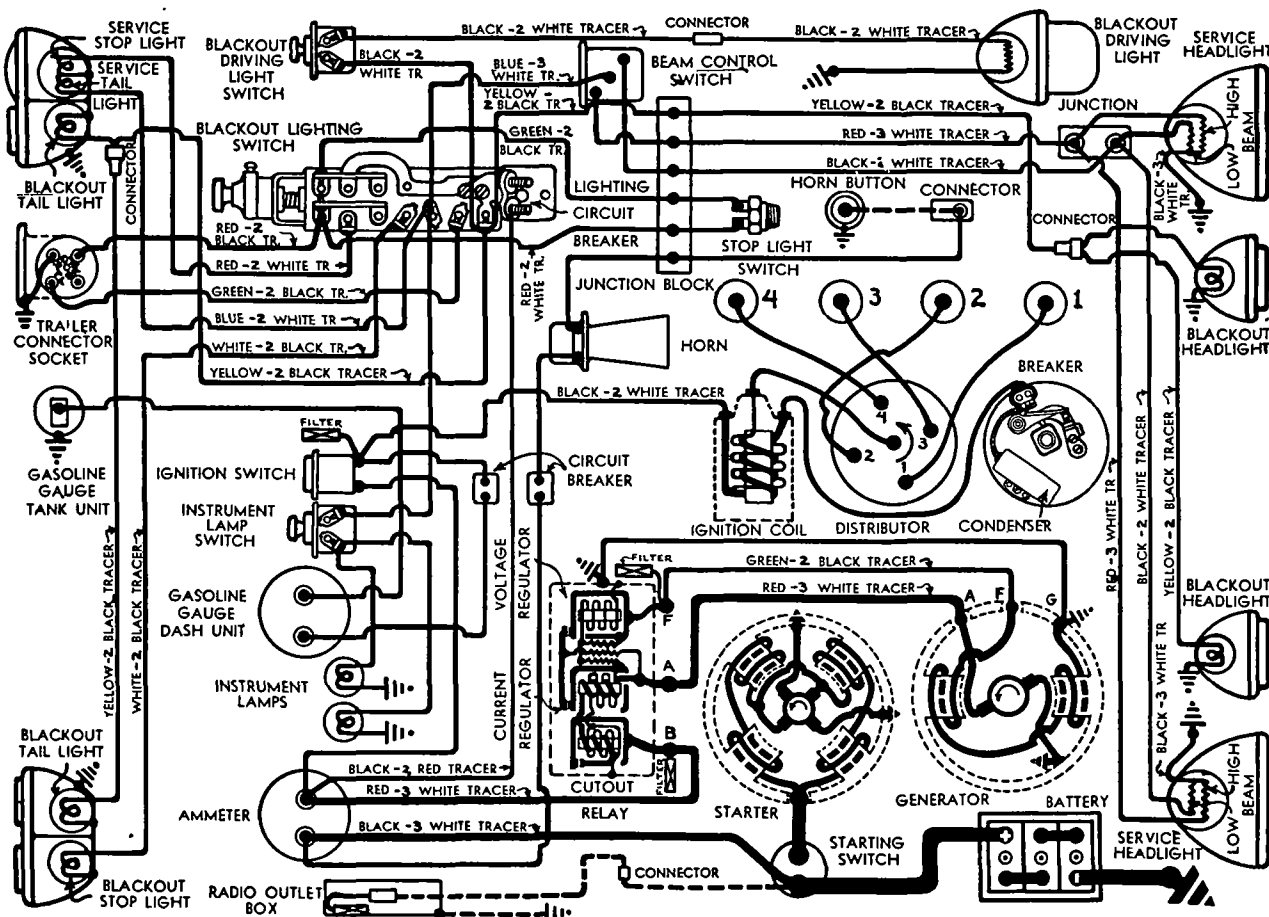

Antecedents: A Theory of

### Automatic Advance

Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start.....	250	0.....	500
3.....	580	6.....	1160
6.....	930	12.....	1860
9.....	1270	18.....	2540
11.....	1500	22.....	3000

**Distributor Removal:** Mounted on right hand side of engine. To remove, take out hold-down screw in advance arm.

**Installation Note**—If crankshaft has been turned with distributor off engine, install distributor as follows: Turn crankshaft to cylinder #1 firing position (see Timing), turn distributor rotor to #1 distributor cap segment position (see diagram), insert distributor drive shaft in drive housing on engine, rock shaft back and forth until drive lug on end of shaft enters slot in drive coupling, push distributor down into place and install hold-down screw. Check Ignition Timing.

wide open and fast idle inoperative), set throttle stopscrew for idling speed of 600 Engine RPM or 8 MPH. Turn idle adjusting screw out until engine begins to roll, then turn screw in until engine fires smoothly. Final setting of idle screw should be 1-2 turns open. Recheck idle speed.

**Accelerating Pump**—No seasonal adjustment.

**Float Level**— $\frac{3}{8}$ " from top of float at free end to machined surface (gasket seat) on cover with valve seated. To check, invert assembly and allow float to hang freely. Do not compress spring in valve stem.

**Metering Rods & Jets**—See *Carter Jet Table in Carburetor Section for complete data.*

**Fast Idle**: Choke valve interconnected with throttle valve to open throttle to fast idle position when choke in use. No adjustment required.

## CARB. EQUIPMENT

**Air Cleaner**: Oakes Model No. 613300. Oil-bath type.

**Capacity**— $1\frac{1}{4}$  pints SAE No. 20 or 30 (Summer), 10 (Winter) engine oil. Change oil at 2000 mile intervals; more often if required by operating conditions.

**Fuel Pump**: AC Type No. 1523096 or 1538312. Diaphragm type fuel pump. NOTE—Pump has hand lever on side of pump body for hand operation (priming).

**Pressure**— $1\frac{1}{2}$ - $2\frac{1}{2}$  lbs. ( $4\frac{1}{2}$  lbs. max. at 1800 RPM).

**Fuel Strainer**: Type T2, AC No. 1595848. Disc type mounted on right side of dash.

**Servicing**—Remove plug and drain bowl, remove bowl and filter element, clean element in solvent, wash out bowl, re-install (weekly).

**Gasoline Gauge**: Auto-Lite (Motometer) Electric type. Dash Unit—No. NG-10026D or No. NG-9799D.

**Tank Unit**—No. NG-9797T.

See *Carb. Equipment Section for complete data.*

## CRANKCASE VENTILATOR

**Sealed Positive Ventilation Type**. Consists of Air Intake Pipe from Air Cleaner to Crankcase Oil Filler (Oil Filler Cap has gasket and must seat tightly to prevent air leaks at this point) and Air Outlet Pipe from Valve Chamber Cover to Intake Manifold. There is a Vacuum Valve at the manifold connection and this valve must close at idling speed for satisfactory engine idling performance.

**Servicing**—Make certain that connecting pipes are tight and that oil filler cap gasket seals cap tightly. Remove and clean control valve when tuning engine or whenever system does not operate satisfactorily.

**Vacuum Control Valve**: Remove control valve by disconnecting pipe at valve chamber cover and unscrewing valve from manifold, clamp valve in use and remove top of housing, withdraw valve and spring. Clean valve and valve seat thoroughly. Reassemble and re-install unit.

## BATTERY

**Auto-Lite Type TS-2-15 or Willard Type SW-2-119** (Orig. Equip.), **Auto-Lite TG-2-15 or Willard MW-2-125** (Replacement). 6 volt, 15 plate, 118 Ampere Hour Capacity (Auto-Lite), 6 volt, 17 plate, 125 Ampere Hour Capacity (Willard) at 20 hour rate.

**Starting Capacity**—140 amperes (Auto-Lite), 160 amperes (Willard) for 20 minutes.

**Zero Capacity**—300 amperes for 4.0 min. (Auto-Lite), 5.3 min. (Willard). Five second voltage 4.15 volts (Auto-Lite), 4.4 volts (Willard).

**Grounded Terminal**—Negative (—) to frame.

**Engine Ground**—Strap connector at left front engine mounting bracket and additional ground strap between cylinder head (at rear) and dash.

**Location**—In engine compartment on right side.

## STARTER

**Auto-Lite Model MZ-4113. Armature No. MZ-2089.**

**Drive**—Special Bendix Drive No. A2233.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—42-53 ozs. (new brushes).

**Cranking Engine**—185 RPM, 150-175 amps., 5 volts.

### Performance Data

Torque	RPM	Volts	Amperes
0 ft. lbs.	4300	5.5	70
.65 "	2500	5.5	100
2.55 "	1325	5.0	200
4.95 "	750	4.5	300
7.65 "	220	4.0	400
7.8 "	Lock	3.0	420
11.7 "	Lock	4.0	560

**Removal**: Starter flange mounted on right front face of flywheel housing. To remove, take out two flange mounting capscrews and one bolt in bracket at commutator end.

**Starting Switch**: Auto-Lite Model SW-4001 or SW-4015. Mounted on toeboard and operated manually by switch button.

## GENERATOR

**Auto-Lite Model GEG-5001A, GEG-5002D or GEG-5101D. Armature No. GEG-2120F (GEG-5001A, 2D), GEG-2134F (5101D).** Two brush with external vibrating type voltage and current regulation.

► **CAUTION**—Internal wiring of this generator (and regulator) is not similar to other Auto-Lite units and these generators and regulators must always be used together.

**Maximum Charging Rate**—40 amperes, 8.0 volts, 1465 RPM. Actual charging rate controlled by regulator and dependent on battery condition.

**Charging Rate Adjustment**—None. See Regulator.

### Performance Data

Amperes	Volts	RPM
8	7.0	930
8	7.6	955
40	7.6	1460
40	8.0	1465

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—64-68 ozs. (new brushes).

**Field Current**—1.60-1.78 amperes at 6.0 volts.

**Motoring Current**—4.7-5.2 amperes at 6.0 volts.

**Belt Adjustment**: Make certain generator brace is locked (pull generator out until brace locks), loosen brace nut, move generator out until belt deflection midway between generator and fan pulleys is 1", tighten brace nut.

**NOTE**—Generator brace is designed to stop fan and generator rotation when desired. Lifting up on brace handle slackens off drive belt.

**Removal**: Special pivot mounting at right front of engine with fan belt drive. To remove, pull up on brace handle to slacken off drive belt, move generator toward engine, remove belt, take out generator brace bolt and two pivot bolts, lift generator out.

## REGULATOR

**Auto-Lite No. VRY-4203-A,B,E, or G. Voltage-Current Type**. Regulator case mounted on right side in engine compartment. Consists of Cutout Relay and vibrating type Voltage and Current Regulators.

► **CAUTION**—Internal wiring of this regulator (and generator) is not similar to other Auto-Lite units and these regulators and generators must always be used together.

### Cutout Relay

**Cuts In**—6.5-7.0 volts.

**Cuts Out**—5-6.0 ampere discharge current.

**Contact Gap**—.025" minimum.

**Air Gap**—.0595-.0625" with contacts open.

### Voltage Regulator

**Setting**—7.35 volts at 70° F.

**To Check**—Connect ammeter in charging line at regulator "B" terminal (use short heavy leads), connect voltmeter between "B" terminal and ground. Operate generator at speed equivalent to 30 MPH charging a fully charged battery until voltage is steady (charging rate approx. 10 amperes), note voltmeter reading which should agree with setting above.

**To Adjust (with cover removed)**—Change regulator armature spring tension by bending lower spring hanger slightly. Increase tension to increase operating voltage, decrease tension to decrease voltage.

**Contact Gap**—.010-.012". **Spring Tension** 7-8 ozs.

**Air Gap**—.040-.042" with the contacts just opening (.010-.016" between contact spring and armature stop).

### Current Regulator

**Setting**—40-42 amperes.

**To Check**—Connect test meters as for voltage check (above). Operate generator at speed equivalent to 30 MPH charging battery, turn on car lights and accessories or connect load (bank of headlamp bulbs, etc.) between ammeter and battery so that generator charges at peak rate and current regulator operates. Note ammeter reading which should agree with Setting above.

**To Adjust (with cover removed)**—Same as for Voltage Regulator (above).

**Contact Gap**—.030-.033". **Spring Tension** 7-8 ozs.

**Air Gap**—.047-.049" with the contacts just opening (.010-.016" between contact spring and armature stop).

## LIGHTING

**Lighting System**—Two distinct lighting systems provided, both controlled by the main lighting switch (Blackout Lighting Switch) as follows:

**Blackout (1st Switch "On" Position)**—Blackout Headlights, Blackout Tail Lights (right & left) and Blackout Stop Light (right side) operative. Blackout Driving Light (on left fender) operative with Blackout Driving Light Switch "on".

**Service (2nd Switch "On" Position)**—Service Headlights, Service Tail Light (left side) and Stop Light (left side) operative. Panel Lights operative with Panel Light Switch "on". Headlight upper and lower beams are controlled by Beam Selector Switch on toeboard.

## C NTINUED FROM PRECEDING PAGE

**Day Driving (3rd Switch "On" Position)**—Switch knob must be placed in this position to make the Service Stop Light operative for daytime driving (stop light lead taken through switch—see diagram). NOTE—Switch knob has lock button which must be pressed down to enable switch to be placed in any other position than "Off" and "Blackout."

**Service Headlamps**—Sealed Beam type. Headlamps are adjusted so that center of Upper Beam "hot spot" is aimed straight ahead and 7" below lamp center height at 25 feet.

**Blackout Driving Light**—Special shielded Sealed Beam type. This light adjusted so that center of beam "hot spot" is aimed straight ahead and 2.1" below lamp center height at 10 feet.

## Switches

**Blackout Lighting (Main) Switch**—To remove switch, loosen setscrew in knob, unscrew knob, loosen hex. head screw at side of switch bushing on front of panel, press Blackout control button in and pull bushing off, remove mounting nut, take switch out from under panel, mark all wires before disconnecting them.

**Blackout Driving Light Switch**—Clum. To remove, loosen setscrew in knob, unscrew knob, remove mounting nut on front of panel, remove switch from under panel, disconnect wires.

**Panel Light Switch**—Clum. Removed in same manner as Blackout Driving Light Switch.

**Beam Control Switch**—Clum Model 9634.

**Stop Light Switch**—Auto-Lite No. 100810F. Hydraulic type.

## Bulb Specifications

Position	Candlepower	Mazda No.
Service Headlamps..... (Sealed Beam).....		4031
Blackout Headlamps.....	3.....	1235①
Blackout Driving Light..... (Sealed Beam).....		2405S
Service Tail & Stop.....	21-3.....	1158
Panel Lights.....	3.....	63②
Blackout Stop.....	3.....	63①
Blackout Tail.....	3.....	63①
①—Replace as unit (lense, gasket, reflector, bulb).		
②—To replace, pry off shield, pull light socket out of shield, remove lamp from socket. Re-install in same manner.		

## MISC. ELECTRICAL

**LIGHTING CIRCUIT BREAKER:** Mounted on back of lighting switch. Vibrating thermostatic type. Protects lighting circuits by limiting current to 30 amperes. No adjustment.

**GASOLINE GAUGE & HORN CIRCUIT BREAKERS:** Mounted on back of instrument panel. Vibrating thermostatic types. Protect circuits by limiting current. No adjustment.

**HORN:** Vibrator type. Mounted on left side of dash in engine compartment.

## ENGINE REMOVAL

**ENGINE REMOVAL:** To remove engine from chassis as required for such service items as crankshaft and camshaft overhaul, perform the following operations in sequence:

1. **Drain Cooling System.** Drain cocks located at lower left corner of radiator and right front corner of cylinder block.

2. **Remove Battery.** Disconnect battery cables, re-

move battery from box on right side of engine.

3. **Remove Radiator.** Disconnect and remove upper and lower hoses, radiator stay rod, and hold-down nuts, lift radiator out. Do not lose radiator mounting pads. NOTE—Not necessary to remove radiator grille.

4. **Remove Air Cleaner.** Disconnect and remove air cleaner hose connection, remove wing nuts on mounting bracket and lift cleaner out.

CAUTION—Use care not to spill oil in cleaner.

5. **Remove Starter.** Disconnect cable at starter terminal. Remove two flange mounting capscrews and bolt in support bracket at commutator end, pull starter forward to clear Bendix Drive and lift out.

6. **On Right Side of Engine,** disconnect generator leads and ignition coil leads to distributor. Remove heat indicator bulb from cylinder head (CAUTION—Use care not to kink or break tube), disconnect engine ground strap (at right front engine mounting bracket), remove two bolts in engine mounting.

7. **On Left Side of Engine,** disconnect throttle and choke control rods at carburetor, and governor dash control cable at governor (if used). Disconnect and remove horn. Remove fuel tank filler cap (to relieve pressure), disconnect fuel line at fuel pump. Disconnect oil gauge lines at crankcase, remove accelerator linkage rod. Disconnect exhaust pipe at manifold. Remove two bolts in left front engine mounting.

8. **Underneath Engine,** disconnect rear end of engine stay cable at frame cross-member (left side), remove bell housing attaching bolts leaving one bolt at each side to support engine weight.

9. **Remove Engine.** Attach chain hoist to engine and take up on hoist just enough to support engine without binding remaining bell housing bolts, remove these bolts. Swing engine forward to withdraw clutch shaft from bushing in flywheel, lift engine out.

**INSTALLATION CAUTION**—Place small amount of grease in clutch shaft bushing in flywheel before installing engine.

## CYLINDER HEAD

**CYLINDER HEAD:** Installation—Use a torque indicating wrench to tighten cylinder head stud nuts and capscrews, tighten in correct sequence.

**Tightening Torque**—See Tightening (Torque Wrench) Specifications below.

## TIGHTENING (TORQUE WRENCH) SPECIFICATIONS

**TIGHTENING TORQUES:** Use a torque indicating wrench to tighten capscrews or bolt nuts retaining the parts listed below and tighten to tensions listed:

	Ft. Lbs.	In. Lbs.
Cylinder Head Capscrews.....	65-70.....	780-840
Cylinder Head Stud Nuts.....	60-65.....	720-780
Main Bearing Capscrews.....	65-70.....	780-840
Connecting Rod Bolts.....	50-55.....	600-660
Manifold Attaching Stud Nuts.....	31-35.....	372-420
(Intake & Exhaust)		
Spring Clip "U" Bolts.....	50-55.....	600-660
Torque Reaction Spring Bolt.....	60-65.....	720-780
Spring Pivot Bolt.....	27-30.....	324-360

## ENGINE

**ENGINE SPECIFICATIONS:** Own Make. Four cylinder, "L" Head type. Cylinder block and crankcase cast enbloc. Cylinders offset from center-line of crankshaft toward camshaft side of engine.

**Bore**—3 $\frac{1}{8}$ " (3.125-3.127"). **Stroke**—4 $\frac{3}{8}$ ".

**Displacement**—134.2 cubic inches.

**Rated Horsepower (SAE)**—15.63

**Developed Horsepower**—54 at 4000 RPM.

**Compression Ratio**—6.48-1 Std. Cast Iron Head.

**Compression Pressure**—110 lbs. at cranking speed of 185 RPM (70 lbs. minimum). All cylinders must be equal within 10 lbs.

**Vacuum Reading**—Steady 21-23" idling at 8 MPH.

**PISTONS:** Lynite Lo-Ex Aluminum Alloy, "T" Slot, Cam ground, tin-plated type with heat insulation groove above top piston ring.

**Length**—3 $\frac{3}{4}$ ".

**Removal**—Pistons and rods removed from above.

**Clearance**—.0205-.0225" top, .003" skirt.

**Replacement Pistons:** Finished pistons furnished .010", .020", .030" Oversize. CAUTION—Pistons must not be "lapped" in (will destroy tin-plating).

**Fitting New Pistons:** Use .003" feeler stock,  $\frac{3}{4}$ " wide, inserted between piston and cylinder wall on opposite side from "T" slot. Pull required to withdraw feeler must be within 5-10 lbs. at 70°F.

**Installing Pistons:** "T" slot toward valve (left) side of engine (opposite side from oil spray hole in connecting rod lower end).

**PISTON RINGS:** Two compression, one oil control ring per piston, all above pin (piston has narrow heat insulation groove above top ring groove). Oil ring groove drilled with oil drainage holes.

Ring	Width	End Gap	Side Clearance
Compression.....	3/32"	.008-.013"	.0005-.001"
Oil Contr.....	3/16"	.008-.013"	.001-.0015"

**Replacement Rings:** Furnished .010", .020", .030" Oversize. See "Installing Rings" for types used.

**Installing Rings:** Install compression rings with mark "TOP" (on side) toward top. Rings have taper face and must be installed correctly. Top ring inner bevel edge must be up.

**PISTON PIN:** Diameter .8117-.8119". Length 2 25/32". Pin is locked in connecting rod by clampscrew.

NOTE—On new pistons, pin hole is .8118-.8120" in diameter and is diamond-bored and tin-plated.

**Pin Fit in Piston**—.0001-.0005" clearance or light thumb push fit with piston and pin at 70°F.

**Replacement Pins:** Furnished Standard and .001", .002", .003" Oversize.

**CONNECTING ROD:** Length 9.1875".

**Crankpin Journal Diameter**—1 15/16".

**Lower Bearing**—Steel-backed, babbitt-lined, replaceable type. CAUTION—Oil spray hole in upper half of bearing must line up with oil spray hole in rod.

**Clearance**—.0005-.0025". **Sideplay**—.005-.009".

NOTE—"Palnuts" used as locknuts on connecting rod bolts. To install palnut, after regular bolt nut tightened to 50-55 ft.lbs., turn palnut up against regular nut (flat face in), then tighten palnut  $\frac{1}{2}$  turn additional.

**Bearing Adjustment:** None (no shims). Replace bearings. Do not file connecting rods or bearing caps.

## ENGINE

## CONTINUED FROM PRECEDING PAGE

**NOTE**—Replace bearings when clearance exceeds .005" or sideplay exceeds .013".

**Replacement Bearings:** Furnished Standard & .010", .020", .030" Undersize.

**Installing Rods:** Lower bearing offset. Install rods with offset (wider side) away from nearest main bearing or toward front of engine (#2, #4), toward rear (#1, #3). Oil spray hole in lower end of rod away from camshaft.

**CRANKSHAFT:** Three bearing type with four integral counterweights.

**Journal Diameters**—2.3340. (all bearings).

**Bearings**—Steel-backed, babbitt-lined, replaceable type. Bearing shells are dowelled in bearing caps and crankcase.

**Clearance**—.001-.0025" (.0005-.001" new).

**NOTE**—Replace bearings when clearance exceeds .006" or when endplay exceeds .018".

**Bearing Adjustment:** None (no shims). Replace bearings. Do not file bearing caps. See *Crankshaft Servicing data below*.

**Replacement Bearings:** Furnished Standard & .010", .020", .030" Undersize.

**NOTE**—Engine must be removed from chassis for bearing replacement and crankshaft servicing. See *Engine Removal instructions (above)*.

**Crankshaft Servicing: Main Bearing Replacement**—Make certain that oil holes in bearings line up with oil holes in crankcase and see that bearings fit snugly on dowel pins in crankcase and bearing caps.

**Rear Bearing Oil Seal**—Consists of a wick type packing installed in grooves in bearing cap and crankcase. To install new packing, insert packing in groove, use round piece of wood or steel to "roll" packing into groove, working from both ends toward center. With packing firmly seated in groove, cut off ends flush with surface. **NOTE**—Crankshaft must be removed to install packing in upper (crankcase) half of bearing.

**Rear Bearing Cap Seal**—Bearing cap sealed by cylindrical rubber packing strips inserted in holes between cap and case. When installing bearing cap, coat upper face lightly with sealing compound, insert new packing strips after cap is in place. Packing strips should protrude 1/4" to provide proper compression when oil pan installed. **CAUTION**—Do not cut off this protruding portion of the packing.

**Front (Timing Cover) Oil Seal**—Braided asbestos type impregnated with graphite and oil. Seal is installed in recess in inner face of timing chain cover and retained by steel retainer. To remove seal, pry out retainer and seal assembly. **CAUTION**—Always use new steel retainer when installing new seal.

**End Thrust:** Taken by flanged faces of #1 (front) bearing. Adjustable by adding or removing shims between crankshaft sprocket thrust washer and sprocket. **NOTE**—Crankshaft sprocket must be removed with a gear puller in order to make endplay adjustments.

**Endplay**—.004-.006".

**CAMSHAFT:** 4 bearing. Non-adjustable chain drive. **Journal Diameters**—#1, 2.188"; #2, 2 1/4"; #3, 2 3/16"; #4, 1 3/4".

**Bearings**—Removable steel-backed, babbitt-lined bushing (front), machined in crankcase (all others). **Clearance**—.002-.0035". Service limit .006" (front), .008" (all others).

**Camshaft Servicing: Removal**—Drain both radiator and cylinder block, remove radiator and grille, cylinder head, manifold, valves, and valve springs. Remove oil pump, fuel pump, oil pan, crankshaft pulley (use puller), fan and governor drive belts, and fan assembly. Remove nuts on front engine support rubber insulators. Remove timing chain cover, take out camshaft sprocket mounting screws, remove sprocket and chain. Block up all valve lifters (can be tied up by string from adjusting screw to manifold mounting studs). Place jack under crankcase (use block on jack to avoid damage to pan), raise front end of engine until camshaft will clear front cross-member, pull camshaft out.

**Camshaft Front Bearing**—Consists of a steel-backed, babbitt-lined bushing which takes thrust. When installing this bushing, make certain oil hole lines up with drilled oil hole in crankcase, stake bearing in place to prevent turning in service.

**Camshaft Thrust Plunger**—Plunger and spring should be installed in camshaft hub with round end out. Stationary pin on timing chain cover must be perpendicular so as to bear on spring-loaded plunger.

**End Thrust:** Taken by thrust washer behind camshaft sprocket and spring loaded plunger in forward end of camshaft which bears against stationary thrust pin on chain case cover. **NOTE**—Make certain that plunger and spring are in place when installing chain case cover.

**Timing Chain:** Link-Belt two-sprocket (non-adjustable) type. Width 1". Pitch 1/2". Length 47 links or 23 1/2".

**Camshaft Setting:** With #1 piston on top dead center, mesh chain with marks on sprockets adjacent and in line with a straightedge across the shaft centers. **NOTE**—Camshaft sprocket mounting screw holes offset to insure correct position of sprocket on shaft.

**VALVES: Head Diameter Stem Diameter Length**  
Intake ..... 1 17/32" ..... 373" ..... 5 3/4" (overall)  
Exhaust ..... 1 15/32" ..... 3725" ..... 5 3/4" (overall)

**Seat Angle Lift Stem Clearance**  
Intake ..... 45° ..... 23/64" ..... .0015-.00325"  
Exhaust ..... 45° ..... 23/64" ..... .002-.00375"

**Valve Guides:** Removable type. Remove guides from above with puller, install new guides with driver or press guides down in place to following dimensions:

**Intake Guide**—Top of guide 1 5/16" below top face of block. The shorter smaller-diameter section end of the guide should be up.

**Exhaust Guide**—Top of guide 1" below top face of block. Taper end (counter-bored end) of guide should be up.

**Valve Springs:** Install springs with closed-coil end up toward cylinder block. Spring free length 2 1/2".

**Spring Pressure Spring Length**  
Valve Closed ..... 50 lbs. .... 2 7/64"  
Valve Open ..... 116 lbs. .... 1 3/4"

**Valve Lifters:** Mushroom type operating in reamed holes in block. Serviced by installing oversize lifters. Lifters furnished .004" Oversize.

**Lifter Diameter**—.6240-.6245".

**Lifter Clearance**—.0005-.002".

**NOTE**—Camshaft must be removed for lifter removal.

## VALVE TIMING

**Tappet Clearance:** .014" All Valves, Hot or Cold.

**NOTE**—Tappet adjusting screws are "self-locking" type (no locknuts).

**Valve Timing:** See Camshaft Setting (above).

**Intake Valves**—Open 9° BTDC. Close 50° ALDC.

**Exhaust Valves**—Open 47° BLDC. Close 12° ATDC.

**Valve Timing Check**—Set tappet clearance #1 intake valve at .020". This valve should open with #1 piston 9° or .039" before top dead center with flywheel mark "I.O." centered in inspection hole on right front face of flywheel housing below starter. Reset tappet clearance to .014" running clearance.

## LUBRICATION

**Lubrication System:** Pressure to crankshaft, connecting rod, and camshaft bearings and to timing chain. Oil pump mounted externally on left side of crankcase.

**Crankcase Capacity**—5 qts. (Dry—when filter drained or replaced), 4 qts. (refill).

**Normal Oil Pressure**—40-50 lbs. (20-25 lbs. actual) at normal speeds or 10 lbs. minimum idling.

**NOTE**—On first cars, oil pressure was 75 lbs. (40 lbs. actual) at 30 MPH.

**Oil Pressure Relief Valve**—Located under plug on oil pump cover. Opens at 25 lbs. (50 lbs. gauge pressure). Adjustable by adding or removing shims above spring within plug.

**Oil Pump:** Planetary gear type. Mounted on left hand side of crankcase.

**Pump Removal**—Remove oil pump cover nuts on three mounting studs, slide pump off studs. To disassemble pump, remove one screw in pump cover, lift off cover, remove idler gear and rotor disc. To remove rotor shaft assembly, file off end of pin in drive gear hub, drive pin through shaft, using a small drift, remove gear, withdraw rotor shaft assembly from housing.

**Pump Installation**—Turn flywheel to #1 piston firing position with flywheel mark "IGN" centered in inspection hole in right front face of flywheel housing below starter. Turn distributor shaft to #1 firing position with distributor rotor finger opposite #1 terminal in distributor cap. Hold oil pump in same relative position as when installed on engine, turn pump shaft until tongue offset is upward (widest part of shaft down) and line up gear retaining pin with right hand side of slot in pump body. Slide pump into place on mounting studs, recheck rotor position. **NOTE**—If distributor rotor not at #1 terminal with pump installed, remove pump, turn shaft as required, and re-install.

**Oil Filter:** Mounted on bracket on right side of engine. Oil Filter Element Purolator No. 26637.

**CAUTION**—Filter should be drained at 1000 mile intervals and filter element replaced at 6000 mile intervals for normal service.

**Oil Pressure Gauge:** Auto-Lite No. G-10024 or G-10017.

CONTINUED ON NEXT PAGE

C NTINUED FROM PRECEDIN PAGE

**COOLING**

**Cooling System:** Pressure type with pressure valve (relief valve) in filler cap.

**Capacity**—11 quarts.

**Pressure Valve**—AC No. 846709 (Radiator Filler Cap). Opens at 3¼ lbs. (3¼-4¼ lbs.).

**Water Pump:** Centrifugal, packless, ball bearing type.

**Pump Removal**—Loosen drive belt adjustment and remove belt, disconnect hose, remove pump mounting screws. Lift out pump and fan assembly.

**Belt Adjustment**—See *Generator Belt Adjustment*.

**Thermostat:** In outlet elbow on cylinder head.

**Setting**—Starts to open 145-155°F. Fully open 170°F.

**Temperature Gauge:** Auto-Lite Type H-10014 (not electric type).

See *Miscellaneous Section for complete data*.

**CLUTCH**

Atwood Model TP-2B-7-1 with Borg & Beck No. 11123

Driven Member. Single plate, dry disc type.

See *Clutch Section for complete data*.

**Facings**—One Woven, one Molded Asbestos. Inside Diameter 5½", Outside Diameter 7½". Thickness ⅛" (.125").

**Adjustment:** Pedal free travel ¾" (provides 1/16" clearance between release bearing and clutch release levers). To adjust, loosen locknut on clutch fork connecting cable clevis at cross-shaft connection, screw cable end out of clevis, tighten locknut.

**Removal:** Remove Transmission & Transfer Case Assembly (see Transmission Removal below), remove flywheel bell housing. Mark clutch pressure plate and flywheel to insure re-installation in same relative position. Take out mounting screws in clutch cover flange, turning all screws out evenly to relieve spring pressure, remove clutch assembly and driven member.

**TRANSMISSION**

**Transmission:** Warner Model T84J. Three-speed type with conventional shift lever mounted on top of case. Constant-mesh, synchro-mesh, helical gears (Second & High), sliding spur gear (Low & Reverse).

See *Transmission Section for complete data*.

**Transfer Case:** Spicer Model 18. Two-speed auxiliary transmission and front-wheel drive unit mounted on rear of transmission case. Separate control levers provided for Low-High range (right hand lever), and front-wheel drive engagement (left hand lever). See *Transmission Section for complete data*.

**Removal:** Remove transmission and transfer case as an assembly. Remove transmission floor cover, remove shift lever by unscrewing control housing cap and withdrawing lever. Remove transfer case shift lever pivot pin setscrew and lubricator fitting in right end of shaft, drive out shaft and remove shift levers. Remove exhaust pipe guard and exhaust pipe clamp on skid plate, remove skid flanges at transfer case end. Disconnect front and rear propeller shafts at transfer case universal joints, tie propeller shafts up to frame. Place support jack under engine oil pan. Disconnect speedometer cable at transfer case, remove transfer case rubber snubber bolt nut on right hand side of cross-member.

Remove clevis pin in lower end of hand brake cable, remove hand brake retracting lever. Disconnect engine stay cable at cross-member, bonding strap on transmission and transfer case, and clutch pedal pull back spring. Remove nuts on engine rear support insulator studs at cross-member. Place second support jack under transmission. Remove frame-to-cross member bolts at each end and remove cross-member. CAUTION—With cross-member removed, entire engine and transmission weight will be supported on the jacks. Push transmission to right until clutch control cross-shaft can be freed from ball stud end on transfer case. Remove inspection cover on bell housing, disconnect and remove clutch fork and cable assembly. Remove four transmission mounting bolts in bell housing, slide transmission straight back until clutch shaft clears bell housing (lower jack under engine just enough so that transmission will clear floor pan), lower transmission and remove from beneath car.

**Transmission Removal from Transfer Case**—Drain transmission and transfer case, remove transfer case rear cover and gasket. Remove cotter pin, nut and washer on rear end of transmission main shaft, pull off main shaft gear and oil slinger. Remove control housing on top of transmission by taking out four mounting screws, remove shifter plate spring and shifter plate. Retain second speed gear by looping a piece of wire around gear and fastening wire tightly to front of transmission case. Remove transfer case mounting screws on rear of transmission, withdraw transfer case by tapping lightly on rear end of main shaft while pulling case to the rear. CAUTION—Do not lose transmission interlock plunger located in groove between transmission and transfer cases.

**UNIVERSALS**

**Front & Rear Drive Propeller Shaft Joints:** Spicer Model 1261 (transmission end), Model 1268 (axle end). Needle roller bearing types.

See *Universals Section for complete data*.

**Front Axle Shaft Joint:** Bendix or Rzeppa Constant-velocity type. One joint used at outer end of each shaft (within steering knuckle housing).

See *Universals Section for complete data*.

**FRONT AXLE**

**Spicer Model 25.** Full floating, hypoid gear type. Differential assembly (ring & pinion gear assembly) is identical with Rear Axle and is serviced in the same manner.

See *Rear Axle Section for complete data*.

**Ratio**—4.88-1 Std.

**Backlash**—.005-.007". Shim adjustment.

**Removal:** Support front end of car securely with a chain hoist, remove front wheels. Disconnect front shock absorbers, front brake line (at frame connection), and steering linkage (at idler lever on frame front cross-member). Disconnect propeller shaft by removing universal joint "U" bolts at axle end of shaft. Place support jacks under axle housing so that springs relieved of weight, remove nuts on spring center clip "U" bolts, remove bolts at rear ends of springs and lower the springs, remove axle assembly from beneath the car.

**Axle Shaft & Universal Joint Assy Removal:** Remove wheel, hub cap, axle shaft cotter pin, nut, and washer. Remove drive flange capscrews and washers, re-

move flange with a puller. Bend lip on bearing nut lockwasher out and remove locknut, lockwasher, adjusting nut, and bearing lockwasher. Remove wheel hub and bearing assembly (CAUTION—use care not to damage oil seal). Disconnect brake tube, take out mounting screws on backing plate, remove backing plate and wheel spindle. Pull axle shaft and universal assembly out of axle housing.

**INSTALLATION CAUTION**—Adjust front wheel bearings and bleed brake line when installation completed.

**Wheel Bearing Adjustment:** Jack up the front wheel, remove the hub cap, then remove axle shaft nut, washer, and driving flange (use puller to remove flange). Bend lip of adjusting nut lockwasher back to free nut, remove locknut. Tighten adjusting nut until wheel binds (turn wheel while tightening nut), back off nut 1/8 turn or until wheel rotates freely. Replace lockwasher and locknut, tighten locknut securely and bend ear of lockwasher up against nut to prevent loosening in service. Check adjustment of bearings by grasping front and rear of tire and shaking wheels from side to side. A barely perceptible shake should be felt in the bearings. Install flange shims and flange. On cars with Bendix Universals, check axle shaft endplay (below) before completing assembly. NOTE—On cars with Rzeppa Universals, disregard endplay note below and install shim pack of .060" under flange.

**Axle Shaft Endplay Check (With Bendix Universal Joints)**—Tighten the flange nut (do not install lockwasher), swing wheel to maximum left or right position with punchmark on end of axle shaft straight up or down. Back off flange nut until clearance between nut and flange is .050" (measure with feeler gauge). Tap end of shaft with a soft hammer (shaft will move in an amount equal to the endplay). Recheck clearance between nut and flange with a feeler gauge. Subtract this measured clearance from the original .050" clearance. If resulting figure is less than .015", add shims to shim pack under flange, if figure is more than .035", remove shims from shim pack under flange. With correct thickness of shim pack under flange, install axle shaft lockwasher, nut, and cotter pin.

**REAR AXLE**

**Spicer Model 23-2.** Full floating, hypoid gear type with Hotchkiss Drive.

See *Rear Axle Section for complete data*.

**Ratio**—4.88-1 Std.

**Backlash**—.005-.007". Shim adjustment.

**Removal:** Support rear end of car securely with a chain hoist and support placed under frame ahead of rear springs, remove rear wheels. Disconnect rear shock absorbers, rear brake line (at frame connection), and propeller shaft by removing universal joint "U" bolts at axle end of shaft. Place support jacks under axle housing so that springs relieved of weight, remove nuts on spring center clip "U" bolts, remove pivot bolts at front end of springs and lower the springs, remove axle assembly from beneath the car.

**INSTALLATION CAUTION**—Bleed brake lines after axle re-installed and lines connected.

**Axle Shaft Removal:** Remove six capscrews and washers holding axle shaft driving flange on wheel hub, thread two of these screws into "extra" holes (between regular mounting screw holes) and turn

screws up evenly to pull axle shaft out, withdraw axle shaft from housing.

**Wheel Bearing Adjustment:** Remove the six axle shaft flange screws, turn two of these screws into "extra" holes in flange to start shaft, withdraw axle shaft. Adjust bearings in same manner as front wheels (above). When re-installing axle shaft, make certain that gasket installed under flange.

**NOTE**—Disregard the axle Shaft Endplay Check instructions required for front wheels only.

## SHOCK ABSORBERS

**Monroe.** Direct acting, double acting, hydraulic, adjustable type with rubber-bushed end fittings.

*See Shock Absorber Section for complete data.*

**Adjustment:** Remove mounting bolt at lower end, fully collapse shock absorber by pressing up on lower end until adjusting key within unit engages slot in adjusting plate (can be determined by feel), turn unit in clockwise direction until limit of adjustment is reached (full range of adjustment is four turns), back off adjustment by turning unit counter-clockwise exactly two turns for standard setting. **CAUTION**—See that adjusting key does not slip out of engagement with slot while making adjustment.

**Refilling:** Requires dismantling of unit. *See Shock Absorber article in Shock Absorber Section for data.*

## FRONT SUSPENSION

**Front Axle—Spicer Model 25.** Special full-floating driving unit. *See Front Axle data (above).*

**Kingpin Inclination—** $7\frac{1}{2}^{\circ}$  crosswise.

**Caster—** $3^{\circ}$ . No adjustment. If caster incorrect, check entire front end and correct by installing new parts.

**Camber—** $1\frac{1}{2}^{\circ}$ . No adjustment. Correct by installing new parts. Do not attempt to correct camber by cold bending or heating of parts.

**Toe In—** $3/64$ – $3/32$ " ( $1/32$ " each wheel). To adjust, first set each front wheel straight ahead (see Note below), then set toe in by shortening right hand tie rod only. This procedure necessary to maintain correct position of steering idler arm.

**NOTE**—To set front wheels straight ahead, first set tie rod end of steering bell crank (idler lever on frame front cross-member) exactly at right angles

to front axle. Check front wheels by using a straight edge or sighting along rear and front wheels. Adjust each tie rod (loosen end clamp bolts and turn rod) until front wheels are exactly straight ahead. Then make toe in adjustment as directed above. Tie rod lengths between ball end centers should be  $17\frac{11}{32}$ " (left),  $24\frac{1}{4}$ " (right).

**Steering Geometry**—With inner wheel turned  $20^{\circ}$ , outer wheel should be turned exactly  $19^{\circ}45'$ .

**Steering Knuckle Bearings:** The Steering Knuckle is mounted on two "stub" kingpins with Timken roller bearings in ball ends of axle housing. Bearings are adjustable by adding or removing shims located under kingpin bearing caps (upper cap integral with steering arm). Bearings must be disassembled for adjustment as follows:

**Disassembly**—With Axle Shaft & Universal Joint Assembly removed (see Front Axle data above). Remove eight screws holding oil seal retainers in place on inner face of knuckle support, remove oil seal retainer halves. Remove four nuts and lockwashers on lower bearing cap, remove bearing cap and bearing adjusting shims (under cap). Remove four nuts and lockwashers on upper bearing cap (steering arm), remove brake hose shield, steering arm, and bearing adjusting shims (under steering arm). Remove steering knuckle (**CAUTION**—Do not allow lower bearing cone and roller assembly to fall when knuckle is pulled off).

**Bearing Adjustment**—Install steering knuckle on axle housing (reverse order of disassembly directions) without the oil seal placing one each of the following shims under both the upper and lower bearing caps—.003", .005", .010", .030" (total shim thickness at each end .048"), tighten bearing cap stud nuts securely. Then check bearing tension by hooking spring scale in tie rod hole at end of steering arm and noting pull required to turn steering knuckle on axle end. This pull or bearing tension should be 25–35 in. lbs. with oil seals out. Adjust by adding or removing shims under bearing caps. **CAUTION**—Total shim thickness under upper and lower bearing caps must be equal. Shims furnished in thicknesses of .003", .005", .010", .030" for this purpose.

**Oil Seal Replacement**—Felt type mounted in metal retainers bolted on inner face of steering

knuckle. When replacing oil seal, make certain that spherical surface of axle housing is not scored or scratched (smooth down any roughness with emery cloth), bolt seal retainer halves on housing using lockwashers under mounting screw heads, make certain that felts have good fit at point where upper and lower halves join.

## STEERING GEAR

**Ross Model T-12.** Cam-and-Twin Lever type.

*See Steering Gear Section for complete data.*

## BRAKES

**Service Brakes:** Bendix (Lockheed) Four wheel, Hydraulic, Double anchor type. Hand lever applies independent brake on drive shaft at rear of transfer case.

*See Brake Section for complete data.*

**Drum Diameter—**9".

**Lining**—Width  $1\frac{3}{4}$ ". Thickness  $3/16$ ". Length per shoe  $10\frac{7}{32}$ " (forward shoes),  $6\frac{39}{64}$ " (rear shoes). **NOTE**—Manufacturer recommends use of new or replacement shoe assemblies with factory-installed linings.

**Clearance**—.008" toe, .005" heel, for each shoe.

**Hand Brake:** Mechanical type. External, contracting band on drum mounted on driveshaft at rear of transfer case.

**Drum Diameter—**8".

**Lining**—Woven type. Width 2". Thickness  $5/32$ ". Length  $18\frac{9}{16}$ ".

**Adjustment**—Place hand brake lever under instrument panel in fully released position, check brake lever to make certain that cable is free and released. Remove brake band anchor adjusting screw lockwire, turn adjusting screw until .005" feeler is just snug between lining and drum at this point, re-install adjusting screw lockwire. Tighten adjusting nut (at lower end of large adjusting bolt) until brake band is tight on drum, loosen bracket bolt locknut and back off inner bracket bolt nut two turns, tighten locknut. Back off adjusting nut until brake band has approximately .010" clearance on drum at each end.

**HOOD LOCK:** Hood is Alligator type. To raise hood, pull out on control button under left side of instrument panel, press down on safety catch tab beside latch under front edge of hood.

**Hood Removal & Replacement—**See "Hood Assembly" in Frazer Shop Notes.

## MODEL IDENTIFICATION

### STARTING SERIAL NUMBERS

	Model	Serial Numbers
1947 Kaiser	K-100	K-100-001001 Up
1947 Kaiser Custom	K-101	K-101-2000001 Up
1948 Kaiser	K-481	K-481-001001 Up
1948 Kaiser Custom	K-482	K-482-001001 Up

**SERIAL NUMBER:** On left front door hinge post.

**Body Number Note—**Stamped on plate on left side of cowl or on right front face of dash in engine compartment.

**ENGINE NUMBER:** Stamped on pad on left front upper corner of engine block and on Engine Nameplate on left side of crankcase. NOTE—Numeral following Engine Model Designation (first part of Engine Number) indicates Engine Plant as follows: 4—Detroit, 8—Muskegon.

► **Engine Number Symbol (Special Bore & Bearing Sizes)** See "Original Bore & Pistons" & "Original Bearing Sizes" in Frazer Shop Notes. NOTE—Symbol consists of 1 or 2 letters following engine number.

## TUNE-UP

**COMPRESSION PRESSURE:** 115-125 lbs. (for 6.86-1 Heads), 120-130 lbs. (7.3-1 Heads) at cranking speed of 140 RPM. (engine hot, all plugs out, throttle wide open). All cylinders must be equal within 10 lbs.

► **NOTE—7.3-1 Heads** marked by "73" stamped on head directly above engine number pad on block.

**VACUUM READING:** 17½" steady idling at 550 RPM.

**FIRING ORDER:** 1-5-3-6-2-4.

**SPARK PLUG GAPS:** .032"

**Plug Type—**Auto-Lite A-5 (normal driving), A-7 (for short runs or to correct hard-starting in cold climates). 14 mm. metric type.

**IGNITION:** See Coil, Condenser, and Distributor.

**Breaker Gap—**.020" (.018-.022").

**Cam Angle or Dwell—**38° closed, 22° open.

**Breaker Arm Spring Tension—**17-20 ozs.

**Automatic & Vacuum Advance—**See Distributor.

**IGNITION TIMING:** TDC. (at Top Dead Center).

**Timing Procedure—**See Ignition Timing.

**Timing Mark—**Mark "DC" on flywheel (first cars), on vibration dampener (beginning Eng. No. 17160).

**Octane Selector Setting—**Set for slight ping when accelerating with wide open throttle.

**CARBURETION:** See Carburetor & Carb. Equipment.

**Idle Setting—**¾-1¼ turn open—one screw (W1 Carb.), 1¼-2¼ turns open—one screw (W1 Carb.), 1-1¼ turns open—2 screws (WCD Carb.). Turn screws out for richer mixture.

**Idle Speed—**550 RPM.

**Float Level (W1 Carb.)—**5/16" (610S), 3/8" (622S with first Float and Inlet Valve), 1/2" (622SA, SB & 622S with late type Float and Inlet Valve). Measure from top of projection on bowl cover to top of soldered seam on free end of float with bowl cover assembly inverted.

**Float Level (W1)—**1/2" from top of float at free end to gasket seat on cover.

**Float Level (WCD Carb.)—**9/64" (685S with first type Inlet Valve), 1/16" (685S & 685SA with later type Inlet Valve) from top of each float to gasket seat on cover with valve closed (bowl cover assembly inverted).

**Accelerating Pump—**Lower Hole (med.) Normal.

**NOTE—**Pump on 574S has no seasonal adjustment.

**Fuel Pump Pressure:** 3½-4½ lbs. (for pump mounted at rear of engine), 3-4¼ lbs. (pump mounted at front of engine).

► **CAUTION—**Pump pressure must not exceed 4½ lbs.

► **VALVE TAPPET CLEARANCE:** CAUTION—Two settings used.

Before Eng. No. 10769—.010" Int., .014" Exh. Cold.

After Eng. No. 10769—.014" All Valves, Cold.

**NOTE—**Remove splash shield under right front fender for convenience in adjusting valves.

**Valve Timing Check—**See Valve Timing.

**STARTING:** See Battery, Starter, Generator, Regulator.

## IGNITION

**IGNITION SWITCH:** Douglas or Mitchellock, Kaiser Frazer No. 201354 (Before Kaiser No. K-100-65372 & Kaiser Custom No. K-101-2005405), No. 203186 (After above numbers).

**Lock Cylinder—**Kaiser-Frazer No. 201898 (with key).

**COIL:** Auto-Lite Model IG-4093. Mounted on left side of cylinder head opposite distributor.

**Ignition Current—**3 amperes idling, 5 amperes at 6.4 volts (stopped).

**CONDENSER:** Auto-Lite No. IG-2671K.

**Capacity—**.20-.25 microfarad.

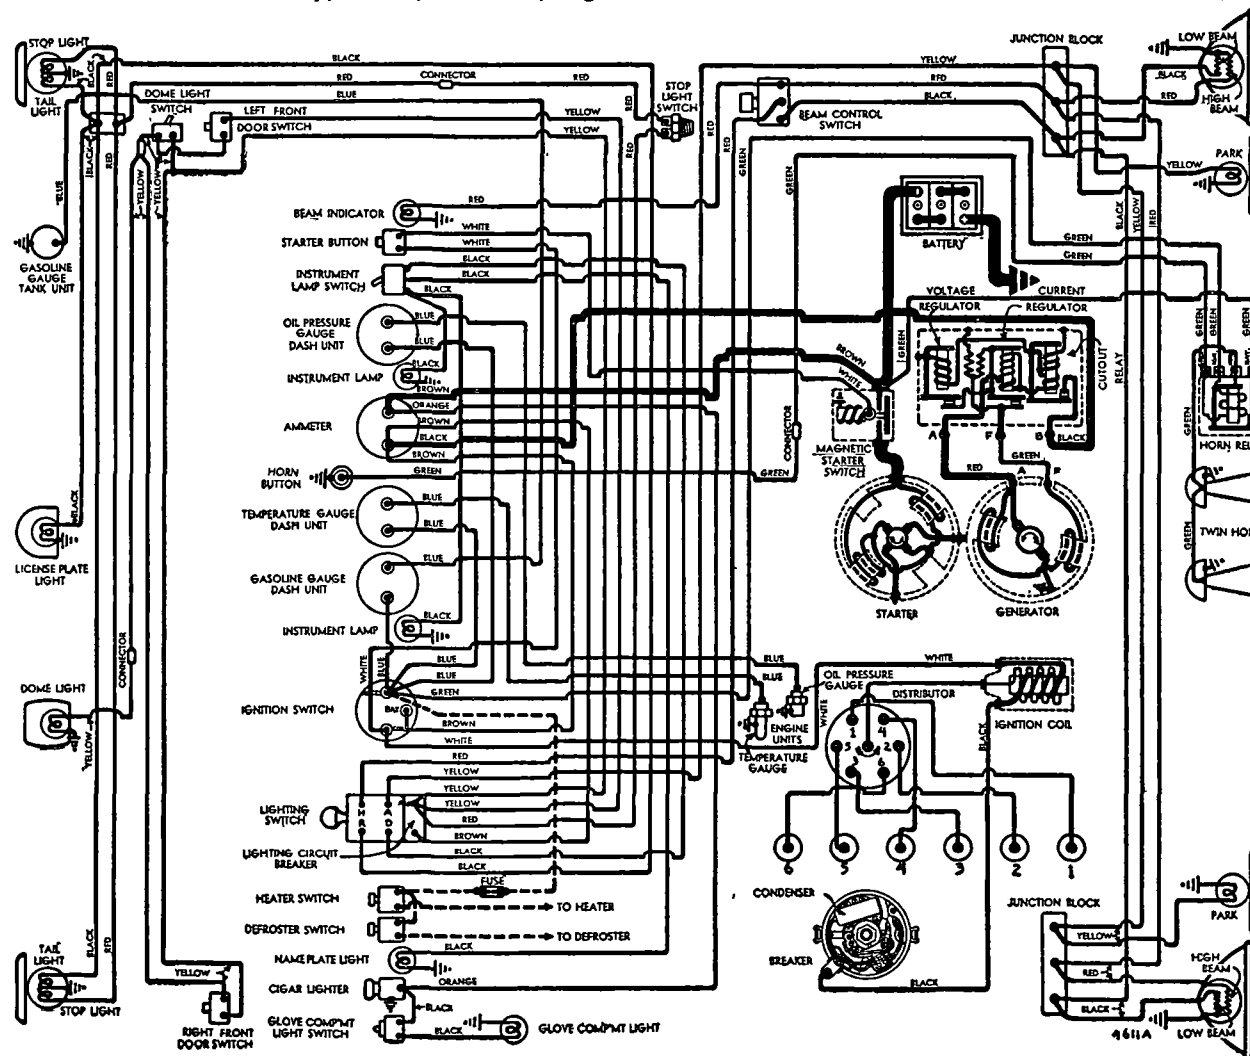

**DISTRIBUTOR:** Auto-Lite Model IGS-4211. Full automatic advance type with auxiliary vacuum spark control and octane selector adjustment.

**Breaker Gap—**.020" (.018-.022").

**Cam Angle—**38° closed, 22° open.

**Breaker Arm Spring Tension—**17-20 ozs.

**Rotation—**Counter-clockwise viewed from above.

Automatic Advance			
Distributor	Engine	Distributor	Engine
Degrees	RPM.	Degrees	R.P.M.
Start.....	350	0.....	700
1.....	365	2.....	730
3.....	400	6.....	800
7.....	1150	14.....	2300
10.....	1700	20.....	3400

Octane Selector—Manual adjustment at distributor providing 10° advance and retard. See Ignition Timing.

Vacuum Spark Control: Auto-Lite (integral type). Linked directly to breaker plate. Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle when spark retarded by return spring in unit.

Vacuum Advance			
Distr. Degrees	Eng. Degrees	Vacuum (" of HG)	
Start.....	0°	8"	
2°	4°	9 1/2"	
4°	8°	11 1/4"	
6°	12°	12 3/4"	
7.5°	15°	14"	

Distributor Removal: On cylinder head between #4 and #5 cylinders. To remove, disconnect vacuum line, take out hold-down screw in advance arm.

### IGNITION TIMING

Std. Setting..... At TDC.  
TIMING MARK NOTE—Timing mark located on flywheel (before Eng. No. 17160), on vibration dampener (Eng. No. 17160 up). Consists of "DC" mark or "0" mark at top dead center with 1° graduations before and after this point.

Timing (with Timing Light C-693)—Mark "DC" or "0" top dead center mark on flywheel (before Eng. No. 17160), on vibration dampener (Eng. No. 17160 Up) with chalk or white paint. Connect timing light to #1 spark plug terminal and direct light at timing mark. Idle engine at 400 RPM. (back off throttle stop screw to decrease normal idle speed of 550 RPM.). Loosen hold-down screw in advance arm, center screw in slot, tighten hold-down screw. Loosen clampscrew in end of arm under distributor, rotate distributor until timing mark appears in line with pointer, tighten clampscrew. Check octane selector setting.

► CAUTION—Reset engine idling speed at 550 RPM. Octane Selector Setting—Set for slight ping when accelerating with wide-open throttle. To adjust, loosen hold-down screw in advance arm, rotate distributor clockwise (if no ping noted), counter-clockwise (if ping too severe).

### CARBURETOR

#### CARTER WA-1

Carter WA1 Type 622SB superseding 622S & 622SA (All Models). 1 1/4" Single Barrel, Downdraft type with Fast Idle and Climatic Control.

► NOTE—622S carburetor can be converted to 622SA by installing new Float and Inlet Valve assembly and changing float level.  
See Carburetor Section for complete data.

Settings (Idle Setting, Float Level, and Accelerating Pump): See Tune-Up data.  
Metering Rods & Jets—See Carter Jet Table in Carburetor Section.

Fast Idle (WA1 Carburetors): Carter Single Barrel  
See Carburetion Equipment Section for data.  
Setting—5/8" clearance between choke valve and air horn (Gauge T109-85) with throttle valve closed and stop screw against (not on) first step of fast

idle cam. Adjust by bending connector link at lower offset (Tool T109-41).

Automatic Choke (WA1 Carburetors): Carter Climatic Control (Single Carburetor Type).  
See Carburetion Equipment Section for complete data.  
Setting—Centered (coil housing at index mark).

### CARBURETOR

#### CARTER WCD

Carter WCD Type 685S superseded by 685SA (Optl. on Custom K-482). 1 1/4" Dual (double barrel), Downdraft type with Fast Idle and Climatic Control.

► NOTE—685S carburetor can be converted to 685SA by installing new intake Needle & Valve Assembly and resetting float level to 685SA specifications.  
See Carburetor Section for complete data.

Settings (Idle Setting, Float Level, and Accelerating Pump): See Tune-Up data.  
Metering Rods & Jets—See Carter Jet Table in Carburetor Section.

Fast Idle (WCD Carburetors): Carter Dual (WCD)  
See Carburetion Equipment Section for complete data.  
Setting—.016" throttle opening with choke valve held closed and throttle lever stop screw backed off (adjust by turning fast idle screw in or out).

Automatic Choke (WCD Carburetors): Carter Climatic Control (Dual Carburetor Type).  
See Carburetion Equipment Section for data.  
Setting—Centered (coil housing at index mark).

### CARBURETOR

#### CARTER W1

Carter W1 Type 574S. 1 1/4" Single Barrel, downdraft type with manual choke.

NOTE—This carburetor used for part production starting with following numbers: K-100 51361, K-101 2000001.

See Carburetor Section for complete data.

Settings (Idle Setting, Float Level, and Accelerating Pump): See Tune-Up data.

Metering Rods & Jets—See Carter Jet Table in Carburetor Section.

### CARB. EQUIPMENT

Air Cleaner: AC Oil-bath type. Kaiser-Frazer No. 200618 (All Models with WA1 or W1 Carburetors), No. 203372 (K-482 Custom with WCD Carburetor). Servicing—Empty and clean reservoir, wash cleaner in kerosene, refill to indicator line with approx. 1 pint SAE No. 50 engine oil (No. 20 for below freezing tem.) at 1000 mile intervals or when engine tuned up (more often if required by operating conditions).

Fuel Pump (Early type—mounted at rear of engine): AC No. 1539057, K-F No. 200281. Diaphragm type.  
► CAUTION—Install this pump with rocker arm OVER camshaft eccentric.

See Carburetion Equipment Section for data.

Pressure—3 1/2-4 1/2 lbs. maximum.

Fuel Pump (Later type—mounted at front of engine): AC No. 1539073 (K-F No. 201509) Diaphragm type fuel pump or AC No. 1539074 (K-F No. 202319) combination Fuel-and-Vacuum Pump.  
Replacement Pump—AC No. 574 (for 1539073), No. 582 (for 1539074 fuel-and-vacuum pump).

► CAUTION—Install these pumps with rocker arms UNDER camshaft eccentric.

See Carburetion Equipment Section for data.

Pressure—3-4 1/4 lbs.

Gasoline Gauge: King-Seeley electric type.

Dash Unit—K-S No. 41405, Kaiser-Frazer No. 201545 (First Type—Ivory on Green), K-S No. 42015,

Kaiser-Frazer No. 202786 (Later Type—White on Beige).

Tank Unit—K-S No. 7916, Kaiser-Frazer No. 201546.  
See Carburetion Equipment Section for complete data.

### BATTERY

Auto-Lite Type 1M-100D. 6 Volt, 15 Plate, 105 Ampere Hour capacity (20 hour rate).

Grounded Terminal—Positive (+) terminal grounded at left front engine support. Engine ground cable connected at same point.

Location—In engine compmt. on left side.

### STARTER

Auto-Lite Model MAW-4043. Armature MAW-2128. Drive—Barrel type Bendix Drive No. A1792.

Rotation—Counter-clockwise at commutator end. Brush Spring Tension—42-53 ozs. (new brushes).

#### Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	4900	5.5	65
2.75 "	1480	5.0	200
5.75 "	820	4.5	300
8.50 "	400	4.0	400
11.55 "	110	3.5	500
18.0 "	Lock	4.0	670

Starting Switch: Auto-Lite Model SS-4001 magnetic switch. Mounted on starter and controlled by push-button on instrument panel.

See Electrical Equipment Section for complete data.

Removal: Flange mounted on left front face of flywheel housing. To remove, disconnect cables, take out flange mounting screws.

### GENERATOR

Auto-Lite Model GDZ-4818A. Armature GDZ-2006F. Two brush type with voltage and current regulation.

Maximum Charging Rate—35 amperes, 8.0 volts, 1900 RPM. or approximately 20 MPH.

Charging Rate Adjustment—None (see Regulator).

Cold Performance Data					
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	925	0	6.4	1000
5	6.65	1060	5	6.65	1150
10	6.85	1200	10	6.85	1290
15	7.05	1340	15	7.05	1430
20	7.3	1480	20	7.3	1590
25	7.55	1620	25	7.55	1750
30	7.8	1760	30	7.8	1980
35①	8.0	1900	35	8.0	2250

①—Current Regulator setting. See Regulator data.

Rotation—Counter-clockwise at commutator end.

Brush Spring Tension—35-53 ozs. (new brushes).

Field Current—1.60-1.78 amperes at 6.0 volts.

Motoring Current—4.16-4.60 amperes at 6.0 volts.

Removal: Pivot mounting at left front of engine. To remove, disconnect leads, take out clamp bolt and pivot bolts. NOTE—Remove battery for access.

Belt Adjustment: 1/8" belt deflection midway between generator and fan pulleys (adjust by pulling generator out with 15 lb. force with all bolts loose).

### REGULATOR

Auto-Lite Model VRP-4004F-2. Vibrating type Voltage and current regulators (with Cutout Relay) in case on left fender shield.

See Electrical Equipment Section for complete data.

NOTE—Regulator cover sealed. Warranty void if seals broken.

## C NTINUED FR M PRECEDIN PAGE

## Cutout Relay

Cuts In—6.4-7.0 volts (set to 6.4-6.6 volts).  
Cuts Out—4.1-4.8 volts (approx. 4-6 amps. disch.).  
Contact Gap—.015" minimum.  
Air Gap—.031-.034" with contacts open (check at hinge end of core).

## Voltage Regulator

Setting—7.2-7.5 volts at 70°F. See Electrical Equipment Section for settings at other temperatures.  
Checking (without breaking seal) & Adjustment—See Electrical Equipment Section.  
Contact Gap—.012" min. (armature against stop pin).  
Air Gap—.048-.052" with contacts just opening.

## Current Regulator

Setting—34-36 amperes (marked '35' on the cover).  
Checking (without breaking seal) & Adjustment—See Electrical Equipment Section.  
Contact Gap & Air Gap—Same as Voltage Regulator.

## LIGHTING

Headlamps: Hall "Sealed Beam" type. Upper and lower beams controlled by beam selector switch. See Electrical Equipment Section for complete data.  
Adjustment—Aim upper beam straight ahead (hot spot center 3" below lamp center height at 25 ft.).  
Beam Indicator—Red jewel on left side of instrument panel (above starter button). Lighted when upper (country beams) in use.  
Direction Signal (Custom Models): Mitchell (United Specialties) type. See Electrical Equipment Section for complete data.  
Direction Indicators—Right and Left indicator lights above instrument dials. Lighted when direction signal on same side of car is operating.

## Switches

Lighting—Kaiser-Frazer No. 200819.  
Beam Selector—Kaiser-Frazer No. 201605.  
Direction Signal—Kaiser-Frazer No. 202692.  
Instrument—Kaiser-Frazer No. 200821 (Before Kaiser No. K100-46044), No. 202715 (Kaiser after No. K100-46044 & all Custom cars).

## Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps	Sealed Beam	4030
Parking	3	63
Beam Ind., Clock	1	51
Instrument, Nameplate	1½	55
Stop & Tail	21-3	1154
Rear License	3	63
Dome, Glove Compt.	21	1129

## MISC. ELECTRICAL

LIGHTING CIRCUIT BREAKER: Thermostatic type. On back of lighting switch.

FUSES: Clock—2 ampere. In clock lead.

Direction Signal—9 ampere. In flasher lead under instrument panel to left of steering column.

HORNS: Auto-Lite. Model HT-4021 or HT-4023 (Low Note), HT-4022 or HT-4024 (High Note). Twin horns.

Horn Relay: Auto-Lite Model HRL-4101. Relay connected through ignition switch (horns operative only with ignition switch "on").

Contacts Close—1.5-3.0 volts (seal to core with 4.0 volts maximum).

Contacts Open—.5 volt min. (open from seal).

Contact Gap—.026". Air Gap—.016-.020" (armature air gap with contacts closed but not sealed), .015-.018" (between armature leg and yoke with armature sealed to core).

## ENGINE

ENGINE SPECIFICATIONS: Own (Continental). Six Cylinder, "L" head type.

Bore—3 5/16". Stroke—4 3/8".

Displacement—226.2 cu. ins. Rated HP.—26.3.

Developed Horsepower—100 at 3600 RPM.

Compression Ratio—6.86-1 (First Cars), 7.3-1 (All Cars after Eng. No. 304305—Detroit, 66125—Muskegon).

►NOTE—7.3 Heads marked by "73" stamped on left front directly above engine number on block.

Compression & Vacuum Reading—See Tune Up data.

ORIGINAL BORE & BEARING SIZES: See Frazer Shop Notes.

TIGHTENING TORQUES: See Frazer Shop Notes.

CYLINDER HEAD INSTALLATION: See Frazer Shop Notes.

ENGINE REMOVAL: See Frazer Shop Notes.

PISTONS: Two types used. Aluminum alloy, Cam-ground, Tin-plated, strut type with split skirt, or T-slot type. Length 3 9/16" (both types).

NOTE—Pistons can be identified by drilled oil drain holes in fourth ring groove and strut within skirt at each pin boss (Strut Type), or by horizontal slot in fourth ring groove and short vertical slot on one side of skirt (T-slot Type).

►CAUTION—Piston weight different for each type.

Weight—15.58 ozs. (strut type), 14.28 ozs. (T-slot).  
Clearance—.0255-.0315" (Top Land). See Fitting new pistons.

Removal—Pistons and rods removed from above.

Fitting New Pistons: Use .0015" feeler stock ½" wide inserted on side opposite slot. Pull to withdraw feeler must be 5-10 lbs.

Replacement Pistons: See Frazer Shop Notes.

Installing Pistons: Slot in skirt toward left or away from camshaft (all types). NOTE—On pistons marked by arrow on head, arrow toward front of car.

PISTON RINGS: Two compression, two slotted oil rings, all above pin. Third ring groove drilled for oil drainage (all types), fourth groove drilled (strut type pistons), slotted (T-slot pistons).

Ring	Width	End Gap	Side Clearance
Compr. (#1)	.0925-.0935"	.008-.016"	.0025-.004"
Compr. (#2)	.0925-.0935"	.008-.016"	.0015-.0035"
Oil (#3, 4)	.1550-.1545"	.008-.016"	.001-.0025"

Installing Rings: Side marked "TOP" (compression rings) upward.

Replacement Rings: See Frazer Shop Notes.

PISTON PIN: Diameter—55/64". Length—2 13/16".

Floating type, with lock ring at each end.

Pin Fit in Piston—Tight fit (— .0003" clearance), or push fit with piston heated to 212°F. (heat piston in water at 212°F. to install new pins).

Pin Fit in Rod Bushing: +.0003" clearance. When installing oversize pins or new bushings, ream bushings for this clearance with DD-82-2 Reamer (used also to ream piston pin bore in piston).

Replacement Pins: Std. size and .003", .005" Oversize.

CONNECTING ROD: Length—7". Weight—29.6 ozs.

Crankpin Journal Diameter—2.0619-2.0627".

►CAUTION—Special bearing sizes used in some engines. See "Original Bearing Sizes" in Frazer Shop Notes.

Lower Bearing—Removable steel-backed, babbitt-lined type. No shims.

Clearance—.0005-.0023". Sideplay—.006-.010".

Bearing Adjustment: None. Replace bearings. Do not file rods or bearing caps.

Replacement Bearings: Furnished Std. Size and .001", .002", .010", .012" Undersize.

Installing Rods: Rods and bearing caps marked. Install with marks together and toward camshaft in same order as when removed. Oil spray hole in lower end of rod toward camshaft. NOTE—Lower bearings offset with narrow side of rod toward nearest main bearing (#1, 3, 5 toward front; #2, 4, 6 toward rear of engine).

CRANKSHAFT: Four bearing, counterweighted type with vibration dampener on forward end.

Journal Diameters—2 3/8" all bearings.

►CAUTION—Special bearing sizes used in some engines. See "Original Bearing Sizes" in Frazer Shop Notes.

Bearings—Removable, steel-backed babbitt-lined.

Clearance—.0015-.002".

Bearing Adjustment: None (no shims). Replace bearings. Do not file bearing caps. Upper main bearing shells can be "rotated" out by installing tool KF-8 in crankshaft journal hole (lug on tool engages edge of bearing when crankshaft rotated).

Filler Block (Front & Rear) Removal & Installation See "Crankshaft & Main Bearings" in Frazer Shop Notes.

Replacement Bearings: Furnished Std. size and .002", .004", .010" Undersize. NOTE—Two types of #1 bearings (flanged & unflanged). See Endplay data.

End Thrust: Taken by front (#1) bearing (special thrustwasher used with unflanged bearings). Controlled by shims installed between bearing journal and thrustwasher. Endplay—.004-.006".

Endplay Adjustment—See "Crankshaft & Main Bearings" in Frazer Shop Notes.

CAMSHAFT: Four bearing. Two-sprocket chain drive. NOTE—Two different camshafts used due to relocation of fuel pump. Camshaft No. 200113 (first cars—pump at rear), No. 203017 (later cars—pump at front).

Journal Diameters—#1, 1 7/8"; #2, 1 13/16"; #3, 1 3/4"; #4, 1 1/4".

Bearings—Steel-backed, babbitted bushings.

Clearance—.002-.004".

Bearing Adjustment: None. Replace bushings with camshaft removed.

End Thrust: Taken by thrust plate on front of engine between front bearing journal and sprocket.

Camshaft Removal: See "Camshaft & Bearings" in Frazer Shop Notes.

Timing Chain: Non-adjustable type. Width 1". Pitch .500", Length 23" or 46 links.

Camshaft Setting: Mesh chain with 9 links (or 10 link pins inclusive of pins opposite marks) between marks on sprockets with #6 piston at top dead center on compression stroke.

VALVES	Head Diameter	Stem Diameter	Length
Intake	1 33/64"	.3414-.3408"	5 3/16"
Exhaust	1 21/64"	.3395-.3387"	5 3/16"

	Seat Angle	Lift	Stem Clearance
--	------------	------	----------------

Intake	30°	.3481"	.0008-.0026"
--------	-----	--------	--------------

Exhaust	45°	.3315"	.0032-.0050"
---------	-----	--------	--------------

NOTE—Valves with drilled stem (for lock pin) used on first cars, valves with grooved stem (for split type locks) used on later cars.

Valve Guides: Pressed in block. Replace when stem clearance exceeds maximum (above). Ream new guides for correct clearance using Reamer C-249.

Valve Guide Installation—Use Driver DD-849. Drive old guide down and out, drive new guide down into place (same height as old guide with mark on driver stem in line with top face of block). NOTE—Tapered end of guide must be upward.

Valve Springs: Check spring with tester C-647. Pressure should be 101±3 lbs. at 1 3/8". Spring free length 1 15/16".

	Spring Pressure	Length
Valve Closed .....	51 lbs.	1 43/64"
Valve Open .....	113 lbs.	1 5/16"

**Valve Lifters:** Barrel type. NOTE—Lifters can be removed (some engines only) without disturbing cylinder head. See "Valve System" in Frazer Shop Notes.

**Clearance—.0005-.0018".** With correct clearance, lifter should rotate in bore with a slight drag.

**Replacement Lifters—**Furnished Std. size and .0005", .001", .0015", .002" Oversize.

### VALVE TIMING

- **Tappet Clearance:** CAUTION—Two settings used:  
Before Eng. No. 10769—.010" Int., .014" Exh. Cold.  
After Eng. No. 10769—.014" All Valves, Cold.
- Valve Timing:** See Camshaft Setting above.
- Intake Valves—**Open 10° BTDC. Close 60° ALDC.
- Exhaust Valves—**Open 55° BLDC. Close 10° ATDC.
- Valve Timing Check—**With tappet clearance set at .014" (running clearance), #1 exhaust valve should close with piston 10° or .045" after top dead center with the ten-degree mark after the dead center mark "DC" at indicator in flywheel housing inspection hole (before Eng. No. 17160). Beginning with Eng. No. 17160, marks located on dampener.

### LUBRICATION

- Lubrication System:** Pressure to crankshaft, connecting rod, camshaft bearings, exhaust valve lifters, timing chain. Oil pump located in oil pan.
- Crankcase Capacity—**5 qts. (refill), 5½ (dry).
- Normal Oil Pressure—**35 lbs., 2000 RPM., 30 MPH.
- Oil Pressure Regulator—**Under plug on right side of crankcase between #4 & #5 cylinders. Opens at 35 lbs. Adjustable by adding or removing washer, No. 200272, between end of spring and plug.
- Oil Pan Removal:** See Frazer Shop Notes.
- Crankcase Ventilation:** Filter element in oil filler cap (air intake). Outlet pipe located on front valve cover plate on right side of engine.
- Oil Pump:** Gear Type. In crankcase.
- Oil Pump Servicing—**See Frazer Shop Notes.
- Oil Filter:** Replace cartridge at 10,000 mile intervals or more often if required by operating conditions.
- Oil Pressure Gauge:** King-Seeley electric type.
- Dash Unit—**K-S No. 41410, Kaiser-Frazer No. 201539 (First Type—Ivory on Green), K-S No. 42020; Kaiser-Frazer No. 202787 (Later Type—White on Beige).
- Engine Unit—**K-S No. 40767, Kaiser-Frazer No. 201540.
- See Miscellaneous Section for complete data.

### COOLING

- Cooling System:** Sealed system (relief valve in filler cap) with positive circulation and thermostatic control. NOTE—Radiator changed—see Radiator.
- Capacity (First 22" Radiator)—**15 qts. (14 qts. at driving level). (Later 17" Radiator) 13½ qts. (13 qts. at driving level).
- Pressure Valve—**AC. No. 846740 (Radiator Filler Cap). Opens at 3¾ lbs. (¾-4¼ lbs.).
- Radiator:** Two types used as follows:  
**First Cars—**No. 200445 (22" wide). Service by installing later type (No. 202906) and installing Radiator Shroud Side Panel Extension No. 203100 (two required), using No. 576 screws (10 required).  
**Later Cars—**Radiator No. 202906 (17" wide).
- Radiator Removal—**See Frazer Shop Notes.
- Water Pump:** Centrifugal type with ball bearing shaft. See Water Pump Section for complete data.
- Belt Adjustment—**See Generator Belt Adjustment.

**Thermostat:** Kaiser-Frazer No. 200160 (Std.), No. 202349 (for Permanent Anti-freeze only). In water outlet elbow on cylinder head.

**Setting (Std. type)—**Begins to open at 148-155°F.

**Temperature Gauge:** King-Seeley electric type.

**Dash Unit—**K-S No. 41415, Kaiser-Frazer No. 201543 (First Type—Ivory on Green), K-S No. 42025, Kaiser-Frazer 42025 (Later—White on Beige).

**Engine Unit—**K-S 40380, Kaiser-Frazer 201550.

See Miscellaneous Section for complete data.

### CLUTCH

**Borg & Beck.....Model 9A7**  
**Auburn (Some Cars).....Model 9251-15**

**Clutch Identification—**Types can be identified by number of pressure plate springs—3 (Auburn), 9 (Borg & Beck—cover also stamped "951").

See Clutch Section for complete data.

**Facings (Borg & Beck)—**Woven asbestos, 2 required. I.D. 6". O.D. 9¼". Thickness ¼".

**Facings (Auburn)—**Moulded metallic or Raybestos, 2 required. I.D. 6". O.D. 9¼". Thickness .135".

**Pedal Adjustment:** Pedal free travel ¾-1". To adjust, position nut on pedal assist spring link (at rear end of spring) so that it is lined up with spring adjusting gauge, KF-10, installed on spring.

**Removal:** Remove transmission (see Transmission Removal below), remove clutch housing underpan, disconnect clutch pedal cross-shaft from pedal linkage. Install Clutch Plate Aligning Arbor, C-360, to hold clutch parts in alignment, take out mounting screws in clutch cover flange (rotate flywheel so that all screws accessible through pan opening). Remove aligning arbor, remove clutch cover assembly and driven member through underpan opening.

### TRANSMISSION

**Warner Model AS11-T86E.** All helical gear type. Constant-mesh, synchro-mesh (Second and High), sliding gear (Low and Reverse).

See Transmission Section for complete data.

**Transmission Control:** Remote control type with gearshift lever mounted on steering column.

See Transmission Section for complete data.

**Removal:** Disconnect front propeller shaft at front universal joint (take out bolts in transmission companion flange), move shaft out of the way. Disconnect speedometer drive cable and transmission control levers at transmission case, free parking brake cable support bracket from frame cross-member. Remove four bolts mounting engine support on frame cross-member (support comes out with transmission). Loosen all four bolts mounting transmission on clutch housing, remove two lower bolts only (CAUTION—two upper bolts must support transmission until ready for removal). Remove flywheel housing underpan, raise rear end of engine (place jack under flywheel, use wood block between jack and flywheel) for sufficient clearance for transmission removal. Remove the two upper mounting bolts, move transmission back until clear of clutch, slide transmission clear of cross-member and remove from beneath car.

### UNIVERSALS

**Detroit Series 4200.** Ball-and-trunnion type or Mechanics. Roller bearing type. Three used with intermediate universal at propeller shaft support.

See Universals Section for complete data.

**Propeller Shaft & Support Bearing:** Two shafts used: Propeller Shaft & Support Bearing Servicing—See "Propeller Shaft" in Frazer Shop Notes.

### REAR AXLE

**Spicer (Salisbury) Model 41-2.** Semi-floating, Hypoid Gear type with Hotchkiss Drive.

See Rear Axle Section for complete data.

**Ratio—**4.09-1 Std., 3.73-1 Special.

**Backlash—.003-.006".** Shim adjustment.

**Removal:** Hoist rear end of car and place supports under frame. Remove rear wheels and drums (use Puller C-319). Disconnect propeller shaft at rear universal flange, disconnect hydraulic brake line at connector on axle housing, disconnect rear shock absorbers and sway eliminator links (when used) at spring seat, disconnect parking brake cables. Disconnect both springs at front hanger and rear shackle, remove axle and spring assembly from beneath car. NOTE—Axle can be removed without disturbing springs by taking out spring "U" bolts.

**Axle Shaft Removal—**Remove rear wheel and drum using puller C-319. Disconnect hydraulic brake line at backing plate and brake cable. Remove outer oil seal and backing plate (CAUTION—do not lose adjusting shims between backing plate and housing flange). Pull axle shaft and bearing assembly out using Puller KF-15.

**Wheel Bearing Adjustment:** Adjust endplay by adding or removing shims located between backing plate and axle housing flange (shims .003", .005", .010", .030" thick). Make certain that shim thickness at right wheel is .060" (to center thrust block on differential pinion), then adjust endplay at left wheel. Endplay—.001-.006".

### SHOCK ABSORBERS

**Monroe.** Direct acting, hydraulic type. Serviced by replacement (mountings serviced separately).

See Shock Absorber Section for complete data.

	Front	Rear
Kaiser-Frazer No. (Std.) .....	201490	201493
Kaiser-Frazer No. (Exp.) .....	202864	202866

### FRONT SUSPENSION

**Front Suspension:** Independent, linked parallelogram type with coil springs.

See Front Suspension Section for complete data.

**Kingpin Inclination—**4¾-5¾° crosswise.

**Caster—**0° preferred (-1° to +1°).

**Camber—**¼° preferred (0° to ¾°).

**Toe-In—**1/16". Adjust by turning both tie rods.

**Steering Geometry (Toe-out):** Inner wheel 23°. Outer wheel 20°. No adjustment. Check for bent steering arms.

### STEERING GEAR

**Gemmer Model 305.** Worm-and-Roller type with "push-pull" adjustments.

NOTE—Both "2-tooth Roller" and "3-tooth Roller" types used. Both gears are similar design.

See Steering Gear Section for complete data.

### BRAKES

**Service Brakes:** Bendix (Lockheed) Hydraulic type with floating self-centering shoes (no anchor pin adjustment). Hand lever applies rear wheel service brakes.

See Brake Section for complete data.

**Drums—**Composite (cast-iron & steel). Diameter 11".

**Clearance—.008"** at heel and toe of each shoe.

**Lining—**Molded type. Width 2". Thickness 13/64".

**Length 12¼"** (forward shoe—all wheels), 10 1/32" (rear shoe—all wheels).

**Hand Brake:** See Service brake data (above).

**MODEL IDENTIFICATION**

**SERIAL NUMBER:** On top left front corner of engine block below head. First number 2,210,001.

**ENGINE NUMBER:** Same as Serial Number (above).

**TUNE-UP**

**COMPRESSION:**—Ratio—6.25-1 Std. 5.75-1 Optl.

Pressure—160 lbs. at 1000 R.P.M. or approximately 105-110 lbs. at cranking speed.

**VACUUM READING:**—Gauge should show steady reading of 20-21" with engine idling at 6 M.P.H.

**FIRING ORDER:** 1-6-2-5-8-3-7-4. See diagram.

**SPARK PLUG GAP:** .025-.030".

Plug Type—AC K-7, 14 mm. Metric.

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap (663-J)—.016" Cam Angle 31° (closed).

Automatic Advance—14° max. at 1850 RPM (distr.).

Vacuum Advance (663-J)—9° distr. with 15-18" vacuum.

**IGNITION TIMING:** See Ignition Timing.

Std. Setting—8° BTDC. with harmonic balancer mark "IGA" at indicator on front of engine.

**CARBURETION:** See Carburetor & Carb. Equipment.

Idle Setting—Both idle screws midway between "miss" and "roll" points. Idle speed 6 MPH.

Float Level—Fuel level 15/32" below top of bowl.

Accelerating Pump—No adjustment.

Fuel Pump Pressure: 4½ lbs. maximum.

**VALVES:** See Valve Timing.

Tappet Clearance—.006" Int., .009" Exh., Hot.

**STARTING:** See Battery, Starter, Generator, Regulator.

**IGNITION**

**Ignition Switch:**—Delco-Remy Model 431-L. Switch and cable assembly. Connected to coil by armored cable.

**Ignition Lock:**—Briggs & Stratton.

**COIL:** Delco-Remy Model 539-C. Mounted on dash.

Ignition Current—2.2 amperes idling, 4.4 stopped.

**CONDENSER:** Delco-Remy No. 1839231.

Capacity—20-.25 microfarad.

**DISTRIBUTOR** Delco-Remy 663-J. Single breaker, 8 lobe cam, full automatic advance type with auxiliary vacuum spark control and manual adjustment at distributor. No synchronization required.

Breaker Gap—Set at .016". Limits .012-.018".

Cam Angle or Dwell—31° (closed), 14° open).

Breaker Arm Spring Tension—19-23 ounces.

**Automatic Advance**

Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start.....	500	1.....	1000
5.75.....	1300	11.....	2600
14.....	1850	28.....	3700

**Vacuum Spark Control Model 680-Z.** Integral type. Mounted on housing and linked directly to breaker plate. Provides additional advance at speeds above idling except when engine is accelerated or operated with wide open throttle when spark is retarded by return spring in unit.

**Vacuum Advance**

Engine Degrees	Vacuum (" of HG)
Start.....	8-10"
18° Max.....	15-18"

**Distributor Removal:**—Mounted on cylinder head. To remove, disconnect vacuum line, take out hold-down screw in advance arm.

**IGNITION TIMING**

**IGNITION TIMING:**—Setting for all engines as follows. See Manual Adjustment Section below.

Flywheel Degrees      Piston Position

All engines ..... 8° BTDC ..... .0264" BTDC

**To Set Timing (Using Synchroscope)**—Recommended by manufacturer. Clip Synchroscope lead to #1 spark plug and direct light on harmonic balancer at front of engine. Idle engine, loosen hold-down screw in advance arm, rotate distributor until timing mark "IG/A" which is 8° before top dead center mark "C.1/6", lines up with pointer on chain case, tighten hold-down screw.

**Timing (Without Synchroscope)**—With #1 piston on compression, turn engine over until piston is 8° (or .0264") before top dead center, stop when "IG/A" mark on harmonic balancer lines up with pointer on chain case, loosen hold-down screw, rotate distributor until contacts begin to open, tighten hold-down screw.

**Manual Adjustment**—With ignition set as above, slight 'ping' should be noticeable when engine is accelerated with wide open throttle at speeds below 15 M.P.H. If 'ping' is too severe, loosen hold-down screw in advance arm, rotate distributor one graduation on scale clockwise to retard spark, repeat test. Adjustment permits 10° advance or retard from center '0' position.

**NOTE**—Check engine for faulty spark plugs, excessive carbon deposits or localized 'hot spots' before changing manual adjustment.

**CARBURETOR**

**CARBURETION:**—Carburetor—Stromberg Model EE-15. 1" dual downdraft type.

For complete data, refer to Carburetor Index.

**NOTE**—Do not adjust carburetor until engine is warmed up so that choke valve is wide open and engine idling at hot or slow idling speed.

**Idle Adjustment**—Set throttle stopscrew so that idling speed is 6 M.P.H. Turn each idle adjusting screw in until engine begins to lag or miss, then turn each out until engine begins to roll, finally turn screws in slowly until engine fires smoothly. Readjust throttle stopscrew for correct idling speed.

**Accelerating Pump Setting**—Not adjustable.

**Fast Idle**—Integral with carburetor. See article on Fast Idle and Automatic Choke as used on EE-15 Stromberg carburetors.

*For complete data, refer to Carburetion Equip. Index.*

**Automatic Choke**—Triple Range Automatic and manual choke control.

*For complete data, refer to Carburetion Equip. Index.*

## CARB. EQUIPMENT

**Air Cleaner**—A.C. #1525600 oil-wetted type standard, #1525979 oil-bath type heavy duty optional.

**NOTE**—Smaller main metering jet must be used in carburetor when heavy duty oil-bath type cleaner used. See Stromberg Jet Specifications in Carburetion Section.

**Fuel Pump**: AC Type I, No. 1522248 (fuel & vacuum).

*For complete data, refer to Carburetion Equip. Index.*

**Gasoline Gauge**—AC. Electric type. #1515303 (dash unit), #1515428 (tank unit).

*For complete data, refer to Carburetion Equip. Index.*

## BATTERY

**BATTERY**—Delco, Type 17-K. 6 volt, 17 plate, 110 ampere hour capacity (20 hour rate).

**Starting Capacity**—131 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 4.4 minutes.

**Grounded Terminal**—Positive (+) terminal.

**Location**—Under right hand front seat.

## STARTER

**Delco-Remy Model 727-N. Armature No. 823881.**

**Drive**—Overrunning clutch and manual pinion shift operated by solenoid switch.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—24-28 ounces each.

### Performance Data

	Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5500	5.0	65	
15 "	Lock	3.0	600	

**Removal**—Starter flange mounted on left front face of flywheel housing. To remove, take out flange mounting screws.

**Starting Switch**—Solenoid switch Type 1514. Push-button 1405 on instrument panel. Solenoid is controlled through relay by push button on instrument board. Operative only with ignition "on".

*For complete data, refer to Electrical Equipment Index.*

## GENERATOR

**Delco-Remy Model 961-D. Armature No. 1857866.** Straight shunt (two brush) type with external voltage and current regulation. Ventilated by fan on drive pulley.

**Charging Rate Adjustment**—No adjustment at generator. Charging rate controlled by Voltage Regulator and maximum output controlled by Current Regulator. See Regulator Section following.

**Maximum Charging Rate**—20 amperes (cold) with discharged battery as indicated on test ammeter connected in charging line at 'BAT' terminal on

control unit. Decreases as battery comes up on charge. Generator output constant at all speeds above 1550 R.P.M. or approximately 20 M.P.H.

### Performance Data—Generator Cold

Amperes	Volts	R.P.M.
22	8.0	1550

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—22-26 ounces each.

**Field Current**—1.7-1.9 amperes at 6 volts.

**Removal**—Pivot mounted at left front of engine with fan belt drive. To remove, take out two pivot bolts and one clamp bolt.

**Belt Adjustment**—Loosen generator pivot bolts and clamp bolt, pull generator out until belt deflection midway between fan and generator pulleys is  $\frac{1}{8}$ -1" (measured from straightedge with  $\frac{1}{8}$ " projection at center laid along belt).

## REGULATOR

**Delco-Remy Model 5559. Double Core Type Voltage & Current Regulator (With 'IGN' Terminal).** Cutout Relay and vibrating Voltage & Current Regulators in case on dash.

*For complete data, refer to Electrical Equipment Index.*

**NOTE**—Units are sealed. Performance can be checked as directed below without breaking seals. Seals must be broken and cover removed (voiding warranty) to make adjustments.

### Cutout Relay

**Cuts In**—6.9-7.6 volts, 12 M.P.H.

**Cuts Out**—3 ampere max. discharge at 6.3 volts.

**Contact Gap**—.018-.025".

**Air Gap**—.018-.022" with contacts closed.

### Voltage Regulator

**Setting**—7.55-7.85 volts at 72° F., 7.45-7.55 volts at 150° F. Regulator is over-compensated for temperature and must be checked at these points.

**To Check**—Disconnect lead at 'IGN' terminal on regulator case, connect jumper between 'IGN' and 'BAT' terminals, connect test ammeter in charging line at 'BAT' terminal, connect voltmeter between 'IGN' terminal and ground. Operate generator at 2800-3200 R.P.M., adjust charging rate to 8-10 amperes, note voltmeter reading. Voltage should agree with setting given above.

**To Adjust**—Change regulator spring tension slightly by bending spring hanger at lower end of armature spring.

**NOTE**—Do not operate generator on open-circuit at any time. All Voltage Regulator readings must be taken with cover on unit and setting should be checked by decreasing speed until Cutout Relay contacts open, and then increasing speed to original point.

**Contact Gap**—.015-.025".

**Contact Spring Tension**—3.5 ozs. minimum.

**Air Gap**—.060-.070" between armature and core with armature down so that fibre bumper just touches stop, .007-.010" between fibre bumper and stop with armature up.

### Current Regulator

**Setting**—20-22 amperes.

**To Check**—Connect ammeter in charging line at 'BAT' terminal on regulator, disconnect lead at 'IGN' terminal (to eliminate voltage regulator action). Turn on lights, operate generator and increase speed until current regulator begins to

operate and output remains constant. Ammeter reading should agree with setting given above.

**To Adjust**—Change regulator spring tension slightly by bending spring hanger at lower end of armature spring slightly.

**NOTE**—Generator voltage must not be allowed to exceed 8.5 volts with Voltage Regulator shorted out.

**Contact Gap**—.015-.025".

**Contact Spring Tension**—3.5 ozs. minimum.

**Air Gap**—.070-.080" between armature and core with armature down so that fibre bumper just touches stop, .007-.010" between fibre bumper and stop with armature up.

## LIGHTING

**LIGHTING**—Headlamps—Guide Multi-beam, Pre-focused, Cross-beam type with special non-interchangeable lenses. Headlamps aimed straight-ahead with lenses removed. Asymmetrical passing beam (upper beam left hand headlamp, lower beam right hand headlamp), controlled by foot selector switch with lighting switch in 'Country Driving' position.

**Headlamp Beam Indicators**—Consist of four bulbs in lower half of speedometer which illuminate markers as follows:

**City**—Lower beam both headlamps.

**Drive**—Upper beam both headlamps.

**Pass**—Asymmetrical passing beam.

**Park**—Parking bulbs in headlamps.

### Switches

**Lighting**—Delco-Remy Model 487-P (L.H.S.R.), 487-N (R.H.S.R.), 487-R (L.H. or R.H.S.R.).

**Foot Selector**—Delco-Remy Model 471-Z, U (RHD).

**Instrument Lamp**—Delco-Remy Model 1364.

**Stop Lamp**—Hydraulic type on distributor at rear of brake master cylinder.

### Bulb Specifications

Position	Candlepower	Mazda No.
Headlamp (Right)	50-32	2530-L
Headlamp (Left)	32-32	2330-L
Instrmt., Map, Qtr., Step, Tail	3	63
Parking, Clock	1.5	55
Beam Indicators	1	51
Stop, Dome	15	87

**NOTE**—Headlamp bulbs are Pre-focused, 'Long-life' type. In all states where 50 cp. bulbs are prohibited, the 32-32 cp. 2330-L bulb is used in both headlamps.

## MISC. ELECTRICAL

**THERMOSTATIC RELAY**—Model 411-A. Contacts remain closed with current of 25 amperes but open within one minute with load of 38 amperes. Non-adjustable.

**HORNS**—Klaxon Model K-33-D, Type 1951 (low note), 1952 (high note). Vibrator type, twin horns with blended tone operated by horn relay.

Horn Type	Current at 6 volts	Air Gap
1951	12-14	.045-.050"
1952	11-13	.036-.040"

**Horn Relay**: Delco-Remy Model 266-T or 266-TK.

**Contacts Close**—25 ampere at 2 volts min.

**Current Draw**—.8 ampere.

**Contact Gap**—.015-.025". Spring Tension—6-8 zs.

**Air Gap**—.012-.017" with contacts closed.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

**ENGINE****ENGINE SPECIFICATIONS:**—8 cylinder, 'L' head.

Bore—3". Stroke—4 3/8".

Displacement—248 cubic inches.

Rated Horsepower—28.8.

Developed Horsepower—105 at 3600 R.P.M. (Std. 6.25-1 head).

Compression Ratio—6.25-1 Std. cast-iron head.

NOTE—Shims for reducing compression ratio to 5.75-1 available for special operating conditions.

Compression Pressure—160 lbs. at 1000 R.P.M. or approximately 105-110 lbs. at cranking speed for std. 6.25-1 head.

Vacuum Reading—Gauge should show steady reading of 20-21" with engine idling at 6 M.P.H.

**PISTONS:**—Lynite, Lo-Ex aluminum alloy, "T" slot, Cam ground type with anodized finish (special hard oxide formed on bearing surface). Pistons cannot be ground. Length—3 11/16". Weight—12.128 ozs.

Removal—Pistons and rods removed from below.

Clearance—Top .015". Bottom of Skirt .0011-.0015". See Fitting New Pistons.

**Replacement Pistons:**—Finished anodized pistons furnished in standard (2.9982-3.0002") and .003" (3.0012-3.0032"), .005" (3.0032-3.0052"), .010" (3.0082-3.0102"), .015" (3.0142-3.0152") oversizes. Cylinder bores should be finished with a 500 grit wet stone.

NOTE—Cylinder bores held within .002" limits. Maximum cylinder bore out-of-round .0005".

**Fitting New Pistons:**—Check piston with micrometer gauge at vertical slot 1 1/4" below top of head and 1/2" above lower edge of skirt. Using 3/8"-1/2" feeler gauges inserted between piston and cylinder wall on side opposite slot to check clearance, piston should drop of its own weight with .0015" feeler and should hold its own weight with .002" feeler.**Installing Pistons:**—Slot should be toward left or away from camshaft**PISTON RINGS:**—Two compression, two oil control rings per piston, all above pin. Lower ring grooves drilled radially with oil drain holes.

NOTE—A narrow heat deflector groove located above top compression groove. No ring fitted in this groove.

Ring	Width	End Gap	Side Clear.
Comp. (all)	1/8"	.007-.012"	.0015-.0028"
Oil Cont. (#3)	1/8"	.007-.015"	.0013-.0026"
Oil Cont. (#4)	5/32"	.007-.015"	.0013-.0026"

NOTE—Worn limits on all rings .025" (End gap) and .004" (Side Clearance).

**PISTON PIN:**—Diameter 55/64". Length 2 11/16". Pin is locked in one piston boss by locking screw. Split-type bushing used in pin hole in rod. See Note below. Pin Fit in Piston—.0001" clearance or free fit (no play) at room temperature 70° F. (free end), .0003" press fit (locking pin end).

Pin Fit in Rod Bushing—.0002-.0008" (new), .0015" maximum (worn).

**Removal:**—Remove lock screw, place piston in boiling water for one minute, then push pin out by hand from locking screw side (to install, proceed as mentioned, except that the pin is pushed in from the opposite direction).

NOTE—In removing and installing split-type bushing an arbor press and special tool kit (Tool No. HM-250) are required.

**CONNECTING ROD:**—Weight 32.336 ozs. Length 9".

Crankpin Journal Diameter—2 1/4".

Lower Bearing—Removable steel-backed, babbitt-lined type. No shims.

Clearance—.001-.0025" (new), .006" max. (worn). Sideplay .003-.006".

Bearing Adjustment:—None (no shims). Replace bearings. Do not file rods or caps.

Installing Rods:—Oil hole in lower bearing upper half must be toward right or camshaft side on all rods.

**CRANKSHAFT:**—5 bearing. Integral counterweights.

Journal Diameters—#1, 2 3/8"; #2, 2 9/16"; #3, 2 3/8"; #4, 2 11/16"; #5, 2 3/4".

NOTE—Journal out-of-round .002" maximum.

Bearing Type—Removable steel-backed, babbitt-lined shells. New bearings need no line-reaming.

Clearance—.002" (new), .004" (worn).

Bearing Adjustment:—None (no shims). Replace bearings. Do not file bearing caps. Upper halves of bearings can be removed and installed by rotating crankshaft with "T" shaped cotter pin installed in oil passage.

NOTE—When reinstalling rear main bearing cap use new wooden plugs in grooves.

End Thrust:—Taken by flange on front (#1) bearing and steel washer behind timing sprocket. Endplay .001-.004" (new), .010 max. (worn).

**CAMSHAFT:**—6 bearing. Non-adjustable chain drive.

Journal Diameters—#1, 2.3095-2.3100"; #2, 2.2470-2.2475"; #3, 2.1845-2.1850"; #4, 2.1220-2.1225"; #5, 2.0595-2.0600"; #6, 1.8095-1.8100".

Bearing Type—Removable bronze bushings.

Clearance—.002-.004" (new), .005" (worn limit).

End Thrust:—Taken by spring-loaded plunger or thrust button in forward end of camshaft. No end-play permissible.

Timing Chain:—Whitney #CL-205. Width 1 1/4". Pitch 1/2". Length 23" or 46 links.

Camshaft Setting:—Sprockets are marked. Mesh chain with sprockets turned so that 'O' marks are adjacent and in line with a straightedge across the shaft centers.

Valves:	Head Diam.	Stem Diam.	Length
Intake	1.562"	.3415-.3425"	5 9/32"
Exhaust	1.421"	.3405-.3415"	5 9/32"

	Seat Angle	Lift	Stem Clearance
Intake	30°	5/16"	.006" (worn limit)
Exhaust	45°	5/16"	.005" (worn limit)

Valve Guides:—Removable. Pressed in block with long stepped end down and finish reamed to provide clearance of .001-.002" Int., .001-.003" Exh.

Valve Springs:—Install springs with close coils below. Free spring length 2 9/16".

	Spring Pressure	Length
Valve Closed	40-46 lbs	2 1/4"
Valve Open	112-120 lbs	1 15/16"

Valve Lifters:—Mushroom type. Clearance in Lifter Guide .0003-.0008" (new), .005" (worn).

**VALVE TIMING**

Tappet Clearance—.006" Int., .009" Exh. Hot.

Valve Timing:—See Camshaft Setting above.

Intake Valves—Open 6° ATDC. Close 37° ALDC.

Exhaust Valves—Open 34° BLDC. Close 5° ATDC.

To Check Valve Timing—No. 1 intake valve pens with piston on top dead center with .0118" tappet clearance.

**LUBRICATION**

LUBRICATION:—Pressure system from oil pump in crankcase through main oil channel in right hand crankcase wall.

Oil Pump:—Gear type located in crankcase. Ignition timing not disturbed by oil pump removal.

Oil Pump Drive Clearances—Drive gear endplay .003-.010" (new), .015" (worn limit). Drive gear backlash must not exceed .018". Clearance between bushing and drive shaft .001-.0025" (new), .010" (worn limit).

Oil Pump Gear Clearances—Clearance between pump gears and pump housing .0025-.0085" (new), .010" (worn limit). Pump gear endplay .0025-.0055" (new), .015" (worn limit).

Normal Oil Pressure:—15 lbs. idling, 25 lbs. at 60 M.P.H.

Oil Pressure Regulator:—Operates at 25 lbs. Mounted on oil pump. Not adjustable.

Crankcase Capacity:—7 qts. (refill).

**COOLING**

COOLING SYSTEM:—Water Pump. Centrifugal type. Belt-driven in tandem with generator.

See Water Pump Section for complete data.

Thermostat: Harrison, By-pass type. In cylinder head water outlet.

Setting—Two types available as follows:

Standard: Starts to open 140-145°F. Fully open 170°F.

High Reading (for use with Heaters): Starts to open 160-165°F. Fully open 185°F.

**CLUTCH**

CLUTCH:—Borg &amp; Beck Model 10A4 with Long Driven Member (10CF-CI). Single plate dry disc type.

See Clutch Section for complete data.

Facings—Moulded type, 2 required. Inside Diam. 6". Outside Diam. 10". Thickness .137".

Adjustment—Free movement of clutch pedal should be 3/8"-1 1/8". Adjust by loosening locknut and turning stop screw on auxiliary cross shaft. Clearance between pedal and underside of toeboard should be 3/8"-3/4". Adjust by changing length of clutch release rod. Free rod at front end, turn rod in or out. Pedal should touch toeboard when clutch fully released. Adjust clutch release rod (as above) if necessary.

Removal—Disconnect front universal joint, remove transmission, drop clutch housing pan, remove clutch release yoke retaining screw, prick punch clutch cover, spring pressure plate and flywheel (install in same position to maintain balance), take out clutch mounting bolts, turning all bolts out evenly to release spring tension. Remove clutch from below.

## TRANSMISSION

**TRANSMISSION:**—Own Make. Constant-mesh helical gear (second), synchro-mesh (second and high), sliding helical gear (low and reverse).

*See Transmission Section for complete data.*

**Removal:** Disconnect front universal and remove from shaft. Disconnect speedometer cable. Take out transmission mounting capscrews, pull transmission straight back and remove from car.

**NOTE**—Keep transmission in high gear or install brace across face of case to hold clutch connection in position, preventing high-speed synchronizing drum from pulling out of splines in main shaft.

## UNIVERSALS

**UNIVERSAL JOINTS:**—Mechanics Model 3-C. Needle bearing type, 2 used.

*See Universals Section for complete data.*

## REAR AXLE

**Own Make**—Semi-floating, spiral bevel gear type with Hotchkiss drive.

*See Rear Axle Section for complete data.*

**NOTE**—Manufacturer recommends Differential Carrier Assembly be returned to factory for servicing.

**Ratio**—Standard 4.55-1. Optional 4.10-1.

**NOTE**—Ratio stamped on bottom of differential carrier. Can be read from beneath car.

**Backlash**—.004-.008". Screw adjustment.

**Removal:**—Disconnect drive shaft at rear universal, remove axle shafts (see below), remove capscrews on differential carrier flange, pull carrier assembly out without disturbing axle housing.

**Axle Shaft Removal**—Jack up car, remove rear wheels, pull wheel hub and brake drum assembly, disconnect brake line and remove backing plates (bleed brake line when re-installed). Use tool J-838, pull shaft and bearing assembly out.

**Wheel Bearing Adjustment:**—None (sealed type).

## SHOCK ABSORBERS

**Delco**. Double acting hydraulic type (front & rear).

*See Shock Absorber Section for complete data.*

## FRONT SUSPENSION

**Front Suspension:**—Independent, linked parallelogram type with coil springs.

*See Front Suspension Section for complete data.*

**Kingpin Inclination**—4°51' crosswise.

**Caster**—1½-2°.

**Camber**—¼-1° with car weight on wheels.

**Toe In**—0-1/16".

**Steering Geometry**—Inner wheel turned 21¼-23¼°, outer wheel 20°. Check tie rod ends and kingpins for looseness.

## STEERING GEAR

**Steering Gear:** Saginaw Model. Worm-and-Double roller type with center steering.

*See Steering Gear Section for complete data.*

## BRAKES

**BRAKES:**—Bendix Hydraulic, single anchor type. Hand lever applies rear wheel service brakes. See article in Brake Section for complete data.

*See Brake Section for complete data.*

**Wheel Cylinders**—Diameters: front 1 1/16", rear 15/16". No part of assembly is interchangeable between front and rear wheels.

**Drum Diameter**—11.995-12.005". Out-of-round .007" maximum. Run out (installed) .010" maximum.

**Lining**—Primary (front) shoe moulded. Secondary (rear) shoe woven. Length front wheel (front shoe 10½", rear shoe 13"), rear wheel (each shoe 13"). Width 2". Thickness 3/16". Length per wheel 23½" (front), 26" (rear).

**Clearance**—.010" between lining and drum.

**Hand Brake Adjustment:**—See Service Brake.

**ENGINE HOOD & SIDE PANEL REMOVAL:**—See Cadillac Special Shop Notes for complete instructions.

### MODEL IDENTIFICATION

**SERIAL NUMBER:** First No. 2,230,001 (1937), 2,270,001 (1938). Stamped on crankcase (parallel to dash) behind left cylinder bank (visible from left side with engine hood up) and on left frame side member in rear of front engine support on 1938 cars.

**ENGINE NUMBER:** Same as Serial Number. Stamped on crankcase (parallel to dash) behind left cylinder bank and on left frame side member in rear of front engine support.

### TUNE-UP

**COMPRESSION:**—Ratio—6.25-1 Std., 5.75-1 Optl. Pressure—155 lbs. at 1000 R.P.M. or approximately 105-110 lbs. at cranking speed.

**VACUUM READING:**—Gauge should show steady reading of 20-21" with engine idling at 6 M.P.H.

**FIRING ORDER:** 1-8-7-3-6-5-4-2. See diagram for cylinder numbering and spark plug cable connections.

**SPARK PLUGS:** AC No. 45. 14 mm. Metric type. Gaps—.025-.027"

**IGNITION:** See Coil, Condenser, and Distributor. Breaker Gap—.015" Cam Angle 31° (closed). Automatic Advance—12° max. at 2000 RPM (Distr.).

**IGNITION TIMING:** See Ignition Timing. Std. Setting—5° BTDC. with mark "IGA" on crankshaft pulley at indicator on front of engine.

**CARBURETION:** See Carburetor & Carb. Equipment. Idle Setting (Stromberg Carb.)—Both idle screws midway between "miss" and "roll" points. Idle speed 6 MPH.

Idle Setting (Carter Carb.)—Both idle screws  $\frac{3}{4}$ -1 $\frac{1}{4}$  (374-S),  $\frac{1}{4}$ -1 (392-S) turn open. Idle speed 6 MPH. Float Level (Stromberg Carb.)—Fuel level  $\frac{5}{8}$ " below top edge of bowl.

Float Level (Carter Carb.)—13/64" (374-S), 3/16" (392-S) from gasket seat on cover to top of float.

Accelerating Pump (Stromberg Carb.)—Inner hole (min. stroke)—Summer, Outer hole (max)—Winter. Accelerating Pump (Carter Carb.)—Inner hole—Normal. Outer hole extreme winter temperatures. Fuel Pump Pressure: 4 $\frac{1}{2}$  lbs. maximum.

**VALVES:** See Valve Timing. Tappet Clearance—None in service (hydraulic type take-up used).

**STARTING:** See Battery, Starter, Generator, Regulator.

### IGNITION

**Ignition Switch:**—Delco-Remy Model 435-K. Connected to coil by armored cable.

**Ignition Lock:**—Briggs & Stratton No. 45792 (cylinder), 80203 (case). Key Series—8000-9499.

**COIL:** Delco-Remy Model 539-C. Mounted on dash. Ignition Current—2.2 amps. idling, 4.4 stopped.

**CONDENSER:** Delco-Remy Part No. 829107 (665-G Distr.), No. 1869704 (1110604 Distr.). Capacity—20-25 microfarad.

**DISTRIBUTOR:** Delco-Remy Model 665-G (1937), 1110604 (1938). Single breaker, 8 lobe cam, full automatic advance type with manual adjustment at distributor. Vacuum spark control not used.

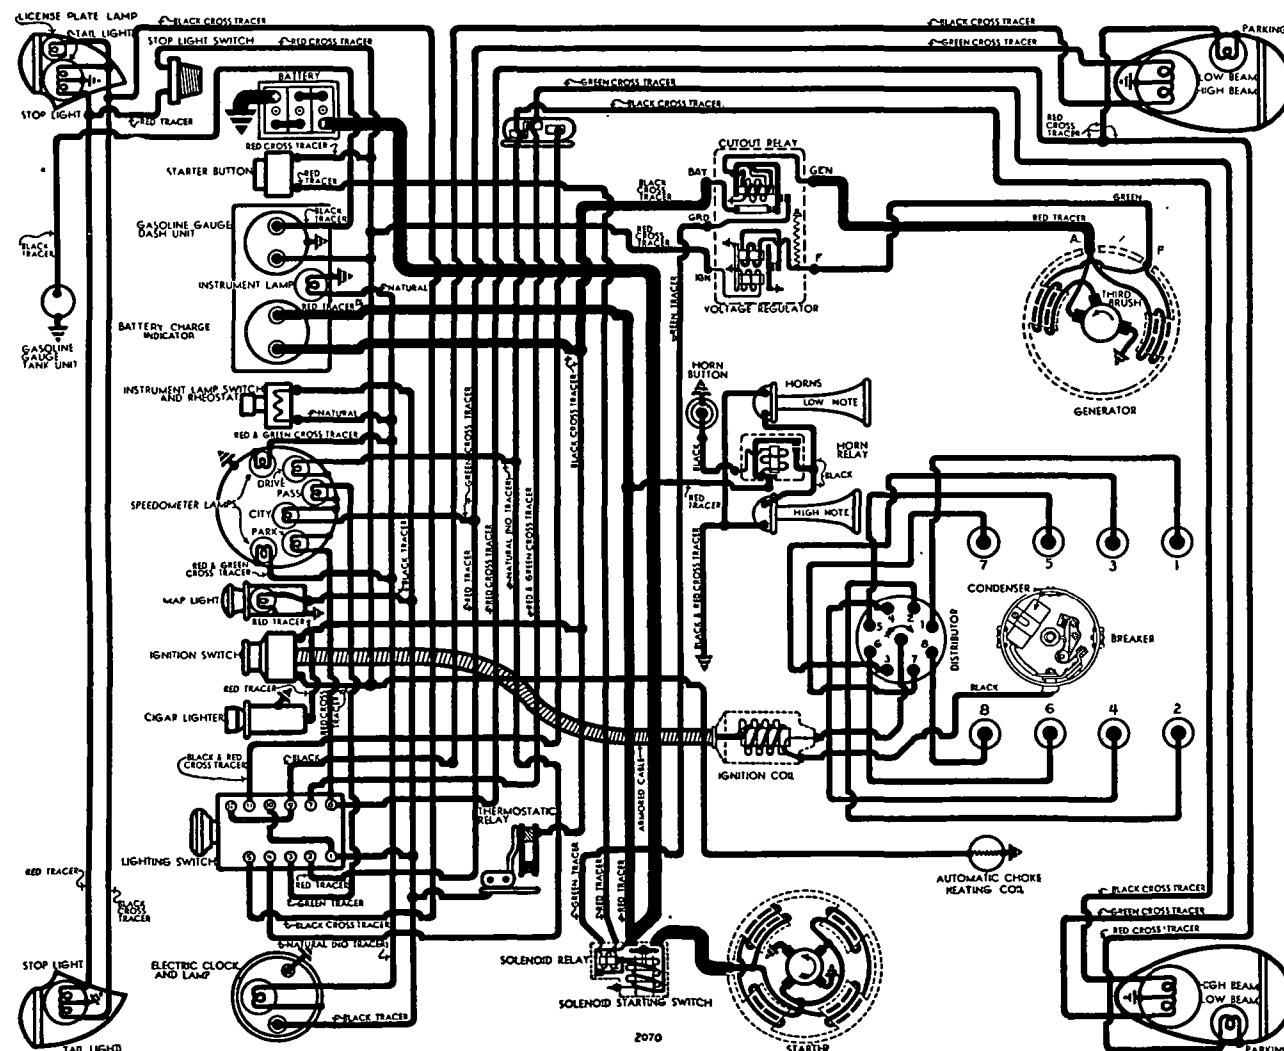

**Breaker Gap**—.0125-.0175".  
**Cam Angle or Dwell**—31° closed, 14° open.  
**Breaker Arm Spring Tension**—22 ounces.  
**Rotation**—Clockwise viewed from top.

#### Automatic Advance

Degrees	Distributor R.P.M.	Degrees	Engine R.P.M.
Start.....	500	1.....	1000
3.....	820	6.....	1640
6.....	1200	12.....	2400
9.....	1600	18.....	3200
12.....	2000	24.....	4000

**Removal:**—Distributor mounted between cylinder banks at rear of engine. To remove, take out two capscrews in mounting bracket.

**NOTE:**—When installing distributor on engine, turn crankshaft to firing position for #1 piston, mesh distributor drive gear so that slot in upper end of shaft is offset toward rear of engine.

1937 SERIES 37-50

### IGNITION TIMING

**IGNITION TIMING:**—Initial setting given for fuel of 70 octane rating. NOTE—See Manual Adjustment (following) for final setting giving best performance with type of fuel regularly used.

**Flywheel Degrees** 5° BTDC. **Piston Position** .0114" BTDC.

**To Set Timing (With Synchroscope)**—Recommended by manufacturer. Clip Synchroscope lead to #1 spark plug, direct light on crankshaft pulley at front of engine. Idle engine, loosen hold-down screw in advance arm, rotate distributor until "IG/A" mark on pulley (which is 5° before dead center mark "C.I.6") appears to line up with pointer on chain case cover, tighten hold-down screw. Adjust for fuel (see Manual Adjustment).

**Timing (Without Synchroscope)**—Turn engine over to firing position for piston #1 (front piston, left

bank) with mark 'IG/A' on crankshaft pulley (5° before dead center mark 'C.1/8' lined up with pointer on chain case. Loosen hold-down screw on advance arm, center pointer on scale, tighten hold-down screw on advance arm. Loosen advance arm clamp bolt, rotate distributor until contacts begin to open, tighten clamp bolt. Adjust for fuel (see Manual Adjustment).

**Manual Adjustment**—Slight ping should be evident at speeds below 15 M.P.H. when car accelerated with wide open throttle. To adjust, loosen hold-down screw on advance arm, rotate distributor one graduation on scale clockwise (if ping too severe), counter-clockwise (if no ping noted), repeat test, adjust until best performance is secured. **NOTE**—Check engine for faulty spark plugs, excessive carbon deposits, localized hot spots, or lean carburetor setting before changing manual adjustment.

## CARBURETOR

STR MBERG

(Early 1937)—Stromberg Model AA-25. 1 1/4" Dual (double barrel), downdraft type with Fast Idle and Automatic Choke.

For complete data, refer to Carburetor Index.

**Idle Adjustment** (all models)—Engine must be warmed up so that Automatic Choke and Fast Idle are inoperative. Set throttle lever stopscrew so that engine idles at 6 M.P.H. Turn each idle adjusting screw in until engine begins to miss, then turn screws out until engine begins to roll, finally turn screws in slowly until engine fires smoothly. Both screws must be adjusted equally. Readjust throttle stopscrew for correct idling speed.

**Accelerating Pump Setting** (Stromberg)—Engage pump link in holes in throttle lever as follows:

Inner Hole (Min. stroke)—Summer temperatures.  
Outer Hole (Max. stroke)—Winter temperatures.

Fast Idle: Stromberg Type (AA-25 Carburetor).

See Carburetion Equipment Section for data.

Automatic Choke: Stromberg Type (AA-25 Carburetor).

See Carburetion Equipment Section for data.

## CARBURETOR

CARTER

(Late 1937 & All 1938 Cars)—Carter Model WDO Vacuum Type 374-S (1937), 392-S (1938). 1 1/4" Dual (double barrel), downdraft types with Fast Idle and Carter Climatic Control (Automatic Choke). For complete data, refer to Carburetor Index.

**Idle Adjustment**—With engine warm (fast idle and automatic choke inoperative) adjust throttle stopscrew so that engine idles at 6 M.P.H. Turn each idle adjusting screw in until engine begins to miss, then turn screws out until engine begins to roll, finally turn screws in slowly until engine fires smoothly. Both screws must be adjusted equally and final setting should be 3/4-1 1/4 turn open (374-S), 1/4-1 turn open (392-S) from inner seated position. Re-adjust throttle stopscrew for 6 MPH. idle speed.

**Accelerating Pump Setting**—Two holes provided in throttle lever for pump link engagement. Set as follows:

Inner hole (short stroke)—Normal operation.

Outer hole (long stroke)—Winter temperatures.

Fast Idle: Carter Dual (WDO) Carburetor type.

See Carburetion Equipment Section for data.

Automatic Choke: Carter Climatic Control (Dual Carburetors).

See Carburetion Equipment Section for data.

## CARB. EQUIPMENT

**Air Cleaner:** AO No. 1528136 (1937 Std.), 1528137 (1937 Optl.), 1528516 (1938 Std.) oil-bath type. **NOTE**—Oil Vent Cleaner No. 864384 used on 1938 car models.

**Fuel Pump:**—AC. Type AB #1522119. Diaphragm type. Combination fuel-and-vacuum pump.

For complete data, refer to Carburetion Equip. Index.

**Gasoline Gauge:** AC Electric type. AC Part Nos:

Dash Unit—1515338 (1937), 1515348 (1938).

Tank Unit—1515442 (1937), 1515473 (1938).

For complete data, refer to Carburetion Equip. Index.

## BATTERY

Delco. Type 17-K (1937), 17-K-1 (1938). 6 volt, 17 plate, 112 ampere hour cap. (20 hr. rate).

Starting Capacity—135 amperes for 20 minutes.

Zero Capacity—300 amperes for 4.3 minutes. Five second voltage—4.38 volts.

**Grounded Terminal**—Positive (+) terminal. Grounded to frame. Engine grounded to same point on right frame side member by strap connector (second ground strap at left front of engine on some models).

**Dimensions**—Length 10 3/8". Width 7". Height 8 3/8". **Location**—Under front seat on left side (1937), under hood on right side (1938). **NOTE**—To remove, take out through bolt on outer edge (under fender), raise carrier and battery to free clamps from frame and lower assembly to floor.

## STARTER

Delco-Remy Model 727-V, 729-F (RHD). Armature No. 820158. Overrunning Clutch and solenoid pinion shift type.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—24-28 ounces.

CONTINUED ON NEXT PAGE

1938 SERIES 38-50

## CONTINUED FROM PRECEDING PAGE

Performance Data			
Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5500	5.0	65
16 "	Lock	3.0	600

**Removal:**—Starter flange mounted on right front face of flywheel housing. To remove, take out flange mounting screws, pull starter forward, remove from below.

**Starting Switch:**—Solenoid Switch Type 1512 (727-V), 1542 (729-F). Pushbutton Switch Type 1389. Solenoid switch controlled through relay in switch case by pushbutton on instrument panel. See article in Electrical Equipment Section.

*For complete data, refer to Electrical Equipment Index.*

**Solenoid Switch Specifications**

Closes against 70 lbs. pull with  $\frac{1}{2}$ " air gap drawing 65-71 amperes at 5 volts. Holds switch closed with current draw of 12-14 amperes (hold-in coil only).

**Solenoid Relay Specifications**

Contacts Close—3.2 volts max. (1512), 1.9 v. (1542).  
Contacts Open—1.6-2.0 volts (1512), 1.0-1.2 v. (1542).  
Contact Gap—.035". Air Gap—.010" (closed).

**GENERATOR**

Delco-Remy Model 918-C (1937), 1101051 (1938). Split field type with fixed third brush and vibrating voltage regulator control.

**Armature:**—Delco-Remy No. 1866789 (all models).

*For complete data, refer to Electrical Equipment Index.*

**Charging Rate Adjustment:**—Adjusted by changing regulator setting. See Regulator data.

**Maximum Charging Rate:**—As given in table below. Reached at 4000 R.P.M. or 50 M.P.H. cold. To check charging rate, connect test ammeter in line at 'BAT' terminal on regulator, voltmeter between 'GEN' terminal and ground, ground 'F' terminal to eliminate regulator action.

**NOTE:**—Do not operate generator on open-circuit.

**Performance Data**

	Amperes	Volts	R.P.M.
Cold	27-31	8.0	4000
Hot	25-28	8.0	4200

**Rotation:**—Counter-clockwise at commutator end.

**Brush Spring Tension:**—22-26 ounces (main), 16-20 ounces (third brush).

**Field Current:**—1.44-1.56 amperes at 6.0 volts (Shunt field), .89-.94 amperes at 6.0 volts (third brush field).

**Removal:**—Flange mounted at front of engine between cylinder banks. Belt driven in tandem with water pump (separate belt for fan). To remove, take out two flange mounting bolts.

**Belt Adjustment:**—Loosen both generator flange mounting bolts. Lift generator up until only slight slack evident in belt when moved sideways with fingers (generator pivots on left mounting bolt, right bolt hole slotted to permit this movement).  
**NOTE:**—Separate adjustment provided at fan bracket for fan belt.

**REGULATOR**

Delco-Remy Model 5817. Double Core Type Voltage Regulator (With 'IGN' Terminal). Cutout Relay and vibrating type Voltage Regulator. Cutout Relay has extra 'ground' contacts for starter control.

*For complete data, refer to Electrical Equipment Index.*

**Cutout Relay**

Cuts In—6.9-7.6 volts.

Cuts Out—0-3.0 amperes discharge current.

Contact Gap—.020". Air Gap—.020" (closed).

**Voltage Regulator**

Setting—7.5-7.9 volts (70°F), 7.4-7.6 volts (150°F). Regulator over-compensated for temperature and must be checked at these points.

**Adjustment:**—Connect ammeter in charging line at 'BAT' terminal on regulator, disconnect lead on 'IGN' terminal and connect jumper between this terminal and 'BAT' terminal, connect voltmeter between 'IGN' terminal and ground. Operate generator at 2000-3000 R.P.M., adjust charging rate to 8-10 amperes (use variable rheostat or AVR set), adjust regulator by bending spring hanger at lower end of armature slightly.

**NOTE:**—Regulator cover must be in place when making tests. Do not operate generator on open-circuit.

Contact Gap—.020". Contact Sp. Tens.—2.7-3.5 ozs. Air Gap—.063" between armature and center of core with armature down. .010" between fibre bumper and stop with armature up.

**LIGHTING**

**LIGHTING:**—Headlamps—Guide Multi-beam, pre-focused type with non-interchangeable lenses (marked 'Right' and 'Left' at top). Asymmetrical passing beam (upper beam left hand headlamp, lower beam right hand headlamp) controlled by foot selector switch with lighting switch in Country Driving position.

**NOTE:**—With lighting switch in second position (City), foot selector switch controls upper 'Driving' beam and lower 'City' beam (for both headlamps).

**Headlamp Adjustment:**—Adjust headlamps only with doors in place. Aim right hand headlamp so that top edge of high intensity spot is on horizontal line at lamp center height and centered on vertical lamp center-line. Aim left hand headlamp for same height but high intensity spot must be to right of vertical lamp center-line. Adjusting screw for up and down movement accessible through hole in bottom of lamp, screw for side movement at inner side of each lamp (accessible after removing spring retained cup).

**Headlamp Indicators:**—Located on lower edge of speedometer panel. Marked as follows:

Drive—Upper beam, both headlamps.

Pass—Special passing beam (see above).

City—Lower beam, both headlamps.

Park (1937 only)—Parking bulbs lighted.

**Switches**

**Lighting (1937)**—Delco-Remy 480-S, 480-N (Exp.).

**Lighting (1938)**—Delco-Remy 1994502, 1995005 (Exp.).

**Dimmer**—D-R Model 471-T, 471-U (RHD).

**Dash Lamp**—D-R Model 1406.

**Bulb Specifications—1937**

Position	Candlepower	Mazda No.
R. H. Headlamp (see note)	32-50	2530-L
L. H. Headlamp	32-32	2330-L
Parking, Instrument	1½	55
Clock, Indicators	1	51
Map, Quarter, License	3	63
Stop and Tail	21-3	1154-L
Dome	15	87

**NOTE:**—In states where this bulb not legal, 32-32 cp., 2330-L bulb used in both headlamps. Type 1154 bulb has stop pin which insures correct installation.

**Bulb Specifications—1938**

Position	Candlepower	Mazda No.
Headlamps	32-32	2330
Stop and Tail	21-3	1154
Parking	1½	55
License, Quarter	3	63
Dome	15	87
Instrument, Clock, Ind.	1	51

**MISC. ELECTRICAL**

**THERMOSTATIC RELAY:** Delco-Remy No. 1866707 (1937), 1866467 (1938). Mounted on lighting switch. Contacts remain closed with 25 ampere current but open within 1 minute with 38 amperes at 70°F. Not adjustable.

**HORNS:** Klaxon Model K-33-D. Type 1965 (Low Note—1937), 1966 (High Note—1937), 1967 (Low Note—1938), 1968 (High Note—1938). Vibrator type, blended tone, twin horns, operated by relay.

**NOTE:**—Horns mounted vertically behind radiator grille with horn relay on left front fender dust shield. Grille must be removed for horn service.

**Horn Type**      **Current (at 6 volts)**      **Air Gap**  
1965, 67 Low Note .....12-14 amperes......045-.050"  
1966, 68 High Note .....11-13 amperes......036-.040"

**Horn Relay:**—Model 271-A. Contact Gap—.020".

Contacts Close—2.7-4.0 volts. Air Gap—.015".

**ENGINE**

**ENGINE SPECIFICATIONS:**—Own. 8 cylinder, 90° Vee, 'L' head type. Upper crankcase and cylinder blocks cast en bloc. Bore—3⅞". Stroke—4½". Displacement 322 cu. ins. Rated HP.—36.45. Developed Horsepower—125 at 3400 RPM. Compression Ratio—6.25-1 Std., 5.75-1 Optl. See Cadillac Special Shop Notes for cylinder head identification and interchangeability data. Compression Pressure—155 lbs. at 1000 R.P.M. r approx. 105-110 lbs. at cranking speed (std. head). Vacuum Reading—20-21" steady at 6 M.P.H.

**PISTONS:**—Lynite or Bohn Lo-Ex aluminum alloy, "T" slot, Cam Ground type with Anodized finish (special hard oxide bearing surface). Length—4⅞". Weight—16.88 oz. stripped. 25.13 oz. complete. Removal—Pistons and rods removed from above Clearance—Skirt .0019". See Fitting New Pistons.

**Replacement Pistons:**—See Cadillac Shop Notes.

**NOTE:**—Hold all cylinders in same block within .002" size limits. Max. allowable out-of-round .0005".

**Fitting New Pistons:**—Check piston diameter with micrometer gauge at right angles to pin hole just below lower ring groove and also ½" above lower edge. If feeler gauges (⅜-½" wide) used, insert feeler at high point of piston next to T slot. Piston should fall of own weight on .002" feeler and hold on .0025" feeler. **NOTE:**—Cylinder bore out-of-round not over .0005", taper .000".

**Installing Pistons:**—Slot toward left (viewed from drivers seat) for all pistons.

**PISTON RINGS:**—Two compression, two oil control rings per piston, all above pin (no ring in narrow top heat deflector groove).

**Ring**      **Width**      **End Gap**      **Side Clearance**  
Compression .....⅞"......007-.012"......0015-.0028"  
Oil Control .....5/32"......007-.015"......0013-.0026"

**NOTE:**—Worn limits .025" (end gap), .004" (side cl.).  
**Replacement Rings:**—Rings furnished .003", .005", .010", .015", .030" oversize.

**ENGINE****CONTINUED FROM PRECEDING PAGE**

**PISTON EIN:**—Diameter  $\frac{1}{8}$ ". Length 2 15/16". Pin floats in piston and rod. Held by locking rings.

See Cadillac Shop Notes for special pin removal and installation instructions.

**Pin Fit in Piston:**—.0004" press fit (ribbed end), .000" clearance or free fit at 70° F. (plain end).

**Pin Fit in Rod Bushing:**—.0002-.0008" clearance (new), .0015" (worn limit).

**CONNECTING ROD:**—Weight 37.472 ozs. Length 8 3/4". Crankpin Journal Diameter—2.460".

**Lower Bearing:**—Steel-backed, babbitt-lined.

**Clearance:**—.0015" (new), .008" Max. (worn).

**Sideplay:**—.003-.008".

**Bearing Adjustment:**—None (no shims). Replace bearings. Do not file rods or caps.

See Cadillac Special Shop Notes for Connecting Rod Bearing data and bearing installation.

**NOTE:**—Use new lockwashers under bearing cap bolts. Use only 12" wrench to tighten (Tool J-835).

**Installing Rods:**—Number on rods and bearing caps on same side and installed in same numbered cylinders with numbers down toward oil pan.

**CRANKSHAFT:**—3 bearing, 6 counterweights.

**Journal Diameters:**—2 1/2" all bearings.

**Bearing:**—Bronze or steel-backed, babbitt-lined.

**Clearance:**—.0015" (new), .004" (worn limit).

**Bearing Adjustment:**—None (no shims). Replace bearings. Do not file bearing caps. Upper halves can be rotated out without removing shaft.

See Cadillac Special Shop Notes for Main Bearing Removal instructions, and Rear Main Bearing Oil Seal renewal (new type used in 1938).

**End Thrust:**—Taken by center bearing. Endplay .001-.005" (new), .010" Max. (worn).

**CAMSHAFT:**—3 bearing. Non-adjustable chain drive. **Journal Diameters:**—#1 and 2, 2.4071-2.4078"; #3, 2.0009-2.0016".

**Bearing Type:**—Steel-backed, babbitt-lined.

**Clearance:**—.0027-.0037" (new), .005" (worn limit).

See Cadillac Special Shop Notes for Camshaft Bushing removal and installation instructions.

**End Thrust:**—Taken by thrust plate behind camshaft sprocket. No endplay should be permitted.

**Timing Chain:**—Morse Type C #3682-R Side Guide type. Width 1 1/8". Pitch 3/8". Length 23 1/4" or 62 links.

**NOTE:**—Install chain 'endless' as an assembly with sprockets. Use tool J-836 to pilot camshaft sprocket

**Camshaft Setting:**—Sprockets marked. Mesh chain with sprockets turned so that '0' marks are adjacent and in line with a straightedge across shaft centers.

**VALVES:**— 

Head Diameter	Stem Diameter	Length
Intake .....1.876-1.886"	......3415-.3425"	.....5 33/64"
Exhaust .....1.626-1.636"	......3405-.3415"	.....5 33/64"

Seat Angle	Lift	Stem Clearance
Intake ..... 45°	......335"	......001-.0023"
Exhaust ..... 45°	......345"	......002-.0033"

**NOTE:**—Worn limit for valve stem-to-guide clearance .006" Intake, .005" Exhaust.

See Cadillac Special Shop Notes for valve removal and installation instructions.

**Valve Guides:**—Pressed in block with long stepped end down and reamed to correct size.

**Valve Lifters:**—Wilcox-Rich 'Zero-lash' type hydraulic lifters. Lifters are mushroom type operating in removable guide brackets.

See Miscellaneous Section for complete data.

**Clearance:**—.001-.0025" (new), .005" (worn limit).

**Valve Springs:**— 

	Pressure	Length
Valve Closed .....	66 lbs	1.926"
Valve Open .....	145 lbs	1.581"

**VALVE TIMING**

**Tappet Clearance:**—None in service (hydraulic type lifter). See Valve Servicing in Cadillac Shop Notes.

**Valve Timing:**—See Camshaft Setting above.

**Intake Valves:**—Open at TDC. Close 42° ALDC.

**Exhaust Valves:**—Open 52° BLDC. Close 10° ATDC.

**To Check Timing:**—Intake valve for #1 cylinder opens with piston on top dead center when mark 'C.1/6' on crankshaft pulley lines up with pointer.

**LUBRICATION**

**LUBRICATION:**—Pressure system with gear type oil pump located in crankcase.

See Cadillac Special Shop Notes for oil pump data.

**Normal Oil Pressure:**—25 lbs. at 30 M.P.H.

**Oil Pressure Regulator:**—Located on oil pump. Operates at 30 lbs. Not adjustable.

**Crankcase Capacity:**—7 qts. (refill).

**COOLING**

**Water Capacity:** 25 quarts.

**Water Pump:** Centrifugal type with self-adjusting (spring-loaded) packing. Belt driven.

See Water Pump Section for complete data.

**Thermostat:**—Mounted in radiator top tank, linked to radiator shutters by rod on forward side.

**Setting:**—(Std. Type) Starts to open 148-153°F., fully open at 170°F. (High Reading Type—use with heaters). Starts 163-168°F. Fully open 185°F.

**Shutter Adjustment:**—Adjust clevis on threaded end of rod to secure 1/16" tension (shutters closed).

**CLUTCH**

**CLUTCH:**—Long Model 11CF-10 1/2 CI. Semi-centrifugal, single plate dry disc type.

See Clutch Section for complete data.

**Facings:**—Woven joined type, 2 required. Inside Diameter 6 1/2". Outside Diameter 10 1/2". Thickness .137" (1937), .125" (1938).

**Adjustment:**—Free movement of pedal should be 7/8-1 1/8". To adjust, turn nut on forward end of connector link in front of clutch fork.

**Removal:**—Remove transmission (see Transmission Section below), drop clutch housing pan, punch mark clutch cover, pressure plate, and flywheel to insure correct installation, take out mounting bolts in cover flange, remove clutch from below.

See Cadillac Shop Notes for clutch locking pin removal (on replacement clutches) and clutch balancing data.

**TRANSMISSION**

**TRANSMISSION:**—Own make. Constant-mesh helical gear (second), synchro-mesh (second and high), sliding helical gear (low and reverse).

See Transmission Section for complete data.

**Transmission Control (1938):** Own Make, Remote Control type with shift lever on steering column.

See Transmission Section for complete data.

**Removal:**—Disconnect shifter rods at levers on left hand side of case, disconnect drive shaft at front universal joint, support engine with jack under oil pan (use wooden block to avoid damage to pan), free transmission extension at rear support cross-member, disconnect engine support stabilizer on right hand (take out pin at forward end), disconnect exhaust pipe brace, disconnect speedometer cable. Take out transmission mounting capscrews, pull transmission straight back (plug clutch connection shaft bearing drain hole as soon as it is ac-

cessible to prevent lubricant loss. CAUTION—When installing transmission, shift transmission into Reverse Gear before attempting installation and make certain that cork is removed from clutch connection bearing drain hole.

**UNIVERSALS**

**UNIVERSAL JOINTS:**—Mechanics Model 3-C. Needle bearing type, 2 used.

See Universals Section for complete data.

**REAR AXLE**

**REAR AXLE:**—Own make. Hypoid gear, semi-floating type with Hotchkiss drive.

See Rear Axle Section for complete data.

**NOTE:**—Manufacturer recommends Differential Carrier Assembly be returned to factory for servicing. Ratio—3.92-1 Std. No optional ratios.

**Backlash:**—.004-.008". Screw adjustment.

**Removal:**—Disconnect drive shaft at rear universal, remove axle shafts (see below), remove capscrews on carrier flange, pull carrier assembly out. **Axle Shaft Removal:**—Jack up car, remove rear wheels, pull wheel hub and brake drum assembly, disconnect brake line and remove backing plates. Use tool J-838, pull shaft and bearing assembly out. **NOTE:**—Early '37 shafts have no locating shoulder for wheel bearing. Install bearing with 5/32" clearance between inner edge of hub and bearing. **CAUTION:**—Bleed brake lines after axle shaft re-installed and brakes reconnected.

**Wheel Bearing Adjustment:**—None (sealed type).

**SHOCK ABSORBERS**

Delco. Double Acting, hydraulic types (front & rear). Delco Model Numbers as follows:

Front—1946-C, D (1937), 1946-E, F (1938).

Rear—1751-A, B (1937), 1751-E, F (1938).

See Shock Absorber Section for complete data.

**FRONT SUSPENSION**

**Front Suspension:**—Independent linked parallelogram type with coil springs.

See Front Suspension Section for complete data.

**Kingpin Inclination:**—4°51' crosswise.

**Caster:**—Pos. 1/4° to Pos. 1° (1937), Neg. 1/4° to Neg. 1 1/4° (1938) at curb weight (Fuel tank full, no Passengers). Adjustable.

**Camber:**—Pos. 1/4° to Pos. 1° (1937), Neg. 1/4° to Pos. 1/2° (1938). Adjustable.

**Toe In:**—1/32-3/32" (at rest), 0-1/16" (in motion).

**Steering Geometry (Toe out on turns):**—Inner wheel turned 21 3/4-23 1/4° (1937), 23 1/2° (1938); Outer wheel turned exactly 20°. Not adjustable.

**STEERING GEAR**

**Steering Gear:** Saginaw Model. Worm-and-Roller type

See Steering Gear Section for complete data.

**BRAKES**

**BRAKES:**—Service—Bendix hydraulic, Duo-Servo, Single Anchor type. Hand lever applies rear brakes.

See Brake Section for complete data.

**Braking Power:**—54 1/2% Front, 45 1/2% Rear).

**Drum Diameter:**—12". Centrifuge type. Drum out-of-round .007" max. Run-out (installed) .010" max.

**Lining:**—Molded type. Width 2 1/4" (front wheels), 2" (rear wheels), Thickness 3/16". Length per shoe 12 15/16".

**Clearance:**—.010" for all shoes.

**Hand Brake:**—See Service Brake above.

**ENGINE HOOD & SIDE PANEL REMOVAL:**—See Cadillac Shop Notes for complete instructions.

## MODEL IDENTIFICATION

**SERIAL & ENGINE NUMBER:**—First number 2290001. Stamped on left side of crankcase at rear of left cylinder block and on left frame side member opposite steering gear.

## TUNE-UP

**COMPRESSION:**—Ratio—6.25-1 Std., 5.75-1 Optl.

Pressure—155 lbs. at 1000 R.P.M. or approximately 110-115 lbs. at cranking speed for Std. head.

**VACUUM READING:** Steady 20-21" idling at 7-8 MPH.

**FIRING ORDER:** 1-8-7-3-6-5-4-2. See diagram for cylinder numbering and spark plug cable connections.

**SPARK PLUGS:** AC No. 104. 10 mm. Metric type.

Gaps—.025-.030"

**NOTE:**—Do not tighten these small plugs excessively (7-10 ft. lbs. tension).

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.015" Cam Angle 31° (closed).

Automatic Advance—12° max. at 2000 RPM (distr.).

**IGNITION TIMING:** See Ignition Timing.

Std. Setting—5° BTDC with crankshaft pulley mark "IGA" at indicator on front of engine.

**CARBURETION:** See Carburetor & Carb. Equipment.

Idle Setting—Both idle screws ½-1½ turns open. Idle speed 7-8 MPH.

Float Level—⅛" from top of float to gasket seat on cover with valve seated (invert to check).

Accelerating Pump—Not adjustable.

Fuel Pump Pressure: 4½ lbs. maximum.

**VALVES:** See Valve Timing.

Tappet Clearance—None in Service (hydraulic type take-up used).

**STARTING:** See Battery, Starter, Generator, Regulator.

## IGNITION

**Ignition Switch:**—Delco-Remy No. 1865711. Connected to coil by armored cable.

**Ignition Lock:**—Briggs & Stratton No. 45792. Key Series—8000 to 9499. Groove—No. 15.

**COIL:** Delco-Remy No. 1115128. Mounted on dash.

Ignition Current—2.2 amperes idling, 4.4 stopped.

**CONDENSER:** Delco-Remy Part No. 1869704.

Capacity—.18-.25 microfarad.

**DISTRIBUTOR:** Delco-Remy No. 1110604. Single breaker, 8 lobe cam, full automatic advance type with manual adjustment at distributor.

Breaker Gap—.0125-.0175".

Cam Angle or Dwell—31° closed, 14° pen (distr.).

Breaker Arm Spring Tension—22 ounces.

Rotation—Clockwise viewed from the top.

Automatic Advance			
Distributor	Engine	Degrees	R.P.M.
Start	500	1	1000
3	820	6	1640
6	1200	12	2400
9	1600	18	3200
12	2000	24	4000

**Manual Adjustment:**—Permits 10° advance or retard from center position. See Ignition Timing for adjustment.

**Removal:**—Distributor mounted between cylinder banks at rear of engine. To remove, take out two capscrews in mounting bracket. **NOTE:**—When installing distributor, turn crankshaft to firing position for #1 piston, mesh distributor drive gear so slot in upper end of shaft is offset toward rear or left hand side of engine.

## IGNITION TIMING

**IGNITION TIMING:**—As given below for fuel of 70 octane rating. See Manual Adjustment (following) for correction dependent on fuel regularly used.

**Flywheel Degrees**

5° BTDC

**Piston Position**

.0114" BTDC

**Timing (With Synchroscope)**—This method recommended by manufacturer. Clip synchroscope lead to #1 spark plug, direct light on crankshaft pulley, idle engine. Loosen hold-down screw in advance arm, rotate distributor until 'IG/A' mark on pulley (5° before dead center mark 'C.1/8') appears in line with pointer on chain case cover, tighten hold-down screw. Adjust for fuel (see Manual Adjustment).

**Timing (Without Synchroscope)**—Turn engine over to firing position for #1 piston (front piston, left bank) with crankshaft pulley mark 'IG/A' (5° before dead center mark 'C.1/8') lined up with pointer

on chain case cover. Loosen hold-down screw in advance arm, center pointer on scale, tighten screw. Loosen advance arm clamp bolt, rotate distributor until contacts begin to open, tighten clamp bolt, check Manual Adjustment.

**Manual Adjustment**—Should be set for slight ping when accelerating engine with wide open throttle at speeds below 15 M.P.H. To adjust, loosen hold-down screw in advance arm, rotate distributor clockwise (if ping too severe), counter-clockwise (if no ping noted) one graduation at a time until correct performance secured. **NOTE**—Check engine for faulty spark plugs, excessive carbon deposits, localized hot spots, lean carburetor setting before changing adjustment to correct ping.

## CARBURETOR

**CARBURETION**:—Carburetor—Carter Model WDO Type 423-S (marked 248 on face of flange). 1½" dual, downdraft type.

For complete data, refer to Carburetor Index.

**Idle Adjustment**—With engine warm so that Automatic Choke and Fast Idle inoperative, set throttle stopscrew for 7-8 MPH. idling speed. Turn each idle adjusting screw (one for each barrel) in until engine begins to miss, then turn screws out until engine begins to roll, finally turn screws in slowly until engine fires smoothly. Reset stopscrew for correct 7-8 MPH. idling speed.

**Accelerating Pump**—Not adjustable.

**Fast Idle**:—Integral type (part of carburetor).

For complete data, refer to Carburetion Equip. Index.

**Setting**—Adjust fast idle screw for .030" throttle opening (measured with T-109-29 gauge between throttle valve edge and wall on side opposite idle port) with choke valve tightly closed.

**Automatic Choke**:—Carter Climatic Control.

For complete data, refer to Carburetion Equip. Index.

**Setting**—Mark on thermostatic coil housing should be in line with reference mark on mounting plate.

## CARB. EQUIPMENT

**Air Cleaner**:—AC #1528940 oil-both type used in conjunction with #864384 crankcase ventilator cleaner.

**Fuel Pump**:—AC Type AB #1523865. Diaphragm type, combination fuel-and-vacuum pump.

For complete data, refer to Carburetion Equip. Index.

**Gasoline Gauge**:—AC Electric type. #1515361 (dash unit), #1515485 (tank unit).

For complete data, refer to Carburetion Equip. Index.

## BATTERY

**BATTERY**:—Delco Model 17K-1. 6 volt, 17 plate, 112 A.H. Capacity (20 hour rate).

**Starting Capacity**—135 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 4.3 minutes. Five second voltage 4.38 volts.

**Grounded Terminal**—Positive (+) grounded to frame (engine grounded to same point on right side of frame by strap—second ground at left front corner of engine in some models).

**Dimensions**—Length 10½". Width 7". Height 8½".

**Location**—Under left front floor.

**Commercial Battery**—Delco Model 19-Q. 6 volt, 19 plate, 122 A.H. Capacity (20 hour rate).

**Starting Capacity**—140 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 4.8 minutes. Five second voltage 4.5 volts.

**Dimensions**—Same as 17K-1 except Height 8 9/16".

**Grounded Terminal, Location**—See 17K-1 above.

## STARTER

**Delco-Remy Model 1107912 (Std.), 1107913 (RHD)**, Armature No. 820158 (all models).

**Drive**—Solenoid pinion shift (overrunning clutch).

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—24-28 ounces.

### Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5500	5.0	60
16 "	Lock	3.0	600

**Removal**:—Flange mounted on right front face of fly-wheel housing. To remove, take out flange mounting screws, pull starter forward and remove from below.

**Starting Switch**:—Solenoid Switch Type 1542 (all). Mounted on starter, controlled through relay (in switch) by Control Switch Type 1996003 on instrument panel.

For complete data, refer to Electrical Equipment Index.

### Solenoid Switch Specifications

Closes against 70 lb. pull with ½" air gap drawing 65-71 amperes at 5 volts. Holds switch closed with current draw of 12-14 amperes (hold-in coil only).

### Solenoid Relay Specifications

**Contacts Close**—1.9 volts max. **Open**—1.0-1.2 volts.

**Contact Gap**—.035". **Air Gap**—.010" (closed).

## GENERATOR

**Delco-Remy Model 1101056**. Armature No. 1866789. Split field type with fixed third brush and vibrating type voltage regulator control.

For complete data, refer to Electrical Equipment Index.

**Charging Rate Adjustment**—See regulator setting below. Do not attempt to change third brush position.

**Maximum Charging Rate**—29 amperes, 8.0 volts, 4000 R.P.M., 50 M.P.H. with discharged battery. Actual charging rate determined by regulator and dependent on battery condition. To check charging rate, connect ammeter in charging line at regulator 'BAT' terminal, voltmeter between 'GEN' terminal and ground, ground regulator 'F' terminal to eliminate regulator action. **NOTE**—Do not operate generator on open-circuit.

### Performance Data

	Amperes	Volts	R.P.M.
Cold	27-31	8.0	4000
Hot	25-28	8.0	4200

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—25 ozs. (main), 17 ozs. (3rd).

**Field Current**—1.44-1.56 amperes at 6.0 volts (shunt field), .89-.94 amperes at 6 volts (third brush field).

**Removal**:—Flange mounted between cylinder banks at front of engine, belt driven in tandem with water pump (separate belt for fan). To remove, take out flange mounting bolts.

**IMPORTANT AIR SCOOP NOTE**—When installing air scoop on generator, make certain that raised portion provides clearance at terminals and that scoop does not cover drive end oil cup.

**Belt Adjustment**:—Loosen generator mounting bolts, lift generator up until only slight slack evident in belt (new type belt engages bottom of pulley groove not sides), tighten bolts. Generator pivots on left hand bolt, right bolt hole slotted. **NOTE**—Fan belt adjustment provided at fan bracket.

## REGULATOR

**Delco-Remy Model 5860**. Double Core Type Voltage Regulator (No 'IGN' Terminal). Cutout Relay and vibrating type Voltage Regulator in case on dash.

For complete data, refer to Electrical Equipment Index.

### Cutout Relay

**Cuts In**—6.3-6.9 volts (relay compensated for temperature—closing voltage same Cold and Hot).

**Cuts Out**—0-4.0 ampere discharge current.

**Contact Gap**—.020". **Air Gap**—.020" (closed).

### Voltage Regulator

**Setting**—7.5-7.9 volts at 70°F., 7.4-7.8 volts at 150°F. Regulator over-compensated for temperature and must be checked at these points.

**Adjustment**—Connect ammeter in charging line at regulator 'BAT' terminal, voltmeter between 'BAT' terminal and ground. Operate generator at 2800-3000 R.P.M., adjust charging rate to 8-10 amperes (use variable rheostat or 'AVR' set), adjust regulator by bending spring hanger at lower end of armature spring slightly to secure setting shown above.

**CAUTION**—Regulator cover must be in place when testing. Do not operate generator on open-circuit.

**Contact Gap**—.020". **Contact Spring Tension** 3.5 ozs.

**Air Gap**—.063" between armature and center of core with armature down, .010" between fibre bumper and stop with armature up.

## LIGHTING

**LIGHTING**:—Headlamps—Guide Multi-beam, pre-focused type (lenses not interchangeable, marked 'Right' and 'Left'). Asymmetrical passing beam (upper beam left lamp, lower beam right lamp) controlled by beam selector switch with lighting switch in Country Driving position. **NOTE**—With lighting switch in City (second) position, beam selector switch controls upper and lower driving beams.

**Headlamp Adjustment**—Adjust only with lenses in place. Aim left hand lamp so that top edge of high intensity spot is at horizontal line at lamp center height and entire high intensity spot to right of lamp vertical center-line. Aim right hand lamp for same height and center high intensity spot on lamp vertical center-line. Adjusting screw for vertical movement at bottom of lamp, screw for horizontal movement at engine side of lamp body under snap-in plug.

**Beam Indicator**—Above center of speedometer dial. Lighted whenever Driving or upper beams in use.

## MISC. ELECTRICAL

**THERMOSTATIC RELAY:**—No. 1865577. On lighting switch. Contacts remain closed with 25 amperes but open in 2 minutes with 38 amperes at 70°F. Not adjustable.

**HORNS:**—Klaxon Model K-33-H. No. 1999501 (low note), 1999502 (high note). New 'Seashell', vibrator type, blended tone, twin horns operated by relay.

Type	Current (at 6 volts)	Air Gap
1999501 (low note)	10-12 amperes	.042-.046"
1999502 (high note)	9-11 amperes	.032-.036"

**Horn Relay:**—D-R. Models 271-A, 1116775.  
Contact Gap—.020". Air Gap .015" (closed).  
Contacts Close—2.3-3.5 volts.

## ENGINE

**ENGINE SPECIFICATIONS:**—Own. 8 cylinder, 90° Vee, 'L' head type. Upper crankcase and cylinder blocks cast en bloc. Bore—3⅞". Stroke—4½".  
Displacement—322 cu. ins. Rated HP.—36.45.  
Developed Horsepower—125 at 3400 R.P.M.  
Compression Ratio—6.25-1 Std., 5.75-1 Optl.  
See Cadillac Shop Notes for cylinder head identification and shims for lowering compression ratio.  
Compression Pressure—155 lbs. at 1000 R.P.M. or approx. 105-110 lbs. at cranking speed (std. head).  
Vacuum Reading—Steady 20-21" idling at 7-8 MPH.

**PISTONS:**—Lynite or Bohn Lo-Ex aluminum alloy, "T" slot, Cam Ground type with Anodized finish (special hard oxide bearing surface). Length—4½".  
Weight—16.88 ozs. (stripped), 25.12 ozs. (complete).  
Removal—Pistons and rods removed from above.  
Clearance—Skirt .0020-.0025". See Fitting Pistons.

Replacement Pistons:—See Cadillac Shop Notes.

**Fitting New Pistons:**—Check piston diameter with micrometer gauge at right angles to pin hole just below lower ring groove and also ½" above lower edge. If feeler gauges (⅜x½" wide, 7-10" long) used, insert feeler next to T-slot. Piston should fall through bore of own weight on .002" feeler, and hold on .0025" feeler. NOTE—Cylinder bore out-of-round .0005" max., taper .0003".

Installing Pistons:—Slot to left, for all pistons.

**PISTON RINGS:**—Two compression, two oil control rings per piston, all above pin.

Ring	Width	End Gap	Side Clearance
Comp. (Top)	3/32"	.007-.012"	.0023-.0041"
Comp. (#2)	⅛"	.007-.012"	.0013-.0028"
Oil Control	5/32"	.007-.015"	.0013-.0028"

Replacement Rings:—.003", .005", .010", .015", .030" O.S.

**PISTON PIN:**—Diameter—7/8". Length—2 15/16". Pin floats in piston and rod. Held by locking rings. See Cadillac Shop Notes for special pin removal and installation instructions.

Pin Fit in Piston—.0004" press fit (ribbed end), .0000" clearance or free fit at 70° F. (plain end).

Pin Fit in Rod Bushing—.0002-.0008" clearance (new), .0018" (worn limit).

**CONNECTING ROD:**—Weight 37.472 ozs. Length 8¾".  
Crankpin Journal Diameter—2.4590-2.4595".  
Lower Bearing—Steel-backed, babbitt-lined type.  
Clearance—.0015-.0025" (new), .0045" Max. (worn).  
Sideplay—.008-.014".

**Bearing Adjustment:**—None (no shims). Replace bearings. Do not file rod or caps. See Cadillac Shop Notes for connecting rod and bearing installation data.

**Installing Rods:**—Numbers on rods and bearing caps on same side and installed in same numbered cylinders with marks down to oil pan.

**CRANKSHAFT:**—3 bearing, 6 counterweights. See Cadillac Shop Notes for main bearing servicing and rear main bearing oil seal renewal.  
Journal Diameters—2½" all bearings.  
Bearings—Steel or bronze backed, babbitt-lined.  
Clearance—.0015-.0025" (new), .005" (worn).

**Bearing Adjustment:**—None (no shims). Replace bearings. Do not file bearing caps. Upper halves can be rotated out without removing crankshaft.

**End Thrust:**—Taken by center (#2) bearing.  
Endplay—.001-.005" (new), .010" Max. (worn).

**CAMSHAFT:**—3 bearing, non-adjustable chain drive. See Cadillac Shop Notes for Camshaft Bushing data.  
Journal Diameters—#1 and #2, 2.4071-2.4078"; #3, 2.0009-2.0016".  
Bearing Type—Steel-backed, babbitt-lined.  
Clearance .0015-.0033" (new), .0045" (worn).

**End Thrust:**—Taken by thrust plate behind camshaft sprocket. No endplay should be permitted.

**Timing Chain:**—Morse Type C #3682-R Side Guide type. Width 1¼". Pitch ⅜". Length 23¼" or 62 links.  
NOTE—Install chain 'endless' as an assembly with sprockets. Use Tool J-836 to pilot camshaft sprocket.

**Camshaft Setting:**—Sprockets marked. Mesh chain with sprockets turned so that '0' marks are adjacent and in line with a straightedge across shaft centers.

VALVES:	Head Diameter	Stem Diameter	Length
Intake	1.876-1.886"	.3415-.3425"	5 33/64"
Exhaust	1.626-1.636"	.3405-.3415"	5 33/64"
	Seat Angle	Lift	Stem Clearance
Intake	45°	.335"	.0012-.0032"
Exhaust	45°	.345"	.0022-.0042"

NOTE—Worn limit for stem clearance .005" (all valves). Valve heads not slotted.

See Cadillac Shop Notes for Valve Servicing data.

**Valve Guides:**—Press in (long stepped end down).

**Valve Lifters:**—Wilcox-Rich 'Zero-lash' type hydraulic lifters. Lifters are mushroom type operating in removable guide brackets.

See Miscellaneous Section for complete data.

Clearance—.0010-.0024" (new), .0035" (worn).

**Valve Springs:**—Free length 2.210".

	Spring Pressure	Length
Valve Closed	66 lbs.	1.926"
Valve Open	145 lbs.	1.581"

## VALVE TIMING

**Tappet Clearance:**—None in service (hydraulic type lifter). See Valve Servicing in Cadillac Shop Notes.

**Valve Timing:**—See Camshaft Setting above.

**Intake Valves:**—Open at TDC. Close 42° ALDC.

**Exhaust Valves:**—Open 52° BLDC. Close 10° ATDC.

**To Check Timing:**—#1 cylinder (front-left bank) intake valve should open with piston at TDC and mark 'C.1/8' on crankshaft pulley aligned with chain case cover pointer.

## LUBRICATION

**LUBRICATION:**—Pressure (gear type oil pump in crankcase). See Cadillac Shop Notes for oil pump data.

**Normal Oil Pressure:**—15 lbs. idling, 25 lbs. at 30 MPH.

**Oil Pressure Regulator:**—Opens at 30 lbs. On oil pump. Non-adjustable type.

**Crankcase Capacity:**—7 quarts.

## COOLING

**COOLING SYSTEM:**—Capacity—25 quarts.

See Cadillac Shop Notes for radiator core removal and fan pulley replacement instructions.

**Water Pump:**—Self-adjusting packing type. See Water Pump Section for complete data.

**Removal:**—Drain water, remove pump belt, hose and pump mounting screws. Lift pump out.

**Thermostat:**—Mounted in radiator top tank, linked to radiator shutters by rod on forward side.

**Setting:**—(Std. Type) Starts to open 148-153°F., fully open at 170°F. (High Reading Type—use with Heaters) Starts to open 163-168°F. Fully open 185°F.

**Shutter Adjustment:**—Adjust clevis on threaded end of rod to secure 1/16" tension (shutters closed).

**Temperature Gauge:**—AC. Electric. #1510773 (dash unit). #1510774 (engine unit).

See Miscellaneous Section for complete data.

## CLUTCH

**CLUTCH:**—Long Model 11CF-10½ CI (before engine unit 2-D-701), 10CF-CI (after engine unit 2-D-700). Semi-centrifugal, single plate, dry disc type.

See Clutch Section for complete data.

**Facings:**—Woven joined type, 2 required. Inside Diam. 6½" (early), 6" (late). Outside Diam. 10½" (early), 10" (late). Thickness .123-.127".

**Adjustment:**—Free movement of pedal should be ⅞-1⅞" (adjusting nut on connector link at fork).

**Removal:**—Remove transmission (see below), drop clutch housing pan, punch mark clutch cover, pressure plate, and flywheel (re-install to these marks),

remove 6 cover screws (release tension evenly), remove assembly. See *Cadillac Shop Notes for clutch locking pin removal (on replacement clutches) and clutch balancing data.*

### TRANSMISSION

**TRANSMISSION:**—Own Make. Constant-mesh, synchro-mesh, all helical gear (sliding gear, low & reverse) with remote shift.

See *Transmission Section for complete data.*

**Transmission Control:**—Remote steering col. shift.  
See *Transmission Section for complete data.*

**Removal:**—Support engine with jack under rear end of oil pan (use wooden block to avoid damage to pan), remove propeller shaft (disconnect front and rear universals), free transmission extension at engine rear support, remove crossmember with engine rear support, disconnect speedometer cable, remove shifter rods from levers at transmission, support transmission at rear, take out mounting screws, pull straight back (plug clutch connection shaft bearing drain hole as soon as accessible to prevent lubricant loss), lower front end of transmission and remove from car. NOTE—For linkage adjustments, refer to *Transmission Section for La Salle Transmission Control.*

### UNIVERSALS

**UNIVERSAL JOINTS:**—Mechanics Model 3C. Needle bearing type. Two used.  
See *Universals Section for complete data.*

### REAR AXLE

**REAR AXLE:**—Own Make. Hypoid gear, semi-floating type with Hotchkiss drive.

See *Rear Axle Section for complete data.*

NOTE—Manufacturer recommends Differential Carrier Assembly be returned to factory for servicing.

Ratio—3.92-1.

Backlash—.004-.010". Screw adjustment.

**Removal:**—Disconnect drive shaft at rear universal, remove axle shafts (see below), remove capscrews on carrier flange, pull carrier assembly out.

**Axle Shaft Removal:**—Remove rear wheels, take off axle shaft nut, pull wheel hub and brake drum, disconnect brake line and remove backing plate. Pull shaft and bearing assembly out (use Tool J-838).

**Wheel Bearing Adjustment:**—None (sealed type).

### SHOCK ABSORBERS

**SHOCK ABSORBERS:**—Delco. Front 1946-G (right), H (left). Rear 1751-V (right), W (left). Double acting, hydraulic types (front and rear).

See *Shock Absorber Section for complete data.*

### FRONT SUSPENSION

**Front Suspension:**—Independent linked parallelogram type with coil springs.

See *Front Suspension Section for complete data.*

**Kingpin Inclination:**—5°6' crosswise.

**Caster:**—Neg. ¼° to Neg. 2¼°. Adjustable.

**Camber:**—Neg. ¼° to Pos. ¾°. Adjustable.

**Toe In:**—1/32-3/32" (at rest), 0-1/16" (in motion).

NOTE—Adjusting sleeve at wheel end of each tie rod provided for toe in adjustment.

**Steering Geometry (Toe out on turns):**—Inner wheel turned 22¼-23¾°. Outer wheel 20°.

### STEERING GEAR

**Steering Gear:** Saginaw Model. Worm-and-Double Roller type.

NOTE—New type steering linkage with idler arm attached to right frame sidemember.

See *Steering Gear Section for complete data.*

### BRAKES

**BRAKES:**—Service—Bendix hydraulic, duo-servo, single anchor type (no eccentric adjustment). Hand lever applies rear service brakes.

See *Brake Section for complete data.*

**Drums:**—Centrifuse. Diameter—11.995-12.005". Drum out-of-round .007", turn down limit .030".

**Lining:**—Moulded. Length per shoe—Front 11 17/32", Rear 12 31/32". Width 2". Thickness 3/16".

**Clearance:**—.015" both ends of secondary shoe.

**Braking Power:**—45½% rear, 54½% front.

**Hand Brake:**—See *Service Brakes.*

**ENGINE HOOD, SIDE PANEL REMOVAL & FRONT SHEET METAL ASSEMBLY ALIGNMENT:**—See Cadillac Shop Notes.

### MODEL IDENTIFICATION

**SERIAL & ENGINE NUMBER:**—First number (50) 2320001, (52) 4320001. Stamped on crankcase at rear of left cylinder block and on left frame side member opposite steering gear.

### TUNE-UP

**COMPRESSION:**—Ratio—8.25-1 Std., 5.75-1 Optl.  
Pressure—155 lbs. at 1000 RPM or approximately 105-110 lbs. at cranking speed for Std. head.

**VACUUM READING:**—Steady 20-21" idling at 7-8 MPH.

**FIRING ORDER:** 1-8-7-3-6-5-4-2. See diagram for cylinder numbering and spark plug cable connections.

**SPARK PLUGS:** AC No. 104. 10 mm. Metric type.

Gaps—.025-.030"

**NOTE:**—Do not tighten these small plugs excessively (7-10 ft. lbs. tension).

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.015" Cam Angle 31° (closed).

Automatic Advance—12° max. at 2000 RPM (distr.).

Vacuum Advance—9° distr. with 15-18" vacuum.

**IGNITION TIMING:** See Ignition Timing.

Std. Setting—5° BTDC with crankshaft pulley mark "IGA" at indicator on front of engine.

**CARBURETION:** See Carburetor & Carb. Equipment.

Idle Setting—Both idle screws ½-1½ turns open. Idle speed 7-8 MPH.

Float Level—⅛" from top of float to gasket seat on cover with valve seated (invert to check).

Accelerating Pump—Not adjustable.

Fuel Pump Pressure: 4½ lbs. maximum.

**VALVES:** See Valve Timing.

Tappet Clearance—None in Service (hydraulic type take-up used).

**STARTING:** See Battery, Starter, Generator, Regulator.

### IGNITION

**Ignition Switch:**—Delco-Remy Model 1116282. Connected to coil by armored cable.

**Ignition Lock:**—Briggs & Stratton No. 45792. Key Series—8000 to 9499. Groove—No. 15.

**COIL:** Delco-Remy No. 1115128. Mounted on dash.

Ignition Current—2.2 amperes idling, 4.4 stopped.

**CONDENSER:** Delco-Remy Part No. 1869704.

Capacity—.18-.25 microfarad.

**DISTRIBUTOR:** Delco-Remy Model 1110806. Single breaker, 8 lobe cam, full automatic advance type with auxiliary vacuum spark control and manual adjustment.

Breaker Gap—.0125-.0175".

Cam Angle or Dwell—31° closed, 14° open (distr.).

Breaker Arm Spring Tension—19-23 ounces.

Rotation—Clockwise viewed from above.

Automatic Advance			
Distributor	R.P.M.	Engine	R.P.M.
Degrees		Degrees	
Start	500	1	1000
12	2000	24	4000

**Vacuum Spark Control 1116020.** Integral type (on distributor, linked to breaker plate). Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle when spark retarded by return spring within unit. Plunger travel 13/64" maximum

Vacuum Advance			
Distr. Degrees	Eng. Degrees	Vacuum (" of HG)	
Start	0°	5.5-7.5"	
9°	18°	15-18"	

**Manual Adjustment:**—Permits 10° advance or retard from center position. See Ignition Timing for adjustment.

**Removal:**—Distributor mounted between cylinder banks at rear of engine. To remove, disconnect vacuum line, take out two hold-down screws in advance arm, lift out. **NOTE:**—When installing distributor, turn crankshaft to firing position for #1 cylinder, mesh distributor drive gear with slot in upper end of drive shaft offset toward left-hand or rear side of engine (narrow portion of coupling to rear).

### IGNITION TIMING

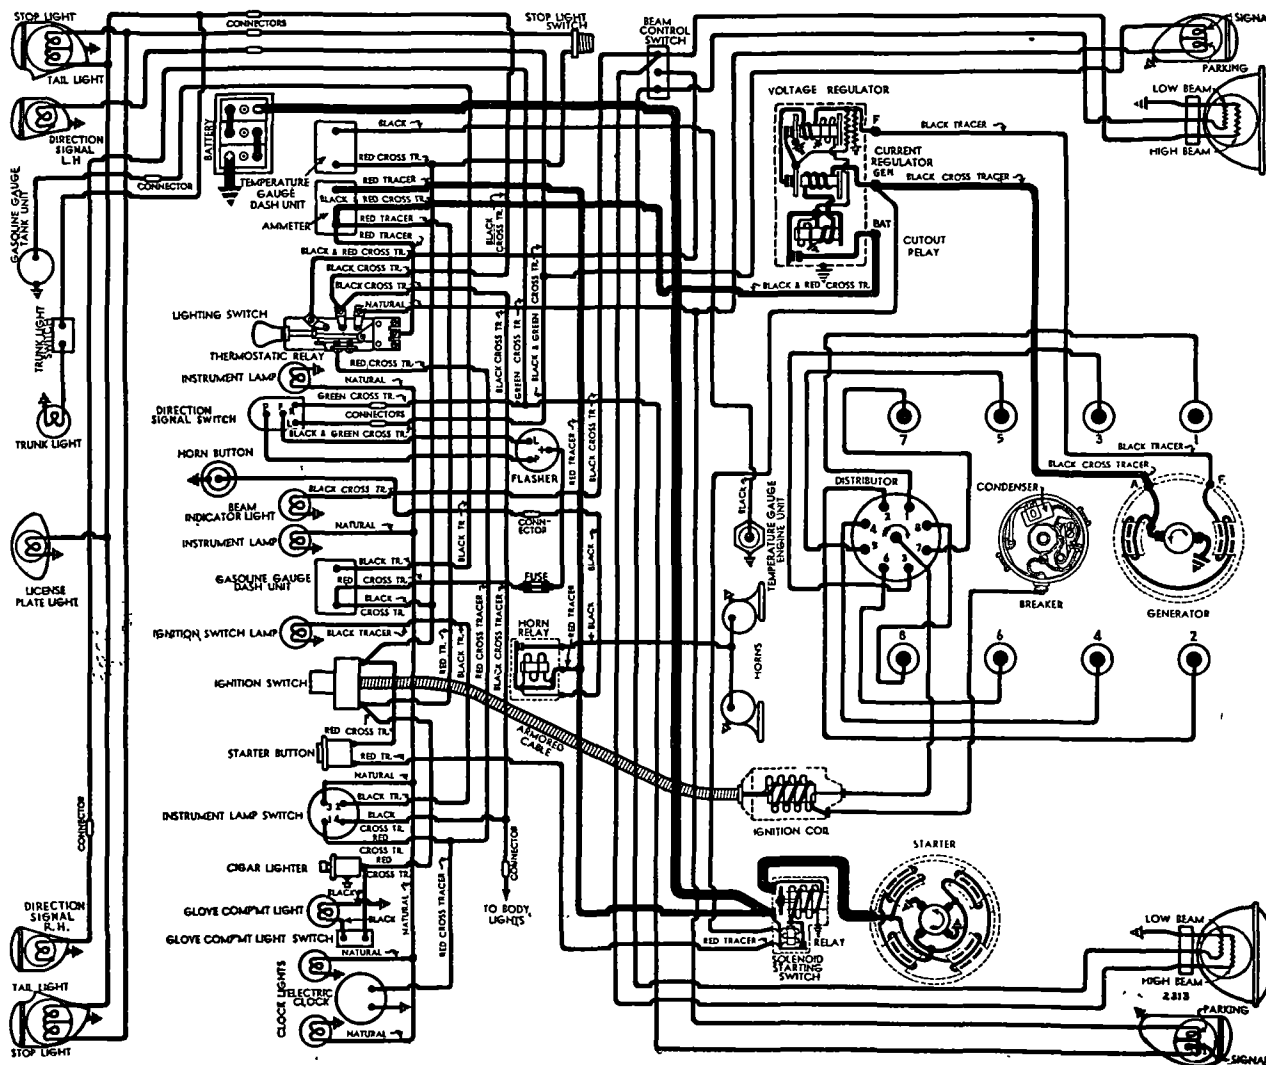

**IGNITION TIMING:**—Setting for 72 octane fuel. See Manual Adjustment (following) for correction dependent on operating conditions and fuel regularly used.

**Flywheel Degrees**

5° BTDC

**Piston Position**

.0114" BTDC

**Timing (With Synchroscope)**—This method recommended by manufacturer. Clip synchroscope lead to #1 sparkplug, direct light on crankshaft pulley, idle engine. Loosen hold-down screw in advance arm, rotate distributor until 'IG/A' mark on pulley (5° before dead center mark 'C.1/6') appears in line with pointer on chain case cover, tighten hold-down screw. Adjust for fuel (see Manual Adjustment).

**Timing (Without Synchroscope)**—Turn engine over to firing position for #1 piston (front piston, left bank) with crankshaft pulley mark 'IG/A' (5° before dead center mark 'C.1/6') lined up with pointer on chain case cover. Loosen hold-down screw in advance arm, center pointer on scale, tighten screw. Loosen advance arm clamp bolt, rotate distributor until contacts begin to open, tighten clamp bolt, check Manual Adjustment.

**Manual Adjustment**—Should be set for slight ping when accelerating engine with wide open throttle at speeds below 15 M.P.H. To adjust, loosen hold-down screw in advance arm, rotate distributor clockwise (if ping too severe), counter-clockwise (if no ping noted) one graduation at a time until correct performance secured. NOTE—Check engine for faulty spark plugs, excessive carbon deposits, localized hot spots, lean carburetor setting before changing adjustment to correct ping.

## CARBURETOR

**CARBURETION:**—Carburetor—Carter Model W D O Type 460-S (marked 277 on face of flange). 1 1/4" dual downdraft type with Carter Climatic Control. For complete data, refer to Carburetor Index.

**Idle Adjustment**—With engine warm and running at slow idle speed (choke valve wide open, fast idle inoperative), set throttle stopscrew for 7-8 MPH idle speed. Adjust idle adjusting screw for each barrel until engine fires smoothly (1/2-1 1/2 turns out from inner seated position—turn screws in for leaner mixture). Readjust idle speed.

**Accelerating Pump**—Non-adjustable.

**Float Level**—1/8" from top of float to gasket seat on cover with needle valve seated (invert to check).

**Fast Idle:**—Integral type (part of carburetor). For complete data, refer to Carburetion Equip. Index.

**Setting**—Adjust fast idle screw for .023" throttle opening with choke valve fully closed.

**Automatic Choke:**—Carter Climatic Control. For complete data, refer to Carburetion Equip. Index.

**Choke Setting**—Set center index mark to coincide with mark on carburetor flange.

## CARB. EQUIPMENT

**Air Cleaner:**—AC #1529297 heavy duty oil-bath type.

**Fuel Pump:**—AC Type AX #1537083. Diaphragm type combination fuel-and-vacuum pump. For complete data, refer to Carburetion Equip. Index.

**Gasoline Gauge:**—AC Electric type. #1515368 (dash unit), #1516155 (tank unit). For complete data, refer to Carburetion Equip. Index.

## BATTERY

**BATTERY:**—Delco Model 17K-2. 6 volt, 17 plate, 115 ampere hour capacity (20 hour rate).

**Starting Capacity**—137 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 4.3 minutes. Five second voltage 4.4 volts.

**Grounded Terminal**—Positive (+) terminal.

**Engine Ground**—Strap connector at right front engine support.

**Dimensions**—Length 10 3/4". Width 7". Height 8 3/8".

**Location**—Under left front floor boards.

**Commercial Battery**—Delco Model 19Q-1. 6 volt, 19 plate, 125 A. H. Capacity (20 hour rate).

**Starting Capacity**—145 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 5.0 minutes. Five second voltage 4.5 volts.

**Dimensions**—Same as 17K-2 except Height 8 9/16".

**Grounded Terminal, Location**—See 17K-2 above.

## STARTER

**Delco-Remy Model 1107912 (Std.), 1107913 (RHD), Armature No. 820158 (all models).**

**Drive**—Solenoid pinion shift (overrunning clutch).

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—24-28 ounces.

### Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5500	5.0	65
16 "	Lock	3.0	600

**Removal:**—Flange mounted on right front face of fly-wheel housing. To remove, take out flange mounting screws, pull starter forward and remove from below.

**Starting Switch:**—Solenoid Switch Type 1542 (all). Mounted on starter, controlled through relay (in switch) by Control Switch Type 1996005 on instrument panel.

For complete data, refer to Electrical Equipment Index.

### Solenoid Switch Specifications

Closes against 70 lb. pull with 1/2" air gap drawing 65-71 amperes at 5 volts. Holds switch closed with current draw of 12-14 amperes (hold-in coil only).

### Solenoid Relay Specifications

Contacts Close—1.9 volts max. Open—1.0-1.2 volts. Contact Gap—.035". Air Gap—.012".

## GENERATOR

**Delco-Remy Model 1102661. Armature No. 1878211. Two brush type with voltage-current control.**

**Charging Rate Adjustment**—No adjustment at generator. Charging rate controlled by Voltage Regulator and maximum output by Current Regulator. See Regulator data following.

**Maximum Charging Rate**—32 amperes min. (hot), 8.0 volts, 2450 RPM, 27 MPH and above with load or discharged battery (Current Regulator setting). Actual charging rate controlled by Voltage Regulator and dependent on battery condition.

### Performance Data

	Amperes	Volts	R.P.M.
Cold	30"	8.0	1750

\*—Not maximum output—See Current Regulator.

**Rotation**—Counter-clockwise at commutator end.

**Field Current**—1.67-1.82 amperes at 6.0 volts.

**Brush Spring Tension**—25 ounces each.

**Removal:**—Flange mounted between cylinder banks at front of engine, belt driven in tandem with water pump (separate belt for fan). To remove, take out flange mounting bolts.

**IMPORTANT AIR SCOOP NOTE**—When installing air scoop on generator, make certain that raised portion provides clearance at terminals and that scoop does not cover drive end oil cup.

**Belt Adjustment:**—Loosen generator mounting bolts, lift generator up until only slight slack evident in belt (new type belt engages bottom of pulley groove not sides), tighten bolts. Generator pivots on left hand bolt, right bolt hole slotted. NOTE—Fan belt adjustment provided at fan bracket.

## REGULATOR

**Delco-Remy Model 1118202. "Single Core" Type. Cutout Relay and vibrating type Voltage and Current Regulators in case on dash.**

**CAUTION**—Check generator for grounded fields before changing regulator settings.

For complete data, refer to Electrical Equipment Index.

### Cutout Relay

**Cuts In**—6.2-6.7 volts (hot).

**Cuts Out**—0-4.0 amperes discharge current.

**Contact Gap**—.020" (same for both sets).

**Air Gap**—.020" (with points just closed).

### Voltage Regulator

**Setting**—7.2-7.4 volts hot (operating temperature). Regulator over-compensated for temperature.

**To Check**—Connect ammeter in charging line at 'BAT' regulator terminal, voltmeter between 'BAT' terminal and ground. Operate generator at 2800 RPM, adjust charging rate to 8-10 amperes (use variable rheostat or 'AVR' set). With regulator at hot operating temperature, retard generator speed until cut-out relay points open, then increase generator speed to 2800 RPM and check hot voltage setting (above).

**To Adjust**—Change regulator armature spring tension slightly by bending lower spring hanger for light (left) spring (or one spring if both alike) only. If further adjustment required, see Single Core Regulator article in Electrical Equipment Section for Heavy (or other spring) adjustment.

**Air Gap**—.070" between center of core and armature with contacts just closed.

### Current Regulator

**Setting**—34-36 amperes hot (at operating temp.).

**To Check**—Remove cover, connect short jumper from voltage regulator frame to upper contact support bracket (shorting out Voltage Regulator). Con-

CONTINUED N NEXT PAGE

## CONTINUED FROM PRECEDIN PAGE

nect ammeter in charging line at 'BAT' regulator terminal. Turn on lights and accessories, operate generator and increase speed until output remains stationary (run until hot). Check setting with regulator at operating temperature.

**To Adjust**—Change regulator armature spring tension slightly by bending lower spring hanger for one spring. If further adjustment required see Single Core Regulator article in Electrical Equipment Section for adjustment of other spring.

**Air Gap**—.080" (check same as Voltage Regulator).

## LIGHTING

**LIGHTING**:—Headlamps—Guide 'Sealed Beam' type. For complete data, refer to Electrical Equipment Index.

**Headlamp Adjustment**—Aim upper beam straight ahead with center of hot spot 3" below lamp center height.

**Beam Indicator**—On speedometer face. Lighted whenever Country (upper) beam in use.

**Direction Signal**—Refer to Electrical Equip. Index.

## Switches

**Lighting**—Delco-Remy 1995010.

**Beam Selector**—Delco-Remy 1997002.

## Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps		Sealed Beam
Front Indic. & Park	21-3	1154
Instr., Clock, Radio	1.5	55
Glove & Trunk Comp't.	1.5	55
Beam Indicator, Ign. Lock	1	51
Stop & Tail	21-3	1154
*Rear Indicator (Early)	21-3	1154
*Rear Indicator (Later)	32	1133
License Plate	3	63
Dome & Quarter	15	87

\*—When replacing Rear Indicator Bulb use same type bulb as formerly used (1154 double contact—1133 single contact) in order for circuit to function properly.

## MISC. ELECTRICAL

**THERMOSTATIC RELAY**:—Delco-Remy. On lighting switch. Contacts remain closed with 30 amperes, open in 3 minutes with 42 ampere load at 70° F. Non-adjustable type.

**FUSES**:—Direction Signal—9 ampere. In Flasher lead under instrument panel.

**Fog Lights**—20 ampere. On switch.

**Radio & Under Seat Heater**—14 amperes each.

**HORNS**:—Delco-Remy Model K-33-H. No. 1999501, 519 (low note), 1999502, 520 (high note). Vibrator type, blended tone, operated by horn relay. Horn set 1999501 & 502 used on early cars.

Type	Current (at 6 volts)	Air Gap
1999501 (Low)	16-18 amperes	.044-.049"
1999502 (High)	15-17 amperes	.034-.039"
1999519 (Low)	19-21 amperes	.044-.049"
1999520 (High)	18-20 amperes	.034-.039"

**Horn Relay**:—Delco-Remy Model 1116775.

**Contact Gap**—.020". **Air Gap**—.015" (closed).

**Contacts Close**—2.75-4.0 volts.

## ENGINE

**ENGINE SPECIFICATIONS**:—Own. 8 cylinder, 90° Vee, 'L' head type. Upper crankcase and cylinder blocks cast Enbloc. Bore—3 $\frac{3}{8}$ ". Stroke—4 $\frac{1}{2}$ ".

**Displacement**—322 cu. ins. **Rated HP** 36.45.

**Developed Horsepower**—130 at 3400 RPM.

**Compression Ratio**—6.25-1 Std. 5.75-1 Optl.

See Cadillac Shop Notes for cylinder head identification and shims for lowering compression ratio.

**Compression Pressure**—155 lbs. at 1000 RPM or approx. 105-110 lbs. at cranking speed (Std. head).

**Vacuum Reading**—Steady 20-21" idling at 7-8 MPH.

**PISTONS**:—Lynite or Bohn Lo-Ex aluminum alloy, 'T' slot, Cam Ground type with Anodized finish (special hard oxide bearing surface). Length—4 $\frac{1}{8}$ ".

**Weight**—16.88 ozs. (stripped), 25.12 ozs. (complete).

**Removal**—Pistons and rods removed from above.

**Clearance**—Skirt .0020-.0025". See Fitting Pistons.

**Replacement Pistons**:—See Cadillac Shop Notes.

**Fitting New Pistons**:—Check piston diameter with micrometer gauge at right angles to pin hole just below lower ring groove and also  $\frac{1}{2}$ " above lower edge. If feeler gauges ( $\frac{1}{4}$ – $\frac{1}{2}$ " wide, 7-10" long) used, insert feeler next to T-slot. Piston should fall through bore of own weight on .002" feeler, and hold on .0025" feeler. NOTE—Cylinder bore out-of-round .0005" maximum, taper .0003".

**Installing Pistons**:—T-slot to left, for all pistons.

**PISTON RINGS**:—2 compression, 2 oil control rings per piston, all above pin. Oil ring grooves drilled for oil drains.

Ring	Width	End Gap	Side Clearance
Compr. (Top)	3/32"	.007-.012"	.0023-.0041"
Compr. (#2)	$\frac{1}{8}$ "	.007-.012"	.0013-.0026"
Oil Control	5/32"	.007-.015"	.0013-.0026"

**Replacem't Rings**:—.003", .005", .010", .015", .030" oversize.

**PISTON PIN**:—Diameter— $\frac{7}{8}$ ". Length—2 15/16". Pin floats in piston and rod. Held by locking rings.

See Cadillac Shop Notes for special pin removal and installation instructions.

**Pin Fit in Piston**—.0004" press fit (ribbed end), .0000" clearance or free fit at 70° F. (plain end).

**Pin Fit in Rod Bushing**—.0002-.0008" clearance (new), .0018" (worn limit).

**CONNECTING ROD**:—Weight 37.472 ozs. Length 8 $\frac{3}{4}$ ". Crankpin Journal Diameter—2.4590-2.4595".

**Lower Bearing**—Steel-backed, babbitt-lined type.

**Clearance**—.0015-.0025" (new), .0045" Max. (worn).

**Sideplay**—.008-.014".

**Bearing Adjustment**:—None (no shims). Replace bearings. Do not file rod or caps. See Cadillac Shop Notes for connecting rod and bearing installation data.

**Installing Rods**:—Numbers on rods and bearing caps on same side and installed in same numbered cylinders with marks down toward oil pan.

**CRANKSHAFT**:—3 bearing with 6 counterweights.

See Cadillac Shop Notes for main bearing servicing and rear main bearing oil seal renewal.

**Journal Diameters**—2 $\frac{1}{2}$ " all bearings.

**Bearings**—Removable steel-backed, babbitt-lined. Clearance—.0015-.0025" (new), .005" Max. (worn).

**Bearing Adjustment**:—None (no shims). Replace bearings. Do not file bearing caps.

**End Thrust**:—Taken by center (#2) bearing.

**Endplay**—.001-.005" (new), .010" Max. (worn).

**CAMSHAFT**:—3 bearing, non-adjustable chain drive.

See Cadillac Shop Notes for camshaft bushing data.

**Journal Diameters**—#1 and #2, 2.4071-2.4078"; #3, 2.0009-2.0016".

**Bearing Type**—Steel-backed, babbitt bushings.

**Clearance**—.0015-.0033" (new), .0045" Max. (worn).

**End Thrust**:—Taken by thrust plate behind camshaft sprocket. No endplay should be permitted.

**Timing Chain**:—Morse Type C #3682-R Side Guide type. Width 1 $\frac{1}{4}$ ". Pitch  $\frac{3}{8}$ ". Length 23 $\frac{1}{4}$ " or 62 links.

NOTE—Install chain 'endless' as an assembly with sprockets. Use Tool J-836 to pilot camshaft sprocket.

**Camshaft Setting**:—Sprockets marked. Mesh chain with sprockets turned so that '0' marks are adjacent and in line with a straightedge across shaft centers.

VALVES:—	Head Diameter	Stem Diameter	Length
Intake	1.876-1.886"	.3415-.3425"	5 33/64"
Exhaust	1.626-1.636"	.3405-.3415"	5 33/64"

	Seat Angle	Lift	Stem Clearance
Intake	45°	.335"	.0012-.0032"
Exhaust	45°	.345"	.0022-.0042"

NOTE—Stem clearance worn limit .005" (all valves). See Cadillac Shop Notes for valve servicing.

**Valve Guides**:—Press in block (long step end down).

**Valve Lifters**:—Wilcox-Rich 'Zero-lash' type hydraulic lifters (Mushroom type) in removable brackets. See Miscellaneous Section for complete data.

**Clearance**—.0010-.0024" (new), .0035" (worn).

**Valve Springs**:—Free length 2.210".

	Spring Pressure	Spring Length
Valve Closed	66 lbs.	1.928"
Valve Open	145 lbs.	1.581"

## VALVE TIMING

**Tappet Clearance**:—None in service (hydraulic type lifter). See Valve Servicing in Cadillac Shop Notes.

**Valve Timing**:—See Camshaft Setting above.

**Intake Valves**—Open at TDC. Close 42° ALDC.

**Exhaust Valves**—Open 52° BLDC. Close 10° ATDC.

**Valve Timing Check**—#1 cylinder (front-left bank) intake valve should open with piston at TDC and mark 'C.1/6' on crankshaft pulley aligned with chain case cover pointer (on right side).

## LUBRICATION

**LUBRICATION**:—Pressure type (gear type pump in crankcase). See Cadillac Shop Notes for oil pump data.

**Normal Oil Pressure**:—15 lbs. idling, 25 lbs. at 30 MPH.

**Oil Pressure Regulator**:—Opens at 30 lbs. On oil pump. Non-adjustable type.

**Crankcase Capacity**:—7 quarts.

**COOLING**

**COOLING SYSTEM:**—Capacity—25 quarts.

*See Cadillac Shop Notes for radiator core removal.*

**Water Pump:**—Self-adjusting packing type.

*See Water Pump Section for complete data.*

**Removal:**—Drain water, remove pump belt, hose and pump mounting screws. Lift pump out.

**Thermostat:**—Mounted in radiator top tank, linked to radiator shutters by rod on forward side.

**Setting:**—(Std. Type) Starts to open 153-158° F., fully open at 175° F. (High Reading Type—use with Heaters) Starts to open 168-173° F. Fully open 190°.

**Shutter Adjustment:**—Adjust clevis on threaded end of rod to secure 1/16" tension on thermostat with shutters closed.

**Temperature Gauge:**—AC Electric. #1510773 (dash unit), #1510774 (engine unit).

*See Miscellaneous Section for complete data.*

**CLUTCH**

**CLUTCH:**—Long Model 10CF-TI. Semi-centrifugal, single plate, dry disc type.

**NOTE:**—Borg & Beck Model 11A6 (marked #946) Single plate, dry disc type with 'Borglite' driven member used on early cars.

*See Clutch Section for complete data.*

**Facings (Long):**—Spiral or chevron wound woven (spiral grooved). Inside Diam. 6¾". Outside Diam. 10". Thickness .137".

**Pedal Adjustment:**—Pedal free travel 7/8-1½" (adjusting nut on connector link at clutch fork).

**Removal:**—Remove transmission (see below), drop clutch housing pan, punch mark clutch cover, pressure plate, and flywheel (re-install to these marks), remove 6 cover screws (release tension evenly).

**NOTE:**—Install driven disc with oil guard (cover over dampener springs) to rear.

*See Cadillac Shop Notes for clutch locking pin removal (on replacement clutches) and balancing data.*

**TRANSMISSION**

**TRANSMISSION:**—Own Make. All helical gear, constant-mesh, synchro-mesh (second & high), sliding gear (low & reverse) with remote shift.

*See Transmission Section for complete data.*

**Transmission Control:**—Remote steering col. shift.

*See Transmission Section for complete data.*

**Removal:**—Support engine with jack under rear end of oil pan (use wooden block to avoid damage to pan), remove propeller shaft (disconnect front and rear universals), free transmission extension at engine rear support, remove crossmember with engine rear support, disconnect speedometer cable, remove shifter rods from levers at transmission, support transmission at rear, take out mounting screws, pull straight back (plug clutch connection shaft bearing drain hole as soon as accessible to prevent lubricant loss), lower front end of transmission and remove.

**UNIVERSALS**

**UNIVERSAL JOINTS:**—Mechanics 3C. Needle bearing.

*See Universals Section for complete data.*

**REAR AXLE**

**REAR AXLE:**—Own Make. Hypoid gear, semi-floating type with Hotchkiss drive.

*See Rear Axle Section for complete data.*

**NOTE:**—Manufacturer recommends Carrier assembly be serviced by factory.

**Ratio:**—3.92-1.

**Backlash:**—.004-.010". Screw adjustment.

**Removal:**—Disconnect rear universal, remove axle shafts (see below), carrier flange capscrews and carrier.

**Axle Shaft Removal:**—Remove wheel, axle shaft nut, dust seal from rim of drum, pull off hub and drum, disconnect brake line and remove backing plate. Pull shaft and bearing assembly (use Tool J-838).

**Wheel Bearing Adjustment:**—None.

**SHOCK ABSORBERS**

**SHOCK ABSORBERS:**—Delco. 1946-G, H (front), 1751-V, W (rear). Double acting, hydraulic type.

*See Shock Absorber Section for complete data.*

**FRONT SUSPENSION**

**Front Suspension:**—Independent linked parallelogram type with coil springs.

*See Front Suspension Section for complete data.*

**Kingpin Inclination:**—5°6' crosswise.

**Caster:**—Negative 1¾° to Neg. 2¾°. Adjustable.

**Camber:**—0° to Positive ¾°. Adjustable.

**Toe In:**—1/32-3/32" (at rest). Adjusters at outer end of each tie rod. Adjust equally.

**Steering Geometry (Toe-out on Turns):**—Inner wheel turned 22¼-23¾°. Outer wheel 20°.

**STEERING GEAR**

**Steering Gear:** Saginaw Model. Worm-and-Double Roller type.

*See Steering Gear Section for complete data.*

**BRAKES**

**BRAKES:**—Service. Bendix hydraulic, duo-servo, single anchor type without eccentric adjustment. Hand lever applies rear wheel service brakes.

*See Brake Section for complete data.*

**Drums:**—Centrifuse. Diameter—11.995-12.0005". Drum out-of-round .007", Turn down limit .030" cut.

**Lining:**—Molded. Length—Primary 11 17/32", Secondary 12 31/32". Width 2" (50,52), 2¼" (50 Com'l front), 2½" (50 Com'l rear). Thickness 3/16".

**Clearance:**—.015" at both ends of secondary shoe with primary shoe forced out against drum.

**Braking Power:**—45½% front wheels, 54½% rear.

**Hand Brake:**—See Service Brakes above.

## CYLINDER HEAD

**CYLINDER HEAD INSTALLATION:** Use Torque Indicating Wrench to tighten cylinder head stud nuts, tighten in sequence from the center of the head outwards. Precedure for tightening Cast Iron and Aluminum Heads is as follows:

**Cast Iron Heads**—With engine cold, tighten all nuts evenly to correct tension. Then run engine until it is thoroughly warmed up and recheck all nuts (additional tightening may be necessary for correct tension).

**Aluminum Heads**—With the engine cold, tighten all nuts to correct tension. Run engine until thoroughly warm, allow engine to cool off, and then recheck all nuts. Do not tighten aluminum heads when warm.

## ENGINE REMOVAL

## 1946-47-48 MODELS

**ENGINE REMOVAL (For Servicing or Exchange):** To remove engine from chassis, drain cooling system and crankcase, then proceed as follows:

1. Disconnect and remove battery.
2. Remove hood (disconnect horn lead at relay, mark hood hinge location on dash, remove hinges).
3. Disconnect all radiator hoses, remove hoses and thermostats, remove radiator.
4. Disconnect all electrical wires and cables at engine accessories (remove spark plug wires and conduits, disconnect ground strap at rear of engine).
5. Disconnect control cables (hand throttle and choke cables—free hand throttle cable clamp at dash and loop cable out of the way by hooking it back of generator regulator, dispose of choke cable similarly by hooking it back of battery box), disconnect fuel line at fuel pump.
6. Remove all engine accessories (except water pumps and starter), remove oil filler pipe.
7. Remove two engine front support bolts.
8. Loosen clamp on exhaust cross-pipe, disconnect both exhaust pipes at exhaust manifolds.
9. Attach hoist to engine sling, take up slack in sling and hoist cables.
10. Remove front floor pan, place support under front end of transmission case, take out cap screws mounting transmission on flywheel housing.
11. Move engine straight forward to disengage clutch shaft, then lift engine out of car.

## ENGINE EXCHANGE

## 1936-46 MODELS

**RECONDITIONED ENGINE & CYLINDER BLOCK:** —Reconditioned engines (complete with heads and oil pan) and cylinder blocks (with fitted pistons) are furnished as follows:

## RECONDITIONED ENGINES

## Model 901H ('36), HB ('37)

Part Number	Size
HB-6012-A . . . . .	.015" Oversize
Model 86H (1938)	
86H-6012-A . . . . .	.015" Oversize

## Model 96H (1939)

96H-6012-A . . . . .	.015" Oversize
----------------------	----------------

## Models 06H (1940), 16H, 168H (1941)

Part Number	Used On:
06H-6012-A . . . . .	06H, 16H (Zephyr)
06H-6012-B . . . . .	168H; 06H, 16H (Contl.)

## Models 26H, 268H (1942)

26H-6012-A . . . . .	All (Std. Trans.)
26H-6012-B . . . . .	All (Liquamatic Trans.)

## Model 66H (Early 1946)①

26H-6012-A . . . . .	To Eng. No. 138051
----------------------	--------------------

①—Engines with 2.937" Bore.

## CYLINDER BLOCKS &amp; PISTONS

## Model 901H (1936)

Part Number	Size
H-6014-A . . . . .	Standard
HB-6014-B . . . . .	.015" Oversize

## Model HB (1937)

HB-6014-A . . . . .	Standard
HB-6014-B . . . . .	.015" Oversize
HB-6014-C . . . . .	.030" Oversize

## Model 86H (1938)

86H-6014-A (Order 96H-6014-A) . . . . .	Standard
86H-6014-B (Order 96H-6014-B) . . . . .	.015" Oversize
86H-6014-C (Order 96H-6014-C) . . . . .	.030" Oversize

## CYLINDER BLOCKS &amp; PISTONS (Cont.)

## Model 96H (1939)

Part Number	Size
96H-6014-A . . . . .	Standard
96H-6014-B . . . . .	.015" Oversize
96H-6014-C . . . . .	.030" Oversize

## Models 06H (1940), 16H, 168H (1941)

06H-6014-A . . . . .	Standard
06H-6014-B . . . . .	.015" Oversize
06H-6014-C . . . . .	.030" Oversize

## Models 26H, 268H (1942)

## Model 66H (Early 1946)①

Standard	Liquamatic Drive 1942	Size
26H-6014-A . . . . .	26H-6014-D . . . . .	Standard
26H-6014-B . . . . .	26H-6014-E . . . . .	.015" Oversize
26H-6014-C . . . . .	26H-6014-F . . . . .	.030" Oversize

①—Engines with 2.937" Bore (To No. 138051).

## CYLINDER SLEEVES

## 1936-48 MODELS

**CYLINDER SLEEVES:** Cast iron, dry type cylinder sleeves available for replacement where bore size worn beyond Oversize Piston limit.

**Sleeve Installation**—Rebore cylinder to size .0012" smaller than outside diameter of sleeve to provide correct press fit, counterbore top of cylinder to fit flange on upper end of sleeve, press sleeve in place.

**NOTE**—These sleeves are furnished with finished cylinder bore to fit a standard size piston. No finishing operations are necessary.

## PISTONS

## 1936-48 MODELS

**REPLACEMENT PISTONS:** Finished pistons are furnished in the sizes listed below with each size graded in steps as follows:

Models 901H ('36), HB ('37), 86H ('38), 96H ('39)	Size
Part No. . . . .	Standard Pistons
86H-6110-A2 . . . . .	2.7482-2.7485"
86H-6110-A4 . . . . .	2.7493-2.7496"

## .002" Oversize

86H-6110-A6 . . . . .	2.7505-2.7508"
86H-6110-A8 . . . . .	2.7517-2.7520"

## .015" Oversize

86H-6110-B2 . . . . .	2.7632-2.7635"
86H-6110-B4 . . . . .	2.7643-2.7646"

## .030" Oversize

86H-6110-C2 . . . . .	2.7782-2.7785"
86H-6110-C4 . . . . .	2.7793-2.7796"

## Models 06H ('40), 16H, 168H ('41)

## Model 66H (Late 1946 &amp; 1947-48)②

Part No.	Standard Pistons	Size
06H-6110-B2 . . . . .		2.8732-2.8735"
06H-6110-B4 . . . . .		2.8743-2.8746"
06H-6110-B6 . . . . .		2.8755-2.8758"
06H-6110-B8 . . . . .		2.8767-2.8770"

## .015" Oversize

06H-6110-C2 . . . . .	2.8882-2.8885"
06H-6110-C4 . . . . .	2.8893-2.8896"

## .030" Oversize

06H-6110-D2 . . . . .	2.9032-2.9035"
06H-6110-D4 . . . . .	2.9043-2.9046"

②—Engines with 2.875" Bore (Eng. #138052 and Up)

## PISTONS (Continued)

①—Engines with 2.937" Bore (To No. 138051).

## PISTON RINGS

## 1936-39 MODELS

**REPLACEMENT PISTON RINGS:** Piston rings (and Expanders for #2 Compression and Oil Ring) furnished in sets and singly in following sizes:

**CAUTION—**1936-37 models have narrower (5/32") oil ring. 1938-39 models use 3/16" oil ring.

## 1936-37 RING SETS IN CARTONS

Part Number	(5/32" Oil Rings)	Size
HS-6149-A (Steel Segment Type).....	Standard	
HS-6149-B (Steel Segment Type).....	.015" Oversize	

## 1938-39 RING SETS IN CARTONS

Part Number	(3/16" Oil Rings)	Size
96HS-6149-A (Steel Segment Type).....	Standard	
96HS-6149-B (Steel Segment Type).....	.015" Oversize	
96HS-6149-C (Steel Segment Type).....	.030" Oversize	

## 1936-39 SINGLE COMPRESSION RINGS

## Upper Compression (No Expander)

Part No.	Type	Size
H-6150-B.....	Plain	Standard
H-6150-C.....	Plain	.015" Oversize
H-6150-D.....	Plain	.030" Oversize

## Lower Compression (With Expander)

86H-6152-A①.....	Expander	Standard
86H-6152-B①.....	Expander	.015" Oversize
86H-6152-C①.....	Expander	.030" Oversize
96HS-6152-A.....	Steel Segment	Standard
96HS-6152-B.....	Steel Segment	.015" Oversize
96HS-6152-C.....	Steel Segment	.030" Oversize

①—Used with new Cylinder Blocks.

## 1936-37 SINGLE 5/32" OIL RINGS

Part No.	Oil Control (with Expander)	Size
HS-6153-A.....	Steel Segment	Standard
HS-6153-B.....	Steel Segment	.015" Oversize

## 1938-39 SINGLE 3/16" OIL RINGS

Part No.	Oil Control (with Expander)	Size
96H-6153-D①.....	Expander	Standard
96H-6153-E①.....	Expander	.015" Oversize
96H-6153-F①.....	Expander	.030" Oversize
96HS-6153-A.....	Steel Segment	Standard
96HS-6153-B.....	Steel Segment	.015" Oversize
96HS-6153-C.....	Steel Segment	.030" Oversize

①—Used with new Cylinder Blocks.

## 1940-48 MODELS

**PISTON RINGS:** Piston rings (and expanders for #2 Compression Ring & Oil Ring) are furnished in Sets in Cartons and single as listed below (Rings should be ordered in sets).

## 1940-41 &amp; LATE 1946-47-48②

## RING SETS IN CARTONS

Part No.	(Steel Segment Type)	Size
06HS-6149-A.....	Standard	
06HS-6149-B.....	.015" Oversize	
06HS-6149-C.....	.030" Oversize	

②—Engines with 2.875" Bore (Eng. #138052 and Up)

## 1940-41 &amp; LATE 1946-47-48②

## SINGLE PISTON RINGS

## Upper Compression (No Expander)

Part No.	Type	Size
06H-6150-B.....	Standard	
06H-6150-C.....	.015" Oversize	
06H-6150-D.....	.030" Oversize	

②—Engines with 2.875" Bore (Eng. #138052 and Up)

## Lower Compression (With Expander)

06H-6152-B①.....	Expander	Standard
06H-6152-C.....	Expander	.015" Oversize
06H-6152-D.....	Expander	.030" Oversize

## PISTON PINS

## 1936-48 MODELS

**REPLACEMENT PISTON PINS:** Piston pins furnished for service in the following sizes:

## 1936-48 PISTON PINS

Part Numbers	1940-48	Size
1936-39		
H-6135-B.....	06H-6135-A.....	Standard
H-6135-C.....	06H-6135-B.....	.001" Oversize
H-6135-D.....	06H-6135-C.....	.002" Oversize

## 1936-48 MODELS

**PISTON PIN FITTING:** Pins can be removed and installed without heating pistons. New pins, pistons, and connecting rods are held to close limits so that no fitting is required. Check pin fit as directed below. Oversize pins can be fitted in old pistons (and rod bushings) if clearances excessive and diameter of pin hole does not exceed .7536". Ream and burnish pin holes to size providing correct clearance for .001" or .002" Oversize.

**CAUTION—**Do not use oversize pins in new pistons.

If connecting rod bushing worn so that clearance excessive with new Standard Size Pin (as used with new pistons), install new bushing in rod (following).

**Pin Fit in Piston:** Pin should be light hand push fit with piston and pin at room temperature (70°F) or .0003-.0009" clearance (new), .0015" (worn).

**Pin Fit in Rod Bushing:** Pin should pass through bushing slowly of own weight. Clearance (new) should be .0002-.0005" and the worn limit is .0015". Renew bushing if clearance excessive (with new pistons), or ream and burnish bushing and install oversize pin (with old pistons).

## 1936-48 MODELS

**CONNECTING ROD BUSHING SERVICING:** Drive old bushing out of connecting rod (use suitable driver to avoid damage to rod). Press new bushing in place, drill four oil holes (to same size as holes in rod), ream and burnish or hone bushing to inside diameter of .7503-.7506" which will provide correct fit for new standard size pin.

**CAUTION—**Check alignment of the connecting rod after bushing installed and correct any misalignment caused by this operation.

## CONNECTING ROD &amp; BEARINGS

## 1936-48 MODELS

**REPLACEMENT CONNECTING ROD BEARINGS:** Bearing halves (upper and lower halves have same part number) furnished in Standard Size and following Undersizes:

## 1936-48 CONNECTING ROD BEARINGS

## Part Numbers

1936-41	1942-47	Size
H-6211-C.....	26H-6211-A.....	Standard
H-6211-D.....	26H-6211-B.....	.0015" Undersize
H-6211-G.....	26H-6211-C.....	.003" Undersize
H-6211-F①.....	26H-6211-D①.....	.020" Undersize
H-6211-E②.....	26H-6211-E②.....	.040" Undersize

①—Used with .020" Undersize Crankshaft.

②—Used with .040" Undersize Crankshaft.

NOTE—24 pieces (2 halves) required for set.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

**CRANKSHAFT & MAIN BEARINGS**

1936-48 MODELS

**REPLACEMENT MAIN BEARINGS:** Bearing halves (upper and lower halves have same part number) furnished in following sizes:

**1936-48 MAIN BEARINGS****Bearing Part Numbers**

Front	#2 & #3	Rear	Size
H-6338-C.....	H-6342-C.....	H-6337-C.....	Standard
H-6338-D.....	H-6342-D.....	H-6337-D.....	.0015" U.S.
H-6338-G.....	H-6342-G.....	H-6337-G.....	.003" U.S.
H-6338-F.....	H-6342-F.....	H-6337-F.....	①.020" U.S.
H-6338-K.....	H-6342-K.....	H-6337-K.....	.030" U.S.
H-6338-E.....	H-6342-E.....	H-6337-E.....	②.040" U.S.

①—Used with .020" Undersize Crankshaft.

②—Used with .040" Undersize Crankshaft.

NOTE—8 pieces (2 halves of each) required for set.

**TIMING GEARS**

1940-48 MODELS

**TIMING GEARS:** Camshaft Gear. New type aluminum alloy camshaft gear is bolted on camshaft hub flange by four offset capscrews and can be replaced without removing camshaft from engine. To remove gear, remove screw in front end of crankshaft, pull fan and dampener assembly (use Puller 6360-A), remove timing gear cover. Bend back lockplate tangs and take out four camshaft gear mounting screws, remove gear. When replacing gear, make certain that marks on camshaft gear and crankshaft gear are lined up and see that lockplate tangs are bent up against flats on mounting screws. Use 6360-B Dampener Replacer tool to install dampener.

NOTE—Camshaft gear mounting screw holes are offset so that gear can only be installed in correct position.

**Crankshaft Gear:** To replace crankshaft gear, pull fan and dampener assembly (see Camshaft Gear Removal above), use 6306-C puller to remove crankshaft gear, 6306-D Gear Replacer to install gear.

**VALVE SYSTEM**

1936-48 MODELS

**VALVE SERVICING:** Complete valve assembly (valve, spring, guide) should be removed from the engine and dismantled on the bench as follows:

**Valve Assembly Removal:** Use special bar type lifter, VZ-185, inserting end of lifter through spring coils to engage flanged lower end of guide, pull guide down slightly to release retaining 'C' washer, pull 'C' washer out, lift valve assembly out through top of block.

**CAUTION:** Mark valve assembly with cylinder number to insure re-installation in same position.

**Valve Assembly Dismantling:** Use special bench fixture to compress valve spring so that spring retainer can be removed, then remove spring, separate guide halves and remove valve. Re-assemble valves in same manner.

**CAUTION:** Mark valve guide halves to insure each assembly being kept together and re-installed in same cylinder.

**Valve Installation:** Intake valve guides have relief groove cut on one edge of each guide half. Install guides with this relief groove up.

**Valve Seat Insert Grinding:**—Manufacturer recommends use of eccentric grinding equipment to re-face seat inserts (inserts are high-tungsten, chrome-alloy steel and are exceedingly hard).

1938-48 MODELS

**Hydraulic Valve Lifter Servicing:**—When lifters removed they should be installed dry (will fill with oil and become quiet more rapidly than if installed with oil film between plunger and cylinder which will trap air in unit). Whenever lifters removed from engine, service as follows:

**Lifter Installation:**—Remove plunger from lifter body, wash out all oil, dry with air, re-install plunger in lifter body and install in engine.

**CAUTION:**—Plunger is selective fit in lifter body and must not be interchanged. Make certain that plunger re-installed in lifter from which removed.

**Lifter Clearance:**—Clearance between plunger and valve stem must be .030-.070" with no oil in unit and plunger and spring fully compressed. To check this clearance, see that lifter is on heel of cam, use screwdriver to fully depress plunger in lifter body, check clearance with feeler gauge.

Refer to article in the Miscellaneous Section for complete Wilcox-Rich 'Zero-lash' hydraulic lifter servicing data.

**OIL PUMP**

1936-48 MODELS

**OIL PUMP:** Removal & Disassembly—To remove pump from engine, remove locking wire and take out mounting screw in pump mounting flange, pull pump down and out (NOTE—Pump body fits in recess in cylinder block and it may be necessary to jar it slightly to loosen it). To dismantle pump, remove 4 screen cover capscrews, take out screen cover, pump cover plate, screen, and screen cover gasket. Lift out pump driven gear. Remove relief valve plug, spring, and plunger (on side of pump housing). If pump shaft and driving gear are to be removed, drive out pin in drive (upper) gear, place pump in arbor press with support under oil screen cover gasket seat (below relief valve), press shaft and driving gear out through lower end of housing.

**Servicing:**—Clean out all oil passages in pump housing with compressed air. Replace all worn parts when clearances exceed following limits:

**Pump Shaft & Bushings:**—Shaft clearance in bushing should be .001-.003" and bushings should be replaced if clearance exceeds .005". Replace shaft if pump gear worn or if bearing surface worn to diameter of less than .497". Replace bushings if worn to inside diameter greater than .502" (check by pushing shaft gear from side-to-side in pump housing, replace bushings if play greater than .005". Remove old bushings with driver, press new bushings in place, line ream to inside diameter of .499".

**Pump Driven Gear & Shaft:**—Clearance between driven gear and stub shaft in pump housing should be .002-.0035". Replace shaft if clearance exceeds .005" or shaft diameter under .434". To replace shaft, drive old shaft out of housing, press new shaft in place (make certain end of shaft will clear cover when installed).

**Oil Pump Relief Valve:**—Check relief valve spring tension. Replace if not within limits as follows:

Spring Number	Pressure & Length
H-6670 ("H" & "86H" pumps).....	134-144 ozs. @ 1.06"
06H-6670 (for "06H" pumps).....	95-101 ozs. @ 1.195"
41A-6654 (for "56H" pumps).....	78-87 ozs. @ 1.38"

**Pump Assembly:**—Insert pump shaft in housing, press drive gear on shaft until clearance between gear hub and end of housing (endplay) is .017", drill new 5/32" hole through shaft in line with hole in gear, install 5/32" pin andpeen both ends of pin. Complete assembly by reversing disassembly (above). **CAUTION:**—Make certain that pump mounting screw is locked with wire and lockwashers used under screen cover capscrews. Stake oil relief valve plug in place with punch.

1936-48 MODELS

**OIL PUMP DRIVE (Camshaft Gear):** Pump drive gear is pressed on rear end of camshaft. Remove old gear with gear puller, No. 6254-A, drive new gear on shaft with a fibre block (support shaft in vise with brass jaws). NOTE—Late design camshafts have flat on oil pump drive gear hub and gears have similar flat to prevent the gear turning in service. These gears and camshaft must be used together and flats must be lined up when installing gear. Drive gear on shaft until it is firmly seated against the shoulder on the shaft.

**Oil Pump Idler Gear:** This gear located in rear end of cylinder block between camshaft gear and oil pump drive gear on pump shaft.

**Removal & Disassembly:**—Take out capscrews in cover on rear face of cylinder block, lift off cover and gear assembly, and gasket.

**Servicing:**—Replace all worn parts when clearances exceed following limits:

**Idler Gear & Bushing:**—Clearance on shaft should be .0005-.002". Replace bushing if worn to inside diameter greater than .752" or if clearance exceeds .005". To replace bushing, drive old bushing out, press new bushing in gear, ream bushing to provide shaft clearance of .0005-.002".

**Idler Gear Shaft:**—Replace shaft if scored or worn to diameter less than .747". To replace shaft, press old shaft out of cover, press new shaft in until end of shaft is flush with face of cover.

1936-48 MODELS

**OIL-PRESSURE REGULATOR (Relief Valve):** Relief valve located under plug directly above front camshaft bearing (under valve cover) on all engines. Oil pump relief valve located on side of oil pump. Additional hydraulic lifter by-pass valve located above rear camshaft bearing (under valve cover) on cars with hydraulic valve lifters starting with 1938. Check relief valve spring tension and replace all springs which are not within limits listed below. **CAUTION:**—Correct type spring must be used.

**Front Cylinder Block Relief Valve (Engines without Hydraulic Valve Lifters):**—Replace valve spring if not within limits of 36-43 ozs. compressed to 1.38".

**Front Cylinder Block Relief Valve (Engines equipped with Hydraulic Valve Lifters):**—Replace valve spring if not within 33-36 ozs. compressed to .53".

**Rear Cylinder Block Hydraulic Lifter By-Pass Valve:**—Replace by-pass valve if spring broken or if valve does not seat properly (or clean metering plug which was used in place of by-pass valve in early 1938).

**Oil Pump Relief Valve:**—Three different spring used. See Oil Pump Removal & Disassembly data above.

## 1936-48 MODELS

**LOW OIL PRESSURE NOTE:** Low oil pressure may be caused by fuel pump push rod bushing being worn through, permitting oil to escape from main oil channel. Replace bushing by driving old bushing out of cylinder block and driving new bushing in until top of bushing is  $\frac{7}{8}$ " above face of casting. New bushings need not be reamed.

## OIL PAN REMOVAL

## 1936-48 MODELS

**OIL PAN REMOVAL:** Drain crankcase. Disconnect drag link at steering gear pitman arm. Loosen clamp on exhaust cross pipe, disconnect cross pipe at left cylinder bank exhaust manifold, remove cross-pipe. Remove capscrews in ball cap at rear end of front radius rods, lower radius rods to provide additional clearance at pan (rods can be held down by inserting wooden block between ball connection at rear end and frame). Remove right and left splash pan mounting screws and move pans out of the way. Remove starter motor. Disconnect oil filter return line at oil pan. Take out oil pan capscrews and remove pan from beneath car. **NOTE—**Front end of car can be raised by means of hoist attached to bumper bars (not axle) for additional pan clearance at front end.

**Installation Caution—**Install new packing in groove at front end of oil pan and use new pan gasket. Packing should be soaked in engine oil for two hours before it is used.

## 1949 LINCOLN

► **OIL PAN REMOVAL (LINCOLN): CAUTION—**For access to oil pump and screen or for clean out, oil sump only can be removed. Oil sump secured by 4 lower capscrews on bell housing and 18 nuts to oil pan.

**Oil Pan Removal—**Car manufacturer recommends following method be used:

- 1)—Drain oil, set #2 piston at top dead center (2nd cylinder right hand bank), turn wheels to extreme right, take off exhaust cross-over pipe (secure manifold heat valve with one nut).
- 2)—Remove steering idler arm bracket from right frame rail and pull down. Take off starter and oil dip stick tube.
- 3)—Remove oil sump (4 lower capscrews on bell housing and 18 nuts to oil pan). Take off oil pan baffle (clipped to oil pan). Disconnect filter return line on left side of pan.
- 4)—Remove 20 oil pan-to-block capscrews using  $\frac{3}{8}$ " drive tools. Move outlet pipe to left after freeing bracket for access to front oil pan screws. Lower rear end of pan and slide out to rear.

## 1949 LINCOLN COSMOPOLITAN

**OIL PAN REMOVAL (LINCOLN COSMOPOLITAN):** Same as given for LINCOLN above except that front end of engine must be raised as follows:

- 1)—Drain radiator and remove lower radiator hoses.
- 2)—Turn fan so that wide angle between blades up.
- 3)—Remove fuel & vacuum pump from adapter.
- 4)—Take off 2 nuts from front engine mounts, raise front of engine  $2\frac{1}{4}$ - $2\frac{3}{8}$ ", block engine up by inserting blocks between brackets and engine mounts.

- 5)—When removing oil pan, pan should be turned so front oil seal will pass over left capscrew of front main bearing cap.

## RADIATOR

## 1946-47-48 MODELS

**RADIATOR REMOVAL:** Drain cooling system. Disconnect and remove upper and lower radiator hoses. Remove two horizontal capscrews at bottom of radiator, lift radiator out.

## COOLING SYSTEM

## 1949 LINCOLN &amp; LINCOLN COSMOPOLITAN

► **PRODUCTION CHANGE FOR IMPROVED COOLING:** New Cylinder Head Gasket No. 8EL-6051-D. This gasket required for new water holes added during production, 4 holes in block (1 in upper corners of each bank) with matching holes in each cylinder head. This gasket furnished for service on all engines (can be used on early engines without the additional holes).

**Drilling of Additional Water Passage Holes on Early Cylinder Blocks and Heads for Improved Circulation—**Allowed by car manufacturer where overheating conditions cannot be corrected by regular methods. Use new gasket No. 8EL-6051-D as template, drill  $\frac{5}{16}$ " additional holes as follows: 4 in cylinder block (1 in upper corner front and rear of each bank), 2 in each cylinder head (1 in upper corner front and rear).

► **CAUTION—**Holes in cylinder block should not be drilled deeper than  $\frac{5}{8}$ ".

## MODEL IDENTIFICATION

**SERIAL NUMBER:** On plate on front of dash. Use Engine Number (following).

**ENGINE NUMBER:** Stamped on left side of crankcase below center of block. First No. K-5501 (1936), K-7501 (1937), K-9001 (1938), K-9451 (1939).

## TUNE-UP

**COMPRESSION:—Ratio—6.38-1 Std. aluminum head.  
Pressure—138 lbs. at 1000 R.P.M. or 105-110 lbs. at  
cranking speed of 100 R.P.M.**

**VACUUM READING:—18-20"** steady reading with engine idling at 5-7 M.P.H.

**FIRING ORDER: 1-4-9-8-5-2-11-10-3-6-7-12.** See diagram for cylinder numbering and spark plug cable connections.

**SPARK PLUGS:** Champion No. 7. 18 mm. Metric type.  
Gaps—.028-.030".

**IGNITION:** See Coil, Condenser, and Distributor.

**Breaker Gap**—.020" **Cam Angle** 36° (closed).

**Synchronization**—Movable contacts open  $33\frac{1}{2}^{\circ}$  (distr.) after fixed set (unequal  $33\frac{1}{2}$ - $26\frac{1}{2}$ - $33\frac{1}{2}^{\circ}$  firing intervals).

**Automatic Advance**—See *Distributor*.

**IGNITION TIMING:** See Ignition Timing.

**Std. Setting**—At TDC, with flywheel mark "D2/12C" at indicator in inspection hole in top right face of housing. NOTE—Movable contacts open  $33\frac{1}{2}^\circ$  (distr.) after this point (unequal  $33\frac{1}{2}^\circ$ - $26\frac{1}{2}^\circ$ - $33\frac{1}{2}^\circ$  intervals).

**CARBURETION:** See Carburetor & Carb. Equipment.

**Idle Setting**—Both idle screws midway between “miss” and “roll” points or set for highest steady vacuum gauge reading. Idle speed 5-7 MPH.

**Float Level**—Fuel level 9/16" below top edge of float bowl.

**Accelerating Pump**—Inner hole—Summer, Outer hole—Winter.

**Fuel Pump Pressure:** 4½ lbs. maximum.

**VALVES:** See Valve Timing.

**Tappet Clearance (1936)**—.004" Int., .006" Exh. Cold.  
(1937-40)—None in service (hydraulic type take-up)

**STARTING:** See Battery, Starter, Generator, Regulator.

## IGNITION

**Ignition Switch:—Oakes Steering Column & Ignition  
Lock No. 301539, Lincoln Part No. K-7675-F.  
Lock Cylinder—Hurd.**

**COIL: Auto-Lite Model CE-4001-L. Two coil unit mounted on dash above distributor. Ignition Current—1.5 amperes idling, 5 amperes stopped for each coil.**

**CONDENSER:** Auto-Lite Part No. IG-2671A & IG-2671E (one each). Capacity—.20-.25 microfarad.

**DISTRIBUTOR:** Auto-Lite Model IGM-4003(Std.), IGM-4003A (Exp.). Double breaker, 6 lobe cam, full automatic advance type. Contacts open alternately.

**Firing Interval**—Alternate opening at 33½ and 26½° intervals corresponding to unequal 67 and 53° firing intervals of engine. Contacts must be synchronized. See Timing.

**Breaker Gap**—Set at .020" (both sets equal).  
**Cam Angle** r Dwell—36° closed, 24° open. Each set operates independently.

**Breaker Arm Spring Tension—17-20 ozs.**

### Automatic Advance—IGM-4003

Distributor		Engine	
Degrees Start	R.P.M.	Degrees	R.P.M.
2	300	0	600
4	660	4	1320
6	1000	8	2000
8.5	1365	12	2730
	1800	17	3600

### Automatic Advance—IGM-4003-A

Start.....	300	0.....	600
4.....	450	8.....	900
6.....	800	12.....	1600
8.....	1140	16.....	2280
10.....	1500	20.....	3000
12.....	1840	24.....	3680

**Removal:**—Distributor mounted between banks at rear of engine. To remove, take off distributor conduits and cap, take out hold-down screws in advance arm.

## IGNITION TIMING

**IGNITION TIMING:—** Flywheel Degrees    Piston Pos.  
All engines ..... At TDC..... 000" TDC.

**NOTE**—Right hand (stationary) contacts control right coil and fire spark plugs in right cylinder bank. Left hand (movable) contacts control left coil and fire plugs in left bank.

**Timing (Stationary Contacts)**—With #2 piston (front cylinder, right bank) on top dead center entering power stroke and flywheel mark 'D2/12C' at indicator in inspection hole in right top face of flywheel housing, loosen taper lock screw in center of breaker cam, carefully locate cam so that right hand (stationary) contacts are beginning to open, tighten lock screw. Synchronize movable contacts.

**Synchronization (On the Engine)**—Turn engine over 67° to firing position of piston #1 (front cylinder, left bank), stop with piston on top dead center when flywheel mark 'D1/11C' lines up with indica-

### 1936 MODEL

tor. Loosen lock screws on movable subplate, shift plate by turning eccentric adjusting screw until movable contacts begin to open, tighten lock screws. **Synchronization (Other methods)**—If distributor synchronized on rotary spark gap or other types of equipment, set movable contacts to open  $33\frac{1}{2}^\circ$  after stationary contacts. Firing intervals unequal  $33\frac{1}{2}$ - $26\frac{1}{2}$ - $33\frac{1}{2}$  distributor degrees.

## CARBURETOR

**CARBURETION:**—Carburetor—Stromberg Model EE-22, 1.437" (1 7/16") dual downdraft type.

For complete data, refer to Carburetor Index.

**Idle Adjustment:**—Warm up engine before adjusting. Manufacturer recommends use of vacuum gauge and adjustment of idle adjusting screws for highest steady vacuum. If vacuum gauge not used, adjust throttle stop screw for 5-7 M.P.H. idling speed,

cut out one bank of cylinders by disconnecting coil primary lead, adjust idling adjusting screw for carburetor barrel feeding the other bank by turning screw in until engine begins to miss and then out until engine fires smoothly. Reconnect coil, disconnect second coil and repeat adjustment for other idle adjusting screw. Idle engine for all 12 cylinders and readjust for correct 5-7 MPH idling speed.

**Accelerating Pump Adjustment:**—Engage pump link in proper hole in throttle lever as follows:

Inner Hole—Minimum stroke—Summer setting.  
Outer Hole—Maximum stroke—Winter setting.

## CARB. EQUIPMENT

**Air Cleaner:** AC #1525939 (1936), #1528347 (1937), #1528497 (others), oil-wetted type.

**Fuel Pump:**—AC Type I #1521218 Diaphragm type combination fuel-and-vacuum pump.

For complete data, refer to Carburetion Equip. Index.

1937-40 M DELS

**Gasoline Gauge (1936)**—King-Seeley Electric type. K-S No. 5766 (Dash Unit—stamped 'G' on edge), No. 5852 (Tank Unit—stamped 'Lincoln K8380E'). (1937-40)—King Seeley Electric. K-S No. 6250, Lincoln No. K-13099D (dash unit), K-S No. 5850, Lincoln No. 70-9275 (tank unit).

For complete data, refer to Carburetion Equip. Index.

## BATTERY

**BATTERY:**—Exide, Type X-21-L, 6 volt, 21 plate, 147 ampere hour capacity (20 hour rate).  
Starting Capacity—175 amperes for 20 minutes.  
Zero Capacity—300 amperes for 6.1 minutes.  
Grounded Terminal—Negative (—) terminal.  
Location—On right side under front floor.

## STARTER

**Auto-Lite Model MAO-4003B (Std.), MAO-4004B (Exp.).** Armature No. MAO-2006.

**Drive:**—Outboard Bendix Type RB10FXXTD.

**Cranking Engine:**—100 RPM, 150-200 amp., 5 volts.

**Rotation:**—Counter-clockwise at commutator end.

**Brush Spring Tension:**—24-32 ozs. (new brushes).

### Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	2700 Min.	5.5	44 Max.
1.5 "	1360	5.5	100
5.7 "	740	5.0	200
11.1 "	500	4.5	300
16.8 "	320	4.0	400
22.3 "	180	3.5	500
34.0 "	Lock	3.0	715
48.5 "	Lock	4.0	975

**Starting Switch:**—Model SS-4004 (MAO-4003B), SS-4005 (MAO-4004B). Pushbutton R.B.M. No. 3225. Magnetic type switch mounted on starter and controlled by pushbutton on instrument panel.

For complete data, refer to Electrical Equipment Index.  
**Removal:**—Starter flange mounted on right front face of flywheel housing. To remove, take out 3 flange mounting screws.

## GENERATOR

**Auto-Lite Model GBC-4103, Armature No. GBC-2035.** Third brush control in conjunction with Current Regulator (two-rate charging control). Ventilated by fan on drive pulley.

**Charging Rate Adjustment:**—Use test meters to check output. Ground regulator by connecting short jumper between fuse cap on regulator and generator frame while making adjustment. Turn slotted screw on commutator endplate (upper hexagonal headed screw) clockwise to increase or counter-clockwise to decrease charging rate. Remove jumper wire.

**IMPORTANT NOTE:**—Third brush stop is set to limit maximum possible output of generator to 24-25 amperes at 8.0 volts and is locked in this position (third brush cannot be shifted beyond this point).  
**Maximum Charging Rate:**—23 amperes (cold), 16 amperes (hot), 1300 R.P.M., 20-25 M.P.H.

### Performance Data

Cold			Regulator Contacts Closed			Hot		
Amps.	Volts	R.P.M.	Amps.	Volts	R.P.M.	Amps.	Volts	R.P.M.
0	6.4	460	0	6.4	525			
4	6.7	525	4	6.8	640

CONTINUED ON NEXT PAGE

## CONTINUED FROM PRECEDING PAGE

**Rotation**—Counter-clockwise at commutator end.  
**Brush Spring Tension**—22-27 ounces.  
**Field Current**—2.47-2.73 amperes at 6.0 volts.  
**Field Fuse**—5 ampere in cup on regulator.  
**Motoring Current**—4.46-4.94 amperes at 6.0 volts.

**Removal**—Generator flange mounted on right rear face of timing chain case. Water pump and oil temperature regulator mounted on commutator end of generator. To remove, drain radiator, disconnect hose couplings and oil leads, remove water pump (optional). Take out 3 capscrews in generator mounting flange, pull generator to rear to disengage drive coupling. Do not disturb intermediate plate carrying drive sprocket or timing chain automatic idler sprocket will require resetting.

## REGULATOR

**Auto-Lite Model TC-4305A. Two Charge Type.** On generator. Consists of Cutout Relay and Two-Rate Charge Control Regulator in a single case.

*For complete data, refer to Electrical Equipment Index.*

## Cutout Relay

**Cuts In**—6.5-7.25 volts, 10 M.P.H.  
**Cuts Out**—5-2.5 ampere discharge current.  
**Contact Gap**—.025-.040".

**Air Gap**—.010-.030" with contacts closed.

## Regulator.

**Contacts Open**—8.25-8.75 volts at 70°F. Unit is over-compensated for temperature (operating voltage lower when hot).

**Contacts Close**—1.2-1.4 volts below opening point.

**Contact Gap**—.005" minimum.

**Air Gap**—.045" with contacts closed.

## LIGHTING

**Headlamps**—Hall, pre-focused type.

1936 Models. Upper and lower beams controlled by light switch lever on steering wheel.

1937-40 Models. Upper and lower beams controlled by foot selector switch on toeboard.

**Adjustment**—Aim headlamps straight ahead with top of upper beam 37" (lamp bulb height) above floor at 25 feet. Adjusting screws located on reflector flange and lense must be removed. Make final check with lenses in place.

**Beam Indicator**—Located in light switch button. Lighted whenever upper beams are lighted.

## Switches (1936)

**Lighting**—R.B.M. Model 1300.

**Compartment**—R.B.M. Model 1260.

**Door Switch**—R.B.M. Model 1550.

## Switches (1937-40)

**Lighting**—R.B.M. No. 2400 ('37), 2430 ('38-39).

**Foot Selector**—R.B.M. No. 2450 ('37), 1092 ('38-39).

**Instrument**—Douglas, Lincoln No. 86-13740-B.

**Stop Light**—Gen'l. Ind., Lincoln K-10428-B.

## Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps	32-32	2330
Parking	1½	55
Indicator	1	51
Instr., Luggage Cmp.	6	81
Dome, Quarter	6	81
Stop & Tail	21-3	1158

## MISC. ELECTRICAL

**CIRCUIT BREAKER**—R.B.M. Model 1630. Consists of two vibrating and one lock-out circuit breaker in

case on dash (see diagram for circuits controlled by each unit).

**Performance**—Begin to operate with load of 35-40 amperes, limiting load to 15 amperes maximum with dead short-circuit across terminals.

**Contact Spring Tension**—5 ounces minimum.

**FUSES**: Generator Field—5 ampere on regulator.

**HORNS**—Sparton. Vibrator type twin horns. Operated by horn relay. Horn current 11-13 amperes each.

**Horn Relay**—R.B.M. No. 100072-L.

**Contacts Close**—4 volts Maximum across windings

**Current Draw**—4-.55 amperes at 6.0 volts.

## ENGINE

**ENGINE SPECIFICATIONS**—Own. 12 cylinder, 67° Vee, 'L' head type. Cylinder block for each bank cast en bloc and separate from crankcase.

**Bore**—3.125". **Stroke**—4.50".

**Displacement**—414 cubic inches.

**Rated Horsepower**—46.8 S.A.E.

**Developed Horsepower**—150 at 3400 R.P.M.

**Compression Ratio**—6.38-1 Std. aluminum head.

**Compression Pressure**—138 lbs. at 1000 R.P.M. or 105-110 lbs. at cranking speed of 100 R.P.M.

**Vacuum Reading**—18-20" steady reading with engine idling at 5-7 M.P.H.

**PISTONS**—Lynite, aluminum alloy, T slot, Cam ground type with oxidized bearing surface (hard oxide formed on outer surface). Recondition engines to take finished replacement pistons. **Length**—3.87". **Weight**—12.5 ozs. (less rings, pin, locking screw). **Removal**—Pistons and rods removed from below. **Clearance**—.025" top, .002" bottom. See Fitting New Pistons.

**Replacement Pistons**—Finished pistons furnished standard and .0025", .015", .030" oversize.

**Fitting New Pistons**: Use .002" feeler inserted between piston and wall on side opposite slot at right angles to pin bosses to check clearance. Pull required to withdraw feeler must be within 5-7 lbs.

**Installing Pistons**—Slot toward left (viewed from drivers seat) for all pistons.

**PISTON RINGS**—Two compression, two oil control rings per piston, all above pin. Lower ring groove drilled with oil drain holes.

Ring	Width	End Gap	Side Clearance
Comp. Top	1235-.1240"	.008-.015"	.0025"
Comp. #2	1235-.1240"	.008-.015"	.0015"
Oil Cont.	1545-.1550"	.007-.015"	.0015"

**Replacement Rings**: Std., .002", .015", .030" oversize.

**PISTON PIN**—Diameter—.875". **Length**—3". Pin locked in piston by locking screw in one boss.

**Pin Fit in Rod Bushing**—.0005" clearance.

**CONNECTING ROD**—Weight—38 ozs. **Length**—10.875". **Crankpin Journal Diameter**—2.500".

**Lower Bearing**—Steel-backed, copper-lead lined. **Clearance**—.0015-.003". **Slideplay**—.006-.015" (total).

**Bearing Adjustment**—None (no shims). Replace bearings. Do not file rods or caps. Bearings furnished .020" undersize.

**Installing Rods**—Number on rod and cap must correspond. Install in same numbered cylinder with marks pointing down toward oil pan.

**CRANKSHAFT**—4 Bearing. Integral counterweights. **Journal Diameters**—2.625" (all bearings).

**Bearing Type**—Steel-backed, copper-lead lined. **Clearance**—.001-.003".

**Bearing Adjustment**—Shims. Do not file caps.

**Replacement Bearings**—Furnished .020" undersize.

**End Thrust**—Taken by rear main bearing. Endplay .004-.007". No adjustment (replace bearing).

**CAMSHAFT**—5 bearing. Duplex chain drive with automatic idler sprocket take-up. *For data on Morse Automatic Take-up Idler, see article in Miscellaneous Sec.* **Journal Diameters**—#1, 1.500"; #2, 3, 4, 2.250"; #5, 1.250". Front bearing must be removed to take out camshaft.

**Bearing Type**—Steel-backed, babbit bushings.

**Clearance**—.0015-.003".

**End Thrust**—Taken by front bearing. Endplay .004-.006". No adjustment (replace bearing).

**Timing Chain**—Morse Duplex. Width 1½". Pitch ¾". **Length** 104 links or 39".

**Camshaft Setting**—Sprockets marked. Mesh chain with sprockets turned so that marks are adjacent and in line with a straightedge across shaft centers.

VALVES	Head Diameter	Stem Diameter	Length
All valves	1.687"	3125"	6.750"
	Seat Angle	Lift	Stem Clearance
All valves	45°	.343"	.003-.004"

**Valve Guides**—Press fit in block. Finish ream to size for correct stem clearance.

**Valve Lifters (1936)**: Cylindrical, roller type. Diameter 1.122-1.1225". Lifter guides single piece, flanged top, removed from above.

(1937-40)—Wilcox-Rich Zero-Lash hydraulic valve lifters. Mushroom type. Diameter .750".

*See Miscellaneous Section for complete data.*

Valve Springs (1936):	Pressure	Length
Valve Closed	60-66 lbs.	2.687"
Valve Open	187-199 lbs.	2.343"
(1937-40)	Pressure	Length
Valve Closed	55-60 lbs.	2.687"
Valve Open	130-140 lbs.	2.343"

## VALVE TIMING

**Tappet Clearance (1936)**: .004" Intake, .006" Exhaust, Cold. Adjustable type.

(1937-40)—None in service (hydraulic take-up).

**Valve Timing**—See Camshaft Setting above.

**Intake Valves**—Open 21° BTDC. Close 49° ALDC.

**Exhaust Valves**—Open 57° BLDC. Close 11° ATDC.

**To Check Timing**—No flywheel marks provided. No. 2 intake valve (front cylinder, right hand bank) opens when a point on the flywheel approximately 6.77 teeth before dead center mark 'D2/12C' lines up with indicator on housing.

1937-40 Note—Hydraulic type valve take-up makes it impossible to determine valve opening except by removing cylinder head and using dial indicator to check valve movement.

## LUBRICATION

**LUBRICATION**—Pressure system. Gear type oil pump mounted in crankcase at rear of engine. Harrison type oil temperature regulator mounted on right side of crankcase.

**Normal Oil Pressure**—40 lbs. at 50 M.P.H.

**Crankcase Capacity**—12 quarts.

**Oil Pressure Regulator**: Located on outlet header near oil temperature regulator on right side of crankcase. Operates at 40 lbs. Not adjustable. Additional non-adjustable by-pass valve located at forward end of oil header in crankcase.

**Oil Temperature Regulator:** Harrison. Located on right hand side of crankcase and connected in water pump inlet line.

**Oil Pressure Gauge ('36):** King-Seeley Electric. K-S Part No. 5760 (dash unit), 5460 (motor unit). Dash unit identified by letter 'O' stamped on edge.

(1937-40 Models)—King Seeley Electric. K-S No. 6255, Lincoln No. K-13116D (dash unit), K-S No. 5460, Lincoln No. 48-9278 (engine unit).

*See Miscellaneous Section for complete data.*

## COOLING

**COOLING SYSTEM:—Water Pump:**—Centrifugal type with adjustable packing. On rear of generator. *See Water Pump Section for complete data.*

**Removal:**—Drain radiator, disconnect hose couplings, oil temperature regulator lines, drive coupling, take out water pump mounting screws.

**Radiator Shutter Thermostat:**—In radiator top tank, connected to shutters by rod and levers. Should be practically closed at 145°F., open at 180°F.

**Hood Shutter Thermostat:** One on each hood side panel. Linked to ventilator doors on panel. Start to open at 95°F, full open at 110°F.

*See Miscellaneous Section for complete data.*

**Water Capacity:**—32 quarts.

**Drain Valves:**—One only, at lower inlet elbow of water pump.

## CLUTCH

**CLUTCH:**—Long Model 12CB-CL. Single plate, dry disc *See Clutch Section for complete data.*

**Facings:**—Woven type, 2 required. Inside Diam. 7", Outside Diam. 12". Thickness .137".

**Adjustment:**—Free movement of clutch pedal should be 1". To adjust, loosen locknut and turn adjusting screw on clutch throw-out fork below pedal shaft. Clearance between pedal and underside of toeboard controlled by stopscrew above pedal shaft.

**Removal:**—Disconnect speedometer cable, rear brake cables, shock absorber links, spring clips on axle housing. Take out clutch housing mounting screws (housing integral with transmission case), slide en-

tire transmission and rear axle assembly to rear to expose clutch. Take out clutch mounting screws in cover flange on flywheel.

## TRANSMISSION

**TRANSMISSION:**—Own make. All helical gears. Constant mesh, synchro-mesh (second and high), sliding gears (low & reverse). NOTE—'Blocker' type synchronizer used on 1938-40 models.

*See Transmission Section for complete data.*

**Removal:**—Remove rear axle or slide assembly back to free transmission (see Rear Axle Section below). Take out clutch housing mounting screws (integral with transmission case), pull transmission straight back and remove.

## UNIVERSALS

**UNIVERSAL JOINT:**—Spicer. One joint mounted within ball housing at rear of transmission case (torque tube drive).

*See Universals Section for complete data.*

## REAR AXLE

**REAR AXLE:**—Own make. Full floating, spiral bevel gear type with straddle-mounted pinion and Torque Tube drive.

*See Rear Axle Section for complete data.*

**Ratio:**—4.58-1. **Backlash:**—.010". Screw adjustment.

**Removal:**—Disconnect speedometer cable, rear brake cables, shock absorber links, spring clips on axle housing. Take out universal joint ball housing bolts, pull rear axle to rear to free drive shaft at splined joint at universal.

**Axle Shaft Removal:**—Axle shaft flange bolted to wheel at outer end (under dustcap). To remove shaft, take out flange screws, pull shaft out (does not disturb wheel bearings).

**Wheel Bearing Adjustment:**—Remove axle shaft, unscrew locknut within wheel hub, take off lockwasher, turn up adjusting nut until bearing clearance is hardly perceptible, replace lockwasher, locknut and axle shaft.

## SHOCK ABSORBERS

**SHOCK ABSORBERS:**—Houdé (Houdaille), Type 'ALG'. Double acting hydraulic, automatic thermostatic valve type.

*See Shock Absorber Section for complete data.*

## FRONT SUSPENSION

**Front Suspension:**—Conventional 'I' beam section front axle with Reverse-Elliott ends and semi-elliptic springs.

**Kingpin Inclination:**—7½° crosswise.

**Caster:**—1½° (normal load). Limits 1-2°. Adjust by inserting wedge shims between spring and spring pad on axle.

**Camber:**—1°. Limits ½-1°. Bending of axle to correct camber not recommended.

**Toe In:**—1/16-1/8". Adjusted in usual manner by loosening clamp bolts and turning tie rod.

**Steering Geometry:**—Inner wheel turned 22¾° (136° WB), 22 1/3° (145° WB), outer wheel 20° (all cars). Allowable variation ½°.

## STEERING GEAR

**Steering Gear:** Gemmer Special Lincoln Model. Worm-and-Roller type.

*See Steering Gear Section for complete data.*

## BRAKES

**BRAKES:**—Service—Bendix Mechanical, Duo-Servo. Single anchor type with Vacuum Power operation. Hand lever applies all four service brakes.

*See Brake Section for complete data.*

**Drum Diameter:**—15.125". Cast-iron, steel-web type. **Lining:**—Molded (all shoes 1936-37, primary '38-40), woven (secondary shoes '38-40). Width 2½". Thickness ¼". Length per wheel 33½".

**Clearance:**—.010" at heel and toe of each shoe.

**Braking Power:**—50% Front, 50% Rear.

**Hand Brake:**—See Service Brakes above.

**Power Unit:**—Bendix plain type vacuum cylinder mounted on right front leg of 'X' member and linked to brake cross-shaft. Control valve connected in linkage between brake pedal and cross-shaft. *See Brake Section for complete data.*

**NOTE:—Engine Hood—Hinged at cowl and lifts from forward end. Free hood latch by turning radiator ornament.**

**Engine Removal** — Remove the hood, radiator splash pan, grille and brace rods, remove radiator. Remove transmission cover in front compartment, disconnect transmission, lift engine out.

**OIL PAN REMOVAL:** See *Lincoln Shop Notes*.

## MODEL IDENTIFICATION

**SERIAL NUMBER:**—Same as engine number. Stamped on top of clutch housing and on left side of front cross member.

**ENGINE NUMBER:—**First number H-1. Stamped on top of clutch housing and on left side of front frame cross-member.

## TUNE-UP

**COMPRESSION:—Ratio—6.7-1 Std. No Optl. ratios.**

**Pressure—146 lbs. at 1000 R.P.M. Max. or 118 lbs. at cranking speed of 100 R.P.M.**

**VACUUM READING:—18-20" steady reading with engine idling at 5 M.P.H.**

**FIRING ORDER:** 1-4-9-8-5-2-11-10-3-6-7-12. See diagram for cylinder numbering and spark plug cable connections.

**SPARK PLUGS:** Champion Type J-9, 14 mm. Metric type.  
Gaps—.028-.030"

**IGNITION:** See Coil, Condenser, and Distributor.  
**Breaker Gap**—.014-.016" Cam Angle 36.5° closed  
 (each set operating independently).  
**Synchronization**—Unequal alternate opening at  
 37½-22½-37½° (distr.) intervals.  
**Automatic Advance**—8° max. at 950 RPM (Orig.  
 H-12127 Distr.), 11-12° max. at 650 RPM (Repl.  
 16H-12127 Distr.). Distributor degrees & RPM.

**IGNITION TIMING:** See Ignition Timing.  
**Std. Setting**—4° BTDC (Orig H-12127 Distr.), 2° BTDC (Repl. 16H-12127 Distr.). No flywheel marks provided. See Ignition Timing for timing procedure and Vacuum Brake Setting.

**CARBURETION:** See Carburetor & Carb. Equipment.  
**Idle Setting**—Both idle screws set midway between “miss” and “roll” points (approx.  $\frac{5}{8}$ - $\frac{3}{4}$  turn open.  
 Idle speed 5-7 MPH.

**Float Level**—Fuel level 15/32" below top edge of bowl.

**Accelerating Pump**—Not adjustable.

**Fuel Pump Pressure** 3½ lbs. maximum.

**VALVES:** See Valve Timing.

**Tappet Clearance—.010-.012" Intake, .014-.016" Exhaust. No adjustment.**

**STARTING:** See Battery, Starter, Generator, Regulator.

## IGNITION

**IGNITION:—Part No. H-12000 (Complete Ignition Unit).**  
Mounted on front of gear case and driven through  
tongue-and-slot coupling from camshaft.

**Ignition Switch:**—Oakes Hershey type co-incidental ignition switch and steering post lock.

**COIL:** Ford Part No. H-12024. Two coil unit mounted on top of ignition unit (one coil for each bank).

**Ignition Current**—3.2 amperes idling, 4.2 stopped.

**Ignition Resistance**—Mounted on lighting circuit

**breaker. One resistance unit connected in each coil primary circuit. Resistance per unit .325-.375 ohms at 68° F.**

**CONDENSER:** Ford Part No. H-12300 (two used).  
Capacity—.30-.34 microfarad.

**DISTRIBUTOR:** Ford No. H-12127 (Orig. Equip.), 16H- 12127 (Repl. Unit). Double breaker, 6 lobe cam, full automatic advance type with Vacuum Brake Control (see Ignition Setting for adjustment). Right hand contacts (movable or adjustable set) control right hand coil and fire spark plugs in right cylinder bank. Left hand contacts (fixed set) control left hand coil and fire plugs in left bank. Contacts open alternately at  $37\frac{1}{2}$  and  $22\frac{1}{2}$  degree intervals corresponding to 75 and 45 degree engine firing intervals (caused by  $75^\circ$  angle between banks) and must be synchronized (see Ignition Timing). Breaker Gap—.014-.016" (both sets). Use special

**two-step feeler to check gap. First step (.014") 'Go', second step (.016") 'No Go'.**

**Cam Angle or Dwell—36.5° closed, 23.5° open. Each set operating independently.**

**Breaker Arm Spring Tension—20-24 ounces.**

**No. H-12127**

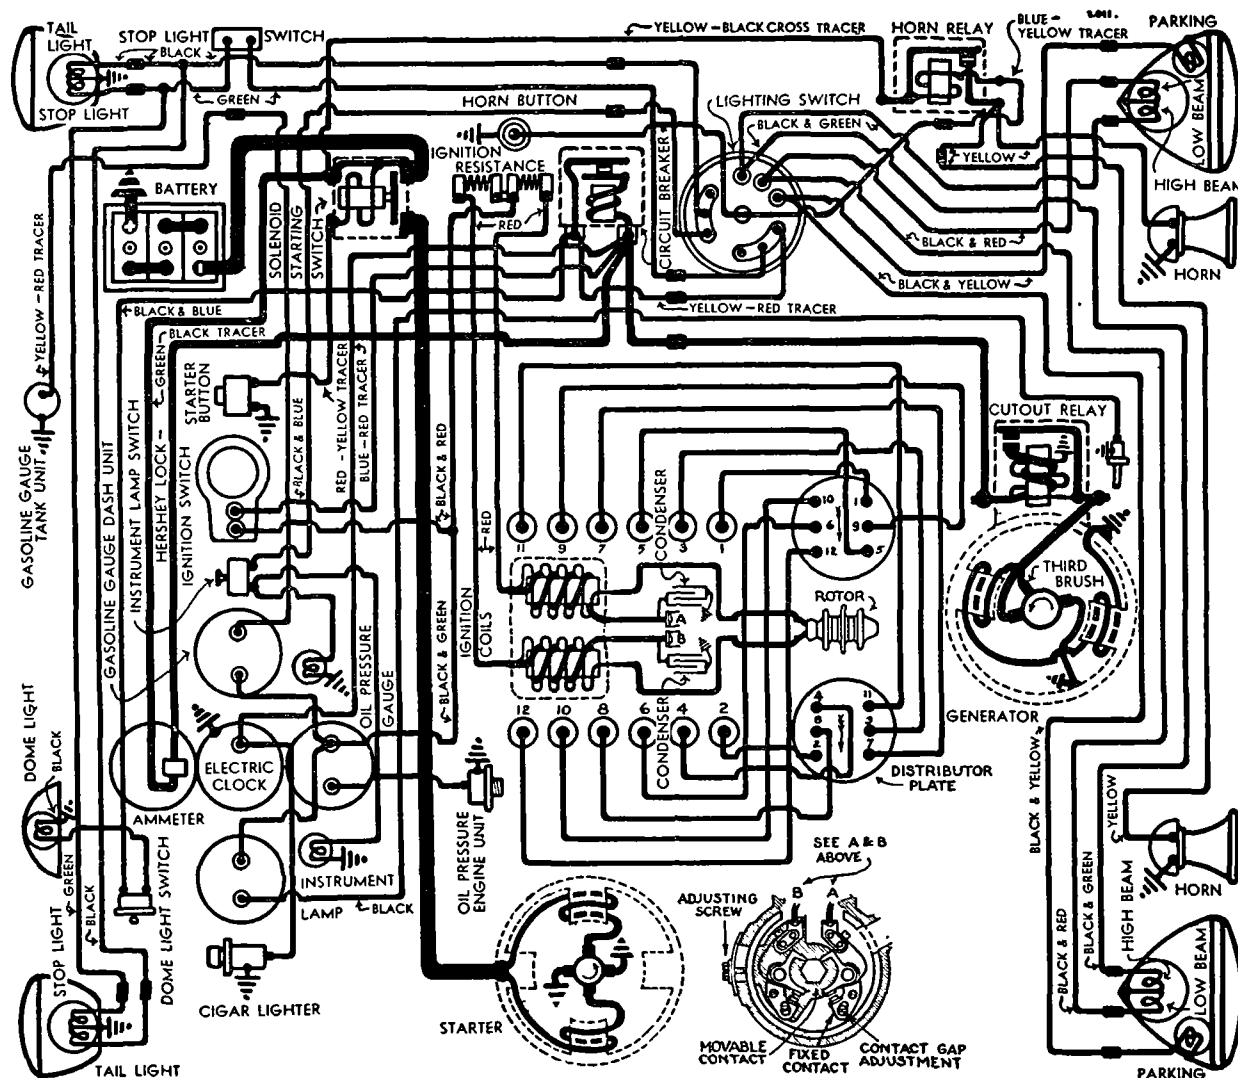

Distributor Automatic Advance Engine			
Degrees	R.P.M.	Degrees	R.P.M.
Start.....	200	0.....	400
8 .....	950	16.....	1900

NOTE—Limits are 7½-8½" (distributor).

**No. 16H-12127**

Distributor Automatic Advance Engine			
Degrees	R.P.M.	Degrees	R.P.M.
Start.....	200	0.....	400
11-12.....	650	22-24.....	1300

**Distributor Removal:**—At front of engine. To remove, disconnect vacuum line, take out 3 capscrews in mounting flange.

## 1936 MODELS

**IGNITION TIMING**

**IGNITION TIMING:**—Special setting for each type distributor. See Vacuum Brake Setting also.

**Ignition Timing (Flywheel Degrees)**

H-12127 Distr. 16H-12127 Distr.

All Engines ..... 4° BTDC ..... 2° BTDC

**Note**—On Ford Stroboscope, settings will be 2° BTDC (H-12127 Distr.), 1° BTDC (16H-12127 Distr.).

**NOTE**—Movable contacts should be synchronized and Timing Fixture V-126 or Stroboscope should be used for this purpose. Manufacturer recommends use of this fixture for both synchronization and timing. V-126 fixture (Ford) modified for use on Zephyr by addition of correct timing marks on edge of disc.

**Timing (Fixed Set—on V126 Fixture)**—Mount ignition unit on fixture, check contact gap and breaker arm spring tension, rotate disc in direction of arrow (counter-clockwise) until hole lines up

with locking plunger, clip timing light lead to left hand coil terminal, loosen adjusting screw on side of ignition unit housing, move screw down (away from coil) to bottom of slot, then move screw up slowly until timing light goes out, tighten screw. Check by rotating disc one full revolution, stop when timing mark on outer edge of disc lines up with pointer on fixture. Contacts should open at this point.

**Synchronization (Movable Set—on V-126 Fixture)**

Clip timing light lead to right hand coil, rotate disc counter-clockwise until next mark on edge of disc lines up with pointer. If timing light does not go out at this point, remove adjusting screw and graduated plate on side of housing, turn eccentric adjusting screw in slot clockwise to advance or counter-clockwise to retard spark until movable contacts begin to open and timing light goes out. Readjust breaker point gap (changed by synchronizing adjustment), repeat test.

**Timing (On Engine)**—With #1 piston on top dead center, loosen adjusting screw on side of ignition unit housing, move screw down to bottom of slot, then move screw up slowly until left hand (fixed) contacts begin to open. Note graduation on plate under screw head in line with reference mark on housing, move screw up exactly one additional graduation (H-12127 Distr.), or up ½ graduation (16H-12127 Distr.), for correct timing as given above. No means provided to synchronize contacts on engine.

**Vacuum Brake Setting:**—Vacuum Brake should be adjusted for best performance with particular fuel and operating conditions. To adjust, loosen locknut, back off adjusting screw until engine 'pings' under load, turn up adjusting screw just enough to eliminate ping, tighten locknut. When adjusted on Stroboscope, brake should retard spark to peepsight (set at 0° advance) at speed of 950 RPM. (H-12127), 650 RPM. (16H-12127) with no vacuum to release brake.

**CARBURETOR**

**CARBURETION:**—Carburetor—Stromberg Model EE-1, Ford No. H-9510-A1. 31/32", dual downdraft type. For complete data, refer to Carburetor Index.

**Idle Adjustment:**—Engine must be warm and idling at hot or slow idling speed. Manufacturer recommends use of Vacuum Gauge and adjustment of idling screws for highest vacuum reading. If vacuum gauge is not used, set throttle stopscrew for 5 M.P.H. idling speed, turn each idle adjusting screw (in succession) in until engine begins to miss, out until engine begins to roll, finally turn screw in slowly until engine fires smoothly. Readjust throttle stopscrew for correct idling speed.

**Accelerating Pump:**—Not adjustable.

**Fast Idle:**—Integral with carburetor and operative with choke valve closed. No adjustment required.

**CARB. EQUIPMENT**

**Air Cleaner:** AC No. 1526761 (1936), 1528239 (1937)  
Oil-wetted type Std. Heavy duty oil-bath type Optl.

**Fuel Pump:** AC Type R, No. 1521764 (1936), 1523307 (1937). Diaphragm type. Ford Nos. 40-9350 (1936), 68-9350 (1937).

For complete data, refer to Carburetion Equip. Index.

**Gasoline Gauge:**—King-Seeley Electric. Ford Nos. Dash Unit—No. H-9280 (1936), HB-9280A (1937—Eng. No. 15530 to 20630), HB-9280B (1937—Eng. No. HB-20631 to 31007), HB-9280C (1937—Eng. No. 31008 to 45529).

**Tank Unit:**—No. H-9275 (1936—marked "Lincoln H-9275" on case), 70-9275B (1937—Use as replacement unit for H-9275).

For complete data, refer to Carburetion Equip. Index.

**BATTERY**

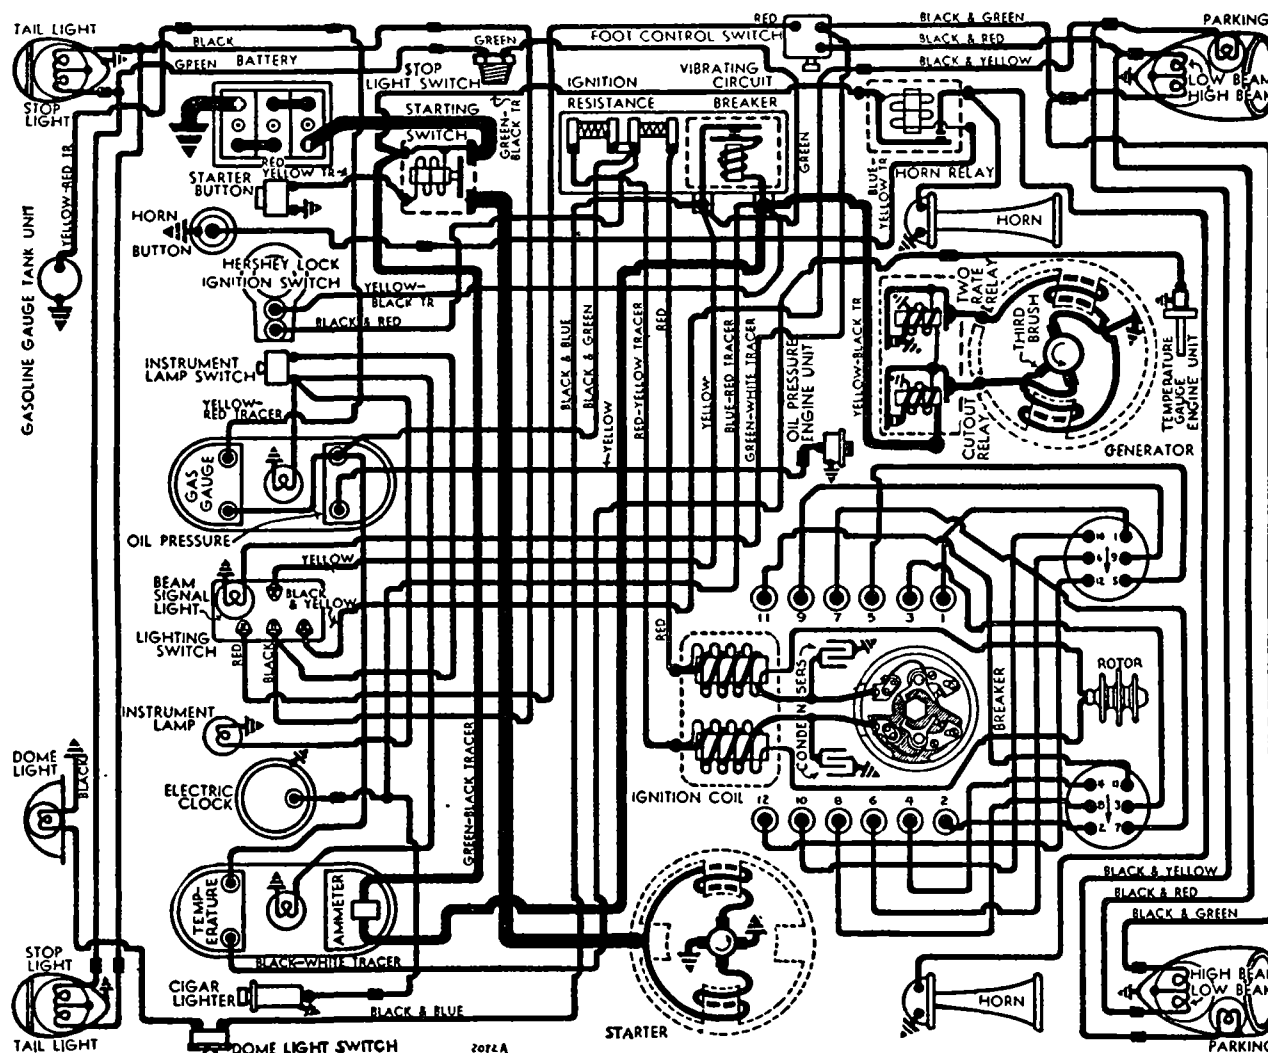

**BATTERY:**—Ford No. 40-10655C (81A-10655 B Replm't.). 6 volt, 17 plate, 100 A.H. Cap. (20 hour rate).

**Starting Capacity:**—126 amperes for 20 minutes.

**Zero Capacity:**—300 amperes for 3.3 minutes.

**Grounded Terminal:**—Positive (+) terminal.

**Location:**—Under left front seat.

CONTINUED FROM PRECEDING PAGE

**STARTER**

Ford Model No. 18-11002. Armature No. 18-11005.  
Drive—Inboard Bendix No. L11FX-10. Ford No. B-11350.

Cranking Engine—110 R.P.M., 225 amps., 4.75 volts.  
Rotation—Counter-clockwise at commutator end.  
Brush Spring Tension—2 lbs. each.

**Performance Data**

Torque	R.P.M.	Volts	Amperes
4 ft. lbs.	1070	4.8	200
8 "	660	4.3	340
12 "	300	3.65	465
14 "	Lock	3.5	500

Starting Switch—R.B.M. No. 2295, Ford No. H-11450-A.  
Pushbutton R.B.M. No. 3224. Magnetic type switch mounted on engine side of dash and controlled by pushbutton No. H-11500-C on instrument panel.

Removal—Starter mounted on right front face of flywheel housing. To remove, take off pan at right of engine, take out two through bolts on commutator endplate, remove starter from below.

**GENERATOR**

Ford Model No. 68-10000-A (Std. 1936), 68-10000-HA (Radio 1936), 78-10000-HA (Std. 1937). Third brush control types in conjunction with regulator (non-vibrating) Two-Rate Relay (except 68-10000-A). Ventilated by fan on drive pulley.

NOTE—These models replaced by 81A-10000-A (68-10000-A), 81A-10000-B (68-10000-HA & 78-10000-HA).

Armatures—Ford No. 18-10005 (68-10000-A), 68-10005-H (68-10000-HA), 78-10005-HA (78-10000-HA).  
Maximum Charging Rate—18 amperes (hot) at 1650 RPM or 27.5 MPH (68-10000-A), 26 amperes (hot) reached at 2000 RPM or 30 MPH (68- & 78-10000-HA).

NOTE—When regulator installed, charging rate must not be set for less than 20 amperes.

Charging Rate Adjustment—Remove commutator cover band, shift third brush counter-clockwise (down) to increase, or clockwise to decrease charging rate. Third brush held in position by friction.

**Performance Data****Model 68-10000-A—Generator Hot**

31.6	7.7	2000

**Performance Stds.—See Note**

68-10000-A		68, 78-10000-HA	
Amperes	Eng. RPM	Amperes	Eng. RPM
Start.....	550	Start.....	525
20.....	1800	26.....	1250
20.....	2500	16.....	2500

NOTE—If generator does not test up to this Performance Std., it should be examined and overhauled.

Rotation—Counter-clockwise at commutator end.  
Brush Spring Tension—Approx. 26-28 ozs.

Field Current—6 amperes at 6.0 volts (68-10000-A—field resistance 1.0 ohm at 70°F), 4.16 amperes at 6.0 volts (68- & 78-10000-HA—field resistance 1.44 ohms at 70°F).

Removal—Generator mounted between cylinder banks at front of engine. Driven by Vee belt in tandem with two water pumps. To remove, take out support bolt in bracket under generator.

Belt Adjustment—Loosen generator support bolt, raise generator until total sideplay on belt midway between generator and water pump pulleys is  $\frac{3}{4}$ -1".

**CUTOUT RELAY**

Ford Part No. B-10505 (Used with 68-10000-A Gen.). Mounted on generator field frame. Generator field lead (black wire) grounded to relay mounting screw.  
Cuts In—5.8-6.3 volts, 10 MPH.  
Cuts Out—3 ampere maximum discharge.  
Contact Gap—.015-.020".  
Air Gap—.010-.015" with contacts closed.

**REGULATOR**

Ford Part No. 68-10505 (used with 68-10000-HA & 78-10000-HA Gen.). Cutout Relay and non-vibrating type voltage regulator (two-rate relay) in case on generator.

For complete data, refer to Electrical Equipment Index.

**Cutout Relay**

Cuts In—5.8-6.3 volts, 10 MPH.  
Cuts Out—3 ampere maximum discharge.  
Contact Gap—.015-.020".  
Air Gap—.010-.015" with contacts closed.

**Regulator**

Regulator—Contacts open at 8.0-8.3 volts reducing charging rate to approximately 50% of high rate, and remain open until cutout relay contacts open.

**LIGHTING**

LIGHTING—Headlamps—Hall, Pre-focused type. Upper and lower beams controlled by lighting switch (1936), Beam Selector Switch on toeboard (1937). Adjustment—Aim headlamps straight ahead with top of beam 33" (lamp bulb height) above floor at 25 feet. Adjusting screws located in reflector flange (lense must be removed). Make final check with lenses in place.

Beam Indicator—Located in switch button. Lighted whenever upper or driving beam is lighted.

**Switches—1936**

Lighting—No. H-11653 (with wiring assembly). No. B-11657 (body & contact assembly), B-11673-B (switch plate assembly).

Instrument—No. H-13740.

**Switches—1937**

Lighting—R-B-M 2400. Ford No. HB-701616 with No. 701618 Switch Knob.

Beam Selector—R-B-M 1092. Ford No. HB-13532 (switch only), HB-11653 (with Headlamp & Horn Wiring).

Instrument—Ford No. 50-13740.

Stop Light—Ford No. 48-13480.

Dome Light—R-B-M 1200A. Ford No. B-13752-A.

**Bulb Specifications**

Position	Candlepower	Mazda No.
Headlamps	32-32	2330
Parking	1½	55
Indicator	1	51
Instrument, Dome	6	81
Stop & Tail	21-3	1158

**MISC. ELECTRICAL**

CIRCUIT BREAKER—R.B.M. Model 1640, Ford Part No. H-11624. Vibrating type circuit breaker mounted on dash. Connected in lighting circuits. Begins to operate with load of 52-54 amperes limiting load to 15 amperes.

HORNS—Sparton. Air-Electric type twin horns operated by horn relay. Horn current 11-13 amperes each.

Horn Relay—R.B.M. Model 10072. Contacts close with terminal voltage of 4.0 volts max. (relay inverted).  
Current Draw—.40-.55 amperes at 6.0 volts.  
Coil Resistance—11-14 ohms.

**ENGINE**

ENGINE SPECIFICATIONS—Own Model H. 12 cylinder, 75° Vee, 'L' head type. Both cylinder banks and crankcase cast Enbloc.  
Bore—2.75". Stroke—3.75".  
Displacement—267.28 cubic inches.  
Rated Horsepower—36.39 S.A.E.  
Developed Horsepower—110 at 3900 R.P.M.  
Compression Ratio—6.7-1 Std. Aluminum head.  
Compression Pressure—146 lbs. at 1000 R.P.M. or 118 lbs. at cranking speed of 100 RPM.  
Vacuum Reading—18-20" steady reading with engine idling at 5 M.P.H.

CYLINDER SLEEVES—Cast iron, dry type cylinder sleeves available for replacement where bore size worn beyond Oversize Piston Limit.  
Sleeve Installation—See Lincoln Shop Notes.

PISTONS—New type special heat-treated steel-alloy, Cam ground type. Length 3.245-3.305".  
Weight—326 grams (without rings or pin).  
Removal—Pistons and rods removed from above.  
Clearance—See Fitting New Pistons.

Replacement Pistons: See Lincoln Shop Notes.

Fitting New Pistons: Use .50" wide feeler stock of correct thickness (as listed below) inserted between piston and cylinder wall at right angles to pin to check clearance. Pull required to withdraw feeler should be 5-8 lbs. (all types).

Feeler Thickness—.002" New Piston in New Plain Bore, .004" for New Piston in Worn Plain Bore .005" for Worn Piston in Worn Plain Bore.

PISTON RINGS—Two compression, one oil ring per piston, all above pin. Oil ring groove drilled with oil drain holes.

Ring	Width	End Gap	Side Clearance
Comp.	.093-.0935"	.008-.013"	.003" (top)
Oil Cont.	.1545-.155"	.008-.013"	.0015"

Replacement Rings—See Lincoln Special Shop Notes for complete data and new expander type rings.

**ENGINE**

CONTINUED FROM PRECEDING PAGE

**PISTON PIN:**—Diameter .7501-.7504". Length 2.482".

Pin floats in piston and rod. Held by locking ring at each end. Connecting rod bronze-bushed.

**Pin Fit in Piston**—.0003-.0009" clearance or light hand push fit with piston at 70°F.**Pin Fit in Rod Bushing**—.0002-.0005" clearance (pin should pass through bushing slowly of own weight). See *Lincoln Shop Notes for Pin Fitting Directions*.**Replacement Pins:** See *Lincoln Shop Notes*.**CONNECTING ROD:**—Weight 638 grams. Length 7.400".**Crankpin Journal Diameter**—2.126".**Lower Bearing**—Removable steel-backed, copper-lead lined bearing shells in each rod.**Bearing Dimensions**—Thickness .0855". Length .787".**Clearance**—.001-.0025". Sideplay .014" (both rods).**Bearing Adjustment:** None (no shims). Do not file caps. Replace bearings if less than .08375" thick.**Replacement Bearings:** See *Lincoln Shop Notes*.**Installing Rods:**—Rods and caps marked 'R1', 'L1', etc. Assemble with marks together, install in same numbered cylinders with marks pointing down on all rods.**CRANKSHAFT:**—4 bearing. Integral counterweights.**Journal Diameters**—2.401" (all bearings).**Bearing Type**—Steel-backed, copper-lead lined.**Clearance**—.001-.003".**Replacement Bearings:** See *Lincoln Shop Notes*.**Bearing Adjustment:**—None (no shims). Replace bearings. Do not file bearing caps.**End Thrust:**—Taken by rear main bearing. Endplay .002-.006". Adjusted by replacing bearing.**CAMSHAFT:**—Four bearing. Helical gear drive.**Bearing Diameters**—1.797" (replace bearings if the diameter more than 1.802", replace camshaft if the journal diameter less than 1.7955").**Bearing Type**—Steel-backed, babbitt-lined bushings pressed in block. Clearance—.002".**End Thrust:**—Taken by front bearing and gear hub and by gear hub and cover plate. Endplay .004-.008". Adjusted by replacing bearing or front plate.**Timing Gears:**—Crankshaft gear Cast-steel. Camshaft gear Bakelized Fabric.**Camshaft Setting:**—Gears marked. Mesh crankshaft gear tooth marked '0' with space between teeth on camshaft gear marked '/' (this mark in line with mark on gear hub).**VALVES:**—

	Head Diam.	Stem Diam.	Length
All valves	1.537"	.3105-.3115"	4.750-4.751"

	Seat Angle	Lift	Stem Clearance
Intake	45°	.292"	.0015-.0035"
Exhaust	45°	.292"	.0025-.0045"

NOTE—Service limit for valve stem diameter is .309" Intake, .3065" Exhaust. Valves interchangeable.

For *Valve Servicing data*, see *Lincoln Shop Notes*.

NOTE—Valve seat inserts used for exhaust valves.

**Valve Guides:** Split type retained by "C" washer and valve spring. NOTE—Replace both halves of all guides measuring less than .6665" (thickness of guide half and valve stem at top of guide with valve of .311" stem diameter in place in guide half).For *Valve Guide Servicing data*, see *Lincoln Shop Notes*.**Valve Lifters:** Barrel type in reamed holes in block. Diameter—.9995". Replace if worn to less than .998" in diameter or length less than 1.700" after any necessary resurfacing of ends (cast type can be re-

surfaced on both ends, pressed steel type on bottom end only).

**Clearance**—.0005-.0015". Lifter should slip into hole in block of own weight.**Valve Springs:**—Free length 2.42".

	Spring Pressure	Length
Valve Closed	37-40 lbs.	2.13"
Valve Open	76-80 lbs.	1.84"

NOTE—Replace springs which do not test to 47-57 lbs. at 2 1/8" or if paint coating has been removed.

**VALVE TIMING****Tappet Clearance:** .010-.012" Intake, .014-.016" Exhaust. No adjustment.**Valve Timing:**—See *Camshaft Setting* above.**Intake Valves**—Open 19°30' BTDC. Close 54°30' ALDC.**Exh. Valves**—Open 57°30' BLDC. Close 16°30' ATDC.**To Check Valve Timing**—No flywheel marks or other means provided to check timing. If dead center point for any piston established on flywheel, intake valve opening for this cylinder should be approximately 6 2/3 teeth before this point with piston .1334" BTDC.**LUBRICATION****LUBRICATION:**—Pressure system. Gear type oil pump mounted in crankcase at rear of engine.**Normal Oil Pressure**—40-45 lbs. at 2000 R.P.M.**Oil Pump and Oil Pressure Regulator:** See *Lincoln Shop Notes for complete data*.**Crankcase Capacity**—6 qts.**Oil Pressure Gauge:**—King-Seeley Electric. Ford No. (1936) H-9273 dash unit, 48-9278 (motor unit). (1937) HB-9273 (dash unit—1st 5500 cars, black markings), HB-9273B (dash unit—next 10,000 cars, red-brown markings), HB-9273C (dash unit—later cars, brown-gray markings). No. 48-9278 (engine unit See *Miscellaneous Section for complete data*).**CLUTCH****CLUTCH:**—Long Model 10CF-CI. Semi-centrifugal, single plate, dry disc type.See *Clutch Section for complete data*.**Clutch Facings**—Moulded type, 2 required. Inside Diam. 6.00", Outside Diam. 10.00". Thickness .140".**Pedal Adjustment:**—Free movement should be 1 1/2-2". To adjust, remove clevis pin on adjusting rod at clutch pedal lever, loosen locknut, turn clevis (lengthen rod to increase free movement).**Removal:**—Remove transmission cover in front compartment, disconnect speedometer cable, remove shift lever. Disconnect rear brake cables and shock absorber links, disconnect rear spring at center mounting on body. Support engine, take out rear engine mounting bolts, take out clutch housing flange mounting screws (housing integral with transmission case), slide entire drive unit to rear exposing clutch. Take out clutch mounting screws on flywheel.**TRANSMISSION****TRANSMISSION:**—Own Make. 3 speed, helical gears (all speeds), Constant-mesh, Synchro-mesh (second and high).See *Transmission Section for complete data*.**Removal:**—Disconnect rear spring at center mounting on body, disconnect speedometer cable, take out mounting bolts in front universal ball housing, slide rear end to rear. Remove transmission cover in front

compartment, remove shift lever. Support engine, take out rear engine mounting bolts, take out clutch housing flange mounting screws, pull transmission to rear.

**UNIVERSALS****UNIVERSAL JOINT:**—Spicer. 1 joint mounted at rear of transmission (within torque tube ball housing).See *Universals Section for complete data*.**REAR AXLE****REAR AXLE:**—Own make. 3/4 floating, spiral bevel type with Torque Tube drive and straddle mounted pinion.See *Rear Axle Section for complete data*.**Ratio**—4.33-1 (1936), 4.44-1 (1937) Std.**Backlash**—.006-.010".**Optional Axle:**—Columbia Two-Speed type.See *Rear Axle Section for complete data*.**Removal:**—Disconnect rear shock absorbers and brake cables, disconnect rear spring at center connection on body, disconnect speedometer cable, take out mounting bolts in universal joint ball housing, pull axle assembly back to free shaft at splined joint at universal.**Axle Shaft Removal:**—Axle housing must be separated at pinion mounting and shafts removed from inner end (differential side gear integral with shaft).**Wheel Bearing Adjustment**—None.**SHOCK ABSORBERS****SHOCK ABSORBERS:**—Ford (Houde). Hydraulic type. See *Shock Absorber Section for complete data*.**FRONT SUSPENSION****Front Suspension:**—Conventional 'I' beam section front axle with Reverse-Elliott type ends and transverse cantilever springs.**Kingpin Inclination**—8° ('36), 4° ('37) crosswise.**Caster**—9° Max., 4 1/2° Min. ('36), 6° Max., 1 1/2° Min. ('37). Must be alike within 1/2° for both wheels. Axle may be bent cold to correct caster if proper tools used (wedges and blocks to prevent crushing flange).**Camber**—3/4° (3/4° Max., 1/4° Min.). Both wheels must be alike within 1/4°, right wheel must not exceed left. Correct in same manner as caster.**Toe In**—1/16-1/8". Adjust in usual manner by loosening tie rod clamp bolts and turning rod.**Steering Geometry (Toe Out)**—Inner wheel turned 23°, outer wheel 20°. Allowable variation 1/2°.**STEERING GEAR****Steering Gear:** Gemmer Model 330. Worm-and-Roller type.See *Steering Gear Section for complete data*.**BRAKES****BRAKES:**—Service—Bendix Duo-Servo, single anchor, mechanical type. Hand lever applies all four service brakes.See *Brake Section for complete data*.**Drum Diameter**—12" Cast alloy iron type.**Lining**—Moulded (primary), Woven (secondary). Width 1.75". Thickness .21". Length per shoe 11.95".**Hand Brake:**—See *Service Brakes* above.

**ENGINE HOOD & ENGINE REMOVAL:**—Turn radiator ornament counter-clockwise to free latch, lift hood  
**Engine Removal:**—Detach water hoses and heat indicator wire, take out radiator mounting screws, remove radiator (right and left grille sections can be removed if required). Disconnect all engine wires and controls, and fuel line. Disconnect exhaust pipe at manifolds. Disconnect transmission from engine, free engine mountings, lift engine out.

**OIL PAN REMOVAL:** See Lincoln Shop Notes.

## MODEL IDENTIFICATION

**SERIAL & ENGINE NUMBER:**—Stamped on top of clutch housing and on left side of front frame cross-member.

## TUNE-UP

**COMPRESSION:**—Ratio—6.7-1 Std. aluminum head.  
 Pressure—146 lbs. at 1000 R.P.M. Max. or 118 lbs. at cranking speed of 100 RPM.

**VACUUM READING:**—18-20" steady idling at 5 M.P.H.  
**FIRING ORDER:** 1-4-9-8-5-2-11-10-3-6-7-12. See diagram for numbering and cable connections on caps.

**SPARK PLUGS:** Champion Type H-10. 14 mm. Metric. Gaps—.030" Limits .028-.030"  
 NOTE—Use J-10 plugs for hot climate or high speed.

**IGNITION:** See Coil, Condenser, and Distributor.  
**Breaker Gap**—.014-.016" **Cam Angle** 36.5° closed (each set operating independently).  
**Synchronization**—Unequal alternate opening at 37½-22½-37½° (distr.) intervals.  
**Automatic Advance**—8° max. at 950 RPM (Orig. H-12127 Distr.), 11-12° max. at 650 RPM (Repl. 16H-12127 Distr.). Distributor degrees & RPM.

**IGNITION TIMING:** See Ignition Timing.  
 Std. Setting—Special settings as follows:

H-12127 Distr. 16H-12127 Distr.  
 Eng. H-45530 to 57738 ('38) At TDC.....2° ATDC  
 All Other Engines .....4° BTDC.....2° BTDC  
 No flywheel marks provided. See Ignition Timing for timing procedure and Vacuum Brake adjustment.

**CARBURETION:** See Carburetor & Carb. Equipment.  
**Idle Setting**—Both idle screws ⅝-¾ turn open (Stromberg Carb.), ⅞ turn open (Chandler-Groves Carb.). Idle speed 5-7 MPH.  
**Float Level** (Stromberg Carb.)—Fuel level 15/32" below top of float bowl.  
**Float Level** (Chandler-Groves Carb.)—Fuel level 11/16" plus or minus 1/32" below top of bowl.

**Accelerating Pump** (Stromberg Carb.)—Inner Hole—Summer, Outer Hole—Winter.  
**Accelerating Pump** (Chandler-Groves Carb.)—Center hole—Normal. Upper hole (Summer), Lower hole (Winter) for temperature extremes.

**Fuel Pump Pressure:** 3½ lbs. maximum.  
**VALVES:** See Valve Timing.  
**Tappet Clearance** None in service (hydraulic lifter)

**STARTING:** See Battery, Starter, Generator, Regulator.

## IGNITION

**IGNITION SWITCH:** Oakes Steering Column & Ignition Lock Assembly. Oakes No. 301650, Ford No. 86H-3676 (1938); No. 301970, Ford No. 96H-3676A (1939 Std.); 302005, Ford No. 96H-3676B (1939 Custom). Ignition Switch Oakes No. 301708 (1938), 301987 (1939 Std.), 302006 (1939 Custom). NOTE—96H-3676A Assy. used as replacement for 1938 86H-3676 Assy.  
**Lock Cylinder**—Hurd or Briggs & Stratton. Ford No. 81A-3686A (1938), 91A-3686A (1939) with two keys.

**COIL:** Ford Part No. H-12024. Two coil unit assembled as part of Ignition Unit.

**Ignition Current**—Approx. 3.2 amperes idling, 4.2 stopped (per coil). Ignition primary circuit resistance 1.0-1.33 ohms.

**Resistor Unit**—One unit connected in each coil primary circuit (2 used). Mounted on Lighting Circuit Breaker assembly No. 86H-11624.

**CONDENSER:** Ford Part No. H-12300 (two used). Capacity—30-34 microfarad.

**DISTRIBUTOR:** Ford No. H-12127 (Orig. Equip.), 16H-12127 (Repl. Unit). Double breaker, 6 lobe cam, full automatic advance type with vacuum brake control. Same design as used on other Zephyr models (alternate contact opening, requires synchronization).

**Firing Interval**—Movable contacts open 37½° after fixed set. Unequal 37½° and 22½° intervals (cor-

responding to 75° and 45° of crankshaft rotation) caused by 75° included angle between banks.

**Breaker Gap**—.014-.016" Both sets. Use tw step feeler gauge, .014" step 'go', .016" step 'no go'.

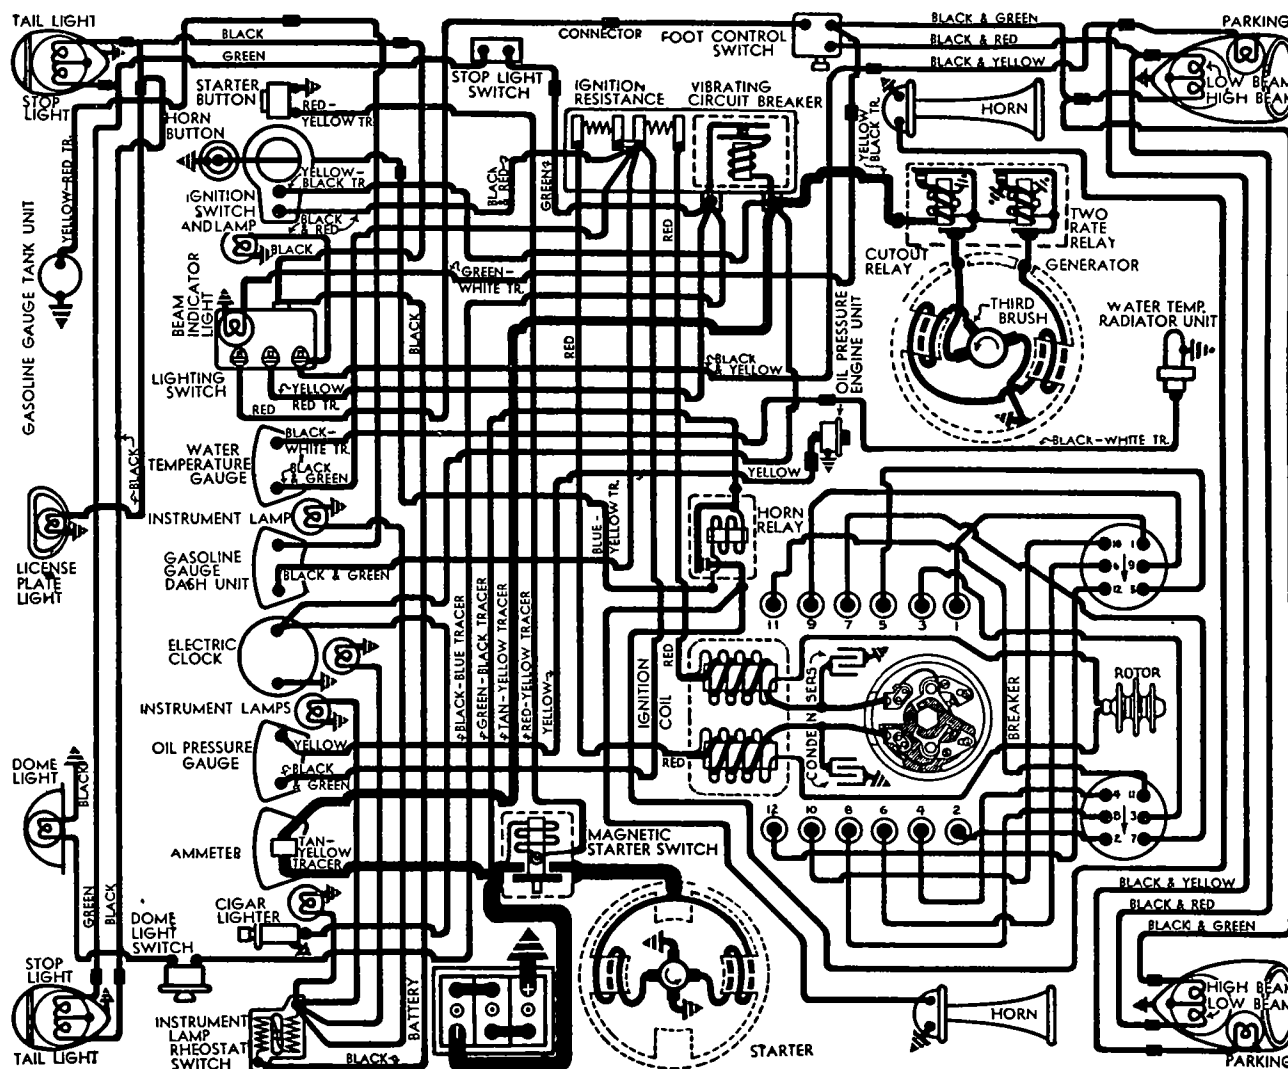

**Cam Angle or Dwell**—36.5° closed, 23.5° open (each set—operate independently).

**Breaker Arm Spring Tension**—20-24 ounces.

**Rotation**—Clockwise viewed from drive end.

No. H-12127 Distributor Automatic Advance Engine			
Degrees	R.P.M.	Degrees	R.P.M.
Start.....	200	0.....	400
8.....	950	16.....	1900
NOTE—Limits are 7½-8½° (distributor).			

No. 16H-12127			
Start.....	200	0.....	400
11-12.....	650	22-24.....	1300

**Distributor Removal:**—Mounted on front of engine. Remove generator, disconnect vacuum line and primary leads, remove distributor cap, take out 3 capscrews in mounting flange.

### IGNITION TIMING

**IGNITION TIMING:**—Important Note—Special setting for each type distributor and different setting for Eng. No. H-45530 to H-57738 (see below). See Vacuum Brake Setting also.

#### Ignition Timing (Flywheel Degrees)

H-12127 Distr. 16H-12127 Distr.  
Eng. H-45530 to H-57738.....At TDC.....2° ATDC  
All Other Engines.....4° BTDC.....2° BTDC  
On Stroboscope settings will 2° BTDC (H-12127 except Eng. H-45530 to H-57738), 1° Before or After TDC (16H-12127 Distr.).

**Timing & Synchronizing Note:**—Manufacturer recommends use of Stroboscope or V-126 Timing Fix-

ture for both operations. See 1937 Lincoln-Zephyr article for all Timing Fixture data. No flywheel marks or other means provided to synchronize distributor on engine.

**Timing (On Engine)**—With #2 piston on top dead center (starting power stroke), loosen adjusting screw on right side of ignition unit housing, move screw down to bottom of slot, then move screw up slowly until left hand (fixed contacts) begin to open, note graduation on plate under screw head in line with reference mark on housing, move screw up one additional graduation (4° BTDC setting), up ½ graduation (2° BTDC setting), down ½ graduation (2° ATDC setting). Engine Nos. H-45530 to H-57738 must be specially timed as directed above. Synchronization (Movable Contacts)—No means provided for synchronization on engine (see note above). If Stroboscope, Timing Fixture, etc. used, set movable contacts to open exactly 37½° (distrib-

utor rotation) after fixed set. To adjust, remove timing adjusting screw and plate on side of housing, turn eccentric adjusting screw (visible in slot).  
**Vacuum Brake Setting:**—Should be set for best performance with particular fuel and operating conditions. To adjust, loosen locknut and back off adjusting screw until engine pings when accelerated, then turn screw in just enough to eliminate this ping, tighten locknut. When adjusted on Stroboscope, brake should retard spark to peepsight (set at 0° advance) at speed of 950 RPM. (H-12127 Distr.), 650 RPM. (16H-12127 Distr.) with no vacuum to release brake.

### CARBURETOR

Stromberg Model EE-1, Ford No. 86H-9510-A1, or Holley (Chandler-Groves) Model AA-1, Ford No. 86H-9510-A2. Dual (double barrel) downdraft type. For complete data, refer to Carburetor Index.

**Idle Adjustment:**—With engine warm, choke valve wide open, and Fast Idle inoperative, set throttle lever stop screw for 5 M.P.H. idle speed, turn each idle adjusting screw (one for each barrel, adjust in succession) in until engine begins to miss, out until engine begins to roll, finally turn screw in slowly until engine fires smoothly. Final setting should be approximately ⅝-¾ (Stromberg), ⅞ (Chandler-Groves) turn from inner seated position. Readjust stop screw for correct idling speed.

**NOTE:**—Vacuum gauge recommended for idling adjustment, set for highest steady reading on gauge.  
**Accelerating Pump Setting (Stromberg):**—Two ball studs provided for pump link connection: 'S' Minimum Stroke—Summer Operation. 'W' Maximum Stroke—Winter Operation.

**Accelerating Pump Setting (Chandler-Groves):**—Three holes provided for pump link connection: Upper (Short Radius)—Min. Stroke, Hot weather. Center—Medium Stroke, Normal temperatures. Lower (Long Radius)—Max. Stroke, Cold weather.  
**NOTE:**—Link locked in pump rod by snap lock. Pull link shaft out of pump rod to disengage lock.

**Fast Idle (All Models):**—Integral with carburetor, operated by choke lever. No adjustment required.

### CARB. EQUIPMENT

**Air Cleaner:** AC No. 1528239 Oil-wetted type (1938), 1528816 Oil-bath type (1939). **NOTE:**—Heavy duty oil-bath type cleaner Optl. in 1938.

**Fuel Pump:**—AC Type R #1523307. Diaphragm type. Ford No. 68-9350. AC Replacement Pump No. 541 For complete data, refer to Carburetion Equip. Index.

**Gasoline Gauge:**—King-Seeley Electric. Ford No. Dash Unit—86H-9280 (1938), 96H-9280 (1939). Tank Unit—70-9275B (1938-39).

For complete data, refer to Carburetion Equip. Index.

### BATTERY

**BATTERY:**—Ford No. 86H-10655-A. 6 volt, 17 plate, 100 ampere hour capacity (20 hour rate).

**Starting Capacity:**—126 amperes for 20 minutes.

**Zero Capacity:**—300 amperes for 3.3 minutes.

**Grounded Terminal:**—Positive (+) grounded to cylinder head stud on right hand bank.

**Location:**—On right side in engine compartment.

**Dimensions:**—Length 10.5". Width 7.2". Height 7.1".

**Battery Indicator:**—King-Seeley Voltmeter. Ford No. 96H-10844. See Electrical Equipment Section.

CONTINUED ON NEXT PAGE

1939 MODELS

CONTINUED FROM PRECEDING PAGE

**STARTER**

Ford Model No. 18-11002. Armature No. 18-11005. Drive—Inb'd Bendix L11FX-10. Ford No. B-11350. Cranking Engine—100 R.P.M., 190-215 amperes. Rotation—Counter-clockwise at commutator end. Brush Spring Tension—2 lbs. each.

**Performance Data**

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.			45-60
4 "	1070	4.6	200
8 "	660	4.3	340
12 "	300	3.65	465
14 "	Lock	3.5	500

**Removal:**—Mounted on right front face of flywheel housing. To remove, take off pan at right of engine, remove 2 through bolts on commutator endplate. **Starting Switch:**—R-B-M. Ford No. 78-11450. Magnetic type. Mounted on dash. Controlled by Push-button switch No. 86H-11500A (1938—15/16" mtg. hole), 86H-11500B (1938—23/32" mtg. hole), 96H-11500A (1939 Std.), 96H-11500B (1939 Custom).

**GENERATOR****EARLY 1938 TYPE**

Ford Model 81A-10000-B (1938 First Cars). Armature No. 79-10005-HA. Third brush control with Two-Rate Relay (regulator). Ventilated by fan. **Charging Rate Adjustment:**—Remove commutator cover band, shift third brush by hand counter-clockwise (down) to increase, clockwise to decrease output. Brush held in position by friction. With standard setting, third brush should be 1½ commutator segments from nearest main brush. **Maximum Charging Rate:**—26 amperes (cold), 30 M.P.H. To check output, use 'BRS' set or rheostat connected across battery terminals and apply load until voltage is exactly 6 volts, operate generator at 1000 R.P.M., check output with ammeter connected in charging line at generator terminal.

Amperes	Performance Standards	Eng. RPM.
Start		525
26		1250
16		2500

**Rotation:**—Counter-clockwise at commutator end. **Field Current:**—3.43-4.17 amperes at 6.0 volts (field resistance 1.44-1.75 ohms).

**Removal & Belt Adjustment:** Same as '38-39 below.

**GENERATOR****1938 & 1939 TYPE**

Ford Model No. 81A-10000-D (1938 Later Cars), No. 91A-10000 (1939). Armature No. 78-10005-A (All Models). Two brush, shunt type with vibrating type voltage and current regulation. Ventilated by fan. **NOTE:**—Armature 78-10005-A replaced by 78-10005-C. **Charging Rate Adjustment:**—None. See Regulator. **Maximum Charging Rate:**—Controlled by regulator (dependent on battery condition and load). To check generator capacity, disconnect field lead at generator, connect both generator terminals together (use short insulated wire), use 'BRS' set or rheostat connected across battery terminals and apply load until voltage is exactly 6 volts. Operate generator at 1000 R.P.M., check output with ammeter connected in charging line at generator terminal. After making test, restore original connections, do not operate generator in service with terminals connected together (this eliminates all regulator action).

Amperes	Performance Standards	Eng. RPM.
Start		500
28		1250
28		2500

**Rotation:**—Counter-clockwise at commutator end. **Field Current:**—2.2 amperes at 6.0 volts (field resistance 2.7 ohms at 70° F.).

**Brush Spring Tension:**—Approximately 28 ozs.

**Removal (All Models):**—Mounted between cylinder banks at front of engine (belt driven in tandem with both water pumps). To remove, take out support bolt in bracket under generator.

**Belt Adjustment (All Models):**—Loosen generator support bolt, move generator up until belt deflection ¾-1" midway between gen. and water pump.

**REGULATOR****EARLY 1938 TYPE**

Ford No. 68-10505 (Used with 81A-10000-B Gen.). Cutout Relay and non-vibrating type regulator (Two Rate Relay). Mounted on the generator.

*For complete data, refer to Electrical Equipment Index.*

**Cutout Relay**

**Cuts In:**—5.8-6.3 volts, 10 MPH.

**Cuts Out:**—3 amperes maximum discharge.

**Contact Gap:**—.015-.020".

**Air Gap:**—.010-.015" with contacts closed.

**Regulator**

**Setting:**—Contacts open when generator voltage reaches 8.0-8.3 volts, reducing charging rate to approximately 50% of the high rate.

**Checking:**—See article in *Electrical Equipment Section*

**REGULATOR****1938 & 1939 TYPE**

Ford Model No. 81A-10505A-1 (81A-10000-D Gen.), 91A-10505A (91A-10000 Gen.). Consists of Cutout Relay and vibrating type Voltage-Current Regulator in case on dash. **NOTE:**—Regulator mounted on rubber cushions with separate ground lead to dash. **NOTE:**—This regulator serviced by new type No. 01A-10505-C4 3-unit Regulator.

*For complete data, refer to Electrical Equipment Index.*

**Cutout Relay**

**Cuts In:**—6.5-7.0 volts, 510 Eng. R.P.M.

**Cuts Out:**—2 ampere maximum discharge current.

**Voltage-Current Regulator**

**Setting:**—7.6 volts max. at 70° F.

**Current Setting:**—30 amperes.

**Checking:**—See article in *Electrical Equipment Section*.

**LIGHTING**

**LIGHTING:**—Headlamps—Hall 'Two-Lite', pre-focused type. Upper and lower beams controlled by selector switch on toeboard.

**Headlamp Adjustment:**—With upper beams lighted, aim each headlamp straight ahead so that beam centered on vertical line directly ahead of lamp center (26½" each side of car center-line) and upper edge at horizontal line at lamp center height 30¾" above floor) at 25 feet.

**Beam Indicator:**—In Light Switch handle (1938), in upper face of Speedometer dial (1939). Lighted when Upper Beams in use.

**Switches—1938**

**Lighting:**—Ford # 86H-701616 with Knob # 701618.

**Beam Selector:**—Same as listed for 1939 cars.

**Instrument:**—Ford No. 86H-13740 (rheostat type).

**Stop Light:**—Ford No. 48-13480.

**Dome Light:**—Ford No. B-13752-A.

**Switches—1939**

**Lighting:**—Ford No. 96H-11654 with Switch Knob No. 96H-11661A (Std.), 96H-11661B (Cust.).

**Beam Selector:**—Ford No. 86H-11653 (with Horn Wiring), No. HB-13532 (switch only).

**Instrument:**—Ford 96H-13740-B (Std.), C (Custom).

**Dome Light:**—Ford No. B-13752-A.

**Stop Light:**—Ford No. 91A-13480 (hydraulic).

**Bulb Specifications**

Position	Candlepower	Mazda No.
Headlamps	32-32	2330
Parking, Instrument	1½	55
Clock, Ign. Switch	1½	55
Beam Indicator	1	51
Stop & Tail	21-3	1158
License Plate	3	63
Dome, Luggage Comp't	6	81

**MISC. ELECTRICAL**

**LIGHTING CIRCUIT BREAKER:**—R-B-M. Ford No. 86H-11624. Mounted on left side of dash under cowl (ignition resistors mounted on same base as part of assembly). Vibrating type, protects lighting circuits.

**HORNS:**—Ford No. 86H-13832 (High Note—R.H.), 86H-13833 (Low Note—L.H.). Air electric dual horns.

**Horn Current:**—11-13 amperes each.

**Horn Relay:**—R-B-M. Ford No. 96H-13842.

**ENGINE**

**ENGINE SPECIFICATIONS:** Own Model. 12 Cylinder, 75° Vee, "L" head type. Both cylinder blocks and crankcase cast together.

**Bore:**—2.75". **Stroke:**—3.75". **Displ't.** 267.28 cu. ins.

**Rated Horsepower:**—36.39.

**Developed Horsepower:**—110 at 3900 R.P.M.

**Compression Ratio:**—6.7-1 Std. No Optl. ratios.

**Compression & Vacuum Reading:**—See *Tune-up data*.

**CYLINDER SLEEVES:**—Cast iron, dry type cylinder sleeves available for replacement where bore size worn beyond Oversize Piston Limit.

**Sleeve Installation:**—See *Lincoln Shop Notes*.

**PISTONS:**—Special heat-treated steel alloy, cam-ground type. Length 3.245-3.305".

**Weight:**—326 grams (without rings or pin).

**Removal:**—Pistons and rods removed from above.

**Clearance:**—See *Fitting New Pistons*.

**Replacement Pistons:** See *Lincoln Shop Notes*.

**Fitting New Pistons:** Use .50" wide feeler stock of correct thickness (as listed below) inserted between piston and cylinder wall at right angles to pin to check clearance. Pull required to withdraw feeler should be 5-8 lbs. (all types).

**Feeler Thickness:**—.002" New Piston in New Plain Bore, .004" for New Piston in Worn Plain Bore .005" for Worn Piston in Worn Plain Bore.

**PISTON RINGS:**—Two compression, one oil control ring per piston, all above pin. Oil ring groove drilled with oil drain holes. **NOTE:**—Expanders used with #2 Compression and both oil rings on 1939 cars. Install this #2 compression ring with mark "TOP" up.

**1938 Ring Specifications**

Ring	Width	End Gap	Side Clearance
Compr.	.093-.0935"	.008-.013"	.0025-.003"
Oil Contr.	.186-.1865"	.008-.013"	.0015-.002"

**1939 Ring Specifications**

Ring	Width	End Gap	Side Clearance
Compr. #1	.093-.0935"	.008-.013"	.0025-.003"
Compr. #2	.093-.0935"	.008-.013"	.002-.0025"
Oil Contr.	.1845-.185"	.008-.013"	.0015-.002"

**Replacement Rings:**—See *Lincoln Special Shop Notes for complete data and new expander type rings*.

## ENGINE

## CONTINUED FROM PRECEDING PAGE

**PISTON PIN:**—Diameter .7501-.7504". Length 2.482". Pin floats in piston and rod, held by locking ring at each end. Connecting rod bronze bushed.  
**Pin Fit in Piston:**—.0003-.0009" clearance or light hand push fit with piston at 70°F.  
**Pin Fit in Rod Bushing:**—.0002-.0005" clearance (pin should pass through bushing slowly of own weight).  
*See Lincoln Shop Notes for Pin Fitting Directions.*  
**Replacement Pins:** *See Lincoln Shop Notes.*

**CONNECTING ROD:**—Weight 638 grams. Length 7.400". Crankpin Journal Diameter—2.126".  
**Lower Bearing:**—Removable steel-backed, copper-lead lined bearing shells in each rod.  
**Clearance:**—.001-.0025". Endplay .014" (total).

**Bearing Adjustment:** None (no shims). Do not file caps. Replace bearings if less than .08375" thick.  
**Replacement Bearings:** *See Lincoln Shop Notes.*

**Installing Rods:**—Assemble rods with marks on rod and cap together. Install in same numbered cylinder with marks pointing toward pan.

**CRANKSHAFT:**—4 Bearing. Integral counterweights. NOTE—Crankshafts furnished Std. and .020", .040" undersize.

**Journal Diameters:**—2.401" (all bearings).  
**Bearing Type:**—Steel-backed, copper-lead lined.  
**Clearance:**—.001-.003".

**Bearing Adjustment:** None. Replace bearings.  
**End Thrust:**—Taken by rear main bearing. Adjusted by replacing bearing. Endplay—.002-.006".

**Replacement Bearings:** *See Lincoln Shop Notes.*

**CAMSHAFT:**—Four bearing. Helical Gear Drive.  
**Bearing Diameters:**—1.797" (replace bearings if the diameter more than 1.802", replace camshaft if the journal diameter less than 1.7955").

**Bearing Type:**—Steel-backed, babbitt-lined bushings pressed in block. Clearance—.001-.002".

**End thrust:**—Taken by gear hub and coverplate. Adjusted by replacing coverplate. Endplay .004-.008".

**Timing Gears:**—Crankshaft gear cast-steel. Camshaft gear Bakelized Fabric.

**Camshaft Setting:**—Mesh marked crankshaft gear tooth with camshaft space between teeth marked by straight line (in line with mark on hub).

**VALVES:**—Head Diameter Stem Diameter Length  
 All Valves..... 1.537"..... 3.105-.3115"..... 4.750-4.751"

Seat Angle Lift Stem Clearance  
 Intake..... 45°..... .292"..... .0015-.0035"  
 Exhaust..... 45°..... .292"..... .0025-.0045"

NOTE—Service limit for valve stem diameter is .309" Intake, .3065" Exhaust. Valves interchangeable. For Valve Servicing data, see Lincoln Shop Notes.

NOTE—Special seat inserts for exhaust valves.

**Valve Guides:** Split type retained by "C" washer and valve spring. NOTE—Replace both halves of all guides measuring less than .6665" (thickness of guide half and valve stem at top of guide with valve of .311" stem diameter in place in guide half).

For Valve Guide Servicing data, see Lincoln Shop Notes.

**Valve Lifters:**—Barrel type with hydraulic tappet take-up (Wilcox-Rich Zero-lash type).

Diameter—.9995".

*See Miscellaneous Section for complete data.*

**Valve Springs:**—Free length 2.42".

Spring Pressure Length  
 Valve Closed..... 51-57 lbs. .... 2.13"  
 Valve Open..... 111-121 lbs. .... 1.84"

NOTE—Replace springs which do not test to 47-57 lbs. at 2 1/8" or if paint coating has been removed.

## VALVE TIMING

**Tappet Clearance:**—None in service (hydraulic lifter).

*See Valve Lifter Servicing in Lincoln Shop Notes.*

**Valve Timing:**—See Camshaft Setting above.

**Int. Valves:**—Open 10.42° BTDC Close 35.58° ALDC.

**Exh. Valves:**—Open 50.92° BLDC Close 8.08° ATDC.

**To Check Valve Timing:**—No flywheel marks provided to check timing. If dead center position for any piston established on flywheel, intake valve for this cylinder should open approx. 3.24 flywheel teeth before this point with piston .0389" BTDC.

## LUBRICATION

**LUBRICATION:**—Pressure system. Gear type oil pump mounted in crankcase. System changed to include oil-relief valve on oil pump, and channel for each row of hydraulic valve lifters in block (fed through metering hole from oil channel at rear of engine, excess oil flows to pressure regulator at front end).  
**Normal Oil Pressure:**—40-45 lbs. at 2000 R.P.M.

**Oil Pump and Oil Pressure Regulator:** *See Lincoln Shop Notes for complete data.*

**Crankcase Capacity:**—5 quarts.

**Oil Pressure Gauge:**—King-Seeley Electric. Ford No. Dash Unit—86H-9273 (1938), 96H-9273 (1939).

**Engine Unit:**—48-9278 (1938-39).

*See Miscellaneous Section for complete data.*

## COOLING

**Water Pump:** Packless type, 2 used (1 for each bank)  
*See Water Pump Section for complete data.*

**Removal:**—Slack off drive belt, disconnect hose couplings, remove mounting screws in pump flange.

**Thermostat:**—In Upper radiator hose. NOTE—On first cars with thermostat at lower (engine) end of hose, reverse hose to provide additional clearance for drive belt thermostat must be reversed in hose when this change made. Later cars have thermostat at upper end.

**Setting:**—Starts to open at 145°F. Fully open 180°F.

**Temperature Gauge:** King-Seeley Electric. Ford No. Dash Unit—86H-10883 (1938), 96H-10883 (1939).

**Radiator Unit:**—H-8586 (1938), 99A-10884 (1939).

*See Miscellaneous Section for complete data.*

**Water Capacity:**—30 quarts.

**Drain Valves:**—One in left hand water outlet elbow, one at each front lower corner of engine block.

## CLUTCH

**CLUTCH:**—Long Model 10CF-CI. Single plate, semi-centrifugal, dry disc type.

*See Clutch Section for complete data.*

**Facings:**—Moulded type, chevron or spiral wound, 2 used. Inside Diam. 6". Outside Dia. 10". Thick. .140".

**Adjustment:**—Pedal free movement 1 1/2-2". To adjust, loosen locknut and turn clevis on connector link.

**Removal:**—Slide transmission and rear axle to rear as a unit (see Transmission Removal below), take out mounting screws in clutch cover flange.

## TRANSMISSION

**TRANSMISSION:**—Own Make. All helical gear, constant-mesh, synchro-mesh (second and high), sliding gear (Low and reverse) with new 'Blocker' type Synchronizer (for second and high).

*See Transmission Section for complete data.*

**Removal:**—Disconnect rear spring at center mounting on body, disconnect speedometer cable, brake cables, shock absorber links, take out mounting bolts in universal joint ball housing, slide axle assembly to rear. Remove side panel on shift lever

housing, remove pin at lower end of shift lever, free lever from transmission. Support engine, take out rear engine mounting bolts, remove clutch housing mounting screws, pull transmission to rear.

NOTE—On cars before Eng. No. 47980 (without plate over rear bearing) use extreme care to prevent transmission mainshaft and rear main bearing pulling out of case when removing transmission which will allow synchronizer balls to drop out. Cars after 11/24/37 have bearing retained by plate

## UNIVERSALS

**UNIVERSAL JOINT:**—Spicer. 1 used (at rear of transmission). *See Universals Section for complete data.*

## REAR AXLE

**REAR AXLE:**—Own Make. New Hypoid Gear, 3/4 floating type with torque tube drive.

*See Rear Axle Section for complete data.*

**Ratio:**—4.44-1 Std. Backlash—.002-.004".

**Optional Axle:**—Columbia Two-Speed type.

*See Rear Axle Section for complete data.*

**Removal:**—Disconnect shock absorber links, brake cables, rear spring at center connection on body, speedometer cable. Take out mounting bolts in universal joint ball housing, pull axle assembly back to free drive shaft at splined joint.

**Axle Shaft Removal:**—Axle housing must be separated at pinion mounting and shafts removed from inner end (diff. side gear integral with shaft).

## SHOCK ABSORBERS

**SHOCK ABSORBERS:**—Houdé (Houdaille) No. BBLCE (front), BBCU (rear). Adjustable, hydraulic type.  
*See Shock Absorber Section for complete data.*

## FRONT SUSPENSION

**Front Suspension:**—Conventional 'T' beam section front axle with Reverse-Elliott ends and transverse spring. Axle positioned by radius rods.

**Kingpin Inclination:**—4° crosswise.

**Caster:**—5° Max., 3° Min. Caster must be alike within 1/2° for both wheels. Axle may be bent cold to correct caster if correct tools used (wedges and blocks to prevent crushing axle flange).

**Camber:**—3/4° Max., 1/4° Min. Camber must be alike within 1/4° both wheels. Correct as for Caster above.

**Toe In:**—1/16-1/8". Adjust in usual manner by loosening tie rod clamp bolts and turning rod.

**Steering Geometry (Toe out on turns):**—Inner wheel turned 23°, outer 20°. Allowable variation 1/2°.

## STEERING GEAR

**Steering Gear:** Gemmer Model 330. Worm-and-Roller  
*See Steering Gear Section for complete data.*

## BRAKES

**Service (1938):** Bendix Mechanical, duo-servo, single anchor type. Hand lever applies all service brakes.  
*See Brake Section for complete data.*

**Service (1939):** Bendix Hydraulic, duo-servo, single anchor type without Eccentric Adjustment. Hand lever applies rear wheel service brakes.

*See Brake Section for complete data.*

**Wheel Cylinders ('39):**—Dia. 1.125" (front), 1.00" (rear). Not interchangeable between wheels.

**Drums:**—Diameter 12".

**Lining:**—Molded (Primary or forward shoe), Woven (Secondary or rear shoe). Width 1.75". Thickness .21". Length per shoe 11.95".

**Clearance:**—.010" at each end of each shoe.

**Hand Brake:** *See Service Brakes above.*

**ENGINE HOOD NOTE:**—Turn radiator ornament counter-clockwise to free latch, lift hood up at front.

**OIL PAN REMOVAL:** See Lincoln Shop Notes.

## MODEL IDENTIFICATION

**SERIAL & ENGINE NUMBER:**—Stamped on top of clutch housing and on left side of front frame cross-member.

## TUNE-UP

**COMPRESSION:**—Ratio—7.2-1 aluminum alloy head. Pressure—125 lbs. at cranking speed of 100 RPM.

**VACUUM READING:**—18-20" steady idling at 6 MPH.

**FIRING ORDER:** 1-4-9-8-5-2-11-10-3-6-7-12. See diagram for numbering and cable connections on caps.

**SPARK PLUGS:** Champion Type H-10. 14 mm. Metric. Gaps—.028-.030"

**IGNITION:** See Coil, Condenser, and Distributor. Breaker Gap—.014-.016" Cam Angle 36.5° closed (each set operating independently).

**Synchronization:**—Unequal alternate opening at 37½-22½-37½° (distr.) intervals.

**Automatic Advance:**—8° max. at 950 RPM (Orig. H-12127 Distr.), 11-12° max. at 650 RPM (Repl. 16H-12127 Distr.). Distributor degrees & RPM.

**IGNITION TIMING:** See Ignition Timing. Std. Setting—4° BTDC (Orig H-12127 Distr.), 2° BTDC (Repl. 16H-12127 Distr.). No flywheel marks provided. See Ignition Timing for timing procedure and Vacuum Brake Setting.

**CARBURETION:** See Carburetor & Carb. Equipment.

**Idle Setting:**—Both idle screws approx. ¾ turn open or set for highest steady vacuum gauge reading. Idle speed 6 MPH.

**Floater Level:**—Fuel level 19/32" plus or minus 1/32" below top edge of float bowl.

**Accelerating Pump:**—Inner (#1) hole—Summer, Center (#2) hole—Winter, Outer (#3) hole—Extreme Winter temperatures.

**Fuel Pump Pressure:** 3½ lbs. maximum.

**VALVES:** See Valve Timing.

**Tappet Clearance:** None in service (hydraulic lifter)

**STARTING:** See Battery, Starter, Generator, Regulator.

## IGNITION

**IGNITION SWITCH:** Oakes Steering Column & Ignition Lock Assembly. Part Numbers as follows:

Model	Oakes No.	Ford No.	Oakes Switch
Zephyr '40①	302099	06H-3676A	302136
Zephyr '40②	302131	06H-3676B	302137
Contl. '40③	302180	06H-3676C	302182④
Contl. '40	302180	06H-3676D	302440⑤
Zephyr '41①	302490	16H-3675A	302440⑤
Zephyr '41②	302545	16H-3675B	302440⑤
Contl. '41	302516	16H-3675C	302440⑤
Cust. Sedan '41	302599	16H-3675A	302440⑤
Cust. Limo. '41	302565	16H-3675B	302440⑤
①—With Standard Trim.			②—With Custom Trim.
③—Cabriolet Models only.			
④—Ford No. 06H-3680.			⑤—Ford No. 16H-3680.

**Lock Cylinder:**—Hurd or Briggs & Stratton. Ford No. 91A-3686A (1940 Zephyr), 06H-3686A (1940 Zephyr Limo. & Contl. with Custom Trim), 06H-3686B (1940 Contl. Cabr.), 06H-3686C (1940 Contl.), 36H-3686A (1941 Zephyr with Std. Trim), 16H-3686B (1941 Zephyr with Custom Trim, Contl., Custom).

**COIL:** Ford Part No. H-12024. Two coil unit assembled as part of Ignition Unit.

**Ignition Current:**—Approx. 3.2 amperes idling, 4.2 stopped (per coil). Ignition primary circuit resist-

ance 1.0-1.33 ohms.

**Resistor Unit:**—One unit connected in each coil primary circuit (2 used). Mounted on Lighting Circuit Breaker Assy. No. 06H-11624 ('40), 16H-11624 ('41).

**CONDENSER:** Ford Part No. H-12300 (two used). Capacity—.30-.34 microfarad.

**DISTRIBUTOR:** Ford No. H-12127 (Orig. Equip.), 16H-12127 (Repl. Unit). Double breaker, 6 lobe cam, full automatic advance type with vacuum brake control. Same design as used on other Zephyr models (with alternate contact opening).

**Firing Interval:**—Movable contacts open 37½° after fixed set. Unequal 37½° and 22½° intervals (corresponding to 75° and 45° of crankshaft rotation)

**Breaker Gap:**—.014-.016" (both sets equal).

**Cam Angle or Dwell:**—36.5° closed, 23.5° open (each set—operate independently).

**Breaker Arm Spring Tension:**—20-24 ozs.

**Rotation:**—Clockwise viewed from drive end.

N. H-12127			
Distributor Automatic Advance Engine			
Degrees	R.P.M.	Degrees	R.P.M.
Start.....	200	0.....	400
8 .....	950	16.....	1900

No. 16H-12127			
Start.....	200	0.....	400
11-12.....	650	22-24.....	1300

**Distributor Removal:**—Mounted on front of engine. Remove generator, disconnect vacuum line and primary leads, remove distributor cap, take out 3 capscrews in mounting flange.

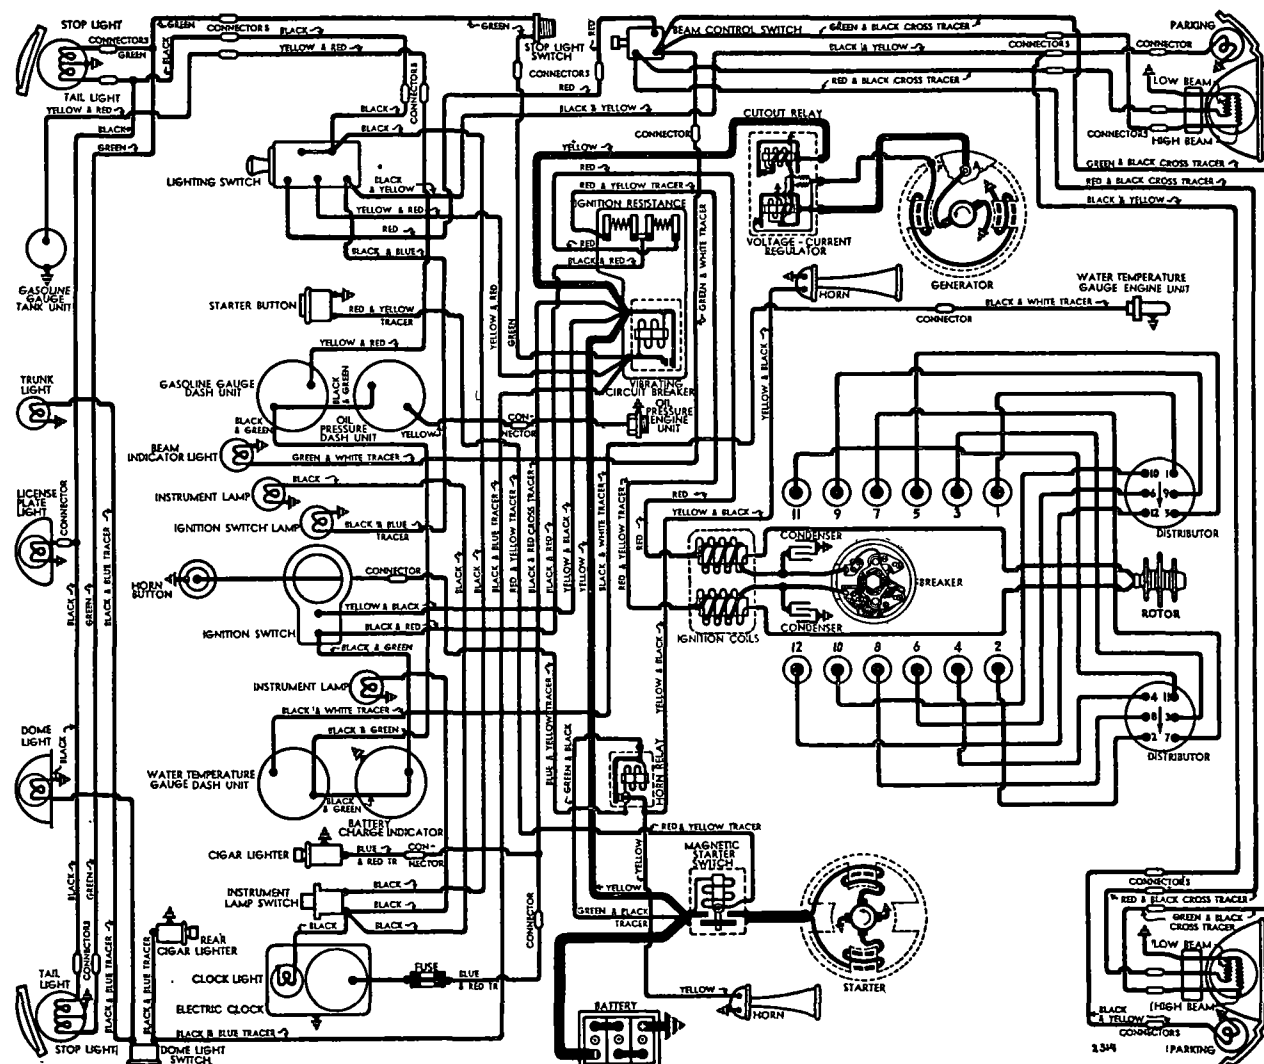

## IGNITION TIMING

**IGNITION TIMING:**—Special setting for each type distributor. See Vacuum Brake Setting also.

**Ignition Timing (Flywheel Degrees)**

H-12127 Distr. 16H-12127 Distr.

All Engines .....4° BTDC.....2° BTDC

**Note**—On Ford Stroboscope, settings will be 2° BTDC (H-12127 Distr.), 1° BTDC (16H-12127 Distr.).

**Timing & Synchronizing Note**—Manufacturer recommends use of Stroboscope or V-126 Timing Fixture for both operations. See 1937 Lincoln-Zephyr article for all Timing Fixture data.

**Timing (On Engine)**—With #2 piston on top dead center (starting power stroke), loosen adjusting screw on right side of ignition unit housing, move screw down to bottom of slot, then move screw up slowly until left hand (fixed contacts) begin to open, note graduation on plate under screw head in line with reference mark on housing, move screw up one additional graduation (H-12127 Dist.), or up ½ graduation (16H-12127 Dist.) for correct timing.

**Synchronization (Movable Contacts)**—No means provided for synchronization on engine (see note above). If Stroboscope, Timing Fixture, etc. used, set movable contacts to open exactly 37½° (distributor rotation) after fixed set. To adjust, remove

timing adjusting screw and plate on side of housing, turn eccentric adjusting screw (visible in slot).

**Vacuum Brake Setting**—Should be set for best performance with particular fuel and operating conditions. To adjust, loosen locknut and back off adjusting screw until engine plings when accelerated, then turn screw in just enough to eliminate this ping, tighten locknut. When adjusted on Stroboscope, brake should retard spark to peepsight (set at 0° advance) at speed of 950 RPM. (H-12127 Dist.), 650 RPM (16H-12127 Distr.) with no vacuum.

## CARBURETOR

Holley (Chandler-Groves) Model AA-1, Ford No. 06H-9510 (1940-41), 16H-9510-B (1941) Std. on Zephyr Models (no Automatic Choke). Ford No. 16H-9505-A or 16H-9505-C Carburetor & Automatic Choke Assy. (Optl. on 1941 Zephyr, Std. on Contl. & Custom). 1" Dual (double barrel) downdraft types. For complete data, refer to Carburetor Index.

**Idle Adjustment**—With engine warm, choke valve wide open and Fast Idle inoperative, set throttle lever stop screw for 6 M.P.H. idle speed. Turn each idle adjusting screw (one for each barrel, adjust in succession) in until engine begins to miss, then out until engine begins to roll, finally turn screw in slowly until engine fires smoothly. Final setting should be approximately ⅞ turn out from the inner seated position. Reset for 6 MPH idle speed.

**Float Level**—Fuel level should be 19/32" plus or minus 1/32" (9/16-10/16") below top edge of bowl. **Accelerating Pump Adjustment**—Three holes provided in throttle lever for pump link connection. Inner (#1)—Min. stroke, Summer temperatures. Center (#2)—Med. stroke, Winter temperatures. Outer (#3)—Max. stroke, Extreme cold weather.

**NOTE**—Pump link locked in pump rod by snap lock. **Fast Idle**—Integral with carburetor. Operated by choke lever. No adjustment required.

## CARB. EQUIPMENT

**Automatic Choke (1941)**: Ford No. 16H-9850. Selectomatic type with automatic control when control button turned so that "A" is up, manual control when button turned so that "M" is up. Automatic Choke is special Sisson type (connected to starter). For complete data, refer to Carburetion Equip. Index.

**Air Cleaner**: Ford No. 06H-9600A (1940 Zephyr—with tube to manifold), 06H-9600E (1940-41 Zephyr, 1941 Custom), 06H-9600D (1940-41 Contl.) Oil-wetted type Std. Heavy duty Oil-bath type Optl. as follows: Ford No. 06H-9625A (1940 Zephyr), 16H-9625 (1941 Zephyr & Custom), 06H-9625C (1940-41 Contl.).

**Gasoline Gauge**—King-Seeley Electric. Ford No. Dash Unit—06H-9280A (1940 Zephyr), 06H-9280B (1940-41 Contl.), 16H-9280 (1941 Zephyr & Custom). **Tank Unit**—01T-9275 (1940), 21C-9275A (1941).

For complete data, refer to Carburetion Equip. Index. **Fuel Pump**—AC Type R. #1523307. Ford No. 68-9350. AC Replacement Exchange Pump No. 541. For complete data, refer to Carburetion Equip. Index.

## BATTERY

**BATTERY**—Ford No. 06H-10655-A. 6 volt, 17 plate, 120 ampere hour capacity (20 hour rate).

**Starting Capacity**—150 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 4.0 minutes.

**Grounded Terminal**—Positive (+) to cyl. head stud.

**Location**—On right side in engine compartment.

**Dimensions**—Length 10.6". Width 7.3". Height 9.2".

**Battery Indicator**—King-Seeley. Voltmeter type. Ford No. 06H-10844-A (except Contl.), 06H-10844-B (Contl.). **NOTE**—This unit not used on 1941 models. For complete data, refer to Electrical Equipment Index.

## STARTER

**STARTER**—Ford No. 18-11002. Armature No. 18-11005. Drive—Inboard Bendix L11FX-10. Ford #B-11350.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—2 lbs. each.

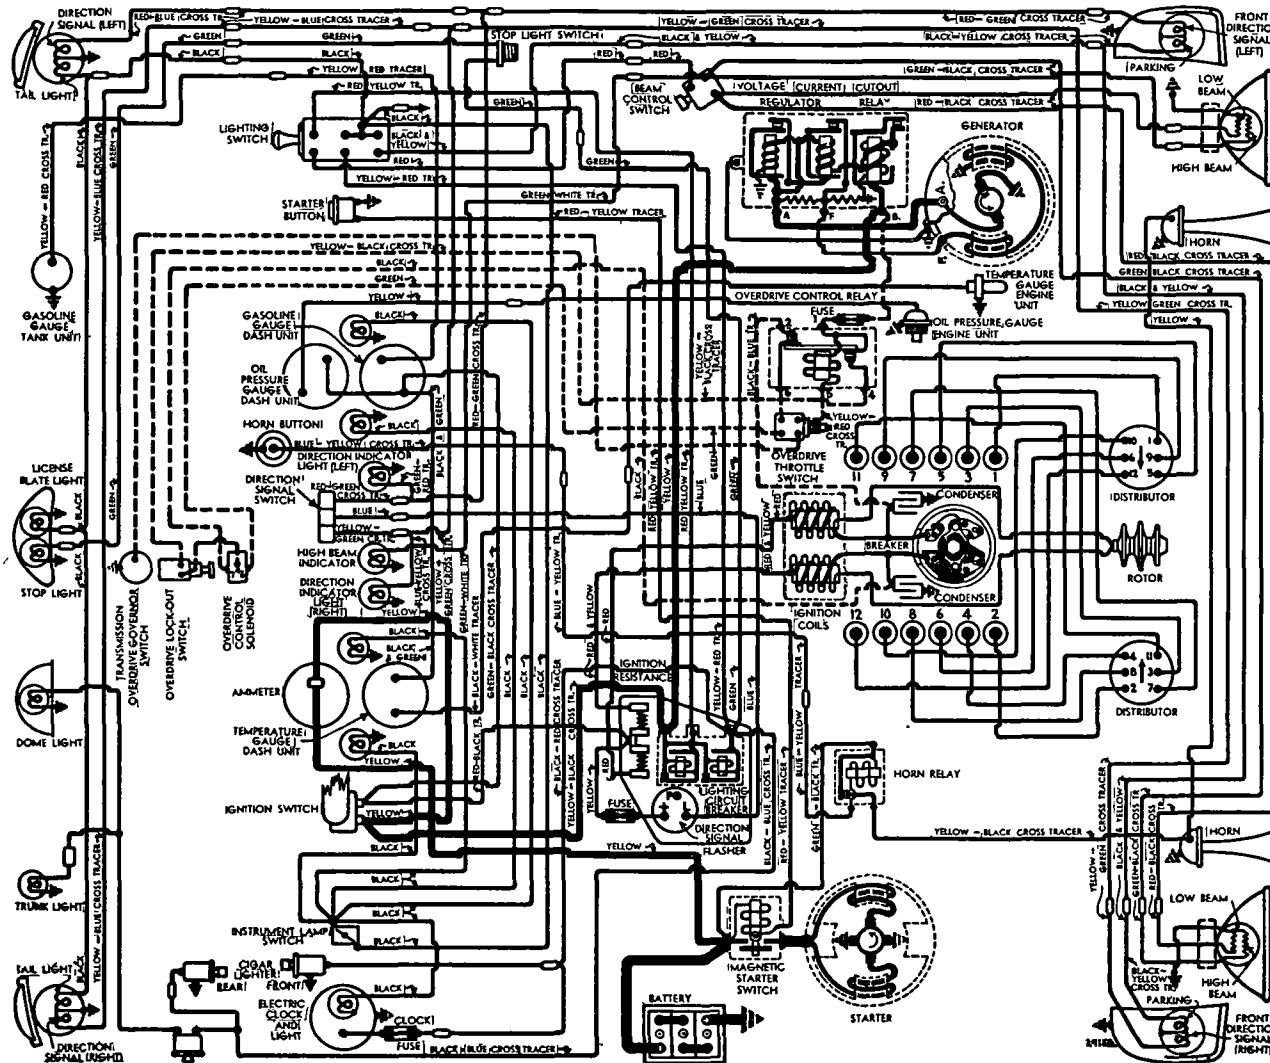

**Cranking Engine**—100 RPM., 190-215 amperes.

### Performance Data

Torque	R.P.M.	Volts	Amperes
4 ft. lbs.	1070	4.6	200
8 "	660	4.3	340
12 "	300	3.65	465
14 "	Lock	3.5	500

**Starting Switch**: R-B-M Model 5604, Ford No. 01A-11450 magnetic switch mounted on dash and controlled by pushbutton on instrument panel, R-B-M 3243, Ford No. 06H-11500A (1940 Zephyr—Std. Trim).

C N T I N U E D N E X T P A G E

1941 M DELS

## CONTINUED FROM PRECEDING PAGE

3244, Ford No. 06H-11500B (1940 Contl., Zephyr Convertible Coupe & Limo., Zephyr other models with Custom Trim); 3234, Ford No. 16H-11500C (1941 Zephyr—Std. Trim), 3234B, Ford No. 16H-11500D (1941 Contl., Custom, Zephyr with Custom Trim).  
Removal:—Starter mounted on right front face of flywheel housing. To remove, take off pan at right of engine, take out starter through-bolts.

## GENERATOR

**GENERATOR:**—Ford No. 01A-10000A & 01A-10000B. Armature No. 01A-10005. Two brush shunt type with Voltage and Current regulation. Ventilated by fan NOTE—01A-10000-A & B replaced by 21A-10000. Charging Rate Adjustment—None. See Regulator. Maximum Charging Rate—Controlled by regulator and dependent on battery condition and load. To check generator output, disconnect generator field lead at generator, connect both generator terminals together (use short insulated wire). Use 'BRS' set or rheostat connected across battery terminals and apply load until voltage is exactly 6 volts. Connect ammeter in charging line, run engine at approximately 1000 RPM., check output at 3 speeds given in performance table below. Restore original connections after completing test. Do not operate generator in service with both terminals connected together. This eliminates all regulator action.

## Performance Data

01A-10000-A		01A-10000-B	
Amperes	Eng. RPM.	Amperes	Eng. RPM.
Start.....	580	Start.....	520
32.....	1100	30.....	1060
32.....	2500	30.....	2500

Rotation—Counter-clockwise at commutator end. Field Current—2.86 amperes at 6.0 volts (01A-10000-A), 2.08 amperes at 6.0 volts (01A-10000-B). Field resistance at 70° F. is 2.1 ohms (01A-10000-A), 2.88 ohms (01A-10000-B).

Brush Spring Tension—Approximately 28 ozs.

Removal:—Generator mounted on bracket between cylinder banks at front of engine, driven in tandem with water pumps by Vee belt. To remove, loosen nut on bracket stud.

Belt Adjustment:—Loosen nut on bracket mounting stud, raise generator up until side movement on belt midway between generator and water pump pulleys is 1" (thumb and finger pressure).

## REGULATOR

Ford No. 01A-10505-A3 (1940), 01A-10505-C4 (1941), Two-unit (1940), Three-unit (1941) Type. Cutout Relay and vibrating type voltage and current regulators in single case mounted on engine dash.

NOTE—Regulator case is mounted on rubber cushions (separate ground lead on case).

For complete data, refer to Electrical Equipment Index. REPLACEMENT REGULATOR NOTE—New type 3-unit Regulator only furnished for replacement.

## Cutout Relay

Cuts In—5.8-6.3 volts at operating temperature.

Cuts Out—5.5 amperes max. (Cold 60°), 1.7 amperes (Hot 180°)—see Regulator article in Electrical Equipment Section for specifications at other temperatures.

## Voltage-Current Regulator

Voltage Setting—6.9-7.2 volts at 70-80°F.

Current Setting—30-33 amperes.

Regulator Checking & Adjustment—See Ford Regulator article in Electrical Equipment Section for data.

## LIGHTING

**LIGHTING:**—Headlamps—Ford Sealed Beam type.

For complete data, refer to Electrical Equipment Index.

Headlamp Adjustment—Aim upper beam of each headlamp straight ahead with hot spot centered on horizontal line 3" below lamp center height.

Beam Indicator—Red jewel on instrument panel directly above speedometer (1940), at top of instrument cluster (1941 Zephyr & Custom), above clock (Contl.) between Right and Left Direction Signal indicators. Lighted whenever Upper Beams in use. Direction Signal—Std. on all 1941 models.

For complete data, refer to Electrical Equipment Index.

## Switches—1940

Lighting—R-B-M Model 2440, Ford No. 06H-11654 (all models). Light Switch Knob Ford No. 06H-11661-A (Std.), 06H-11661-B (Custom).

Beam Selector—R-B-M Model 2480, Ford No. 06H-13532 (Zephyr), HB-13532 (Contl.). Switch with Headlamp & Horn Wiring No. 06H-11653A (Zephyr), 06H-11653B (Contl.).

Instrument—Ford No. 06H-13740-A (Std.), 06H-13740B (Custom & Contl.).

Dome Light—Ford No. B-13752-A.

Stop Light—Ford No. 91A-13480 (hydraulic type).

## Switches—1941

Lighting—R-B-M Model 2445, Ford No. 11A-11654 (Switch only). Light Switch Knob No. 16H-11661-C (Zephyr & Custom), No. 06H-11661-B (Continental).

Beam Selector—R-B-M Model 2486. Ford No. 16H-11653-A (Zephyr & Custom—with Horn wiring), 16H-11653-B (Continental—with Horn wiring). No. 16H-13532-A (Switch only—Zephyr & Custom), 16H-13532-B (Switch only—Continental).

Instrument—Ford No. 16H-13740-C (Zephyr with Std. Trim), 16H-13740-D (Zephyr with Custom Trim, all Continental & Custom).

Stop Light—Ford No. 11A-13480 (hydraulic type).

Direction Signal—Ford No. 16H-13335.

## MISC. ELECTRICAL

**LIGHTING CIRCUIT BREAKER:**—R-B-M Model 6720, Ford No. 06H-11624 ('40); 6740, Ford No. 16H-11624 ('41). This unit is combined with Ignition Resistor assembly on block on dash under left side of cowl. Combination thermostatic and wound-coil type. Contacts open with current of 50 amperes and vibrate to control current load.

FUSES:—Clock—3 amperes. In clock lead.

Overdrive—15 ampere. In control relay lead.

Direction Signal—10 ampere. In flasher lead.

HORNS:—Air electric type dual horns. Ford No. 06H-13832 (Right Hand—high note), 06H-13833 (Left Hand—low note). Horns operated by horn relay.

Horn Current—24-28 amperes (total).

Horn Relay:—R-B-M Model 4750, Ford No. 96H-13842.

Contacts Close 3.5-4.5 volts. Current Draw ¾ amp.

## ENGINE

**ENGINE SPECIFICATIONS:**—Own Model 06H. 12 cyl-

inder 75° Vee, L head type. Both blocks and crank-

case cast enbloc. Bore—2.875". Stroke—3.75".

Rated Horsepower—39.6. Displ'mt.—292 cu. ins.

Developed Horsepower—120 at 3500 RPM.

Compression Ratio—7.2-1 Std. aluminum head.

Compression & Vacuum Reading—See Tune-up data.

**CYLINDER SLEEVES:**—Cast iron, dry type cylinder sleeves available for replacement where bore size worn beyond Oversize Piston Limit.

Sleeve Installation—See Lincoln Shop Notes.

**PISTONS:**—Steel alloy, light weight, cam-ground, with slipper type skirt. Recondition cylinders for finished replacement pistons.

Weight—442 grams (without rings or piston pin).

Removal—Pistons and rods removed from above.

Clearance—See Fitting New Pistons.

Replacement Pistons: See Lincoln Shop Notes.

Fitting New Pistons: Use .50" wide feeler stock of correct thickness (as listed below) inserted between piston and cylinder wall at right angles to pin to check clearance. Pull required to withdraw feeler should be 5-8 lbs. (all types).

Feeler Thickness—.002" New Piston in New Plain Bore, .004" for New Piston in Worn Plain Bore, .005" for Worn Piston in Worn Plain Bore.

**PISTON RINGS:**—Two compression, one oil ring, all above pin. Oil ring groove drilled with drain holes.

NOTE—Expander used with #2 Compr. and oil ring.

Install this #2 Compr. ring with mark 'TOP' up.

Ring Width End Gap Side Clearance

Compr. #1.....093-.0935".....008-.013".....0025-.003"

Compr. #2.....093-.0935".....008-.013".....002-.0025"

Oil Contr.....1845-.185".....008-.013".....0015-.002"

Replacement Rings:—See Lincoln Special Shop Notes for complete Ring and Expander size data.

**PISTON PIN:** Diameter—.7501-.7504". Length 2.607".

Floating type (lock ring in piston at each end). Pin hole in rod is bronze-bushed.

Pin Fit in Piston—.0003-.0009" clearance or light hand push fit with piston at 70°F.

Pin Fit in Rod Bushing—.0002-.0005" clearance (pin should pass through bushing slowly of own weight).

See Lincoln Shop Notes for Pin Fitting Directions.

Replacement Pins: See Lincoln Shop Notes.

**CONNECTING ROD:**—Length 7.40". Weight 638 grams.

Crankpin Journal Diameter—2.126".

Bearing Type—Steel-backed, copper-lead lined bearing halves clamped in each rod.

Clearance—.001-.0025". Sideplay .014" (both rods).

Bearing Adjustment:—None (no shims). Replace bearings if less than .08375" thick. NOTE—Engage tang on bearing in groove in rod and cap. See that long and short bearing cap bolts installed on correct side (rod split at angle, bolts unequal length).

Replacement Bearings: See Lincoln Shop Notes.

Installing Rods:—Marks on rods and caps must be together and installed in same numbered cylinder with marks pointing down toward oil pan.

**CRANKSHAFT:**—Four bearing with integral counterweights. NOTE—Crankshafts furnished Std. and .020", .040" undersize.

Journal Diameters—2.401" (all bearings).

Bearing Type—Steel-backed, copper-lead lined.

Clearance—.001-.003".

Bearing Adjustment:—None (no shims). Replace bearings. Do not file bearing caps. NOTE—See that tang on bearing engages groove in block and cap.

Replacement Bearings: See Lincoln Shop Notes.

**ENGINE****C ONTINUED FROM PRECEDIN PAGE**

**End Thrust:**—Taken by rear main bearing. To adjust, replace bearing. Endplay—.002-.006".

**CAMSHAFT:**—Four bearing. Helical gear drive. NOTE—New bolted-on type Aluminum Alloy camshaft timing gear is used on these models.

**Bearing Diameters:**—1.797" (replace bearings if the diameter more than 1.802", replace camshaft if the journal diameter less than 1.7955").

**Bearing Type:**—Steel-backed, babbitt-lined bushings pressed in block. Clearance—.001-.002".

**End Thrust:**—Taken by gear hub and coverplate. Adjusted by replacing coverplate. Endplay—.005-.015"

**Timing Gears:** Cast-alloy iron (Crankshaft Gear), Aluminum alloy—bolted on type (Camshaft).

**Backlash:**—.004" Max. See *Lincoln Special Shop Notes for Timing Gear servicing data.*

**Camshaft Setting:**—Mesh marked tooth of crankshaft gear with space marked by line on camshaft gear (this line must be in line with mark on hub). NOTE—Capscrew holes in camshaft gear and shaft are unevenly spaced insuring correct gear position.

**VALVES:**— Head Diameter Stem Diameter Length  
All Valves .....1.537" .....3.115" .....4.750-4.751"

	Seat Angle	Lift	Stem Clearance
Intake	45°	.292"	.0015-.0035"
Exhaust	45°	.292"	.0025-.0045"

NOTE—Service limit for valve stem diameter is .309" Intake, .3065" Exhaust. Valves interchangeable. For Valve Servicing data, see *Lincoln Shop Notes.*

**Valve Guides:** Split type retained by "C" washer and valve spring. NOTE—Replace both halves of all guides measuring less than .6665" (thickness of guide half and valve stem at top of guide with valve of .311" stem diameter in place in guide half).

For Valve Guide Servicing data, see *Lincoln Shop Notes.*

**Valve Lifters:** Barrel type hydraulic tappet take-up (Wilcox-Rich Zero-Lash type or Johnson type). Diameter—.9995".

See *Miscellaneous Section for complete data.*

Valve Springs:	Pressure	Length
Valve Closed	51-57 lbs.	2.13"
Valve Open	111-121 lbs.	1.84"

NOTE—Replace springs which do not test to 47-57 lbs. at 2 1/8" or if paint coating has been removed.

**VALVE TIMING**

**Tappet Clearance:**—None in service (hydraulic lifter). See *Valve Lifter Servicing in Lincoln Shop Notes.*

**Valve Timing:**—See Camshaft Setting above.

**Int. Valves:**—Open 10.42° BTDC. Close 35.58° ALDC.

**Exh. Valves:**—Open 50.92° BLDC. Close 8.08° ATDC.

**To Check Timing:**—No flywheel marks provided. If dead center position for any cylinder established on flywheel, intake valve for this cylinder should open approx. 3.24 teeth before this point with piston .0389" before top dead center.

**LUBRICATION**

**LUBRICATION:**—Pressure type with gear type oil pump Normal Oil Pressure—40-45 lbs. at 2000 R.P.M.

**Oil Pump and Oil Pressure Regulator:** See *Lincoln Shop Notes for complete data.*

**Oil Pressure Gauge:**—King-Seeley Electric. Ford No. Dash Unit—06H-9273A (1940 Zephyr), 16H-9273 (1941 Zephyr & Custom), 06H-9273B (1940-41 Contl.).

**Engine Unit:**—48-9278 (All Models).

See *Miscellaneous Section for complete data.*

**Crankcase Capacity:**—5 qts.

**COOLING**

**Water Capacity:** 27 quarts (All Models).

**Water Pump:**—Packless type, 2 used (1 for each bank). See *Water Pump Section for complete data.*

**Thermostat:**—In outlet hose for each bank (2 used).

**Setting:**—Starts to open at 145°F. Fully open 180°F.

**Temperature Gauge:**—King-Seeley Electric. Ford No.

**Dash Unit:**—06H-10883A (1940 Zephyr), 16H-10883 ('41 Zephyr & Custom), 06H-10883B (Continental).

**Engine Unit:**—99A-10884 (All Models).

See *Miscellaneous Section for complete data.*

**CLUTCH**

**Long Model 10CF-TL Semi-centrifugal, single plate, dry disc type.** See *Clutch Section for complete data.*

**Facings:**—Woven type, 2 required. Inside Diameter 6". Outside Diameter 10". Thickness .140".

**Adjustment:**—Pedal free movement 1 1/2-2". To adjust, loosen locknuts and turn clevis on connector link.

**Removal:**—Slide transmission and rear axle to rear as a unit to expose clutch (see Transmission Removal below), take out mounting screws in clutch cover.

**TRANSMISSION**

**TRANSMISSION:**—Own Model. All helical gear, constant-mesh, synchro-mesh (second & high), sliding gear (low & reverse) with steering col. shift.

See *Transmission Section for complete data.*

**Transmission Control:** Steering column shift Std.

See *Transmission Section for complete data.*

**Removal:**—Disconnect hand brake cable, hydraulic brake line at torque tube connection (bleed lines when re-connected), speedometer cable, shock absorber links. Disconnect rear spring at center frame connection. Take off universal joint ball housing bolts, slide axle assembly to rear. Disconnect shifter rods from levers at transmission. Support engine at rear, take out rear engine mounting bolts, remove clutch housing mounting screws, pull transmission

**OVERDRIVE**

**Warner Type R10 (Optl. on 1941 Models).** Electrical control type (with "kick-down" control). Used with Lincoln Transmission.

See *Transmission Section for complete data.*

**Overdrive Solenoid:**—Ford No. 16H-6916.

**Throttle 'Kick-down' Switch:**—Ford No. 16H-6918-A (Zephyr & Custom), 16H-6918-B (Continental). Adjust switch so that it closes when carburetor throttle valve is wide open.

**Lock-Out Switch:**—Ford No. 16H-6917.

**Governor Switch:**—Ford No. 16H-6919.

**Control Relay:**—Ford No. 16H-6915.

**Removal:** Remove Overdrive Control Solenoid before removing Overdrive and Transmission from car. To remove solenoid, disconnect wires on solenoid terminals, take out mounting bolts, in solenoid flange, turn solenoid approximately 60° right or left to disengage solenoid stem from pawl (ball end of stem is flattened on two sides), pull solenoid out. Then remove Overdrive and Transmission (see data above).

► **INSTALLATION CAUTION:**—Do not install Solenoid until Overdrive unit installed on transmission. To install solenoid, insert stem in adapter with ball end flats horizontal, make certain that short pilot on end of solenoid body enters counterbore in adapter casting, turn solenoid approximately 60° to left to engage stem in pawl and line up solenoid flange mounting holes. Check engagement of stem and pawl by attempting to pull solenoid out. Install bolts, connect leads with solenoid terminals UP.

**UNIVERSALS**

**Spicer Model 2102-1.** Needle bearing type. One used See *Universals Section for complete data.*

**REAR AXLE**

**REAR AXLE:**—Own Model. 3/4 floating, Hypoid Gear type with Torque Tube drive.

See *Rear Axle Section for complete data.*

**Ratio:**—4.44-1. **Backlash:**—.002-.004".

**Optl. Axle:**—Columbia Two-speed type.

See *Rear Axle Section for complete data.*

**Removal:**—Disconnect hand brake cable, hydraulic brake line at torque tube connection (bleed lines when re-connected), speedometer cable, shock absorber links. Disconnect rear spring at center frame connection, take out universal joint ball housing bolts, pull axle assembly to rear to free drive shaft  
**Axle Shaft Removal:**—Refer to the *Rear Axle Section Index for article on Lincoln (Zephyr) Rear Axle.*

**SHOCK ABSORBERS**

**Houde (Hondaille) Type BBCM (1940 Front), BBCX (1940 Rear), BBCHN (1941 Front), BBCLZ (1941 Rear).** Double acting, hydraulic. Ford Numbers:

	Right	Left
1940 Models—Front	06H-18045	06H-18046
1940 Models—Rear	06H-18080	06H-18081
1941 Models—Front	16H-18045	16H-18046
1941 Models—Rear	16H-18080	16H-18081

See *Shock Absorber Section for complete data.*

**FRONT SUSPENSION**

**Front Suspension:**—Conventional I-beam section axle with Reverse-Elliott ends and transverse spring. Axle positioned by radius rods and anti-sway bar. Kingpin Inclination—4° crosswise.

**Caster:**—3° Min., 5° Max. Must be equal for both wheels within 1/2°. No adjustment.

**Camber:**—1/4° Min., 3/4° Max. Must be equal for both wheels within 1/4°. right wheel must not exceed left.

**Toe In:**—1/16". Set at 1-10 ratio to Camber. To adjust, loosen clamp bolts, turn tie rod.

**Steering Geometry (Toe out on turns):**—Inner wheel turned 23°, outer 20°. Allowable variation 1/2".

**STEERING GEAR**

**Gemmer Model 330.** Worm-and-Roller type. See *Steering Gear Section for complete data.*

**BRAKES**

**BRAKES:**—Service—Bendix Hydraulic, duo-servo, single anchor type without eccentric adjustment. Hand lever applies rear wheel service brakes.

See *Brake Section for complete data.*

**Wheel Cylinders:**—Diameter 1.125" (front), 1.00" (rear). Not interchangeable from one wheel to another. **Drums:**—Diameter 12".

**Lining:**—Molded (primary or forward shoe), Woven (secondary shoe). Width 1.75". Thickness .21", Length per shoe 11.95".

**Clearance:**—.010" at each end of each shoe.

**Hand Brake:**—See Service Brakes above.

**MISC. MECHANICAL**

**Power Operated Conv. Top:** (1940) Vacuum Power type.

(1941) Auto-Lite Electric type.

See *Miscellaneous Section for complete data.*

**Window Regulators (1941):** Hydro-Electric type.

See *Miscellaneous Section for complete data.*

**ENGINE HOOD NOTE:**—Hood is Alligator type with release knob under instrument panel at extreme left side. To raise hood, pull out on release knob (hood will raise slightly), press in on safety catch under front edge of hood.

**OIL PAN REMOVAL:** See *Lincoln Shop Notes*.

## MODEL IDENTIFICATION

**SERIAL & ENGINE NUMBER:**—Stamped on top of the clutch housing (Body No. only on plate on dash).

## TUNE-UP

**COMPRESSION:**—Ratio—7.1-1 Cast Iron Head.

Pressure—125 lbs. at cranking speed of 100 RPM.

**VACUUM READING:**—18-20" steady idling at 6 MPH.

**FIRING ORDER:**—1-4-9-8-5-2-11-10-3-6-7-12. See diagram for cylinder numbering and spark plug distributor connections.

**SPARK PLUGS:**—Champion H10, 14 MM. Metric type. Gaps—.028-.030".

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.014-.016" Cam Angle 36.5° closed (each set operate independently).

Automatic Advance—11-12° max. at 650 RPM (distr.)

**IGNITION TIMING:** See Ignition Timing.

Std. Setting—2° BTDC. No flywheel marks provided. See Ignition Timing for timing procedure and Vacuum Brake adjustment.

Synchronization—Unequal alternate opening at 37½-22½-37½° (distr.) intervals.

**CARBURETION:** See Carburetor & Carb. Equipment.

Idle Setting—Both idle screws approx. ⅞ turn open. Idle speed 6 MPH. (Cars with Std. Trans.), 350 Eng. RPM (Cars with Liquamatic Drive).

Float Level—Fuel level 19/32" plus or minus 1/32" below top edge of float bowl.

Accelerating Pump—Inner (#1) hole—Summer, Center (#2) hole—Winter, Outer (#3) hole—Extreme Winter temperatures.

Fuel Pump Pressure: 1½-2¾ lbs. (3½ lbs. max.).

**VALVES:** See Valve Timing.

Tappet Clearance—None in service (hydraulic type take-up used).

**STARTING:** See Battery, Starter, Generator, Regulator.

## IGNITION

**Ignition Switch:**—Oakes steering column and ignition lock assembly. NOTE—Steering post and ignition lock Assem. No. includes lock cylinder and keys.

Steering Post & Ign. Lock Assem. Ignition Switch

	Oakes No.	Ford No.	Oakes No.
Zephyr	302725	26H-3675-A	302406
Continental	302748	26H-3675-B	302406
Custom①	302746	268H-3675-A	302406
Custom②	302747	268H-3675-B	302406
① Sedan Model 268H31. ② Limousine Model 268H32.			

Lock Cylinder—Hurd. Ford No. 26H-3677-A (Zephyr), 26H-3677-B (Continental), 268H-3677 (Custom), with keys.

**COIL:** Ford Part No. H-12024. Two coil unit (part of Ignition Unit assembly). Mounted on distributor at front of engine.

**Ignition Current:**—Approximately 3.2 amperes idling, 4.2 amperes stopped, per coil. Ignition primary circuit resistance 1.0-1.33 ohms.

**Resistor Unit:**—One resistor connected in each coil primary circuit (2 used). Part of Lighting Circuit Breaker Assembly No. 16H-11624.

**CONDENSER:** Ford Part No. H-12300 (two used).

Capacity—30-34 microfarad.

**DISTRIBUTOR:** Ford Part No. 16H-12127 (less coils, plates and caps). Double breaker, 6 lobe cam, full automatic advance type with Vacuum Brake control (see Ignition Timing). Same design as used on late 1941 Lincoln (begin with '41 Motor No. 118869) and similar to previous designs except for new automatic advance data (given below).

**Firing Interval:**—Movable contacts open 37½° after fixed set with unequal intervals of 37½° and 22½°

(75° & 45° crankshaft rotation) caused by the 75° included angle between cylinder banks.

**Breaker Gap:**—.014-.016" (both sets set alike).

**Cam Angle or Dwell:**—Approx. 36½° closed, 23½° open, set dwell at 60% (limits 58-60% at 2000 RPM.) on Ford Test Set. Correct for each set (operate independently).

**Breaker Arm Spring Tension:**—20-24 ounces.

**Rotation:**—Clockwise viewed from drive end.

## Automatic Advance (Vacuum Brake Disconnected)

Distributor	R.P.M.	Engine	R.P.M.
Degrees		Degrees	
Start.....	200	0.....	400
11-12.....	650	22-24.....	1300

**Distributor Removal:**—Mounted on front of engine. To remove, remove generator, disconnect vacuum line and primary leads, remove distributor caps, take out 3 capscrews in mounting flange.

## IGNITION TIMING

**IGNITION TIMING:**—See Vacuum Brake Setting below for correction dependent on fuel and operating conditions.

Flywheel Degrees  
All Engines (16H-12127 Distr.) ..... 2° BTDC.

**Timing**—Manufacturer recommends use of Ford Laboratory Test Set (Heyer H1) with Distributor Stroboscope (Heyer H1-DFZ) and Stroboscope Attachment (Heyer H1-BRS). On Stroboscope, set Stroboscopic Disc at 37½°, set Timing Index at 1° before top dead center, set peepsight at Zero. Adjust distributor by loosening adjusting screw in slot on right hand side of housing, move screw down (to retard spark), up (to advance spark) in slot until stroboscopic disc light is in line with peepsight. Synchronize Movable Contacts (see below).

**Timing (On the Car)**—No flywheel marks provided. With distributor adjusted as described above (and movable contacts synchronized), this will give correct 2° BTDC. timing when installed on engine.

**Synchronization (Movable Contacts)**—No means provided for synchronization on engine. If Stroboscope, etc. used, set movable contacts to open exactly 37½° (distributor rotation) after fixed set. To adjust, remove adjusting screw and turning synchronizing screw visible in slot.

**Vacuum Brake Setting**—Should be adjusted to eliminate pinging when engine operated with load. To adjust, loosen locknut, back off adjusting screw until engine pings with load, then turn screw in just enough to eliminate ping, tighten locknut. When adjusted on Stroboscope, vacuum brake should retard spark to peep sight with peep sight set at 1° when distributor is driven at 650 RPM. with no vacuum to release brake.

## CARBURETOR

**Holley (Chandler-Groves)**—Two models used: Ford No. 26H-9505-C (without Automatic Choke). Ford No. 26H-9505-D (cars with Automatic Choke). Dual (double barrel) downdraft type.

See Carburetor Section for complete data.

**Idle Adjustment**—With engine warm, choke valve wide open and Fast Idle inoperative, set throttle lever stopscrew for 6 MPH. idle speed. Turn each idle adjusting screw (one for each barrel. adjust in succession) in until engine begins to miss, then out until engine begins to roll, finally turn screw in slowly until engine fires smoothly. Final setting should be approximately ¾ turn out from the inner seated position. Re-adjust throttle stopscrew for correct idling speed of 6 MPH. **NOTE**—If vacuum gauge used, set for highest steady gauge reading.

**Liquamatic Drive Idle Speed Note**—Set idle speed for cars with Liquamatic Drive at 350 RPM.

**Accelerating Pump Setting**—Three holes provided in the throttle lever for pump rod link connection. Adjust for seasonal requirements as follows:  
#1 (Inner)—Min. stroke, Summer temperatures.  
#2 (Center)—Med. stroke, Winter temperatures.  
#3 (Outer)—Max. stroke, Extreme cold weather.

**Float Level**—Use Ford Gauge 9550-A to set the float level with 1/16" feeler between float and gauge (1.353" end 'Go', 1.322" end 'No Go') measuring from bottom of bowl cover to bottom of float (with 1/16" feeler between float and gauge). Fuel level in bowl should be 18/32-20/32".

**Metering Jets**—See Holley (Chandler-Groves) Ford Jet Specification Table in Carburetor Section.

**Anti-Stall Device (Cars with Liquamatic Drive):**—Ford No. 26H-9944. Vacuum operated throttle kicker.

**Fast Idle (Cars without Automatic Choke):**—Integral type. Operated by choke lever. No adjustment.

**Automatic Choke:**—Std. on Continental & Custom, Optl. Zephyr. Refer to Carburetion Equipment Index. for Sisson Automatic Choke article for complete data.

## CARB. EQUIPMENT

**Air Cleaner:**—Ford No. 26H-9625-A (Zephyr & Custom), 26H-9625-B (Continental) oil bath type.

**Fuel Pump:**—AC Type R, #1537709. Ford No. 26H-9350. Diaphragm type. Pressure—1½-2¾ lbs. For complete data, refer to Carburetion Equip. Index.

**Gasoline Gauge:**—King-Seeley Electric type. Ford No. 26H-9280 (dash unit), No. 21C-9275-A (tank unit). For complete data, refer to Carburetion Equip. Index.

## BATTERY

**BATTERY:**—Ford No. 06H-10655-A. 6 volt, 17 plate, 120 ampere hour capacity (20 hour rate).

**Starting Capacity**—150 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 4.0 minutes.

**Grounded Terminal**—Positive (+) grounded to cylinder head stud of right hand bank.

**Location**—On right side in engine compartment.

**Dimensions**—Length 10.6". Width 7.3". Height 9.2".

## STARTER

**STARTER:**—  
Car Model      Starter      Armature      Ford Nos.  
Conv. Coupe (76) ①..... 26H-11001-A..... 26H-11005-A  
Conv. Coupe (76) ②..... 26H-11001-B.....  
All Others ③..... 18-11002..... 18-11005

①—Std. transmission. ②—With Liquamatic Drive. Drive—With Std. Trans.: Inboard Bendix L11FX-10, Ford No. B-11350 (All exc. Conv. Coupe). Ford B&S Drive No. 91A-11350 (Conv. Coupe). With Liquamatic Drive: Barrel Type Bendix No. A-2100, Ford No. 09B-11350 (All Models). Refer to Electrical Equipment Index for Ford B&S Starter Drive article for data.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—2 lbs. each.

**Cranking Engine**—100 RPM, 190-215 amperes.

## Performance Data

Torque	R.P.M.	Volts	Amperes
4 ft. lbs.....	1070.....	4.6.....	200
8 ".....	660.....	4.3.....	340
12 ".....	300.....	3.65.....	465
14 ".....	Lock.....	3.5.....	500

**Starting Switch:**—R-B-M Model 5604, Ford No. 01A-11450-A magnetic switch mounted on the dash and controlled by pushbutton on instrument panel Ford No. 26H-11500-A (Zephyr), 26H-11500-B (Others).

**Removal:**—Starter mounted on right front face of flywheel housing. To remove, take off pan at right of engine, free starter-to-oil pan support bracket, take out through-bolts on commutator end plate.

## GENERATOR

**GENERATOR:**—Ford No. 21A-10000. Armature No. 01A-10005. Two brush (shunt) type with vibrating type voltage and current regulation. Ventilated by fan on drive pulley.

**Charging Rate Adjustment:**—None. See Regulator.

**Maximum Charging Rate**—Controlled by regulator and dependent on battery condition and load. To check generator output, disconnect generator field lead at generator, connect both generator terminals together (use short insulated wire). Use 'BRS' set or rheostat connected across battery terminals and apply load until voltage is exactly 6 volts. Connect ammeter in charging line, run engine, check output at 2 speeds given in performance table below. Restore original connections after completing test.

**Do not operate generator in service with both terminals connected together. This eliminates all regulator action and will damage generator.**

## Performance Data

Amperes	Engine RPM.
Start.....	520
30.....	1060
30.....	2500

**Rotation**—Counter-clockwise at commutator end.

**Field Current**—2.1 amperes at 6.0 volts (field resistance 2.88 ohms at 70°F.).

**Brush Spring Tension**—Approximately 28 ozs.

**Removal:**—Generator mounted on bracket between cylinder banks at front of engine, driven in tandem with water pumps by Vee belt. To remove, loosen nut on bracket stud.

**Belt Adjustment:**—Loosen nut on bracket mounting stud, raise generator up until side movement on belt midway between generator and water pump pulleys is 1" (thumb and finger pressure).

## REGULATOR

**REGULATOR:**—Ford No. 11A-10505. Three-Unit type. Consists of Cutout Relay, Vibrating Voltage Regulator and vibrating Current Regulator (separate units) in single case on engine side of dash.

For complete data, refer to Electrical Equipment Index.

**NOTE**—Regulator case is grounded through separate ground wire extending from regulator to generator frame. This ground connection must be in place when regulator being operated or tested.

## Cutout Relay

**Cuts In**—5.8-6.3 volts at operating temperature.

**Cuts Out**—8 ampere discharge current (maximum).

## Voltage Regulator

**Setting**—6.9-7.2 volts at 70-80° F. See Ford Regulator article in the Electrical Equipment Section for voltages at other temperatures.

**Checking & Adjusting**—Refer to Electrical Equipment Index for article on 'Ford Regulator—3-unit type'.

## Current Regulator

**Setting**—30-33 amperes hot (after engine run for 5 minutes).

**Checking & Adjusting**—See Voltage Regulator above.

CONTINUED ON NEXT PAGE

C NTINUED FR M PRECEDIN PA E

## LIGHTING

**LIGHTING:**—Headlamps—Ford Sealed Beam type. Controlled by Lighting Switch on instrument panel and Beam Selector Switch on toeboard.  
For complete data, refer to Electrical Equipment Index.  
Headlamp Adjustment—Aim upper beam straight ahead (hot spot center 3" below lamp center height).  
Beam Indicator—At top of speedometer dial. Lighted whenever Country (upper) beams in use.  
Direction Signal—Refer to Electrical Equip. Index.

## Switches

**Lighting**—R-B-M Model 2445, Ford No. 11A-11654 (switch only). Light Switch Knob No. 26H-11666-A (Zephyr), 26H-11666-B (Continental), 268H-11666 (Custom). Light Switch Knob Shaft No. 26H-11663.  
**Beam Selector**—R-B-M. Switch Only: Ford No. 16H-13532-A (Zephyr & Custom), 16H-13532-B (Continental). With Headlamp & Horn Wiring: Ford No. 26H-11653A (Zephyr & Cust.), 26H-11653B (Cont'l.).  
**Instrument**—Ford No. 26H-13740.  
**Map Light (Floor Light)**—Ford No. B-13752-A.  
**Front & Rear Door Switches**—Ford No. 16H-13752.  
**Stop Light**—Ford No. 11A-13480 (hydraulic type).  
**Direction Signal**—Ford No. 16H-13335 (Switch Assembly).

## Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps		Sealed Beam
Front Dir. Signal & Park	21-3	1154
Instrument, Ignition Switch	1½	55
Speedometer, Clock	1½	55
Beam & Dir. Sig. Indicators	1	51
Rear Dir. Signal & Tail	21-3	1154
Stop	21	1129
Rear License	3	63
Trunk (Luggage Comp't.)	3	63
Dome (exc. Convertibles)	3	63
Rear Quarter (Custom)	6	81

## MISC. ELECTRICAL

**LIGHTING CIRCUIT BREAKER:**—R-B-M Model 6740, Ford No. 16H-11624. Combined with Ignition Resistor (twin unit) on block on dash under cowl (Direction Signal Flasher also mounted on same block). Consists of two separate circuit breaker units (one unit protects headlight circuits, second unit protects other lighting circuits) of the thermostatic and wound-coil type. Contacts open with current of 50 amperes and vibrate rapidly to control current.

**FUSES:**—Direction Signal—10 ampere. In Flasher lead.  
Overdrive—15 ampere. In control relay lead.  
Liquamatic Drive—15 ampere. In control relay lead.  
Electric Clock—2 ampere. In feed wire connector.

**HORNS:**—Air electric type dual horns. Ford No. 26H-13832 (Right Hand—high note), 26H-13833 (Left Hand—low note). Horns operated by horn relay.  
Horn Current—24-28 amperes (total).

**Horn Relay:**—R-B-M Model 4750, Ford No. 96H-13842.  
Contact Closing Voltage—3.5-4.5 volts.  
Current Draw—Approximately ¾ ampere.

## ENGINE

**ENGINE SPECIFICATIONS:**—Own Model 26H. 12 cylinder 75° Vee, L head type. Both blocks and crankcase cast enbloc. Bore—2.93". Stroke—3.75".

Rated Horsepower—41.4. Displacement—308 cu. ins.

Developed Horsepower—130 at 3600 RPM.

Compression Ratio—7.1-1 cast-iron head.

Compression Pressure—125 lbs. at cranking speed.

Vacuum Reading—18-20" steady idling at 6 MPH.

NOTE—Idling sp. 350 Eng. RPM. on Liquamatic cars.

**CYLINDER SLEEVES:**—Cast iron, dry type cylinder sleeves available for replacement where bore size worn beyond Oversize Piston Limit.

Sleeve Installation—See Lincoln Shop Notes.

**PISTONS:**—Steel alloy, light weight, cam ground, with slipper type skirt. Recondition cylinders for finished replacement pistons.

Weight—442 grams (without rings or pin).

Removal—Pistons and rods removed from above.

Clearance—See Fitting New Pistons.

Replacement Pistons: See Lincoln Shop Notes.

**Fitting New Pistons:** Use .50" wide feeler stock of correct thickness (as listed below) inserted between piston and cylinder wall at right angles to pin to check clearance. Pull required to withdraw feeler should be 5-8 lbs. (all types).

Feeler Thickness—.002" New Piston in New Plain Bore, .004" for New Piston in Worn Plain Bore .005" for Worn Piston in Worn Plain Bore.

**PISTON RINGS:**—Two compression, one oil ring, all above pin. Oil ring groove drilled with drain holes.

Ring	Width	End Gap	Side Clearance
Compr. #1	.093-.0935"	.012-.017"	.0025-.003"
Compr. #2	.093-.0935"	.012-.017"	.002-.0025"
Oil Contr.	.1845-.185"	.008-.013"	.0015-.002"

Replacement Rings: See Lincoln Special Shop Notes

**PISTON PIN:**—Diameter .7501-.7504". Length 2.607".

Floating type (locking ring in piston at each end).

Pin hole in connecting rod bronze-bushed.

Pin Fit in Piston—.0003-.0009" clearance or light hand push fit with piston at 70°F.

Pin Fit in Rod Bushing—.0002-.0005" clearance (pin should pass through bushing slowly of own weight).

See Lincoln Shop Notes for Pin Fitting Directions.

Replacement Pins: See Lincoln Shop Notes.

**CONNECTING ROD:**—Length 7.40". Weight 711 grams.

Crankpin Journal Diameter—2.250".

**Bearing Type:**—Steel-backed, copper-lead lined bearing halves clamped in each rod.

Clearance—.001-.0025". Sideplay .014" (both rods).

**Bearing Adjustment:**—None (no shims). Replace bearings if less than .08375" thick. NOTE—Engage tang on bearing in groove in rod and cap. See that long and short bearing cap bolts installed on correct side (rod split at angle, bolts unequal length).

Replacement Bearings: See Lincoln Shop Notes.

**Installing Rods:**—Marks on rods and caps must be together and installed in same numbered cylinder with marks pointing down toward oil pan.

**CRANKSHAFT:**—Four bearing with integral counterweights. NOTE—New crankshaft used.

Journal Diameters—2.401" (all bearings).

Bearing Type—Steel-backed, copper-lead lined.

Clearance—.001" (or slight drag with .002" feeler assembled in bearing for clearance check).

**Bearing Adjustment:**—None (no shims). Replace bearings. Do not file bearing caps. NOTE—See that tang on bearing engages groove in block and cap.

Replacement Bearings: See Lincoln Shop Notes.

**End Thrust:**—Taken by rear main bearing. To adjust, replace bearing. Endplay—.002-.006".

**CAMSHAFT:**—Four bearing with Helical Gear drive. NOTE—Camshaft gear Aluminum-alloy type and is bolted on camshaft.

**Bearing Diameters:**—1.797" (replace bearings if the diameter more than 1.802", replace camshaft if the journal diameter less than 1.7955").

**Bearing Type:**—Steel-backed, babbitt-lined bushings pressed in block. Clearance—.001-.002".

**End Thrust:**—Taken by gear hub and coverplate. Adjusted by replacing coverplate. Endplay—.005-.015".

**Timing Gears:**—Cast alloy iron type (Crankshaft), Aluminum alloy—bolted on shaft (Camshaft).

Backlash—.004" Maximum.

See Lincoln Shop Notes for Timing Gear data.

**Camshaft Setting:**—Mesh marked tooth of crankshaft gear with space marked by line on camshaft gear (this line must be in line with mark on hub). NOTE—Cap screw holes in camshaft gear and shaft are unevenly spaced insuring correct gear position.

**VALVES:**—Head Diameter Stem Diameter Length  
All Valves .....1.537" .....3.115" .....4.750-4.751"

	Seat Angle	Lift	Stem Clearance
Intake	45°	.292"	.0015-.0035"
Exhaust	45°	.292"	.0025-.0045"

NOTE—Service limit for valve stem diameter is .309" Intake, .3065" Exhaust. Valves interchangeable. For Valve Servicing data, see Lincoln Shop Notes.

NOTE—Valve Seat Inserts used for exhaust valves.

**Valve Guides:** Split type retained by "C" washer and valve spring. NOTE—Replace both halves of all guides measuring less than .6665" (thickness of guide half and valve stem at top of guide with valve of .311" stem diameter in place in guide half).

For Valve Guide Servicing data, see Lincoln Shop Notes.

**Valve Lifters:** Barrel type hydraulic tappet take-up (Wilcox-Rich Zero-Lash type or Johnson type).

Diameter—.9995".

See Miscellaneous Section for complete data.

Valve Springs:	Pressure	Length
Valve Closed	51-57 lbs.	2.13"
Valve Open	111-121 lbs.	1.84"

NOTE—Replace springs which do not test to 47-57 lbs. at 2½" or if paint coating has been removed.

## VALVE TIMING

**Tappet Clearance:**—None in service (hydraulic lifter). See Valve Lifter Servicing in Lincoln Shop Notes.

**Valve Timing:**—See Camshaft Setting above.

Int. Valves—Open 10.42° BTDC. Close 35.58° ALDC.

Exh. Valves—Open 50.92° BLDC. Close 8.08° ATDC.

To Check Timing—No flywheel marks provided. If dead center position for any cylinder established on flywheel, intake valve for this cylinder should open approx. 3.24 teeth before this point with piston .0389" before top dead center.

## LUBRICATION

**LUBRICATION:**—Pressure type with gear type oil pump in crankcase at rear of engine.

Normal Oil Pressure—40-45 lbs. at 2000 RPM.

**Oil Pump and Oil Pressure Regulator:** See Lincoln Shop Notes for complete data.

**Oil Pressure Gauge:**—King-Seeley Electric. Ford No. 26H-9273 (dash unit), No. 48-9278 (engine unit). See Miscellaneous Section for complete data.

**Crankcase Capacity:**—5 qts.

## COOLING

**COOLING SYSTEM:**—Capacity—27 quarts.

**Water Pump:**—Packless type, 2 used (1 for each bank). See Water Pump Section for complete data.

**Removal:**—Slack off drive belt, disconnect hose couplings, take out mounting screws on pump.

**Thermostat:**—In outlet hose for each bank (2 used). Setting—Starts to open at 145°F. Fully open 180°F.

**Temperature Gauge:**—King-Seeley Electric. Ford No. 26H-10883 (dash unit), No. 99A-10884 (engine unit). See Miscellaneous Section for complete data.

## CLUTCH

**CLUTCH:**—Long Model 10CF-TL Semi-centrifugal single plate, dry disc type.

See Clutch Section for complete data.

**Liquamatic Drive Cars:**—These cars equipped with different type driven member.

See Clutch Section for complete data.

**Facings:**—Woven type, 2 required. Inside Diam. 6". Outside Diameter 10". Thickness .140".

**Adjustment:**—Pedal free movement 1½"-2". To adjust, loosen locknuts and turn clevis on connector link.

**Removal:**—Slide transmission and rear axle to rear as a unit to expose clutch (see Transmission Removal below), take out mounting screws in clutch cover.

## TRANSMISSION

### STANDARD

**TRANSMISSION (STD.):**—Own Make. Constant-mesh, synchro-mesh (second and high), sliding gear (low and reverse). All helical gear type.

See Transmission Section for complete data.

**Transmission Control:**—Mechanical steering col. shift. See Transmission Section for complete data.

**Removal:**—Disconnect hand brake cable, hydraulic brake line at torque tube connection (bleed lines when re-connected), speedometer cable, shock absorber links. Disconnect rear spring at center frame connection. Take off universal joint ball housing bolts, slide axle assembly to rear. Disconnect shifter rods from lever at transmission. Support engine at rear, take out rear engine mounting bolts, remove clutch housing mounting screws, pull transmission straight back.

## TRANSMISSION

### OPTIONAL EQUIPMENT

**LIQUAMATIC DRIVE:**—Consists of liquid coupling and Warner Model T94A-R10A 3 speed semi-automatic transmission (automatic shifting between 2nd & 3rd speeds) with overdrive. Optional equipment. See Transmission Section for complete data.

## OVERDRIVE

**Overdrive (Optl.):**—Warner Type R10A overdrive with electrical solenoid control (no centrifugal pawls) and 'kick-down' feature.

See Transmission Section for complete data.

**Overdrive Solenoid:**—Ford No. 16H-6916.

**Throttle 'Kick-down' Switch:**—Ford No. 16H-6918-A (Zephyr & Custom), 16H-6918-B (Continental). Adjust switch so that it closes when carburetor throttle valve is wide open.

**Lock-out Switch:**—Ford No. 16H-6917. Mounted on Overdrive case.

**Governor Switch:**—Ford No. 16H-6919.

**Control Relay:**—Ford No. 26H-6915.

**Removal:** Remove Overdrive Control Solenoid before removing Overdrive and Transmission from car. To remove solenoid, disconnect wires on solenoid terminals, take out mounting bolts in solenoid flange, turn solenoid approximately 60° right or left to disengage solenoid stem from pawl (ball end of stem is flattened on two sides), pull solenoid. Then remove Overdrive and Transmission (see data above).

► **INSTALLATION CAUTION:**—Do not install Solenoid until Overdrive Unit installed on transmission. To install solenoid, insert stem in adapter with ball end flats horizontal, make certain that short pilot on end of solenoid body enters counterbore in adapter, turn solenoid approx. 60° to left to engage stem in pawl and line up solenoid flange mounting holes. Check engagement of stem and pawl by attempting to pull solenoid out (solenoid should not be free and resistance of solenoid spring should be felt.) Install mounting bolts and connect leads at terminals.

**CAUTION:**—Solenoid terminals must be "up."

## UNIVERSALS

**UNIVERSAL JOINT:**—Spicer Model 2102-1. Needle bearing type. Single joint at rear of transmission.

See Universals Section for complete data.

## REAR AXLE

**REAR AXLE:**—Own Model ¾ floating, Hypoid Gear type with Torque Tube drive.

See Rear Axle Section for complete data.

**Ratio:**—4.44-1. **Backlash:**—.002-.004".

**Removal:**—Disconnect hand brake cable, hydraulic brake line at torque tube connection (bleed lines when re-connected), speedometer cable, shock absorber links. Disconnect rear spring at center frame connection. Take out universal joint ball housing bolts, pull axle assembly to free shaft at joint.

**Axle Shaft Removal:**—Refer to the Rear Axle Section Index for article on Lincoln Rear Axle for data.

## SHOCK ABSORBERS

**SHOCK ABSORBERS:**—Honde (Houdaille)—Types BBCHO (Front), BBCLY (Rear). Lincoln No. 26H-18045 (Right Front), 26H-18046 (Left Front), 26H-18080 (Right Rear), 26H-18081 (Left Rear). Double acting, hydraulic, adjustable type.

See Shock Absorber Section for complete data.

## FRONT SUSPENSION

**Front Suspension:**—Conventional I-beam section axle with Reverse-Elliott ends and transverse spring. Axle held by radius rods and anti-sway strut rod.

**Kingpin Inclination:**—4° crosswise.

**Caster:**—3° Min., 5° Max. Must be equal for both wheels within ½°. No adjustment.

**Camber:**—¼° Min., ¾° Max. Must be equal for both wheels within ¼°, right wheel must not exceed left.

**Toe In:**—1/16". Set at 1-10 ratio to Camber. To adjust, loosen clamp bolts, turn tie rod.

**Steering Geometry (Toe out on turns):**—Inner wheel turned 23°, outer 20°. Allowable variation ½°.

## STEERING GEAR

Gemmer Model 330. Worm-and-Roller type.

See Steering Gear Section for complete data.

## BRAKES

**BRAKES:**—Service—Bendix-Hydraulic, duo-servo, single anchor type without eccentric adjustment. Hand lever applies rear wheel service brakes. See Brake Section for complete data.

**Wheel Cylinders:**—Diameter 1.125" (front), 1.00" (rear). Not interchangeable from one wheel to another. **Drums:**—Diameter 12".

**Lining:**—Molded (primary or forward shoe), Woven (secondary shoe). Width 1.75". Thickness .21", Length per shoe 11.95".

**Clearance:**—.010" at each end of each shoe.

**Hand Brake:**—See Service Brakes above.

## MISC. MECHANICAL

**Power Operated Convertible Top:** Auto-Lite Electric type.

See Miscellaneous Section for complete data.

**Window Regulators:** Hydro-Electric type.

See Miscellaneous Section for complete data.

**HOOD LOCK:** Hood is Alligator type. To raise hood, pull out lock button on left side of instrument panel, press in on safety catch under front edge of hood.

## MODEL IDENTIFICATION

**SERIAL & ENGINE NUMBER:** Stamped on top of clutch housing (visible through opening in floor) and on left side of frame front cross-member near left front engine support.

## TUNE-UP

**COMPRESSION:** Pressure—105-125 lbs. at cranking speed.

**VACUUM READING:** Steady 18-20" idling at 6 MPH.

**FIRING ORDER:** 1-4-9-8-5-2-11-10-3-6-7-12 with cylinders numbered 1-3-5-7-9-11—Left Bank, 2-4-6-8-10-12—Right Bank (front-to-rear).

**SPARK PLUGS:** Champion Type H-10, 14 mm. Metric. Gaps—.025"

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.014-.016" (both sets equal).

Cam Angle or Dwell—36.5° closed, 23.5° open (each set—contacts operate independently).

Breaker Arm Spring Tension—20-24 ozs.

Automatic Advance—Starts at 200 RPM. Max. advance 11-12° at 650 RPM (Distr. ° and RPM).

**IGNITION TIMING:** See Ignition Timing.

Std. Setting—2° BTDC.

**Timing Marks:** None. See Ignition Timing for directions on setting and synchronizing of distributor for correct timing when installed on engine.

**Vacuum Brake Setting:** Set to just eliminate ping with engine pulling load (back off adjusting screw until engine pings, then turn screw in just enough to eliminate pinging).

**CARBURETION:** See Carburetor & Carb. Equipment.

**Idle Setting:** With engine warm, set throttle stop-screw for 500 RPM idle speed. Set idle adjusting screws (1 for each barrel—adjust in succession) for smooth idle (turn screws in for leaner mixture). **Float Level:**—1.322-1.353" bottom of float to underside of bowl cover with needle valve seated (Gauge 9550-A). Fuel level 11/16" plus or minus 1/32" below top edge of bowl.

**Accelerating Pump:** Inner (#1) Hole—Summer, Center (#2) Hole—Winter, Outer (#3) Hole—extremely cold temperatures.

**Fuel Pump Pressure:** 1½-3½ lbs.

**MANIFOLD HEAT CONTROL:** Automatic thermostatic type. Located at exhaust pipe connection to exhaust manifold for left hand cylinder bank. See that valve operates freely.

**VALVES:** See Valve Timing.

**Tappet Clearance:**—None in service. Zero-lash type hydraulic lifter used.

**STARTING:** See Battery, Starter, Generator, and Regulator.

## IGNITION

**IGNITION SWITCH:** Oakes Steering Column & Ignition Lock.

Assembly	Oakes No.	Ford No.
Lincoln	302945	5EH-3675-A
Continental	303000	5EH-3675-B
Lincoln RHD.	302964	5EHF-3675

Ignition Switch Assembly—Oakes No. 302440, Ford N. 16H-3680.

Lock Cylinder—Hurd.

**COIL:** Ford No. H-12024 (Part of Ignition Unit Assy.).

Two-coil unit mounted on distributor.

**Primary Resistor:**—One resistor connected in series with each coil primary (two used). Resistors are part of Lighting Circuit Breaker Assy. 16H-11624.

**Ignition Current:**—Approx. 3.2 amperes idling, 4.2 amperes stopped, for each coil. Primary circuit resistance 1.0-1.33 ohms.

**CONDENSER:** Ford Part No. H-12300 (two used).

Capacity—30-34 microfarad.

**DISTRIBUTOR:** Ford No. 16H-12127 (Less Coil, Distributor Caps, and Plates). Double breaker, 6 lobe cam, full automatic advance type with Vacuum Brake adjustment. Contacts open alternately at 37½° and 22½° intervals corresponding to unequal 75° & 45° firing intervals (must be synchronized). **Firing Interval:**—Movable contacts open 37½° after

fixed set with unequal intervals of 37½° and 22½° (75° & 45° crankshaft rotation) caused by 75° included angle between cylinder banks.

**Breaker Gap:**—.014-.016" (both sets set alike).

**Cam Angle or Dwell:**—36.5° closed, 23.5° open (each set—operate independently).

**Breaker Arm Spring Tension:**—20-24 ozs.

**Rotation:**—Clockwise viewed from drive end.

Distributor Automatic Advance Engine

Degrees	R.P.M.	Degrees	R.P.M.
Start.....	200	0.....	400
11-12.....	650	22-24.....	1300

**Distributor Removal:**—Mounted on front of engine. To remove, remove generator, disconnect vacuum line and primary leads, remove distributor caps, take out 3 capscrews in mounting flange.

**Vacuum Brake:** Consists of a spring-loaded, vacuum controlled brake piston which bears on edge of retard disc of breaker advance mechanism and acts as a "drag" to retard normal advance when engine is accelerated or operated under load. Piston is normally held out of engagement by manifold vacuum.

### IGNITION TIMING

**Std. Setting—All Engines.....** 2° BTDC. See Vacuum Brake Setting for service correction for operating conditions and octane rating of fuel used.

**Ignition Timing (Basic Setting)**—Distributor can be set for correct ignition timing when off engine as follows: Place a small straight edge or scale against the tang on the drive end of the shaft (scale must be on wide side of shaft), rotate distributor in direction of rotation (clockwise) until the trailing edge of the scale is exactly 11/32" past the nearest edge of the mounting hole in the flange which is nearest the vacuum brake. If left hand (fixed) breaker contacts do not open at this point, loosen adjusting screw on side of distributor housing, move screw up (to advance timing), down (to retard timing) until contacts begin to open, tighten adjusting screw. Then check synchronization of movable contacts as follows:

**Synchronization (Basic Setting)**—Remove timing adjusting screw and plate on side of distributor for access to synchronizing screw (visible in adjusting screw slot). Place a scale on the wide side of the shaft and against the tang (as for timing above), rotate distributor shaft in direction of rotation (clockwise) until leading edge of scale is exactly 27/32" before the nearest edge of the mounting hole in the flange which is nearest the vacuum brake. If right hand (movable) contacts do not open at this point, turn synchronizing adjusting screw until contacts begin to open. Replace adjusting screw and plate, recheck timing of left hand (fixed) contacts as directed above.

**Timing (On Engine)**—No flywheel marks or other means provided to check or adjust ignition timing on the engine. If basic setting (timing & synchronizing of contacts) is correct as directed above, all necessary adjustments for operating conditions and octane rating of fuel being used can be made by means of Vacuum Brake Setting as follows:

**Vacuum Brake Setting:**—Should be set for best performance with particular fuel and operating conditions. To adjust, loosen locknut and back off adjusting screw until engine pings when accelerated, then turn screw in just enough to eliminate this ping, tighten the locknut.

### CARBURETOR

**Holley (Chandler-Groves) Ford No. 26H-9510-C.** Dual (double barrel) downdraft with manual choke. See Carburetor Section for complete data.

**Idle Adjustment**—With engine warm, choke valve wide open and Fast Idle inoperative, set throttle lever stopscrew for 6 M.P.H. idle speed. Turn each idle adjusting screw (one for each barrel, adjust in succession) in until engine begins to miss, then out until engine begins to roll, finally turn screw in until engine fires smoothly. Recheck idle speed.

**NOTE**—Set for highest reading on Vacuum Gauge.

**Float Level**—Use Gauge 9550-A to check float level. Invert air horn and float assembly, place gauge on

face of bowl cover. Bottom of float should be 1.322-1.353" from face of cover (1.353" part of gauge "Go", 1.322" part of gauge "No Go"). Adjust by bending lip of float lever. Fuel level in bowl should be 11/16" plus or minus 1/32" below top edge of bowl.

**Accelerating Pump Adjustment**—Three holes provided in throttle lever for pump link connection. Inner (#1)—Min. stroke, Summer temperatures. Center (#2)—Medium stroke, Normal Temperature. Outer (#3)—Max. stroke, Extreme cold weather.

**NOTE**—Pump link locked in pump rod by snap lock. Pull link shaft out of pump rod to disengage lock.

**Metering Jets**—See Chandler-Groves (Ford) Jet Specification Table in Carburetor Section.

**Fast Idle:**—Integral with carburetor. Operated by choke lever. No adjustment required.

### CARB. EQUIPMENT

**Air Cleaner:** Ford No. 26H-9625-A (Lincoln), 26H-9625-B (Cont'l) Heavy duty Oil-bath type.

**Servicing**—Clean and re-fill (to level mark on case) with same grade engine oil used in crankcase at 3500 mile intervals (when crankcase drained) or more often if required. Wash filter element.

**NOTE**—Clean and re-oil filter element in oil filler cap (crankcase breather) every 1000 miles.

**Gasoline Gauge:** King-Seeley Electric. Ford Nos. Dash Unit: 5EH-9280A ('46 Lincoln), 5EH-9280B ('46 Continental), 5EH-9280C ('47 All). Tank: 21C-9275A.

**Fuel Pump:** AC Type R, No. 1537709, Ford No. 26H-9350A. Diaphragm type.

See Carburetion Equipment Section for data.

**Pressure**—3½ lbs. maximum (1½-3½ lbs.).

### BATTERY

**Ford Type 06H-10655-A.** 6 Volt, 17 Plate, 120 Ampere Hour Capacity (20 hour rate).

**Starting Capacity**—150 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 4.0 minutes.

**Grounded Terminal**—Positive (+) grounded to cylinder head stud of right hand bank.

**Location**—On right side in engine compartment.

**Dimensions**—Length 10.6". Width 7.3". Height 9.2".

### STARTER

**Ford Model No. 18-11002 or Ford No. 5EH-11001.**

**Armature No.**—Ford No. 18-11005 (for 18-11001).

**Drive**—Bendix No. A1472 (Ford No. B-11350) or Bendix No. A-2100 (June 1947, starting Ser. No. 7H-165897).

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—2 lbs. each.

**Cranking Engine**—100 RPM., 190-215 amperes.

#### Performance Data

Torque	R.P.M.	Volts	Amperes
4 ft. lbs.	1070	4.6	200
8 "	660	4.3	340
12 "	300	3.65	465
14 "	Lock	3.5	500

**Starting Switch:** Ford No. 21A-11450. Magnetic switch mounted on the dash and is controlled by panel pushbutton switch Ford No. 5EH-11500.

**Removal:**—Starter mounted on right front face of flywheel housing. To remove, take off pan at right of engine, remove bolts on commutator endplate

### GENERATOR

**Ford Model No. 21A-10000.** Armature No. 01A-10005A. Two brush (shunt) type with vibrating voltage and current regulation. Ventilated by fan. **Charging Rate Adjustment**—None. See Regulator. **Maximum Charging Rate**—Controlled by regulator and dependent on battery condition and load. To check generator output, disconnect generator field lead at generator, connect both generator terminals together (use short insulated wire). Use 'BRS' set or rheostat connected across battery terminals and apply load until voltage is exactly 6 volts. Connect ammeter in charging line, run engine, check output at 2 speeds given in performance table below. Restore original connections after completing test. **Do not operate generator in service with both terminals connected together. This eliminates all regulator action and will damage generator.**

Amperes	Engine RPM.
Start.....	520
30 .....	1060
30 .....	2500

**Rotation**—Counter-clockwise at commutator end.

**Field Current**—2.1 amperes at 6.0 volts (field resistance 2.88 ohms at 70°F.).

**Brush Spring Tension**—Approximately 28 ozs.

**Removal:**—Generator mounted on bracket between cylinder banks at front of engine, driven in tandem with water pumps by Vee belt. To remove, loosen nut on bracket stud.

**Belt Adjustment:**—Loosen nut on bracket mounting stud, raise generator up until side movement on belt midway between generator and water pump pulley is ½" (thumb and finger pressure).

### REGULATOR

**Ford Model No. 01A-10505-C.** Three Unit Type. Consists of Cutout Relay, vibrating Voltage Regulator and vibrating Current Regulator (separate units) in single case on engine side of dash. See Electrical Equipment Section for complete data.

**NOTE**—Regulator case is grounded through braided wire 'pigtail' or separate ground wire extending from regulator to generator frame. Ground wire must be in place when generator operated.

#### Cutout Relay

**Cuts In**—5.8-6.3 volts at operating temperature.

**Cuts Out**—8 ampere discharge current (maximum).

#### Voltage Regulator

**Setting**—6.9-7.2 volts at 70-80° F. See Ford Regulator article in Electrical Equipment Section for voltages at other temperatures.

**Checking & Adjusting**—Refer to Electrical Equipment Index for article on 'Ford Regulator—3-unit Type'

#### Current Regulator

**Setting**—30-33 amperes hot (after 5 minutes run).

**Checking & Adjusting**—See Voltage Regulator above.

### LIGHTING

**Headlamps:** Ford "Sealed Beam" type.

Controlled by Lighting Switch on instrument panel and Beam Selector Switch on toeboard.

See Electrical Equipment Section for complete data.

C NTINUED ON NEXT PA E

## CONTINUED FROM PRECEDING PAGE

**Adjustment**—Aim upper beam straight ahead (hot spot center 3" below lamp center height at 25 ft.).  
**Beam Indicator**—In upper center of speedometer dial. Lighted whenever upper beams in use.

**Direction Signal**: See *Electrical Equipment Section*.

**Direction Indicators**—Right and Left hand arrows on face of speedometer dial.

**Direction Signal Flasher**—Ford No. 16H-13350.

## Switches

**Lighting**—R-B-M Model 2445, Ford No. 11A-11654 (switch only). Light Switch Knob No. 5EH-11666-A (Lincoln), 5EH-11666-B (Continental).

**Beam Selector (Switch Only)**—Ford No. 16H-13532-A (Lincoln), 16H-13532-B (Continental).

**Beam Selector (With Headlamp & Horn Wiring)**—Ford 26H-11653-A (Lincoln), 26H-11653-B (Contl.).

**Instrument**—Ford No. 5EH-13740-B.

**Dome Light & Map Light**—Ford No. 5EH-13752-A.

**Door Switches**—Ford No. 16H-13752.

**Stop Light**—Ford No. 11A-13480.

**Direction Signal**—Ford No. 16H-13335 (switch).

## Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps	Sealed Beam	
Park & Frt. Direc. Signal	21-3	1154
Instrument, Clock	1.5	55
Beam & Direc. Sig. Indicators	1	51
Tail & Rear Direc. Signal	21-3	1154
Stop	21	1129
Dome & Quarter	6	81
Rear License	3	63
Trunk (Luggage Comp't.)	6	81

## MISC. ELECTRICAL

**LIGHTING CIRCUIT BREAKER**: RBM Model 6740, Ford No. 16H-11624. Combined with Ignition Resistor (twin unit) on block on dash under cowl (Direction Signal Flasher also mounted on same block). Consists of two separate circuit breaker units (one unit protects headlight circuits, second unit protects other lighting circuits) of the thermostatic and wound-coil type. Contacts open with current of 50 amperes and vibrate rapidly to control current.

**WINDOW REGULATOR CIRCUIT BREAKER**: Ford No. 51A-12250-A. 30 ampere capacity.

**FUSES**: Overdrive—20 ampere. In control relay lead. Direction Signal—10 ampere. In flasher lead.

**HORNS**: Ford No. 26H-13832 (High Note), 26H-13833 (Low Note). Air electric type twin horns operated by horn relay. Horn Current—24-28 amperes total.

**Horn Relay**: Ford No. 96H-13842.

**Contact Closing Voltage**—3.5-4.5 volts.

**Current Draw**—Approximately ¼ ampere.

## ENGINE

► **ENGINE PRODUCTION CHANGE**: See *Engine Specifications (below)* for 1946 production change.

► **ENGINE SPECIFICATIONS** (to Engine No. 138051): Twelve Cylinder, "L" Head, 75° Vee type with both cylinder banks and crankcase cast Enbloc.  
 Bore—2.937" Stroke—3.75"

**Displacement**—305 cu. ins. Rated H. P. 41.4.

**Developed Horsepower**—130 at 3600 RPM.

**Compression Ratio**—7.2-1. Cast Iron Heads.

► **ENGINE SPECIFICATIONS** (Beginning Engine No. 138052): Twelve Cylinder, "L" Head, 75° Vee type with both cylinder banks and crankcase cast Enbloc.  
 Bore—2.875" Stroke—3.75"

**Displacement**—292 cu. ins. Rated H. P.—39.6

**Developed Horsepower**—120 at 3600 RPM.

**Compression Ratio**—7.2-1. Cast Iron Heads.

**Compression & Vacuum Reading**—See *Tune-up data*.

**OIL PAN REMOVAL**: See *Lincoln Shop Notes*.

**ENGINE REMOVAL**: See *Lincoln Shop Notes*.

**TIGHTENING TORQUES**: See *Lincoln Shop Notes*.

**CYLINDER HEAD**: Tightening. See *Lincoln Shop Notes*.

**CYLINDER SLEEVE**: Cast iron, dry type cylinder sleeves available for replacement where bore size worn beyond Oversize Piston limit.

**Servicing**—Press sleeve in cylinder rebored to .0012" smaller diameter than outside diameter of sleeve and counterbored at top for sleeve flange. Sleeve finished for std. pistons without honing.

**PISTONS**: Steel alloy, light weight, cam ground, with slipper type skirt. Recondition cylinders for finished replacement pistons (or sleeves if required).  
**Weight**—442 grams (without rings or pin).

**Removal**—Pistons and rods removed from above.

**Clearance**—See *Fitting New Pistons*.

**Replacement Pistons**: See *Lincoln Shop Notes*.

**Fitting New Pistons**:—Use .002" feeler, .50" wide, inserted between piston and cylinder wall at right angle to pin. Pull to withdraw feeler must be within 5-8 lbs. NOTE—For New Pistons installed in Worn Bore use .004" feeler, or .005" for Worn Pistons in Worn Bore (all within 5-8 lbs. pull).

**PISTON RINGS**: Two compression, one oil ring, all above pin. Oil ring groove drilled with drain holes. NOTE—Expander used with #2 Compr. and oil ring. Install this #2 Compr. ring with mark "TOP" up.

Ring	Width	End Gap	Side Clearance
Compr. (#1)	.093-.0935"	.008-.013"	.0015-.0035"
Compr. (#2)	.093-.0935"	.008-.013"	.001-.004"
Oil Cont. (#3)	.1845-.185"	.008-.013"	.001-.004"

**Replacement Rings**: See *Lincoln Shop Notes*.

**PISTON PIN**: Diameter .7501-.7504", Length 2.607".

Floating type (locking ring in piston at each end). Pin hole in connecting rod bronze-bushed.

**Pin Fit in Piston**—.0003-.0009" clearance or light hand push fit with piston at 70°F.

**Pin Fit in Rod Bushing**—.0002-.0005" clearance (pin should pass through bushing slowly of own weight).

**Replacement Pins**: Std., .001", .002" Oversize.

**CONNECTING ROD**: Length 7.40". Weight 711 grams.

**Crankpin Journal Diameter**—2.250"

**Bearing Type**—Steel-backed, copper-lead lined bearing halves clamped in each rod.

**Clearance**—.001-.0025". Sideplay .014" (both rods).

**Bearing Adjustment**: None (no shims). Do not file bearing caps. Replace bearings if less than .08375" thick. NOTE—Rods and caps carry cylinder number. Engage tang on bearing in groove in rod and cap. Install long and short bearing cap bolts correctly.

**Replacement Bearings**: See *Lincoln Shop Notes*.

**CRANKSHAFT**: Four bearing with integral counterweights. NOTE—Crankshafts furnished Std. and .020", .040" undersize.

**Journal Diameters**—2.401" (all bearings).

**Bearing Type**—Steel-backed, copper-lead lined.

**Clearance**—.001-.003".

**Bearing Adjustment**:—None (no shims). Replace bearings. Do not file bearing caps. NOTE—See that tang on bearing engages groove in block and cap.

**Replacement Bearings**: See *Lincoln Shop Notes*.

**End Thrust**:—Taken by rear main bearing. To adjust, replace bearing. Endplay—.002-.006".

**CAMSHAFT**: Four bearing with helical gear drive. **Bearing Diameters**—1.797" (replace bearings if diameter more than 1.802", replace camshaft if journal diameter less than 1.7955").

**Bearing Type**—Steel-backed, babbitt-lined bushings pressed in block. Clearance—.001-.002".

**End Thrust**:—Taken by gear hub and coverplate. Adjusted by replacing coverplate. Endplay—.005-.015".

**Timing Gears**:—Cast alloy iron (Crankshaft), New Aluminum Alloy—bolted on shaft (Camshaft).

**Backlash**—.004" Maximum.

**Timing Gear Replacement**—See *Lincoln Shop Notes*.

**Camshaft Setting**:—Mesh marked tooth of crankshaft gear with space marked by line on camshaft gear (this line must be in line with mark on hub).

**VALVES**:— Head Diameter Stem Diameter Length  
 All Valves .....1.537" .....3.115" .....4.750-4.751"

Seat Angle Lift Stem Clearance

Intake .....45° .....292" .....0015-.0035"

Exhaust .....45° .....292" .....0025-.0045"

NOTE—Service limit for valve stem diameter is .309" Intake, .3065" Exhaust. Valves interchangeable.

**Valve Seat Inserts**—Used for exhaust valves.

*For Valve Servicing data, see Lincoln Shop Notes.*

**Valve Guides**: Split type retained by "C" washer and valve spring. NOTE—Replace both halves of all guides measuring less than .6665" (thickness of guide half and valve stem at top of guide with valve of .311" stem diameter in place in guide half).

*For Valve Servicing data, See Lincoln Shop Notes.*

**Valve Lifters**: Barrel type hydraulic tappet take-up (Wilcox-Rich Zero-Lash type or Johnson type).

**Diameter**—.9995".

*See Miscellaneous Section for complete data.*

**Valve Springs**: Pressure Length

Valve Closed ..... 51-57 lbs. ....2.13"

Valve Open ..... 111-121 lbs. ....1.84"

NOTE—Replace springs which do not test to 47-57 lbs. at 2½" or if paint coating has been removed.

## VALVE TIMING

**Tappet Clearance**:—None in service (hydraulic lifter).  
*See Valve Lifter Servicing in Lincoln Shop Notes.*

**Valve Timing**:—See *Camshaft Setting* above.

**Int. Valves**—Open 10.42° BTDC. Close 35.58° ALDC.

**Exh. Valves**—Open 50.92° BLDC. Close 8.08° ATDC.

**To Check Timing**—No flywheel marks provided. If dead center position for any cylinder established on flywheel, intake valve for this cylinder should open approx. 3.24 teeth before this point with piston .0389" before top dead center.

## LUBRICATION

**Engine Oiling System**: Pressure to main bearings, connecting rod lower bearings, camshaft bearings, valve lifters (hydraulic type) and timing gears. Oil pump mounted in crankcase at rear of engine.

**Oil Pan Removal**: See *Lincoln Shop Notes*.

**Crankcase Capacity**—5 qts.

**Normal Oil Pressure**—40-45 lbs. at 2000 RPM.

**Oil Pressure Regulator**—Located under plug above front camshaft bearing (under manifold) and on oil pump body (in crankcase).

NOTE—Check relief valve tension spring whenever engine overhauled. Replace cylinder block relief valve spring if tension not within limits of 33-36 ozs. at .53". Replace oil pump relief spring if tension not within limits of 78-87 ozs. at 1.38".

**Oil Pump:** Gear type. In crankcase at rear of engine.

**Oil Pump Servicing—**See *Lincoln Shop Notes*.

**Oil Filter:** Replace cartridge at 5000 mile intervals (Ford No. 01A-18662-A1).

**Oil Pressure Gauge:** King-Seeley Electric. Ford Nos. Dash Unit: 5EH-9273A ('46 Lincoln), 5EH-9273B ('46 Continental), 5EH-9273C (All 1947).

**Engine Unit—**No. 48-9278 (All Models).

See *Miscellaneous Section for complete data*.

## COOLING

**Cooling System:** Positive circulation with two water pumps at front of engine (pump for each bank), pressure system with relief valve in radiator cap. Capacity—27 quarts.

**Pressure Valve—**In radiator filler cap. Opens at 3½-4½ lbs. Radiator Cap No. 26H-8100-B.

**Water Pump:** Packless type with ball bearing at pulley end (plain bushing at impeller). Two used.

See *Water Pump Section for complete data*.

**Removal—**Drain cooling system, loosen generator belt adjustment, remove belt. Disconnect and remove hose at water pump. Take out four capscrews mounting pump on cylinder block, lift pump out.

**Belt Adjustment—**See *Generator Belt Adjustment*.

**Thermostat:** In outlet hose for each bank (2 used).

**Setting—**Start to open at 150-155°F. Fully open at 175-180°F.

**Temperature Gauge:** King-Seeley Electric. Ford Nos. Dash Unit: 5EH-10883A ('46 Lincoln), 5EH-10883B ('46 Continental), 5EH-10883C (All 1947).

**Engine Unit—**No. 99A-10884 (All Models).

See *Miscellaneous Section for complete data*.

## CLUTCH

**Long Model 10CF-TI, Ford No. 26H-7563.** Semi-centrifugal, single plate, dry disc type.

See *Clutch Section for complete data*.

**Facings—**Woven asbestos composition. I. D. 6¾". O. D. 10". Thickness .125" (⅛").

**Pedal Adjustment:** Pedal free travel 1¼-2". To adjust, loosen locknuts and turn adjusting turnbuckle on connector rod between clutch throw-out lever and equalizer shaft lever. CAUTION—Opening in turnbuckle must be horizontal to prevent it binding on transmission case.

**Removal:** Remove transmission (see Transmission Removal below), block clutch release levers in disengaged position by inserting wedge between each lever and clutch cover. Take out six capscrews mounting clutch on flywheel, lift out assembly.

## TRANSMISSION

**Own Make No. 01A-7005 (Std.), 26H-7005-A (With Overdrive).** All helical gear type, constant-mesh, synchro-mesh (Second & High), sliding gear (Low & Reverse).

See *Transmission Section for complete data*.

**Transmission Control:** Mechanical steering col. shift. See *Transmission Section for complete data*.

**Removal:** Remove rear axle assembly (see Rear Axle Removal below). Disconnect Overdrive control and wires at solenoid, lockout switch and governor, remove solenoid as directed under Overdrive (cars with Overdrive Transmission only). Disconnect gearshift rods at transmission case levers, take out capscrew and washer mounting universal joint on transmission shaft, slide universal to rear and remove. Disconnect and remove clutch throw-out

equalizer shaft. Remove nuts and flat washers on engine rear support bolts. Place support jack under rear end of engine (use wood block on jack), raise rear end of engine so that rear support clears mounting bolts. Take out eight capscrews mounting transmission on flywheel housing, pull transmission straight back and remove from car.

## OVERDRIVE

**Warner Model AS2-R10 (before Mar. 1, 1947), AS3-R10 (After Mar. 1, 1947).** Optl. equipment, used with special Lincoln Transmission. Overdrive is solenoid operated with governor control and throttle operated "kick-down".

See *Transmission Section for complete data*.

**Solenoid—**Ford No. 16H-6916.

**Control Relay—**Ford No. 26H-6915-A.

**Control Governor—**Ford No. 16H-6919.

**Throttle Kick-down Switch—**Ford No. 16H-6918-A (Lincoln), 16H-6918-B (Continental).

**Lock-out Switch—**Ford No. 16H-6917.

**Removal:** Same as for Std. transmission (above) except for removal and installation of the solenoid.

► **IMPORTANT SERVICE NOTE—**Solenoid should be removed before transmission or overdrive removed from car (and installed after these units installed) and must be removed exactly as follows to avoid damage to unit: Disconnect wires at solenoid terminals, take out two mounting screws in base flange, rotate solenoid approximately 60° to right to disengage pawl rod from pawl (this will line up flats on end of rod with slot in pawl), withdraw solenoid and pawl rod assembly. To install solenoid, insert pawl rod in adapter with flats horizontal, make certain that short pilot on end of solenoid body enters counterbore in adapter casting, rotate solenoid approximately 60° to left to engage pawl rod in pawl and to line up solenoid flange mounting holes. Check engagement of pawl by attempting to pull solenoid out (solenoid should not come out and resistance of solenoid spring should be felt). Install solenoid mounting screws and connect wires.

## UNIVERSALS

**Spicer Model 2102-1X.** Needle bearing type. Single universal in torque ball at rear of transmission.

See *Universals Section for complete data*.

## REAR AXLE

**Own Make.** ¾ Floating, Hypoid Gear type with Torque Tube drive.

See *Rear Axle Section for complete data*.

**Ratio—**4.22-1 Std.

**Backlash—**.002-.004"

**Removal:** Raise rear end of car. Disconnect track bar. Disconnect rear spring (use spring spreader if available) by placing block under each rear spring eye and lowering car so that weight keeps spring extended, then remove spring shackle bolts and bars. Take out pin in hand brake equalizer and disconnect hand brake cable. Disconnect hand brake conduit retainer and hydraulic brake line at torque tube, disconnect shock absorber links. Remove front floor pan. Disconnect speedometer cable at torque tube. Take off nuts on four universal housing ball cap bolts, remove two bolts holding ball cap halves together, remove ball cap. Pull rear axle assembly

straight back to disconnect torque tube from transmission, remove axle assembly from beneath car. **Axle Shaft Removal—**See *Lincoln Rear Axle article in Rear Axle Section for complete data*.

## SHOCK ABSORBERS

**Houde (Houdaille).** Double acting, hydraulic type. See *Shock Absorber Section for complete data*.

**Houde Model** Right—Ford No.—Left

Front .....BBCHO-6.....5EH-18045.....5EH-18046

Rear .....BBCLY-6.....5EH-18080.....5EH-18081

**Adjustment—**Std. setting marked by line on face of lever hub (pointer should be aligned with this mark). Adjustment can be varied by turning pointer clockwise (for more control), or counter-clockwise (for less control) not more than 1 or 2 serrations at a time. NOTE—Stops are provided to limit adjustment in either direction.

**Refilling:** Check at 5000 mile intervals and fill to level of filler plug hole. Use Ford No. M-4633-B fluid only (Houde L-1404) which is required for these new shock absorbers with round top filler plug.

## FRONT SUSPENSION

**Front Suspension:**—Conventional I-beam section axle with Reverse-Elliott ends and transverse spring. Axle held by radius rods and anti-sway strut rod.

**Kingpin Inclination—**4° crosswise.

**Caster—**3° Min., 5° Max. Must be equal for both wheels within ½°. No adjustment.

**Camber—**¼° Min., ¾° Max. Must be equal for both wheels within ¼°, right wheel must not exceed left.

**Toe In—**1/16". Set at 1-10 ratio to Camber. To adjust, loosen clamp bolts, turn tie rod.

**Steering Geometry—**Outer wheel 20°, Inner 23° ± ½°

## STEERING GEAR

**Gemmer Model 330.** Worm-and-Roller type.

See *Steering Gear Section for complete data*.

## BRAKES

**Service:** Bendix Hydraulic, Duo-servo, Single Anchor type without eccentric adjustment. Hand lever applies rear wheel service brakes.

See *Brake Section for complete data*.

**Wheel Cylinders—**Diameter 1.125" (front), 1.00" (rear). Not interchangeable between wheels.

**Drums—**Composite Cast Iron type. Diameter 12".

**Lining—**Molded (primary or forward shoe), Woven (secondary shoe). Width 1.75". Thickness .21". Length per shoe 11.95".

**Clearance—.010"** at each end of each shoe (adjusting screw in each wheel backed off 14 notches or "clicks" from point where shoes drag on drum).

**Hand Brake:**—See *Service Brakes* above.

## MISC. MECHANICAL

**Power Operated Convertible Top:** Auto-Lite Electric type.

See *Miscellaneous Section for complete data*.

**Window Regulators:** Hydro-Electric type.

See *Miscellaneous Section for complete data*.

**CARB. EQUIPMENT**

**Fuel Pump (Fuel-&-Vacuum):** Lincoln No. 8EL-9350-A.

Pressure— $3\frac{1}{2}$ - $4\frac{1}{2}$  lbs.

See Carburetion Equipment Section for complete data.

**Gasoline Gauge:** King-Seeley Electric.

**Dash Unit—**Lincoln 8L-9280 (K-S #42235).

**Tank Unit (Lincoln)—**99A-9275B (K-S #7540).

**Tank Unit (Cosmopolitan)—**Lincoln No. 21C-9275A, K-S No. 8435.

See Carburetion Equipment Section for complete data.

**Air Cleaner (Oil Bath):** Lincoln No. 8EL-9600.

**Servicing (Oil Bath type)—**Clean and re-fill sump (to level mark) with same grade oil used in crankcase at 2500 mile intervals (when crankcase drained). Occasionally wash filter in cleaning fluid.

**BATTERY**

Lincoln No. 06H-10655-A. 6 Volt, 17 Plate, 120 Ampere Hour Capacity (20 hour rate).

**Starting Capacity—**150 amperes for 20 minutes.

**Zero Capacity—**300 amperes for 4.3 minutes. Five Second Voltage—4.4 volts.

**Grounded Terminal—**Positive (+) terminal.

**Location—**On right side in engine compartment.

**Dimensions—**L.  $10\frac{5}{8}$ ". W.  $7\frac{5}{16}$ ". H.  $9\frac{3}{16}$ ".

**STARTER**

Lincoln Model No. 7EH-11002-B. Armature 18-11005.

**Drive—**Bendix No. A1472 (Lincoln No. B-11350).

**Rotation—**Counter-clockwise at commutator end.

**Brush Spring Tension—**20-22 ounces.

**Cranking Engine—**100 RPM., 190-215 amperes.

**Performance Data**

Torque	R.P.M.	Volts	Amperes
4 ft. lbs.	1070	4.6	200
8 "	660	4.3	340
12 "	300	3.65	465
14 "	Lock	3.5	500

**Starting Switch:** Lincoln No. 21A-11450 Magnetic Switch mounted on right front fender apron and controlled by panel pushbutton switch Lincoln No. 6H-11500.

**Removal:** On right front face of engine rear plate. To remove, take off right engine splash pan (if used), free starter-to-oil pan bracket, take out 2 starter through bolts.

**GENERATOR**

Lincoln No. 8EL-10002 (less pulley & bracket).

**Armature No.—**Lincoln No. 8EH-10005. Two brush type with current and voltage regulation.

**Maximum Charging Rate—**40 amperes, 7 volts, reached at approximately 19.5 MPH. Controlled by regulator and dependent on load and battery condition.

**To Check Generator Output—**Connect ammeter in series with charging line at regulator "ARM" terminal, connect short insulated jumper between generator "A" and "F" terminals (to short out regulator). Run engine at approximately 1500 RPM. and note ammeter reading. If generator output equals or exceeds rate output (below) generator performance is satisfactory. Remove jumper.

► **CAUTION—**Do not operate generator at higher speeds or in service with jumper connected between generator armature and field terminals. This jumper eliminates all regulator action.

**Performance Data**

Amperes	Engine R.P.M.
40	1500
Rotation—Counter-clockwise at commutator end.	
Brush Spring Tension—20-24 ozs.	

**Removal:** On support secured to intake manifold by stud nut, driven by belt in tandem with water pumps. To remove, loosen stud nut and disengage generator belt, take out capscrews in mounting strap, lift generator off support.

**Generator Belt Adjustment:** Loosen nut on support mounting stud, raise generator up until side movement on belt midway between generator and water pump pulley is  $\frac{1}{2}$ " (thumb and finger pressure).

**Fan Belt Adjustment:** See COOLING.

**REGULATOR**

Lincoln No. 5EH-10505-C or E. Voltage-Current 3-Unit.

See Electrical Equipment Section for complete data.

**NOTE—**Separate ground wire extending to cowl must be in place when generator operated.

**Cutout Relay**

**Cuts In—**6.4-6.9 volts with engine at normal operating temperature.

**Cuts Out—**8 ampere discharge current (maximum).

**Contact Gap—**.010" (armature against upper stop).

**Air Gap—**.017" between armature and core with contacts open.

**Voltage Regulator**

**Voltage Setting—**7.0-7.5 volts with engine at normal operating temperature.

**Air Gap—**.035" between armature and core with contacts just closed.

► **CAUTION—**Make certain gauge contacts armature and not brass rivet on underside of armature.

**Contact Spring Tension—**5 ounces minimum with contacts just opening.

**Checking & Adjustment—**See Electrical Equip. Section.

**Current Regulator**

**Current Setting—**38-42 amperes with engine at normal operating temperature.

**Air Gap—**.035" between armature and core with contacts just closed.

**Contact Spring Tension—**5 ounces minimum with contacts just opening.

**Checking & Adjustment—**See Electrical Equip. Section.

**LIGHTING**

**Headlamps:** Ford "Sealed Beam" type.

See Electrical Equipment Section for complete data.

**Adjustment—**Aim upper beams straight ahead (hot spot centers 3" below lamp center height at 25 ft.).

**Beam Indicator—**Bulb above Left Direction Indicator on face of clock. Lights with Upper Beam "on"

**Direction Signal:** Std. See Electrical Equipment Section.

**Direction Indicators—**Right and Left indicators on lower edge of clock face.

**Direction Signal Flasher—**Lincoln No. 8L-13350-B.

**Switches**

**Lighting—**Lincoln No. 7RA-11654.

**Beam Selector—**Lincoln No. 7RA-13532.

**Instrument—**Lincoln No. 8L-13740.

**Map Light—**Lincoln No. 8L-15653.

**Glove Box—**Lincoln No. 8L-14413.

**Dome Light (exc. Conv.)—**Lincoln No. 8M-13752-A.

**Dome (Convertible only)—**Lincoln No. 8M-13754.

**Door Switches—**Lincoln No. 8M-13713.

**Stop Light—**Lincoln No. 91A-13480.

**Trunk (with wire assy.)—**Lincoln No. 8M-13546.

**Road Light—**Lincoln No. 8L-15224.

**Direction Signal—**Lincoln No. 8L-13335 (for service use part No. 8L-14486—includes wire assy.).

**Bulb Specifications**

**MISC. ELECTRICAL**

**CIRCUIT BREAKERS:** Lincoln No. 8L-12258-A (Lincoln), No. 8H-12258-A (Lincoln Cosmopolitan, Lincoln Convertible). Consists of the following separate circuit breakers mounted on bracket (together with 2 fuses) behind instrument panel (see wiring diagram for positions on bracket).

**Headlight & Roadlights—**30 ampere.

**Auxiliary Lights—**15 ampere.

**Hydraulic Window, Seat Regulator, and Convertible Top Switches—**15 ampere.

**FUSES:** Courtesy, Dome, Glove Box & Map Lights—14 ampere. On circuit breaker bracket behind instrument panel (see wiring diagram).

**Direction Signal—**14 ampere (next to fuse listed above).

**Clock—**2 ampere. In clock feed wire.

**Overdrive—**30 ampere. On ignition terminal of overdrive relay (on dash under hood).

**Heater—**20 ampere. In lead to heater switch.

**HORNS:** Lincoln No. 51A-13832-A or B (High Pitch, Right Horn), No. 51A-13833-A or B (Low Pitch, Left Horn). Dual horns operated by relay.

**Air Gap—**.027-.029" for high pitch (right horn), .032-.034" for low pitch (left horn).

**Horn Current—**13 amperes (High Pitch), 14 (Low).

**Horn Relay:** Lincoln No. 7RA-13853-A. On dash.

**Contact Gap—**.015-.025".

**Contact Closing Voltage—**4 volts max.

**ENGINE**

**ENGINE SPECIFICATIONS:** Own Make. Eight cylinder, "L" head, 90° Vee type with both cylinder banks and crankcase cast Enbloc.

**Bore—** $3\frac{1}{2}$ ". **Stroke—** $4\frac{3}{8}$ ".

**Displacement—**336.7 cu. ins. **Rated HP—**39.2.

**Developed Horsepower—**152 at 3600 RPM.

**Compression Ratio—**7.0-1 cast-iron head.

**Compression & Vacuum Reading—**See Tune-Up.

**OIL PAN REMOVAL:** See Lincoln Shop Notes.

**TIGHTENING TORQUES:** See Lincoln Shop Notes.

► **PRODUCTION CHANGE FOR IMPROVED COOLING:** New Cylinder Head Gasket No. 8EL-6051-D—Two additional water passage holes (one at each corner on upper edge of gasket) used to match new holes added to latest production engines. This gasket used for service on all engines. These additional water passage holes can be added on earlier engines as described under COOLING in Lincoln Shop Notes.

**CYLINDER SLEEVES:** Not used.

**PISTONS:** Aluminum alloy, steel strut, flat head, split skirt, cam ground type.

C NTINUED ON NEXT PA E

## ENGINE

## C CONTINUED FROM PRECEDING PAGE

Weight—548 grams. Length—3.84".

Removal—Pistons and rods removed from above.

Clearance—.0005-.001". See Fitting Pistons.

Replacement Pistons: Std. .0025", .020", .030", .040" OS. Fitting Pistons: Use 1/2" wide feeler inserted between piston (on side opposite slot) and cylinder wall at right angles to pin. Feeler thickness .0015" for New Piston in New Bore, .003" for New Piston in Worn Bore or Worn Piston in New Bore, .004" for Worn Piston in Worn Bore. Pull to withdraw feeler 6 to 12 pounds.

Cyl. Bore Max. Wear Limits: Out-of-round, .003", Taper .006".

PISTON RINGS: Top compr. (internal bevel), #2 Compr. (tapered), #3 & #4 oil rings (one piece, wedge channel), all above pin. Oil ring grooves drilled with drain holes.

Ring	Width	End Gap	Side Clearance
Compr. #1	.165"	.008-.016"	.002-.0035"②
Compr. #2	.165"	.008-.016"	.0015-.003"③
Oil #3 & 4	.152"	.008-.016"	.0015-.003"③

Worn Limit—①—.035", ②—.0045", ③—.004".

Ring Thickness—Compression .0933", Oil .186".

Replacement Rings: Ring sets furnished standard size and .020", .030", .040" Oversize.

PISTON PIN: Diameter—.8503". Length—3.118". Floating type (lock ring in piston at each end). Pin hole in connecting rod bronze bushed.

Pin Fit in Piston—.0001-.00005" clearance (new), .001" (worn limit).

Pin Fit in Rod Bushing—.0001-.0002" clearance (new), .0012" (worn limit).

Replacement Pins: Std. size & .001", .002" Oversize.

CONNECTING ROD: Length—8.062".

Weight—773 grams (less bearings).

Crankpin Journal Diameter—2.400". Maximum wear limits—out-of-round .0015", taper .001".

Lower Bearing—Steel-backed, copper-lead alloy lined, replaceable shells. Upper and lower halves are interchangeable.

Clearance—.0005-.003" (new), .005" (worn limit).

Sideplay—.007-.013" (new), .022" (worn limit).

►NOTE—Replace rod bearings less than .0745" thick.

Bearing Adjustment: None (no shims). Do not file caps. Replace bearings. Tang on bearing must engage groove in rod and cap.

►PALNUT NOTE—Tighten finger tight plus 1/3 turn.

Replacement Bearings: Standard size and .002", .010", .020", .030", .040" Undersize.

CRANKSHAFT: 3 bearing with 6 integral counterweights and vibration dampener on front end.

►SLUDGE TRAPS—Crankpin throws equipped with sludge traps having removable plugs for cleaning.

Vibration Dampener—Viscous type (inertia ring floats in Dow-Corning fluid in damper housing). Sealed unit. Serviced by replacement only.

Main Journal Diameter—#1 & #2, 2.8740"; #3, 2.8735". Max. wear limits—out-of-round .0015", taper .001".

Bearings—Steel-backed, copper-lead alloy lined, replaceable shells. Upper and lower halves alike.

Clearance—Zero-.0025" (selective fit, crankshaft to turn free). Worn limit .0044" (#1, 2), .005" (#3).

►NOTE—Replace main bearings less than .0938" thick.

Bearing Adjustment: None (no shims). Do not file caps. Replace bearings. Tang on bearing must engage groove in block and cap.

►NOTE—Self-locking bearing cap bolts used.

Replacement Bearings: Standard size and .002", .010", .020", .030", .040" Undersize.

End Thrust: Taken by rear main bearings. Adjust by replacing bearings if clearance excessive.

Endplay—.002-.006" (new), .010" (worn limit).

CAMSHAFT: 3 bearing with helical gear drive. Oil pump drive gear, fuel pump drive eccentric (and removable bushing over eccentric) assembled on rear end of shaft.

Bearing Diameter—1.9285" (replace bearing if diameter greater than worn limit of 1.9315").

Replacement Bearings: Three sizes as follows:

- 1—Std. size on both inside and outside diameter.
- 2—Std. on I. D., .080" Oversize on O. D.
- 3—.015" Undersize on I. D., Std. on O. D. (must be finished reamed in assembly).

End Thrust: Thrust plate bolted on front of block.

Timing Gears: Helical cast aluminum camshaft gear bolted on camshaft, cast alloy iron crankshaft gear.

Camshaft Setting: Mesh marked tooth of crankshaft gear with space marked by line on camshaft gear.

VALVES:	Head Diameter	Stem Diameter	Length
Intake	1.800"	.3417"	5.7145"
Exhaust	1.515"	.3410"	5.7145"

	Seat Angle	Lift	Stem Clearance
Intake	45°	.357"	.0015-.003"①
Exhaust	45°	.340"	.0022-.0037"②

Wear Limit—①—.005", ②—.006".

Valve Seat Inserts—On exhaust only.

Valve Guides: One piece type pressed in block. Inside diameter .344". Length 2.66".

Guide Installation—Press in block from above with small diameter end down. Distance from top of valve seat to upper end of valve guide 1.30".

Valve Lifters: Mushroom type, hydraulic tappet take-up (Wilcox-Rich Zero-Lash type).

Body Diameter—.7177" (new), .7167" (wear limit).

Clearance in Block—.0003-.0018" (new), .003" (worn).

See Miscellaneous Section for complete data.

Valve Springs: Coated springs used.

Spring Pressure—62-68 lbs. (closed), 140-152 (open).

Spring Test—63-69 lbs. at 1.680". Free length 2.08".

## VALVE TIMING

Tappet Clearance: None in service (hydraulic lifter).

Valve Timing: See Camshaft Setting above.

Intake Valves—Open 14° BTDC. Close 60° ALDC.

Exhaust Valves—Open 62° BLDC. Close 16° ATDC.

Valve Timing Check—Intake valve opens 14° BTDC.

Valve timing mark location on vibration dampener.

## LUBRICATION

Engine Oiling System: Pressure to main bearings, connecting rod lower bearings, camshaft bearings, valve lifters (hydraulic type) and timing gears. Oil pump mounted in crankcase at rear of engine.

Crankcase Capacity—6 quarts (refill).

Normal Oil Pressure—50 lbs. at 2000 RPM.

Oil Pressure Relief Valves: Two used as follows:

- 1—Oil Pump Relief Valve—In oil pump body and regulates pressure to 50 lbs. for engine lubrication. Spring tension 199 ozs. at 2.18".

- 2—Cylinder Block Oil Relief Valve—At front end of valve chamber and regulates pressure to 15 lbs. for hydraulic valve lifters.

Oil Pump: Gear type. In crankcase at rear of engine.

►NOTE—Removable sump attached to oil pan for access to oil pump and screen.

Oil Filter: On left cylinder head. Replace cartridge every 5000 miles or more often if required.

Oil Filter Cartridge—Lincoln No. 8EL-18662.

Oil Pressure Gauge: King-Seeley Electric.

Dash Unit—Lincoln No. 8L-9273.

Engine Unit—Lincoln No. 41A-9278.

See Miscellaneous Section for complete data.

Crankcase Ventilation: Filter element in oil filler breather cap (inlet), and in upper end of outlet pipe at elbow connection just below generator on left side.

Servicing—Wash screen in cleaning fluid and wet with engine oil when dry at oil change period (2500 miles).

## COOLING

►PRODUCTION CHANGE FOR IMPROVED COOLING:

New Cylinder Head Gasket No. 8EL-6051-D—Two additional water passage holes (one at each corner on upper edge of gasket) used to match new holes added to latest production engines. This gasket used for service on all engines. These additional water passage holes can be added on earlier engines as described under COOLING in Lincoln Shop Notes.

Cooling System: Pressure type with relief valve in filler cap and two belt-driven pumps (one for each bank) with re-circulating by-pass.

Capacity—34½ quarts.

Pressure Valve—In radiator filler cap. Lincoln No. 26H-8100-B (AC #846740). Opens at 3½-4½ lbs.

Water Pumps: Two used. Centrifugal, belt-driven, packless type. Shaft mounted on sealed duplex ball bearing.

See Water Pump Section for complete data.

Fan Belt Adjustment—Loosen fan mounting bracket bolts, raise fan up until side movement on belt midway between fan and crankshaft pulleys is 1/2".

Generator (& Water Pump) Belt Adjustment—See GENERATOR.

Thermostats: Two used (one in each cylinder head water outlet). Lincoln No. 8EL-8575-A (std.), C (optl.).

Setting (std.)—148-170° maximum.

Setting (optl.)—178-200° maximum.

Temperature Gauge: King-Seeley Electric.

Dash Unit—Lincoln No. 8L-10883.

Engine Unit—Lincoln No. 8A-10884.

See Miscellaneous Section for complete data.

## CLUTCH

Long Model 11CF-10½TI, Lincoln No. 8EL-7563.

Semi-centrifugal, single plate, dry disc type.

See Clutch Section for complete data.

Facings—Moulded or Woven. Inside Diameter 7". Outside Diameter 10½". Thickness .125".

Pedal Adjustment: Pedal free travel 1.00-1.25".

Removal: Remove transmission (see TRANSMISSION Removal below). Take off flywheel housing, block clutch release levers in disengaged position by inserting wedge between each lever and clutch cover.

Take out cover mounting screws, lift assembly out.

## TRANSMISSION

Warner Model AS1-T85B (Std.), AS2-T85B (with Overdrive). All helical gear type, constant-mesh, synchro-mesh (Second & High), sliding gear (Low & Reverse).

See Transmission Section for complete data.

Transmission Control: Steering column mounted shift. See Transmission Section for complete data.

Removal: Disconnect rear universal, slide propeller shaft out of transmission. Disconnect clutch, transmission and speedometer linkage. Support rear of engine and disconnect rear engine mounting from

frame. Take out four transmission-to-flywheel housing capscrews and remove transmission.

### OVERDRIVE

Warner Model AS2-T85B (Transmission & Overdrive). Optl. equipment. Overdrive is solenoid operated type (no centrifugal pawls) with Governor Control and throttle operated "kick-down".

See Transmission Section for complete data.

Solenoid—Lincoln No. 8M-6916.

Control Relay—Lincoln No. 8M-6915. On engine side of dash. 30 ampere fuse on ignition terminal.

Lock-Out Switch—Lincoln No. 8M-6917-A.

Throttle Kick-down Switch—Lincoln No. 8A-6918.

Governor—Lincoln No. 8M-6919.

Removal: Same as for Std. transmission (above) after disconnecting overdrive control cable and wiring.

### UNIVERSALS

Spicer 1310. Needle bearing type. Two used.

See Universals Section for complete data.

►NOTE—Slip joint formed by splined slip yoke of front universal engaging transmission mainshaft (or overdrive shaft). One-piece propeller shaft used.

### REAR AXLE

Own Make. Semi-floating, hypoid gear type with Hotchkiss drive (separate carrier not used). Axle ends flanged (no separate hub). Wheel bearings are sealed ball, pre-lubricated (no lubrication required). See Rear Axle Section for complete data.

Ratio—3.9-1 (Std.), 4.27-1 (with Overdrive).

Backlash—.005-.008". Shim adjustment.

Removal: Raise rear of car. Disconnect rear universal. Remove axle shafts (see instructions below). Disconnect brake line hose at "T" on left side of axle

housing, and hand brake cable. Disconnect shock absorbers, spring U-bolts and shackles. Remove axle housing assembly from car.

Axle Shaft Removal: Remove wheel. Take out drum to hub capscrews, remove drum. Take out 4 axle retainer nuts (work through opening in axle shaft flange). Use Puller No. 4235 and pull shaft (do not disturb brake backing plate or damage wheel bearing oil seal). Replace one nut to secure backing plate.

### SHOCK ABSORBERS

Std.—Lincoln 8M-18045-A (front), 8M-18080-A (rear).

Heavy Duty (special equip.)—Lincoln No. 8M-18045-B (front), 8M-18080-B (rear).

Direct acting, hydraulic types. Two makes are used and are interchangeable.

►NOTE—Shock absorbers are permanently sealed and cannot be refilled or repaired.

See Shock Absorber Section for complete data.

►Rear Shock Absorber Installation—Lower tube has welded stone shield on lower end which must be installed toward front of car.

### FRONT SUSPENSION

Front Suspension: Independent, linked parallelogram type with coil springs, direct acting shocks, and front stabilizer.

See Front Suspension Section for complete data.

►CAUTION—Specifications listed below supersede earlier 1949 Lincoln Front End Specifications.

Kingpin Inclination—5° crosswise.

Caster—Pos. ½° to Neg. 1°. Threaded bushing adjustment at lower pivot pin.

Camber—0° to +¾°. Eccentric adjustment at upper pivot pin.

Toe In—3/32-5/32". Adjusting sleeve on outer end of each tie rod. Adjust equally.  
Steering Geometry (toe out on turns)—Inner wheel turned 36°, outer wheel 26°5'.

### STEERING GEAR

Gemmer Model 335. "3-tooth" Worm-and-Roller type with "push-pull" adjustment.

See Steering Gear Section for complete data.

### BRAKES

Service: Lincoln-Bendix Hydraulic, Duo-Servo, Single Anchor type without eccentric adjustment. Hand lever applies rear wheel service brakes.

See Brake Section for complete data.

Wheel Cylinders—Diameter: Front wheel 1.128" (hone limit 1.132"). Rear wheel .940" (hone limit .942").

Drums—Diameter 12".

Lining—Molded or Woven. Width 2¼" (front wheel), 2" (rear wheel). Thickness 3/16". Length per shoe 12 15/16".

Clearance—.010" at each end of secondary shoe with primary shoe forced out against drum (adjusting screw in each wheel backed off 14 notches or "clicks" from point where shoes drag on drum).

Braking Power—59% front wheels, 41% rear.

Hand Brake: See Service Brakes above.

### MISC. MECHANICAL

Power Operated Convertible Tops, Windows & Front Seat: Hydro-Lectric type (hydraulic actuation with motor-driven pump supplying oil under pressure for power cylinders).

See Miscellaneous Section for complete data.

## CYLINDER HEAD

**CYLINDER HEAD INSTALLATION:** Use Torque Indicating Wrench to tighten cylinder head capscrews in correct sequence as shown in diagram. Tighten all screws to correct tension and recheck after engine has been run and thoroughly warmed up.

Tightening Torques—See Tightening (Torque Wrench) specifications.

## OIL PAN REMOVAL

### 1949 MERCURY

**OIL PAN REMOVAL (MERCURY):** Car manufacturer recommends following method be used (pan can be removed without draining oil):

- 1)—Take off exhaust pipe cross-over (secure manifold heat valve with one nut).
- 2)—Remove steering idler arm bracket from right frame rail and pull down.
- 3)—Remove starter.
- 4)—Take off flywheel housing lower front cover (cover drops straight down after removing nuts and bolts). Remove oil dip stick tube from pan.
- 5)—Remove 16 oil pan-to-block capscrews using  $\frac{3}{8}$ " drive tools. Lower rear end of pan and slide out to rear.

**NOTE**—Front end of engine does not have to be raised to remove pan.

## CAMSHAFT & BEARINGS

### 1949 MERCURY

**CAMSHAFT PRODUCTION CHANGE (1949 MERCURY VEHICLE NO. 9CM-826 UP):** Change to REVERSE helix timing gears giving forward thrust at front end of camshaft for silencing backlash (was toward rear on early engines with normal gears). Oiling at front end modified with a change in front camshaft bearing position (same bearing used). Parts for both types are as follows:

## CAMSHAFT PRODUCTION PARTS CHANGES

	Early Type	9CM-826 UP Type
Camshaft .....	8CM-6250	8CM-6250-B
Camshaft Gear .....	7RA-6256	8BA-6256-A
Crankshaft Gear .....	48-6306	8BA-6306
Oil Line Plug .....	8BA-6026	7HA-6026

Following modifications made for use of new REVERSE helix timing gears:

1)—**Timing Gears.** Reverse helical gears (L.H. teeth on camshaft gear, R.H. teeth on crankshaft gear).

2)—**Camshaft.** Oil hole in front bearing journal moved  $\frac{1}{16}$ " (center of hole .440-.450" to rear of flange on shaft, was .507-.512" on early shafts). Inside diameter increased to  $\frac{3}{16}$ " (was  $\frac{1}{8}$ " on early shafts). Outer end of hole is at front of shaft on both types of camshafts.

►3)—**Camshaft Front Bearing Position—CAUTION—** Same bearing used but position in block different for each type camshaft. This is important to provide correct lubrication for front end of camshaft (alignment of upper oil hole in bearing with oil hole in camshaft front bearing journal). Bearing positioned as follows:

**Bearing Position for Late (8CM-6250-B) Camshaft—**Installed with front edge flush with front face of block to align upper oil hole in bearing with relocated hole in camshaft front bearing journal (see No. 2 above).

**Bearing Position for Early (8CM-6250) Camshaft—**Installed with front edge  $\frac{1}{16}$ " back from face of block for oil hole alignment.

4)—**Cylinder Block Front Oil Line Plug.** Solid plug in oil line (above camshaft). Early type plug equipped with oil hole for front end gear lubrication. With this new plug front end gears and thrust surfaces lubricated from front end of camshaft (oil fed from main oil line lead at front camshaft bearing into oil lead in shaft and out through front end of shaft).

►FOR 1939-48 MERCURY SHOP NOTES, SEE FORD SHOP NOTES

**FORD TRUCK NOTE:**—All Mercury Engine data below applies to Ford Truck Models with '95' Engine as well as Mercury models.

clutch housing and on left frame member in front

**OIL PAN REMOVAL:**—See Ford Shop Notes for data.

## MODEL IDENTIFICATION

**SERIAL & ENGINE NUMBER:**—Stamped on top of clutch housing and on left frame side member near generator.

## TUNE-UP

**COMPRESSION:**—Ratio—6.3-1 Std. cast-iron head.

Pressure—145 lbs. at 2400 R.P.M. or 112 lbs. at cranking speed of 100 R.P.M.

**VACUUM READING:**—Steady 18-20" at 5-7 MPH.

**FIRING ORDER:** 1-5-4-8-6-3-7-2. See diagram for cylinder numbering and spark plug cable connections.

**SPARK PLUGS:** Champion Type H-10. 14 mm. Metric. Gaps—.025"

**IGNITION:** See Coil, Condenser, and Distributor.

**Breaker Gap**—.014-.016" **Cam Angle** 36° closed (both sets together with correct coil-loading lead).

**Automatic Advance**—8° max. at 950 RPM (78-12127 Distr.), 11° max. at 600 RPM (11A-12127 Distr.). Distributor degrees and RPM.

**IGNITION TIMING:** See Ignition Timing.

**Std. Setting**—4° BTDC. No flywheel marks provided. See Ignition Timing for method of timing ignition and Vacuum Brake adjustment.

**CARBURETION:** See Carburetor & Carb. Equipment.

**Idle Setting**—Both idle screws 5/8-7/8 turn open or set for highest steady vacuum gauge reading. Idle speed 5-7 MPH or 350 RPM.

**Float Level**—Fuel level 11/16" plus or minus 1/32" below top edge of float bowl.

**Accelerating Pump**—Inner (#1) hole—Summer, Center (#2) hole—Winter, Outer (#3) hole—Extreme Winter temperatures.

**Fuel Pump Pressure:** 3 1/2 lbs. maximum.

**VALVES:** See Valve Timing.

**Tappet Clearance**—.010-.012" Intake, .014-.016" Exhaust. No adjustment provided.

**STARTING:** See Battery, Starter, Generator, Regulator.

## IGNITION

**Ignition Switch:**—Oakes Steering Column & Ignition Lock Assy. No. 301941, Ford No. 99A-3676 (1939); 302142, Ford No. 09A-3676 (1940). Ignition Switch No. 301683 (1939), 302159 (1940).

**Lock Cylinder**—Hurd or Briggs & Stratton No. 8500, Ford No. 99A-3686 (with keys).

**Key Series**—FK000 to FK999. Groove—No. 17.

**COIL:** Ford Part No. 78-12036 or 81A-12036 (less Condenser). Mounted on ignition unit (part of ignition assembly).

**Resistor Unit**—Connected in coil primary circuit. Mounted on Circuit Breaker Assembly No. 01A-12250.

**Ignition Current**—4 1/2-6 amperes (engine stopped). Ignition primary circuit resistance 1-1 1/2 ohms.

**CONDENSER:** Ford Part No. 78-12300 (78-12036 Coil), 81A-12300 (81A-12036 Coil).

**Capacity**—33-36 microfarad.

**DISTRIBUTOR:** Ford Part No. 78-12127 (Orig. Equip.) or 11A-12127 (Repl. Unit) less coil, caps, and plates. Double breaker, 8 lobe cam, full automatic advance type with Vacuum Brake Control (see Ignition Timing for adjustment). Both types alike except for automatic advance. Same design as used on Ford V8 models.

**Breaker Gap**—.014-.016" (both sets). Use special two step feeler—.014" step 'go', .016" step 'no go'.

**Cam Angle**—36° closed, 9° open. For both sets operating together with correct coil-loading lead.

**Breaker Arm Spring Tension**—20-24 ozs.

**Rotation**—Clockwise viewed from drive end.

No. 78-12127			
Distributor	Automatic Advance	Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start.....	200	0.....	400
8 .....	950	18.....	1900

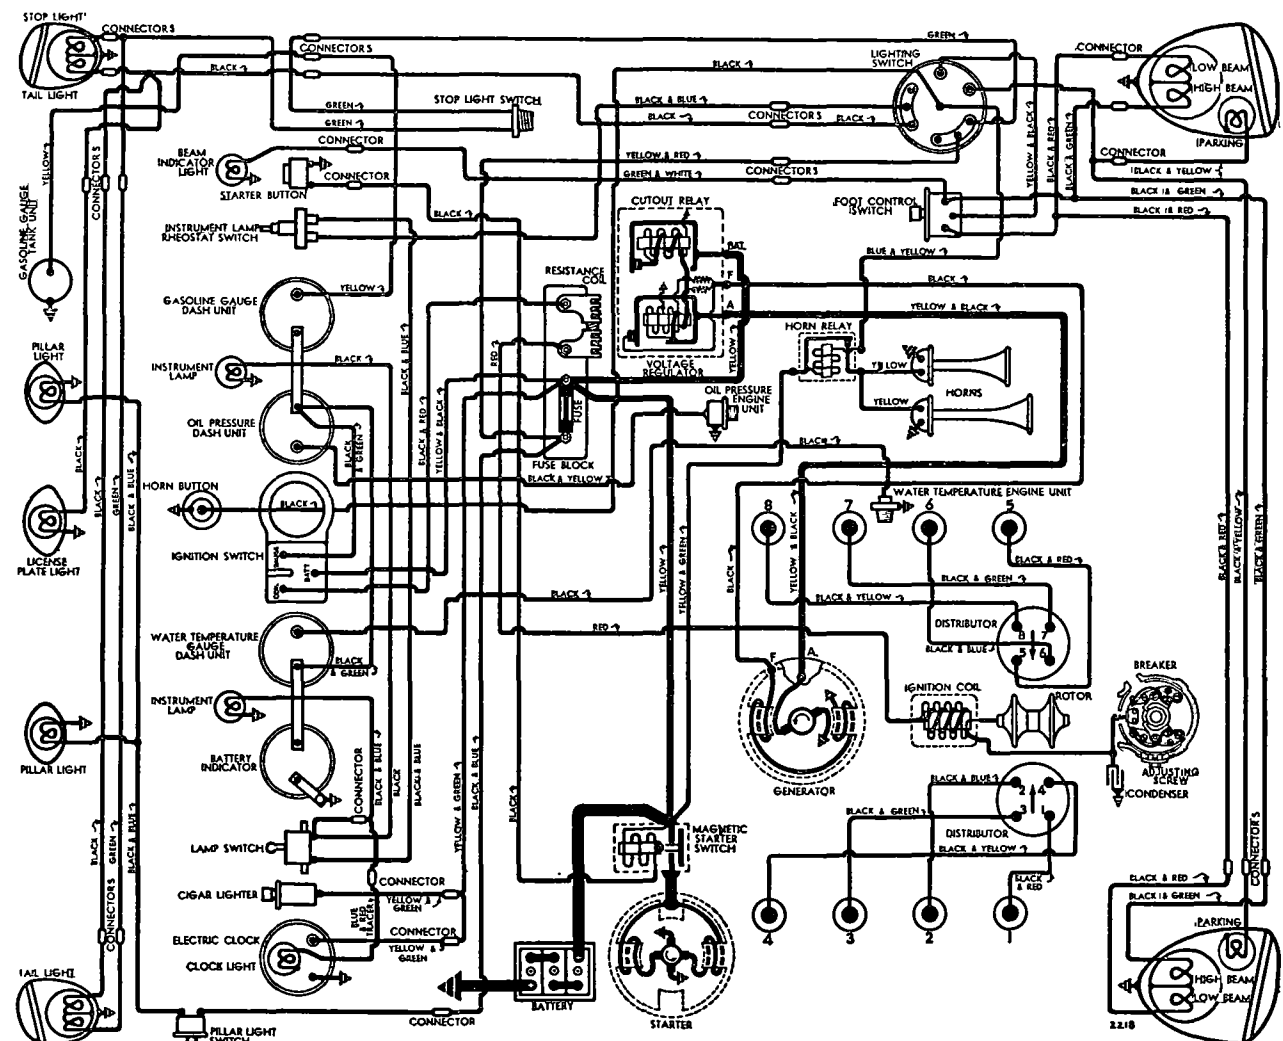

**NOTE**—Limits are 7 1/2-8 1/2° (distributor).

No. 11A-12127			
Distributor	Automatic Advance	Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start.....	200	0.....	400
11 .....	600	22.....	1200

**NOTE**—Limits are 10 1/2-11 1/2° (distributor).

**Removal:**—Ignition unit mounted on front of engine. To remove, disconnect vacuum line, take off caps, take out screws in mounting flange.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

**IGNITION TIMING**

**IGNITION TIMING:**—For each engine as follows (see Vacuum Brake Setting below for adjustment depending on type of service and fuel used).

**Flywheel Degrees Piston Position**

All Engines ..... 4° BTDC ..... 0058° BTDC.

**Timing Note:**—Manufacturer recommends use of Laboratory Test Set with Stroboscope attachment or V-126 Timing Fixture for all ignition settings.

**Timing (On Engine):**—No flywheel marks provided and timing should be set with piston on top dead center. With #1 piston on top dead center entering power stroke, loosen timing adjusting screw on left hand side of ignition unit housing, place screw in retard position at lower end of slot, move screw slowly up until timing contacts begin to open, note graduation on plate under screw head which is in

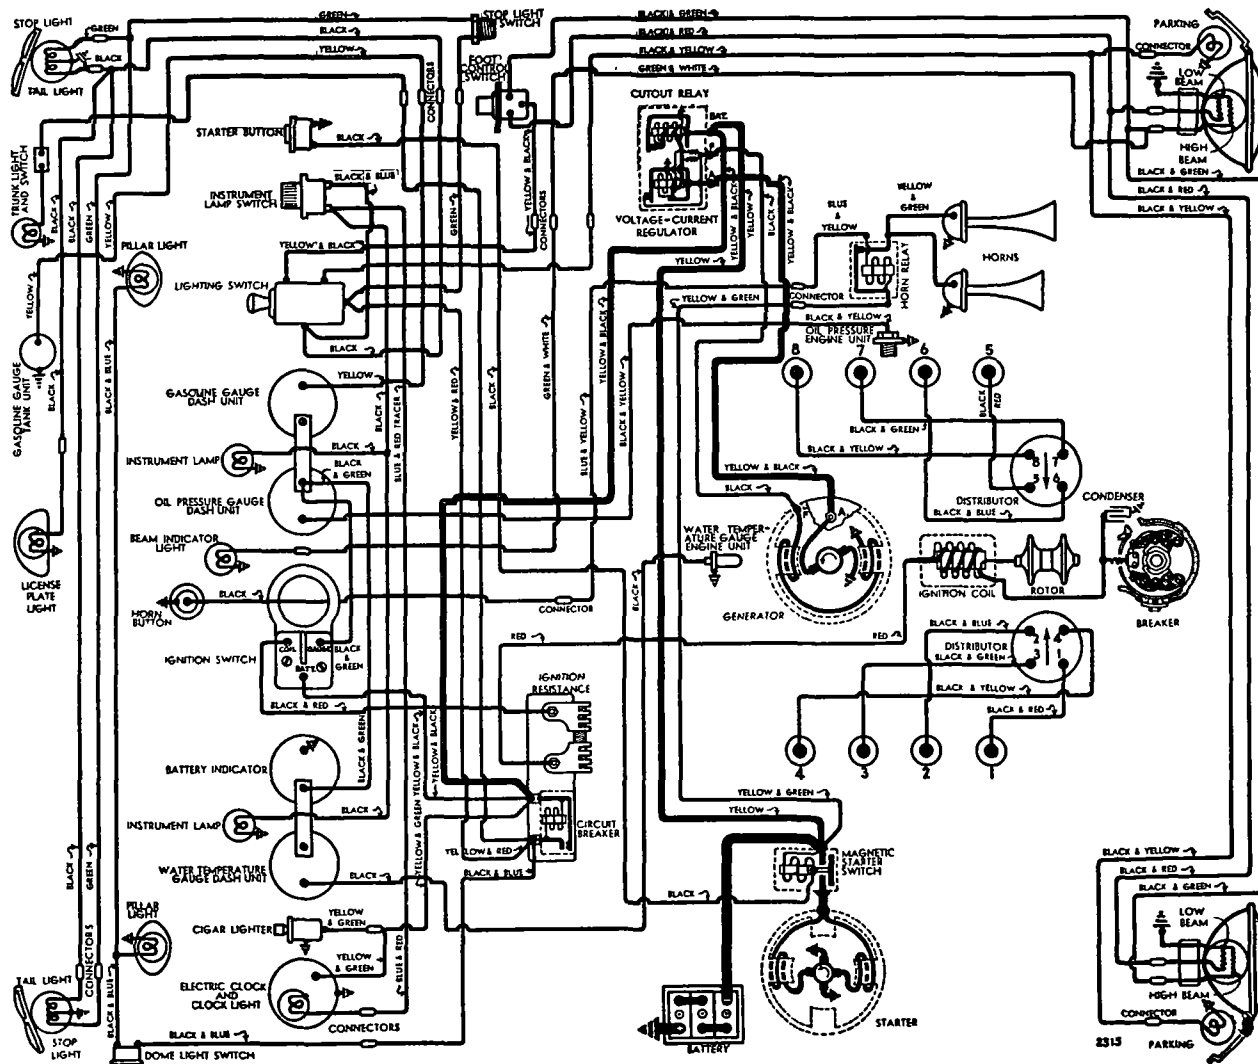

line with reference mark on housing, move screw up exactly one additional graduation, tighten screw.  
**NOTE:**—Dead center position can be determined by inserting gauge rod in cylinder or by measuring to tops of #2 and #3 pistons (should be equal).

**Vacuum Brake Setting:**—Should be adjusted to eliminate pinging when engine operated with load. To adjust, loosen locknut, back off adjusting screw until engine pings with load, turn screw in just enough to eliminate ping, tighten locknut. When adjusted on Stroboscope, vacuum brake should retard spark to peepsight (set at 2°) at 950 RPM. (78-12127), 650 RPM. (11A-12127) with no vacuum

**CARBURETOR**

Holley (Chandler-Groves) Model AA-1, Ford No. 91A-9510-A. Dual (double barrel) downdraft type.

**NOTE:**—Model 91A-9510A replaced by 21A-9510-A. For complete data, refer to Carburetor Index.

1940 MODELS

**Idle Adjustment:**—With engine warm, choke valve wide open, and Fast Idle inoperative, set throttle lever stopscrew for 5-7 MPH. idling speed, turn each idle adjusting screw (one for each barrel, adjust in succession) in until engine begins to miss, then out until engine begins to roll, finally turn screw in until engine fires smoothly. Final setting should be approximately  $\frac{3}{8}$ - $\frac{7}{8}$  turn of screw from inner seated position. Readjust stopscrew for correct idling speed of 5-7 MPH. or 350 RPM.

**NOTE:**—Vacuum gauge recommended for idling adjustment. Set for highest steady gauge reading.

**Float Level:**— $1\frac{1}{2}$ - $1\frac{11}{32}$ " from bottom of float to face of cover with valve seated (invert to check). Fuel level  $21/32$ - $23/32$ " below top edge of bowl.

**Accelerating Pump Setting:**—Three holes provided for pump link connection as follows:

Inner (#1)—Min. stroke, Summer Temperatures.

Center (#2)—Med. stroke, Winter Temperatures.

Outer (#3)—Max. stroke, Extreme Cold Weather.

**NOTE:**—Link locked in pump rod by snap-lock. Pull link shaft out of pump rod to disengage this lock.

**Fast Idle:**—Integral with carburetor. Operated by choke valve lever. No adjustment required.

**CARB. EQUIPMENT**

**Air Cleaner:** AC No. 1528237 (1939), 1529224 (1940); Ford No. 91A-9600A Oil-wetted type Std. Heavy duty Oil-bath type Optl.

**Gasoline Gauge:** King-Seeley Electric type. Ford No. Dash Unit—99A-9280 (1939), 09A-9280 (1940).

**Tank Unit—99A-9275B (All Models).**

For complete data, refer to Carburetion Equip. Index.

**Fuel Pump:**—AC Type R. #1523307, Ford No. 68-9350, Diaphragm type.

For complete data, refer to Carburetion Equip. Index.

**BATTERY**

1939

**BATTERY (1939):** Ford No. 81A-10655A. 6 volt, 17 plate, 100 ampere hour capacity (20 hour rate).

**Starting Capacity—126 amperes for 20 minutes.**

**Zero Capacity—300 amperes for 3.3 minutes.**

**Grounded Terminal—Positive (+)** grounded to dash. **Engine Ground—**Strap connector between right rear cylinder head stud and dash.

**Dimensions—**Length 10.5". Width 7.2". Height 7.1". **Location—**On right side in engine compartment.

**Battery Indicator:**—King Seeley. Ford No. 99-A-10844. Voltmeter type. See Electrical Equipment Section.

**BATTERY**

1940

**BATTERY (1940):** Ford No. 01A-10655A. 6 volt, 17 plate, 120 ampere hour capacity (20 hour rate).

**Starting Capacity—150 amperes for 20 minutes.**

**Zero Capacity—300 amperes for 4.0 minutes.**

**Grounded Terminal—Positive (+)** grounded to dash. **Engine Ground—**Strap connector between right rear cylinder head and dash.

**Dimensions—**Length 10.6". Width 7.3". Height 9.2". **Location—**On right side in engine compartment.

**Battery Indicator—**King-Seeley. Voltmeter type. Ford No. 09A-10844.

For complete data, refer to Electrical Equipment Index.

**STARTER**

**Ford Model No. 18-11002. Armature No. 18-11005.**

**Drive—Inboard Bendix No. L11FX-10. Ford No. B-11350 or Ford B&S Drive No. 91A-11350.**

*Refer to Electrical Equipment Index for article on Ford B&S Starter Drive for servicing instructions.*

**Rotation—Counter-clockwise at commutator end.**

**Brush Spring Tension—2 lbs. each.**

**Cranking Engine—100 RPM., 190-215 amperes.**

**Performance Data**

Torque	R.P.M.	Volts	Amperes
4 ft. lbs.	1070	4.6	200
8 "	860	4.3	340
12 "	300	3.65	465
14 "	Lock	3.5	500

**Starting Switch—R-B-M Model 5604. Ford No. 01A-11450A. Magnetic switch mounted on dash and controlled by pushbutton on instrument panel R-B-M No. 3239, Ford No. 09A-11500.**

**Removal—Starter mounted on right front face of flywheel housing. To remove, take off pan at right of engine, free starter-to-oil pan support bracket, take out through-bolts on commutator end plate.**

**GENERATOR****STANDARD**

**Ford Model No. 91A-10000 (1939), 01A-10000A & 01A-10000B (1940). Two brush, shunt type with vibrating type voltage and current regulation. Ventilated by fan on drive pulley.**

**NOTE—01A-10000-A & B replaced by 21A-10000.**

**Armature—Ford No. 78-10005A (91A-10000), 01A-10005 (01A-10000A & 10000B).**

**Charging Rate Adjustment—No adjustment. See Regulator data below.**

**Maximum Charging Rate—Controlled by regulator and dependent on battery condition and load. To check generator output, disconnect generator field lead at generator, connect both generator terminals together (use short insulated wire). Use 'BRS' set or rheostat connected across battery terminals and apply load until voltage is exactly 6 volts. Connect ammeter in charging line, run engine at approximately 1000 RPM., check output at 3 speeds given in performance table below. Restore original connections after completing test. Do not operate generator in service with both terminals connected together. This eliminates all regulator action and will damage generator.**

**Performance Stds.****91A-10000**

Amperes	Engine RPM.
Start.....	500
28.....	1250
28.....	2500

**01A-10000-A****01A-10000-B**

Amperes	Eng. RPM.	Amperes	Eng. RPM.
Start.....	580	Start.....	520
32.....	1100	30.....	1060
32.....	2500	30.....	2500

**Rotation—Counter-clockwise at commutator end.**

**Field Current—2.86 amperes at 6.0 volts (01A-10000-A), 2.08 amperes at 6.0 volts (01A-10000-B), 2.2 amperes at 6.0 volts (91A-10000). Field resistance**

**at 70°F is 2.1 ohms (01A-10000A), 2.88 ohms (01A-10000B), 2.7 ohms (91A-10000).**

**Brush Spring Tension—Approximately 28 ozs.**

**Removal—Generator mounted on bracket between cylinder banks at front of engine and driven in tandem with water pumps by Vee belt. To remove, loosen nut on mounting bracket stud.**

**Belt Adjustment—Loosen nut on bracket mounting stud, raise generator up until side movement on belt midway between generator and water pump pulleys is 1" (thumb and finger pressure).**

**GENERATOR****SPECIAL EQUIPMENT**

**SPECIAL GENERATORS—Other Makes—Refer to Electrical Equipment Index for 'Special Generator' article for complete data on special Generators and Regulators which may be used on these models.**

**REGULATOR**

**Ford No. 91A-10505A (91A-10000 Gen.), 01A-10505A (01A-10000A & 10000B Gen.). Cutout Relay and vibrating type voltage-regulator in case mounted on engine dash. NOTE—Regulator mounted on rubber cushions (separate ground wire attached to case). REPLACEMENT NOTE—This 2-unit regulator superseded by new 3-unit type No. 01-A-10505C.**

**Cutout Relay**

**Cuts In—5.8-6.3 volts at operating temperature.**

**Cuts Out—5.5 amperes max. (Cold 80°), 1.7 amperes (Hot 180°)—see Regulator article in Electrical Equipment Section for specifications at other temperatures.**

**Voltage-Current Regulator**

**Voltage Setting—6.9-7.2 volts at 70-80°F.**

**Current Setting—30-33 amperes.**

**Regulator Checking & Adjustment—See Ford Regulator article in Electrical Equipment Section for complete testing data. Not adjustable (case sealed).**

**LIGHTING**

**Headlamps—Ford (Corcoran-Brown) Two-Lite, Pre-focused type (1939), Ford Sealed Beam type (1940). Upper and lower beams controlled by Beam Selector switch on toeboard.**

**Headlamp Adjustment—With upper beams lighted, aim each headlamp straight ahead so that beam centered on vertical line directly ahead of lamp upper edge of beam at lamp center height (1939), hot spot centered on horizontal line 3" below lamp center height (1940) at distance of 25 feet.**

**Beam Indicator—Red jewel on instrument panel in upper left hand corner (1939), directly above speedometer (1940). Lighted with Upper Beams "on".**

**Switches—1939**

**Lighting—R-B-M. Ford No. 91-A-11653-B (switch and wiring assembly), 81-A-11657 (body and contact assembly).**

**Beam Selector—R-B-M. Ford No. 81-A-13532.**

**Instrument—Ford No. 99A-13740.**

**Stop Light—Ford No. 91A-13480.**

**Switches—1940**

**Lighting—R-B-M Model 6425. Ford No. 01A-11652. Switch mounted on instrument panel with separate Beam Selector Switch on toeboard. Light Switch Knob & Insert Ford No. 09A-11661-B.**

**Beam Selector—R-B-M Model 2480. Ford No. 81A-13532 (Switch only), No. 01A-11653-A (with Wiring).**

**Instrument—Ford No. 09A-13740-A.**

**Stop Light—Ford No. 11A-13480.**

**Bulb Specifications**

**MISC. ELECTRICAL**

**LIGHTING CIRCUIT BREAKER (1939): Ford No. 91A-12250 (Circuit Breaker) or No. 40-12250 (Fuse Block). Mounted on rear of dash under cowl with Ignition Resistor as an assembly. Vibrating type circuit breaker serviced by No. 01-A-12250 (1940 type).**

**Fuse Capacity—20 amps. (for 40-12250 Fuse Block).**

**LIGHTING CIRCUIT BREAKER (1940): R-B-M 6700, Ford No. 01A-12250. Combined with Ignition Resistor on block on dash under cowl. Combination thermostatic and wound-coil type. Contacts open at 50 amperes and vibrate to control current.**

**HORNS—Air Electric type dual horns. Ford N. 91A-13832 (high note), 91A-13833 (low note).**

**Horn Current—24-28 amperes (total).**

**Horn Relay—R-B-M Model 4700, Ford No. 91A-13842. Contact Closing Voltage—3.5-4.5 volts.**

**Current Draw—Approximately ¾ ampere.**

**ENGINE**

**ENGINE SPECIFICATIONS—Own 95. 8 Cylinder, 90° Vee, L head. Both banks & crankcase cast enbloc. Bore—3.187". Stroke—3.75". Rated Horsepower—32.5. Displacement—239 cu. ins. Developed Horsepower—95 at 3600 RPM. Compression Ratio—6.30-1 (Pass. Cars, Ford Comm.), 5.9-1 (Ford Trucks). Cast-iron heads. Compression & Vacuum Reading—See Tune-up data.**

**OIL PAN REMOVAL: See Ford Shop Notes.**

**CYLINDER HEAD: Tightening Torque and Cylinder Head Diagram—See Ford Shop Notes.**

**►Re-working Head for Improved Cooling: See Ford Shop Notes for instructions (and new Head Gaskets).**

**CYLINDER SLEEVES—Hardened, dry type cylinder sleeves used on engines marked 'HS' on cylinder block above upper front corner of left cylinder head.**

**Servicing—See Ford Shop Notes for complete data.**

**PISTONS—Steel alloy, light weight, cam ground type (Mercury), Aluminum alloy, T-slot type (Ford Trucks). Recondition engine for finished replacement pistons.**

**Weight—Without rings or pin. 358-362 grams (Mercury), 364-368 grams (Ford Truck).**

**Removal—Pistons and rods removed from above.**

**Clearance—See Fitting New Pistons.**

**Replacement Pistons—See Ford Shop Notes for data.**

**Fitting New Pistons: Use .50" wide feeler stock of correct thickness (see Table below) inserted between piston and cylinder wall at right angles to**

## ENGINE

## CONTINUED FROM PRECEDING PAGE

pin to check clearance. Pull required to withdraw feeler should be 6-10 lbs. (all types).

Engine With Sleeves		Feeler Thickness	
		Steel Piston	Aluminum Piston
New Piston & Sleeve	.003"	.003"	.003"
New Piston—Worn Sleeve	.004"	.004"	.004"
Worn Piston & Sleeve	.005"	.005"	.005"
Engines Without Sleeves			
New Piston & Bore	.0025"	.002"	.002"
New Piston—Worn Bore	.004"	.004"	.004"
Worn Piston & Bore	.005"	.005"	.005"

**PISTON RINGS:**—Two compression, one slotted oil ring, all above pin (drain holes in oil ring groove).

**NOTE**—Expander used with #2 Compr. and oil ring.

Ring	Width	End Gap	Side Clearance
Compr. #1	.0915-.0920"	.012-.017"	.0025-.003"
Compr. #2	.0915-.0920"	.012-.017"	.002-.0025"
Oil Contr.	.1535-.1540"	.012-.017"	.0015-.002"

**Replacement Rings:**—See Ford Shop Notes for data.

**PISTON PIN:** Diameter—.7501-.7504". Length—2.975" (with steel pistons), 2.850" (with aluminum pistons). Pin hole in connecting rod bronze-bushed.

**Pin Fit in Piston:**—.0001-.0002" clearance (aluminum pistons), .0003-.0009" clearance (steel pistons) or light hand push fit with piston at 70°F.

**Pin Fit in Rod Bushing:**—.0002-.0005" clearance (pin should pass through bushing slowly of own weight).

See Ford Shop Notes for Pin Fitting directions.

**Replacement Pins:** See Ford Shop Notes.

**CONNECTING ROD:**—Length 7.002". Weight 488 grams.

**Crankpin Journal Diameter:**—2.139" (connecting rod diameter on crankpin—2.360").

**Bearing Type:**—Steel-backed, special-alloy lined. Bearing floats in both rods (side-by-side mounting) with bearing surface on both inner and outer face.

**Bearing Dimensions:**—Length 1.747". Thick. .1095". Clearance—.0015-.0035" (see Bearing Adjustment).

**Sideplay:**—.003-.007" (bearing endplay), .006-.014" (side clearance for both rods).

**Bearing Adjustment:**—None (no shims). Do not file bearing caps. Replace bearings if less than .1085" thick, replace or hone rods for oversize bearings if worn more than .0015" over original size of 2.3597-.23603". **CAUTION**—Both rods must be same size.

**Replacement Bearings:** See Ford Shop Notes.

**Installing Rods:**—Marks on rods and caps must be together and installed in same numbered cylinder with marks pointing down toward oil pan.

**CRANKSHAFT:**—3 bearing. Integral counterweights.

**Journal Diameters:**—2.499" (all bearings).

**Bearing Type:**—Steel-backed, special-alloy lined.

**Clearance:**—.001-.003".

**Bearing Adjustment:**—None (no shims). Do not file.

**End Thrust:**—Taken by rear main bearing. Adjust by replacing bearing. Endplay—.002-.006".

**Replacement Bearings:** See Ford Shop Notes.

**CAMSHAFT:**—3 bearing. Helical gear drive (2 types of camshaft gears used—Bakelized Fabric pressed on shaft or new Aluminum Alloy type bolted on shaft).

**Bearing Diameters:**—1.797" all bearings. Replace camshaft if worn to less than 1.7955" diameter.

**Bearings:**—Steel-backed, babblitt-lined bushings.

**Clearance:**—.002".

**End Thrust:**—Taken by gear hub and cover plate. Adjusted by replacing coverplate. Endplay—.005-.015".

**Timing Gears:**—Cast alloy iron (crankshaft), Bakelized Fabric—pressed on shaft, or Aluminum Alloy—bolted on shaft (camshaft). Backlash—.004" max. See Ford Shop Notes for Timing Gear Replacement.

**Camshaft Setting:**—Mesh 'O' marked tooth of crankshaft gear with '/' marked space on camshaft gear (this mark must be in line with mark on hub).

Valves:	Head Diameter	Stem Diameter	Length
All Valves	1.537"	.3115"	4.750-4.751"

	Seat Angle	Lift	Stem Clearance
All Valves	45°	.292"	.0015-.0035"

**NOTE**—Service limit for valve stem diameter is .309" Intake, .3065" Exhaust. Valves interchangeable. See Ford Shop Notes for Valve Servicing data.

**NOTE**—Seat inserts used for all valves.

**Valve Guides:**—Split type retained by 'C' washer and valve spring. **NOTE**—Replace both halves of all guides measuring less than .6665" (thickness of guide half and valve stem at top of guide with valve of .311" stem diameter in place in guide). For Valve Guide servicing data, see Ford Shop Notes.

**Valve Lifters:**—Barrel type in reamed holes in block. Diameter—.9995". Replace if worn to less than .998" in diameter or length less than 1.710" after any necessary resurfacing of ends (cast type can be resurfaced on both ends, pressed steel type on bottom end only).

**Clearance:**—.0005-.0015". Lifter should slip into hole in block of own weight.

Valve Springs:	Pressure	Length
Valve Closed	37-40 lbs.	2.13"
Valve Open	76-80 lbs.	1.84"

**NOTE**—Replace spring if the pressure is less than 30 lbs. when compressed to 2.125".

## VALVE TIMING

**Tappet Clearance:** .010-.012" Intake, .014-.016" Exh.

**Valve Timing:**—See Camshaft Setting above.

**Intake Valves:**—Open at TDC. Close 44° ALDC.

**Exhaust Valves:**—Open 48° BLDC. Close 6° ATDC.

**To Check Valve Timing:**—No flywheel marks provided. Intake valve opens with piston at TDC.

## LUBRICATION

**LUBRICATION:**—Pressure. Gear type oil pump mounted in crankcase at rear of engine.

**Oil Pan Removal:** See Ford Shop Notes.

**Normal Oil Pressure:**—30 lbs. at 2000 R.P.M.

**Oil Pump and Oil Pressure Regulator:** See "Oil Pump" in Ford Shop Notes for data.

**Oil Pressure Gauge:**—King-Seeley Electric. Ford No. Dash Unit: 99A-9273 ('39), 09A-9273 ('40). Engine unit: 48-9278 (all models).

See Miscellaneous Section for complete data.

**Crankcase Capacity:**—5 qts.

## COOLING

**COOLING SYSTEM:**—Capacity 22 qts.

**Water Pump:**—Packless type, 2 used (1 for each bank).

See Water Pump Section for complete data.

**Removal:**—Slack off drive belt, support engine at forward end, remove front engine mounting bolts, take out mounting screws in pump body.

**Thermostat:**—In each cylinder head outlet (2 used).

**Setting:**—Starts to open at 145°F. Fully open 180°.

**Temperature Gauge:**—King-Seeley Electric. Ford No. Dash Unit: 99A-10883 ('39), 09A-10883 ('40). Engine Unit: 99A-10884 (all models).

See Miscellaneous Section for complete data.

## CLUTCH

**CLUTCH:**—Long Model 9CF-CS. Single, plate, dry disc, semi-centrifugal type.

See Clutch Section for complete data.

**Facings:**—Moulded type, 2 required. Inside Diam. 5.76". Outside Diameter 9". Thickness .137".

**Adjustment:**—Pedal free movement must be 1.0-1.25". To adjust, remove pin at throw-out shaft lever end of connecting link, turn clevis on link rod.

**NOTE**—Pedal free movement 1.5-1.75" for '39 cars.

**Removal:**—Slide rear axle and transmission to rear as a unit to expose clutch (See Transmission Removal (below), take out mounting screws in cover.

## TRANSMISSION

**TRANSMISSION:**—Own Make. Constant-mesh, synchro-mesh (second & high), sliding gear (low & reverse), all helical gear type.

See Transmission Section for complete data.

**Transmission Control (09A):**—Steering col. shift Std. See Transmission Section for complete data.

**Removal:**—Disconnect rear shock absorbers, hand brake cables, hydraulic brake line (at torque tube connection—bleed lines when re-connected), speedometer cable, shock absorber links. Disconnect rear spring at center frame connection. Take out universal joint ball housing screws, slide rear axle assembly back to disengage drive shaft at splined joint. Support engine at rear, take out rear engine mounting bolts, remove clutch housing screws, pull transmission straight back.

**NOTE**—Disconnect gear shifter rods from levers at transmission on 1940 models.

## UNIVERSALS

**UNIVERSAL JOINT:**—Spicer 6454-SF ('39), 202-6 ('40). Steel bushing type. 1 joint to rear of transmission. See Universals Section for complete data.

## REAR AXLE

**REAR AXLE:**—Own make. ¾ floating, Spiral Bevel gear type with Torque Tube drive.

See Rear Axle Section for complete data.

**Ratio:**—3.54-1 Std., 3.78-1 Optl.

**Backlash:**—.010" max.

**Optional Axle:**—Columbia Two-speed type.

See Rear Axle Section for complete data.

**Removal:**—Disconnect rear shock absorbers, hand brake cables, hydraulic brake line (at torque tube connection—bleed lines when re-connected), speedometer cable, shock absorber links. Disconnect rear spring at center frame connection. Take out universal joint ball housing screws, pull axle assembly to rear to disengage drive shaft at splined joint.

**Axle Shaft Removal**—See *Mercury Rear Axle article in Rear Axle Section.*

### SHOCK ABSORBERS

**SHOCK ABSORBERS:**—Houdé (Houdaille). Front — BBDK (1939), BBDM (1940). Rear—BBDW (1939), BBCX (1940). Double acting, hydraulic, adjustable.

See *Shock Absorber Section for complete data.*

### FRONT SUSPENSION

**Front Suspension:**—Conventional 'I' beam section front axle with Reverse Elliott ends and transverse

spring. Axle positioned by radius rods.

**Kingpin Inclusion**—8° crosswise.

**Caster**—9° Max., 4½° Min. Must be equal within ½°. Axle may be bent cold to correct caster if proper tools (to prevent axle damage) are used.

**Camber**—1° Max., ¼° Min. Must be equal within ¼°, right wheel must not exceed left. Adjust in same manner as for caster (see caster data above).

**Toe In**—1/16". Set at 1-10 ratio to Camber. Adjust by loosening clamp bolts and turning tie rod.

**Steering Geometry (Toe Out on Turns)**—Outer wheel turned 20°, Inner wheel 23½°. No adjustment.

### STEERING GEAR

**Steering Gear:** Gemmer Model 305. Worm-and-Roller type with "push-pull" adjustments.

See *Steering Gear Section for complete data.*

### BRAKES

**BRAKES:**—Service. Lockheed hydraulic, double anchor type. Hand lever applies rear service brakes.

See *Brake Section for complete data.*

**Drum**—Cast iron. Diameter 12".

**Wheel Cylinders**—Stepped type as follows:

Front Wheel....1.25"-1.00". Rear Wheel....1.125"-1.00".

**Lining**—Woven (forward shoes), Molded (rear shoes). Width 1.75". Thickness .20". Length per shoe 13.18" (forward shoes), 10.1" (rear shoes).

**Clearance**—Least possible amount without drag.

**Hand Brake:**—See Service Brakes above.

### MISC. MECHANICAL

1940 Power Operated Conv. Top: Vacuum Power type.

See *Miscellaneous Section for complete data.*

**COMMERCIAL & TRUCK NOTE:**—All Engine data below applies also to Ford Commercial & Truck Models with V8 '100' engine. See Ford Commercial & Truck articles for all other data.

**ENGINE HOOD NOTE:**—Hood is Alligator type with release knob under instrument panel to left of steering column. To raise hood, pull out on release knob (hood will raise slightly), press in on safety catch under front edge of hood.

**OIL PAN REMOVAL:**—See *Ford Shop Notes* for data.

## MODEL IDENTIFICATION

**SERIAL & ENGINE NUMBER:**—Stamped on top of clutch housing and on left frame rail (near gen.).

## TUNE-UP

**COMPRESSION: Ratio**—6.6-1 (Pass. Car, Comm'l, ¾ & 1 Ton), 5.9-1 ('41 Other Trucks), 6.4-1 ('42 Other Trucks). All heads cast-iron except 6.6-1 '41 Alum. **Pressure**—116 lbs. (6.6-1), 106 lbs. (5.9-1), 120 lbs. (6.4-1) at cranking speed (100 RPM).

**VACUUM READING:—**Steady 18-20" idling at 5-7 MPH.

**FIRING ORDER:**—1-5-4-8-6-3-7-2. See wiring diagram.  
**SPARK PLUGS:**—Champion H-10, 14 MM. Metric.

**IGNITION:** See Coil, Condenser, and Distributor.  
**Breaker Gap**—.014-.016" Cam Angle 36° closed (both sets with correct coil loading lead).

**Automatic Advance**—8° max. at 950 RPM (78-12127 Distr.), 11° max. at 600 RPM (11A-12127 & 21A-12127 Distr.). Distributor degrees and RPM.

**IGNITION TIMING:** See Ignition Timing. Std. Setting—4° BTDC. No flywheel marks provided. See Ignition Timing for method of timing ignition and Vacuum Brake adjustment.

**CARBURETION:** See Carburetor & Carb. Equipment.  
**Idle Setting**—Both idle screws  $\frac{5}{8}$ - $\frac{3}{4}$  turn open or set for highest steady vacuum gauge reading. Idle speed 5-7 MPH (Cars with Std. Trans.), 350 Eng. RPM. (Cars with Liguamatic Drive Trans.).

**Float Level**—Fuel level 11/16" plus or minus 1/32" below top edge of float bowl.  
**Accelerating Pump**—Inner (#1) hole—Summer, Center (#2) hole—Winter, Outer (#3) hole—Extreme Winter temperatures.

**Fuel Pump Pressure:** 3½ lbs. maximum.

**VALVES:** See Valve Timing.

**Tappet Clearance—.010-.012" Intake, .014-.016" Exh.**

**STARTING:** See **Battery, Starter, Generator, Regulator.**

## IGNITION

**Ignition Switch:**—Oakes Steering Column & Ignition Lock Assy. No. 302370 (1941 First Cars), Ford No. 19A-3678A; 302595 (1941 After approx. Nov. 15, '40), Ford No. 19A-3676B; 302758 (1942), Ford No. 29A-3676. Ignition Switch No. 302513 (1941 First Cars), 302606 (1941 Later Cars), 302494 (1942).

**NOTE**—First type 1941 switch has Starter Button in lock body, later type 1941 switch has starter button mounted separately on instrument panel.

**Lock Cylinder**—Hurd or Briggs & Stratton #80935. Ford No. 19A-3686A (19A-3676A Lock Assy.), 91A-3686A (19A-3676B & 29A-3676 Lock Assy.) with keys. **Key Series**—FK000 to FK999. **Groove** No. 17.

**COIL:** Ford No. 78-12036 or 81A-12036 (1941), IGA-12024 (1942). 1941 type Ignition Coils are mounted on Ignition unit as part of Ignition Assembly. 1942 type Ignition Coil is new type coil mounted separately on bracket on left of engine.

**Ignition Current**—4½-6 amperes (engine stopped).  
**Ignition primary circuit resistance** 1-1⅓ ohms.

**Resistor Unit**—Connected in coil primary circuit. Mounted on Circuit Breaker Assembly 11A-12250-A.

**CONDENSER:** Ford Part No. 78-12300 (78-12036 Coll),  
81A-12300 (81A-12036 Coll), IGA-12300B (IGA-12036  
Coll).

**Capacity**—33-36 mfd. (78-12300 & 81A-12300),  
.29-32 mfd. (IGA-12300B).

**DISTRIBUTOR (1941):** Ford No. 78-12127 or 11A-12127 (less Coil, Caps, & Plate). Double breaker, 8 lobe cam, full automatic advance with Vacuum Brake control (see Ignition Timing for adjustment). Both types alike except for automatic advance. Same design as used on Ford V8 and previous Mercury cars. Breaker Gap—.014-.016" (both sets). Use special two step feeler—.014" step 'go'. .016" step 'no go'. Cam Angle—36° closed, 9° open. For both sets operating together with correct coil-loading lead.

**Breaker Arm Spring Tension—20-24 ozs.**

**Rotation**—Clockwise viewed from drive end.

**No. 78-12127**

Distributor		Automatic Advance Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start.....	200	0.....	400
8 .....	950	16.....	1900

NOTE—Limits are 7½-8½" (distributor).

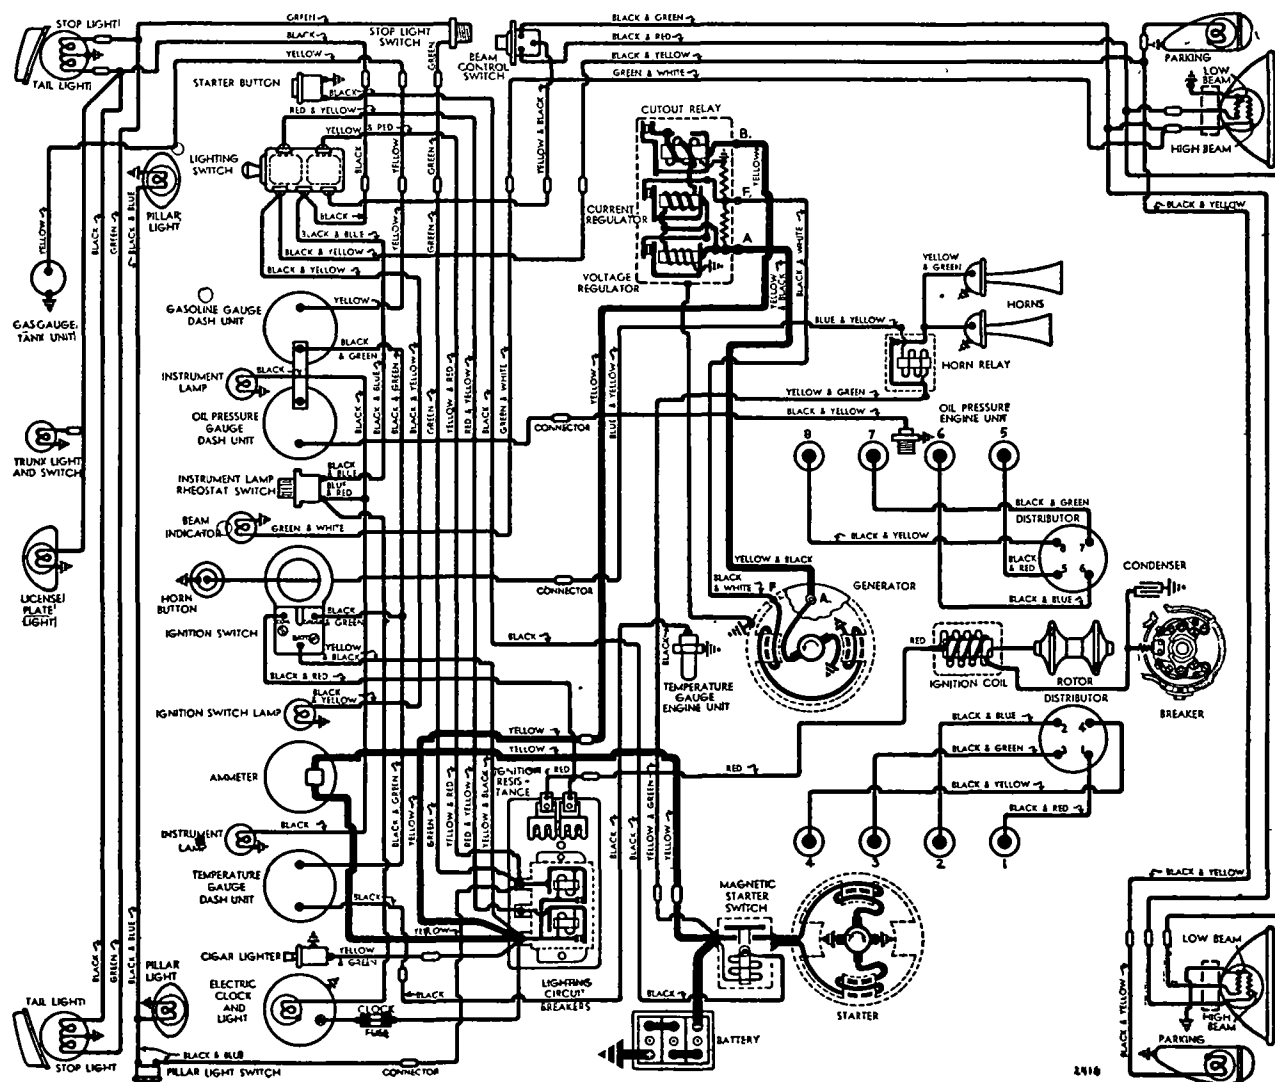

**No. 11A-12127**

Distributor	R.P.M.	Engine	R.P.M.
Degrees	Degrees	Degrees	Degrees
Start.....	200	0.....	400
11.....	600	22.....	1200

NOTE—Limits are 10½-11½° (distributor).

**Removal:**—Ignition unit mounted on front of engine. To remove, disconnect vacuum line, take off caps, take out screws in mounting flange.

**DISTRIBUTOR (1942):** Ford No. 21A-12127 (less Terminal Housing). New flat ignition unit (coil is sepa-

## 1941 MODELS

rate) mounted on front of the engine and driven directly off end of camshaft. Double breaker, 8 lobe cam, full automatic advance type with Vacuum Brake control (breaker design unchanged).

**Breaker Gap**—.014-.016" (both sets). Use special two step feeler—.014" step 'go', .016" step 'no go'.  
**Cam Angle or Dwell**—Approx. 36° closed, 9° open. Set dwell at 80% (limits 78-80% at 2000 RPM.) on Ford Test Set. For both sets operating together with correct coil-loading lead.

**Breaker Arm Spring Tension**—20-24 ounces.

**Rotation**—Clockwise viewed from drive end (counter-clockwise viewed from front of car).

No. 21A-12127			
Distributor	Automatic Advance	Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start.....	200	0.....	400
11.....	600	22.....	1200

**NOTE**—Limits are 10½-11½° (distributor degrees).

**Removal:**—Distributor mounted on front of engine. To remove, disconnect primary lead, remove distributor cap, take out mounting screws in distributor flange, lift unit out.

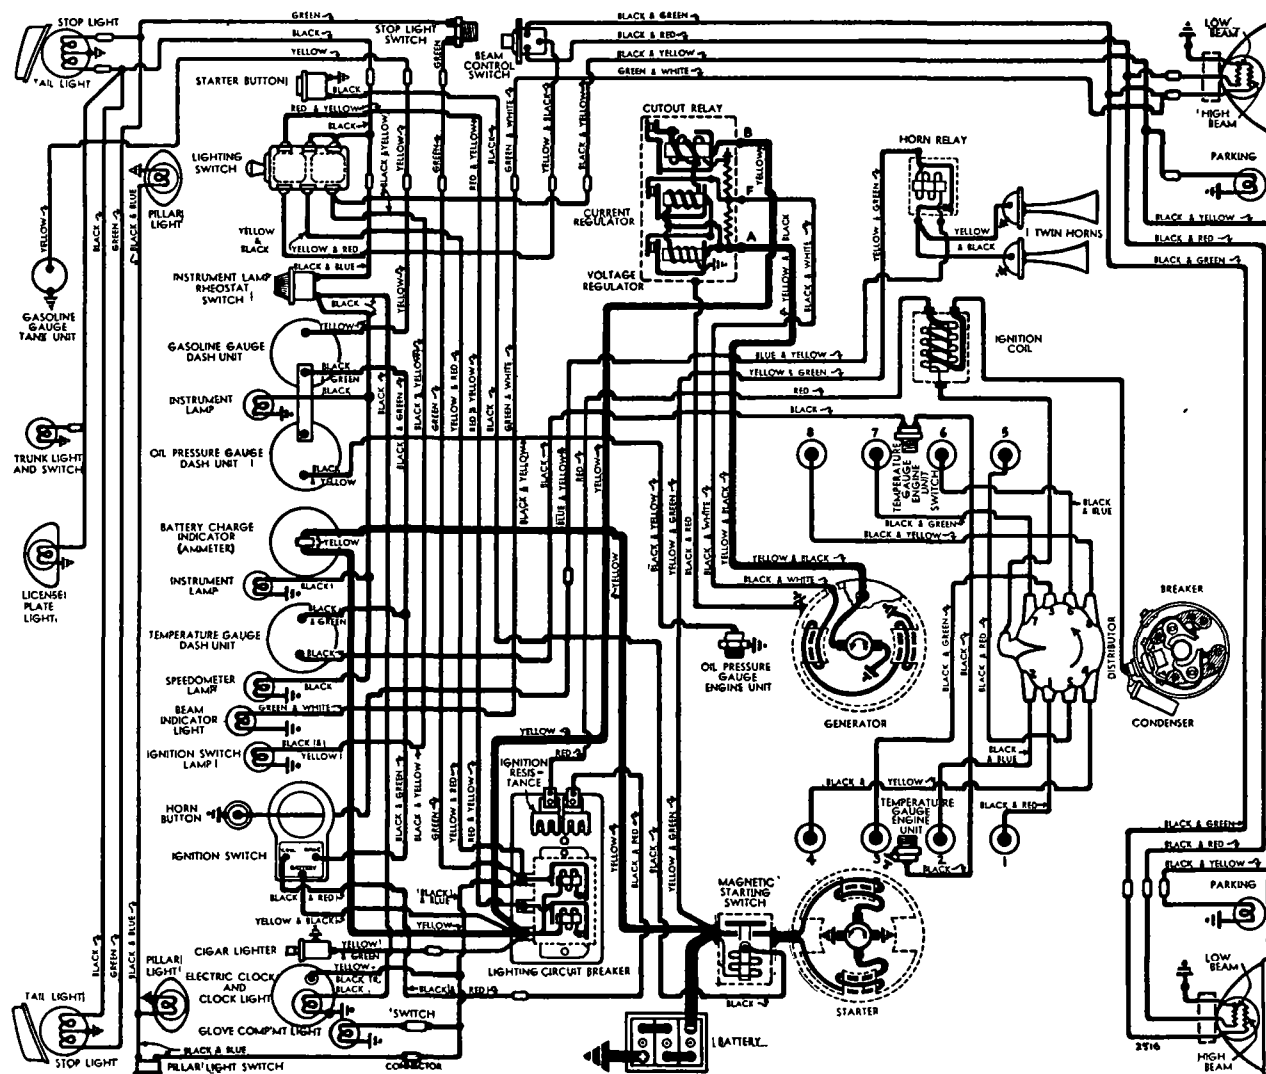

## IGNITION TIMING

**IGNITION TIMING:**—See Vacuum Brake Setting for final adjustment dependent on operating conditions.

**Flywheel Degrees Piston Position**

All V8 Engines .....4° BTDC.....0058° BTDC.

**Timing**—Manufacturer recommends use of Ford Laboratory Test Set (Heyer H1) with Distributor Stroboscope (Heyer H1-DFZ). On Stroboscope set timing index at 2° before top dead center, set peep-sight at Zero, adjust distributor by loosening adjusting screw in slot on left side of housing and moving screw up (to retard spark), down (to advance spark) in slot until Stroboscopic disc light is in line with peepsight, tighten adjusting screw.

1942 M DELS

**Timing (On Engine)**—No flywheel marks provided and timing should be set with piston on top dead center. With #1 piston on top dead center entering power stroke, loosen timing adjusting screw on left hand side of ignition unit housing, place screw in retard position at lower end of slot, move screw slowly up until timing contacts begin to open, note graduation on plate under screw head which is in line with reference mark on housing, move screw up exactly one additional graduation, tighten screw. **NOTE**—Dead center position can be determined by inserting gauge rod in cylinder or by measuring to tops of #2 and #3 pistons (should be equal).  
**Vacuum Brake Setting**—Should be adjusted to eliminate pinging when engine operated with load. To adjust, loosen locknut, back off adjusting screw until engine pings with load, then turn screw in just enough to eliminate ping, tighten locknut. When adjusted on the stroboscope, vacuum brake should retard spark to peep sight with peep sight set at 2° when distributor is driven at 950 RPM. (78-12127), 650 RPM. (11A-12127 & 21A-12127) with no vacuum to release brake.

## CARBURETOR

Holley (Chandler-Groves) Model AA-1, Ford No. 91A-9510A (1941), 21A-9510A (1942—and replacement for 1941 type). Dual, downdraft type.

**NOTE**—New 1942 carburetor has bowl vent at rear and must be used with new type higher fan (bowl vent location prevents fuel fluctuations in bowl from cooling air fan blast).

For complete data, refer to Carburetor Index.

**Idle Adjustment**—With engine warm, choke valve wide open, and Fast Idle inoperative, set throttle lever stopscrew for 5-7 MPH. idling speed, turn each idle adjusting screw (one for each barrel, adjust in succession) in until engine begins to miss, then out until engine begins to roll, finally turn screw in until engine fires smoothly. Final setting should be approximately ⅝-¾ turn of screw from inner seated position. Readjust stopscrew for correct idling speed of 5-7 MPH. **NOTE**—Vacuum gauge recommended (set for highest steady reading).

**Liquamatic Drive Idle Speed Note**—Set idle speed for cars with Liquamatic Drive at 350 RPM.

**Accelerating Pump Setting**—Three holes provided in the throttle lever for pump rod link connection. Adjust for seasonal requirements as follows:

- #1 (Inner) Hole—Summer or Hot weather.
- #2 (Center) Hole—Average fuel and weather.
- #3 (Outer) Hole—Extremely Cold weather.

**Float Level**—Use 9550-A gauge to set the float level (1.353" end 'Go', 1.332" end 'No Go') measuring from underside of bowl cover to bottom of float (with cover and float assembly inverted). Fuel level in bowl should be 11/16" plus or minus 1/32".

**Metering Jets**—See Holley Chandler-Groves (Ford) Jet Specification Table in Carburetor Section.

## CARB. EQUIPMENT

**Air Cleaner:**—Ford No. 19A-9600-A oil-wetted type standard. Heavy duty oil-bath type optional.

**Fast Idle:**—Integral with carburetor. Operated by choke valve lever. No adjustment required.

**Fuel Pump:**—AC 'R' No. 1537383—Exchange No. 541, Ford No. 11A-9350 diaphragm type fuel pump.

For complete data, refer to Carburetion Equip. Index.  
**Pressure**—1½-2¼ lbs.

CONTINUED ON NEXT PAGE

**CONTINUED FR M PRECEDING PAGE**

**Gasoline Gauge:** King-Seeley Electric. Ford Nos. Dash Unit—19A-9280 (1941), 29A-9280 (1942). Tank Unit—99A-9275B (All Models).  
For complete data, refer to Carburetion Equip. Index.

**BATTERY**

Ford No. 01A-10655A. 6 volt, 17 plate, 120 amp. hr. Starting Capacity—150 amperes for 20 minutes. Zero Capacity—300 amperes for 4.0 minutes. Grounded Terminal—Positive (+) grounded to dash. Engine Ground—Strap connector between right rear cylinder head and dash. Dimensions—Length 10.6". Width 7.3". Height 9.2". Location—On right side in engine compartment.

**STARTER**

Ford Model No. 18-11002. Armature No. 18-11005. Drive—Inboard Bendix No. L11FX-10. Ford No. B-11350, or Ford B & S Drive (operates through rubber—no springs are used) Number 91A-11350. Cars with Liquamatic Drive use Barrel Type Bendix N. A-2100. For complete data, refer to Electrical Equipment Index for Ford B&S Starter Drive article. Rotation—Counter-clockwise at commutator end. Brush Spring Tension—2 lbs. each. Cranking Engine—100 RPM., 190-215 amperes.

**Performance Data**

Torque	R.P.M.	Volts	Amperes
4 ft. lbs.	1070	4.6	200
8 "	660	4.3	340
12 "	300	3.65	465
14 "	Lock	3.5	500

**Starting Switch:**—R-B-M Model 5604, Ford No. 01A-11450-A. Magnetic switch mounted on the dash and controlled by pushbutton on instrument panel. Ford No. 19A-11500 or 21A-11500 (Broadcloth or Leather Trim), 29A-11500-B (Bedford Cord Trim).

**Removal:**—Starter mounted on right front face of flywheel housing. To remove, take off pan at right of engine, free starter-to-oil pan support bracket, take out through-bolts on commutator end plate.

**GENERATOR**

Ford Model No. 01A-10000-B (1941), 21A-10000 ('42), Armature No. 01A-10005 (All). Two brush (shunt) type with vibrating type voltage and current regulation. Ventilated by fan on drive pulley.

Charging Rate Adjustment—None. See Regulator. Maximum Charging Rate—Controlled by regulator and dependent on battery condition and load. To check generator output, disconnect generator field lead at generator, connect both generator terminals together (use short insulated wire). Use 'BRS' set or rheostat connected across battery terminals and apply load until voltage is exactly 6 volts. Connect ammeter in charging line, run engine, check output at 2 speeds given in performance table below. Restore original connections after completing test. Do not operate generator in service with both terminals connected together. This eliminates all regulator action and will damage generator.

**Performance Data**

Amperes	Engine RPM.
Start	520
30	1060
30	2500

Rotation—Counter-clockwise at commutator end. Field Current—2.1 amperes at 6.0 volts (field resistance 2.88 ohms at 70°F.).

Brush Spring Tension—Approximately 28 ozs.

**Removal:**—Generator mounted on bracket between cylinder banks at front of engine, driven in tandem with water pumps by Vee belt. To remove, loosen nut on bracket stud.

**Belt Adjustment:**—1" deflection midway between generator and water pump pulleys. NOTE—Generator mounting bracket modified to include fan mounting (fan driven by a separate belt). Both belts adjusted in same manner by loosening mounting bolt and raising mounting brackets.

**REGULATOR**

Ford Model No. 01A-10505-C. Three-unit Type. Consists of Cutout Relay, vibrating Voltage Regulator and vibrating Current Regulator (separate units) in single case on engine side of dash.

For complete data, refer to Electrical Equipment Index. NOTE—Regulator case is grounded through separate ground wire extending to generator frame.

**Cutout Relay**

Cuts In—5.8-6.3 volts at operating temperature. Cuts Out—8 ampere discharge current maximum.

**Voltage Regulator**

Setting—6.9-7.2 volts at 70-80°F.

Checking & Adjusting—Refer to Electrical Equipment Index for 'Ford Regulator 3-Unit Type' article.

**Current Regulator**

Setting—30-33 amperes hot (after 5 minutes run). Checking & Adjusting—See Voltage Regulator above.

**LIGHTING**

**LIGHTING:**—Headlamps—Ford Sealed Beam type.

For complete data, refer to Electrical Equipment Index.

Headlamp Adjustment—Aim upper beam straight ahead (hot spot center 3" below lamp center height). Beam Indicator—Red jewel on instrument panel directly above speedometer dial (1941), on lower edge (1942). Lighted with Upper Beams "on". Direction Signal—Refer to Electrical Equip. Index.

**Switches**

Lighting—R-B-M Model 2445, Ford No. 11A-11652. Light Switch Knob & Insert Ford No. 19A-11661 (1941), 29A-11661A (1942 Cars with Broadcloth and Leather Trim) 29A-11661B ('42 with Bedford Trim). Beam Selector—R-B-M. Ford No. 11A-13532 (switch only). Switch & Wiring Assy. Ford No. 11A-11653 (1941), 29A-11653 (1942).

Instrument—Ford No. 19A-13740.

Stop Light—Ford No. 11A-13480.

Direction Signal—Ford No. 29AS-13335 (in Turn Indicator Kit No. 29AS-18440).

**Bulb Specifications**

Position	Candlepower	Mazda No.
Headlamps		Sealed Beam
Parking, Instrument, Clock	1½	55
Beam Indicator, Ign. Lock	1	51
Stop & Tail	21-3	1154
Stop (Station Wagon)	21	1129
Tail (Station Wagon)	3	63
Rear License, Dome Trunk	3	63

NOTE—When Direction Signal used, Parking Light is combined with front Direction Signal (21-3 cp. bulb, Mazda No. 1154). Direction Signal Indicator bulb on instrument panel is 1½ cp. Mazda No. 55.

**MISC. ELECTRICAL**

**LIGHTING CIRCUIT BREAKER:**—Ford No. 11A-12250A. Combined with Ignition Resistor on block on dash under cowl. Consists of two separate circuit breaker units (on unit protects headlight circuits, second unit protects ther lighting circuits) of the thermo-

static and wound-coil type. Contacts open with current of 50 amperes and vibrate to control current.

**FUSES:**—Electric Clock—2 amperes.

Liquamatic Drive—15 amperes. In connector in feed wire from ignition switch to relay (on dash).

**HORNS:**—Air Electric type dual horns. Ford No. 91A-13832 (High Note), 91A-13833 (Low Note).

Horn Current—24-28 amperes (total).

Horn Relay—R-B-M Ford No. 11A-13842-D.

Contact Closing Voltage—3.5-4.5 volts.

Current Draw—Approximately ¾ ampere.

**ENGINE**

**ENGINE SPECIFICATIONS:**—Own 100. 8 Cylinder, 90° Vee, L head. Both banks & crankcase cast enbloc.

Bore—3.187". Stroke—3.75".

Rated Horsepower—32.5. Displacement—239 cu. ins.

Developed Horsepower—100 at 3800 RPM.

Compression Ratio and Pressure—As follows:

Car	Ratio	Lbs. RPM	Pressure
Model			
'41 Mercury①	6.6-1	145 at 2000	116 at 100
'42 Mercury①	6.6-1	150 at 2200	116 at 100
'41 Ford V8②	5.9-1	135 at 2200	106 at 100
'42 Ford V8②	6.4-1	152 at 2300	120 at 100

①—Ford V8 '100' HP Commercial, ¾ & 1 Ton Trucks.  
②—Ford V8 '100' HP All Other Truck Models.

Vacuum Reading—Steady 18-20" at 5MPH.

**OIL PAN REMOVAL:** See Ford Shop Notes.

**CYLINDER HEAD:** Tightening Torque and Cylinder Head Diagram—See Ford Shop Notes.

►Re-working Head for Improved Cooling: See Ford Shop Notes for instructions (and new Head Gaskets).

**CYLINDER SLEEVES:**—Hardened, dry type cylinder sleeves used on some engines. May carry mark 'HS' on block beside inner front corner of left cyl. head.

Servicing:—See Ford Shop Notes for data.

**PISTONS:**—Steel alloy, light weight, cam ground type or Aluminum alloy, T slot type. Recondition engine to take finished replacement pistons (replace sleeves, install Std. pistons. See Cylinder Sleeves). NOTE—1942 engines equipped with new steel pistons with wide top land (used with new type crankshaft). Weight—Without rings or pin, 358-362 grams (Mercury), 364-368 grams (Ford Truck).

Removal—Pistons and rods removed from above.

Clearance—See Fitting New Pistons.

Replacement Pistons:—See Ford Shop Notes for data.

Fitting New Pistons:—Use .50" wide feeler stock if correct thickness inserted between piston and cylinder wall at right angles to pin to check clearance. Pull to withdraw feeler 6-10 lbs. (all types).

Engine With Sleeves Feeler Thickness

	Steel Piston	Aluminum Piston
New Piston & Sleeve	.003"	.003"
New Piston—Worn Sleeve	.004"	.004"
Worn Piston & Sleeve	.005"	.005"

Engines Without Sleeves

New Piston & Bore	.0025"	.002"
New Piston—Worn Bore	.004"	.004"
Worn Piston & Bore	.005"	.005"

**PISTON RINGS:**—Two compression, one slotted oil ring, all above pin (drain holes in oil ring groove). NOTE—Expander used with #2 Compr. and oil ring.

Ring	Width	End Gap	Side Clearance
Compr. #1	.0915-.0920"	.012-.017"	.0025-.003"
Compr. #2	.0915-.0920"	.012-.017"	.002-.0025"
Oil Contr.	.1535-.1540"	.012-.017"	.0015-.002"

Replacement Rings:—See Ford Shop Notes for data.

**PISTON PIN:** Diameter—.7501-.7504". Length—2.975" (with steel pistons), 2.850" (with aluminum pistons).

**ENGINE****C ONTINUED FR M PRECEDING PAGE**

Floating type (locking ring in piston at each end).  
Pin Fit in Piston—.0001-.0002" clearance (aluminum pistons), .0003-.0009" clearance (steel pistons) or light hand push fit with piston at 70°F.

Pin Fit in Rod Bushing—.0002-.0005" clearance (pin should pass through bushing slowly of own weight).  
See Ford Shop Notes for Pin Fitting directions.

Replacement Pins: See Ford Shop Notes.

**CONNECTING ROD:**—Length 7.000". Weight 488 grams. Crankpin Journal Diameter—.2139" (connecting rod diameter on crankpin—.2360").

**Bearing Type**—Steel-backed, special-alloy lined. Bearing floats in both rods (side-by-side mounting) with bearing surface on both inner and outer face.  
**Bearing Dimensions**—Length 1.747". Thick. .1095". Clearance—.0015-.0035" (see Bearing Adjustment).  
**Sideplay**—.003-.007" (bearing endplay), .006-.014" (side clearance for both rods).

**Bearing Adjustment:** None (no shims). Do not file bearing caps. Replace bearings if less than .1085" thick, replace or hone rods for oversize bearings if worn more than .0015" over original size of 2.3597-.23603". **CAUTION**—Both rods must be same size.

Replacement Bearings: See Ford Shop Notes.

**Installing Rods:**—Marks on rods and caps must be together and installed in same numbered cylinder with marks pointing down toward oil pan.

**CRANKSHAFT:**—3 bearing. Integral counterweights. NOTE—1942 engines equipped with new crankshaft (used in conjunction with new wide land pistons).  
**Journal Diameters**—2.499" (all bearings).  
**Bearing Type**—Steel-backed, special-alloy lined.

**Clearance**—.001-.003".

**Bearing Adjustment:**—None (no shims). Do not file.  
**End Thrust:**—Taken by rear main bearing. Adjust by replacing bearing. Endplay—.002-.006".

Replacement Bearings: See Ford Shop Notes.

**CAMSHAFT:**—Three bearing. Helical gear drive.  
**Bearing Diameters**—1.797" all bearings. Replace camshaft if worn to less than 1.7955" diameter.  
**Bearings**—Steel-backed, babbit-lined bushings.  
**Clearance**—.002".

**End Thrust:**—Taken by gear hub and cover plate. Adjusted by replacing coverplate. Endplay—.005-.015".

**Timing Gears:**—Cast alloy iron (crankshaft), Bakelized Fabric or Alum. bolted on shaft (camshaft).  
**Backlash**—.004" maximum. Refer to Ford Shop Notes for Timing Gear Replacement data.

**Camshaft Setting:**—Mesh 'O' marked tooth of crankshaft gear with 'I' marked space on camshaft gear (this mark must be in line with mark on hub).

**VALVES:**—Head Diameter Stem Diameter Length  
All Valves .....1.537" .....3.115" .....4.750-4.751"  
Seat Angle Lift Stem Clearance  
All Valves .....45° .....292" ......0015-.0035"

NOTE—Service limit for valve stem diameter is .309" Intake, .3065" Exhaust. Valves interchangeable. See Ford Shop Notes for Valve Servicing data.

NOTE—Seat inserts on all valves ('41), exhaust ('42).  
**Valve Guides:**—Split type retained by 'C' washer and valve spring. NOTE—Replace both halves of all guides measuring less than .6665" (thickness of guide half and valve stem at top of guide with valve of .311" stem diameter in place in guide).

For Valve Guide servicing data, see Ford Shop Notes.

**Valve Lifters:**—Barrel type in reamed holes in block. Diameter—.9995". Replace if worn to less than .998"

in diameter or length less than 1.710" after any necessary resurfacing of ends (cast type can be resurfaced on both ends, pressed steel on bottom only).  
**Clearance**—.0005-.0015". Lifter should slip into hole in block of own weight.

**Valve Springs:** Pressure Length  
Valve Closed .....37-40 lbs. ....2.13"  
Valve Open .....76-80 lbs. ....1.84"  
NOTE—Minimum spring tension 30 lbs. at 2.125".

**VALVE TIMING**

**Tappet Clearance:**—.010-.012" Intake, .014-.016" Exh.

**Valve Timing:**—See Camshaft Setting above.

**Intake Valves**—Open at TDC. Close 44° ALDC.

**Exhaust Valves**—Open 48° BLDC. Close 6° ATDC.

**To Check Valve Timing:**—No flywheel marks provided. Intake valve opens with piston at TDC.

**LUBRICATION**

**LUBRICATION:**—Pressure. Gear type oil pump mounted in crankcase at rear of engine.

**Oil Pan Removal:** See Ford Shop Notes.

**Normal Oil Pressure:**—30 lbs. at 2000 R.P.M.

**Oil Pump and Oil Pressure Regulator:** See "Oil Pump" in Ford Shop Notes for data.

**Oil Pressure Gauge:**—King-Seeley Electric. Ford No. Dash Unit—19A-9273 (1941), 29A-9273 (1942).

**Engine Unit**—48-9278 (All Models).

See Miscellaneous Section for complete data.

**Crankcase Capacity:**—5 quarts.

**COOLING**

**COOLING SYSTEM:**—Capacity 2½ qt. ('41), 22 qt. ('42).

**Water Pump:**—Packless type, 2 used (1 for each bank). See Water Pump Section for complete data.

**Thermostat:**—In each cylinder head outlet (2 used). Setting—Starts to open at 145°F. Fully open 180°.

**Temperature Gauge:**—King-Seeley Electric. Ford No. Dash Unit—19A-10883 (1941), 29A-10883 (1942).  
**Engine Unit**—99A-10884 (All Models).

See Miscellaneous Section for complete data.

NOTE—Accessory Temperature Gauge Switch (for Other Bank) No. 01A-10990. Kit No. 11A-18381.

**CLUTCH**

**CLUTCH:**—Long Model 10CF-TI (Std.), 9CF-CS (with Liquamatic Drive). Semi-centrifugal, single plate, dry disc type. See Clutch Section for complete data.  
**Facings Woven**, 2 used. I.D. 6¾", O.D. 10". Thick ¼".

**Adjustment:**—Pedal free movement must be 1.0-1.25". To adjust, remove pin at throw-out shaft lever end of connecting link, turn clevis on link rod.

**Removal:**—Slide rear axle and transmission to rear as a unit to expose clutch (see Transmission Removal below), take out mounting screws in cover.

**TRANSMISSION****STANDARD**

**TRANSMISSION (STD.):**—Own Make. Constant-mesh, synchro-mesh (second and high), sliding gear (low and reverse). All helical gear type.

See Transmission Section for complete data.

**Transmission Control:**—Mechanical steering col. shift. See Transmission Section for complete data.

**Rem val:**—Disconnect gear shifter rods at levers on transmission case. Disconnect rear shock absorbers, hand brake cables, hydraulic brake line at torque tube connection (bleed lines when re-connected), speedometer cable. Disconnect rear spring at center frame connection. Take out universal joint ball

housing screws, slide rear axle assembly back to disengage drive shaft at splined joint. Support engine at rear, take out rear engine mounting bolts, and clutch housing screws. Remove transmission.

**TRANSMISSION****OPTIONAL**

**LIQUAMATIC DRIVE (29A):**—Consists of fluid coupling & 3 speed automatic transmission (automatic shifting between 2nd & 3rd speeds). Optl. equipment. See Transmission Section for complete data.

**UNIVERSALS**

**UNIVERSAL JOINT:**—Spicer 202-6 Steel bushing type. See Universals Section for complete data.

**REAR AXLE**

**REAR AXLE:** Own Make. ¾ floating, Spiral Bevel Gear Torque Tube drive. See Rear Axle Section for data.  
**Ratio**—3.54-1 Std., 3.78-1 & 4.11-1 Optl.  
**Backlash**—.010" maximum.

**Removal:**—Disconnect rear shock absorbers, hand brake cables, hydraulic brake line (at torque tube connection—bleed lines when re-connected), speedometer cable, shock absorber links. Disconnect rear spring at center frame connection. Take out universal joint ball housing screws, pull axle assembly to rear to disengage drive shaft at splined joint.

**Axle Shaft Removal:**—See Mercury Rear Axle article

**SHOCK ABSORBERS**

Houde. Double acting, hydraulic, adjustable type.

Houde Model Right—Ford No.—Left  
Front '41 .....BBCN.....11A-18045A.....11A-18046A  
Front '42 .....BBCN.....21A-18045.....21A-18046  
Rear .....BBCZ.....11A-18080A.....11A-18081A  
See Shock Absorber Section for complete data.

**FRONT SUSPENSION**

**Front Suspension:**—Conventional 'I' beam section front axle with Reverse Elliott ends and transverse spring. Axle positioned by radius rods.

**Kingpin Inclination**—8° crosswise.

**Caster**—9° Max., 4½° Min. Must be equal within ½°.

**Camber**—1° Max., ¼° Min. Must be equal within ¼°

and the right wheel must not exceed the left. Axle may be bent cold to adjust caster & camber if proper tools (to prevent axle flange damage) used.

**Toe In**—1/16". Set at 1-10 ratio to Camber.

**Steering Geometry**—Inner wheel 23½°. Outer 20°.

**STEERING GEAR**

**Steering Gear:** Gemmer Model 305. Worm-and-Roller type with "push-pull" adjustments.

See Steering Gear Section for complete data.

**BRAKES**

**BRAKES:**—Service. Lockheed hydraulic, double anchor type. Hand lever applies rear service brakes. See Brake Section for complete data.

**Drum**—Cast iron. Diameter 12".

**Wheel Cylinders**—Stepped type as follows:

Front Wheel.....1.25"-1.00". Rear Wheel.....1.125"-1.00".

**Lining**—Woven (all shoes). Width 1.75". Thickness

.20". Length per shoe 13.18" (forward), 10.1" (rear).

**Clearance**—Least possible amount without drag.

**Hand Brake:**—See Service Brakes above.

**MISC. MECHANICAL**

**Power Operated Convertible Top:** Auto-Lite Electric type. See Miscellaneous Section for complete data.

**ENGINE HOOD NOTE:** Hood is alligator type with release knob under instrument panel to left of steering column. To raise hood, pull out on release knob (hood will raise slightly), press in on safety catch under front edge of hood, lift hood up.

**OIL PAN REMOVAL:** See *Ford Shop Notes*.

## MODEL IDENTIFICATION

**SERIAL & ENGINE NUMBER:** Stamped on top of clutch housing and on left frame side member near generator.

## TUNE-UP

**COMPRESSION:** Pressure—105-125 lbs. at cranking speed of 100 RPM (Std. 6.75-1 Cast Iron Head).

**VACUUM READING:** Steady 18-20" idling at 500 RPM.

**FIRING ORDER:** 1-5-4-8-6-3-7-2 (Cyl. Nos. 1-2-3-4 Right Bank, 5-6-7-8 Left Bank, front-to-rear). See diagram.

**SPARK PLUGS:** Champion Type H-10, 14 mm. Metric. Gaps—.025"

**IGNITION:** See Coil, Condenser, and Distributor.

**Breaker Gap**—.014-.016" (both sets).

**Cam Angle**—36° (both sets operating together).

**Breaker Arm Spring Tension**—20-24 ozs.

**Rotation**—Clockwise viewed from drive end (distributor off engine).

**Automatic Advance**—Starts at 200 RPM. Maximum 11° at 600 RPM (distr. degrees & RPM).

**IGNITION TIMING:** See Ignition Timing.

**Std. Setting**—4° BTDC.

**Timing Marks**—None. See Ignition Timing for directions on setting of distributor for correct timing when installed on engine.

**Vacuum Brake Setting**—Set to just eliminate ping-pong when engine operated under load (back off screw until engine pings, then turn screw in until ping is eliminated).

**CARBURETION:** See Carburetor & Carb. Equipment.

**Idle Setting**—Both idle screws  $\frac{5}{8}$ - $\frac{3}{4}$  turn open and set for smooth idle and highest steady reading of vacuum gauge (when used). Idle speed 500 RPM. (can be judged by marking fan belt and setting speed for 25 revolutions of the belt in 10 seconds).

**Float Level**—Fuel level 11/16" (21/32 - 23/32") below top edge of bowl.

**Accelerating Pump**—Center (#2) hole Normal. Inner (#1) hole—Summer. Outer (#3) hole—Winter, for temperature extremes.

**Fuel Pump Pressure:** 3½ lbs. maximum (1½-3½ lbs.).

**MANIFOLD HEAT CONTROL:** Automatic thermostatic control type. Located in exhaust manifold outlet connection of left hand cylinder bank, diverts exhaust gases through by-pass in intake manifold to right cylinder bank when valve closed. See that valve operates freely.

**VALVES:** See Valve Timing.

**Tappet Clearance**—.010-.012" Intake, .014-.016" Exhaust, Cold. No adjustment.

**STARTING:** See Battery, Starter, Generator, and Regulator.

## IGNITION

**IGNITION SWITCH:** Oakes Steering Column & Ignition Lock Assembly No. as follows:

### Steering Col. & Ign. Lock Ignition Switch

Oakes No. Ford No. Oakes No. Ford No.  
LHD. Cars① ..... 302995 ..... 59A-3676A.302494.11A-3680  
LHD. Cars② ..... 302960 ..... 59A-3676B.302494.11A-3680  
RHD. Cars① ..... 302998 59AF-3676D.302494.11A-3680  
Sportsman ..... 302992 ..... 59A-3676C.302494.11A-3680  
Canadian Cars 302970 ..... C59A-3676.302494.11A-3680  
①—With Brown Trim. ②—With Grey-Green Trim.

**Lock Cylinder**—Hurd or Briggs & Stratton No.80935.  
Ford No. 91A-3686A (with Keys).

**Key Series**—FK000 to FK999. Groove—No. 17.

**COIL:** Ford No. 1GA-12024. Mounted separately on left front corner of cylinder block.

**Resistor Unit**—Connected in coil primary circuit. Mounted on Circuit Breaker Assembly No. 11A-12250.

**Ignition Current**—4½-6 amperes (engine stopped).  
Ignition primary circuit resistance 1-1½ ohms.

**CONDENSER:** Ford Part No. 1GA-12300-B.  
Capacity—.29-.32 microfarad.

**DISTRIBUTOR:** Ford No. 59A-12127 (Less Terminal Housing, Cap, and Rotor). New flat type, single cap, "Sealed Dry" type with "V" outlet. Double breaker, 8 lobe cam, full automatic advance type with Vacuum Brake adjustment. Breaker "loading" and "timing" contacts operation unchanged.

**Breaker Gap**—.014-.016" (both sets). Use special two step feeler—.014" step "Go", .016" "No Go".

**Cam Angle or Dwell**—36° closed, 9° open. For both sets operating together with correct coil-loading lead. NOTE—Cam Angle for each set operating singly approximately 22½° closed, 22½° open (50%).

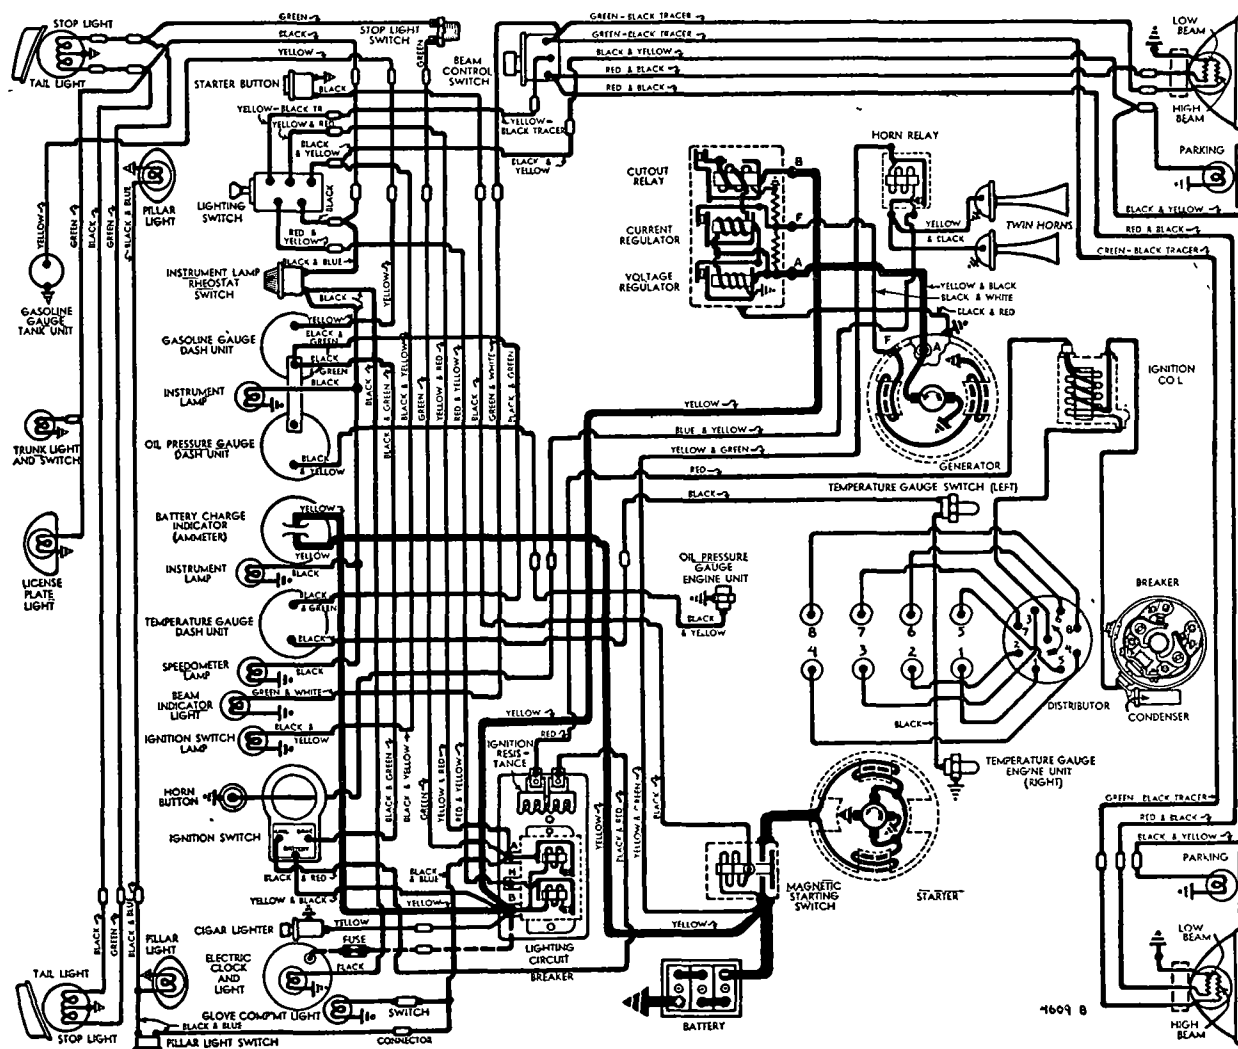

**Breaker Arm Spring Tension**—20-24 ounces.

**Rotation**—Clockwise viewed from drive end of unit.

Distributor Automatic Advance Engine

Degrees	R.P.M.	Degrees	R.P.M.
Start.....	200	0.....	400
11.....	600	22.....	1200

**Vacuum Brake:** Consists of a spring-loaded, vacuum controlled, brake piston which bears on edge of

retard disc of breaker advance mechanism and acts as a "drag" to retard normal advance when engine is accelerated or operated under load. Piston is normally held out of engagement by manifold vacuum.

**Removal:** Distributor mounted on front of engine. To remove, disconnect coil primary lead, unsnap ball clip and remove terminal housing and conduit assembly, remove distributor rotor. Take out two cap-screws mounting distributor on engine, remove distributor and gasket. **NOTE**—Vacuum connection (for Vacuum Brake operation) is through hole in face of mounting flange.

## IGNITION TIMING

**Std. Setting**—See Vacuum Brake Setting for service correction for operating conditions.

**Flywheel Degrees Piston Position**

All Engines ..... 4° BTDC ..... 0058° BTDC.

**Ignition Timing (Basic Setting)**—Distributor can be timed for correct ignition timing when off engine as follows: Place a small straight edge or scale against tang on drive end of distributor shaft (scale must be on wide side of shaft), rotate distributor in direction of rotation (clockwise) until trailing edge of scale is exactly  $\frac{3}{4}$ " past the nearest edge of the small mounting hole (left hand hole—nearest vacuum brake) on the mounting flange. If left hand (timing) contacts do not begin to open at this point, loosen adjusting screw on side of distributor housing, move screw down (to advance spark), up (to retard spark), in slot until contacts begin to open, tighten adjusting screw. This setting will provide correct 4° BTDC. Ignition timing when distributor installed on engine.

**NOTE**—Timing is controlled by opening of left hand breaker contacts only (right hand contacts "load" coil and open and close earlier than the left hand contacts).

**Timing (On the Engine)**—No flywheel marks provided. With basic timing of distributor properly set (above), ignition timing will be correct when distributor installed on engine and all necessary adjustments for operating conditions and octane rating of fuel being used can be made by means of the Vacuum Brake adjustment as follows:

**Vacuum Brake Setting:**—Should be adjusted to eliminate pinging when engine operated with load. To adjust, loosen locknut, back off adjusting screw until engine pings with load, turn screw in just enough to eliminate ping.

## CARBURETOR

Holley (Chandler-Groves) Ford No. 59A-9510-A. Dual (double barrel), downdraft type with manual choke control.

See Carburetor Section for complete data.

**Idle Adjustment**—With engine warm, choke valve wide open, and Fast Idle inoperative, set throttle lever stopscrew for 500 RPM. idling speed, turn each idle adjusting screw (one for each barrel, adjust in succession) in until engine begins to miss, then out until engine begins to roll, finally turn screw in until engine fires smoothly. Final setting should be approximately  $\frac{1}{8}$ — $\frac{1}{4}$  turn 1 screw from inner seated position. Readjust stopscrew for correct idling speed. **NOTE**—Idling speed can be estimated by marking spot on fan belt and setting speed for 25 revolutions of the belt in 10 seconds.

**NOTE**—Vacuum gauge recommended for idling adjustment. Set for highest steady gauge reading.

**Float Level**—Use 9550-A gauge to set float level (1.353" end "Go", 1.322" end "No Go") measuring from underside of bowl cover to bottom of float with cover and float assembly inverted. Fuel level in bowl should be  $11/16$ " plus or minus  $1/32$ ".

**Accelerating Pump Setting**—Three holes provided for pump link connection as follows:

Inner (#1)—Min. stroke, Summer Temperatures.

Center (#2)—Medium Stroke, Normal temperature.

Outer (#3)—Max. stroke, Extreme Cold Weather.

**NOTE**—Link locked in pump rod by snap-lock. Pull link shaft out of pump rod to disengage this lock.

**Metering Jets**—Refer to Carburetor Index for Chandler-Groves (Ford) Carburetor Jet Specification Table.

**Fast Idle:** Integral with carburetor. Operated by Choke Valve lever. No adjustment required.

## CARB. EQUIPMENT

**Air Cleaner:** Ford No. 91A-9600-A, Oil-bath type.

**Servicing**—Clean and refill (to level mark on case) with same grade engine oil used in crankcase at 3500 mile intervals (when crankcase drained) or more often if required. Clean filter element by washing in cleaning fluid.

**NOTE**—Clean and re-oil filter element in oil filler cap (crankcase breather) every 1000 miles.

**Fuel Pump:** AC. Type R, Ford No. 11A-9350. Diaphragm type. Exchange Pump AC No. 541 ('46), 571 ('47).

See Carburetion Equipment Section for data.

**Pressure**— $3\frac{1}{2}$  lbs. maximum ( $1\frac{1}{2}$ — $3\frac{1}{2}$  lbs.).

**Gasoline Gauge:** King-Seeley Electric. Ford Nos.

Dash Unit—No. 59A-9280 ('46), No. 6M-9280 ('47).

Tank Unit—No. 99A-9275-B.

See Carburetion Equipment Section for data.

## BATTERY

Ford Type No. 01A-10655-A. 6 Volt, 17 Plate, 120 Ampere Hour Capacity (20 hour rate).

**Starting Capacity**—150 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 4.0 minutes.

**Grounded Terminal**—Positive (+) grounded to dash.

**Engine Ground**—Strap connector between right rear cylinder head and dash.

**Dimensions**—Length 10.56". Width 7.28". Height 8.25".

**Location**—On right side in engine compartment.

## STARTER

Ford Model No. 18-11002. Armature No. 18-11005.

**Drive**—Inboard Bendix Drive No. A1472, Ford No. B-11350.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—2 lbs. each.

**Cranking Engine**—100 RPM., 190-215 amperes.

### Performance Data

Torque	R.P.M.	Volts	Amperes
4 ft. lbs.	1070	4.6	200
8 "	660	4.3	340
12 "	300	3.65	465
14 "	Lock	3.5	500

**Starting Switch:** Ford No. 21A-11450 Magnetic Switch mounted on the dash and controlled by pushbutton switch on instrument panel, Ford No. 19A-11500.

**Removal:**—Starter mounted on right front face of flywheel housing. To remove, take off pan at right

of engine, free starter-to-oil pan support bracket, take out through-bolts on commutator end plate.

## GENERATOR

Ford Model No. 21A-10000. Armature No. 01A-10005A. Two brush (shunt) type with vibrating type voltage and current regulation. Ventilated by fan on drive pulley.

**Charging Rate Adjustment**—No adjustment. See Regulator data below.

**Maximum Charging Rate**—Controlled by regulator and dependent on battery condition and load. To check generator output, disconnect generator field lead at generator, connect both generator terminals together (use short insulated wire). Use 'BRS' set or rheostat connected across battery terminals and apply load until voltage is exactly 6 volts. Connect ammeter in charging line, run engine, check output at 2 speeds given in performance table below. Restore original connections after completing test. Do not operate generator in service with both terminals connected together. This eliminates all regulator action and will damage generator.

### Performance Data

Amperes	Engine RPM.
Start	520
30	1060
30	2500

**Rotation**—Counter-clockwise at commutator end. **Field Current**—2.1 amperes at 6.0 volts (field resistance 2.88 ohms at 70°F.).

**Brush Spring Tension**—Approximately 28 ozs.

**Removal:**—Generator mounted on bracket between cylinder banks at front of engine, driven in tandem with water pumps by Vee belt. To remove, loosen nut on bracket stud.

**Belt Adjustment:**—Loosen nut on bracket mounting stud, raise generator up until side movement on belt midway between generator and water pump pulley is  $\frac{1}{2}$ " (thumb and finger pressure).

## REGULATOR

Ford Model No. 01A-10505-C. Three-Unit Type. Consists of Cutout Relay, vibrating Voltage Regulator and vibrating Current Regulator (separate units) in single case on engine side of dash.

See Electrical Equipment Section for complete data.

**NOTE**—Regulator case is grounded through braided wire 'pigtail' or separate ground wire extending from regulator to generator frame. This ground connection must be in place when regulator being operated or tested (disturbed by removal of regulator cover).

### Cutout Relay

**Cuts In**—5.8-6.3 volts at operating temperature.

**Cuts Out**—8 ampere discharge current (maximum).

### Voltage Regulator

**Setting**—6.9-7.2 volts at 70-80° F. See Ford Regulator article in Electrical Equipment Section for voltages at other temperatures.

**Checking and Adjusting**—Refer to Electrical Equipment Index for article on 'Ford Regulator—3-unit Type' for complete instructions.

### Current Regulator

**Setting**—30-33 amperes hot (after generator has been operating for 5 minutes).

**Checking & Adjusting**—See Voltage Regulator (above).

C NTINUED ON NEXT PA E

CONTINUED FR M PRECEDING PAGE

**LIGHTING****Headlamps:** Ford "Sealed Beam" type.

Controlled by Lighting Switch on instrument panel and Beam Selector Switch on toeboard.

See Electrical Equipment Section for complete data.

**Headlamp Adjustment:** Aim upper beam of each headlamp straight ahead with hot spot centered on horizontal line 3" below lamp center height at 25 ft.**Beam Indicator:** Red Jewel on lower edge of speed-meter dial. Lighted whenever upper beam in use.**Switches****Lighting:** Ford No. 11A-11652 (Switch & Wiring), Light Switch Knob & Insert Ford No. 59A-11661.**Beam Selector:** Ford No. 11A-13532 (Switch only), No. 29A-11653 (Switch & Wiring).**Instrument:** Ford No. 19A-13740.**Stop Light:** Ford No. 11A-13480.**Bulb Specifications**

Position	Candlepower	Mazda No.
Headlamps		Sealed Beam
Parking	3	63
Instrument, Clock	1.5	55
Beam Indicator	1	51
Dome, Luggage Comp't.	3	63
Stop & Tail	21-3	1154
Rear License	3	63

**MISC. ELECTRICAL****LIGHTING CIRCUIT BREAKER:** Ford No. 11A-12250A

Combined with Ignition Resistor on block on dash under cowl. Consists of two separate circuit breaker units (one unit protects headlight circuits, second unit protects other lighting circuits) of the thermostatic and wound-coil type. Contacts open with current of 50 amperes and vibrate rapidly to control current.

**HORNS:** Ford No. 91A-13832 (High Note), 91A-13833 (Low Note). Air electric type dual horns operated by horn relay.**Horn Current:** 24-28 amperes total.**Horn Relay:** Ford No. 11A-13842D.**Contact Closing Voltage:** 3.5-4.5 volts.**Current Draw:** Approximately ¾ ampere.**ENGINE****ENGINE SPECIFICATIONS:** Own "100". Eight Cylinder, 90° Vee, "L" Head type. Cylinder banks and crankcase cast Enbloc.**Bore:** 3.187". **Stroke:** 3.75".**Displacement:** 239 cu. ins. Rated H. P. 32.5.**Developed Horsepower:** 100 at 3800 RPM.**Compression Ratio:** 6.75-1 Cast Iron Heads.**Compression Pressure & Vacuum Reading:** See Tune-up data.

► **1946-47 ENGINE SERVICE NOTES:** Cylinder Head. New type, Part No. 59A-6050-A or -B, is interchangeable right-and-left. May be identified by figures "59A" or "59A-B" on top. Heads have greater valve clearance for new cylinder block (below) and larger water holes for improved cooling (¾" hole at top center and ⅝" hole at center between #2 and #3 cylinders).

► **Cylinder Head Gasket:** New type, Part No. 59A-6051, may be identified by 5/16" round hole instead of blunt cone shaped opening at lower edge between #2 and #3 cylinder bores. This gasket must be used with new 1946 type Cylinder Head (above).

► **Cylinder Block:** New type, Part No. 59A-6010-C with valve ports located .09" farther from center line of block. May be identified by number or by oblong water passages just above valves (round on previous types).

► **CAUTION:** If the earlier type Cylinder Heads (81A, 81T, 99T, 29A) used with this block, heads must be machined out for valve clearance, and water passages in head should be enlarged for improved cooling. See Ford Shop Notes for complete data.

**OIL PAN REMOVAL:** See Ford Shop Notes.**ENGINE REMOVAL:** See Ford Shop Notes.**TIGHTENING TORQUES:** See Ford Shop Notes.**CYLINDER HEAD:** Tightening—See Ford Shop Notes.

**CYLINDER SLEEVE:** Cast iron, dry type cylinder sleeves may be used (engine may have mark "HS" on block beside inner front corner of left cyl. head). Servicing—See Ford Shop Notes.

**PISTONS:** Steel or aluminum alloy, light weight, cam ground, dome head type. Pistons are new four-ring type. Recondition engines to take finished replacement pistons (if sleeves used, replace sleeves, install new std. size pistons).

**Removal:** Pistons and rods removed from above. **Clearance:** See Fitting New Pistons.

**Replacement Pistons:** See Ford Shop Notes.

**Fitting New Pistons:** Use .50" wide feeler stock of correct thickness (see Table below) inserted between piston and cylinder wall at right angles to pin to check clearance. Pull required to withdraw feeler should be 6-10 lbs. (all types).

Engine With Sleeves	Feeler Thickness	
	Steel Piston	Aluminum Piston
New Piston & Sleeve	.003"	.003"
New Piston—Worn Sleeve	.004"	.004"
Worn Piston & Sleeve	.005"	.005"

Engines Without Sleeves	Feeler Thickness	
	Steel Piston	Aluminum Piston
New Piston & Bore	.0025"	.002"
New Piston—Worn Bore	.004"	.004"
Worn Piston & Bore	.005"	.005"

**PISTON RINGS:** Two compression, two slotted oil rings per piston (lower oil ring below pin). Upper oil ring groove slotted, lower ring groove drilled for oil drainage.

Ring	Width	End Gap	Side Clearance
Compr. (#1)	.0915-.0920"	.012-.017"	.0015-.003"
Compr. (#2)	.0915-.0920"	.012-.017"	.001-.0025"
Oil (#3, 4)	.1540-.1550"	.012-.017"	.001-.0025"

**Replacement Rings:** See Ford Shop Notes.

**PISTON PIN:** Diameter .7501-.7504" Length 2.975" (with steel pistons), 2.850" (aluminum pistons). Floating type with locking ring in piston at each end. Pin hole in rod is bronze-bushed.

**Pin Fit in Piston:** .0001-.0002" clearance (aluminum pistons), .0003-.0009" clearance (steel pistons) or light hand push fit with piston at 70°F.

**Pin Fit in Rod Bushing:** .0002-.0005" clearance (pin should pass through bushing slowly of own weight). See Ford Shop Notes for Pin Fitting directions.

**Replacement Pins:** See Ford Shop Notes.

**CONNECTING ROD:** Length 7.000". Weight 492 grams. Crankpin Journal Diameter—2.1390". Connecting rod bore diameter 2.360" (2.3597-2.3603").

**Lower Bearing Type:** Steel-backed, special alloy lined with bearing surface on both inner and outer face. Bearing floats in both rods (side-by-side

mounting). Bearing Dimensions—Length 1.747", Thickness .1095".

**Clearance:** .0015-.0035" (see Bearing Adjustment). **Sideplay:** .003-.007" (bearing endplay), .006-.014" (side clearance for both rods).

**Bearing Adjustment:** None (no shims). Do not file bearing caps. Replace bearings if less than .1085" thick, replace or hone rods for oversize bearings if worn more than .0015" over original size of 2.3597-2.3603". **CAUTION:** Both rods must be same size.

**Replacement Bearings:** See Ford Shop Notes.

**Installing Rods:** Marks on rods and bearing caps (R1, L1, etc.) must be together and installed in same numbered cylinder with marks pointing down toward oil pan.

**CRANKSHAFT:** Three bearing type with integral counter-weights.**Journal Diameters:** 2.4990" (all main bearings).**Bearing Type:** Steel-backed, special alloy lined.**Clearance:** .001-.003"

**Bearing Adjustment:** None (no shims). Replace bearings. Do not file bearing caps.

**Replacement Bearings:** See Ford Shop Notes.

**End Thrust:** Taken by rear main bearing flanges. Adjust by replacing bearing. Endplay .002-.006".

**CAMSHAFT:** Three bearing type. Helical gear drive.**Bearing Diameters:** 1.797" (all bearings).**Bearing Type:** Steel-backed, babbitted bushings.**Clearance:** .001-.002"

**End Thrust:** Taken by gear hub and thrust surface on inner face of cover plate. Adjusted by replacing cover plate. Endplay .005-.015"

**Timing Gears:** Crankshaft Gear—Cast alloy iron. Camshaft Gear—Aluminum alloy bolted-on type.

**Backlash:** .004" maximum.**Replacement Gears:** See Ford Shop Notes for Gear Oversizes & installation instructions.

**Camshaft Setting:** Mesh marked tooth of crankshaft gear in similarly marked space between teeth on camshaft gear.

VALVES:	Head Diameter	Stem Diameter	Length
All Valves	1.510"	.3095-.3105"	4.577"

	Seat Angle	Lift	Stem Clearance
Intake	45°	.292"	.0015-.0035"
Exhaust	45°	.292"	.0025-.0045"

**ENGINE**

CONTINUED FROM PRECEDING PA E

	Spring Pressure	Length
Valve Closed	37-40 lbs.	2.13"
Valve Open	76-80 lbs.	1.84"

**VALVE TIMING**

**Tappet Clearance:** .010-.012" Intake, .014-.016" Exhaust, Cold. No adjustment.

**Valve Timing:** See Camshaft Setting above.

**Intake Valves—Open AT TDC. Close 44° ALDC.**

**Exhaust Valves—Open 48° BLDC. Close 6° ATDC.**

**Valve Timing Check—No flywheel marks or other means provided to check timing. #1 intake valve should open with #1 piston on top dead center entering the intake stroke.**

**LUBRICATION**

**Engine Oiling System:** Pressure to main bearings, connecting rod lower bearings, camshaft bearings, and timing gears. Oil pump mounted in crankcase at rear of engine.

**Oil Pan Removal:** See *Ford Shop Notes*.

**Crankcase Capacity—5 quarts.**

**Normal Oil Pressure—30 lbs. at 2000 RPM.**

**Oil Pressure Regulator—Located under plug above front camshaft bearing (under manifold) and on oil pump housing (some models). Not adjustable.**

**NOTE—Check relief valve tension spring whenever engine overhauled. Replace the cylinder block relief valve spring if tension not within limits of 43-50 ozs. at 1.380" (engines without oil pump relief valve), or 78-80 ozs. at 1.380" (engines with oil pump relief valve). Replace oil pump relief valve spring tension not within 78-87 ozs. at 1.380".**

**Oil Pump:** Gear type. In crankcase at rear of engine.

► **NOTE—This new type pump, No. 41A-6600-A (for engines without oil pan baffles), has oil pressure regulator (relief valve) in pump body.**

**Oil Pump Servicing—See *Ford Shop Notes*.**

**Oil Filter:** Replace cartridge at 5000 mile intervals (Ford No. 01A-18862-A Unit).

**Oil Pressure Gauge:** King-Seeley Electric. Ford Nos.

**Dash Unit—No. 59A-9273 ('46), No. 6M-9273 ('47).**

**Engine Unit—No. 41A-9278 (80 lbs. type).**

**See *Miscellaneous Section* for complete data.**

**COOLING**

**Cooling System:** Positive circulation with two water pumps at front of engine (pump for each bank).

**Capacity—22 quarts.**

**Pressure Valve—In radiator filler cap. Opens at 3½-4½ lbs.**

**Water Pump:** Packless, centrifugal type (2 used). Mounted on front of engine (pump housing integral with front engine mounting).

**See *Water Pump Section* for complete data.**

**Removal—Drain cooling system, place support jack under engine (use wood block on jack to avoid damaging pan), remove bolt from front engine support, raise engine until no weight rests on front support. Loosen generator mounting bolt, remove drive belt. Disconnect and remove hose at pump. Remove four capscrews mounting pump on engine, lift pump out. CAUTION—One mounting screw located within water pump inlet connection (accessible with hose removed).**

**Belt Adjustment—See *Generator Belt Adjustment*.**

**Thermostat:** In each cylinder head water outlet (two used). Start to open at 150-155°F. Fully open at 175-180°F.

**Temperature Gauge:** King-Seeley Electric Ford Nos.

**Dash Unit—No. 59A-10883 ('46), No. 6M-10883 ('47).**

**Engine Unit—No. 01A-10990 (Temperature Gauge Switch—in left hand cylinder head), No. 99A-10884 (regular Engine Unit—in right cylinder head).**

**See *Miscellaneous Section* for complete data.**

**CLUTCH**

**Long Model 10CF-TI, Ford No. 19A-7563. Single plate, semi-centrifugal, dry disc type.**

**See *Clutch Section* for complete data.**

**Facings—Woven asbestos composition. I.D. 6¾". O.D. 10". Thickness ⅝".**

**Pedal Adjustment:** Pedal free travel 1-1¼". To adjust, disconnect clevis at equalizer (throw-out) shaft end of pedal connector rod, turn clevis on rod.

**Removal:** Remove Transmission (see Transmission Removal below), install wooden wedges between each release lever and cover to hold the clutch in released position, take out six capscrews mounting cover assembly on flywheel, lift out cover assembly

**TRANSMISSION**

**Own Make. Three-speed, all-helical gear type. Constant-mesh, synchro-mesh (Second & High), sliding gear (Low & Reverse).**

**See *Transmission Section* for complete data.**

**Transmission Control:** Remote control type with gearshift lever on steering column.

**See *Transmission Section* for complete data.**

**Removal:** Remove Rear Axle (see Rear Axle Removal below), remove capscrews mounting front seat track on floor, move front seat back for necessary room. Take out mounting screws in front floor pan spacer, remove spacer. Disconnect gearshift connecting rods at transmission case, disconnect and remove equalizer (clutch release) shaft. Remove capscrew and washer on end of transmission shaft (in universal joint), remove universal joint. Remove nuts and washers on engine rear support bolts. Support engine by placing jack (use wood block on jack) under rear end and raise engine sufficiently so that rear support clears mounting bolts (NOTE—remove nuts holding lower half of engine rear support assembly and remove the assembly). Take out eight capscrews mounting transmission case on flywheel housing, pull transmission straight back

**UNIVERSALS**

**Spicer Model 202-6X, Ford No. B-7090. Steel bushing type. Single joint in torque ball at transmission.**

**See *Universals Section* for complete data.**

**REAR AXLE**

**Own Make. ¾" Floating, Spiral Bevel Gear type with Torque Tube Drive.**

**See *Rear Axle Section* for complete data.**

**Ratio—3.54-1 Std., 3.78-1 & 4.11-1 Optl.**

**Backlash—.012" maximum.**

**Removal:** Raise rear end of car. Disconnect track bar. Disconnect rear spring (use spring spreader if available) by placing block under each rear spring eye and lowering car so that weight keeps spring extended and then removing spring shackle bolts and bars. Take out pin in hand brake equalizer and

disconnect hand brake cable. Disconnect hydraulic brake line at torque tube and rear shock absorber links at each wheel. Disconnect accelerator pedal, remove pedal pads, floor mat, beam control switch (take out two mounting screws), and floor pan. Disconnect speedometer cable at torque tube. Remove nuts on four universal joint ball housing bolts and two bolts holding ball cap halves together, remove ball cap. Pull rear axle back to disconnect torque tube from transmission and remove from beneath car.

**SHOCK ABSORBERS**

**Houde. Double acting, hydraulic, adjustable type. See *Shock Absorber Section* for complete data.**

<b>Houde Model Right — Ford No. — Left</b>			
Front.....	BBCN-3.....	51A-18045 .....	51A-18046
Rear①.....	BBCZ-3.....	51A-18080A .....	51A-18081A
Rear②.....	BBCZ-3.....	51A-18080B .....	51A-18081B
①—Except Sedan Delivery and Station Wagon.			
②—Sedan Delivery & Station Wagon only.			

**Adjustment:** Standard setting marked by line on face of lever hub (pointer should be aligned with this mark). Adjustment can be varied by turning pointer clockwise (for more control) or counter-clockwise (for less control) not more than 1 or 2 serrations at a time. NOTE—Stops are provided to limit adjustment in either direction.

**Refilling:** Check every 5000 miles, fill to level of the filler plug hole. Use Ford No. M-4633-B fluid only (Houde L-1404) required for these new shock absorbers (identified by round top filler plug).

**FRONT SUSPENSION**

**Front Axle:** Conventional "I" beam section type with Reverse-Elliott ends and transverse spring. Axle positioned by radius rods.

**Kingpin Inclination—8° crosswise.**

**Caster—3°. Axle may be bent cold for minor corrections providing correct tools used to prevent crushing of axle flange.**

**Camber—¾°. Adjust as for Caster (above).**

**Toe In—1/16". Adjust in usual manner by changing length of tie rod.**

**STEERING GEAR**

**Gemmer design (Model 305), Ford Make. Worm-&-Roller type with push-pull adjustments.**

**See *Steering Gear Section* for complete data.**

**BRAKES**

**Service:** Lockheed Hydraulic, self-centering, double anchor type. Hand lever applies rear wheel brakes.

► **These brakes do not have anchor pin adjustments. See *Brake Section* for complete data.**

**Drums—Composite iron and steel. Diameter 12".**

**Clearance—Least possible amount without drag.**

**Lining—Width 1.75". Thickness .187". Length per shoe 13.12" (forward shoes), 10.08" (rear shoes).**

**Hand Brakes:** See *Service Brakes* (above).

**MISC. MECHANICAL**

**Power Operated Convertible Top:** 2 types as follows:

1—Convertible—Auto-Lite electric type.

2—Sportsman Convertible—Hydro-Lectric type.

**See *Miscellaneous Section* for complete data.**

**Power Window Regulators (Sportsman Convertible):** Hydro-Lectric type.

**See *Miscellaneous Section* for complete data.**

**HOOD LOCK:** Pull T-handle under edge of instrument panel on left side, push back on safety catch under front edge of hood, raise hood.

## MODEL IDENTIFICATION

**VEHICLE NUMBER:** Stamped on plate attached to engine side of dash and on top of right frame side rail to rear of front suspension upper control arm.

## TUNE-UP

**COMPRESSION PRESSURE:** 115 lbs. at cranking speed. Maximum compression pressure 170 lbs.

**VACUUM READING:** Steady 18-21" idling at 500 RPM.

**FIRING ORDER:** 1-5-4-8-6-3-7-2. See diagram.

**SPARK PLUG GAPS:** .030" Limits .029-.032".

Plug Type—Champion H-10. 14 mm.

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.014-.016".

Cam Angle or Dwell—28-30° (closed).

Breaker Arm Spring Tension—17-20 ounces.

Advance Performance—See Distributor.

**IGNITION TIMING:** 2° BTDC.

Timing Procedure—See Ignition Timing.

**Crankshaft Pulley Mark:** Circular boss aligned with timing pin on right side of engine front cover.

**CARBURETION:** See Carburetor & Carb. Equipment.

Idle Setting—Approx. 1 turn open. Two screws—turning screws out gives richer mixture.

Idle Speed—Approximately 500 RPM.

Float Level—Fuel level  $\frac{1}{2}$ "  $\pm$   $\frac{1}{32}$ " below top edge of bowl. Use Fuel Level Gauge No. 9550-B.

Accelerating Pump—Center Hole average setting. Inner Hole for hot weather, Outer for cold weather. Fuel Pump Pressure— $3\frac{1}{2}$ - $4\frac{1}{2}$  lbs.

**MANIFOLD HEAT CONTROL:** Automatic. No adjustment. Valve located between right end of exhaust pipe cross over and right exhaust manifold.

**VALVE TAPPET CLEARANCE:** .010-.012" Intake valves, .014-.016" Exhaust, Cold. No adjustment.

Valve Timing Check—See Valve Timing.

**STARTING:** See Battery, Starter, Generator, Regulator.

## IGNITION

**IGNITION SWITCH:** Mercury No. 6A-11572-A.

Ignition Lock—Mercury No. 8H-11582-A.

**COIL:** Mercury No. 7RA-12029-A. Can type.

Location—On front lower corner of right cyl. hd.

Ignition Current—Approx. 5.2-5.7 amperes at 6 volts, stopped. Primary cir. resistance 1.05-1.15 ohms 75°.

**CONDENSER:** Mercury No. 7RA-12300-B.

Capacity—.21-.25 microfarad.

**DISTRIBUTOR:** Mercury No. 7RA-12127-C (less Cap and Rotor). New "Pressure" Distributor with spark advance controlled by vacuum diaphragm moving breaker plate to advance spark against two breaker plate springs. Operating vacuum taken from 1 carburetor connection (2 passages inside carburetor, 1 at venturi, 1 at throttle valve). Full spark advance obtained at 18-35 MPH. with normal road load or for part throttle operation at any speed.

► **NOTE**—Distributor is single contact type (no "coil loading" contacts are used).

Breaker Gap—.014-.016".

Cam Angle—28-30° (closed).

Breaker Arm Spring Tension—17-20 ounces.

Rotation—Clockwise viewed from above.

## Advance Performance (at Wide Open Throttle)

Distributor			Engine		
Degrees	Vacuum	R.P.M.	Degrees	Vacuum	R.P.M.
0°	0"	200	0°	0"	400
1¼-2¼°	0.4"	500	2½-4½°	0.4"	1000
4¼-5¼°	1.7"	1000	8½-10½°	1.7"	2000
6¼-7¼°	2.85"	1500	12½-14½°	2.85"	3000
7½-8½°	3.7"	2000	15-17°	3.7"	4000

**Distributor Removal:** Mounted at front of engine on right side. To remove, disconnect vacuum line, take out hold down screw, lift off.

## IGNITION TIMING

**Std. Setting** ..... 2° BTDC.

**Crankshaft Pulley Mark:** Circular boss on rear edge of pulley (timing pin above pulley on right side).

**Timing:** With #1 piston at firing position and timing mark on pulley aligned with timing pin on front of engine, loosen hold down screw on distributor, rotate distributor until contacts begin to open,

tighten hold down screw. Check spark plug connections (see diagram), see that rotor at #1 in cap.

► **Timing (with Neon Timing Light)**—**CAUTION**—Vacuum line must be disconnected to avoid vacuum advance operating. Mark timing pin and pulley mark with white chalk. Connect timing light to #1 spark plug. Idle engine and adjust distributor (as directed above) until mark aligned with timing pin.

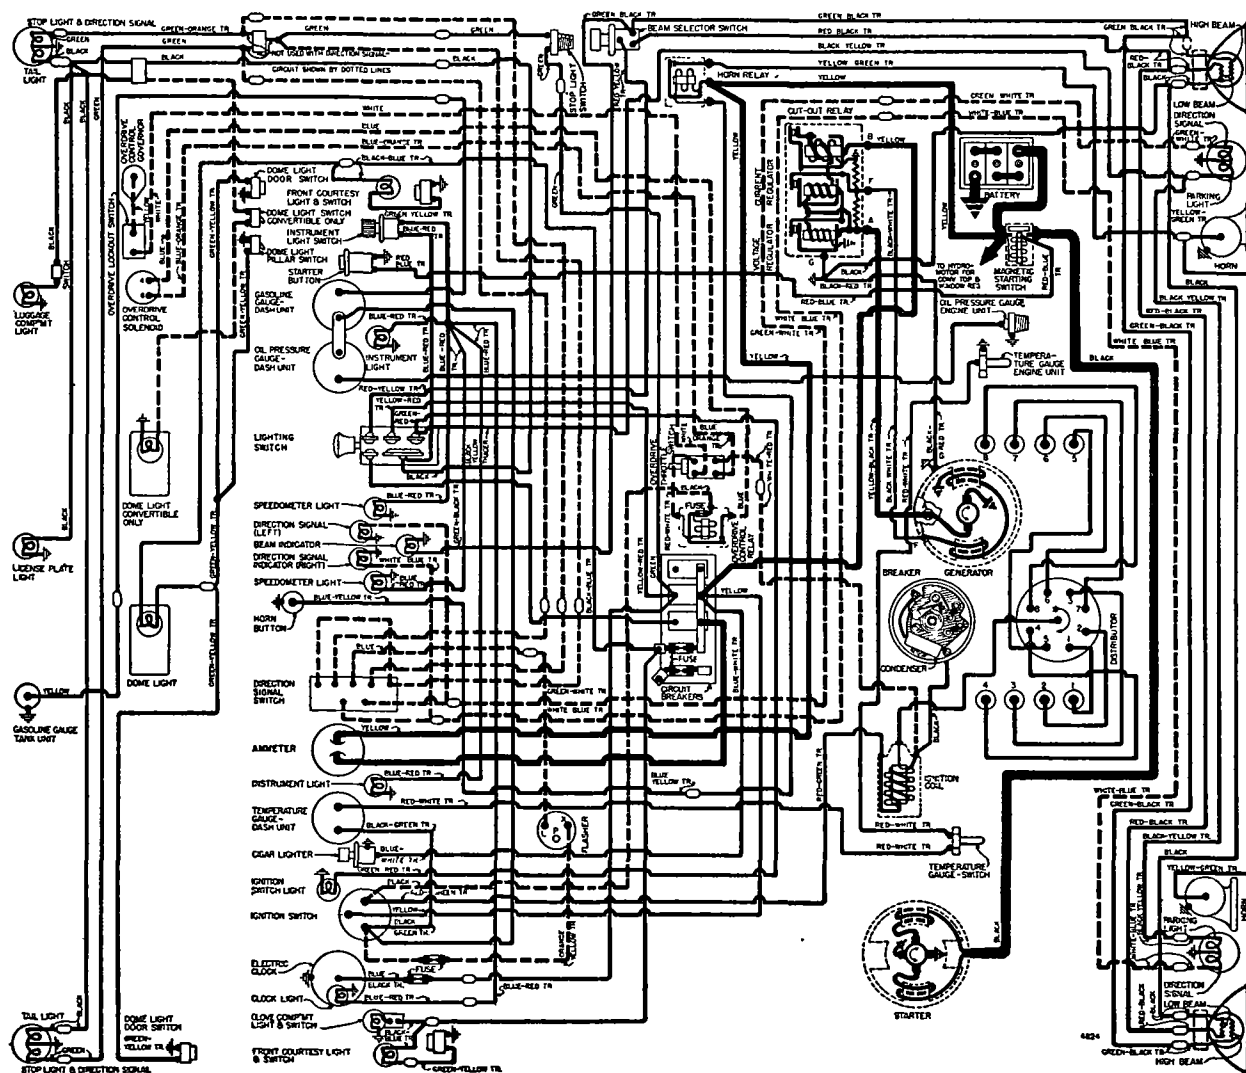

## CARBURETOR

Holley-Ford. Mercury No. 8CM-9510-A. Dual concentric (double barrel) downdraft type with Automatic Choke.

See Carburetor Section for complete data.

► **New Float & Float Spring** change for stabilizing float level—See 1949 Mercury in Carburetor Section.

► **New Main Tubes and Main Jet** change to correct flat spots or stumble on acceleration—See 1949 Mercury in Carburetor Section.

**Settings (Idle Setting, Float Level, and Accelerating Pump):** See Tune-Up data.

**Metering Jets—See Holley-Ford Jet Specification Table in Carburetor Section.**

**Fast Idle:** Holley-Ford Carburetor type.

See Carburetion Equipment Section for complete data.

**Automatic Choke:** Holley-Ford Carburetor type.

See Carburetion Equipment Section for complete data.

## CARB. EQUIPMENT

**Air Cleaner (Oil Bath):** Mercury No. 8CM-9600-A.

**Servicing (Oil Bath type)—**Clean and re-fill sump (to level mark) with same grade oil used in crankcase at 2500 miles (when crankcase drained). Occasionally wash filter in cleaning fluid.

**Fuel Pump (std.):** Mercury No. 7RA-9350-C.

**Optl. (Fuel-& Vacuum)—**Mercury No. 8CM-9350.

**Pressure—**3½-4½ lbs. (both types).

See Carburetion Equipment Section for complete data.

**Gasoline Gauge:** King-Seeley Electric.

**Dash Unit—**Mercury No. 8M-9280 (K-S #42180).

**Tank Unit (All exc. Sta. Wagon)—**Mercury No. 99A-9275-B (K-S No. 7540).

**Tank Unit (Station Wagon)—**Mercury No. 01A-9275-A, K-S No. 7748.

See Carburetion Equipment Section for complete data.

## BATTERY

**Mercury No. 8M-10655-A** 6 volt, 17 plate, 100 A. H. Zero Capacity—300 amperes for 3.3 minutes. Five Second Voltage—4.2 volts.

**Grounded Terminal—**Positive (+) terminal.

**Location—**On left side in engine compartment.

**Dimensions—**L. 10 9/16". W. 7¼". H. 8 1/16".

## STARTER

**Mercury No. 7RA-11002.** Armature No. 18-11005.

**Drive—**Bendix No. A1472 (Mercury No. B-11350).

**Rotation—**Counter-clockwise at commutator end.

**Brush Spring Tension—**20-22 ounces.

**Cranking Engine—**100 RPM., 190-215 amperes.

### Performance Data

Torque	R.P.M.	Volts	Amperes
4 ft. lbs.	1070	4.6	200
8 "	660	4.3	340
12 "	300	3.65	465
14 "	Lock	3.5	500

**Starting Switch:** Mercury No. 21A-11450 Magnetic Switch mounted on left front fender apron and controlled by panel pushbutton switch Mercury No. 6H-11500.

**Removal:** On right front face of flywheel housing cover. To remove, take off right engine splash pan (if used), free starter-to-oil pan bracket, take out 2 starter through bolts.

## GENERATOR

**Mercury No. 8BA-10002-A** (less pulley & bracket).

**Armature No.—**Mercury No. 8BA-10005.

**2 brush type with current and voltage regulation.**

**Charging Rate Adjustment—**None. See Regulator.

**Maximum Charging Rate—**30 amperes, 7 volts, reached at approximately 18.5 MPH. Controlled by regulator and dependent on load and battery condition. **To Check Generator Output—**Connect ammeter in series with charging line at regulator "ARM" terminal, connect short insulated jumper between generator "A" and "F" terminals (to short out regulator). Run engine at approximately 1500 RPM. and note ammeter reading. If generator output equals or exceeds rate output (below) generator performance is satisfactory. Remove jumper.

► **CAUTION—**Do not operate generator at higher speeds or in service with jumper connected between generator armature and field terminals. This jumper eliminates all regulator action.

### Performance Data

Amperes	Engine R.P.M.
30	1500
<b>Rotation—</b> Counter-clockwise at commutator end.	
<b>Brush Spring Tension—</b> 20-24 ozs.	

**Removal:** On support secured to valve chamber cover by stud and nut, driven by belt in tandem with water pumps. To remove, loosen stud nut and disengage generator belt, take out cap screw in mounting strap, lift generator off support.

**Generator Belt Adjustment:** Loosen 2 bolts on fan mounting bracket, loosen generator support mounting stud nut, raise generator up until side movement on belt midway between generator and water pump pulley is ½" (thumb and finger pressure), tighten stud nut. Adjust fan belt in similar manner, tighten 2 fan bracket bolts.

## REGULATOR

### Mercury Numbers

Regulator	Generator	Amperes
51A-10505-A or C	8BA-10002-A (Std.)	30-33

**Voltage-current 3-Unit types.**

See Electrical Equipment Section for complete data.

**NOTE—**Separate ground wire extending to cowl must be in place when generator operated.

### Cutout Relay

**Cuts In—**6.4-6.9 volts with engine at normal operating temperature.

**Cuts Out—**8 ampere discharge current (maximum).

**Contact Gap—.010"** (armature against upper stop).

**Air Gap—.017"** between armature and core with contacts open.

### Voltage Regulator

**Voltage Setting—**7.0-7.5 volts with engine at normal operating temperature.

**Checking & Adjustment—**See Electrical Equip. Section.

**Air Gap—.035"** between armature and core with contacts just closed.

► **CAUTION—**Make certain gauge contacts armature and not brass rivet on underside of armature.

**Contact Spring Tension—**5 ounces minimum with contacts just opening.

### Current Regulator

**Current Setting—**30-33 amperes with engine at normal operating temperature.

**Checking & Adjustment—**See Electrical Equip. Section.

**Air Gap—.035"** between armature and core with contacts just closed.

**Contact Spring Tension—**5 ounces minimum with contacts just opening.

## LIGHTING

**Headlamps:** Ford "Sealed Beam" type.

See Electrical Equipment Section for complete data.

**Adjustment—**Aim upper beams straight ahead (hot spot centers 3" below lamp center height at 25 ft.).

**Beam Indicator—**Bulb between 50 and 60 on speedometer. Lighted with Upper Beam "on".

**Direction Signal:** Std. See Electrical Equipment Section.

**Direction Indicators—**Right and Left indicators on lower edge of speedometer.

**Direction Signal Flasher—**Mercury No. 8L-13350-B.

### Switches

**Lighting—**Mercury No. 7RA-11654.

**Beam Selector—**Mercury No. 7RA-13532.

**Instrument—**Mercury No. 5EH-13740-B.

**Glove Box—**Mercury No. 8L-14413.

**Dome Light—**Mercury No. 8M-13752-A.

**Dome Light (Convertible)—**Mercury No. 8H-13754.

**Dome Light (Sta. Wagon)—**Mercury No. 5EH-13752-A.

**Door Switches—**Mercury No. 8M-13713.

**Stop Light—**Mercury No. 11A-13480.

**Trunk (with wire assy.)—**Mercury No. 8M-13546.

**Direction Signal—**Mercury No. 8L-13335 (for service use Part No. 8L-14486—includes wire assy.).

### Bulb Specifications

## MISC. ELECTRICAL

**CIRCUIT BREAKERS:** Mercury No. 8M-12258-A, No. 8H-12258-A (Convertible). Consists of the following separate circuit breakers mounted on bracket (together with 2 fuses) behind instrument panel on left side (see wiring diagram for positions on bracket):

**Headlights—**30 ampere.

**Auxiliary Lights—**15 ampere.

**Hydraulic Window, Seat Regulator, and Convertible**

**Top Switches—**15 ampere.

**FUSES:** Courtesy, Dome, & Glove Box Lights—14 ampere. On circuit breaker bracket behind instrument panel (see wiring diagram).

**Direction Signal—**14 ampere. In feed from ignition switch to flasher.

**Clock—**2 ampere. In clock feed wire.

**Overdrive—**30 ampere. On ignition terminal of overdrive relay (on dash under hood).

**Heater—**20 ampere. In lead to heater switch.

**HORNS:** Mercury No. 51A-13832-A (High Pitch, Right Horn), No. 51A-13833-A (Low Pitch, Left Horn).

Dual horns operated by relay.

**Air Gap—.027-.029"** for high pitch (right horn), .032-.034" for low pitch (left horn).

**Horn Current—**13 amperes (high pitch), 14 (low).

**Horn Relay:** Mercury No. 7RA-13853-A. On dash.

**Contact Gap—.015-.025"**.

**Contact Closing Voltage—**4 volts max.

## ENGINE

**ENGINE SPECIFICATIONS:** Own Make. Eight cylinder "L" head, 90° Vee type with both cylinder banks and crankcase cast Enbloc.

**Bore—**3 3/16". **Stroke—**4".

**Displacement—**255.4 cu. ins. **Rated HP—**32.5.

**Developed Horsepower—**110 at 3600 RPM.

**Compression Ratio—**6.8-1 cast-iron head.

**Compression & Vacuum Reading—**See Tune-Up.

**TIGHTENING TORQUES:** See Mercury Shop Notes.

CONTINUED ON NEXT PAGE

## ENGINE

## C CONTINUED FROM PRECEDING PAGE

**OIL PAN REMOVAL:** See *Mercury Shop Notes*.

**CYLINDER SLEEVES:** Not used.

**PISTONS:** Aluminum alloy, steel strut, dome head, U-slot, cam ground type.

► **CAUTION—1949 Mercury and Ford Pistons or Rings are not interchangeable.**

Weight—370 grams. Length—2.89" (exclud. dome).

Removal—Pistons and rods removed from above.

Clearance—.0005-.001". See Fitting Pistons.

Cyl. Bore Wear Limits—Out-of-round .003", Taper .006".

Replacement Pistons: Std., .0025", .020", .030", .040" OS.

Fitting Pistons: Use ½" wide feeler inserted between piston and cylinder wall at right angles to pin. Feeler thickness .0015" for New Piston in New Bore, .003" for New Piston in Worn Bore or Worn Piston in New Bore, .004" for Worn Piston in Worn Bore. Pull to withdraw feeler 6 to 12 lbs.

**PISTON RINGS:** Two compression, two slotted oil rings per piston (lower oil ring below pin). Rings are taper faced. Upper oil ring groove slotted, lower ring groove drilled for oil drainage.

► **CAUTION—1949 Mercury and Ford Piston Rings are not interchangeable (heavier rings used on Mercury).**

Ring Width End Gap Side Clearance

Compr. #1 .....154"......012-.020"......0015-.0030"②

Compr. #2 .....154"......012-.020"......0010-.0025"③

Oil #3 & 4 .....142"......008-.020"......0015-.0030"②

Worn Limit—①—.035", ②—.0040", ③—.0035".

Ring Thickness—Compression .0933", Oil .186".

Replacement Rings: Ring sets furnished standard size and .020", .030", .040" Oversize.

**PISTON PIN:** Diameter—.7503". Length—2.847".

Floating type (lock ring in piston at each end). Pin hole in connecting rod bronze bushed.

Pin Fit in Piston and Rod Bushing—.0005" clearance (new), .0015" (worn limit).

Replacement Pins: Std. size & .001", .002" Oversize.

**CONNECTING ROD:** Length—7".

Weight—524 grams (less bearings).

Crankpin Journal Diameter—2.1385". Maximum wear limits—Out-of-round .0015", taper .001".

► **Lower Bearing—Locked in (not floating type as used on earlier engines), steel-backed, copper-lead alloy lined, replaceable shells. Upper and lower halves interchangeable.**

Clearance—.0005-.003" (new), .005" (worn limit).

Sideplay—.006-.014" (new), .022" (worn limit).

► **NOTE—Replace bearing shells less than .0745" thick.**

**Bearing Adjustment:** None (no shims). Do not file caps. Replace bearings. Tang on bearing must engage groove in rod and cap.

► **PALNUT NOTE—Tighten finger tight plus 1/3 turn.**

Replacement Bearings: Standard size and .002", .010", .020", .030", .040" Undersize.

**CRANKSHAFT:** 3 bearing, 6 integral counterweights.

► **SLUDGE TRAPS—Crankpin throws equipped with sludge traps having removable plugs for cleaning.**

Journal Diameters—2.4990" (all main bearings).

Wear Limits: .0015" Out-of-round, .001" Taper.

Bearings—Steel-backed, copper-lead alloy lined, replaceable shells. Upper and lower halves alike.

Clearance—Zero-.0025" (selective fit, crankshaft to turn free). Worn limit .005" maximum.

► **NOTE—Replace main bearing shells less than .0835" thick.**

**Bearing Adjustment:** None (no shims). Do not file caps. Replace bearings. Tang on bearing must engage groove in block and cap.

**Replacement Bearings:** Standard size and .002", .010", .020", .030" Undersize. Rear mains also furnished .015" Oversize in Overall length for taking up endplay wear.

**End Thrust:** Taken by rear main bearing. Adjust by replacing bearing if endplay excessive.

Endplay—.002-.006" (new), .008" (worn).

**CAMSHAFT:** Three bearing. Helical gear drive. Distributor drive gear pressed on front end of shaft, oil pump drive gear on rear end.

► **CAMSHAFT PRODUCTION CHANGE VEHICLE NO. 9CM-826 UP—Change to REVERSE helix timing gears to give forward thrust at front end of camshaft (was to rear on early engines) providing one-way thrust to camshaft for silencing backlash. Oiling at front end of shaft modified (new front camshaft bearing position, new camshaft, and new cylinder block oil line plug). See Mercury Shop Notes for data.**

Bearing Diameter—1.7985" (replace bearing if diameter greater than worn limit of 1.8015").

**Replacement Bearings:** Standard size and .010", .015" Undersize. Undersize bearings require finish reaming.

**End Thrust:** Taken by front end of camshaft and thrust surface on inner face of cylinder front cover. Adjust by replacing cover. Endplay—.007-.016".

**Timing Gears:** Helical cast aluminum camshaft gear bolted on camshaft, cast alloy iron crankshaft gear.

► **CAUTION—Camshaft gear teeth REVERSE (L. H.) starting with Vehicle No. 9CM-826 (R. H. teeth used before this number).**

**Replacement Camshaft Gears—Furnished standard size and in following Oversizes: .006" OS (L. H. and R. H. teeth), .010" (R. H. teeth), .012" (L. H. teeth).**

**Camshaft Setting:** Mesh marked tooth of crankshaft gear with marked space on camshaft gear.

**VALVES:** Head Diameter Stem Diameter Length  
Intake .....1.515"......3410"①......4.8175"  
Exhaust .....1.515"......3410"①......4.8140"

Seat Angle Lift Stem Clearance

All Valves .....45"......338"......0015-.0035"②

Wear Limit—①—.3375". ②—.005" Int., .006" Exh.

► **REPLACEMENT VALVES—Exhaust valves furnished for replacement to be used for ALL VALVES.**

Valve Seat Inserts—Used on all valves.

**Valve Guides:** One piece type positioned and retained by "C" washer. Inside diameter .344". Outside diameter 1.031". Distance from top of valve seat to upper end of guide 1.116".

**Valve Lifters:** Barrel type operating in guide holes in cylinder block.

Diameter—.9992" (replace if worn to less than .9977"). Length limit after resurfacing end 1.728".

Clearance—.0007-.0016" (new), .003" (worn limit).

**Valve Springs:** Coated springs used.

Spring Pressure—37-40 lbs. (closed), 76-80 (open).

Spring Test—37-40 lbs. at 2.125". Free length 2.41".

## VALVE TIMING

**Tappet Clearance:** .010-.012" Intake, .014-.016" Exhaust, Cold. No adjustment.

**Valve Timing:** See Camshaft Setting above.

Intake Valves—Open 10° BTDC. Close 50° ALDC.

Exhaust Valves—Open 50° BLDC. Close 10° ATDC.

NOTE—Clearance for checking timing .015".

**Valve Timing Check—Intake valve opens 10° BTDC. Valve timing mark location on crankshaft pulley.**

## LUBRICATION

**Engine Oiling System:** Pressure to main bearings, connecting rod lower bearings, camshaft bearings, timing gears and distributor drive gear. Piston pins and valve lifters lubricated by splash. Oil pump mounted in crankcase at rear of engine.

► **CAUTION—Vehicle No. 9CM-826 and Up use solid Cylinder Block Front Oil Line plug (plug with oil hole used on early engines). See CAMSHAFT PRODUCTION CHANGE in Mercury Shop Notes for complete data.**

Crankcase Capacity—5 quarts (refill).

Normal Oil Pressure—50 lbs. at 2000 RPM.

**Oil Pressure Relief Valve:** In oil pump body. Not adjustable.

Spring Tension—15 lbs. 2 ozs. to 15 lbs. 6 ozs. at 1.14".

NOTE—Cylinder block oil relief valve not used.

**Oil Pump:** Gear type (two types: spur gear or helical gear types). In crankcase at rear of engine.

**Oil Filter:** On left cylinder head. Replace cartridge each 5000 miles or more often if required.

Oil Filter Cartridge—Mercury No. 8CM-18662.

**Oil Pressure Gauge:** King-Seeley Electric.

Dash Unit—Mercury No. 8M-9273.

Engine Unit—Mercury No. 41A-9278.

See *Miscellaneous Section* for complete data.

**Crankcase Ventilation:** Filter element in oil filler breather cap (inlet), and in outlet pipe below fan. Servicing—Wash screen in cleaning fluid and wet with engine oil when dry at oil change period (2500 miles).

## COOLING

**Cooling System:** Pressure type with relief valve in filler cap and two belt-driven pumps (one for each bank) with re-circulating by-pass.

Capacity—22.25 quarts.

**Pressure Valve—In radiator filler cap, Mercury No. 26H-8100-B (AC #846740). Opens at 3½-4½ lbs.**

**Water Pumps:** Two used. Centrifugal, belt-driven packless type. Shaft mounted on pre-packed ball-bearing at front, and bushing next to seal. Oil cup provided for bushing lubrication.

See *Water Pump Section* for complete data.

► **CAUTION—WATER PUMP LUBRICATION: Oil cup provided on each pump which should be filled with SAE #20 engine oil when new and every 1000 miles. Use length of wire inserted in oil cup when oiling (ordinary oil can does not reach).**

**Fan Belt Adjustment—Loosen 2 fan mounting bracket bolt nuts, raise fan up until side movement of belt midway between fan and crankshaft pulleys is ½".**

**Generator (& Water Pump) Belt Adjustment—See GENERATOR.**

**Thermostats:** Two used (one in each cylinder head water outlet). Mercury No. 8RT-8575-A.

Setting—Starts to open 148-153°F. Fully open 168-173°F.

**Temperature Gauge:** King-Seeley Electric.

Dash Unit—Mercury No. 8M-10883.

Engine Unit—Mercury No. 8A-10990 (switch in right bank), No. 8A-10884 (reg. unit left bank).

See *Miscellaneous Section* for complete data.

## CLUTCH

**Borg & Beck Model 10A7, Mercury No. 8CM-7563.** Single plate, dry disc type with Borglite driven member.

**Cover Number—988** stamped on cover.

*See Clutch Section for complete data.*

**Facings—Moulded.** Inside diameter 6 $\frac{3}{4}$ ". Outside diameter 10". Thickness .125".

**Pedal Adjustment:** 1.00" pedal free travel.

**Removal:** Remove transmission (see TRANSMISSION Removal below). Take out cover mounting bolts, lift assembly out.

## TRANSMISSION

**Own Make.** 3-speed, all helical gear type. Constant-mesh, synchro-mesh (Second & High), sliding gear (Low & Reverse).

*See Transmission Section for complete data.*

**Transmission Control:** Steering column mounted shift.

*See Transmission Section for complete data.*

**Removal:** Disconnect rear universal, slide propeller shaft out of transmission. Disconnect clutch, transmission and speedometer linkage. Support rear of engine and disconnect rear engine mounting from frame. Take out eight transmission-to-flywheel housing cap screws and remove transmission.

## OVERDRIVE

**Warner Model AS1-R10C (Overdrive only).** Optl. equipment. Overdrive is solenoid operated type (no centrifugal pawls) with Governor Control and throttle operated "kick-down."

*See Transmission Section for complete data.*

**Solenoid—Mercury No. 8M-6916.**

**Control Relay—Mercury No. 8M-6915.** On engine side of dash. 30 ampere fuse on ignition terminal.

**Lock-Out Switch—Mercury No. 8M-6917-A.**

**Throttle Kick-down Switch—Mercury No. 8A-6918.**

**Governor—Mercury No. 8M-6919.**

**Removal:** Same as for Std. transmission (above) after disconnecting overdrive control cable and wiring.

## UNIVERSALS

**Mechanics Type 2CR.** Needle bearing type. 2 used.  
*See Universals Section for complete data.*

►**NOTE—Slip joint formed by splined yoke of front universal engaging transmission mainshaft (or overdrive shaft). One-piece propeller shaft used.**

## REAR AXLE

**Own Make.** Semi-floating, hypoid gear type with Hotchkiss drive (separate carrier not used). Axle ends flanged (no separate hub). Wheel bearings are sealed-ball pre-lubricated (no lubrication required).  
*See Rear Axle Section for complete data.*

**Ratio—Standard:** 3.9-1 (43-11). With Overdrive: 4.27-1 (47-11). Station Wagon: 4.55-1 (50-11).

**Backlash—.003-.008".** Shim adjustment.

**Removal:** Raise rear of car. Disconnect rear universal. Remove axle shafts (see instructions below). Disconnect brake line at "T" on left side of axle housing, and hand brake cable. Disconnect shock absorbers, spring U-bolts and shackles. Remove axle housing assembly from car.

**Axle Shaft Removal:** Remove wheel. Take out drum to hub cap screws, remove drum. Take out 4 axle retainer nuts (work through opening in axle shaft flange). Use Puller No. 4235 and pull shaft (do not disturb brake backing plate or damage wheel bearing oil seal). Replace one nut to secure backing plate.

## SHOCK ABSORBERS

**Std.—Mercury 8M-18045-A (front), 8M-18080-A (rear).**

**Heavy Duty (special equip.)—Mercury No. 8M-18045-B (front), 8M-18080-B (rear).**

Direct acting, hydraulic types. Two makes are used and are interchangeable.

*See Shock Absorber Section for complete data.*

►**NOTE—Shock absorbers are permanently sealed and cannot be refilled or repaired.**

**Rear Shock Absorber Installation—**Lower tube has welded stone shield on lower end which must be installed toward front of car.

## FRONT SUSPENSION

**Front Suspension:** Independent, linked parallelogram type with coil springs, direct acting shocks, and front stabilizer.

*See Front Suspension Section for complete data.*

►**CAUTION—Specifications listed below supersede earlier 1949 Mercury Front End Specifications.**

**Kingpin Inclination—5°** crosswise.

**Caster—Pos. ½° to Neg. 1°.** Threaded bushing adjustment at lower pivot pin.

**Camber—0° to +¾°.** Eccentric adjustment at upper pivot pin.

**Toe In—3/32-5/32".** Adjusting sleeve on outer end of each tie rod. Adjust equally.

**Steering Geometry (toe out on turns)—**Inner wheel turned 36°, outer wheel 26°5'.

## STEERING GEAR

**Gemmer Model 335.** "3-tooth" Worm-and-roller type with "push-pull" adjustment.

*See Steering Gear Section for complete data.*

## BRAKES

**Service:** Mercury-Bendix Hydraulic, Duo-Servo, Single Anchor type without eccentric adjustment. Hand lever applies rear wheel service brakes.

*See Brake Section for complete data.*

**Wheel Cylinders—Diameter:** Front wheel 1.128" (hone limit 1.132"). Rear wheel 1.003" (hone limit 1.005").

**Drums—Diameter 11".**

**Lining—**Molded or woven. Width 2" (front wheel), 1¾" (rear wheel). Thickness 3/16". Length per shoe 11 15/16".

**Clearance—.010"** at each end of secondary shoe with primary shoe forced out against drum (adjusting screw in each wheel backed off 14 notches or "clicks" from point where shoes drag on drum).

**Braking Power—56%** front wheels, 44% rear.

**Hand Brake:** See Service Brakes above.

## MISC. MECHANICAL

**Power Operated Convertible Tops, Windows, & Front Seat:** Hydro-Lectric type (hydraulic actuation with motor-driven pump supplying oil under pressure for power cylinders).

*See Miscellaneous Section for complete data.*

**HOOD ASSEMBLY****1940 MODELS**

**HOOD LOCK:** Engine hood hinged at cowl and lifts from forward end. To raise hood, turn latch handle located on lower edge of radiator grille at center and release safety catch (under hood) at upper edge of grille.

**1941-48 MODELS**

**HOOD LOCK:** Alligator type hood hinged at cowl. Hood lock button located on left side under instrument panel. Removable hood side panels used.

**FRONT END SHEET METAL****1940 MODELS**

**FRONT END ASSEMBLY REMOVAL:** Radiator core, grille and front fenders can be removed as an assembly for work on front of engine, if necessary, by loosening fenders, core, and side shields.

**CYLINDER HEAD****1948 & EARLIER MODELS**

**INSTALLING CYLINDER HEAD:** Use a Torque Indicating Wrench to tighten cylinder head stud nuts, tighten in correct sequence as shown in the diagrams. Cast Iron heads could be tightened cold and rechecked after the engine has been run and thoroughly warmed up.

Cylinder Head Gasket—Always use new gasket. Coat gasket with very light application of Perfect Seal Gasket Paste to insure tight seal between head and block.

NASH '600'

NASH 6

NASH 8

**Tightening Torque—**See Tightening (Torque Wrench) Specifications below.

**1937-41 MODELS**

**REPLACEMENT CYLINDER HEADS FOR OLDER CAR MODELS:** Cylinder heads as used on later cars

are furnished for replacement on some earlier car models (with special attaching parts) as follows:

Series 3720 (1937): Use Service Part No. 3111950 with Part No. 3123400-A (includes 4760 Cylinder Head).

Series 38, 39, 4020 (1938-40): Use Service Assembly Part No. 3123400-A (includes 4760 Cylinder Head and attaching parts).

Series 38, 39, 40, 4180 (1938-41): Use 4280 Cylinder Head and gasket and install Washer WA-1035 under each rocker arm shaft stud spacer to maintain original angular movement of valve push rods.

**TIGHTENING (TORQUE WRENCH) SPECIFICATIONS****1942-48 MODELS**

Cylinder Head Stud Nuts:	Ft. Lbs.	In. Lbs.

**ENGINE REMOVAL****1948 MODELS**

**ENGINE REMOVAL:** Remove hood. Drain cooling system, remove radiator and hose connections from engine. Disconnect fuel line at fuel pump, and exhaust pipe at manifold flange. Disconnect throttle controls and remove linkage from engine. Disconnect oil pressure and temperature gauge lines at engine units. Disconnect wiring at ignition coil and generator. Remove crankcase ventilator. Take out front and rear engine mounting bolts. Disconnect clutch linkage (under car), disconnect transmission (see Transmission Removal on car model page for complete instructions). Lift engine out of car using care not to damage engine accessories.

**ENGINE MOUNTINGS****1941-48 "600" MODELS**

**Front Engine Mounting:** Consist of shackles insulated with rubber bushings (upper end attached to engine support plate by bushing welded to support, lower end attached to bracket bolted to front frame cross-

member) with rubber bumper between frame bracket and bushing to limit movement of shackle mounting.

**Installation & Adjustment—**Tighten retaining nuts on shackle studs securely. NOTE—Studs provided with shoulders to limit compression of rubber bushings.

**Rear Engine Mounting:** Consists of rubber and steel support cushion (upper and lower channel sections with live rubber cushion vulcanized to both parts) bolted to transmission case (upper channel), and to body frame cross-member (lower channel). Oil shield is installed on top of support to protect support cushion. Clutch housing is also insulated from engine block (see Clutch Housing Insulator).

**Installation—**See that oil seal installed with depressed edge forward (to clear transmission case), tighten mounting bolts securely.

**Clutch Housing Insulator:** Consists of a live rubber pad installed between clutch housing and engine block (upper) and additional pad between engine block and adapter plate (lower). Upper mounting studs (3) provided with limiting sleeves to prevent excessive compression of the rubber pad. Tighten stud nuts securely and lock with palnuts. NOTE—No bolt used in hole on right hand side of housing just above dowel bolt (omitted to permit proper functioning of insulators).

**1941-47 AMBASSADOR MODELS**

**REPLACEMENT (1948 TYPE) ENGINE NOTE:** When installing 1948 engines in these models, see Replacement Engine Mounting data (following original mounting data).

**Front Engine Mounting (Original Type):** Consists of rubber cushion in retainer mounted on frame cross-member by four studs and nuts. Cushion has steel insert (for engine support capscREW) and loose rubber insert plug in lower face of cushion to stabilize cushion action. Cushion block has rectangular projection to control engine torque which must be installed toward left side and square projection of steel insert must register with locating washer welded on front engine support.

**Installation & Adjustment—**See that loose rubber insert in place in cushion and that torque reaction projection on cushion toward left side, align square projection on steel insert with locating washer on engine support, install capscREW and lockwasher, shift retainer until it just contacts torque projection on cushion, tighten retainer stud nuts securely.

**Rear Engine Mounting (Original Type):** Consists of upper and lower rubber cushions assembled on stud welded to frame cross-member and support bracket bolted to flywheel housing at each side. Mounting stud has shoulder to limit compression of rubber cushions.

**Installation & Adjustment—**Install lower (larger) cushion on stud under engine support bracket with steel face down and upper end piloted in steel retainer on lower face of bracket, install upper cushion on stud above bracket with steel face up and small end seated in counterbore in bracket, install lockwasher and nut on stud, tighten nut securely (shoulder on stud limits compression of cushions).

### 1941-47 AMBASSADOR MODELS

**REPLACEMENT ENGINE MOUNTINGS:** When installing 1948 Series Engines in these cars, 1948 type engine mountings must be used (see 1948 Mounting data), and front support must be modified as follows:

**Installing 1948 Mountings on 1941-47 Cars—**Cut off two front original retainer mounting studs to height of 7/32" (to serve as alignment dowels) or install two No. 3125208 dowel studs in these holes. Install new Support Brackets (No. 3124614 L.H. & 3124615 R.H.), piloting bracket on dowel studs, using original rear mounting studs, or two No. SC-3430 cap-screws in bracket rear holes. Weld bracket to front of frame cross-member across entire 2" front width (CAUTION—Rubber cushions must be removed from bracket to avoid damage from heat of welding). Lower engine until cushion studs project through slots in chain cover spacer, tighten cushion-to-bracket stud nuts securely, install reinforcing plates No. 3124598 on cushion studs, install lockwasher and nut, tighten nut securely.

### 1948 AMBASSADOR MODELS

**Front Engine Mounting:** New type cushion assembly consisting of outer "U" shaped steel section with integral stud (bolts to engine support plate), and inner plate with separate stud (bolts to bracket on cross-member) with rubber insulator bonded to both parts.

**Installation & Adjustment—**With cushion assembled on frame bracket, lower engine until cushion studs project through slots in engine support plate, tighten cushion-to-bracket stud nuts, then install reinforcing plates on cushion studs and tighten stud nuts.

**Rear Engine Mounting:** Consist of similar rubber cushions on angular brackets welded to frame cross-member and attached to clutch housing by bolts. NOTE—1948 type engine has new clutch housing and frame cross-member for this new mounting.

## ORIGINAL BORE & PISTONS

### 1939-48 MODELS

**ORIGINAL BORE SIZE (ENGINE CODE)** Engines factory equipped with .010" oversize bore (or undersize bearings) are marked with a three-letter code for identification. Standard size engines do not have this code mark.

**Code Mark Location—**Code mark consists of three letters stamped near water temperature gauge engine unit mounting ("600" Models), on engine number pad (Amb. Models).

**Letter Position—**Bore (and piston) size is indicated by first letter of the three-letter code.

**Size Identification—**Letters indicate following:

"A"—Standard size Bore and Pistons.

"C"—.010" Oversize Bore and Pistons.

NOTE—The other two letters of the three-letter code designate main and connecting rod journal and bearing sizes (see Original Bearing Sizes).

### 1942-48 MODELS

**ORIGINAL BORE AND PISTON SIZES:** Original cylinder bore and piston sizes (standard size and .010" Oversize) are graded in steps listed in table below and are marked by letters. Bore and piston carry same mark. Difference in diameter between

piston and cylinder bore gives the desired .0003-.0009" clearance. Marks located as follows:

**Piston Mark—**Letter stamped on piston head.

**Cylinder Bore Mark—**Letter stamped on exhaust pipe bosses on side of block (#1, 3, and 5 ahead of stud hole in bosses, #2, 4, 6 to rear of stud hole).

Standard Size Bore & Piston		.010" Oversize Bore & Piston	
Mark	Size	Mark	Size
A	0—	CA	+10—
B	0	CB	+10
C	0+	CC	+10+
D	+1—	CD	+11—
E	+1	CE	+11
F	+1+	CF	+11+
G	+2—	CG	+12—
H	+2	CH	+12
I	+2+	CI	+12+

**Model "600" Note—**Cylinder Bore & Piston dimensions for standard 'B' and 'CB' sizes are as follows:

**Piston Diam.—**3.1244-3.1247" (B), 3.1344-3.1347" (CB).

**Cylinder Bore—**3.125-3.1253" (B), 3.135-3.1353" (CB).

## PISTONS

### 1940 MODELS

**REPLACEMENT PISTONS:** Nash finished replacement pistons furnished in the following sizes:

Standard	.010" Oversize
.001" Oversize	.012" Oversize
.002" Oversize	.015" Oversize
.003" Oversize	.020" Oversize
.005" Oversize	

**Semi-finished Pistons—**Furnished in one size only—.050" Oversize. These pistons must be finished on suitable machine equipment.

**Installation Note—**Pistons must be installed with slot in skirt away from camshaft and trademark on inside of piston toward front of engine. Pin bosses in piston offset toward camshaft.

### 1941 MODELS

**REPLACEMENT PISTONS:** Finished autothermic type pistons on Models 4140 and 4160, invar-strut type pistons on Model 4180, furnished in the following sizes:

Standard size	.010" Oversize
.001" Oversize	.012" Oversize
.002" Oversize	.015" Oversize
.003" Oversize	.020" Oversize
.005" Oversize	.040" Oversize

**Installation Note—**Pistons on all models must be installed with Nash emblem inside skirt toward the front of the engine.

## PISTON RINGS

### 1940 MODELS

**REPLACEMENT PISTON RINGS:** Nash replacement piston rings furnished in the following three sizes:

1—Standard. 2—.010" Oversize. 3—.020" Oversize.

**Installation—**Car manufacturer recommends that these Sealed Power Spring Type Rings be used as follows:

**Standard—**For standard up to and including .010" Oversize pistons.

**.010" Oversize—**For .011" Oversize up to and including .020" Oversize pistons.

**.020" Oversize—**For .021" Oversize up to and including .030" Oversize pistons.

**NOTE—**When installing rings, check to following specifications: End Gap—.010-.020" for compression rings; .010-.018" for oil control rings. Side Clearance in ring groove—#1 Compression .002-.0025", #2 Compression .0015-.003". #3 Oil Control .0015-.0025". #4 Oil Control .001-.0025".

### 1941 MODELS

**PISTON RINGS: Installation—**A plain top compression ring is used on all models and must be installed with bevel on upper inner edge toward top of the piston. A taper faced compression ring is used in second ring groove with a plain expander installed behind it. This ring should be installed with taper extending out toward the bottom. In #3 & 4 ring grooves (one oil control ring only used on '600') slotted type oil rings with a ventilated type expander installed behind ring is used. Ring fit correct with .010-.015" End Gap and .002-.004" Side Clearance. Stagger end gaps of rings and expanders on piston.

### 1941-48 MODELS

**REPLACEMENT PISTON RINGS:** Statite piston rings furnished by car manufacturer for service. These rings can be installed in cylinder bores up to .009" taper or .003" out-of-round for correction of excessive oil consumption using same pistons.

## ORIGINAL BEARING SIZES

### 1936-48 MODELS

**ORIGINAL BEARING SIZES (ENGINE CODE NOTE):**—Engines factory-equipped with oversize bores or undersize main or connecting rod bearings carry a three letter code for identification. Standard engines carry no code mark.

**Code Mark Location—**Three letter code stamped on machined surface near water temperature gauge engine unit mounting ("600" Models), on engine number pad on upper right corner of engine block (Amb. Models).

**Letter Position—**Three letter code used. Position of letter indicates the following:

1st Letter—Original Bore Size.

2nd Letter—Main Bearing Journal Size.

3rd Letter—Crankpin Journal Size.

**Size Identification—**Letters indicate following:

'A'—Standard size (bore or bearing sizes).

'B'—.010" Undersize (main or con rod bearings).

'C'—.010" Oversize (bore size with .010" OS Pistons).

NOTE—.010" Undersize bearings fitted to .010" Undersize main bearing and crankpin journals. .010" Oversize pistons fitted to .010" oversize bores.

## CONNECTING ROD & BEARINGS

### 1948 & EARLIER MODELS

**PLASTIGAGE FOR CHECKING BEARING CLEARANCE:** Consists of plastic rod material supplied in envelope marked with scale which gives bearing clearance in thousandths of an inch when used to measure flattened plastigage in bearing cap. Use Plastigage as follows:

**Bearing Clearance Check—**Remove bearing cap, wipe oil from bearing insert and journal (CAUTION—When checking main bearings, keep all other

CONTINUED ON NEXT PAGE

## C NTINUED FR M PRECEDING PA E

bearing caps tight so that crankshaft weight will not cause incorrect reading). Place piece of Plastigage rod across full width of bearing insert in cap, re-install bearing cap and tighten bolts to recommended torque (see Tightening Specifications). Remove cap, match widest width of flattened Plastigage with correct graduation of scale on envelope (marking of this graduation is clearance).

## 1940-48 MODELS

**CONNECTING ROD: Bearing Removal & Installation.** Removable bearing shells used. To remove bearings, take off bearing caps, remove bearings from rod and cap. Fit bearings as directed below. When installing bearings, oil hole in upper half should register with oil spit hole in rod. Tongue on each bearing should engage groove in rod and cap.

**Replacement Bearings**—Finished bearings furnished standard and .002", .010" undersize.

**Fitting Bearings**—To check bearing clearance, insert short piece of .002" feeler stock, ½" wide, lengthwise to crankpin between bearing and crankshaft, tighten cap. Bearing fit correct when a definite drag is felt when rotating the crankshaft. (CAUTION—Do not rotate crankshaft more than 1" in either direction). If no drag felt, replace bearings with proper size (see Replacement Bearings above) until bearing fit correct. Do not shim bearings or file bearing caps.

## 1941-48 MODELS

**INSTALLING CONNECTING ROD PALNUTS:** Palnuts used to lock connecting rod bolt nuts in place of cotter pin. Tighten bolt nuts to 27-30 ft. lbs. tension on '600', 50-55 ft. lbs. tension on Amb. 6 & 8, with a tension wrench. Lock bolt nuts in place by installing new palnuts. Install with smooth face toward nut, draw nut up tight but do not overtighten.

## CRANKSHAFT &amp; MAIN BEARINGS

## 1940-48 MODELS

**MAIN BEARING REMOVAL & INSTALLING:** Upper bearing half may be 'rotated' out by inserting pin in oil hole in crankshaft and turning shaft in the direction of locating tongue on bearing. Bearings can be installed by reversing removal procedure.

**Replacement Bearings**—Finished bearings which require no reaming or scraping are furnished standard size and .002", .010" undersize.

**Fitting Bearings**—To check bearing clearance, insert short piece of .002" feeler stock, ½" wide, lengthwise to crank pin between bearing and crankshaft, tighten cap. Bearing fit correct when a definite drag is felt when rotating crankshaft (CAUTION—Do not rotate crankshaft more than 1" in either direction). If no drag felt, replace bearings with proper undersize (as listed above) until bearing fit correct. Do not shim bearings or file caps. NOTE—If filing of caps necessary, car manufacturer recommends that this be done carefully without removing too much metal.

## 1940-48 MODELS

**REPLACEMENT MAIN BEARING CAPS:** In extreme emergencies, replacement main bearing caps can be installed if fitted as directed below. Bearing caps

are line-bored in production and original bearing caps should be retained if possible.

**Replacement Main Bearing Caps**—On 6 cyl. engines replace caps as follows: Align bore in cap with bore in crankcase by filing sides of cap (caps fit in recess in block). To assure correct alignment, cap retaining screws should be tightened, then backed off slightly and crankshaft rotated allowing cap to be properly positioned, tighten retaining screws to 66-70 ft. lbs. tension with tension wrench.

**Replacement Main Bearing Caps**—On 8 cylinder, install caps on engine, tighten retaining screws, back off screws slightly, line up dowel holes in cap and crankcase (original caps doweled in place when bearings line-bored) to align bore in cap with bore in crankcase, tighten screws to 70-73 ft. lbs.

## 1940-48 MODELS

**CRANKSHAFT REAR OIL SEALS:** Install new seals with rear main bearing cap off (and crankshaft out of engine when replacing upper half) as follows:

**Rear Main Bearing Oil Seal ('600')**—Hemp packing fitted in groove in crankcase and cap behind oil slinger on crankshaft. Cap sealed with rubber plugs in groove on each side where cap fitted in recess in block. Use Tool J-1610 to install packing in groove in cap and block. Place packing in groove (with bearing shell removed), place small diameter of tool over packing, hit end of tool with lead hammer to seat packing, cut ends of packing flush with bearing cap seat, remove tool. Repeat operation for groove in block. Install rubber seal plugs on each side of bearing cap (on 4840 with angle seal, make certain that seal also seated in horizontal groove in block).

**Rear Main Bearing Oil Seal (Amb. 4860)**—New type steel-backed, synthetic rubber seal. Install upper half in block, lower half in bearing cap, making certain that seal fits snugly over edge of rear bearing oil-return groove. See that surface on crankshaft to rear of oil slinger (on which seal bears) is clean and smooth. Install rubber seal key strips on either side of bearing cap (these strips overlap bearing cap and seal sides and mating surfaces of bearing cap in crankcase).

**Rear Main Bearing Oil Seal (Ambassador 6, 1940-47)**—Reverse threaded oil slinger formed on crankshaft rotates in line with cored groove in block and cap. No seal installed in this groove. Groove in cap provided with two 13/32" diameter oil return holes. Cap sealed with straight grain pine wood seal plugs installed in groove on each side of cap where cap fitted in recess in block. With bearing cap off, check clearance between oil slinger threads and bore in block and cap. Clearance must be .006-.008" uniformly around shaft to provide eccentric oil thread. If clearance too small, file crankshaft thread (CAUTION—Do not alter bore in block and cap for clearance adjustment). Clean seal plug grooves in cap to provide flat and smooth surfaces. After bearing cap installed, place gasket compound on inner end of plug, tap plug carefully in place in groove on each side of cap, cut off ends of plugs flush.

**Rear Main Bearing Oil Seal (Ambassador 8, 1940-42)**—Reverse threads cut on the crankshaft behind oil slinger. Slinger turns in line with cored groove in block and cap. No seal installed in this groove. Groove in cap provided with oil return holes. Clear-

ance between threads (behind oil slinger) and bore in block (behind oil slinger groove) should be .006-.008". Check with cap off engine. If clearance too small file threads on crankshaft. Cap sealed to oil pan with cork gasket. Rear edge of cap sealed to flywheel housing pan by an additional cork gasket.

**Crankshaft Sprocket Installation:**—Sprocket should be heated for installation on crankshaft. When re-assembling timing chain make certain that sprocket marks are adjacent and in line with a straightedge across the crankshaft and camshaft centers.

NOTE—Sprocket should be heated to 212° F. (temperature of boiling water).

## 1941-48 "600" MODELS

**CRANKSHAFT END THRUST PLATE ('600'):** Crankshaft end thrust taken by flanged edges of front bearing. A steel thrust plate is assembled between rear face of timing chain sprocket and flanged face of front bearing. Plate keyed to shaft by woodruff key which also secures sprocket on shaft. When plate installed, chamfered edge on inner diameter should face toward the rear for tight fit against bearing journal. See Crankshaft Front Oil Seal and Vibration Dampener for assembling directions. Adjustment—If endplay not correct with all parts correctly assembled, replace front main bearings or thrust plate.

## 1941-48 MODELS

**CRANKSHAFT FRONT OIL SEAL: "600" & Amb. 6.** A felt seal is fitted in the timing chain cover which bears against vibration dampener hub. Seal seat in cover has inner edge turned up to form a shedder on inside of cover. An oil slinger is assembled behind vibration dampener hub which extends over outer edge of oil shedder. Use Tool J-1430 installed on end of crankshaft when tightening timing chain cover screws to align seal properly. NOTE—On '600' Model a cork seal and rubber seal ring is assembled behind vibration dampener to seal front end of crankshaft. See Vibration Dampener below for data.

**Model 4180**—Oil threads formed on rear of vibration dampener hub with an oil slinger assembled behind hub. A steel-bushing is assembled in opening in timing chain cover. Use Tool J-1430 installed on end of crankshaft when tightening timing chain cover screws to align steel bushing properly.

## VIBRATION DAMPENER

## 1940 MODELS

**VIBRATION DAMPENER:** Rubber cushioned vibration dampener mounted on forward end of crankshaft. Dampener is drilled for lubrication. Car manufacturer recommends that 2 brass filler plugs in outside diameter of dampener flywheel be removed and filled with light engine oil at 3000 mile intervals.

## 1941-48 MODELS

**VIBRATION DAMPENER: "600" & Amb. Six.** Non-adjustable, rubber-cushioned vibration dampener mounted on forward end of crankshaft. Outer flywheel secured to dampener hub by rubber-cushioned bolts. On '600' Model, a cork seal and rubber seal ring installed between front end of crankshaft and hub retainer. Hub assembly installed as follows: Lock hub on shaft with woodruff key, install large lockwasher with notches on inner edge, cork seal, rubber seal ring and hub retainer in recess in hub, install hex head lock screw with helical

lockwasher under it in screw hole in end of crankshaft and tighten screw securely. On Amb. Six, dampener hub retained by a special nut with shake-proof lockwasher (no seals installed behind hub retainer as on '600'). On all models, rubber block retaining bolt nuts on front face of dampener hub must be drawn up tight. No adjustment provided. **IMPORTANT NOTE**—When installing front flywheel on hub, timing marks must be in line with hub key-way and on the same side. Whenever new front flywheel installed, balance holes must be duplicated as to size and depth for proper balance.

**Amb. Eight**—Adjustable, rubber-cushioned vibration dampener mounted on forward end of crankshaft. Consists of hub retained on end of crankshaft by a special nut. Pulley secured to front face of hub by four screws. Two rubber cushions assembled on each screw, rear half installed with shoulder toward hub, front half with shoulder toward circular ring. This ring fits in recess on front face of pulley and screw holes are provided for assembling ring under screws. All four screws should be drawn down evenly and inner ends (on rear side of hub) should be peened to lock screws in place. Screw tension can be adjusted to eliminate knock caused by vibration dampener. Fan belt tension should be checked first since excessive belt tension will cause dampener to knock. Two oil wicks under brass plugs on outer edge of dampener should be oiled every 2000 miles. Remove plugs, saturate oil wicks with light engine oil.

**CAUTION**—See Important Note above.

## CAMSHAFT & BEARINGS

### 1940 MODELS

**CAMSHAFT REMOVAL:** For camshaft removal or camshaft bearing replacement, remove as follows: Remove radiator, grille, and hood side panel for access to engine. Remove fan belt, vibration dampener, timing chain cover, timing chain, distributor and fuel pump. On Ambassador Eight, take off the oil pump and pump driveshaft. Remove front camshaft bearing (takes camshaft end thrust), raise valve lifters to clear camshaft journals and withdraw camshaft from front of engine. **NOTE**—When re-assembling oil pump and pump driveshaft on Ambassador Eight, slot in end of pump driveshaft (for distributor coupling) should be across the engine.

### 1941-48 MODELS

**CAMSHAFT REMOVAL:** Amb. "600". Special valve tappet retaining clips (supplied in sets of 16—Tool No.

J-1612) available for camshaft removal without necessity of removing valves or cylinder head. Clips should be installed on upper ends of valve lifters and will hold lifters up out of the way while the camshaft is being withdrawn.

**CAMSHAFT REMOVAL:** Amb. Six. Remove pushrods. Remove valve cover on side of engine, lift up each valve lifter and use rubber band to hold lifters up out of the way while the camshaft is being withdrawn.

## VALVE SYSTEM

### 1941-48 MODELS

**SELF-LOCKING TAPPET SCREWS "600":** No locknut used on tappet adjusting screw. Threaded bushing welded to top of tappet with threads out of index with threads in tappet which locks tappet screw in position. Screw tension should be 50 inch lbs. minimum to retain tappet adjustment. Check with tension wrench. Tappet screws supplied separately, however car manufacturer recommends replacement of complete tappet assembly.

## OIL PAN REMOVAL

### 1941-42 MODELS

**NASH "600":** Disconnect both the front shock absorbers at upper end, remove nuts on upper ends of suspension units and lift off front suspension upper cross-rod (extending across engine directly above cylinder head), disconnect accelerator rod between carburetor and dash. Drain cooling system, disconnect upper radiator hose. Remove front four oil pan cap screws, install support jack under engine at front engine support (directly behind vibration dampener), disconnect front engine support by removing bolts in mounting shackle. Raise front end of engine approximately 4". Remove all oil pan cap screws, lower pan and remove from beneath car.

**CAUTION**—Check Front Suspension after oil pan replaced and front suspension upper cross-rod reinstalled. See 1941-42 Nash "600" article in Front Suspension Section.

## OIL PUMP

### 1948 MODELS

**OIL PUMP (AMB. SIX):** Pump is mounted on center main bearing cap and must be dismantled for removal as follows:

**Oil Pump Disassembly & Removal:** Take out pump mounting screws, withdraw pump body and idler gear assembly (shaft will remain in engine). Withdraw shaft from below disengaging drive gear from

splines on upper end of shaft as shaft is withdrawn. Gear is free fit on shaft splines and can be lifted out after it is freed from the shaft. Pump operates in thin wall bushing pressed in block (upper), in pump body (lower). Remove and replace bushing from below with pump and shaft out of engine. Ream bushing to diameter of .500" after installation.

**CAUTION**—Excessive clearance of shaft in bushing will result in low oil pressure (pump oil delivery is up along shaft to oil channel in block—upper bushing prevents oil leakage from channel).

**Oil Pump Assembly & Installation:** Make certain that loose thrust ball installed in pump body at lower end of pump shaft. Install pump in reverse order of disassembly and removal instructions (above).

### LATE 1947 MODELS

► **OIL PUMP PRODUCTION CHANGE:** New larger capacity, higher-pressure pumps used beginning with late 1947 cars as follows: "600" Series 40—Serial No. K-182791, Eng. No. KE-34134 Up; Amb. Series 60—Serial No. R-457798, Eng. No. RE-20512 Up.

► **CAUTION**—Pump parts not interchangeable (parts furnished for both early and later type pumps).

**Pump Identification**—Pumps can be distinguished by length of pump gears as follows: First Type—1 $\frac{1}{4}$ ". Later Type—1 $\frac{3}{4}$ ". Later type pump also has shaft undercut to provide for the greater oil delivery flow.

## CLUTCH NOTES

### 1946 "600" STARTING SERVICE SERIAL NO. N6-125727

### 1947-48 "600" MODELS

**CLUTCH LINKAGE ADJUSTMENT:** Linkage consists of a clutch beam lever (idler lever), pivoted in a channel-section clutch beam support, which transmits clutch pedal movement to clutch throw-out fork. Beam support is hooked over a beam support plate mounted on the engine (inner end), and rests on a beam fulcrum plate assembly mounted on the steering gear housing (outer end). Beam support is held in position by a beam anchor spring hooked in lug on fulcrum plate mounting stud. Beam fulcrum plate must be properly positioned or beam support will climb out of support plate hook and cause clutch chattering. Adjust as follows:

**Beam Fulcrum Plate Adjustment**—Install spacing washers, as required, between beam anchor spring plate and steering gear housing so that beam support is centered on its two support points. See that pull of beam anchor spring is parallel to beam fulcrum plate.

## MODEL IDENTIFICATION

**SERIAL NUMBER:**—First No. (Model 3640) C-1001 (3640A) C-9501. On right frame side rail under engine hood and on Caution Plate on left front door corner plate.

**ENGINE NUMBER:**—Stamped on plate on right front of crankcase below valve cover plate.

## TUNE-UP

**COMPRESSION:**—Ratio—5.58-1. No optional ratios. Pressure—125 lbs. at 350 R.P.M.

**VACUUM READING:**—Gauge should show steady reading of 18-20" with engine idling.

**FIRING ORDER:** 1-5-3-6-2-4. See diagram.

**SPARK PLUGS:** AC Type G-8. 18 mm. Metric. Gaps—.025" (.030" cars with radio). NOTE—In some cases performance has been improved by setting the gaps at .020" in the field.

**IGNITION:** See Coil, Condenser, and Distributor.

**Breaker Gap**—.020" (.018-.020") Cam Angle 38° closed  
**Automatic Advance**—12° (distr.) maximum at 1000 Distributor RPM.

**IGNITION TIMING:** See Ignition Timing.

**Std. Setting**—10° BTDC (early cars), TDC (later cars). IGN mark on vibration dampener at front of engine. NOTE—Time cars with red plate on side of distributor housing reading "CAUTION—SET IGN. ON DC" as directed, regardless of IGN mark location.

**CARBURETION:** See Carburetor & Carb. Equipment.

**Idle Setting**—Idle speed 5-7 MPH. Adjust idle screw for smooth idle.

**Float Level**—Fuel level  $\frac{5}{8}$ " below edge of bowl.  
**Accelerating Pump**—2 or 3 holes. Inner (Summer), Outer (Winter).

**Fuel Pump Pressure:**  $3\frac{1}{2}$  lbs. maximum.

**VALVES:** See Valve Timing.

**Tappet Clearance**—.015" all valves with engine hot or cold.

**STARTING:** See Battery, Starter, and Generator.

## IGNITION

**Ignition Switch:**—Mitchellock Model 24-B, Type 6708. Connected to coil by armored cable.

**Ignition Lock:**—Briggs & Stratton Model 50184, Mitchell No. 6760.

**COIL:** Auto-Lite IG-4626 (Early), IG-4626-A (Later).  
**Ignition Current**— $2\frac{1}{2}$  amperes idling, 4 stopped.

**CONDENSER:** Auto-Lite Part No. IGB-1025.

**Capacity**—.20-.25 microfarad.

**DISTRIBUTOR:** Auto-Lite Model IGB-4328A or IGB-4328B. Single breaker, 6 lobe cam, full automatic advance type.

**Breaker Gap**—Set at .020". Limits .018-.020".  
**Cam Angle or Dwell**—38° closed, 22° open (distr.).  
**Breaker Arm Spring Tension**—16-20 ounces.

**Automatic Advance—IGB-4328-A and B**  
Distributor Engine

Degrees	R.P.M.	Degrees	R.P.M.
Start	300	0	600
3	390	6	790
7	500	14	1000
10	800	20	1600
12	1000	24	2000

**Removal:**—Distributor mounted on right side of cylinder head. To remove, loosen locknut and take out mounting setscrew on side of cylinder head opposite distributor.

## IGNITION TIMING

**IGNITION TIMING:**—Flywheel Degs. Piston Pos.  
First Cars (see note) 10° BTDC. .0415" BTDC.  
Later Cars . . . . . At TDC. .0000" TDC.

**NOTE:**—On all cars with a red plate reading "Caution—Set IGN. on DC." on the side of the distributor housing, the later ignition setting must be used regardless of the location of the 'IGN' line on the vibration dampener. On late cars the IGN. and DC. lines on the vibration dampener coincide.

**Timing (first cars without 'Caution' Plate):**—With #1 piston on compression, turn engine over until piston is 10° before top dead center, stop when 'IGN' line on vibration dampener at front of engine lines up with pointer on chain case cover. The 'IGN' mark is the first line, the second line indicates top dead center for pistons #1 and 6. Loosen locknut and setscrew on side of cylinder

head, rotate distributor until contacts begin to open, tighten setscrew and locknut.

**Timing (later cars with Caution Plate):**—With #1 piston on compression, turn engine over until piston reaches top dead center, stop when 'DC' line on vibration dampener at front of engine lines up with pointer on chain case cover (if the dampener also marked 'IGN' at point 10° before 'DC' line, the 'IGN' line should be disregarded and the ignition set at the second or 'DC' line; on late cars the two lines coincide). Loosen locknut and set screw on side of cylinder head, rotate distributor until contacts begin to open, tighten setscrew and locknut.

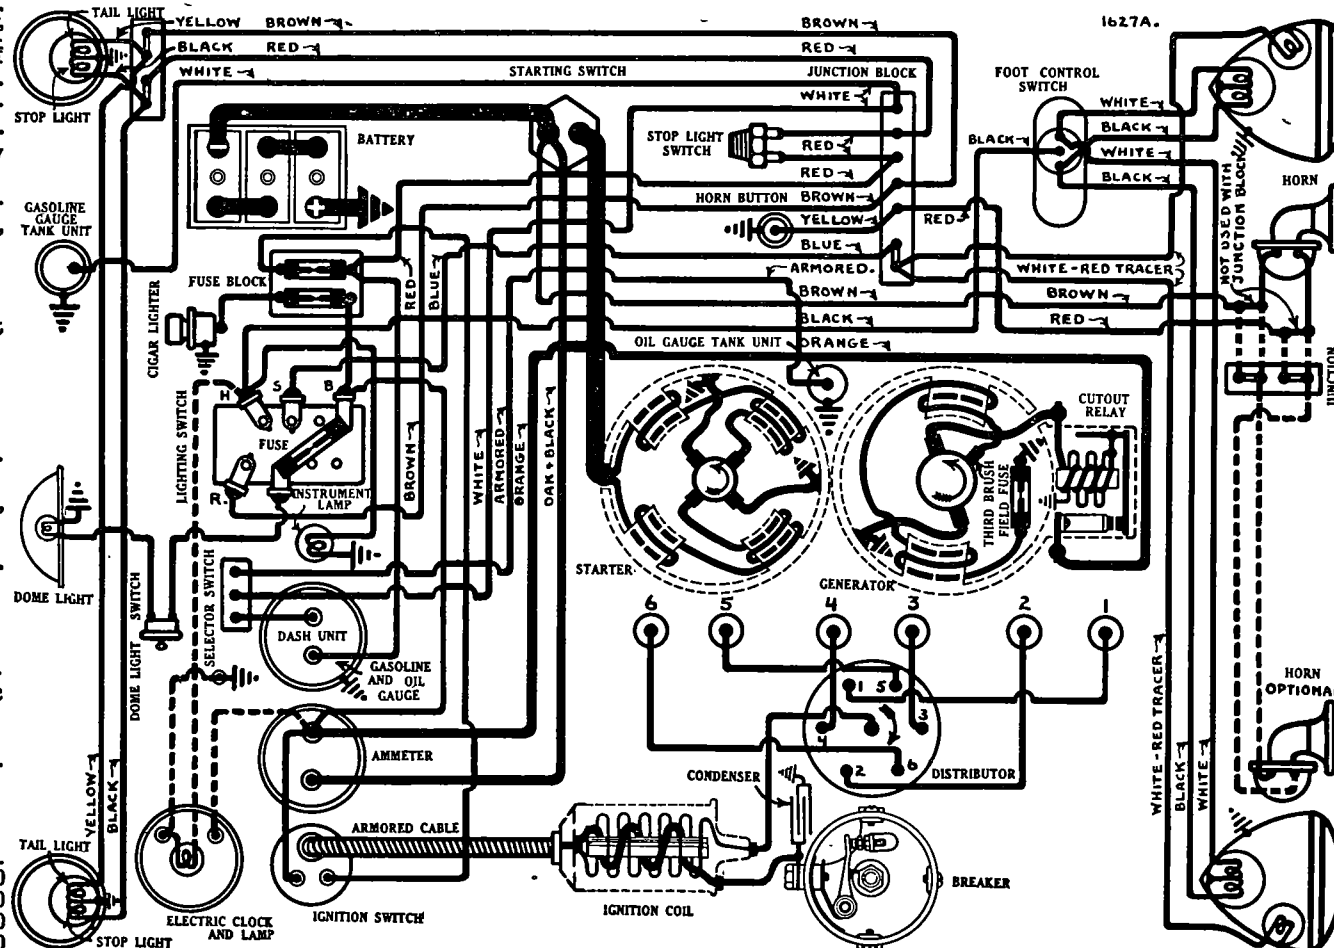

## CARBURETOR

**Stromberg Model EX-22 (3640), AX-2 (3640A).** Single barrel, downdraft types with manual choke control.

**For complete data, refer to Carburetor Index.**

**NOTE:**—Do not adjust carburetor until engine is thoroughly warmed up and choke valve is wide open.

**Idle Adjustment:**—Adjust throttle stopscrew so that idle speed is 5-7 M.P.H. Turn idle adjusting screw

MODEL 3640

in until engine begins to hesitate or miss, then out until engine begins to roll, finally turn screw in slowly until engine fires smoothly. Readjust throttle stopscrew for correct idling speed.

**Accelerating Pump Setting**—Engage pump link in proper hole in throttle lever for seasonal requirements as follows:

#1—Inner hole (Min. stroke)—Extremely hot temperatures.

#2—Center hole (Med. stroke)—Normal summer temperatures.

#3—Outer hole (Max. stroke)—Winter temperatures.

### CARB. EQUIPMENT

**Air Cleaner**—AC. #152967 oil-wetted type standard.

Heavy duty oil-bath type optional.

**Fuel Pump**—AC type R #1521454 (3640), #1522133

(3640A RHD). Type W #1522152 (3640A LHD).

For complete data, refer to *Carburetion Equip. Index*.

**Gasoline Gauge**—Auto-Lite Electric Gasoline & Oil Level Gauge. No. NG-7822D (Dash Unit), NG-7441T (Gasoline Tank Unit), NG-7465 (Oil Level Engine Unit). For data, refer to *Carburetion Equip. Index*.

### BATTERY

U.S.L. Type KW-13A (3640), Type KL-1-13 (3640A). 6 volt, 13 plate, 96 (KW-13A), 100 (KL-1-13) ampere hour capacity (20 hour rate).

**Starting Capacity**—106 amperes (KW-13A), 120 amperes (KL-1-13) for 20 minutes.

**Grounded Terminal**—Positive (+) terminal is grounded to frame and to transmission cover bolt. **Location**—On left side under driver's seat.

### STARTER

Auto-Lite Models MAB-4068 or Model MAB-4076. Armature No. MAB-2057.

MODEL 3640A

**Drive**—Inboard Bendix Type LCD11FX-10.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—42-53 ozs. (new brushes).

### Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	3700	5.5	60
0.6 "	1910	5.0	100
3.4 "	1100	4.5	200
6.6 "	695	4.0	300
10.15 "	420	3.5	400
15.8 "	Lock	3.0	582
22.5 "	Lock	4.0	775

**Starting Switch**—Model SW-4001 (MAB-4068), SW-4005 (MAB-4076). Mounted on left side of engine below clutch pedal. Operated by depressing clutch pedal fully. No adjustment required.

**Removal**—Starter flange mounted on left front face of flywheel housing. To remove, take out two flange mounting capscrews.

### GENERATOR

Auto-Lite Models GAR-4618-2, GAR-4601-5 or GAR-4634-2. Third brush control types.

**Armature Nos.** GAR-2155 (4618), GAR-2214 (others).

**Charging Rate Adjustment**—Take off commutator cover band, shift third brush by hand counter-clockwise to increase, or clockwise to decrease charging rate. Third brush held in position by friction.

**Maximum Charging Rate**—18 amperes (cold), 16 amperes (hot), 8.0 volts. 2300 R.P.M.

### Performance Data—GAR-4618-2 and 4634-2

Cold			Hot		
Amps.	Volts	R.P.M.	Amps.	Volts	R.P.M.
0	6.4	800	0	6.4	800
4	6.8	940	4	6.85	960
8	7.15	1125	8	7.25	1160
12	7.5	1380	12	7.65	1500
16	7.85	1740	16	8.0	2300
18	8.0	2250			

### Performance Data—GAR-4601-5

Cold			Hot		
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	720	0	6.4	780
4	6.8	860	4	6.8	925
8	7.25	1000	8	7.25	1125
12	7.7	1160	12	7.7	1350
16	8.1	1360	16	8.1	1680
20	8.5	1660	19.2	8.4	2600
22.4	8.8	2300			

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—50-60 ozs. max.

**Field Current**—3.7-4.1 amps. (GAR-4618 & 4634), 3.51-3.89 amperes (GAR-4601-5) at 6.0 volts.

**Motoring Current**—4.94-5.46 amps. (4618 & 4634), 5.07-5.57 amperes (GAR-4601-5) at 6.0 volts.

**Field Fuse**—5 ampere on generator frame.

**Removal**—Generator cradle mounted at left front of engine with fan belt drive. Water pump impeller mounted on generator shaft. To remove, drain radiator, take out water pump mounting bolts or remove water pump cover screws. Slack off belt adjustment. Loosen mounting clamp band, lift out generator and water pump.

**Belt Adjustment**—Adjust when slack or sideplay of belt midway between generator and fan pulleys exceeds 1½". To adjust, loosen two capscrews on fan bracket, lift bracket up (pivots on one screw) until sideplay is approximately 1", tighten capscrews.

C NTINUED N NEXT PA E

## CONTINUED FROM PRECEDING PAGE

**CUTOUT RELAY**

**Auto-Lite CB-4014.** Mounted on generator.  
For complete data, refer to *Electrical Equipment Index*.  
**Cuts In**—6.5-7.25 volts, 800 R.P.M.  
**Cuts Out**—5-2.5 ampere discharge current.  
**Contact Gap**—.015-.045".  
**Air Gap**—.010-.030" with contacts closed.

**LIGHTING****M DEL 3640**

**LIGHTING**:—Soreng-Manegold Switch, Model 5820-A.  
**R.B.M. Foot Control Switch.** Foot operated control switch used to control headlamp upper and lower beams. Headlamp bulbs are pre-focused

**Bulb Specifications**

Position	Candlepower	Mazda No.
Headlamps	32-21	2320C
Parking, Instrument	3	63
Stop and Tail	21-3	1158
Dome	3	64 (DC.)

**LIGHTING****MODEL 3640A**

**LIGHTING**:—Headlamps—Corcoran-Brown, Pre-focused type. Foot selector switch controls upper and lower beams.

**Switches**

**Lighting**—Soreng-Manegold Model A-5820-A.  
**Foot Selector**—H. A. Douglas.  
**Stop Light**—Motometer Hydraulic #58012. Nash Part No. 47601.

**Bulb Specifications**

Position	Candlepower	Mazda No.
Headlamps	32-32	2331
Stop and Tail	21-3	1158
Parking, Instrument	3	63
Dome	6	81

**MISC. ELECTRICAL****MODEL 3640**

**FUSES**:—Lighting—20 ampere on back of switch.  
**Generator Field**—5 ampere on generator frame.  
**Accessory**—One or two 20-ampere fuses on fuse block mounted on steering column support in back of instrument panel.

**MISC. ELECTRICAL****M DEL 3640A**

**FUSES**:—Lighting—20 ampere on fuse block on back of instrument panel.

**Stop Light and Gasoline Gauge**—20 ampere on fuse block as above.

**Generator Field**—5 ampere on generator frame.

**ENGINE**

**ENGINE SPECIFICATIONS**:—Own 'Monitor Sealed Motor.' Six cylinder, 'L' head type. Cylinders cast en bloc. No intake manifold is used and intake passage is formed within the head and block castings.

**Bore**—3 $\frac{3}{8}$ ". **Stroke**—4 $\frac{3}{8}$ ".

**Displacement**—234 cubic inches.

**Rated Horsepower**—27.34 (SAE).

**Developed Horsepower**—90 at 3400 R.P.M.

**Compression Ratio and Pressure**—5.58-1 std. cast-

iron head. Pressure—125 lbs. at 350 R.P.M.

**Vacuum Reading**—Gauge should show steady reading of 18-20" with engine idling at 5-7 M.P.H.

**PISTONS**:—Bohnalite, aluminum alloy, Invar strut, split skirt type.

**Length**—3 $\frac{3}{8}$ ".

**Weight**—19 $\frac{1}{8}$  ounces.

**Removal**—Pistons and rods removed from above.

**Clearance**—Skirt .002". See Fitting New Pistons.

**Fitting New Pistons**:—Use .002" feeler stock inserted between piston and cylinder wall on side opposite slot to check clearance.

**Installing Pistons**:—Slot should be toward left or away from camshaft.

**PISTON RINGS**:—Two compression rings, two oil control rings per piston, all above pin.

Ring	Width	End Gap
Comp. All	$\frac{1}{8}$ "	.010-.025"
Oil Cont. (#3)	$\frac{1}{8}$ "	.010-.025"
Oil Cont. (#4)	$\frac{3}{16}$ "	.010-.025"

**PISTON PIN**:—Diameter— $\frac{7}{8}$ ". Pin floats in piston and rod. Pin hole in rod is bronze-bushed. Pins furnished for service standard, .001", .003", .005" oversize.

**Pin Fit in Piston**—Light push fit with piston heated.

**Pin Fit in Rod Bushing**—.0001" or light push fit with piston and rod cold.

**CONNECTING ROD**:—Length—8 $\frac{3}{4}$ " (center-to-center).  
**Weight**—36 $\frac{1}{4}$  ounces.

**Upper Bearing (Piston Pin Bushing)**—Bronze.

**Crankpin Journal Diameter**—2".

**Lower Bearing**—Interchangeable, steel-backed, bab-bitt or copper-lead lined type. Shims used.

**Clearance**—.002-.003". Sideplay .008-.012".

**Bearing Adjustment**:—Shims. Do not file rods or caps. Replace bearings when necessary.

**CRANKSHAFT**:—7 bearing. Integral counterweights.

**Journal Diameters**—2 31/64" all bearings.

**Bearing Type**—Interchangeable, steel-backed, bab-bitt or copper-lead lined, shims used.

**Clearance**—.002-.0025".

**Bearing Adjustment**:—Shims. Do not file caps. Replace bearings when necessary.

**End Thrust**:—Taken by center (#4) bearing. Endplay .004-.007".

**CAMSHAFT**:—8 bearing. Non-adjustable chain drive.

**Journal Diameters**—#1, 1 $\frac{7}{8}$ "; #2, 2 13/64"; #3, 2 11/64"; #4, 2 9/64"; #5 2 7/64"; #6, 1 $\frac{3}{4}$ ".

**End Thrust**:—Taken by front bearing (shoulder formed on shaft behind bearing, and shoulder in front of bearing formed by sprocket hub when bolted on camshaft). Adjusted by replacing bearing.

**Timing Chain**:—Whitney. Double strand roller chain. Width 9/16". Pitch  $\frac{3}{8}$ ". Length 22 $\frac{1}{2}$ " or 60 links.

**Camshaft Setting**:—Sprockets are marked. Mesh chain with sprockets turned so that marks are adjacent and in line with a straightedge across the shaft centers. Install chain endless with camshaft sprocket off engine.

**VALVES**:— **Head Diam.** **Stem Diam.** **Seat Width**

**Intake** ..... 1 21/32" ..... 3/41" ..... 1/16"

**Exhaust** ..... 1 17/32" ..... 3/41" ..... 1/16"

**Seat Angle** **Lift** **Stem Clearance**

**Intake** ..... 45° ..... 5/16" ..... .002"

**Exhaust** ..... 45° ..... 5/16" ..... .002"

**VALVE TIMING**

**Tappet Clearance**:—.015" all valves with engine hot or cold.

**Valve Timing**:—See Camshaft Setting above.

**LUBRICATION**

**LUBRICATION**:—Pressure. Gear type oil pump located in crankcase.

**Normal Oil Pressure**:—25 lbs. (10 lbs. idling).

**Oil Pressure Relief Valve**:—Located on oil pump.

**Operates at 25 lbs.** Adjustable by turning screw.

**Crankcase Capacity**:—7 qts. (refill).

**CLUTCH**

**CLUTCH**:—Borg & Beck Model 9A6. Single plate, dry disc type. See article in Clutch Section for relining and assembling directions.

See *Clutch Section for complete data*.

**Facings**—Woven (pressure plate side), molded (flywheel side), 2 required. Inside Diam 5 $\frac{5}{8}$ ". Outside Diam. 9 $\frac{1}{4}$ ". Thickness .133".

**Adjustment**—Free movement of clutch pedal must be  $\frac{1}{2}$ -1". Adjust whenever free movement is less than  $\frac{1}{2}$ ". To adjust, loosen transverse bolt at lower end of clutch pedal, shift pedal position, tighten bolt.

**Removal**—Disconnect driveshaft at rear of transmission, remove transmission, drop clutch housing underpan, take out capscrews mounting clutch on flywheel turning all screws out evenly to release spring pressure. Clutch assembly can then be removed from below without removing flywheel housing.

**FRONT SUSPENSION**

**Front Suspension**:—Conventional 'I' beam section front axle with Reverse-Elliott ends and semi-elliptic springs.

**Kingpin Inclination**—7° crosswise.

**Camber**—0-1 $\frac{1}{2}$ ". No adjustment.

**Caster**—0-1°. Adjust by inserting wedge shims between spring and spring pad on axle.

**Toe In**—0- $\frac{1}{8}$ ". Adjust by loosening clamp bolt at right end of tie rod and screwing tie rod in or out of end joint. Tighten clamp bolt.

**STEERING GEAR**

**Steering Gear**: Gemmer Worm-and-Roller type.

See *Steering Gear Section for complete data*.

**BRAKES**

**BRAKES**:—Service—Bendix Hydr., Duo-Servo, single anchor type. Hand lever applies rear service brakes.

See *Brake Section for complete data*.

**Drum Diameter**—10".

**Lining**—Moulded type. Width 2". Thickness 3/16". Length 22 1/16" per wheel.

**Clearance**—.010" between drum and lining.

**Hand Brake Adjustment**:—Should be adjusted whenever service brakes adjusted. Turn adjusting screw in wheel so that shoes are tight in drum. Loosen two bracket bolts, pull hand brake lever on three notches, pull bracket forward removing all slack in cables and tighten bolts. Then with lever in released position readjust shoes to give .010" clearance in drums by checking with feeler gauge through slot in drum.

**MODEL IDENTIFICATION**

**SERIAL NUMBER:**—First number—R-303301. On right hand frame side rail under engine hood.

**ENGINE NUMBER:**—On plate on right hand side of crankcase. Serial number (R-303301 up) on right hand frame side rail under engine hood.

**TUNE-UP**

**COMPRESSION:**—Ratio—5.25-1 Cast-iron head.  
Pressure—125 lbs. at 350 R.P.M.

**VACUUM READING:**—Gauge should show steady reading of 18-20" with engine idling.

**FIRING ORDER:** 1-5-3-6-2-4. See wiring diagram for spark plug cable connections on distributor cap.

**SPARK PLUGS:** AC Type K-12 or No. 47 (std.), Type K-7 or No. 45 (cars with Overdrive). 14 mm. Metric. Gaps—.025" (.030" cars with radio).

**IGNITION:** See Coil, Condenser, and Distributor.  
**Breaker Gap**—.020". Limits .018-.020". (.020-.024" for first 1000 miles with new contacts).  
**Cam Angle**—35° closed (for each set of contacts).  
**Synchronization**—Set movable contacts to open simultaneously with stationary contacts.  
**Automatic Advance**—9° max. at 680 RPM (IGE-4012A), 9° max. at 1000 RPM (IGE-4012B). Distr. ° and RPM.

**IGNITION TIMING:** See Ignition Timing.  
**Std. Setting**—Stationary contacts open with 'IGN' mark (or first line) on vibration dampener aligned with pointer at front of engine. Both sets of contacts should open simultaneously.

**CARBURETION:** See Carburetor & Carb. Equipment.  
**Idle Setting**—Set idle adjusting screw midway between "miss" and "roll" points. Idle speed 7-8 MPH.  
**Float Level**—Fuel level 9/16" below edge of bowl.  
**Accelerating Pump**—Inner hole (Summer), outer (winter).

**Fuel Pump Pressure:** 3½ lbs. maximum.

**VALVES:** See Valve Timing.  
**Tappet Clearance**—.015" with engine hot. Set clearance with engine idling.

**STARTING:** See Battery, Starter, Generator, Regulator.

**IGNITION**

**Ignition Switch:**—Oakes Hershey type co-incident ignition switch and steering post lock.

**COIL:** Auto-Lite Model CE-4402A (2 used). On dash  
**Ignition Current**—2 amperes (running), 4 amperes (stopped) for each coil.

**CONDENSER:** Auto-Lite Part No. IG-2671 (2 used).  
Capacity—.20-.25 microfarad.

**DISTRIBUTOR:** Auto-Lite IGE-4012A, IGE-4012B (after serial number R-303971 and R-303920 excepting cars R-303058 to 304077 inclusive). Double breaker, 6 lobe cam, full automatic advance type. Contacts open simultaneously to fire both spark plugs in each cylinder at the same instant. Each set of contacts controls one coil and fires one spark plug in each cylinder. Contacts must be synchronized—see Timing.

**Breaker Gap**—Set at .020". Limits .018-.020".

**Cam Angles**—Closed 35°. Open 25° (distributor). Each set operates independently and controls one coil.

**Breaker Arm Spring Tension**—16-20 ounces.

6	740	12	1480
9	1000	18	2000

**Distributor Removal:**—Mounted on right side of crankcase. To remove, take out hold-down screw in advance arm.

**IGNITION TIMING**

**IGNITION TIMING:**—Stationary Contacts—With #1 piston on compression, turn engine over until 'IGN' mark on vibration dampener at front of engine lines up with pointer on chain case cover. The second line indicates top dead center. Loosen advance arm clamp bolt, rotate distributor until fixed contacts (mounted directly on breaker plate) begin to open, tighten clamp bolt. Then check synchronization of movable contacts.

**Synchronization (Movable Contacts)**—Movable contacts (mounted on sub-plate) should open at the same instant as the fixed set (see above). After timing stationary contacts, and without disturbing

CONTINUED ON NEXT PAGE

## C CONTINUED FROM PRECEDING PAGE

position of crankshaft or distributor, loosen lock-screws on movable sub-plate carrying the second set of contacts, shift plate by prying with a screw-driver inserted in the slot in the edge of the plate until contacts begin to open, tighten lock-screws.

**CARBURETOR**

**CARBURETION:**—Carburetor—Stromberg Model EX-32, 1½" downdraft type with manual choke control. See Carburetion Section for adjustment, overhaul and Jet Specifications.

*For complete data, refer to Carburetor Index.*

**NOTE**—Do not adjust carburetor until engine is warmed up so that choke valve is wide open and engine idling at hot or slow idling speed.

**Idle Adjustment**—With engine hot and choke valve fully released, set throttle stop-screw to idle engine at 5-7 M.P.H., turn idle adjusting screw in until engine begins to miss, then turn screw out until engine begins to roll, finally turn screw in slowly until engine fires smoothly. Readjust throttle stop-screw for correct idling speed if necessary.

**Accelerating Pump Setting**—Pump lever has two holes for pump link engagement. Change for seasonal requirements:

Outer Hole—(Max. stroke)—Winter temperatures.  
Inner Hole—(Min. stroke)—Summer temperatures.

**CARB. EQUIPMENT**

**Air Cleaner:**—AC. #1525945 oil-wetted type standard, heavy duty oil-bath type optional.

**Fuel Pump:**—AC. Type W #1522153. Diaphragm type.  
*For complete data, refer to Carburetion Equip. Index.*

**Gasoline Gauge:**—Stewart Electric type, combination oil and gasoline gauge.

*For complete data, refer to Carburetion Equip. Index.*

**BATTERY**

**U.S.L. Type KL-1-13.** 6 volt, 13 plate, 100 amp. hour. Starting Capacity—120 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 3.1 minutes.

**Grounded Terminal**—Positive (+) terminal.

**Location**—Under right front seat.

**STARTER**

**AutoLite Model MAB-4077.** Armature MAB-2057.

**Drive**—Inboard Bendix Type LCD11FX-10.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—42-53 ounces (new brushes).

**Performance Data**

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	3700	5.5	60
.6 "	1910	5.5	100
3.4 "	1100	5.0	200
6.6 "	695	4.5	300
10.15 "	420	4.0	400
15.8 "	Lock	3.0	582
22.5 "	Lock	4.0	775

**NOTE**—Lock torque figures correct without switch.

**Removal:**—Starter flange mounted on left front face of flywheel housing. To remove, take out two flange mounting screws.

**Starting Switch:**—Model VC-4002. Vacuum control type. Mounted on starter field frame and operated by clutch pedal. See article in Equipment Section for complete data.

*For complete data, refer to Electrical Equipment Index.*

**Starting switch cable adjustment**—Starting switch should make contact just after clutch is released. To check, engage transmission gears, depress clutch pedal, note when starter engages. If clutch is not completely released (car will tend to move) or if pedal travel is excessive, adjust by loosening two clamp bolts on clutch throwout shaft lever to which switch cable is attached and move clamp in (for later engagement) or out (for earlier engagement) of starter.

**GENERATOR****EARLY CARS**

**Auto-Lite Model GAR-4601-5.** Armature GAR-2214.

Third brush control type used with Cutout Relay.

**Charging Rate Adjustment**—Take off commutator band. Shift third brush by hand counter-clockwise to increase or clockwise to decrease charging rate. Brush held in position by friction.

**Standard Charging Rate Setting**—20 amperes (cold), 16 amperes (hot), 2300 R.P.M.

**Performance Data**

Cold			Hot		
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	720	0	6.4	760
4	6.8	860	4	6.8	925
8	7.25	1000	8	7.25	1125
12	7.7	1160	12	7.7	1350
16	8.1	1360	16	8.1	1680
20	8.5	1660	19.2	8.4	2600
22.4	8.8	2300			

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—50-60 ozs. (new brushes).

**Field Current**—3.51-3.89 amperes at 6.0 volts.

**Motoring Current**—5.03-5.57 amperes at 6.0 volts.

**Field Fuse**—7½ amperes. Under cover on generator.

**Removal:**—Generator cradle mounted at left front of engine with fan belt drive. Water pump driven by extension of generator shaft. To remove, disconnect water pump drive coupling, slack off belt adjustment, loosen mounting clamp band, lift generator out.

**Belt Adjustment:**—Adjust belt when sideplay at point midway between generator and fan pulley exceeds 1½". To adjust, loosen two capscrews on fan bracket, raise bracket up (bracket pivots on one screw) until sideplay on belt is approximately 1", tighten screws.

**GENERATOR****LATER CARS**

**Auto-Lite Model GBR-4602-4.** Armature GAR-2214. Third brush control type used with "Two Charge" Regulator.

**Charging Rate Adjustment**—Use test meters to check generator output. Short out current regulator by connecting jumper wire from "F" terminal on

generator to ground. Take off commutator band, shift third brush by hand counter-clockwise to increase or clockwise to decrease charging rate until output is 26 amperes at 8.0 volts with generator at room temperature. Third brush held in position by friction. Remove jumper.

**Maximum Charging Rate**—As given above. Do not exceed.

**Performance Data****Cold — Regulator Inoperative — Hot**

Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	720	0	6.4	780
4	6.65	820	4	6.7	900
8	6.9	920	8	6.95	1060
12	7.1	1050	12	7.2	1250
16	7.4	1200	16	7.5	1440
20	7.6	1400	20	7.8	1840
26	8.0	2400	23	8.0	2800

**Field Current**—4.13-4.57 amperes at 6.0 volts.

**Motoring Current**—5.84-6.46 amperes at 6.0 volts.

**Field Fuse**—5 ampere in knurled cup on side of regulator case.

**Rotation, Brush Spring Tension, Removal and Belt Adjustment** same as for generator on first cars. See above.

**CUTOUT RELAY****EARLY CARS**

**Auto-Lite Model CB-4014** (Used with the GAR-4601-5 generator). Mounted on generator. See article in Equipment Section for complete data.

*For complete data, refer to Electrical Equipment Index.*

**Cuts In**—6.5-7.25 volts, 750 R.P.M.

**Cuts Out**—5-2.5 amperes discharge current.

**Contact Gap**—.015-.045".

**Air Gap**—.010-.030" with contacts closed.

**REGULATOR****LATER CARS**

**Auto-Lite Model TC-4313A "Two-Charge"** (for GBR-4602-4 generator). Mounted on generator. Consists of Cutout Relay and Current Regulator (two-rate charging control). See Equipment Section article for complete data.

*For complete data, refer to Electrical Equipment Index.*

**Cutout Relay**

**Cuts In**—6.5-7.25 volts, 750 R.P.M.

**Cuts Out**—5-2.5 ampere discharge current.

**Contact Gap**—.015-.045" (with upper or ground contacts closed—ground contacts must be open with main contacts closed).

**Air Gap**—.010-.030" with contacts closed.

**Current Regulator**

**Contacts Open**—8.25-8.75 volts at 70° F.

**Contacts Close**—1.2-1.4 volts below opening point.

**Contact Gap**—.005" minimum.

**Air Gap**—.045" with contacts closed.

**LIGHTING**

**LIGHTING:**—Headlamps—Corcoran-Brown, Pre-focused type. Upper and lower beams controlled by foot selector switch.

**Switches**

**Lighting**—Soreng-Manegold Model A-5820-A.

**Foot Selector**—H. A. Douglas, Nash Part No. 46939.

**Stop Light**—Motometer Hydraulic #58012. Nash Part No. 47601.

**Bulb Specifications**

Position	Candlepower	Mazda No
Headlamps	32-32	2331
Stop and Tail	21-3	1158
Fender, Instrument	3	63
Dome	6	81

**MISC. ELECTRICAL**

**FUSES:**—Lighting—20 ampere on fuse block mounted on steering column brace in back of instrument panel.

**Horn**—20 (single horn), 30 ampere (dual horns) on fuse block as above.

**Stop Light and Gasoline Gauge**—20 ampere on fuse block as above.

**Generator Field**—7½ ampere on generator frame (GAR). 5 ampere in knurled cup on regulator case (GBR).

**HORNS:**—Sparton Model B-6366 Std. Single horn. Dual horns Nash Part Nos. 47607-A (long), 47608-A (short), operated by horn relay. All horns vibrator type.

**Horn Relay:**—R.B.M. Type 10072. Current draw .4-.55 amperes at 6.0 volts. Coil resistance 11-14 ohms. Contacts must close with 4 volts across winding with relay in inverted position.

**ENGINE**

**ENGINE SPECIFICATIONS:**—Type—6 cylinder, valve-in head, twin-ignition type.

**Bore**—3⅜". **Stroke**—4⅜".

**Displacement**—234 cubic inches.

**Rated Horsepower**—27.34 (SAE).

**Developed Horsepower**—93 at 3400 R.P.M.

**Compression Ratio and Pressure**—5.25-1 std. cast-iron hd., no optl. Pressure—125 lbs at 350 R.P.M.

**Vacuum Reading**—Gauge should show steady reading of 18-20" with engine idling at 5-7 M.P.H.

**PISTONS:**—Nelson Bohnalite, aluminum alloy, Invar strut, split skirt type.

**Length**—3⅞".

**Weight**—19½ ounces.

**Removal**—Pistons and rods removed from above.

**Clearance**—Skirt .002". See Fitting Pistons.

**Fitting New Pistons:**—Use .002" feeler stock inserted between piston and cylinder wall on side opposite slot to check clearance.

**Installing Pistons:**—Slot should be toward left hand side of engine r away from camshaft.

**PISTON RINGS:**—Two compression rings, two oil control rings per piston, all above pin.

Ring	Width	End Gap
Comp. All	⅛"	.010-.025"
Oil Cont. (3)	⅛"	.010-.025"
Oil Cont. (4)	3/16"	.010-.025"

**PISTON PIN:**—Diameter—7/8". Length—2 51/64". Pin floats in piston and rod. Pin hole in rod is bronze-bushed. Pins furnished for service standard, .001" .003", .005" oversize.

**Pin Fit in Piston**—Light push fit with piston heated.

**Pin Fit in Rod Bushing**—.0001" or light push fit with both parts at normal temperature.

**CONNECTING ROD:**—Length—8¾". Weight—36¼ ozs.

**Upper Bearing (Piston Pin Bushing)**—Bronze.

**Crankpin Journal Diameter**—2".

**Lower Bearing**—Interchangeable steel-backed, copper-lead lined type. Shims used.

**Clearance**—.002-.0025". Sideplay .006-.012".

**Bearing Adjustment:**—Shims. Do not file rods or caps. Replace bearings when necessary.

**CRANKSHAFT:**—7 bearing. Integral counterweights.

**Journal Diameters**—2 31/64" all bearings.

**Bearing Type**—Interchangeable steel-backed, copper-lead lined. Shims used.

**Clearance**—.002-.0025".

**Bearing Adjustment:**—Shims. Do not file caps. Replace bearings when necessary.

**End Thrust:**—Taken by center (#4) bearing. Endplay .004-.007".

**CAMSHAFT:**—Non-adjustable double-roller chain drive.

**End Thrust:**—Taken by front bearing. Adjusted by replacing bearing.

**Timing Chain:**—Diamond double roller chain. Width ⅞". Pitch ⅜". Length 22½" or 60 links.

**Camshaft Setting:**—Sprockets are marked. Mesh chain with sprockets turned so that marks are adjacent and in line with a straightedge across the shaft centers. Chain should be removed and installed endless. Use special pullers and pushers, keep sprockets lined up to avoid sidestrain on chain and sprockets.

VALVES:	Head Diam.	Stem Diam.	Length
Intake	1¾"	.372"	5 17/32"
Exhaust	1 19/32"	.372"	5 17/32"
	Seat Angle	Lift	Stem Clearance
Intake	45°	11/32"	.002"
Exhaust	45°	11/32"	.002"

**VALVE TIMING**

**Tappet Clearance:**—.015" all valves with engine hot, running at idling speed.

**Valve Timing:**—See Camshaft Setting above.

**LUBRICATION**

**LUBRICATION:**—Pressure. Gear type oil pump located in crankcase.

**Normal Oil Pressure:**—25 pounds.

**Oil Pressure Relief Valve:**—Located on oil pump cover. Operates at 25 lbs. Adjustable by turning screw.

**Crankcase Capacity:**—7 qts. (refill).

**CLUTCH**

**CLUTCH:**—Borg & Beck Model 10A6. Single plate, dry disc type. See article in Clutch Section for relining and assembling directions.

See Clutch Section for complete data.

**Facings**—Moulded type, 2 required. Inside Diam. 6⅞". Outside Diam. 9⅞". Thickness ⅛".

**Adjustment**—Free movement of clutch pedal must be ½-1½". Adjust by loosening transverse bolt in link directly behind pedal and above clutch pedal shaft and shifting position of pedal. Setscrew on lever end of throw-out shaft at right of transmission must not contact stop on clutch housing. Check starting switch cable adjustment after adjusting clutch pedal.

**Starting Switch Cable Adjustment**—Starting switch should make contact just after clutch is released. To check, engage transmission gears, depress clutch pedal, note when starter engages. If clutch is not completely released (car will tend to move) or if pedal travel is excessive, adjust by loosening two clamp bolts on clutch throw-out shaft lever to which switch cable is attached and move cable clamp in (for later engagement) or out (for earlier engagement) of starter.

**Removal**—Disconnect driveshaft at rear of transmission, remove transmission, drop clutch housing underpan, take out capscrews mounting clutch on flywheel turning all screws out evenly to release spring pressure. Clutch assembly can then be removed from below without removing flywheel housing.

**FRONT SUSPENSION**

**Front Suspension:**—Conventional 'I' beam section front axle with Reverse-Elliott ends, or 'Articulated' type independent springing. Semi-elliptic springs used with both axles. Specifications for both types are the same.

**Kingpin Inclination**—7° crosswise.

**Camber**—0-1½°. No adjustment.

**Caster**—0-1½°. Adjusted by inserting wedge shims between spring and spring pad on axle.

**Toe In**—0-⅛". Adjust in usual manner by changing length of tie rod.

**Tread**—58" (front), 60" (rear).

**STEERING GEAR**

**Steering Gear:** Gemmer Worm-and-Roller type. See Steering Gear Section for complete data.

**BRAKES**

**BRAKES:**—Service—Bendix Hydr., Duo-Servo, single anchor type. Hand lever applies rear service brakes. See Brake Section for complete data.

**Drum Diameter**—11".

**Lining**—Moulded type. Width 1¼". Thickness 3/16". Length 23 13/16" per wheel.

**Clearance**—.010" between drum and lining.

**Hand Brake Adjustment:**—See Service Brakes.

**MODEL IDENTIFICATION**

**SERIAL NUMBER:**—First number B-77325. On right front side rail under engine hood.

**ENGINE NUMBER:** On plate on right side of engine.

**TUNE-UP**

**COMPRESSION PRESSURE:** 110 lbs. at 350 RPM.

**VACUUM READING:** Steady 18-20" idling.

**FIRING ORDER:** 1-6-2-5-8-3-7-4. See wiring diagram

**SPARK PLUGS:** AC Type K-12 or No. 47 (std.), Type K-7 or No. 45 (cars with Overdrive). 14 mm. Metric. Gaps—.025" (.030" cars with radio).

**IGNITION:** See Coil, Condenser, and Distributor.

**IGNITION TIMING:** See Ignition Timing. Std. Setting—Stationary contacts open with 'IGN' mark (or first line) on vibration dampener aligned with pointer at front of engine. Both sets of contacts should open simultaneously.

**CARBURETION:** See Carburetor & Carb. Equipment. Idle Setting—Set both screws midway between "miss" and "roll" points. Idle speed 5-7 MPH.

**Float Level:** Fuel level  $\frac{1}{2}$ " below top edge of bowl. **Accelerating Pump:** Inner hole (Summer), outer (winter).

**Fuel Pump Pressure:**  $3\frac{1}{2}$  lbs. maximum.

**VALVES:** See Valve Timing.

**Tappet Clearance:**—.015" with engine hot.

**STARTING:** See Battery, Starter, Generator, Regulator.

**IGNITION**

**Ignition Switch:**—Oakes Hershey type co-incidental ignition switch and steering post lock.

**COIL:** Auto-Lite Model CE-4402A (2 used). On dash Ignition Current—2 amperes idling, 4 stopped.

**CONDENSER:** Auto-Lite Part No. IG-2671 (2 used). Capacity—.20-.25 microfarad.

**DISTRIBUTOR:** Auto-Lite ICK-4101. Double breaker, 8 lobe cam, full automatic advance. Contacts open simultaneously to fire both spark plugs in each cylinder at the same instant. Each set of contacts controls one coil and fires one spark plug in each cylinder. Contacts must be synchronized.

**Breaker Gap:**—.017" and alike for both sets.

**Cam Angle or Dwell:**—Closed 28°. Open 17° (distributor). Each set operates independently.

**Breaker Arm Spring Tension:**—20 ounces.

**Distr. Automatic Advance.... Eng.**

Degrees	R.P.M.	Degrees	R.P.M.
Start	200	0	400
3	360	6	720
6	520	12	1040
9	680	18	1360
12	840	24	1680
15	1000	30	2000

**Distributor Removal:**—Mounted on right side of crankcase. To remove, take out hold-down screw in advance arm.

**IGNITION TIMING**

**IGNITION TIMING:**—Stationary Contacts—With #1 piston on compression, turn engine over until first line on vibration dampener at front of engine lines up with pointer on chain case cover. This line is the 'IGN' mark and the second line indicates top dead center. Loosen advance arm clamp bolt, rotate dis-

tributor until stationary contacts (mounted directly on breaker plate) begin to open, tighten clamp bolt. Check synchronization of movable contacts. **Synchronization (Movable Contacts)**—Movable contacts (mounted on sub-plate) should open at the same instant as the stationary set (see above). After timing stationary contacts, and without disturbing position of crankshaft or distributor, loosen lock screws on sub-plate carrying the second set of contacts, shift plate by prying with a screwdriver inserted in the slot in the edge of the plate until contacts begin to open, tighten lock screws.

**CARBURETOR**

**CARBURETION:**—Carburetor—Stromberg Model EE-1. 1" dual, downdraft type with manual choke control.

*For complete data, refer to Carburetor Index.*

**Settings (Idle Setting, Float Level, and Accelerating Pump):** See Tune-Up.

**CARB. EQUIPMENT**

**Air Cleaner:**—AC. #1525949 oil-wetted type standard.

**Fuel Pump:**—AC. Type W #1522154. Diaphragm type.

*For complete data, refer to Carburetion Equip. Index.*

**Gasoline Gauge:** Stewart Electric. Gas & Oil gauge.

*For complete data, refer to Carburetion Equip. Index.*

**BATTERY**

**U.S.L. Type KW-15A.** 6 volt, 15 plate, 115 amp. hr.

**Starting Capacity:**—140 amperes for 20 minutes.

**Zero Capacity:**—300 amperes for 4.0 minutes.

**Grounded Terminal:**—Positive (+) to frame.

**Location:**—Under right front seat.

**STARTER**

**Auto-Lite Model MAB-4054 or MAB-4057 (Export).**

**Armature No.** MAB-2047.

**Drive:**—Inboard Bendix Type LCD11FX-10.

**Rotation:**—Counter-clockwise at commutator end.

**Brush Spring Tension:**—44-56 ozs. (new brushes).

**Performance Data**

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	3700	5.5	60
.6 "	1910	5.5	100
3.4 "	1100	5.0	200
6.6 "	695	4.5	300
10.15 "	420	4.0	400
15.8 "	Lock	3.0	582
22.5 "	Lock	4.0	775

**Removal:**—Starter flange mounted on left front face of flywheel housing. To remove, take out two flange mounting screws.

**Starting Switch:** Auto-Lite VC-4003, 4002 (Export). Vacuum control, clutch pedal operated.

*For complete data, refer to Electrical Equipment Index.*

**GENERATOR**

**Auto-Lite Model GBR-4602-4.** Armature No. GAR-2214, 3rd brush with "Two-Charge" Regulator.

**Charging Rate Adjustment:**—Use test meters to check generator output. Short out current regulator by connecting jumper wire from 'F' terminal on generator to ground. Take off commutator band, shift third brush by hand counter-clockwise to increase or clockwise to decrease charging rate until output is 26 amperes at 8.0 volts generator at 70°.

**Maximum Charging Rate:**—As given above.

**Performance Data**

Cold — Regulator Inoperative — Hot					
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	720	0	6.4	780
4	6.65	820	4	6.7	900
8	6.9	920	8	6.95	1060

16	7.4	1200	16	7.5	1440
20	7.6	1400	20	7.8	1840
26	8.0	2400	23	8.0	2800

**Rotation:**—Counter-clockwise at commutator end.

**Brush Spring Tension:**—50-60 ozs. (new brushes).

**Field Current:**—4.13-4.57 amperes at 6.0 volts.

**Motoring Current:**—5.84-6.46 amperes at 6.0 volts.

**Field Fuse:**—5 ampere in cup on side of regulator

**Removal:** Disconnect water pump drive coupling, loosen belt and clamp band, lift off generator.

**Belt Adjustment:**—Adjust when sideplay at point midway between generator and fan pulley exceeds 1½". To adjust, loosen two capscrews on fan bracket, raise bracket up (bracket pivots on one screw) until sideplay on belt is approximately 1", tighten screws.

**REGULATOR**

**Auto-Lite Model TC-4313A.** "Two-Charge" Regulator. Mounted on generator. Consists of Cutout Relay and Current Regulator (two-rate charging control).

*For complete data, refer to Electrical Equipment Index.*

**Cutout Relay**

**Cuts In:**—6.5-7.25 volts, 750 R.P.M.

**Cuts Out:**—5-2.5 ampere discharge current.

**Contact Gap:**—.015-.045" (with upper or ground contacts closed—ground contacts must be open with main contacts closed).

**Air Gap:**—.010-.030" with contacts closed.

**Current Regulator**

**Contacts Open:**—8.25-8.75 volts at 70° F.

**Contacts Close:**—1.2-1.4 volts below opening point.

**Contact Gap:**—.005" minimum.

**Air Gap:**—.045" with contacts closed.

**LIGHTING**

**Headlamps:**—Corcoran-Brown, pre-focused type. Switches

**Lighting:**—Soreng-Manegold Model A-5820-A.

**Foot Selector:**—H. A. Douglas.

**Stop Light:**—Motometer Hydraulic #58012. Nash Part No. 47601.

**MISC. ELECTRICAL**

**FUSES:**—Lighting—20 ampere on fuse block mounted on steering col. brace back of instrument panel.

**Horn:**—20 amp. (single), 30 (dual) on block.

**Stop Light & Gas Gauge:**—20 amp. on fuse block.

**Generator Field:**—5 ampere on side of regulator.

**HORNS:**—Single horn, Sparton, std. Dual horns optl.

**Horn Relay:**—R.B.M. Type 10072. Current draw .4-.55

amperes at 6.0 volts. Coil resistance 11-14 ohms.

Contacts must close with 4 volts across winding with relay in inverted position.

**ENGINE**

**ENGINE SPECIFICATIONS:**—Type—8 cylinder, valve-in head, twin ignition type.

**Bore:**—3⅞". **Stroke:**—4¼".

**Displacement:**—260.8 cu. ins. **Rated HP:**—31.25.

**Developed Horsepower:**—102 at 3400 R.P.M.

**Compression Ratio:**—5.25-1 std. cast-iron head.

**Compression & Vacuum Reading:**—See Tune-Up.

**PISTONS:**—Nelson Bohnalite, aluminum alloy, Invar strut, split skirt. Length 3 11/16". Weight 19 ozs.

**Removal:**—Pistons and rods removed from below.

**Clearance:**—Skirt .002". See Fitting New Pistons.

**Fitting New Pistons:**—Use .002" feeler stock inserted between piston and cylinder wall on side opposite slot to check clearance.

**Installing Pistons:**—Slot should be toward left or away from camshaft.

**PISTON RINGS:**—Two compression rings, two oil control rings per piston, all above pin.

**Ring** **Width** **End Gap**

Comp. All ⅛" .010-.025"

Oil Cont. (#3) ⅛" .010-.025"

Oil Cont. (#4) 3/16" .010-.025"

**PISTON PIN:**—Diameter—⅞". Length—2 9/16".

Pin floats in piston and rod. Pin hole is bronze-bushed. Pins furnished for service standard, .001", .003", .005" oversize.

**Pin Fit in Piston:**—Light push fit with piston heated.

**Pin Fit in Rod Bushing:**—.0001" or light push fit with both parts at normal temperature.

**CONNECTING ROD:**—Length—8¾". Weight—34 ozs.

**Upper Bearing (Piston Pin Bushing):**—Bronze.

**Crankpin Journal Diameter:**—2".

**Lower Bearing:**—Interchangeable steel-backed, copper-lead lined type. Shims used.

**Clearance:**—.002-.0025". Sideplay .006-.012".

**Bearing Adjustment:**—Shims. Do not file rods or caps. Replace bearings when necessary.

**CRANKSHAFT:**—9 bearing. Integral counterweights.

**Journal Diameters:**—2 31/64" all bearings.

**Bearing Type:**—Interchangeable steel-backed, copper-lead lined. Shims used.

**Clearance:**—.002-.0025".

**Bearing Adjustment:**—Shims. Do not file caps. Replace bearing when necessary.

**End Thrust:**—Taken by center (#5) bearing. Endplay .004-.007".

**CAMSHAFT:**—Non-adjustable roller chain drive.

**Timing Chain:**—Diamond double roller chain. Width 9/16". Pitch ⅜". Length 62 links or 23¼".

**Camshaft Setting:**—Sprockets are marked. Mesh chain with sprockets turned so that marks are adjacent and in line with a straightedge across the shaft centers.

**VALVE TIMING**

**Tappet Clearance:**—.015" all valves with engine hot.

**Valve Timing:**—See Camshaft Setting above.

**LUBRICATION**

**LUBRICATION:**—Pressure. Gear type oil pump located in crankcase.

**Normal Oil Pressure:**—25 pounds.

**Oil Pressure Relief Valve:**—Located on oil pump cover. Operates at 25 lbs. Adjustable by turning screw.

**Crankcase Capacity:**—7 quarts (refill).

**CLUTCH**

**Borg & Beck Model 10A6.** Single plate, dry disc.

*See Clutch Section for complete data.*

**Facings:**—Moulded type, 2 required. Inside Diam. 6⅞". Outside Diam. 9⅞". Thickness ⅛".

**Adjustment:**—Free movement of clutch pedal must be ½-1½". Adjust by loosening transverse bolt directly behind pedal and above clutch pedal shaft and shifting position of pedal. Setscrew on lever end of throw-out shaft at right of clutch housing must not contact stop on housing. Check starting switch **Removal:**—Disconnect driveshaft at rear of transmission, remove transmission, drop clutch housing underpan, take out clutch mounting capscrews.

**FRONT SUSPENSION**

**Front Suspension:**—Conventional 'T' beam section front axle with Reverse-Elliott ends, or 'Articulated' type independent springing. Semi-elliptic springs used on both axles. Specifications are alike.

**Kingpin Inclination:**—7° crosswise.

**Camber:**—0-1½°. No adjustment.

**Caster:**—0-1½°. Adjust by inserting wedge shims between spring and spring pad on axle.

**Toe In:**—0-⅞". Adjust in usual manner by changing length of tie rod.

**STEERING GEAR**

**Steering Gear:** Gemmer Worm-and-Roller type.

*See Steering Gear Section for complete data.*

**BRAKES**

**BRAKES:**—Service—Bendix Hydr., Duo-Servo, single anchor type. Hand lever applies rear service brakes.

*See Brake Section for complete data.*

**Drum Diameter:**—11".

**Lining:**—Moulded type. Width 2¼". Thickness 3/16". Length 23 13/16" per wheel.

**Clearance:**—.010" between drum and lining.

**Hand Brake Adjustment:**—See Service Brakes.

## MODEL IDENTIFICATION

**SERIAL NUMBER:**—First number—R-309311 (3720), R-324111 (3820). Stamped on plate on right frame side member under engine hood.

**ENGINE NUMBER:**—1st No.—RE-77104 (3820). Stamped on plate on right hand side of engine block.

## TUNE-UP

**COMPRESSION:** Ratio—5.67-1 (3720), 6.0-1 (3820).

Pressure—Approx. 100-105 lbs. at cranking speed with all cylinders equal within 10 lbs.

**VACUUM READING:**—18-20" steady reading with engine idling at 7 MPH.

**FIRING ORDER:** 1-5-3-6-2-4. See diagram for spark plug cable connections in distributor cap.

**SPARK PLUGS:** AC Type 47 (standard 3720), Type 45 (standard 3820, with Overdrive 3720). 14 mm. Gaps—.025" (.030" cars with radio).

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.020". Cam Angle—35° Closed.

Synchronization—Set movable contacts to open simultaneously with stationary contacts.

Automatic Advance—Max. advance at follows:

Distributor	Dist. Deg.	Dist. RPM
IGE-4012B	9°	1000
IGE-4012C & 4018	13°	1000

**IGNITION TIMING:** See Ignition Timing.

Std. Setting—TDC (3720), 6° BTDC (3820). 'IGN.DC' mark (3720), 'IGN' mark (3820) on vibration dampener aligned with pointer at front of engine. Both sets of contacts should open simultaneously.

**CARBURETION:** See Carburetor & Carb. Equipment. Idle Setting—Screw midway between "miss" and "roll" points. Idle speed 5-7 MPH.

Float Level—Fuel level  $\frac{3}{4}$ " (Stromberg), 19/32" (Marvel) below top edge of bowl.

Accelerating Pump—Marvel—center hole. Stromberg—inner hole (Summer), outer (Winter).

Fuel Pump Pressure:  $\frac{3}{2}$  lbs. maximum.

**VALVES:** See Valve Timing.

Tappet Clearance—.008" (Intake '37), .015" (Exhaust '37—All Valves '38), engine hot and idling.

NOTE—On 3820 cars driven consistently at less than 50 MPH, intake valves can be set at .008".

**STARTING:** See Battery, Starter, Generator, Regulator.

## IGNITION

**Ignition Switch:**—Oakes Steering Column and Ignition Lock No. 301630. Ignition Switch No. 301538.

**Ignition Lock:**—Briggs & Stratton No. 80207 (Lock cylinder). Key Series—5 digits. Groove—#1.

**COIL:** Two Used, Auto-Lite CE-4402-A. Service coil CE-4404. Coils mounted on dash.

Ignition Current—2 amps. idling, 4 stopped.

**CONDENSER:** Auto-Lite Part No. IG-2671. Two used.

Capacity—.20-.25 microfarad.

**DISTRIBUTOR:** Auto-Lite IGE-4012B or C (3720), Model IGE-4018 (for 3820). "Twin Ignition," Double breaker, 6 lobe cam, full automatic advance type. Contacts open simultaneously to fire both spark plugs in each cylinder at the same instant and must be synchronized (See Timing).

Breaker Gap—Set at .020".

Cam Angle or Dwell—35° Closed. 25° Open. For each set of contacts (operate independently).

Breaker Arm Spring Tension—18-20 ounces.

Rotation—Counter-clockwise viewed from the top.

### Automatic Advance—IGE-4012-B

Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start	200	0°	400
2°	380	4°	760
5°	650	10°	1300
7°	825	14°	1650
9°	1000	18°	2000

### Automatic Advance—IGE-4012-C and 4018

Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start.....	275	0.....	550
3.....	370	6.....	740
5.....	435	10.....	870
7.....	500	14.....	1000
9.....	670	18.....	1340
11.....	835	22.....	1670
13.....	1000	26.....	2000

**Removal:**—Distributor mounted on right hand side of crankcase. To remove, take out hold-down screw in advance arm.

## IGNITION TIMING

**IGNITION TIMING:**—Setting for all engines as follows:

Model	Flywheel Degrees	Piston Position
3720	0° at TDC	.0000" TDC
3820	6° BTDC	.0150" BTDC

**Timing (Stationary Contacts)**—With #1 piston on compression, turn engine over until piston reaches firing position (see table above), stop when 'DC IGN' mark (3720), 'IGN' mark (3820) on vibration dampener at front of engine lines up with pointer on chain case cover. Loosen advance arm clamp bolt, rotate distributor until stationary contacts (mounted directly on breaker plate) begin to open, tighten clamp bolt, then synchronize movable contacts.

1937 MODELS

**Synchronization (Timing Movable Contacts)**—Without disturbing position of distributor or crankshaft, loosen lock screws on movable sub-plate (carrying second set of contacts), shift plate by prying with screwdriver in notch on edge of plate until this set of contacts begin to open, tighten sub-plate lock screws.

**Synchronization (Other Methods)**—Set contacts to open simultaneously at regular 60° (dist). intervals.

### CARBURETOR

**CARBURETION:** Carburetor—Stromberg EX-32 (3720), Marvel Model C-2, No. 10-1802 (3820). 1¼" single barrel downdraft types with manual choke.

*For complete data, refer to Carburetor Index.*

**Idle Adjustment**—With engine warm and choke

valve wide open, set throttle stopscrew so that engine idles at 5-7 M.P.H., turn idle adjusting screw in until engine begins to lag or miss, then turn screw out until engine begins to roll, finally turn screw in slowly just enough so that engine fires smoothly. Readjust throttle stopscrew for correct idling speed.

**Accelerating Pump Adjustment**—Three holes provided in throttle lever for pump link engagement. Adjust for seasonal requirements as follows:

No. 1 (inner) Hole—Extremely hot weather or high-test fuel.

No. 2 (center) Hole—Normal temperatures and fuel.

No. 3 (outer) Hole—Extremely cold weather or low grade fuel.

**NOTE**—Center hole not used on Stromberg EX-32.

See Electrical Equipment Section for Regulator internal wiring when two resistors used.

1938 MODELS

### CARB. EQUIPMENT

M DEL 3720

**Air Cleaner:**—AC. #1528143 oil-wetted type standard, #1528278 Heavy Duty oil-bath type optional.

**Fuel Pump:**—AC. Type W #1523237 Diaphragm type Std., Type AD #1523238 combination fuel-and-vacuum type Optl.

*For complete data, refer to Carburetion Equip. Index.*

**Gasoline Gauge:**—Motometer (Auto-Lite) Electric. No. 8229-D (dash unit), NG-8230-T (tank unit).

*For complete data, refer to Carburetion Equip. Index.*

### CARB. EQUIPMENT

MODEL 3820

**Air Cleaner:**—AC. #1528645 oil-wetted type std., #1528680 heavy duty oil-bath type optl.

**Fuel Pump:**—AC. Type W #1523642 Diaphragm type std., Type AD #1523643 combination fuel-and-vacuum pump optl.

*For complete data, refer to Carburetion Equip. Index.*

**Gasoline Gauge:**—King-Seeley Electric Type. K-S No. 6730 (Dash unit—first cars—ball type pointer), 7070 (Dash unit—later cars—bar type pointer), No. 6732 (Tank unit—all cars).

*For complete data, refer to Carburetion Equip. Index.*

### BATTERY

MODEL 3720

**BATTERY:**—U.S.L. Type KL-1-13. 6 volt, 13 plate, 100 ampere hour capacity (20 hour rate).

**Starting Capacity**—120 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 3.1 minutes.

**Grounded Terminal**—Positive (+) terminal grounded to transmission cover bolt.

**Location**—On left side under drivers seat.

### BATTERY

MODEL 3820

**BATTERY:**—U.S.L. Type HTL-1-15. 6 volt, 15 plate, 105 ampere hour capacity (20 hour rate).

**Starting Capacity**—133 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 3.8 minutes.

**Grounded Terminal**—Positive (+) terminal grounded to frame and to transmission (1 cable).

**Dimensions**—Length 9 1/16". Width 7 7/8". Height 9 1/16".

**Location**—Under right front seat.

### STARTER

**Auto-Lite Model MAB-4076, Armature MAB-2057.**

**Drive**—Inboard Bendix Type LCD11FX-10.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—42-53 ozs. (new brushes).

**Cranking Engine**—125 R.P.M., 150-160 amps., 5.2 v.

#### Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	3700	5.5	60
.6 " "	1910	5.5	100
3.4 " "	1100	5.0	200
6.6 " "	695	4.5	300
10.15 " "	420	4.0	400
15.8 " "	Lock	3.0	582
22.5 " "	Lock	4.0	775

**Removal:**—Starter flange mounted on left front face of flywheel housing. To remove, take out flange mounting screws.

**Starting Switch:**—A-L Model SW-4005. Mounted on left side of engine below clutch pedal. Operated by depressing clutch pedal fully. No adjustment required.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDIN PA E

**GENERATOR  
STANDARD**

Auto-Lite GCM-4803-4 or GCM-4803A-4 (3720), GCM-4803B-4 (3820). Armature GCJ-2030. Third brush control ventilated by fan.

Charging Rate Adjustment—Remove commutator cover band, shift third brush by hand counter-clockwise to increase, or clockwise to decrease, charging rate (brush held in position by friction). NOTE—Standard setting of third brush (for maximum output as shown in table below)  $2\frac{3}{8}$ – $2\frac{5}{8}$  commutator bars between third brush and insulated (nearest) main brush.

Maximum Charging Rate—22 amperes (cold), 18 amperes (hot), 8.0 volts, 2650 R.P.M. Use test ammeter connected in charging line at battery terminal of Cutout Relay to check generator output.

**Performance Data**

Cold		Hot	
Amperes	R.P.M.	Amperes	R.P.M.
0.....6.4	775	0.....6.4	830
4.....6.7	900	4.....6.75	985
8.....7.0	1075	8.....7.1	1190
12.....7.3	1200	12.....7.5	1480
16.....7.6	1420	16.....7.8	1970
20.....7.85	1900	18.....8.0	2700
22.....8.0	2650		

Rotation—Counter-clockwise at commutator end.

Brush Spring Tension—53 ozs. max. (new brushes).

Field Current—3.50–3.89 at 6.0 volts.

Motoring Current—5.75–6.25 amperes at 6.0 volts.

Field Fuse—5 ampere capacity (under cover on generator frame).

Removal & Belt Adjustment: Same as given below.

**GENERATOR  
SPECIAL EQUIPMENT**

Auto-Lite GCO-4802 or GCO-4802A (3720), GCO-4802C (3820). Armature GCO-2031F. Two brush types with external current and voltage regulation.

Charging Rate Adjustment—No adjustment at generator. Charging rate controlled by Voltage Regulator and maximum output controlled by Current Regulator.

Maximum Charging Rate—28 amperes, 8.0 volts, 1850 R.P.M. and above with load or discharged battery (Current Regulator setting). Actual charging rate controlled by Voltage Regulator and is dependent on battery condition.

**Performance Data**

Cold		Hot	
Amperes	R.P.M.	Amperes	R.P.M.
0.....6.4	825	0.....6.4	900
4.....6.6	940	4.....6.6	1025
8.....6.85	1050	8.....6.85	1160
12.....7.1	1175	12.....7.1	1310
16.....7.3	1300	16.....7.3	1475
20.....7.55	1450	20.....7.55	1660
24.....7.8	1610	24.....7.8	1880
28.....8.0	1850	28.....8.0	2200

NOTE—Current reg. limits output to 28 amperes.

Rotation—Counter-clockwise at commutator end.

Brush Spring Tension—53 ozs. max. (new brushes).

Field Current—1.47–1.63 amperes at 6.0 volts.

Motoring Current—3.94–4.36 amperes at 6.0 volts.

Removal (All models):—Generator cradle mounted at left side of engine with fan belt drive. Water pump driven by generator shaft extension. To re-

move, disconnect water pump, loosen fan belt, remove generator clamp band and lift generator off. Belt Adjustment (All models):—Adjust whenever belt deflection is more than  $1\frac{1}{2}$ " (when pressed lightly midway between generator and fan pulleys). To adjust, loosen two capscrews on fan bracket, lift fan up (one screw hole slotted) until belt deflection is approximately 1", tighten screws.

**CUTOUT RELAY  
STANDARD**

Auto-Lite Model CB-4014 (Used with GCM Generators). Mounted on generator.

For complete data, refer to Electrical Equipment Index.

Cuts In—6.5–7.25 volts.

Cuts Out—5–2.5 amperes discharge.

Contact Gap—.015–.045".

Air Gap—.010–.030" with contacts closed.

**REGULATOR****SPECIAL EQUIPMENT**

Auto-Lite VRB-4002D or VRB-4010A. Voltage-Current Type (used with GCO Generators). Consists of Cutout Relay, vibrating Voltage Regulator, and vibrating Current Regulator in case on dash.

NOTE—Regulator cover is sealed. Serviced on exchange basis if seals not broken. Unit can be checked without breaking seal but cover must be removed to make adjustments.

For complete data, refer to Electrical Equipment Index.

**Cutout Relay**

Cuts In—6.4–7.0 volts Cold.

Cuts Out—5–3.0 amperes discharge current.

Air Gap—.034" min., .038" max. with contacts open.

Measure at hinge end of core.

**Voltage Regulator**

Setting—7.3–7.6 volts at 70°F. (Regulator Serial No. 8R-000001 Up). See Electrical Equipment Section for settings and changes on units before this serial no. To Check (Without Breaking Seals)—Connect ammeter in charging line at 'B' terminal on regulator, connect voltmeter between 'B' and 'GD' terminals. Operate generator, charging fully charged battery, at speed equivalent to 30 M.P.H. until voltage is steady. Voltmeter reading should be within limits of 7.3–7.6 volts (cold—70°F), 7.1–7.4 volts (hot—140°F). See Regulator Setting above.

To Adjust (with cover removed)—Change armature spring tension slightly by bending lower spring hanger. See Electrical Equipment Section for complete directions.

Contact Gap—.010" Min., .020" Max. with armature against stop pin.

Air Gap—.0595–.0625" with contacts just opening.

**Current Regulator**

Setting—27–29 amperes (marked '28' on cover).

To Check (Without Breaking Seals)—Connect ammeter and voltmeter as directed for Voltage Regulator test. Operate generator at 30 M.P.H. car speed, add load (use bank of headlamp bulbs or turn on car lights and discharge battery) so that generator will charge at peak rate and bring Current Regulator into action. Charging current should not exceed 28 amperes. If more than slight excess is noted, Regulator is defective.

To Adjust (with cover removed)—Change regulator armature spring tension by bending lower spring hanger slightly. See Electrical Equipment Section for complete directions.

Contact Gap & Air Gap—As given above for Voltage Regulator.

**LIGHTING**

**LIGHTING:**—Headlamps—Corcoran-Brown, pre-focused type. Country driving and City beams controlled by foot dimmer switch on toeboard. City beam deflected to right (special type 2331 bulb). Headlamp Adjustment—Aim headlamps straight ahead with top of beam at lamp center height at 25 feet, (upper beams—Country driving) lighted. Vertical adjustment controlled by mounting bolts horizontal by screw ahead of front mounting bolt. Headlamp Beam Indicator—Red jewel light on instrument panel above speedometer dial. Lighted whenever Country driving (upper) beams lighted.

**Switches**

Lighting—Douglas.

Foot Dimmer—Douglas.

**Bulb Specifications**

Position	Candlepower	Mazda No.
Headlamps	32–32	2331
Park, Dash, License	3	63
Indicator	1	51
Stop-Tail	21–3	1158
Dome	6	63

**MISC. ELECTRICAL**

**FUSES:**—Lighting—20 amp. on back of lighting switch.

Accessory—20 ampere on fuse block attached to light switch. Protects stop light and gas gauge.

Generator Field—5 ampere (on GCM generators only). Located under cover on generator field frame.

**HORNS:**—Sparton—Vibrator type twin horns operated by R.B.M. horn relay.

Horn Relay—R.B.M. Model 10072. Current draw .4–.55 amperes at 6.0 volts. Coil resistance 11–14 ohms. Contacts must close with 4 volts across windings when in inverted position.

**ENGINE**

**ENGINE CODE NOTE:**—Consists of three letters stamped on Engine Number Plate to indicate original size of Cylinder Bore (first letter), Main Bearings (second letter), Crankpin & connecting rod bearings (third letter) as follows: 'A'—Standard, 'B'—.010" Undersize, 'C'—.010" Oversize, 'D'—.015" Oversize, 'E'—.020" Oversize.

**ENGINE SPECIFICATIONS:**—Type—6 cylinder, valve-in head. Twin Ignition type.

NOTE—3820 models use the 'Iso-thermal' fuel intake system (intake manifold cast in cylinder head and surrounded by cooling water for temp. control).

Bore—3 $\frac{3}{8}$ ". Stroke—4 $\frac{3}{8}$ ".

Displacement—234 cu. ins. Rated HP.—27.34.

Developed Horsepower—93 ('37), 105 ('38) at 3400

Compression Ratio—5.67–1 (3720). 6.0–1 (3820).

Compression & Vacuum Reading—See Tune-Up.

►Later type Replacement Cylinder Heads: See "Cylinder Head" in Nash Shop Notes.

**PISTONS:**—Nash, aluminum alloy, Invar strut, split skirt type. See Engine Code Note above for original bore and piston sizes. Length—3 $\frac{3}{8}$ ".

Weight—19 $\frac{1}{8}$  ounces.

Removal—Pistons and rods removed from above.

Clearance—.0015–.002". See Fitting New Pistons.

Replacement Pistons—Finished pistons furnished Std. and .001", .002", .003", .005", .010", .012", .015", .020" oversize. Semi-finished pistons .050" oversize.

Fitting New Pistons—Use .002" feeler stock inserted between piston and cylinder wall on side opposite slot to check clearance. Pull required to withdraw feeler should be 10 lbs.

**ENGINE****CONTINUED FROM PRECEDING PAGE**

**Installing Pistons:**—Piston pin offset toward camshaft side of engine and trademark (within piston) toward front.

**PISTON RINGS:**—Two compression rings, two oil control rings per piston, all above pin.

Ring	Width	End Gap
Compression (All)	1/8"	.010"
Oil Control (#3—1937)	1/8"	.010"
Oil Control (#4—1937)	3/16"	.010"
Oil Control (All—1938)	5/32"	.010"

**Replacement Rings:**—Furnished .010", .020" oversize.

**PISTON PIN:**—Diameter— $\frac{7}{8}$ ". Length—2 51/64". Pin floats in piston and rod, retained by locking rings. Pin hole in piston offset toward camshaft side of engine, pin hole in rod bronze-bushed.

**Pin Fit in Piston:**—Light push fit with piston heated to 200°F.

**Pin Fit in Rod Bushing:**—.0001" or light push fit with both parts at normal temperature.

**Replacement Pins:**—Furn. 001", .002", .005" oversize.

**CONNECTING ROD:**—Length—8 3/4". Weight—36 1/4 ozs.

**Upper Bearing (Piston Pin Bushing):**—Bronze.

**Crankpin Journal Diameter:**—2".

**Lower Bearing:**—Removable steel-backed, babbit-lined type. No shims. See Engine Code Note (above) for original bearing sizes.

**Clearance:**—.002". Sideplay—.004" Max.

**Bearing Adjustment:**—None (no shims). Replace bearings. Do not file rods or caps.

**Replacement Bearings:**—Furnished .010" undersize.

**CRANKSHAFT:** 7 bearing, integral counterweights.

**Journal Diameters:**—2 31/64" all bearings.

**Bearing Type:**—Interchangeable steel-backed, babbit-lined type. No shims. See Engine Code Note (above) for original bearing sizes.

**Clearance:**—.002".

**Bearing Adjustment:**—None (no shims). Replace bearings. Do not file bearing caps. Bearing upper halves can be 'rotated' out without removing crankshaft by using pin installed in oil hole in shaft and rotating shaft.

**Replacement Bearings:**—Furnished .010" undersize.

**End Thrust:**—Taken by center (#4) bearing. Endplay .004". No adjustment (replace bearing).

**CAMSHAFT:**—Non-adjustable double-roller chain drive.

**End Thrust:**—Taken by front bearing. Replace front bearing to take up excessive endplay.

**Timing Chain:**—Double-roller chain. Width 9/16". Pitch 3/8". Length (3720—22 1/2" or 60 links 3820—23 1/4" or 62 links).

**Camshaft Setting:**—Sprockets are marked. Mesh chain with sprockets turned so that marks are adjacent and in line with a straightedge across the shaft centers. Chain should be removed and installed endless. Use special pullers and pushers, keep sprockets lined up to avoid sidestrain on chain and sprockets.

VALVES:	Head Diameter	Seat Angle	Stem Clear.
Intake	1 3/4"	45°	.003"
Exhaust	1 19/32"	45°	.003"

**VALVE TIMING**

**Tappet Clearance:**—.008" (Intake '37), .015" (Exhaust '37—All valves '38), engine hot and idling. NOTE—On 1938 cars driven consistently at less than 50 M.P.H., intake valves can be set at .008".

**Valve Timing:**—See Camshaft Setting above.

**LUBRICATION**

**LUBRICATION:**—Pressure. Gear type oil pump located in crankcase.

**Normal Oil Pressure:**—25-35 lbs. at normal temp.

**Oil Pressure Gauge:**—King-Seeley Electric. K-S No. 6730 (dash unit, first cars—ball type pointer), 7070 (dash unit, later cars—bar type pointer), No. 6125 (motor unit, all cars). This data for 3820 only.

See Miscellaneous Section for complete data.

**Oil Pressure Relief Valve:**—Located on oil pump cover. Operates at 30 lbs. Screw adjustment.

**Crankcase Capacity:**—7 quarts (refill).

**COOLING**

**COOLING SYSTEM:**—Water Pump. Centrifugal, adjustable packing. Driven by generator extension shaft.

See Water Pump Section for complete data.

**Removal:**—Drain radiator, disconnect hose and drive coupling, take out mounting screws in pump flange.

**Thermostat:**—Dole. In water outlet on cyl. head.

**Setting:**—Thermostat opens at 160°F.

**Temperature Gauge ('38):**—King-Seeley Electric type.

**Dash Unit:**—K-S No. 6730 (with Ball type pointer), No. 7070 (with Bar type pointer).

**Engine Unit:**—K-S No. 5700.

**NOTE:**—No. 5700 Engine Unit serviced by No. 7000 (new type) which must be used with new Dash Unit No. 7295. Service Kit No. 7643 contains both units.

See Miscellaneous Section for complete data.

**Water Capacity:**—17 qts. (3720), 16 qts. (3820).

**Drain Valves:**—One only—at bottom of radiator.

**CLUTCH**

**CLUTCH:**—Borg & Beck Mod. 10A7. Mod. #902 stamped on cover. Single plate, dry disc type.

See Clutch Section for complete data.

**Facings ('37):**—Moulded type, 2 required. Inside Diam. 6 1/4". Outside Diam. 9 1/8". Thickness 1/8".

**Facings ('38):**—Molded-woven, 2 required. Inside Diam. 6". Outside Diam. 10". Thickness 1/8".

**Adjustment:**—Free movement of clutch pedal must be 1/2-1 1/2". Adjust by loosening transverse bolt in link directly below clutch pedal shaft and positioning pedal in slot. Clearance between pedal and toe-board should be 3/8". On cars with 'NoRol' check operation whenever clutch adjusted and, if necessary, adjust as follows:

**NoRol Adjustment:**—Loosen locknut and turn adjusting nut at rear end of connecting rod (at NoRol lever) in for later brake release, out for earlier.

**Removal:**—Remove transmission (see Transmission Removal below), remove clutch housing underpan, take out clutch mounting bolts evenly, remove assembly from below.

**TRANSMISSION**

**TRANSMISSION:**—Own Make. Constant-mesh, synchromesh, helical gear (second and high), sliding helical gear (low and reverse).

See Transmission Section for complete data.

**Vacuum Gear Shift (Transmission Control):**—Evans Nash Vacuum type. Optional on Model 3820.

See Transmission Section for complete data.

**Removal:**—Disconnect driveshaft. Disconnect shift linkage (on cars with Vacuum Gear Shift). Take off nuts on transmission mounting bolts, pull transmission straight back.

**OVERDRIVE**

**Cruising Gear (Overdrive):**—Warner Model AS6-R6 optional. In separate case at rear of transmission. See Transmission Section for complete data.

**UNIVERSALS**

**UNIVERSAL JOINTS:**—Mechanics—Model 2C. Roller bearing type. 2 used.

See Universals Section for complete data.

**REAR AXLE**

**REAR AXLE:**—Own—Semi-floating, spiral bevel gear type with Hotchkiss drive.

See Rear Axle Section for complete data.

**Ratio:**—4 1/9 to 1 Std.

**Removal:**—Block up rear of car, remove wheels and axle shafts, disconnect brake lines and cables, shock absorber links, drive shaft at rear universal joint. Free axle from springs by disconnecting spring bolts, remove axle assembly from under car.

**Axle Shaft Removal:**—Remove wheel, take out mounting screws in retainer, remove retainer, oil seal, brake backing plate, bearing adjusting shims. Use puller to remove shaft and bearing assembly.

**Wheel Bearing Adjustment:**—Controlled by shims at flanged end of housing. To adjust, remove brake backing plate and add or remove shims. Endplay—.003-.006".

**SHOCK ABSORBERS**

**SHOCK ABSORBERS:**—Nash (Delco or Gabriel design), double acting (3720), direct acting (3820).

See Shock Absorber Section for complete data.

**FRONT SUSPENSION**

**Front Suspension:**—Conventional 'I' beam front axle with Reverse-Elliott ends and semi-elliptic springs.

**Kingpin Inclination:**—7° crosswise.

**Camber:**—1/2-1 1/2". No adjustment.

**Caster:**—2 1/2° ('37), 1 1/2° ('38). Shim adjustment. Install shims between spring and spring pad on axle.

**Toe In:**—0-1/16". Adjust by loosening clamp bolt at right hand end of tie rod and turning rod in or out of end fitting.

**Steering Shock Eliminator:**—Consists of rubber bumper mounted on underside of left frame side-rail just in front of left front spring rear shackle. Adjust to give 1/16" clearance between spring and bumper with normal load.

**STEERING GEAR**

**Steering Gear:**—Gemmer Model 305 Worm-and-Roller type with "push-pull" adjustments.

See Steering Gear Section for complete data.

**BRAKES**

**BRAKES:**—Bendix Duo-Servo, Single Anchor type or Lockheed type hydraulic brakes. Hand lever applies rear wheel service brakes. NoRol optional (3820).

See Brake Section for complete data.

**Drum Diameter:**—10" (3720), 10 1/16" (3820).

**Lining:**—Woven (primary), moulded (secondary). Width 2" ('37), 2 1/16" ('38). Thickness 3/16".

**Length per wheel:** 22 1/16" ('37), 22" ('38).

**Clearance (Bendix):**—.010" at heel & toe (each shoe)

**Clearance (Lockheed):**—.005" heel, .010" toe (each shoe).

**Braking Power:**—53% front, 47% rear.

**Hand Brake:**—See Service Brakes above.

**NoRol:**—Optional. Consists of a clutch pedal controlled valve in the brake line by which brakes held 'on' when car stopped on up-grade until clutch is engaged.

See Brake Section for complete data.

**MODEL IDENTIFICATION**

**SERIAL NUMBER:**—1st No. B-80031 ('37), B-86031 ('38).  
On plate on right frame side member under hood.  
**ENGINE NUMBER:**—1st No. B-100640 ('38). Stamped  
on plate on right hand side of engine block.

**TUNE-UP**

**COMPRESSION:** Ratio 5.64-1 (3780), 6.0-1 (3880).  
Pressure—Approx. 90 lbs. (3780), 100-105 lbs. (3880)  
at cranking speed of 125 RPM.  
**VACUUM READING:**—18-20" steady reading with en-  
gine idling at 7 M.P.H.

**FIRING ORDER:** 1-6-2-5-8-3-7-4. See diagram for  
spark plug cable connections in distributor cap.

**SPARK PLUGS:** AC Type 47 (standard 3780), Type 45  
(standard 3880, with Overdrive 3780). 14 mm.  
Gaps—.025" (.030" cars with radio).

**IGNITION:** See Coil, Condenser, and Distributor.

**Breaker Gap**—.017". Cam Angle 28° Closed.

**Synchronization**—Set movable contacts to open  
simultaneously with stationary contacts.

**Automatic Advance**—Max. Advance as follows:

Distributor	Distr. Deg.	Dist. RPM
IGK-4101	15°	1000
IGK-4101-A	9°	1000
IGK-4101-B & 4102	12°	1100

**IGNITION TIMING:** See Ignition Timing.

**Std. Setting**—TDC (3780), 9° BTDC (3880). 'IGN.DC'  
mark (3780), 'IGN' mark (3880) on vibration damp-  
ener aligned with pointer at front of engine. Both  
sets of contacts should open simultaneously.

**CARBURETION:** See Carburetor & Carb. Equipment.  
**Idle Setting**—Screws midway between "miss" and  
"roll" points. Idle speed 7 MPH (or 9 MPH for stall-  
ing complaints if Overdrive used).

**Float Level**—Fuel level  $\frac{1}{2}$ " below top edge of bowl.  
**Accelerating Pump**—Inner hole (Summer), outer  
(Winter).

**Fuel Pump Pressure:**  $3\frac{1}{2}$  lbs. maximum.

**VALVES:** See Valve Timing.

**Tapet Clearance:** .008" (Intake '37), .015" (Exhaust  
'37—All Valves '38), engine hot and idling.

**NOTE**—On 3880 cars driven consistently at less than  
50 MPH, intake valves can be set at .008".

**STARTING:** See Battery, Starter, Generator, Regulator.

**IGNITION**

**Ignition Switch:**—Oakes Steering Column and Igni-  
tion Lock No. 301632. Ignition Switch No. 301538.

**Ignition Lock**—Briggs & Stratton No. 80207 (Lock  
cylinder). Key Series—5 digits. Groove—#1.

**COIL:** Two Used, Auto-Lite CE-4402-A. Service coil  
CE-4404. Coils mounted on dash.

**Ignition Current**—2 amps. Idling, 4 stopped.

**CONDENSER:** Auto-Lite Part No. IG-2671. Two used.  
Capacity—.20-.25 microfarad.

**DISTRIBUTOR:** Auto-Lite No. IGK-4101, -A or -B  
(3780), IGK-4102 (3880). Twin Ignition Double  
breaker, 8 lobe cam, full automatic advance type.  
Contacts open simultaneously to fire both spark  
plugs in each cylinder at the same instant and must  
be synchronized (See Timing).

**Breaker Gap**—Set at .017" (alike for both sets).

**Cam Angle or Dwell**—28° Closed, 17° Open. For each  
set of contacts (operate independently).

**Breaker Arm Spring Tension**—18-20 ounces.

**Rotation**—Clockwise viewed from the top.

**Automatic Advance—IGK-4101**

Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start.....	200	0.....	400
3.....	360	6.....	720
6.....	515	12.....	1030

Start.....	200	0.....	400
3.....	475	6.....	950
6.....	740	12.....	1480
9.....	1000	18.....	2000

**Automatic Advance—IGK-4101-B and 4102**

Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start.....	275	0.....	550
4.....	400	8.....	800
8.....	750	16.....	1500
12.....	1100	24.....	2200

**Removal:**—Distributor mounted on right hand side of  
crankcase. To remove, take out hold-down screw  
in advance arm.

**IGNITION TIMING**

**IGNITION TIMING:**—Setting for all engines as follows:

Model	Flywheel Degrees	Piston Position
3780	0° at TDC	.000" TDC
3880	9° BTDC	.0313" BTDC

**Timing (Stationary Contacts)**—With #1 piston on compression, turn engine over until piston reaches firing position (see table above), stop when 'DC IGN' mark (3780), 'IGN' mark (3880) on vibration dampener at front of engine lines up with pointer on chain case cover. Loosen advance arm clamp bolt, rotate distributor until stationary contacts (mounted directly on breaker plate) begin to open, tighten clamp bolt, then synchronize movable points.

**Synchronization (Timing Movable Contacts)**—Without disturbing position of distributor or crankshaft, loosen lock screws on movable sub-plate (carrying second set of contacts), shift plate by prying with screwdriver in notch on edge of plate until this set of contacts begin to open, tighten sub-plate lock screws.

**Synchronization (Other Methods)**—Set contacts to open simultaneously at regular 45° (dist.) intervals.

## CARBURETOR

**CARBURETION:**—Carburetor. Stromberg Model EE-1, 1" dual downdraft type.

For complete data, refer to Carburetor Index.

**Idle Adjustment**—With engine warm and choke valve wide open, set throttle stopscrew so that engine idles at 7 M.P.H., turn both idle adjusting screws (simultaneously and equally) in until engine begins to lag or miss, then out until engine begins to roll, finally turn both screws in slowly until engine fires smoothly. Readjust throttle stopscrew for correct idle speed. **NOTE**—On cars where Overdrive used continuously, throttle stopscrew may be set for 9 M.P.H. idle speed if engine tends to stall when coasting.

**Accelerating Pump Adjustment**—Two holes provided in throttle lever for accelerating pump rod

connection. Adjust for seasonal requirements as follows:

Inner Hole (Min. stroke)—Summer temperatures.

Outer Hole (Max. stroke)—Winter temperatures.

## CARB. EQUIPMENT

### MODEL 3780

**Air Cleaner:**—Burgess oil-wetted type standard, AC #1528280 Heavy Duty oil-bath type optional.

**Fuel Pump:**—AC. Type AD, #1523236 Diaphragm type, combination fuel-and vacuum pump.

For complete data, refer to Carburetion Equip. Index.

**Gasoline Gauge:**—Motometer (Auto-Lite) Electric. No. NG-8229-D (dash unit), NG-8230-T (tank unit).

For complete data, refer to Carburetion Equip. Index.

## CARB. EQUIPMENT

### MODEL 3880

**Air Cleaner:**—AC #1528644 oil-wetted type Std., #1528688 heavy duty oil-bath type optional.

**Fuel Pump:**—AC Type AD, #1523644 combination fuel-and-vacuum pump std.

For complete data, refer to Carburetion Equip. Index.

**Gasoline Gauge:**—King-Seeley Electric Type. K-S No. 6730 (Dash unit—first cars—ball type pointer), 7070 (Dash unit—later cars—bar type pointer), N. 6732 (Tank unit—all cars).

For complete data, refer to Carburetion Equip. Index.

## BATTERY

### MODEL 3780

**BATTERY:**—U.S.L. Type KW-15A. 6 volt, 15 plate, 116 ampere hour capacity (20 hour rate).

Starting Capacity—140 amperes for 20 minutes.

Zero Capacity—300 amperes for 4.0 minutes.

**Grounded Terminal:**—Positive (+) terminal grounded to transmission cover bolt.

**Location:**—On left side under drivers seat.

## BATTERY

### MODEL 3880

**BATTERY:**—U.S.L. Type HTL-2-17. 6 volt, 17 plate, 120 ampere hour capacity (20 hour rate).

Starting Capacity—152 amperes for 20 minutes.

Zero Capacity—300 amperes for 4.9 minutes.

**Grounded Terminal:**—Positive (+) terminal. Grounded to frame and to transmission cover bolt (same cable).

**Dimensions:**—Width 7 1/8". Length 10 5/16". Height 9 1/16".

**Location:**—In cradle under right front seat.

## STARTER

Auto-Lite MAB-4054. Armature MAB-2057.

Drive—Inboard Bendix Type LCD11FX-10.

Rotation—Counter-clockwise at commutator end.

Brush Spring Tension—42-53 ozs. (new brushes).

Cranking Engine—125 R.P.M., 150-160 amperes, 5.15 volts.

### Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	3700	5.5	60
.6 " "	1910	5.5	100
3.4 " "	1100	5.0	200
6.6 " "	695	4.5	300
10.15 " "	420	4.0	400
15.8 " "	Lock	3.0	582
22.5 " "	Lock	4.0	775

Lock torque figures correct without switch.

See Electrical Equipment Section for Regulator internal wiring when two resistors used.

1938 MODELS

CONTINUED N NEXT PAGE

**CONTINUED FROM PRECEDING PAGE**

**Removal:**—Starter flange mounted on right front face of flywheel housing. To remove, disconnect switch linkage, take out flange mounting screws, remove starter and switch as an assembly.

**Starter Switch:**—Model VC-4003. Vacuum control type mounted on starter field frame and operated by clutch pedal.

*For complete data, refer to Electrical Equipment Index.*

**Adjustment:**—Check setting whenever clutch pedal is adjusted. Switch should make contact just after clutch is released. To check, engage transmission gears, depress clutch pedal (with engine not running), note pedal position when starter engages. If clutch not entirely disengaged so that car tends to move, or if pedal travel is excessive, adjust by loosening two clamp bolts on clutch throw-out shaft lever (at left side of clutch housing), move cable clamp in toward shaft for later engagement, or out for earlier engagement, tighten clamp bolts. Switch lever should have  $\frac{1}{8}$ " free movement.

**GENERATOR**

Auto-Lite GCO-4802 or GCO-4802A (3780) GCO-4802C (3880). Armature No. GCO-2031F. Two brush types with external current & voltage regulator.

**Charging Rate Adjustment:**—No adjustment at generator. Charging rate controlled by Voltage Regulator and maximum output controlled by Current Regulator.

**Maximum Charging Rate:**—28 amperes, 8.0 volts, 1850 R.P.M. and above with load or discharged battery (Current Regulator setting). Actual charging rate controlled by Voltage Regulator and is dependent on battery condition.

**Performance Data**

Cold			Hot		
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	825	0	6.4	900
4	6.6	940	4	6.6	1025
8	6.85	1050	8	6.85	1160
12	7.1	1175	12	7.1	1310
16	7.3	1300	16	7.3	1475
20	7.55	1450	20	7.55	1660
24	7.8	1610	24	7.8	1880
28	8.0	1850	28	8.0	2200

**NOTE:**—Current reg. limits output to 28 amperes.

**Rotation:**—Counter-clockwise at commutator end.

**Brush Spring Tension:**—53 ozs. max. (new brushes).

**Field Current:**—1.47-1.63 amperes at 6.0 volts.

**Motoring Current:**—3.94-4.36 amperes at 6.0 volts.

**Removal:**—Generator cradle mounted at left side of engine with fan belt drive. Water pump driven by generator shaft extension. To remove, disconnect water pump, loosen fan belt, remove generator clamp band and lift generator off.

**Belt Adjustment:**—Adjust whenever belt deflection is more than  $1\frac{1}{2}$ " (when pressed lightly midway between generator and fan pulleys). To adjust, loosen two capscrews on fan bracket, lift fan up (one screw hole slotted) until belt deflection is approximately 1", tighten screws.

**REGULATOR**

Auto-Lite VRB-4002-D (3780), VRB-4010-A (3880). Current Voltage type in case on dash.

**NOTE:**—Regulator cover is sealed. Serviced on exchange basis if seals not broken. Unit can be

checked without breaking seal but cover must be removed to make adjustments.

*For complete data, refer to Electrical Equipment Index.*

**Cutout Relay**

**Cuts In:**—6.4-7.0 volts Cold.

**Cuts Out:**—5-3.0 amperes discharge current.

**Contact Gap:**—.015" minimum.

**Air Gap:**—.034" min., .038" max. with contacts open.

Measure at hinge end of core.

**Voltage Regulator**

**Setting:**—7.3-7.6 volts at 70°F. (Regulator Serial No. 8R-000001 Up). See Electrical Equipment Section for settings and changes on units before this serial no.

**To Check (Without Breaking Seals):**—Connect ammeter in charging line at 'B' terminal on regulator, connect voltmeter between 'B' and 'GD' terminals. Operate generator, charging fully charged battery, at speed equivalent to 30 M.P.H. until voltage is steady. Voltage should be within limits of 7.3-7.6 volts (cold—70°F), 7.1-7.4 volts (hot—140°F). See Regulator Setting above.

**To Adjust (with cover removed):**—Change armature spring tension slightly by bending lower spring hanger. See Electrical Equipment Section for complete directions.

**Contact Gap:**—.010" Min., .020" Max. with armature against stop pin.

**Air Gap:**—.0595-.0625" with contacts just opening.

**Current Regulator**

**Setting:**—27-29 amperes (marked '28' on cover).

**To Check (Without Breaking Seals):**—Connect ammeter and voltmeter as directed for Voltage Regulator test. Operate generator at 30 M.P.H. car speed, add load (use bank of headlamp bulbs or turn on car lights and discharge battery) so that generator will charge at peak rate and bring Current Regulator into action. Charging current should not exceed 28 amperes. If more than slight excess is noted, Regulator is defective.

**To Adjust (with cover removed):**—Change regulator armature spring tension by bending lower spring hanger slightly. See Electrical Equipment Section for complete directions.

**Contact Gap & Air Gap:**—As given above for Voltage Regulator.

**LIGHTING**

**LIGHTING:**—Headlamps—Corcoran-Brown, pre-focused type. Country Driving and City Beams controlled by foot selector switch on toeboard. City Beam deflected slightly to right (special type 2331 lamp bulb).

**Headlamp Adjustment:**—Aim headlamps straight ahead with top of beam at lamp center height at 25 feet, (upper beams—Country driving) lighted. Vertical adjustment controlled by mounting bolts—loosen bolts and shift lamp by hand. Horizontal adjustment controlled by screw (under hood just ahead of front mounting bolt).

**Headlamp Beam Indicator:**—Red jewel light on instrument panel above speedometer dial. Lighted whenever Country driving (upper) beams lighted.

**Switches**

**Lighting:**—Douglas.

**Foot Dimmer:**—Douglas.

**Bulb Specifications**

Position	Candlepower	Mazda No.
Headlamps	32-32	2331
Park, Dash, License	3	63
Indicator	1	51
Stop-Tail	21-3	1158
Dome	6	63

**MISC. ELECTRICAL**

**FUSES:**—Lighting—20 amp. on back of lighting switch.

Accessory—20 ampere on fuse block attached to lighting switch. Protects stop light and gasoline gauge circuits.

**HORNS:**—Sparton—Vibrator type twin horns operated by R.B.M. horn relay.

**Horn Relay:**—R.B.M. Model 10072. Current draw .4-.55 amperes at 6.0 volts. Coil resistance 11-14 ohms. Contacts must close with 4 volts across windings when in inverted position.

**ENGINE**

**ENGINE CODE NOTE:**—Consists of three letters stamped above Engine Number Plate to indicate original size of Cylinder Bore (first letter), Main Bearings (second letter), Crankpin & connecting rod bearings (third letter) as follows: 'A'—Standard, 'B'—.010" Undersize, 'C'—.010" Oversize, 'D'—.015" Oversize, 'E'—.020" Oversize.

**ENGINE SPECIFICATIONS:**—8 cylinder, valve-in-head, Twin-ignition type.

**NOTE:**—3880 models use 'Iso-thermal' fuel intake system (Intake manifold cast in cylinder head and surrounded by cooling water for temp. control).

**Bore:**—3 $\frac{1}{8}$ ". **Stroke:**—4 $\frac{1}{4}$ ".

**Displacement:**—260.8 cu. ins. **Rated HP:**—31.25.

**Developed HP:**—105 ('37), 115 ('38) @ 3400 RPM.

**Compression Ratio:**—5.46-1 ('37), 6.0-1 ('38).

**Compression Pressure:**—Approx. 90 lb. ('37), 100-105 lb. ('38) at cranking speed. All cyl. equal within 10 lb.

**Vacuum Reading:**—Steady 18-20" idling at 7-9 MPH.

► Later type Replacement Cylinder Heads: See "Cylinder Head" in Nash Shop Notes.

**PISTONS:**—Nash, aluminum alloy, Invar strut, split skirt type. See Engine Code Note above for original bore and piston sizes.

**Removal:**—Pistons and rods removed from below. **Clearance:**—.0015-.002". See Fitting New Pistons.

**Replacement Pistons:**—Finished pistons furnished Std. and .001", .002", .003", .005", .010", .012", .015", .020" oversize. Semi-finished pistons .050" oversize.

**Fitting New Pistons:**—Use .002" feeler stock inserted between piston and cylinder wall on side opposite slot to check clearance. Pull required to withdraw feeler should be 10 lbs.

**Installing Pistons:**—Piston pins offset toward camshaft side of engine and trademark (within piston) toward front.

**PISTON RINGS:**—Two compression rings, two oil control rings per piston, all above pin.

Ring	Width	End Gap
Compression (All)	1/8"	.010"
Oil Control (#3—1937)	1/8"	.010"
Oil Control (#4—1937)	3/16"	.010"
Oil Control (All—1938)	5/32"	.010"

**Replacement Rings:**—Furnished .010", .020" oversize.

**ENGINE**

CONTINUED FROM PRECEDING PAGE

**PISTON PIN:**—Diameter— $\frac{7}{16}$ ". Length—2 9/16".

Pin floats in piston and rod, retained by locking rings. Pin hole in piston offset toward camshaft side of engine, pin hole in rod bronze-bushed.

Pin Fit in Piston—Light push fit (piston @ 200°F).

Pin Fit in Rod Bushing—.0001" or light push fit with both parts at normal temperature.

Replacement Pins:—Furn. .001", .002", .005" oversize.

**CONNECTING ROD:**—Length—8 $\frac{3}{4}$ ". Weight—34 ozs.

Upper Bearing (Piston Pin Bushing)—Bronze.

Crankpin Journal Diameter—2".

Lower Bearing—Removable steel-backed, babbit-lined type. No shims. See Engine Code Note (above) for original bearing sizes.

Clearance—.002". Sideplay .004" Max.

Bearing Adjustment:—None (no shims). Replace bearings. Do not file rods or caps.

Replacement Bearings:—Furnished .010" undersize.

**CRANKSHAFT:**—9 bearing. Integral counterweights. Journal Diameters—2 31/64" all bearings.

Bearing Type:—Interchangeable steel-backed, babbit-lined type. No shims.

Clearance—.002".

Bearing Adjustment:—None (no shims). Replace bearings. Do not file bearing caps. Bearing upper halves can be 'rotated' out without removing crankshaft by using pin installed in oil hole in shaft and rotating shaft.

Replacement Bearings:—Furnished .010" undersize.

End Thrust:—Taken by center (#5) bearing. Endplay .004". No adjustment (replace bearing).

**CAMSHAFT:**—Non-adjustable roller chain drive.Timing Chain:—Double-roller chain. Width 9/16". Pitch  $\frac{3}{8}$ ". Length 23 $\frac{1}{4}$ " or 62 links.

Camshaft Setting:—Sprockets are marked. Mesh chain with sprockets turned so that marks are adjacent and in line with a straightedge across the shaft centers. Chain should be removed and installed endless. Use special pullers and pushers, keep sprockets lined up to avoid sidestrain on chain and sprockets.

VALVES:	Head Diam.	Seat Angle	Stem Clearance
Intake	1 21/32"	45°	.003"
Exhaust	1 15/32"	45°	.003"

**VALVE TIMING**

Tappet Clearance:—.008" (Intake '37), .015" (Exhaust '37—All valves '38), engine hot and idling. NOTE—On 1938 cars driven consistently at less than 50 M.P.H., intake valves can be set at .008".

Valve Timing:—See Camshaft Setting above.

**LUBRICATION****LUBRICATION:**—Pressure. Gear type oil pump located in crankcase.

Normal Oil Pressure:—25-35 lbs. at normal temp.

Oil Pressure Relief Valve:—Located on oil pump cover. Operates at 30 lbs. Adjustable by turning screw.

Crankcase Capacity:—7 quarts (refill).

Oil Pressure Gauge:—King-Seeley Electric, K-S No. 6730 (dash unit, first cars—ball type pointer), 7070 (dash unit, later cars—bar type pointer), N. 6125 (motor unit, all cars). This data for 3880 only.

See Miscellaneous Section for complete data.

**COOLING****COOLING SYSTEM:**—Water Pump:—Centrifugal type, driven through flexible coupling by extension of generator armature shaft.

See Water Pump Section for complete data.

Removal:—Drain radiator, disconnect hose and drive coupling, take out mounting screws in pump flange.

Thermostat:—Dole. In water outlet on cyl. head.

Setting:—Thermostat opens at 160°F.

Temperature Gauge ('38): King-Seeley Electric type.

Dash Unit—K-S No. 6730 (with Ball type pointer), No. 7070 (with Bar type pointer).

Engine Unit—K-S No. 5700.

NOTE—No. 5700 Engine Unit serviced by No. 7000 (new type) which must be used with new Dash Unit No. 7295. Service Kit Not. 7643 contains both units.

See Miscellaneous Section for complete data.

Water Capacity:—18 qts (3780), 17 qts. (3880).

Drain Valves:—At bottom of radiator. Drain plug also located at lower left rear corner of engine block.

**CLUTCH****CLUTCH:**—Borg & Beck Mod. 10A6. Mod. #883 stamped on cover. Single plate, dry disc type.

See Clutch Section for complete data.

Facings:—Moulded-woven type, 2 required. Inside Diam. 6". Outside Diam. 10". Thickness  $\frac{1}{8}$ ".

NOTE—Woven facings used on 3780.

Adjustment—Free movement of clutch pedal must be  $\frac{1}{2}$ -1 $\frac{1}{2}$ ". Adjust by loosening transverse bolt in link directly behind pedal and above clutch pedal shaft and positioning pedal in slot. Clearance between pedal and toeboard should be  $\frac{3}{8}$ ". Check Starting Switch adjustment and 'NoRol' setting whenever clutch adjusted and adjust if necessary.

NoRol Adjustment—Loosen locknut and turn adjusting nut at rear end of connecting rod (at NoRol lever) in for later brake release, out for earlier release. Brakes should release just as clutch engages.

Starting Switch Adjustment—Starting switch lever should have  $\frac{1}{8}$ " free movement. Adjust by turning lever stopscrew on side of switch case. Switch should close just after clutch is completely disengaged. Adjust by loosening two clampscrews attaching switch cable to lever on right end of clutch throw-out shaft, move clamp toward shaft for later starter engagement, out for earlier.

Removal:—Remove transmission (see Transmission Removal below), remove clutch housing underpan, take out clutch mounting bolts evenly, remove assembly from below.

**TRANSMISSION****TRANSMISSION:**—Own Make. Constant-mesh, synchro-mesh, helical gear (second and high), sliding helical gear (low and reverse).

See Transmission Section for complete data.

Vacuum Gear Shift (Transmission Control):—Evans Nash vacuum type. Optl. on Model 3880 only.

See Transmission Section for complete data.

Removal:—Disconnect driveshaft. Disconnect shift linkage (on cars with Vacuum Gear Shift). Take off nuts on transmission mounting bolts, pull transmission straight back.

**OVERDRIVE**

Cruising Gear (Overdrive):—Warner Model AS7-R1 (3780), AS6-R6 (3880). Optional equipment.

See Transmission Section for complete data.

**UNIVERSALS****UNIVERSAL JOINTS:**—Mechanics Model 3C. Roller bearing type. Two used.

See Universals Section for complete data.

**REAR AXLE****REAR AXLE:**—Own—Semi-floating, spiral bevel gear type with Hotchkiss drive.

See Rear Axle Section for complete data.

Ratio—4.1-1 Std.

Removal:—With axle shafts removed, drop driveshaft, remove carrier mounting bolts and remove assembly from car without removing housing.

Axle Shaft Removal—Remove wheel, take out mounting screws in retainer, remove retainer, oil seal, brake backing plate, bearing adjusting shims. Use puller to remove shaft and bearing assembly.

Wheel Bearing Adjustment—Controlled by shims at flanged end of housing. To adjust, remove brake backing plate and add or remove shims.

Endplay—.003-.006".

**SHOCK ABSORBERS****SHOCK ABSORBERS:**—Nash (Delco or Gabriel design), double acting (3780), direct acting (3880).

See Shock Absorber Section for complete data.

**FRONT SUSPENSION**

Front Suspension:—Conventional 'I' beam front axle with Reverse-Elliott ends and semi-elliptic springs.

Kingpin Inclination—7° crosswise.

Camber— $\frac{1}{2}$ -1 $\frac{1}{2}$ ". No adjustment.Caster—2° ('37), 1 $\frac{1}{2}$ ° ('38). Shim adjustment. Install shims between spring and spring pad on axle. Toe In—0-1/16". Adjust by loosening clamp bolt at right hand end of tie rod and turning rod in or out of end fitting.

Steering Shock Eliminator—Consists of rubber bumper mounted on underside of left frame siderail just in front of left front spring rear shackle. Adjust to give 1/16" clearance between spring and bumper with normal load.

**STEERING GEAR**

Steering Gear: Gemmer Model 335 Worm-and-Roller type with "push-pull" adjustments.

See Steering Gear Section for complete data.

**BRAKES****BRAKES:**—Service. Bendix Duo-servo, Single Anchor type, or Lockheed type, Hydraulic brakes. Hand lever applies rear wheel service brakes. NoRol optional equipment on 3880 only.

See Brake Section for complete data.

Drum Diameter—11" ('37), 11 1/16" ('38).

Lining—Woven (prim. '38), Moulded (all '37—secondary '38). Width 2 $\frac{1}{4}$ " ('37), 2 1/16" ('38). Thickness 3/16". Length per wheel 23 13/16" ('37).

Clearance (Bendix)—.010" at heel &amp; toe (each shoe).

Clearance (Lockheed)—.005" heel, .010" toe (each shoe).

Braking Power—53% front, 47% rear.

NoRol:—Optional. Consists of a clutch pedal controlled valve in the brake line by which brakes held 'on' when car stopped on up-grade until clutch is engaged.

See Brake Section for complete data.

Hand Brake:—See Service Brakes above.

**NOTE:**—Engine hood hinged at cowl and lifts from forward end. Hood latch handle located at lower edge of radiator grille (safety catch at top of grille).

### MODEL IDENTIFICATION

**SERIAL NUMBER:**—First number R-331400. Stamped on plate on right frame side rail under hood.

**ENGINE NUMBER:**—First number E-33900 (See Note). Stamped on boss on right front upper corner of engine block.

Engine No. Change Note—Beginning with Serial No. R-331967, engine numbering changed so that number is 500 less than serial number on same car (Serial No. R-331,967—Engine No. E-331467).

### TUNE-UP

**COMPRESSION:**—Ratio—6.0-1 std. No optl. ratios.

Pressure—125 lbs. at 350 R.P.M. or approximately 100 lbs. at cranking speed of 125 R.P.M. Pressure must be equal for all cylinders within 10 lbs.

**VACUUM READING:**—18-20" steady reading with engine idling at 7-8 M.P.H.

**FIRING ORDER:** 1-5-3-6-2-4. See wiring diagram for sparkplug cable connections on distr. cap.

**SPARK PLUGS:** AC No. 45. 14 mm. Metric.

Gaps—Set at .025".

**IGNITION:** See Coil, Condenser, and Distributor. Breaker Gap—.020". Cam Angle—35° Closed. Synchronization—Movable contacts should be set to open simultaneously with stationary set. Automatic Advance—11½° max. at 875 RPM (distr.).

**IGNITION TIMING:** See Ignition Timing.

Std. Setting—6° BTDC. Vibration dampener mark 'IGN' (23/64" before 'DC' mark) aligned with pointer on chain case cover at front of engine. Both sets of contacts should open simultaneously.

**CARBURETION:** See Carburetor & Carb. Equipment. Idle Setting—Idle screw ¾-1½ turn open. Idle speed 7-8 MPH.

Float Level—¾" from projection on cover to top of soldered seam at front end of float with needle valve seated (invert to check).

Accelerating Pump—Lower hole (Normal setting).

Fuel Pump Pressure: 3½ lbs. maximum.

**VALVES:** See Valve Timing.

Tappet Clearance—.008" Int., (.015" for high speed operation), .015" Exh. Set with engine warm and idling.

**STARTING:** See Battery, Starter, Generator, Regulator.

### IGNITION

**Ignition Switch:**—Oakes Steering Column and Ignition Lock No. 301954. Ignition Switch No. 301538.

**Ignition Lock:**—Briggs & Stratton No. 80207 (Lock cylinder). Key Series—5 digits. Groove—#1.

**COIL:** Two Used, Auto-Lite CE-4402-A. Service Coil CE-4404. Coils mounted on right side of engine. Ignition Current—2 amps. idling, 4 stopped.

**CONDENSER:** Auto-Lite Part No. IG-2671. Two used. Capacity—20-25 microfarad.

**DISTRIBUTOR:** Auto-Lite IGE-4019A. Twin Ign. double breaker, 6 lobe cam, full automatic advance type. Contacts open simultaneously to fire both spark plugs in each cylinder at the same instant and must be synchronized (See Timing).

Breaker Gap—Set at .020".

Cam Angle or Dwell—35° Closed. 25° Open (distr.). For each set of contacts (operate independently).

Breaker Arm Spring Tension—16-20 ounces.

Rotation—Counter-clockwise viewed from the top.

Automatic Advance			
Distributor	R.P.M.	Engine	R.P.M.
Degrees	Degrees	Degrees	Degrees
Start	275	0	550
.8	300	1.6	600
3	375	6	750
5	435	10	870
7	500	14	1000
9	660	18	1320
11.5	875	23	1750

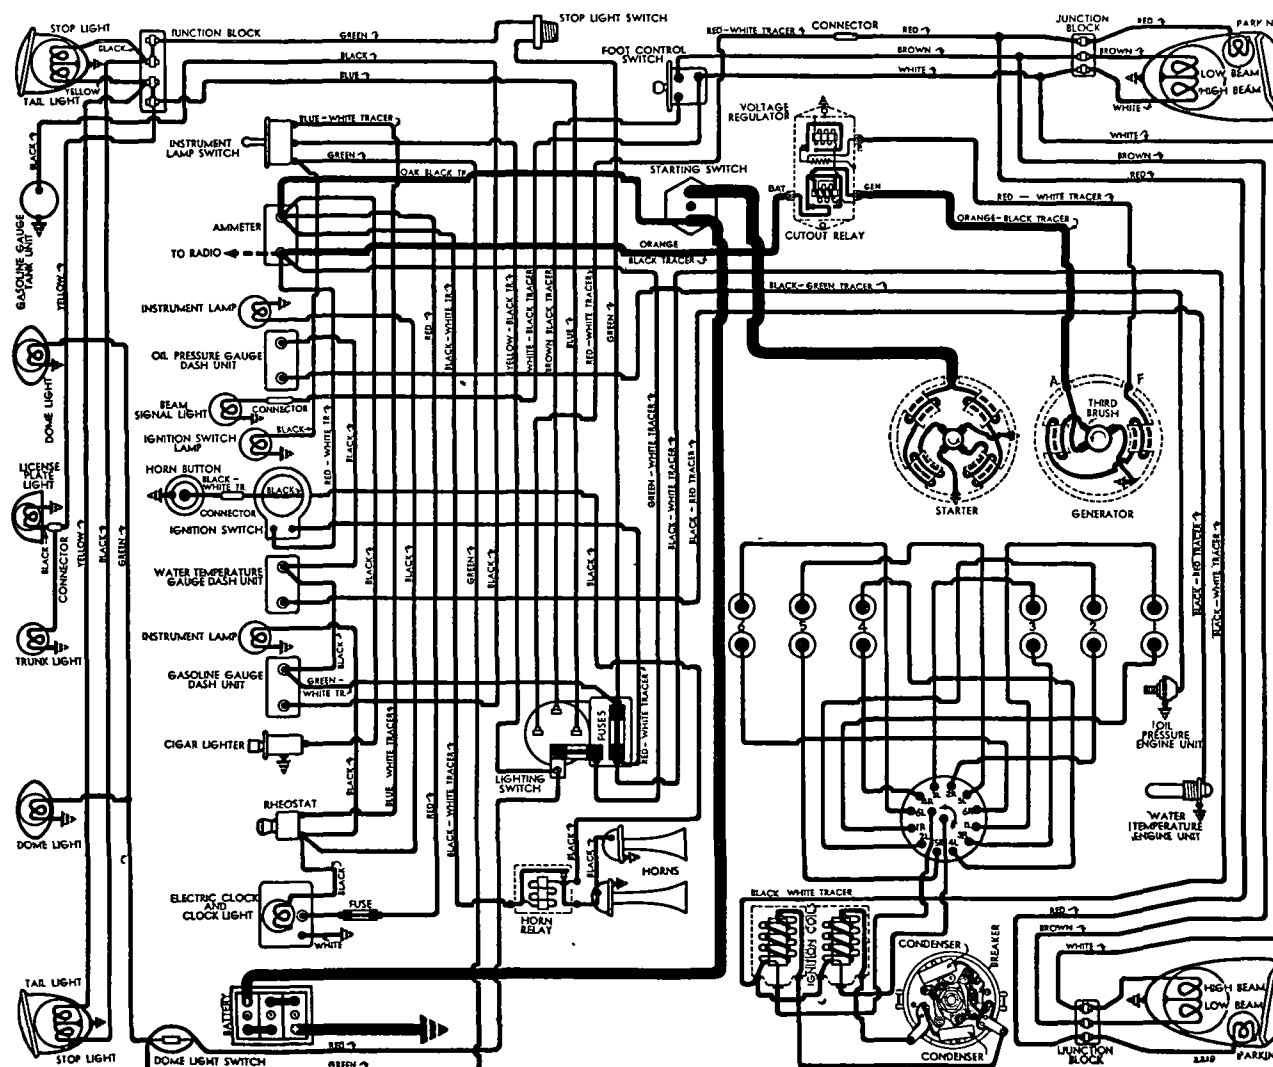

**Removal:**—Distributor mounted on right hand side of crankcase. To remove, take out hold-down screw in advance arm.

### IGNITION TIMING

**IGNITION TIMING:**—Setting for all engines as follows:

Flywheel Degrees	Piston Position
6° BTDC.	.0150" BTDC.

**Timing (Stationary Contacts)**—With #1 piston on compression, turn engine over until piston is 6° or .015" before top dead center, stop when 'IGN' mark on vibration dampener at front of engine lines up with pointer on chain case cover (this mark is 6° or 23/64" before top dead center mark 'DC'). Loosen advance arm clamp bolt, rotate distributor until stationary contacts (mounted directly on breaker plate) begin to open, tighten clamp bolt, then synchronize movable contacts.

**Synchronization (Timing Movable Contacts)**—Without disturbing position of distributor or crankshaft, loosen lock screws on movable sub-plate (carrying second set of contacts), shift plate by prying with screwdriver in notch on edge of plate until this set of contacts begin to open, tighten sub-plate lock screws.

**Synchronization (Other Methods)**—Set contacts to open simultaneously at regular 60° (dist.) intervals.

## CARBURETOR

**CARBURETION**—Carburetor—Carter Model WA-1, Type 435-S. (#253 cast on face of flange). Single barrel, 1¼" downdraft type with Carter Climatic Control.

*For complete data, refer to Carburetor Index.*

**Idle Adjustment**—With engine warm (fast idle and automatic choke inoperative) adjust throttle stop screw so that engine idles at 7-8 M.P.H. Turn idle adjusting screw in until engine begins to miss, then turn screw out until engine begins to roll, finally turn screw in slowly until engine fires smoothly. Final setting should be ¾-1½ turns open of screw from inner seated position. Readjust throttle stop screw for correct 7-8 M.P.H. idling speed.

**Accelerating Pump Adjustment**—Pump arm under dust cover at top of carburetor has three holes for pump link engagement. Set as follows:

Upper Hole (max. stroke)—Cold weather.  
Lower Hole (med. stroke)—Moderate weather.  
Inner Hole (min. stroke)—Hot weather.

**Fast Idle**—Carter Cam type.

*For complete data, refer to Carburetion Equip. Index.*

**Setting**—Turn throttle stop screw until it just seats on cam (fast idle cam held in normal idle position). With throttle lever closed, pull cam back until stop screw against first stop of fast idle cam. Check clearance between inside wall of air horn and lower edge of choke valve (Gauge T109-83). Should be ½".

**Automatic Choke**—Carter Climatic Control. Built-in carburetor.

*For complete data, refer to Carburetion Equip. Index.*

**Setting**—Set coil housing one notch rich for average driving and climatic conditions.

## CARB. EQUIPMENT

**Air Cleaner**—AC. #1529112 oil-wetted type std. #1529115 heavy duty oil-bath type optional.

**Fuel Pump**—AC. Type W #1523642 diaphragm type std. Type AD #1523643 combination fuel-and-vacuum pump optl. on cars with Cruising Gear.  
*For complete data, refer to Carburetion Equip. Index.*

**Gasoline Gauge**—King-Seeley Electric type. K-S No. 7265 (dash unit), No. 6732 (tank unit).

*For complete data, refer to Carburetion Equip. Index.*

## BATTERY

**BATTERY**—U.S.L. Type HTL-1-15, 6 volt, 15 plate, 105 ampere hour capacity (20 hour rate).

**Starting Capacity**—133 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 3.8 minutes.

**Grounded Terminal**—Positive (+) terminal grounded to frame and to transmission (1 cable).

**Dimensions**—Length & Height 9 1/16". Width 7 1/4".

**Location**—Under right front seat.

## STARTER

**Auto-Lite Model MAB-4076. Armature MAB-2057.**

**Drive**—Inboard Bendix Type LCD11FX-10.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—42-53 ozs. (new brushes).

**Cranking Engine**—160 RPM., 150-160 amps., 5.2 v.

### Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	3700	5.5	60
.6 "	1910	5.5	100
3.4 "	1100	5.0	200
6.6 "	695	4.5	300
10.15 "	420	4.0	400
15.8 "	Lock	3.0	582
22.5 "	Lock	4.0	775

**Removal**—Starter flange mounted on left front face of flywheel housing. To remove, take out flange mounting screws.

**Starting Switch**—A-L Model SW-4005. Mounted on left side of engine below clutch pedal. Operated by depressing clutch pedal fully. No adjustment required.

## GENERATOR

### THIRD-BRUSH TYPES

**Auto-Lite Model GDS-4802A. Armature No. GDF-2097.** Third brush control type with external vibrating voltage regulation. Ventilated by fan on drive pulley.

**Maximum Charging Rate**—35 amperes (cold), 27.5 amperes (hot), at 8.0 volts, 24 M.P.H. Actual charging rate controlled by Voltage Regulator and dependent on battery condition.

**Charging Rate Adjustment**—Maximum output controlled by third brush. Do not adjust third brush for output greater than shown in table below (with field terminal grounded to render regulator inoperative). See Regulator Section (following).

**NOTE**—Third brush setting 1 bar minus 1 mica strip (minimum), 1 bar (maximum) from insulated main brush.

### Performance Data

Cold			Hot		
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	920	0	6.4	960
4	6.6	1050	4	6.65	1120
8	6.8	1175	8	6.9	1280
12	7.0	1300	12	7.1	1430
16	7.2	1450	16	7.45	1640
20	7.4	1600	20	7.6	1900
24	7.6	1820	24	7.8	2320
28	7.8	2075	27.5	8.0	3200
33	8.0	2900			

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—53 ozs. max. (new brushes).

**Field Current**—1.65-1.82 amperes at 6.0 volts.

**Motoring Current**—5.10-5.45 amperes at 6.0 volts.

**Removal**—Generator cradle mounted at left side of engine with fan belt drive. Water pump driven by generator shaft extension. To remove, disconnect water pump, loosen fan belt, remove generator clamp band and lift generator off.

**Belt Adjustment**—Adjust whenever belt deflection is more than 1½" (when pressed lightly midway between generator and fan pulleys). To adjust, loosen two capscrews on fan bracket, lift fan up (one screw hole slotted) until belt deflection is approximately 1", tighten screws.

## GENERATOR

### TWO-BRUSH TYPES

**Auto-Lite Model GCO-4802-C. Armature Number GCO-2031F.** Shunt (two brush) type with external vibrating voltage and current regulation. See preceding 3880 page for complete data.

## REGULATOR

### FOR THIRD-BRUSH GENERATOR

**Auto-Lite Model VRD-4010A. Voltage Type** (used with GDS-4802A Generator). Consists of cutout relay and vibrating voltage regulator in a single case mounted on frame in engine compartment.

*For complete data, refer to Electrical Equipment Index.*

**NOTE**—Regulator cover sealed. Serviced on exchange basis if seals not broken.

### Cutout Relay

**Cuts In**—6.4-7.0 volts Cold, 9 M.P.H.

**Cuts Out**—5-3.0 amperes discharge current.

**Contact Gap**—.015" minimum.

**Air Gap**—.034-.038" Contacts open—measure at hinge end of core.

### Voltage Regulator

**Setting**—7.3-7.6 volts at 70°F.

**To Check** (without breaking seals)—Connect ammeter in charging line at regulator 'B' terminal, voltmeter between 'B' and 'GD' terminals. Operate generator at speed equivalent to 30 M.P.H., charging battery, until voltage is steady. Voltage reading should be 7.3-7.6 volts (Cold—70°F), 7.1-7.4 volts (Hot—140°F).

**To Adjust** (with cover removed)—Change regulator armature spring tension by bending lower spring hanger. See Electrical Equipment Section for complete directions.

**Contact Gap**—.010-.020" (armature against stop pin).

**Air Gap**—.0595-.0625" with contacts just opening.

## REGULATOR

### FOR TWO-BRUSH GENERATOR

**Auto-Lite Model VRB-4010-A. Voltage-Current Type** (Used with GCO-4802C Generator). See preceding 3880 page for complete data.

## LIGHTING

**LIGHTING**—Headlamps—Corcoran-Brown, pre-focused type. Country driving and City beams controlled by selector switch on toeboard. City beam deflected slightly to right (special 2331 bulb).

**Headlamp Adjustment**—With car 25' from screen and Country Driving (upper beams) lighted, aim headlamps straight ahead with top of beam at lamp center height. Adjusting screws located under headlight door to left of lens. Upper screw controls horizontal movement, lower screw vertical movement.

C NTINUED ON NEXT PAGE

## CONTINUED FR M PRECEDIN PAGE

Beam Indicator—Red dot above speedometer dial. Lighted when Country Driving (upper beams) in use.

## Switches

Lighting—Douglas.  
Beam Selector—Douglas.  
Instrument—Douglas.

## Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps	32-32	2331
Park, Dash, License	3	63
Indicator	1	51
Stop-Tail	21-3	1158
Dome	6	81

## MISC. ELECTRICAL

FUSES:—Lighting—20 ampere capacity fuse on lighting switch.

Accessory—20 ampere capacity fuse on fuse block on lighting switch. Protect stop light and gasoline gauge circuits.

HORNS:—Auto-Lite. Model HH-4003 (low pitch), HH-4004 (high pitch). Vibrator type, blended tone horns operated by relay.

Horn Relay:—R.B.M. Model 4755.

Contacts Close—3.5-4.5 volts.

Current Draw— $\frac{3}{4}$  ampere.

## ENGINE

NOTE:—Engine hood hinged at cowl and lifts from forward end. Hood latch handle located at lower edge of radiator grille (safety catch at top of grille).

ENGINE CODE NOTE:—Consists of three letters stamped on Engine Number Plate to indicate original size of Cylinder Bore (first letter), Main Bearings (second letter), Crankpin & connecting rod bearings (third letter) as follows: 'A'—Standard, 'B'—.010" Undersize, 'C'—.010" Oversize, 'D'—.015" Oversize, 'E'—.020" Oversize.

ENGINE SPECIFICATIONS:—8 cylinder, valve-in-head, Twin Ignition type. NOTE—"Iso-thermal" fuel intake system used (intake manifold cast in cylinder head—water cooled for temp. control).

Bore— $3\frac{3}{8}$ ". Stroke— $4\frac{3}{8}$ ".

Displacement—234.8 cu. ins. Rated HP.—27.34.

Developed Horsepower—105 HP. at 3400 R.P.M.

Compression Ratio—6.0-1 cast-iron head.

Compression Pressure—125 lbs. @ 350 RPM. or approx. 100-105 lbs. at cranking speed (125 RPM).

Vacuum Reading—18-20" steady idling at 7-8 MPH.

►Later type Replacement Cylinder Heads: See "Cylinder Head" in Nash Shop Notes.

PISTONS:—Nelson-Bohnalite, aluminum alloy, Invar strut, tin plated, split skirt type. See Engine Code Note above for original bore and piston sizes.

Weight— $19\frac{1}{4}$  ounces. Length— $3\frac{7}{8}$ ".

Removal—Pistons and rods removed from above.

Clearance—Top .027-.030". Skirt .001-.002".

Replacement Pistons:—Std. & .001", .002", .003", .005", .010", .012", .015", .020" O.S. Semi-finished .050" O.S.

Fitting New Pistons:—Insert .002" feeler between piston and cylinder wall on side opposite slot. Pull to withdraw feeler should be 10 lbs.

Installing Pistons:—Pin offset to camshaft side of engine. Trademark (within piston) to front.

PISTON RINGS:—Two compression rings, two oil control rings per piston, all above pin.

Ring	Width	End Gap	Wall Thickness
Compression	.123-.124"	.010-.020"	.150"
Oil Control	.1545-.1550"	.010-.018"	.150"

Replacement Rings:—Furnished .010", .020" oversize.

PISTON PIN:—Diameter .8745-.8748". Length 2.799-2.809". Floating type. Retained by locking rings. Pin hole in piston offset to camshaft.

Pin Fit in Piston—Light push fit (piston @ 200°F.)

Pin Fit in Rod Bushing—Select fit to .0001" or light push fit at normal temperature.

Replacement Pins:—Furn. .001", .002", .005" oversize.

CONNECTING ROD:—Length— $8\frac{3}{4}$ ". Weight— $36\frac{1}{4}$  ozs.

Upper Bearing (Piston Pin Bushing)—Bronze.

Crankpin Journal Diameter—2.0015-2.0025".

Lower Bearing—Removable steel-backed, babbit-lined type. No shims. See Engine Code Note (above) for original bearing sizes.

Clearance—.0015-.0025". Sideplay—.008-.012".

Bearing Adjustment:—None (no shims). Replace bearings. Do not file rods or caps.

Replacement Bearings:—Furnished .010" undersize.

CRANKSHAFT:—7 bearing, 4 counterweights.

Journal Diameters—2  $31\frac{1}{64}$ " all bearings.

Bearing Type—Interchangeable steel-backed, babbit-lined. No shims. See Engine Code Note (above) for original bearing sizes. Clearance—.002".

Bearing Adjustment:—None (no shims). Replace bearings. Do not file caps. Upper halves can be 'rotated' out without removing crankshaft by using pin in oil hole in shaft, turn shaft.

Replacement Bearings:—Furnished .010" undersize.

End Thrust:—At #4 bearing. Endplay—.004".

CAMSHAFT:—Non-adjustable double-roller chain drive.

End Thrust:—Taken by front bearing. Replace bearing to take up excessive endplay.

Timing Chain:—Whitney No. 49205. Width  $9\frac{1}{16}$ ". Pitch  $\frac{3}{8}$ ". Length 60 links or  $22\frac{1}{2}$ ".

Camshaft Setting:—Sprockets marked. Mesh chain with sprocket marks adjacent and in line with a straightedge across the shaft centers.

VALVES:	Head Diameter	Stem Diameter	Length
Intake	1 $3\frac{1}{4}$ "	.3715-.3725"	.5 17/32"
Exhaust	1 19/32"	.3715-.3725"	.5 17/32"

	Seat Angle	Lift	Stem Clearance
All Valves	45°	.11/32"	.002-.004"

Valve Guides:—Press fit in head.

Valve Springs:—Double springs on all valves. Spring free length 1  $21\frac{1}{32}$ " (inner), 2" (uter).

	Inner Spring Pressure	Length	Outer Spring Pressure	Length
Closed	19-23 lbs.	1 $3\frac{1}{8}$ "	35½-40½ lbs.	1 11/16"
Open	48-54 lbs.	1 $1\frac{1}{32}$ "	92-98 lbs.	1 11/32"

## VALVE TIMING

Tappet Clearance:—.008" Int., (.015" for high speed operation), .015" Exh. Set with engine warm and idling.

Valve Timing:—See Camshaft Setting above.

Intake Valves—Open  $24\frac{1}{2}$ ° BTDC. Close  $70\frac{1}{2}$ ° ALDC.

Exhaust Valves—Open  $49\frac{1}{2}$ ° BLDC. Close 5° ATDC.

Valve Timing Check—With regular running tappet clearance of .015", Exhaust valve should close with piston 5° or .0104" after top dead center.

## LUBRICATION

LUBRICATION:—Gear type pump in crankcase.

Normal Oil Pressure:—30 lbs. at 20 M.P.H.

Oil Pressure Relief Valve:—On oil pump cover. Opens at 30 lbs. Screw adjustment.

Oil Pressure Gauge:—King-Seeley Electric. K-S No. 7270 (dash unit), 6125 (engine unit).

See Miscellaneous Section for complete data.

Crankcase Capacity:—7 qts. (6 qts. refill).

## COOLING

COOLING SYSTEM:—Capacity—16 quarts.

Water Pump:—Centrifugal, adjustable packing type. Driven by generator extension shaft.

See Water Pump Section for complete data.

Removal—Drain radiator, disconnect hose and drive coupling, take out mounting screws in pump flange.

Thermostat:—Dole. In water outlet on cyl. head.

Setting—Starts to open at 160°F.

Temperature Gauge:—King-Seeley Electric. K-S No. 7275 (dash unit), 7000 (engine unit).

See Miscellaneous Section for complete data.

NOTE—Gauge reads '212' with ignition 'Off'.

## CLUTCH

CLUTCH:—Borg & Beck Model 10A7. #902 or #934 stamped on cover. Single plate, dry disc type.

See Clutch Section for complete data.

Facings—Woven, 2 required. Inside Diam. 6". Outside Diam. 10". Thickness .125".

Adjustment:—Pedal free movement  $\frac{1}{2}$ - $1\frac{1}{4}$ " (loosen transverse bolt in link below pedal shaft, position pedal in slot). Pedal toeboard clearance  $\frac{3}{8}$ ". Check 'No-Rol' operation (if car so equipped).

Removal:—Remove transmission (see below), clutch housing underpan, clutch cover mounting bolts (release tension evenly), lower assembly out.

## TRANSMISSION

TRANSMISSION:—Own Make. Constant-mesh (all speeds), synchro-mesh (second & high), all helical gear.

See Transmission Section for complete data.

**Transmission Control:**—Mechanical type steering column mounted gear shift, optional.

*See Transmission Section for complete data.*

**Removal:**—Disconnect driveshaft. Disconnect shift linkage (cars with steering column shift). Remove transmission mounting stud nuts and lift out.

### OVERDRIVE

**Cruising Gear (Overdrive):**—Warner design type R8 optional. In separate case at rear of transmission.

*See Transmission Section for complete data.*

### UNIVERSALS

**UNIVERSAL JOINTS:**—Mechanics. Type 2C. Roller bearing type, 2 used.

*See Universals Section for complete data.*

### REAR AXLE

**REAR AXLE:**—Own Make. Semi-floating, hypoid gear type with Hotchkiss drive (spiral bevel on Coupe).

*See Rear Axle Section for complete data.*

**Ratio:**—4.1-1 Std. 4 4/9-1 Optl.

**Backlash:**—.005-.007". Shim adjustment.

**Removal:**—Block up rear of car, remove wheel and drum assemblies, axle shafts, disconnect brake lines and cables, shock absorbers, drive shaft at rear uni-

versal. Free axle from springs by disconnecting spring bolts, withdraw axle.

**Axle Shaft Removal:**—Remove wheel and drum, take out retainer mounting bolt nuts, remove retainer, oil seal, brake backing plate, bearing adjusting shims. Pull shaft and bearing out.

**Wheel Bearing Adjustment:**—Shims at flanged end of housing. To adjust, remove brake backing plate, add or remove shims. Endplay—.004-.006".

### SHOCK ABSORBERS

**SHOCK ABSORBERS:**—Delco. Front 1112-P, Rear 1117-DD. Direct acting, hydraulic type. 1723-L, M, N, P (double acting) Export.

*See Shock Absorber Section for complete data.*

### FRONT SUSPENSION

**Front Suspension:**—Conventional 'I' beam front axle with Reverse-Elliott end and semi-elliptic springs.

**Kingpin Inclination:**—7° crosswise.

**Camber:**— $\frac{1}{2}$ -1 $\frac{1}{2}$ ° and equal at both wheels.

**Caster:**—1 $\frac{1}{2}$ °. Shim adjustment. Install shims (furnished in 1 $\frac{1}{2}$ ° and 3° angles) between spring and spring pad on axle.

**Toe In:**—0-1/16". Adjust by loosening clamp bolt at right end of tie rod and turning tie rod.

**Steering Shock Eliminator:**—Consists of spring and rubber bumper bracket at rear of left front spring. Adjust lower nut to give  $\frac{1}{8}$ " clearance between upper rubber cushion and frame. Adjust spring cushion. (ahead of spring rear shackle) to 1/16" clearance between cushion and spring.

### STEERING GEAR

**Steering Gear:** Gemmer Model 305 Worm-and-Roller type with "push-pull" adjustments.

*See Steering Gear Section for complete data.*

### BRAKES

**BRAKES:**—Service. Bendix hydraulic, duo-servo, single anchor type with eccentric adjustment. Hand lever applies rear service brakes.

*See Brake Section for complete data.*

**Drums:**—Cast-iron. Diameter 10 1/16".

**Lining:**—Moulded. Width 2". Thickness 7/32". Length per wheel 22".

**Clearance:**—.010" at heel and toe of each shoe.

**Braking Power:**—53% front wheels, 47% rear.

**Hand Brake:**—See Service Brakes.

**No-Rol:** Optional equipment.

*See Brake Section for complete data.*

**NOTE:**—Engine hood hinged at cowl and lifts from forward end. Hood latch handle located at lower edge of radiator grille (safety catch at top of grille).

### MODEL IDENTIFICATION

**SERIAL NUMBER:**—First number B-89000. Stamped on plate on right frame side rail under hood.

**ENGINE NUMBER:**—Stamped on boss on right front upper corner of engine block (see Note for numbering change).

**Engine No. Change Note:**—Beginning with Serial No. B-103201, engine numbering changed so that number is 500 less than serial number on same car (Serial No. B-103201, Engine No. B-102701).

### TUNE-UP

**COMPRESSION:**—Ratio—6.0-1 std. No optl. ratios.

**Pressure:**—110 lbs. at 350 R.P.M. or approximately 100 lbs. at cranking speed of 125 R.P.M. Pressure must be equal for all cylinders within 10 lbs.

**VACUUM READING:**—18-20" steady reading with engine idling at 7-8 M.P.H.

**FIRING ORDER:** 1-6-2-5-8-3-7-4. See wiring diagram for spark plug cable connections in distr. cap.

**SPARK PLUGS:** AC No. 45. 14 mm. Metric.  
Gaps—Set at .025".

**IGNITION:** See Coil, Condenser, and Distributor.

**Breaker Gap:**—.017". **Cam Angle:**—28° Closed.

**Synchronization:**—Set movable contacts to open simultaneously with stationary contacts.

**Automatic Advance:**—12° max. at 1100 RPM (distr.).

**IGNITION TIMING:** See Ignition Timing.

**Std. Setting:**—9° BTDC. Vibration dampener mark 'IGN' (.725" before 'DC' mark) aligned with pointer on chain case cover at front of engine. Both sets of contacts should open simultaneously.

**CARBURETION:** See Carburetor & Carb. Equipment.  
**Idle Setting:**—Idle screws ¼-1 turn open. Idle speed 7-8 MPH.

**Float Level:**—3/16" from top of float to machined surface of cover (remove gasket, invert to check).  
**Accelerating Pump:**—Lower Hole (Summer), upper (Winter).

**Fuel Pump Pressure:** 3½ lbs. maximum.

**VALVES:** See Valve Timing.

**Tappet Clearance:**—.008" Int., (.015" for high speed operation), .015" Exh. Set with engine warm and idling.

**STARTING:** See Battery, Starter, Generator, Regulator.

### IGNITION

**Ignition Switch:**—Oakes Steering Column and Ignition Lock No. 301955. Ignition Switch No. 301538.

**Ignition Lock:**—Briggs & Stratton No. 80207 (Lock cylinder). Key Series—5 digits. Groove—#1.

**COIL:** Two Used, Auto-Lite CE-4402-A. Service Coil CE-4404. Coils mounted on right side of engine.  
**Ignition Current:**—2 amps. idling, 4 stopped.

**CONDENSER:** Auto-Lite Part No. IG-2871. Two used.  
**Capacity:**—20-25 microfarad.

**DISTRIBUTOR:** Auto-Lite IKG-4102. Twin ign. double breaker, 8 lobe cam, full automatic advance type. Contacts open simultaneously to fire both spark plugs in each cylinder at the same instant and must be synchronized (See Timing).

**Breaker Gap:**—Set at .017" (alike for both sets).

**Cam Angle or Dwell:**—28° Closed. 17° Open. For each set of contacts (operate independently).

**Breaker Arm Spring Tension:**—18-20 ounces.

**Rotation:**—Clockwise viewed from the top.

Automatic Advance			
Distributor	Engine	Distributor	Engine
Degrees	R.P.M.	Degrees	R.P.M.
Start.....	275	0.....	550
2.....	335	4.....	670
4.....	400	8.....	800
6.....	570	12.....	1140
8.....	745	16.....	1490
10.....	925	20.....	1850
12.....	1100	24.....	2200

**Removal:**—Distributor mounted on right hand side of crankcase. To remove, take out hold-down screw in advance arm.

### IGNITION TIMING

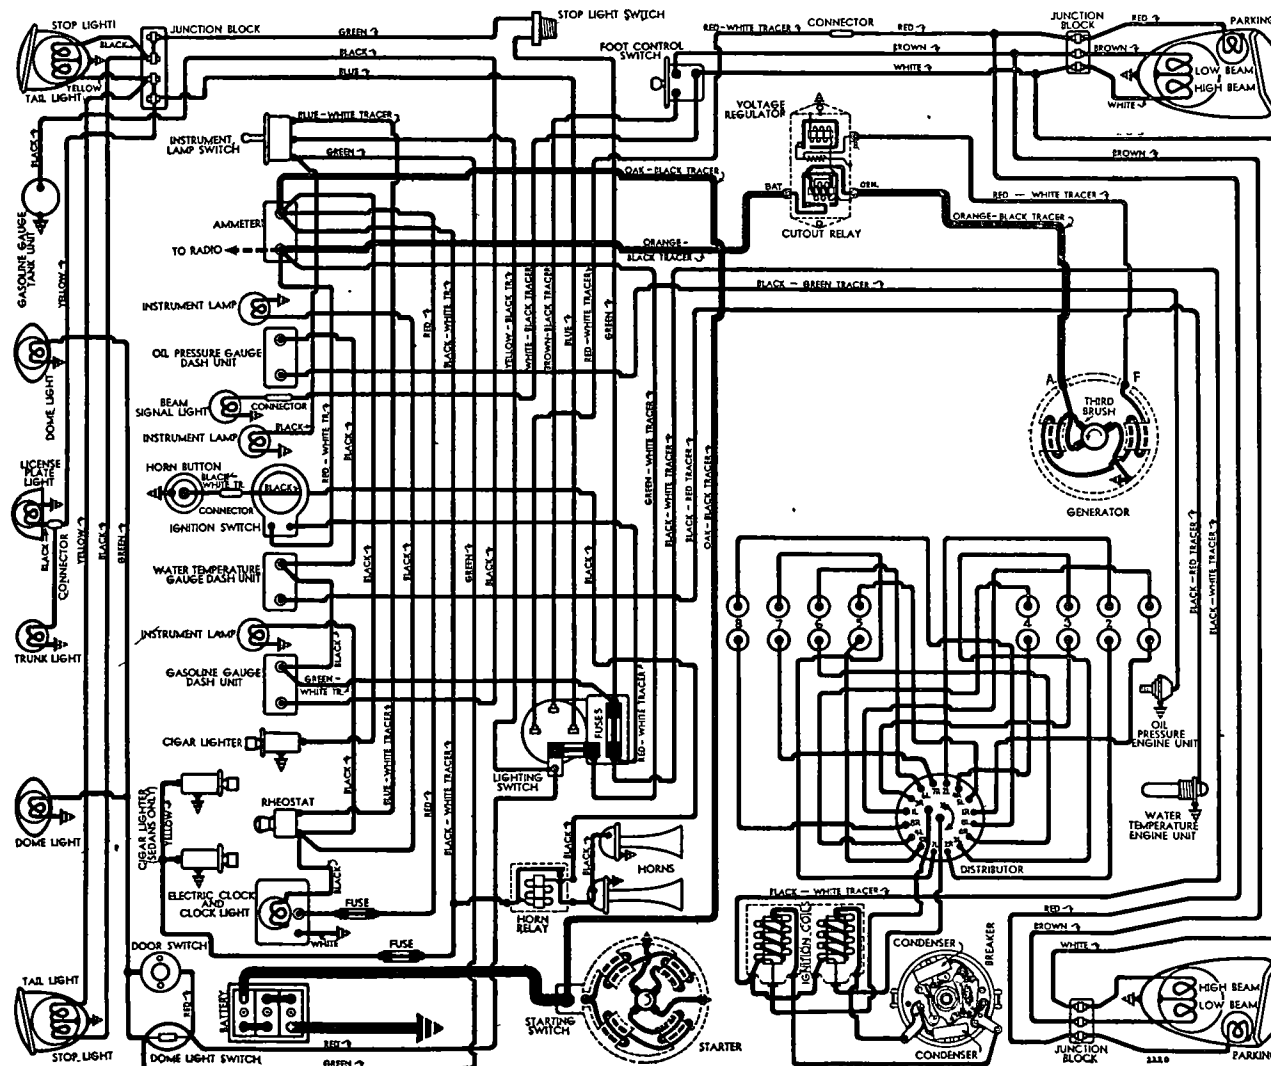

**IGNITION TIMING:**—Setting for all engines as follows:

**Flywheel Degrees**

**Piston Position**

9° BTDC ..... .0325" BTDC

**Timing (Stationary Contacts):**—With #1 piston on compression, turn engine over until piston is 9° or .0325" before top dead center, stop when 'IGN' mark on vibration dampener at front of engine lines up with pointer on chain case cover (this mark is 9° or .725" before top dead center mark 'DC'). Loosen advance arm clamp bolt, rotate distributor until stationary contacts (mounted directly on breaker plate) begin to open, tighten clamp bolt, then synchronize movable contacts.

**Synchronization (Timing Movable Contacts)**—Without disturbing position of distributor or crankshaft, loosen lock screws on movable sub-plate (carrying second set of contacts), shift plate by prying with screwdriver in notch on edge of plate until this set of contacts begin to open, tighten sub-plate lock screws.

**Synchronization (Other Methods)**—Set contacts to open simultaneously at regular 45° (dist.) intervals.

## CARBURETOR

**CARBURETION**—Carburetor—Carter Model WDO Type 436-S (marked 255 on face of flange). 1" dual, downdraft type.

*For complete data, refer to Carburetor Index.*

**Idle Adjustment**—With engine warm so that Automatic Choke and Fast Idle inoperative, set throttle stop screw for 7-8 M.P.H. idling speed. Turn each idle adjusting screw (one for each barrel) in until engine begins to miss, then turn screws out until engine begins to roll, finally turn screws in slowly until engine fires smoothly. Final setting should be ¼-1 turn open of screws from inner seated position. Reset throttle stop screw for correct 7-8 M.P.H. idling speed.

**Accelerating Pump Adjustment**—Pump arm has two holes for pump link engagement. Set as follows:

Upper Hole (max. stroke)—Cold weather.  
Lower Hole (min. stroke)—Hot weather.

**Fast Idle**—Integral type (part of carburetor).

*For complete data, refer to Carburetion Equip. Index.*

**Setting**—Adjust fast idle screw for .015" throttle opening (measured with T109-44 gauge between throttle valve edge and wall on side opposite idle port) with choke valve tightly closed.

**Automatic Choke**—Carter Climatic Control.

*For complete data, refer to Carburetion Equip. Index.*

**Setting**—Set coil housing one notch rich for average driving and climatic conditions.

## CARB. EQUIPMENT

**Air Cleaner**—AC. #1529113 oil-wetted type std. #1529116 heavy duty oil-bath type optional.

**Fuel Pump**—AC. Type AD #1523644 combination fuel-and-vacuum pump standard.

*For complete data, refer to Carburetion Equip. Index.*

**Gasoline Gauge**—King-Seeley Electric type. K-S No. 7265 (dash unit), No. 6732 (tank unit).

*For complete data, refer to Carburetion Equip. Index.*

## BATTERY

**BATTERY**—U.S.L. Type HTL-2-17. 6 volt, 17 plate, 120 ampere hour capacity (20 hour rate).

**Starting Capacity**—152 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 4.9 minutes.

**Grounded Terminal**—Positive (+) terminal Grounded to frame and to transmission cover bolt (same cable).

**Dimensions**—Width 7½". Length 10 5/16". Height 9 1/16".

**Location**—In cradle under right front seat.

## STARTER

Auto-Lite Model MAB-4054. Armature MAB-2057.

Drive—Inboard Bendix Type LCD11FX-10.

Rotation—Counter-clockwise at commutator end.

Brush Spring Tension—42-53 ozs. (new brushes).

Cranking Engine—160 R.P.M., 150-160 amperes, 5.15 volts.

Performance Data			
Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	3700	5.5	60
.6 " "	1910	5.5	100
3.4 " "	1100	5.0	200
6.6 " "	695	4.5	300
10.15 " "	420	4.0	400
15.8 " "	Lock	3.0	582
22.5 " "	Lock	4.0	775

Lock torque figures correct without switch.

**Removal**—Starter flange mounted on right front face of flywheel housing. To remove, disconnect switch linkage, take out flange mounting screws, remove starter and switch as an assembly.

**Starter Switch**—Model VC-4003. Vacuum control type mounted on starter field frame and operated by clutch pedal.

*For complete data, refer to Electrical Equipment Index.*

**Adjustment**—Check setting whenever clutch pedal is adjusted. Switch should make contact just after clutch is released. To check, engage transmission gears, depress clutch pedal (with engine not running), note pedal position when starter engages. If clutch not entirely disengaged so that car tends to move, or if pedal travel is excessive, adjust by loosening two clamp bolts on clutch throw-out shaft lever (at left side of clutch housing), move cable clamp in toward shaft for later engagement, or out for earlier engagement, tighten clamp bolts. Switch lever should have ¼" free movement.

## GENERATOR

Auto-Lite Model GDS-4802-B. Armature No. GDF-2097. Third brush control type with external vibrating voltage regulation. Ventilated by fan on drive pulley.

**Maximum Charging Rate**—35 amperes (cold), 27.5 amperes (hot), at 8.0 volts, 24 M.P.H. Actual charging rate controlled by Voltage Regulator and dependent on battery condition.

**Charging Rate Adjustment**—Maximum output controlled by third brush. Do not adjust third brush for output greater than shown in table below (with field terminal grounded to render regulator inoperative). See Regulator Section (following).

**NOTE**—Third brush setting 1 bar minus 1 mica strip (minimum), 1 bar (maximum) from insulated main brush.

Performance Data					
Cold			Hot		
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	920	0	6.4	960
4	6.6	1050	4	6.65	1120
8	6.8	1175	8	6.9	1280
12	7.0	1300	12	7.1	1430
16	7.2	1450	16	7.45	1640
20	7.4	1600	20	7.6	1900
24	7.6	1820	24	7.8	2320
28	7.8	2075	27.5	8.0	3200
33	8.0	2900			

**Rotation**—Counter-clockwise at commutator end.  
**Brush Spring Tension**—53 ozs. max. (new brushes).  
**Field Current**—1.65-1.82 amperes at 6.0 volts.  
**Motoring Current**—5.10-5.45 amperes at 6.0 volts.

**Removal**—Generator cradle mounted at left side of engine with fan belt drive. Water pump driven by generator shaft extension. To remove, disconnect clamp band and lift generator off.

**Belt Adjustment**—Adjust whenever belt deflection is more than 1½" (when pressed lightly midway between generator and fan pulleys). To adjust, loosen two capscrews on fan bracket, lift fan up (one screw hole slotted) until belt deflection is approximately 1", tighten screws.

## REGULATOR

Auto-Lite Model VRD-4010A. Voltage Type. Consists of cutout relay and vibrating voltage regulator in a single case mounted on frame in engine compartment.

*For complete data, refer to Electrical Equipment Index.*

**NOTE**—Regulator cover sealed. Serviced on exchange basis if seals not broken.

### Cutout Relay

**Cuts In**—6.4-7.0 volts Cold, 9 M.P.H.

**Cuts Out**—5-3.0 amperes discharge current.

**Contact Gap**—.015" minimum.

**Air Gap**—.034-.038" Contacts open—measure at hinge end of core.

### Voltage Regulator

**Setting**—7.3-7.6 volts at 70°F.

**To Check** (without breaking seals)—Connect ammeter in charging line at regulator 'B' terminal, voltmeter between 'B' and 'GD' terminals. Operate generator at speed equivalent to 30 M.P.H., charging battery, until voltage is steady. Voltage reading should be 7.3-7.6 volts (Cold—70°F), 7.1-7.4 volts (Hot—140°F).

**To Adjust** (with cover removed)—Change regulator armature spring tension by bending lower spring hanger. See Electrical Equipment Section for complete directions.

**Contact Gap**—.010-.020" (armature against stop pin).

**Air Gap**—.0595-.0625" with contacts just opening.

## LIGHTING

**LIGHTING**—Headlamps—Corcoran-Brown, pre-focused type. Country driving and City beams controlled by selector switch on toeboard. City beam deflected slightly to right (special 2331 bulb).

**Headlamp Adjustment**—With car 25' from screen and Country Driving (upper beams) lighted, aim headlamps straight ahead with top of beam at lamp center height. Adjusting screws located under headlight door to left of lens. Upper screw controls horizontal movement, lower screw vertical movement.

**Beam Indicator**—Red dot above speedometer dial. Lighted when Country Driving (upper beams) in use.

### Switches

**Lighting**—Douglas.

**Beam Selector**—Douglas.

**Instrument**—Douglas.

CONTINUED ON NEXT PAGE

## CONTINUED FROM PRECEDING PAGE

Bulb Specifications		
Position	Candlepower	Mazda No.
Headlamps	32-32	2331
Park, Dash, License	3	63
Indicator	1	51
Stop-Tail	21-3	1158
Dome	6	81

## MISC. ELECTRICAL

**FUSES:**—Lighting—20 ampere capacity fuse on lighting switch.

Accessory—20 ampere capacity fuse on fuse block on lighting switch. Protects stop light and gasoline gauge circuits.

**HORNS:**—Auto-Lite, Model HH-4003 (low pitch), HH-4004 (high pitch). Vibrator type, blended tone horns operated by relay.

**Horn Relay:**—R.B.M. Model 4755.

Contacts Close—3.5-4.5 volts.

Current Draw—¾ ampere.

## ENGINE

**NOTE:**—Engine hood hinged at cowl and lifts from forward end. Hood latch handle located at lower edge of radiator grille (safety catch at top of grille).

**ENGINE CODE NOTE:**—Consists of three letters stamped on Engine Number Plate to indicate original size of Cylinder Bore (first letter), Main Bearings (second letter), Crankpin & connecting rod bearings (third letter) as follows: 'A'—Standard, 'B'—.010" Undersize, 'C'—.010" Oversize, 'D'—.015" Oversize, 'E'—.020" Oversize.

**ENGINE SPECIFICATIONS:**—8 cylinder, valve-in-head, Twin Ignition type. **NOTE:**—'Iso-thermal' fuel intake system used (Intake manifold cast in cylinder head—water cooled for temp. control).

Bore—3⅞". Stroke—4¼".

Displacement—260.8 cu. ins. Rated HP—31.25.

Developed Horsepower—115 HP. at 3400 R.P.M.

Compression Ratio—6.0-1 cast-iron head.

Compression Pressure—110 lbs. at 350 RPM. or approx. 100 lbs. at cranking speed (125 RPM).

Vacuum Reading—Steady 18-20" idling at 7-8 MPH.

►Later type Replacement Cylinder Heads: See "Cylinder Head" in Nash Shop Notes.

**PISTONS:**—Nelson-Bohnalite, aluminum alloy, Invar strut, tin plated, split skirt type. See Engine Code Note above for original bore and piston sizes.

Weight—16 ounces. Length—3 11/16".

Removal—Pistons and rods remove from below.

Clearance—Top .018-.022". Skirt .001-.002".

Replacement Pistons:—Std. & .001", .002", .003", .005", .010", .012", .015", .020" O.S. Semi-finished .050" O.S.

Fitting New Pistons:—Insert .002" feeler between piston and cylinder wall on side opposite slot. Pull to withdraw feeler should be 10 lbs.

Installing Pistons:—Pin offset to camshaft side of engine. Trademark (within piston) to front.

**PISTON RINGS:**—Two compression rings, two oil control rings per piston, all above pin.

Ring	Width	End Gap	Wall Thickness
Compression	.1235-.124"	.010-.015"	.130"
Oil Cont. (#3)	.1235-.1240"	.010-.018"	.140"
Oil Cont. (#4)	.1860-.1865"	.010-.018"	.140"

Replacement Rings:—Furnished .010", .020" oversize.

**PISTON PIN:**—Diameter—.8745-.8748". Length—2.564-2.576". Floating type. Retained by locking rings. Pin hole in piston offset toward camshaft.  
Pin Fit in Piston—Light push fit (piston @ 200°F.)  
Pin Fit in Rod Bushing—Select fit to .0001" or light push fit at normal temperature.

Replacement Pins:—Furn. .001", .002", .005" oversize.

**CONNECTING ROD:**—Length—8¾". Weight—34 ozs.

Upper Bearing (Piston Pin Bushing)—Bronze.

Crankpin Journal Diameter—2.0015-2.0025".

Lower Bearing—Removable steel-backed, babbitt-lined type. No shims. See Engine Code Note (above) for original bearing sizes.

Clearance—.0015-.0025". Sideplay—.008-.012".

Bearing Adjustment:—None (no shims). Replace bearings. Do not file rods or caps.

Replacement Bearings:—Furnished .010" undersize.

**CRANKSHAFT:**—Nine bearing type.

Journal Diameters—2 31/64" all bearings.

Bearing Type—Interchangeable steel-backed, babbitt-lined. No shims. See Engine Code Note (above) for original bearing sizes. Clearance—.002".

Bearing Adjustment:—None (no shims). Replace bearings. Do not file caps. Upper halves can be 'rotated' out without removing crankshaft by using pin in oil hole in shaft, turn shaft.

Replacement Bearings:—Furnished .010" undersize.

End Thrust:—At #5 bearing. Endplay—.004".

**CAMSHAFT:**—Non-adjustable double-roller chain drive.

Timing Chain:—Diamond. Width 9/16". Pitch ¾".

Length 62 links or 23¼".

Camshaft Setting:—Sprockets marked. Mesh chain with sprocket marks adjacent and in line with a straightedge across the shaft centers.

VALVES:	Head Diameter	Stem Diameter	Length
Intake	1 21/32"	.3715-.3725"	5½"
Exhaust	1 15/32"	.3715-.3725"	5½"

	Seat Angle	Lift	Stem Clearance
All Valves	45°	11/32"	.002-.004"

Valve Guides:—Press fit in head.

Valve Springs:—Double springs on all valves. Spring free length 1 21/32" (inner), 2" (outer).

	Inner Spring		Outer Spring	
	Pressure	Length	Pressure	Length
Closed	19-23 lbs.	1 3/8"	35½-40½ lbs.	1 11/16"
Open	48-54 lbs.	1 1/32"	92-98 lbs.	1 11/32"

## VALVE TIMING

Tappet Clearance:—.008" Int., (.015" for high speed operation), .015" Exh. Set with engine warm and idling.

Valve Timing:—See Camshaft Setting above.

Intake Valves—Open 20° BTDC. Close 74° ATDC.

Exhaust Valves—Open 45° BLDC. Close 10° ATDC.

Valve Timing Check—With regular running tappet clearance of .015", Exhaust valve should close with piston 10° or .0400" after top dead center.

## LUBRICATION

**LUBRICATION:**—Gear type pump in crankcase.

Normal Oil Pressure:—30 lbs. at 20 M.P.H.

Oil Pressure Relief Valve:—On oil pump cover. Opens at 30 lbs. Screw adjustment.

Oil Pressure Gauge:—King-Seeley Electric. K-S No. 7270 (dash unit), 6125 (engine unit).

See Miscellaneous Section for complete data.

Crankcase Capacity:—7 qts. (dry or refill).

## COOLING

**COOLING SYSTEM:**—Capacity—17 quarts.

Water Pump:—Centrifugal, adjustable packing type. Driven by generator extension shaft.

See Water Pump Section for complete data.

Removal—Drain radiator, disconnect hose and drive coupling, take out mounting screws in pump flange.

Thermostat:—Dole. In water outlet on cyl. head.

Setting—Starts to open at 160°F.

Temperature Gauge:—King-Seeley Electric. K-S No. 7275 (dash unit), 7000 (engine unit).

See Miscellaneous Section for complete data.

**NOTE:**—Gauge reads '212' with ignition 'Off'.

## CLUTCH

**CLUTCH:**—Borg & Beck Model 10A7. #919 stamped on cover. Single plate, dry disc type.

See Clutch Section for complete data.

Facings—Woven, 2 required. Inside Diam. 6". Outside Diam. 10". Thickness .125".

Adjustment:—Pedal free movement ½-1¼". (loosen transverse bolt in link below pedal shaft, position pedal in slot). Pedal toeboard clearance ¾". Check Starting Switch adjustment (below) and 'No-Rol' (if car so equipped).

Starting Switch Adjustment—Starting switch lever should have ¼" free movement. Adjust by turning lever stop screw on side of switch case. Switch should close just after clutch is completely disengaged. Adjust by loosening two clampscrews attaching switch cable to lever on right end of clutch throw-out shaft, move clamp toward shaft for later starter engagement, out for earlier.

Removal:—Remove transmission (see below), clutch housing underpan, clutch cover mounting bolts (release tension evenly), lower assembly out.

## TRANSMISSION

**TRANSMISSION:**—Own Make. Constant-mesh (all speeds), synchro-mesh (second & high), all helical gear.

See Transmission Section for complete data.

Transmission Control:—Mechanical type steering column mounted gear shift, optional.

See Transmission Section for complete data.

Removal:—Disconnect driveshaft. Disconnect shift linkage (cars with steering column shift). Remove transmission mounting stud nuts and lift out.

## OVERDRIVE

Cruising Gear (Overdrive):—Warner design type R8 standard. In separate case at rear of transmission. See Transmission Section for complete data.

**UNIVERSALS**

**UNIVERSAL JOINTS:**—Mechanics. Type 3C. Roller bearing type. 2 used.  
*See Universals Section for complete data.*

**REAR AXLE**

**REAR AXLE:**—Own Make. Semi-floating, hypoid gear type with Hotchkiss drive (spiral bevel on Coupe).  
*See Rear Axle Section for complete data.*

**Ratio**—4.1-1 standard

**Backlash**—.005-.007". Screw Adjustment.

**Removal:**—Block up rear of car, remove wheel and drum assemblies, axle shafts, disconnect brake lines and cables, shock absorbers, drive shaft at rear universal. Free axle from springs by disconnecting spring bolts, withdraw axle.

**Axle Shaft Removal:**—Remove wheel and drum, take out retainer mounting bolt nuts, remove retainer, oil seal, brake backing plate, bearing adjusting shims. Pull shaft and bearing out.

**Wheel Bearing Adjustment:**—Shims at flanged end of housing. To adjust, remove brake backing plate, add or remove shims. **Endplay**—.004-.006".

**SHOCK ABSORBERS**

**SHOCK ABSORBERS:**—Delco 1112-M (front), 1117-DD (rear). Direct acting, hydraulic type.  
**Export Note**—Double acting 1723-L, M, N, P used.  
*See Shock Absorber Section for complete data.*

**FRONT SUSPENSION**

**Front Suspension:**—Conventional 'T' beam front axle with Reverse-Elliott ends and semi-elliptic springs.

**Kingpin Inclination**—7° crosswise.

**Camber**— $\frac{1}{2}$ -1 $\frac{1}{2}$ ° and equal at both wheels.

**Caster**—1 $\frac{1}{2}$ °. Shim adjustment. Install shims (furnished in 1 $\frac{1}{2}$ ° and 3° angles) between spring and spring pad on axle.

**Toe In**—0-1/16". Adjust by loosening clamp bolt at right end of tie rod and turning tie rod.

**Steering Shock Eliminator**—Consists of spring and rubber bumper bracket at rear of left front spring. Adjust lower nut to give  $\frac{1}{8}$ " clearance between upper rubber cushion and frame. Adjust spring cushion (ahead of spring rear shackle) to 1/16" clearance between cushion and spring.

**STEERING GEAR**

**Steering Gear:** Gemmer Model 335 Worm-and-Roller type with "push-pull" adjustments.  
*See Steering Gear Section for complete data.*

**BRAKES**

**BRAKES:**—Service. Bendix hydraulic, duo-servo, single anchor type with eccentric adjustment. Hand lever applies rear service brakes.

*See Brake Section for complete data.*

**Drums**—Cast-iron. Diameter 11 1/16".

**Lining**—Moulded. Width 2 $\frac{1}{4}$ ". Thickness 7/32". Length per wheel 24".

**Clearance**—.010" at heel and toe of each shoe.

**Braking Power**—53% front wheels, 47% rear.

**Hand Brake:**—See Service Brakes.

**No-Rol:** Optional equipment.

*See Brake Section for complete data.*

**NOTE:**—Engine hood hinged at cowl and lifts from forward end. Hood latch handle located at lower edge of radiator grille (safety catch at top of grille).

## MODEL IDENTIFICATION

**SERIAL NUMBER:**—First number R-340000. Stamped on plate on right frame side member under hood.

**SERVICE SERIAL NUMBER:**—First number N6-31500. On 'Caution Plate' on left front door hinge post.

**ENGINE NUMBER:**—First number E-339500. On engine block on right side at front. **NOTE**—Engine Number is 500 less than Serial Number on same car.

## TUNE-UP

**COMPRESSION:**—Ratio—6.0-1 std. cast-iron head.

Pressure—125 lbs. at 350 RPM or approx. 100 lbs. at cranking speed of 160 RPM.

**VACUUM READING:**—Steady 18-20" idling at 7-8 MPH.

**FIRING ORDER:** 1-5-3-6-2-4. See wiring diagram for spark plug cable connections at distributor cap.

**SPARK PLUGS:** AC No. 45. 14 mm. Metric.

Gaps—Set at .025".

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.020". Cam Angle—35° Closed.

Synchronization—Set movable contacts to open simultaneously with stationary contacts.

Automatic Advance—11½° max. at 875 RPM (distr.).

**IGNITION TIMING:** See Ignition Timing.

**Std. Setting:**—6° BTDC. Vibration dampener mark 'IGN' (23/64" before 'DC' mark) aligned with pointer on chain case cover at front of engine. Both sets of contacts should open simultaneously. **CAUTION**—Torquematic Spark Control (see DISTRIBUTOR following for description) cable must be disconnected at dash before setting Ign. Timing.

**CARBURETION:** See Carburetor & Carb. Equipment.

**Idle Setting:**—Idle screw ¾-1½ turns open. Idle speed 7-8 MPH.

**Float Level:**—¾" from projection on cover to top of soldered seam at front end of float with needle valve seated (invert to check).

**Accelerating Pump:**—Lower hole (Normal Setting).

**Fuel Pump Pressure:** 3½ lbs. maximum.

**VALVES:** See Valve Timing.

**Tappet Clearance:**—.015" all valves—engine warm and idling. **NOTE**—For high speed driving, .018" maximum tappet clearance may be used.

**STARTING:** See Battery, Starter, Generator, Regulator.

## IGNITION

**Ignition Switch:**—Oakes Steering Column and Ignition Lock No. 302074. Ignition Switch No. 301538.

**Ignition Lock:**—Briggs & Stratton, B & S No. 80207. Key Digits—5 digits. Groove—No. 1.

**COIL:** Two Used, Auto-Lite CE-4025-A. Mounted on right side of engine.

Ignition Current—2 amps. idling, 4 stopped.

**CONDENSER:** Auto-Lite Part No. IG-2671. Two used. Capacity—.20-.25 microfarad.

**DISTRIBUTOR:** Auto-Lite IGE-4019A. Twin Ign. double breaker, 6 lobe cam, full automatic advance type with Torquematic Spark Control. Contacts open simultaneously to fire both spark plugs in each cylinder at the same instant and must be synchronized (see Ignition Timing).

Breaker Gap—Set at .020".

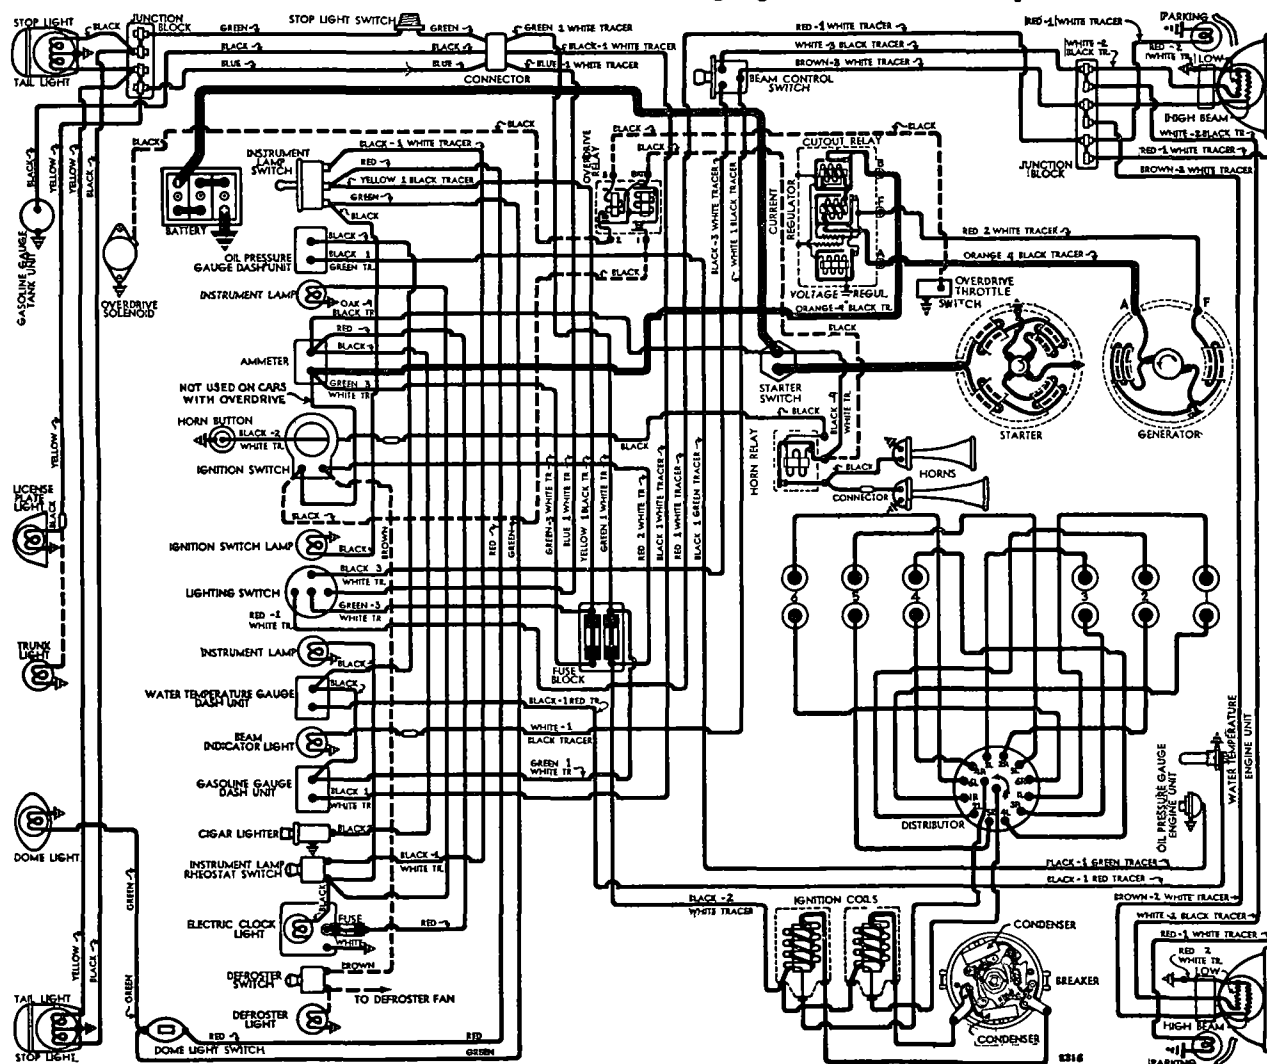

Cam Angle or Dwell—35° closed, 25° open (distr.).

For each set of contacts (operate independently).

Breaker Arm Spring Tension—17-20 ounces.

Rotation—Counter-clockwise viewed from above.

Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start.....	275	0.....	550
3.....	370	6.....	740
7.....	500	14.....	1000
9.....	665	18.....	1330
11.5.....	875	23.....	1750

**Torquematic Spark Control:**—Consists of cable anchored at dash and connected to distributor body by a travel limiting spring. Retards distributor through engine movement caused by torque action. Maximum retard 2½° (engine movement in excess of 2½° taken up by travel limiting spring). See Ignition Timing for setting.

**Removal:**—Mounted on right side of engine. To remove, take out hold-down screw in advance arm, disconnect torquematic control, lift distributor off.

## IGNITION TIMING

**IGNITION TIMING:**—Setting for all engines as follows:

**Flywheel Degrees**

**Piston Position**

6° BTDC ..... .0150° BTDC

**To Set Timing:**—Car manufacturer recommends use of Nash Timing Light SE-569. Synchronize breaker points (see Synchronization following). With Timing Light connected as for Synchronization (see be-

low), slacken torquematic cable by loosening lock-nuts on anchor bracket at dash. With #1 piston on compression, turn engine over until piston is 6° or .0150" BTDC, stop when 'IGN' mark on vibration dampener lines up with pointer on chain case cover (this mark is 6° or 23/64" before top dead center mark 'DC'). Loosen advance arm clamp bolt, rotate distributor until points just break (lights go on) with stop pin (hold-down bolt and nut) in advance position in slot in advance arm, tighten clamp bolt. Adjust cable locknuts at anchor bracket on dash to leave torquematic cable without slack or tension and stop pin in advance position in slot.

**Synchronization**—Use Nash Timing Light SE-569 (consists of two lights—one for each set of contacts) connected between each primary terminal and ground. Turn on ignition, turn engine over until fixed points just open (light for stationary contacts on). If both lights go on, synchronization correct. If not, loosen 3 lock screws on movable sub-plate, shift plate by prying with screwdriver in notch on edge of plate until this set of contacts begin to open (both lights on), tighten sub-plate lock screws, and set Ignition Timing as directed above. If other methods used, set contacts to open simultaneously at 60° (distributor) intervals.

**Torquematic Spark Control Check**—Distributor must be free in bracket and cable pulleys positioned to prevent cable interference with engine. Advance spring and cable take-up spring must be properly located and spring resistance centralized. Car manufacturer recommends use of Nash Synchro Light SE-417 to check torquematic retard by means of dead center mark on vibration dampener.

## CARBURETOR

**CARBURETION**—Carburetor—Carter Type WA-1, Model 435-S (#253 cast on face of flange). Single barrel, 1 1/4" downdraft type.

For complete data, refer to Carburetor Index.

**Idle Adjustment**—With engine warm and running at slow idle speed (choke valve wide open, fast idle inoperative), set throttle stop screw for 7-8 MPH idle speed. Adjust idle adjusting screw until engine fires smoothly (3/4-1 1/2 turns open—turn screw in for leaner mixture). Readjust idle speed.

**Accelerating Pump Setting**—Pump arm under dust cover at top of carburetor has three holes for pump link engagement. Set as follows:

Upper Hole (max. stroke)—Cold weather.  
Lower Hole (med. stroke)—Moderate weather.  
Inner Hole (min. stroke)—Hot weather.

**Float Level**—3/8" from projection on cover to top of soldered seam at front end of float with needle valve seated (invert to check).

**Fast Idle**—Integral type (built-in carburetor).

For complete data, refer to Carburetion Equip. Index.

**Fast Idle Setting**—Part of Climatic Control. Adjust by bending connecting link offset for 3/8" choke valve opening with stop screw against (not on) first step of fast idle cam.

**Automatic Choke**—Carter Climatic Control.

For complete data, refer to Carburetion Equip. Index.

**Setting**—Set coil housing 1 Notch Rich.

## CARB. EQUIPMENT

**Air Cleaner**—AC #1529112 oil-wetted type std.

**Fuel Pump**—AC Type W #1523642 diaphragm type std. Type AD #1523643 combination fuel-and-vacuum pump optional.

For complete data, refer to Carburetion Equip. Index.

**Gasoline Gauge**—King-Seeley Electric type. K-S No. 7680 (dash unit), No. 7780 (tank unit).

For complete data, refer to Carburetion Equip. Index.

## BATTERY

**BATTERY**—USL Type HTL-1-15 or Auto-Lite Type CTL-1-15. 6 volt, 15 plate, 105 ampere hour capacity (20 hour rate).

**Starting Capacity**—133 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 3.8 minutes.

**Grounded Terminal**—Positive (+) grounded to transmission. Separate ground strap from transmission to frame.

**Dimensions**—Length & Height 9 1/16". Width 7 7/8".

**Location**—Under front seat.

## STARTER

**Auto-Lite Model MAB-4076. Armature MAB-2057.**

**Drive**—Inboard Bendix Type LCD11FX-10.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—42-53 ozs. (new brushes).

**Cranking Engine**—160 RPM, 150-160 amps., 5.2 v.

### Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	3700	5.5	60
.6 " "	1910	5.5	100
3.4 " "	1100	5.0	200
6.6 " "	695	4.5	300
10.15 " "	420	4.0	400
15.8 " "	Lock	3.0	582
22.5 " "	Lock	4.0	775

**Removal**—Starter flange mounted on left front face of flywheel housing. To remove, take out flange mounting screws.

**Starting Switch**—A-L #SW-4005. Mounted on body floor below clutch pedal. Operated by depressing clutch pedal fully. No adjustment required.

## GENERATOR

**Auto-Lite Model GDZ-4803A. Armature No. GDZ-2079-F.** Two brush type with current-voltage control.

**Charging Rate Adjustment**—None. See Regulator.

**Maximum Charging Rate**—35 amperes (hot or cold), 8.0 volts, 1900 RPM (generator) and above with load or discharged battery (Current Regulator setting). Actual charging rate controlled by Voltage Regulator and dependent on battery condition.

### Performance Data

Cold			Hot		
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	925	0	6.4	1000
4	6.6	1035	4	6.6	1120
8	6.75	1140	8	6.75	1235
12	6.95	1250	12	6.95	1350
16	7.15	1370	16	7.15	1460
20	7.3	1480	20	7.3	1590
24	7.5	1590	24	7.5	1730
28	7.7	1710	28	7.7	1900
32	7.9	1820	32	7.9	2090
35	8.0	1900	35	8.0	2250

**Rotation**—Counter-clockwise at commutator end.  
**Brush Spring Tension**—53 ozs. max. (new brushes).  
**Field Current**—1.60-1.78 amperes at 6.0 volts.  
**Motoring Current**—4.16-4.60 amperes at 6.0 volts.

**Removal**—Generator cradle mounted at left side of engine with fan belt drive. Water pump driven by generator shaft extension. To remove, disconnect water pump, loosen fan belt, remove generator clamp band and lift generator off.

**Belt Adjustment**—Adjust whenever belt deflection is over 1 1/2" (when pressed lightly midway between generator and fan pulleys). To adjust, loosen two cap screws on fan bracket, lift fan up (one screw hole slotted) for 1" belt deflection, tighten screws.

## REGULATOR

**Auto-Lite Model VRP-4004A. Current-Voltage Type.** Mounted in single case on dash.

For complete data, refer to Electrical Equipment Index.

**NOTE**—Regulator case cover is sealed. Serviced on exchange basis if seals not broken.

### Cutout Relay

**Cuts In**—6.4-6.6 volts.

**Cuts Out**—4.1-4.8 volts (approx. 4-6 amps. disch.).

**Contact Gap**—.015" minimum.

**Air Gap**—.031" min., .034" max. with contacts open. Measure at hinge end of core.

### Voltage Regulator

**Setting**—7.2-7.5 volts at 70° F.

**To Check (without breaking seals)**—Connect ammeter in charging line at regulator 'B' terminal, voltmeter between 'B' terminal and ground. Operate generator at speed equivalent to 30 MPH, charging battery until voltage is steady. Voltage reading should be 7.2-7.5 volts at 70° F. See Electrical Equipment Section for voltages at other temperatures.

**To Adjust (with cover removed)**—Change regulator armature spring tension by bending lower spring hanger slightly. See Electrical Equipment Section.

**Contact Gap**—.012" Min. (armature against stop pin).  
**Air Gap**—.048-.052" with contacts just opening.

### Current Regulator

**Setting**—34-36 amperes (marked '35' on cover).

**To Check (without breaking seals)**—Connect test meters as for Voltage check (above). Operate generator at 30 MPH, charging battery, add load (use bank of headlamp bulbs, or turn on car lights and accessories and discharge battery) so that generator charges at peak rate and Current Regulator operates. Charging current should not exceed 34-36 amperes. If more than slight excess noted, regulator is defective.

**Adjustment & Contact Gap**—Same as for Voltage Regulator (above).

**Air Gap**—.034-.038" (before No. 5U-000001), .048-.052" (after above No.) with contacts just opening.

## LIGHTING

**LIGHTING**—Headlamps—General Electric 'Sealed Beam'.

For complete data, refer to Electrical Equipment Index.

**Headlamp Adjustment**—Aim upper beam for each lamp straight ahead with center of hot spot 3" below lamp center height.

**Beam Indicator**—Red light on speedometer face. Lighted whenever Country (upper) beam in use.

C NTINUED ON NEXT PAGE

## CONTINUED FROM PRECEDIN PAGE

## Switches

Lighting—Douglas No. 5754.

Beam Selector—Douglas No. 5733.

Instrument—Douglas No. 5653.

## Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps		Sealed Beam
Parking, Rear License	3	63
Instrum., Beam Indic.	1½	55
Stop & Tail	21-3	1154
Dome	6	81

## MISC. ELECTRICAL

**FUSES:**—Lighting—30 ampere (SFE type) mounted on fuse block on back of instrument panel toward left.  
Accessory—30 ampere (SFE type) on fuse block.

**HORNS:**—Delco-Remy. No. 1999565 (low note), No. 1999566 (high note). Vibrator type, blended tone, operated by horn relay.

Type	Current (at 6 volts)	Air Gap
1999565 (Low Note)	19-21 amperes	.047-.052"
1999566 (High Note)	18-20 amperes	.039-.044"

Horn Relay:—Delco-Remy Model 1116775.

Contact Gap—.020". Air Gap—.015" (closed).

Contacts Close—2.75-4.0 volts.

## ENGINE

**ENGINE CODE NOTE (ORIGINAL BORE & BEARING SIZES):** See Nash Shop Notes for complete data.

**ENGINE SPECIFICATIONS:**—6 cylinder, valve-in-head, Twin Ignition type. NOTE—'Iso-thermal' fuel intake system used (intake manifold cast in cylinder head—water cooled for temperature control).

Bore—3⅞". Stroke—4⅞".

Displacement—234.8 cu. ins. Rated HP—27.34.

Developed Horsepower—105 at 3400 RPM.

Compression Ratio—6.0-1 cast-iron head.

Compression Pressure—125 lbs. at 350 RPM. or approx. 100-105 lbs. at cranking speed (160 RPM).

Vacuum Reading—18-20" steady idling at 7-8 MPH.

►Later type Replacement Cylinder Heads: See "Cylinder Head" in Nash Shop Notes.

**PISTONS:**—Nelson-Bohnalite, aluminum alloy, Invar strut, tin plated, split skirt type.

**Original Bore Size:**—See Engine Code Note in Nash Shop Notes for complete data.

Weight—19¼ ozs. (stripped). Length—3⅞".

Removal—Pistons and rods removed from above.

Clearance—Top .027-.030". Skirt .001-.002".

Replacement Pistons:—See Nash Shop Notes for data.

**Fitting New Pistons:**—Insert .002" feeler between piston and cylinder wall on side opposite slot. Pull to withdraw feeler should be 10 lbs.

**Installing Pistons:**—Pin offset toward camshaft. Slot toward left (trademark within piston toward front).

**PISTON RINGS:**—Two compression, two oil control rings per piston, all above pin. Oil ring grooves drilled for oil drain holes.

Ring	Width	End Gap	Side Clearance
Compr. #1	.124"	.010-.020"	.002-.0025"
Compr. #2	.124"	.010-.020"	.0015-.003"
Oil Contr. #3	.1550"	.010-.018"	.0015-.0025"
Oil Contr. #4	.1550"	.010-.018"	.001-.0025"

NOTE—Wall thickness .145" (for all rings).

Replacement Rings:—See Nash Shop Notes for data.

**PISTON PIN:**—Diameter—.8745". Length—2.804".

Floating type. Pin retained by locking ring at each end. Pin hole in piston offset to camshaft.

Pin Fit in Piston—Light push fit (piston at 200°F.).

Pin Fit in Rod Bushing—Select fit to .0001" or light push fit at normal temperature.

Replacement Pins:—.001, .003", .005" oversize.

**CONNECTING ROD:**—Length—8¾". Weight—36¼ ozs.

Upper Bearing (Piston Pin Bushing)—Bronze.

Crankpin Journal Diameter—2.002".

Lower Bearing—Removable steel-backed, babbitt-lined type. No shims. See Engine Code Note in Nash Shop Notes for original bearing sizes.

Clearance—.0015-.0025". Sideplay—.008-.012".

**Bearing Adjustment:**—None (no shims). Replace bearings. Do not file rods or caps. Tangs on bearing shells should be installed on opposite sides of rod.

Replacement Bearings:—.002", .010" undersize.

Installing Rods:—Oil split hole toward camshaft.

**CRANKSHAFT:**—7 bearings, 4 counterweights.

See Nash Shop Notes for vibration dampener data.

Journal Diameters—2 31/64" all bearings.

Bearings—Interchangeable steel-backed, babbitt-lined type. No shims. Clearance—.002".

See Engine Code Note in Nash Shop Notes for original main bearing sizes.

**Bearing Adjustment:**—None (no shims). See Nash Shop Notes for removing, installing and fitting bearings.

Replacement Bearings:—.002", .010" Undersize.

**End Thrust:**—Center (#4) bearing. Replace bearing to take up excessive endplay. Endplay—.004".

**CAMSHAFT:**—Non-adjustable double-roller chain drive.

See Nash Shop Notes for camshaft removal.

Bearings—Steel-backed, babbitt bushings.

Bearing Clearance—.002".

**End Thrust:**—Taken by front bearing. Replace bearing to take up excessive endplay.

Endplay—.003" (new), .005" max. (worn).

**Timing Chain:**—Whitney No. 49205 or Diamond. Width 9/16". Pitch ⅜". Length 60 links or 22½".

**Camshaft Setting:**—Sprockets marked. Mesh chain with sprocket marks adjacent and in line with a straightedge across the shaft centers.

**VALVES:**—Head Diameter Stem Diameter Length

Intake ..... 1¾" ..... 3725" ..... 5 17/32"

Exhaust ..... 1 19/32" ..... 3725" ..... 5 17/32"

Seat angle Lift Side Clearance

All Valves ..... 45° ..... 11/32" ..... .002-.004"

**Valve Guides:**—Press fit. Press in head to shoulder on guide and ream for correct clearance. Replacement guides furnished .002" undersize.

**Valve Springs:**—Double springs on all valves.

Free Length—1 21/32" (inner), 2" (outer).

Inner Spring Outer Spring

Pressure Length Pressure Length

Closed ..... 21 lbs. .... 1⅜" ..... 38 lbs. .... 1 11/16"

Open ..... 51 lbs. .... 1 1/32" ..... 95 lbs. .... 1 11/32"

**Valve Lifters:**—Mushroom type. Lifter guide holes reamed in block. Remove from below (camshaft out).

## VALVE TIMING

**Tappet Clearance:**—.015" all valves—engine warm and idling.

Valve Timing:—See Camshaft Setting above.

Intake Valves—Open 24½° BTDC. Close 70½° ALDC.

Exhaust Valves—Open 49½° BLDC. Close 5° ATDC.

**Valve Timing Check:**—With regular tappet clearance of .015", exhaust valve should close with piston 5° or .0104" after top dead center.

## LUBRICATION

**LUBRICATION:**—Pressure system (gear type oil pump in crankcase. NOTE—Install pump with distributor drive slot turned crosswise of car.

Normal Oil Pressure:—30 lbs. at 20 MPH.

**Oil Pressure Relief Valve:**—On oil pump cover. Opens at 30 lbs. Turn adjusting screw in to increase.

**Oil Pressure Gauge:**—King-Seeley Electric. K-S No. 7665 (dash unit), 6125 (engine unit).

See Miscellaneous Section for complete data.

Crankcase Capacity:—6 qts. (dry or refill).

## COOLING

**COOLING SYSTEM:**—Cap. 16 qts. (17 with heater).

**Water Pump:**—Centrifugal, adjustable packing type. See Water Pump Section for complete data.

**Removal:**—Drain radiator, disconnect hose and drive coupling, take out mounting screws in pump flange.

**Thermostat:**—Dole. In water outlet on cyl. head.

Setting—Starts to open at 160° F.

**Temperature Gauge:**—King-Seeley Electric. K-S No. 7670 (dash unit), 7000 (engine unit). NOTE—Gauge inoperative with ignition Off (reads '212').

See Miscellaneous Section for complete data.

## CLUTCH

**CLUTCH:**—Borg & Beck Model 10A7. Single plate, dry disc type. Production Change—Clutch assembly changed from #934 (same as '39, used up to Service Serial No. N6-36493) to #950 with 'Borglite' driven member (N6-36494 and up). Serv. Serial No. on plate on left front door hinge post. Clutch assembly number stamped on clutch cover.

See Clutch Section for complete data.

**Facings:**—Spiral wound moulded woven, 2 used. Inside Diam. 6" (934), 7" (950). Outside Diam. 10". Thickness .125". NOTE—Install plate with mark 'flywheel side' forward (damper toward trans).

**Pedal Adjustment:**—Free travel ½-1" (adjusting nuts on lower end of pedal connector link). Check NoRol

**Removal:**—Remove transmission (see below). Disconnect clutch pedal linkage. Support engine at rear, disconnect rear engine mountings. Remove clutch housing and pan. Punch mark flywheel, cover, and pressure plate (re-assemble to these marks). Take out mounting screws in cover flange.

## TRANSMISSION

**TRANSMISSION:**—Own Make. All helical gear, constant-mesh (all speeds), synchro-mesh (second & high) with remote type steering column shift.

See Transmission Section for complete data.

**Transmission Control:**—Steering col. mechanical shift. See Transmission Section for complete data.

**Removal:**—Disconnect shift rods, speedometer cable, overdrive control and wires (if used), and drive-shaft. Remove two upper mounting studs and install pilot studs (to support transmission and avoid bending clutch plate). Remove remaining mounting stud nuts, remove transmission from below. **NOTE:**—When removing transmission from car, do not remove inspection hole plate in car floor.

### OVERDRIVE

**Cruising Gear (Overdrive):**—Warner Model AS12-R6 with electrical 'kick-down' control optl.

*See Transmission Section for complete data.*

**Overdrive Solenoid:**—Delco-Remy Model 1118004.

**Throttle Switch:**—Adjust switch to close with throttle wide open and carburetor throttle shaft pulley spring just starting to compress.

**Control Relay:**—Delco-Remy Model 1116798.

### UNIVERSALS

**UNIVERSAL JOINTS:**—Mechanics Type 2C. Roller bearing type.

*See Universals Section for complete data.*

### REAR AXLE

**REAR AXLE:**—Own Make. Semi-floating, hypoid gear with Hotchkiss drive.

*See Rear Axle Section for complete data.*

**Ratio:**—4.1-1 Std., 4 4/9-1 Optl.

**Backlash:**—.005-.007". Shim adjustment.

**Removal:**—Hoist rear of car, remove axle shafts (see below). Free axle from springs by disconnecting U-bolts and rear shackles and withdraw from car.

**Axle Shaft Removal:**—Remove wheel and drum. Disconnect brake line and cable. Remove backing plate mounting bolt nuts, oil seal retainer, brake backing plate, bearing adjusting shims and withdraw shaft and bearing (do not drag shaft on oil seal).

**Wheel Bearing Adjustment:**—Shims at flanged end of housing. To adjust, remove backing plate, add or remove shims (equally at both ends of axle).

**Endplay:**—.003-.006".

### SHOCK ABSORBERS

**SHOCK ABSORBERS:**—Delco. Front—Model 1947-C, D.

Rear—Model 1006-DD, 1006-EE (heavy springs), 1723-N, P (heavy springs—Export). Double acting, hydraulic. Direct acting on rear (except 1723).

*See Shock Absorber Section for complete data.*

### FRONT SUSPENSION

**Front Suspension:**—Independent, linked parallelogram type with coil springs.

*See Front Suspension Section for complete data.*

**IMPORTANT:**—Insert 2" blocks (Tool J886) between upper support arm and frame flange (at each side) to level frame when checking specifications.

**Kingpin Inclination:**—4½° crosswise.

**Caster:**—0° to Negative ½°. Adjustable.

**Camber:**—Pos. ¼° to Pos. ¾°. Adjustable.

**Toe In:**—1/32-3/32". Adjust tie rod tube for each wheel equally.

**Steering Geometry (Toe-out on Turns):**—Inner wheel turned 21½°, Outer wheel 20°.

### STEERING GEAR

**Steering Gear:** Gemmer Model Number 305. Worm-and-Roller type with 'push-pull' adjustment. New type steering linkage with idler arm on right frame side member.

*See Steering Gear Section for complete data.*

### BRAKES

**BRAKES:**—Service, Bendix hydraulic, duo-servo, single anchor type without eccentric adjustment. Hand lever applies rear wheel service brakes.

*See Brake Section for complete data.*

**Drums:**—Cast-iron. Diameter—10".

**Lining:**—Moulded. Width 2". Thickness 3/16". Length per wheel 22".

**Clearance:**—.015" at each end of secondary shoe with primary shoe forced out against drum.

**Braking Power:**—53% front wheels, 47% rear.

**Hand Brake:**—See Service Brakes above.

**No-Rol:** Optional equipment.

*See Brake Section for complete data.*

**NOTE:**—Engine hood hinged at cowl and lifts from forward end. Hood latch handle located at lower edge of radiator grille (safety catch at top of grille).

### MODEL IDENTIFICATION

**SERIAL NUMBER:**—First number B-106300. Stamped on plate on right frame side rail under hood.

**SERVICE SERIAL NUMBER:**—First number N8-13500. On 'Caution Plate' on left front door hinge post.

**ENGINE NUMBER:**—First number B-105800. On engine block on right side at front. **NOTE:**—Engine Number is 500 less than Serial Number on same car.

### TUNE-UP

**COMPRESSION:**—Ratio—6.0-1 std. cast-iron head.

Pressure—110 lbs. at 350 RPM or approx. 100 lbs. at cranking speed of 160 RPM.

**VACUUM READING:**—Steady 18-20" idling at 7-8 MPH.

**FIRING ORDER:** 1-6-2-5-8-3-7-4. See wiring diagram for spark plug cable connections in distr. cap.

**SPARK PLUGS:** AC No. 45. 14 mm. Metric. Gaps—Set at .025".

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.017". Cam Angle—28° closed.

Synchronization—Set movable contacts to open simultaneously with stationary contacts.

Automatic Advance—12° max. at 1100 RPM (distr.).

**IGNITION TIMING:** See Ignition Timing.

Std. Setting—9° BTDC. Vibration dampener mark 'IGN' (.725" before 'DC' mark) aligned with pointer on chain case cover at front of engine. Both sets of contacts should open simultaneously. **CAUTION:**—Torquematic Spark Control (see DISTRIBUTOR following for description) cable must be disconnected at dash before setting Ignition Timing.

**CARBURETION:** See Carburetor & Carb. Equipment. Idle Setting—Idle screws ½-1½ turns open. Idle speed 7-8 MPH.

Float Level—3/16" from top of float to gasket seat on cover with needle valve seated (invert to check). Accelerating Pump—Lower hole (Summer), upper (Winter).

Fuel Pump Pressure: 3½ lbs. maximum.

**VALVES:** See Valve Timing.

Tappet Clearance:—.015" all valves—engine warm and idling. **NOTE:**—For high speed driving, .018" maximum tappet clearance may be used.

**STARTING:** See Battery, Starter, Generator, Regulator.

### IGNITION

Ignition Switch—Oakes Steering Column and Ignition Lock No. 302076. Ignition Switch No. 301538.

Ignition Lock—Briggs & Stratton. B & S No. 80207. Key Series—5 digits. Groove—No. 1.

**COIL:** Two Used, Auto-Lite CE-4025-A. Mounted on right side of engine.

Ignition Current—2 amps. Idling, 4 Stopped.

**CONDENSER:** Auto-Lite Part No. IG-2671. Two used. Capacity—20-25 microfarad.

**DISTRIBUTOR:** Auto-Lite IKG-4102. Twin Ign. double breaker, 8 lobe cam, full automatic advance type with Torquematic Spark Control. Contacts open simultaneously to fire both spark plugs in each cylinder at the same instant and must be synchronized (see Ignition Timing).

Breaker Gap—Set at .017" (alike for both sets).

Cam Angle or Dwell—28° closed, 17° open (distr.).

For each set of contacts (operate independently).

Breaker Arm Spring Tension—17-20 ounces.

Rotation—Clockwise viewed from above.

#### Automatic Advance

Distributor	R.P.M.	Engine	R.P.M.
Degrees	Degrees	Degrees	Degrees
Start.....	275	0.....	550
4.....	400	8.....	800
6.....	575	12.....	1150
9.....	840	18.....	1680
12.....	1100	24.....	2200

**Torquematic Spark Control:**—Consists of cable anchored at dash and connected to distributor body by a travel limiting spring. Retards distributor through engine movement caused by torque action. Maximum retard 2½° (engine movement in excess of 2½° taken up by travel limiting spring). See Ignition Timing for setting.

**Removal:**—Mounted on right side of engine. To remove, take out hold-down screw in advance arm, disconnect torquematic control, lift distributor off.

### IGNITION TIMING

**IGNITION TIMING:**—Setting for all engines as follows:

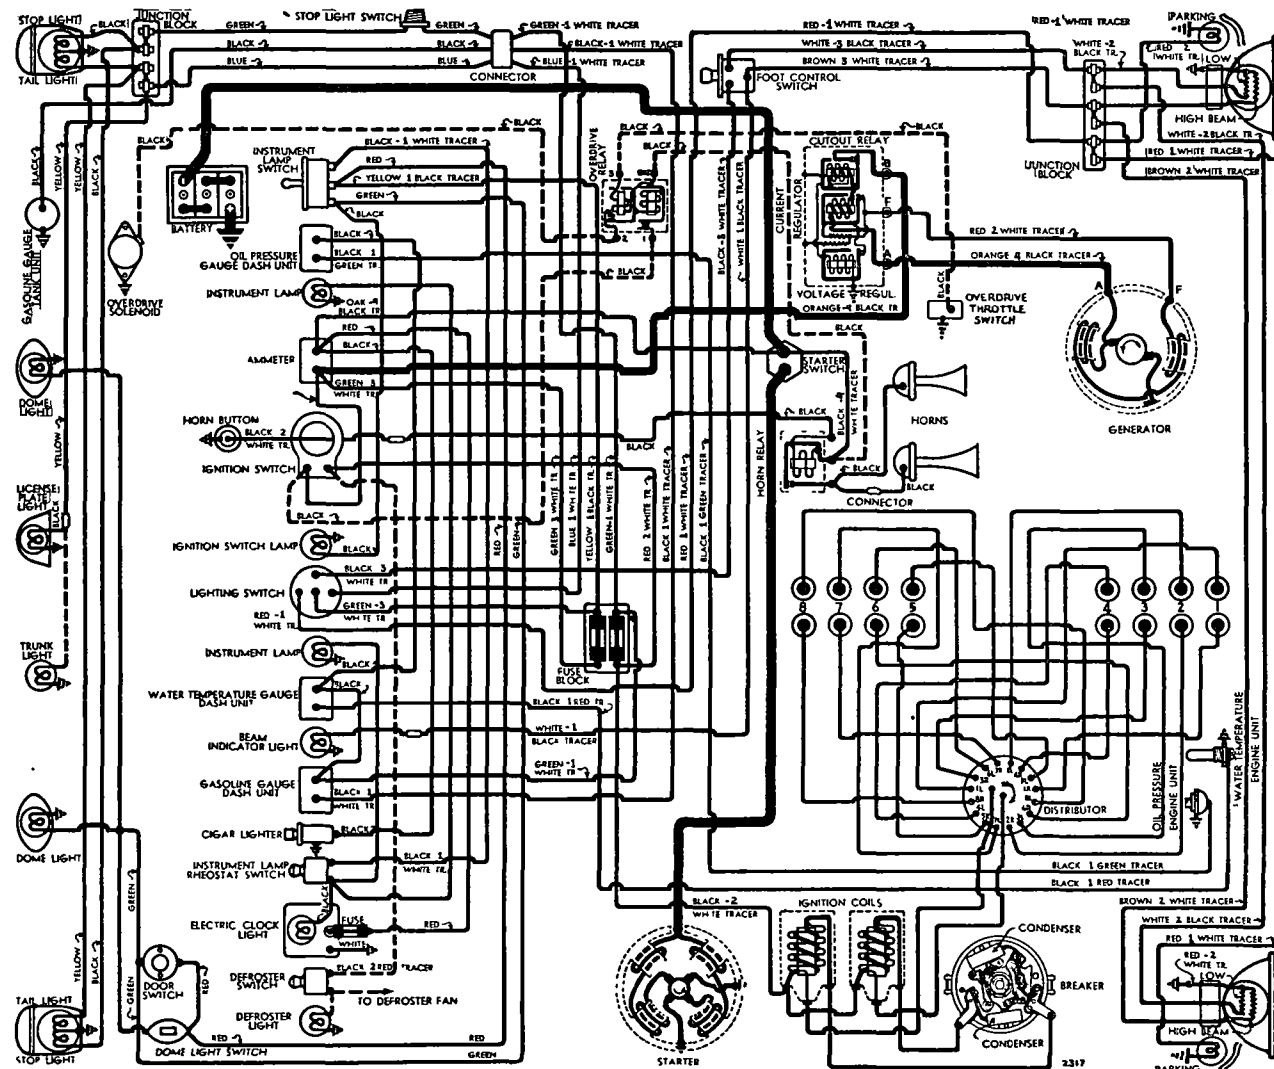

Flywheel Degrees

Piston Position

9° BTDC

.0325" BTDC

To Set Timing—Car manufacturer recommends use of Nash Timing Light SE-569. Synchronize breaker points (see Synchronization following). With Timing Light connected as for Synchronization (see

below), slacken torquematic cable by loosening lock-nuts on anchor bracket at dash. With #1 piston on compression, turn engine over until piston is 9° or .0325" BTDC, stop when 'IGN' mark on vibration dampener lines up with pointer on chain case cover (this mark is 9° or .725" before top dead center mark 'DC'). Loosen advance arm clamp bolt, rotate distributor until points just break (lights go on) with stop-pin (hold-down bolt and nut) in advance position in slot in advance arm, tighten clamp bolt. Adjust cable locknuts at anchor bracket on dash to leave torquematic cable without slack or tension and stop-pin in advance position in slot.

**Synchronization**—Use Nash Timing Light SE-569 (consists of two lights—one for each set of contacts) connected between each primary terminal and ground. Turn on ignition, turn engine over until fixed points just open (light for stationary contacts on). If both lights go on synchronization correct. If not, loosen 3 lock screws on movable sub-plate, shift plate by prying with screwdriver in notch on edge of plate until this set of contacts begin to open (both lights on), tighten sub-plate lock screws and set Ignition Timing as directed above. If other methods used, set contacts to open simultaneously at 45° (distributor) intervals.

**Torquematic Spark Control Check**—Distributor must be free in bracket and cable pulleys positioned to prevent cable interference with engine. Advance spring and cable take-up spring must be properly located and spring resistance centralized. Car manufacturer recommends use of Nash Synchro Light SE-417 to check torquematic retard by means of dead center mark on vibration dampener.

## CARBURETOR

**CARBURETION**—Carburetor—Carter Type WDO, Model 465-S (#255 cast on face of flange). 1" dual downdraft type.

*For complete data, refer to Carburetor Index.*

**Idle Adjustment**—With engine warm and running at slow idle speed (choke valve wide open, fast idle inoperative), set throttle stopscrew for 7-8 MPH idle speed. Adjust idle adjusting screw for each barrel (in succession) until engine fires smoothly ( $\frac{1}{2}$ -1 $\frac{1}{2}$  turns open for each screw—turn screws in for leaner mixture). Readjust idle speed.

**Accelerating Pump Setting**—Pump arm has 2 holes for pump link engagement. Set as follows:  
Upper Hole (max. stroke)—Cold weather.  
Lower Hole (min. stroke)—Hot weather.

**Float Level**— $\frac{3}{16}$ " from top of float to gasket seat on cover with needle valve seated (invert to check).

**Fast Idle**—Integral type (built-in carburetor).

*For complete data, refer to Carburetion Equip. Index.*

**Fast Idle Setting**—Adjust fast idle screw for .015" throttle opening with choke valve closed.

**Automatic Choke**—Carter Climatic Control.

*For complete data, refer to Carburetion Equip. Index.*

**Choke Setting**—Set coll housing 1 Notch Rich.

## CARB. EQUIPMENT

**Air Cleaner**—AC #1529113 oil-wetted type std.

**Fuel Pump**—AC Type AD #1523644 combination fuel-and-vacuum type standard.

*For complete data, refer to Carburetion Equip. Index.*

**Gasoline Gauge**—King-Seeley Electric type. K-S No. 7680 (dash unit), No. 7780 (tank unit).

*For complete data, refer to Carburetion Equip. Index.*

## BATTERY

**BATTERY**—USL Type HTL-2-17 or Auto-Lite Type CTL-2-17. 6 volt, 17 plate, 120 ampere hour capacity (20 hour rate).

**Starting Capacity**—152 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 4.9 minutes.

**Grounded Terminal**—Positive (+) grounded to transmission. Separate ground strap from transmission to frame.

**Dimensions**—Length 10  $\frac{5}{16}$ ". Width 7 $\frac{1}{8}$ ". Height 9  $\frac{1}{16}$ ".

**Location**—Under front seat.

## STARTER

**Auto-Lite Model MAB-4104. Armature MAB-2057.**

**Drive**—Inboard Bendix Type LCD11FX-10.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—42-53 ozs. (new brushes).

**Cranking Engine**—160 RPM, 150-160 amps., 5.2 v.

### Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	3700	5.5	60
.6 " "	1910	5.5	100
3.4 " "	1100	5.0	200
6.6 " "	695	4.5	300
10.15 " "	420	4.0	400
15.8 " "	Lock	3.0	582
22.5 " "	Lock	4.0	775

**Removal**—Starter flange mounted on right front face of flywheel housing. To remove, disconnect battery cable, take out flange mounting screws.

**Starting Switch**—A-L #SW-4005. Mounted on body floor below clutch pedal. Operated by depressing clutch pedal fully. No adjustment required.

## GENERATOR

**Auto-Lite Model GDZ-4803-B. Armature No. GDZ-2079F.** Two brush type with current-voltage control.

**Charging Rate Adjustment**—No adjustment at generator. Charging rate controlled by Voltage Regulator and maximum output by Current Regulator. See Regulator data following.

**Maximum Charging Rate**—35 amperes (hot or cold), 8.0 volts, 1900 RPM (generator) and above with load or discharged battery (Current Regulator setting). Actual charging rate controlled by Voltage Regulator and dependent on battery condition.

### Performance Data

Cold			Hot		
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	925	0	6.4	1000
4	6.6	1035	4	6.6	1120
8	6.75	1140	8	6.75	1235
12	6.95	1250	12	6.95	1350
16	7.15	1370	16	7.15	1460
20	7.3	1480	20	7.3	1590
24	7.5	1590	24	7.5	1730
28	7.7	1710	28	7.7	1900
32	7.9	1820	32	7.9	2090
35	8.0	1900	35	8.0	2250

**Rotation**—Counter-clockwise at commutator end.  
**Brush Spring Tension**—53 ozs. max. (new brushes).  
**Field Current**—1.60-1.78 amperes at 6.0 volts.  
**Motoring Current**—4.16-4.60 amperes at 6.0 volts.

**Removal**—Generator cradle mounted at left side of engine with fan belt drive. Water pump driven by generator shaft extension. To remove, disconnect water pump, loosen fan belt, remove generator clamp band and lift generator off.

**Belt Adjustment**—Adjust whenever belt deflection is over  $\frac{1}{2}$ " (when pressed lightly midway between generator and fan pulleys). To adjust, loosen two capscrews on fan bracket, lift fan up (one screw hole slotted) for 1" belt deflection, tighten screws.

## REGULATOR

**Auto-Lite Model VRP-4004-A. Current Voltage.** Mounted in single case on dash.

*For complete data, refer to Electrical Equipment Index.*

**NOTE**—Regulator case cover is sealed. Serviced on exchange basis if seals not broken.

### Cutout Relay

**Cuts In**—6.4-6.6 volts.

**Cuts Out**—4.1-4.8 volts (approx. 4-6 amps. disch.).

**Contact Gap**—.015" minimum.

**Air Gap**—.031" min., .034" max. with contacts open. Measure at hinge end of core.

### Voltage Regulator

**Setting**—7.2-7.5 volts at 70° F.

**To Check (without breaking seals)**—Connect ammeter in charging line at regulator 'B' terminal, voltmeter between 'B' terminal and ground. Operate generator at speed equivalent to 30 MPH, charging battery until voltage is steady. Voltage reading should be 7.2-7.5 volts at 70° F. See Electrical Equipment Section for voltages at other temperatures.  
**To Adjust (with cover removed)**—Change regulator armature spring tension by bending lower spring hanger slightly. See Electrical Equipment Section.  
**Contact Gap**—.012" Min. (armature against stop pin).  
**Air Gap**—.048-.052" with contacts just opening.

### Current Regulator

**Setting**—34-36 amperes (marked '35' on cover).

**To Check (without breaking seals)**—Connect test meters as for Voltage check (above). Operate generator at 30 MPH, charging battery, add load (use bank of headlamp bulbs, or turn on car lights and accessories and discharge battery) so that generator charges at peak rate and Current Regulator operates. Charging current should not exceed 34-36 amperes. If more than slight excess noted, regulator is defective.

**Adjustment & Contact Gap**—Same as for Voltage Regulator (above).

**Air Gap**—.034-.038" (before No. 5U-000001), .048-.052" (after above No.) with contacts just opening.

## LIGHTING

**LIGHTING**—Headlamps—General Electric 'Sealed Beam'.

*For complete data, refer to Electrical Equipment Index.*

**Headlamp Adjustment**—Aim upper beam for each lamp straight ahead with center of hot spot 3" below lamp center height.

**Beam Indicator**—Red light on speedometer face. Lighted whenever Country (upper) beam in use.

CONTINUED ON NEXT PA E

**CONTINUED FROM PRECEDING PAGE****Switches**

Lighting—Douglas No. 5754.  
Beam Selector—Douglas No. 5733.  
Instrument—Douglas No. 5653.

**Bulb Specifications**

Position	Candlepower	Mazda No.
Headlamps		Sealed Beam
Parking, Rear License	3	63
Instrum., Beam Indic.	1½	55
Stop & Tail	21-3	1154
Dome	6	81

**MISC. ELECTRICAL**

**FUSES:**—Lighting—30 ampere (SFE type) mounted on fuse block on back of instrument panel toward left.  
Accessory—30 ampere (SFE type) on fuse block.

**HORNS:**—Delco-Remy. No. 1999565 (low note), No. 1999566 (high note). Vibrator type, blended tone, operated by horn relay.

Type	Current (at 6 volts)	Air Gap
1999565 (Low Note)	19-21 amperes	.047-.052"
1999566 (High Note)	18-20 amperes	.039-.044"

Horn Relay:—Delco-Remy Model 1116775.

Contact Gap—.020". Air Gap—.015" (closed).

Contacts Close—2.75-4.0 volts.

**ENGINE**

**ENGINE CODE NOTE (ORIGINAL BORE & BEARING SIZES):** See Nash Shop Notes for complete data.

**ENGINE SPECIFICATIONS:**—8 cylinder, valve-in-head, Twin Ignition type. NOTE—'Iso-thermal' fuel intake system used (intake manifold cast in cylinder head—water cooled for temperature control).

Bore—3½". Stroke—4¼".

Displacement—260.8 cu. ins. Rated HP—31.25.

Developed Horsepower—115 at 3400 RPM.

Compression Ratio—6.0-1 cast-iron head.

Compression Pressure—110 lbs. at 350 RPM. or approx. 100 lbs. at cranking speed (160 RPM).

Vacuum Reading—18-20" steady idling at 7-8 MPH.

► Later type Replacement Cylinder Heads: See "Cylinder Head" in Nash Shop Notes.

**PISTONS:**—Nelson-Bohnalite, aluminum alloy, Invar strut, tin plated, split skirt type.

**Original Bore Size:**—See Engine Code Note in Nash Shop Notes for complete data.

Weight—16 ozs. (stripped). Length—3 11/16".

Removal—Pistons and rods removed from below. Clearance—Top .018-.022". Skirt .001-.002".

Replacement Pistons:—See Nash Shop Notes for data.

**Fitting New Pistons:**—Insert .002" feeler between piston and cylinder wall on side opposite slot. Pull to withdraw feeler should be 10 lbs.

**Installing Pistons:**—Pin offset toward camshaft. Slot toward left (trademark within piston toward front).

**PISTON RINGS:**—Two compression, two oil control rings per piston, all above pin. Oil ring grooves drilled for oil drain holes.

Ring	Width	End Gap	Side Clearance
Compr. #1	.124"	.010-.020"	.002-.0025"
Compr. #2	.124"	.010-.020"	.0015-.003"
Oil Contr. #3	.1240"	.010-.018"	.0015-.0025"
Oil Contr. #4	.1865"	.010-.018"	.001-.0025"

NOTE—Wall thickness .130" compression, .140" oil ring.

Replacement Rings:—See Nash Shop Notes for data.

**PISTON PIN:**—Diameter—.8747". Length—2.574".

Floating type. Pin retained by locking ring at each end. Pin hole in piston offset to camshaft.

Pin Fit in Piston—Light push fit (piston at 200°F.).

Pin Fit in Rod Bushing—Select fit to .0001" or light push fit at normal temperature.

Replacement Pins:—.001", .003", .005" oversize.

**CONNECTING ROD:**—Length—8¾". Weight—34 ozs.

Upper Bearing (Piston Pin Bushing)—Bronze.

Crankpin Journal Diameter—2.0015".

Lower Bearing—Removable steel-backed, babbitt-lined type. No shims. See Engine Code Note in Nash Shop Notes for original bearing sizes.

Clearance—.0015-.0025". Sideplay—.008-.012".

Bearing Adjustment:—None (no shims). Replace bearings. Do not file rods or caps. Tangs on bearing shells should be installed on opposite sides of rod.

Replacement Bearings:—.002", .010" undersize.

Installing Rods:—Oil split hole toward camshaft.

**CRANKSHAFT:**—9 bearing. No counterweights.

See Nash Shop Notes for vibration dampener data.

Journal Diameters—2 31/64" all bearings.

Bearings—Interchangeable steel-backed, babbitt-lined type. No shims. Clearance—.002".

See Engine Code Note in Nash Shop Notes for original main bearing sizes.

Bearing Adjustment:—None (no shims). See Nash Shop Notes for removing, installing and fitting bearings.

Replacement Bearings:—.002", .010" Undersize.

End Thrust:—Center (#5) bearing. Replace bearing to take up excessive endplay. Endplay—.004".

**CAMSHAFT:**—Non-adjustable double-roller chain drive.

See Nash Shop Notes for camshaft removal.

Bearings—Steel-backed, babbitt bushings.

Bearing Clearance—.002".

End Thrust:—Taken by front bearing. Replace bearing to take up excessive endplay.

Endplay—.003" (new), .005" Max. (worn).

Timing Chain:—Diamond. Width 9/16". Pitch ¾".

Length 62 links or 23¼".

Camshaft Setting:—Sprockets marked. Mesh chain with sprocket marks adjacent and in line with a straightedge across the shaft centers.

**VALVES:**—Head Diameter Stem Diameter Length

Intake ..... 1 21/32" ..... 3725" ..... 5½"

Exhaust ..... 1 15/32" ..... 3725" ..... 5½"

Seat angle Lift Side Clearance

All Valves ..... 45° ..... 11/32" ..... .002-.004"

Valve Guides:—Press fit. Press in head to shoulder on guide and ream for correct clearance. Replacement guides furnished .002" undersize.

Valve Springs:—Double springs on all valves.

Free Length—1 21/32" (inner), 2" (outer).

Inner Spring Outer Spring

Closed ..... 21 lbs. ..... 1¾" ..... 38 lbs. ..... 1 11/16"

Open ..... 51 lbs. ..... 1 1/32" ..... 95 lbs. ..... 1 11/32"

Valv Lifters:—Mushroom type. Lifter guide holes reamed in block. Remove from below (camshaft out).

**VALVE TIMING**

**Tappet Clearance:**—.015" all valves—engine warm and idling.

**Valve Timing:**—See Camshaft Setting above.

Intake Valves—Open 20° BTDC. Close 74° ALDC.

Exhaust Valves—Open 45° BLDC. Close 10° ATDC.

Valve Timing Check—With regular tappet clearance of .015" Exhaust valve should close with piston 10° or .0400" after top dead center.

**LUBRICATION**

**LUBRICATION:**—Pressure system (gear type oil pump in crankcase). NOTE—Slot in pump shaft should be assembled across engine when pump installed.

Normal Oil Pressure:—30 lbs. at 20 MPH.

Oil Pressure Relief Valve:—On oil pump cover. Opens at 30 lbs. Turn adjusting screw in to increase.

Oil Pressure Gauge:—King-Seeley Electric. K-S No. 7665 (dash unit), 6125 (engine unit).

See Miscellaneous Section for complete data.

Crankcase Capacity:—7 qts. (dry or refill).

**COOLING**

**COOLING SYSTEM:**—Capacity. 17 qts. (add 1 qt. for heater).

**Water Pump:**—Centrifugal, adjustable packing type. See Water Pump Section for complete data.

Removal—Drain radiator, disconnect hose and drive coupling, take out mounting screws in pump flange.

**Thermostat:**—Dole. In water outlet on cyl. head.

Setting—Starts to open at 160° F.

**Temperature Gauge:**—King-Seeley Electric. K-S No. 7670 (dash unit), 7000 (engine unit). NOTE—Gauge inoperative with Ignition Off (reads '212').

See Miscellaneous Section for complete data.

**CLUTCH**

**CLUTCH:**—Borg & Beck Model 10A7. Single plate, dry disc type. See Production Change following.

► Production Change—Clutch assembly changed from #919 (same as 1939) to #949 (with 'Borglite' driven member) after Feb. 1, 1940. Assembly No. stamped on cover.

See Clutch Section for complete data.

Facings—Spiral wound molded woven, 2 used. Inside Diam. 6" (919), 6½" (949). Outside Diam. 10". Thickness .125". NOTE—Install plate with mark 'flywheel side' forward (damper toward trans).

**Pedal Adjustment:**—Free travel ½-1" (adjusting nuts on lower end of pedal connector link). Check NoRol

**Removal:**—Remove transmission (see below). Disconnect clutch pedal linkage. Support engine at rear, disconnect rear engine mountings. Remove clutch housing and pan. Punch mark flywheel, cover, and pressure plate (re-assemble to these marks). Take out mounting screws in cover flange.

**TRANSMISSION**

**TRANSMISSION:**—Own Make. All helical gear, constant-mesh (all speeds), synchro-mesh (second & high) with remote type steering column shift.

See Transmission Section for complete data.

**Transmission Control:**—Steering col. mechanical shift. See Transmission Section for complete data.

**Removal:**—Disconnect shift rods, speedometer cable, overdrive control and wires (if used), and drive-shaft. Remove two upper mounting studs and install pilot studs (to support transmission and avoid bending clutch plate). Remove remaining mounting stud nuts, remove transmission from below. **NOTE**—When removing transmission from car, do not remove inspection hole plate in car floor.

### OVERDRIVE

**Cruising Gear (Overdrive):**—Warner Model AS12-R6 with electrical 'kick-down' control optl.

*See Transmission Section for complete data.*

**Overdrive Solenoid:**—Delco-Remy Model 1118004.

**Throttle Switch:**—Adjust switch to close with throttle wide open and carburetor throttle shaft pulley spring just starting to compress.

**Control Relay:**—Delco-Remy Model 1116798.

### UNIVERSALS

**UNIVERSAL JOINTS:**—Mechanics Type 3C. Roller bearing type. 2 used.

*See Universals Section for complete data.*

### REAR AXLE

**REAR AXLE:**—Own Make. Semi-floating, hypoid gear type with Hotchkiss drive.

*See Rear Axle Section for complete data.*

**Ratio:**—4.1-1 Std., 4 4/9-1 Optl.

**Backlash:**—.005-.007". Shim adjustment.

**Removal:**—Hoist rear of car, remove axle shafts (see below). Free axle from springs by disconnecting U-bolts and rear shackles and withdraw from car.

**Axle Shaft Removal:**—Remove wheel and drum. Disconnect brake line and cable. Remove backing plate mounting bolt nuts, oil seal retainer, brake backing plate, bearing adjusting shims and withdraw shaft and bearing (do not drag shaft on oil seal).

**Wheel Bearing Adjustment:**—Shims at flanged end of housing. To adjust, remove backing plate, add or remove shims (equally at both ends of axle).

**Endplay:**—.003-.008".

### SHOCK ABSORBERS

**SHOCK ABSORBERS:**—Delco. **Front:**—Model 1947-C, D.

**Rear:**—Model 1006-DD, 1006-EE (heavy springs), 1723-N, P (heavy springs—Export). Double acting, hydraulic. Direct acting on rear (except 1723).

*See Shock Absorber Section for complete data.*

### FRONT SUSPENSION

**Front Suspension:**—Independent, linked parallelogram type with coil springs.

*See Front Suspension Section for complete data.*

**IMPORTANT:**—Insert 2" blocks (Tool J886) between upper support arm and frame flange (at each side) to level frame when checking specifications.

**Kingpin Inclination:**—4½° crosswise.

**Caster:**—0° to Negative ½°. Adjustable.

**Camber:**—Pos. ¼° to Pos. ¾°. Adjustable.

**Toe In:**—1/32-3/32". Adjust tie rod tube for each wheel equally.

**Steering Geometry (Toe-out on Turns):**—Inner wheel turned 21½°, Outer wheel 20°.

### STEERING GEAR

**Steering Gear:** Gemmer Model Number 335. Worm-and-Roller type with 'push-pull' adjustment. New type steering linkage with idler arm on right frame side member.

*See Steering Gear Section for complete data.*

### BRAKES

**BRAKES:**—Service. Bendix hydraulic, duo-servo, single anchor type with eccentric adjustment. Hand lever applies rear wheel service brakes.

*See Brake Section for complete data.*

**Drums:**—Cast-iron. Diameter 11 1/16".

**Lining:**—Moulded. Width 2¼". Thickness 3/16". Length per wheel 24".

**Clearance:**—.010" at heel and toe of each shoe.

**Braking Power:**—53% front wheels, 47% rear.

**Hand Brakes:**—See Service Brakes above.

**No-Rol:** Optional equipment.

*See Brake Section for complete data.*

**OIL PAN REMOVAL, AND ENGINE CODE NOTE DATA (ORIGINAL BORE & BEARING SIZES):** Refer to Nash Shop Notes for complete instructions.

### MODEL IDENTIFICATION

**SERIAL NUMBER:**—First No. K-5001. On plate on right side of cowl under engine hood.

**Service Serial No.** Note—Stamped on plate on left front door hinge pillar. First No. N4-5001.

**ENGINE NUMBER:**—Stamped on left side of engine block at front end. First No. 5001 (same as Serial #).

### TUNE-UP

**COMPRESSION:**—Ratio—8.7-1 Std.

Pressure—120 lbs. at 350 R.P.M. cranking speed.

**VACUUM READING:**—Steady 18-20" idling at 6 MPH.

**FIRING ORDER:**—1-5-3-6-2-4. See diagram.

**SPARK PLUGS:**—Auto-Lite AN-7. 14 MM. Metric. Gaps—.025".

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.020". Cam Angle—35° Closed.

Automatic Advance—10° max. at 1200 RPM (distr.).

Vacuum Advance—8½° (Distr.) with 14-17" vacuum.

**IGNITION TIMING:** See Ignition Timing.

Std. Setting—TDC. 'IGN/DC' vibration dampener mark aligned with pointer at front of engine.

CAUTION—Latch out vacuum advance when setting Ign. Timing (See IGNITION TIMING following).

**CARBURETION:** See Carburetor & Carb. Equipment.

Idle Setting—Idle screw ½-1¼ turns open. Idle speed 6 MPH.

Float Level—Top of float (not soldered seam) 5/64" below top edge of bowl with valve seated.

Accelerating Pump—Center Hole normal setting.

Fuel Pump Pressure: 3½ lbs. (4 lbs. fuel & vacuum).

**VALVES:** See Valve Timing.

Tappet Clearance:—.015" all valves. Engine Hot.

NOTE—May be set at .018" max. for sustained high speed driving. Self-locking tappet screws used.

**STARTING:** See Battery, Starter, Generator, Regulator.

### IGNITION

**Ignition Switch:**—Delco-Remy No. 1116310. Connected to ignition coil by armored cable.

**Ignition Lock:**—Briggs & Stratton No. 45792.

Key Series—N-1201 to N-1449. Groove—No. 15.

**COIL:** Delco-Remy 1115028 (Domestic), 1115030 (Exp.). Mounted on engine side of dash.

Ignition Current—2 amperes idling, 5 stopped.

**CONDENSER:** Delco-Remy Part No. 1869705.

Capacity—.18-.25 microfarad.

**DISTRIBUTOR:** Delco-Remy 1110512. Single breaker, 6 lobe cam, full automatic advance type with separate vacuum spark control and Octane Selector adjustment.

Breaker Gap—.020". Limits .018-.024".

Cam Angle or Dwell—35° closed, 25° open.

Breaker Arm Spring Tension—17-21 ozs.

Rotation—Counter-clockwise viewed from above.

#### Automatic Advance

Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start	400	2	800
10	1200	20	2400

**Vacuum Spark Control No. 1116029.** Mounted on distributor mounting plate and linked to advance arm. Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle when spark retarded by return spring within unit.

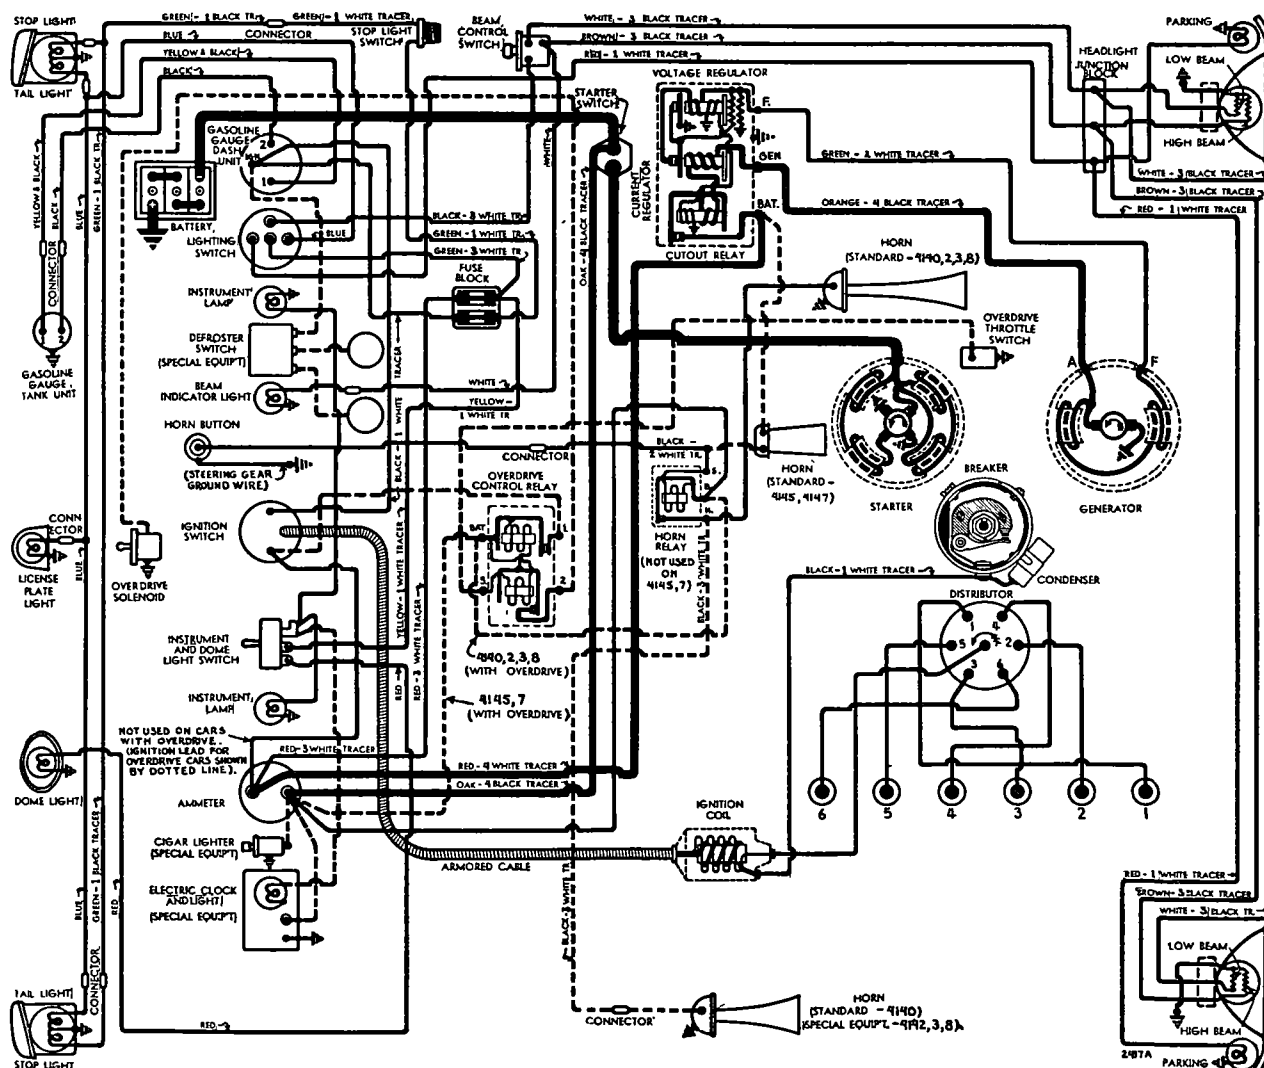

Plunger Travel—23/64" (total).

#### Vacuum Advance

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	3-5"
8½°	17°	14-17"

**Removal:**—Distributor mounted on left side of engine and driven by inclined shaft. To remove, loosen advance arm clamp bolt or disconnect vacuum line and take out hold-down screw in advance arm.

**Installation Note:**—When installing distributor, crank engine to firing position for #1 cylinder (piston at TDC), see that oil pump drive gear meshed so that slot in shaft points across engine with wide half of shaft toward front (slot is offset), turn rotor to #1 segment in distributor cap, install distributor and check timing.

## IGNITION TIMING

**IGNITION TIMING:**—Flywheel Degrees Piston Position  
All Engines ..... At TDC ..... 000" TDC.

**Timing Note:**—Vacuum advance must be latched out by aligning holes in advance arm and hold-down plate and inserting  $\frac{1}{8}$ " pin through these holes while timing is being set.

**To Set Timing:**—Turn engine over until #1 piston reaches top dead center on compression stroke with 'IGN/DC' mark on vibration dampener in line with pointer on chain case cover. Latch out vacuum control (see note above), loosen advance arm clamp bolt, rotate distributor until contacts begin to open, tighten clamp bolt, see that rotor at #1 segment in distributor cap, check Octane Selector setting.

**Octane Selector Setting:**—Should be set for slight ping when accelerating with wide open throttle at speeds between 10-15 MPH. To adjust, loosen hold-down screw, rotate distributor one graduation at a time counter-clockwise (if ping too severe), clockwise (if no ping noted) until correct performance secured.

## CARBURETOR

**CARBURETION:**—Carburetor—Carter (B & B) Model 513-S,  $1\frac{1}{4}$ " downdraft type with manual choke control.

*For complete data, refer to Carburetor Index.*

**Idle Adjustment:**—With engine warm and choke valve wide open, set throttle stopscrew for 6 MPH. idle speed. Adjust idle adjusting screw for smooth idle (screw  $\frac{1}{2}$ - $1\frac{1}{4}$  turns open from inner seated position—turn screw in for leaner mixture), recheck idle speed.

**Accelerating Pump Setting:**—Throttle lever has 3 holes for pump rod link engagement as follows:

Inner (Min. stroke)—Hot Summer weather.

Center (Med. stroke)—Normal temperatures.

Outer (Max. stroke)—Cold Winter weather.

**Float Level:**—Top of float (not soldered seam)  $5/64$ " (plus or minus  $1/64$ " ) below top edge of bowl with valve seated.

**Metering Jet:**—See Carter (B&B) Jet Table in Carburetor Section for complete data.

**Fast Idle:**—No adjustment provided (linked to choke valve so throttle opened to fast idle position when choke valve closed).

## CARB. EQUIPMENT

**Air Cleaner:**—AC No. 1542037 oil-wetted type Std. Heavy duty oil-bath type Optl.

**Fuel Pump:**—AC Type W (Std.), Type AJ Fuel-& Vacuum Pump (Cars with Overdrive). Pump Exchange Part No. 532.

*For complete data, refer to Carburetion Equip. Index.*

**Pressure:**— $3\frac{1}{2}$  lbs. ('W'), 4 lbs. ('AJ').

**Gasoline Gauge:**—Auto-Lite Electric type. No. NG-9645D (Dash Unit), No. NG-9637T (Tank Unit).

*For complete data, refer to Carburetion Equip. Index.*

## BATTERY

**BATTERY:**—Auto-Lite CTL-1-13. 6 volt, 13 plate, 90 Ampere Hour capacity (20 hour rate).

**Zero Capacity:**—300 amperes for 3.0 minutes.

**Grounded Terminal:**—Positive (+) terminal to body.

**Engine Ground:**—Separate strap connector to body.

**Location:**—Under left front seat.

## STARTER

**STARTER:**—Delco-Remy 1109451. Armature No. 1882547.

**Drive:**—Inboard Barrel Type Bendix No. A-2033.

**Rotation:**—Counter-clockwise at commutator end.

**Brush Spring Tension:**—24-28 ozs. each.

### Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	6000	5.7	60
11.5 "	Lock	3.3	540

**Removal:**—Starter flange mounted on left front face of flywheel housing. To remove, take out flange mounting screws.

**Starting Switch:**—Mounted on toeboard and operated by clutch pedal when clutch fully disengaged.

## GENERATOR

**GENERATOR:**—Delco-Remy 1102684. Armature 1882588.

Two brush (shunt) type with Current-voltage control.

**Charging Rate Adjustment:**—None. Charging rate controlled by Voltage Regulator and maximum output controlled by Current Regulator. See Regulator data.

**Maximum Charging Rate:**—32-34 amperes, 8 volts, not. Actual charging rate controlled by voltage regulator and dependent on battery condition.

### Performance Data

	Amperes	Volts	R.P.M.
Cold	30①	8.0	1750

①Not maximum output. See Current Regulator.

**Rotation:**—Counter-clockwise at commutator end.

**Brush Spring Tension:**—25 ozs. each.

**Field Current:**—1.75-1.9 amperes at 6.0 volts.

**Removal:**—Generator cradle mounted at left side of engine with fan belt drive (water pump driven by extension of generator shaft). To remove, disconnect water pump, loosen fan belt, remove generator clamp band, lift generator out.

**Belt Adjustment:**—Adjust whenever belt deflection exceeds  $1\frac{1}{2}$ " (light pressure midway between fan and generator pulley). To adjust, loosen fan mounting bracket capscrews, raise fan (pivots on one screw, other screw hole slotted) until belt deflection is  $\frac{3}{4}$ ", tighten screws.

## REGULATOR

**REGULATOR:**—Delco-Remy 1118202. Single Core Type. Vibrating Current & Voltage Regulator on dash.

*For complete data, refer to Electrical Equipment Index.*

**CAUTION:**—Check generator for grounded field coils and leads before changing regulator settings to correct High Charging Rate or High Voltage.

### Cutout Relay

**Cuts In:**—6.2-6.7 volts hot.

**Cuts Out:**—0-4.0 ampere discharge current.

**Contact Gap:**—.020" (same for both sets).

**Air Gap:**—.020" (with contacts just closed).

## Voltage Regulator

**Setting:**—7.2-7.4 volts hot (operating temperature). Regulator over-compensated for temperature. Should be checked with cover in place and hot.

**To Check:**—Connect ammeter in charging line at regulator 'BAT' terminal, voltmeter between this terminal and ground. Operate generator at 2800 RPM., adjust charging rate to 8-10 amperes (use variable rheostat or AVR set). With regulator hot (150°F.), decrease generator speed until cutout relay contacts open, then increase speed to 2800 RPM. and check hot voltage setting (above).

**To Adjust:**—Change regulator armature spring tension slightly by bending hanger at lower end of one spring only. If further adjustment required, see Single Core Regulator article in Electrical Equipment Section for adjustment directions for the other (second) spring.

**Air Gap:**—.070" between center of core and armature with contacts just closing (press down on armature to open contacts, release pressure, check gap at point where contacts just close).

## Current Regulator

**Setting:**—34-36 amperes hot (at operating temp.).

**To Check:**—Remove regulator cover, connect short jumper between Voltage Regulator frame and upper contact support bracket (to short out Voltage Regulator), connect ammeter in charging line at regulator 'BAT' terminal, turn on car lights and accessories. Operate generator and increase speed until output remains constant. With regulator hot (150°F), current reading should agree with setting (above).

**To Adjust:**—Same as for Voltage Regulator (above).

**Air Gap:**—.080" (check same as Voltage Regulator).

## LIGHTING

**LIGHTING:**—Headlamps—Hall 'Sealed Beam' type.  
*For complete data, refer to Electrical Equipment Index.*

**Headlamp Adjustment:**—Aim upper beam straight ahead (hot spot center 3" below lamp center height).

**Beam Indicator:**—In center of speedometer dial. Lighted when Country (upper) beams in use.

### Switches

**Lighting:**—Douglas. Nash No. 3107032.

**Beam Selector:**—Douglas.

**Instrument:**—Douglas.

### Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps		Sealed Beam
Parking	3	63
Instrument, Clock	$1\frac{1}{2}$	55
Beam Indicator	$1\frac{1}{2}$	55

Rear License	3	63
Dome	6	81

C NTINUED ON NEXT PAGE

## CONTINUED FROM PRECEDING PAGE

## MISC. ELECTRICAL

**FUSES:**—Lighting—30 ampere. On fuse block on left hand front face of dash.

Accessory—30 ampere. On fuse block.

**HORNS:**—Delco-Remy. No. 1999917 (Spec. 4145, 7), No. 1999565 (Deluxe 4142, 3, 8), No. 1999565 Low Note & 1999566 High Note Twin Horns (Deluxe Torpedo 4140), Deluxe Single Horn & Torpedo Deluxe Twin Horns operated by horn relay.

Deluxe 4142, 3, 8 Note—No. 1999566 High Note Horn Optl. with Std. 1999565 Low Note Horn as twin horn, blended tone equipment (Relay is Std.).

Type	Current (at 6 volts)	Air Gap
1999565 (Low Note)	19-21 amperes	.047-.052"
1999566 (High Note)	18-20 amperes	.039-.044"

Horn Relay:—Delco-Remy No. 1116775.

Contact Gap—.025". Air Gap—.015" (closed).

Contacts Close—2.75-4.0 volts.

## ENGINE

**OIL PAN REMOVAL AND ENGINE CODE NOTE DATA (ORIGINAL BORE & BEARING SIZES):** Refer to Nash Shop Notes for complete instructions.

**ENGINE SPECIFICATIONS:**—6 cylinder, 'L' head type. Cylinders cast Enbloc with intake manifold cast in block (Iso-thermal fuel intake system).

Bore—3 $\frac{1}{8}$ ". Stroke—3 $\frac{3}{4}$ ".

Displacement—172.6 cu. ins. Rated HP—23.44.

Developed Horsepower—75 at 3600 RPM.

Compression Ratio—6.7-1 Std. (cast-iron head).

Compression Pressure—120 lbs. at 350 RPM.

Vacuum Reading—18-20" idling at 6 MPH.

**PISTONS:**—Aluminum alloy, Autothermic, cam-ground, tin-plated type. Length—3 $\frac{3}{8}$ ".

Original Bore Sizes:—See Engine Code Note in Nash Shop Notes for data.

Removal—Pistons and rods removed from above.

Clearance—See Fitting New Pistons.

Replacement Pistons:—Furnished std. and .001", .002", .003", .005", .010", .012", .015", .020", .040" oversize.

Fitting New Pistons:—Use .002" oiled feeler  $\frac{1}{2}$ " wide between piston and wall at right angles to pin hole on side opposite slot. Pull to withdraw feeler must be within 12-18 lbs. with piston at room temperature.

Installing Pistons:—Slot to left side (trademark on piston toward the front).

**PISTON RINGS:**—Two compression, one oil ring per piston, all above pin. Oil ring groove drilled for oil drain.

Ring	Width	End Gap	Side Clearance
Compr.	.093"	.010-.015"	.002-.004"
Oil Contr.	.1865"	.010-.015"	.002-.004"

Replacement Rings & Installation Data:—See Nash Shop Notes for complete data.

**PISTON PIN:**—Diameter—.8120". Length—2.609".

Floating type, retained by locking ring at each end.

Pin Fit in Piston—Light push fit (piston at 200° F.).

Pin Fit in Rod Bushing—Select fit for .0001" clearance or light push fit at normal temperature.

Replacement Pins:—Standard, .001, .003" oversize.

**CONNECTING ROD:**—Length—6 $\frac{3}{4}$ ". Weight—24 ozs.

Upper Bearing (Piston Pin Bushing)—Bronze.

Crankpin Journal Diameter 1.875". See Engine Code Note in Nash Shop Notes for original bearing sizes.

Lower Bearing—Removable steel-backed babbit.

Clearance—.0015-.0025". Sideplay—.004-.008".

Bearing Adjustment:—None (no shims). Replace bearings. See Nash Shop Notes for instructions.

Replacement Bearings:—Std., .002", .010" undersize.

Installing Rods:—Mark rods and bearing caps before removal and install in same position. Oil hole in lower end of rod must be toward right of engine.

**CRANKSHAFT:**—Four bearing, counterweighted type. See Nash Shop Notes for Vibration Dampener data.

Journal Diameters—2 31/64" all bearings. See Engine Code Note in Nash Shop Notes for Original bearing sizes.

Bearings—Removable steel-backed babbit type. Clearance—.002".

Bearing Adjustment:—None (no shims). Replace bearings. See Nash Shop Notes for bearing installation and fitting, replacement main bearing caps, and rear main bearing oil seal data.

Replacement Bearings:—Std., .002", .010" undersize.

End Thrust:—Taken by #1 front bearing. See Nash Shop Notes for thrust plate and oil seal data.

Endplay—.004-.006".

**CAMSHAFT:**—4 bearing. Non-adjustable chain drive. See Nash Shop Notes for Camshaft removal data.

Bearing Type—Steel-backed, babbit bushings.

Clearance—.002".

End Thrust:—Taken by front bearing and camshaft sprocket. Endplay—.004-.006".

Timing Chain:—Whitney No. 49205 roller chain. Width 9/16". Pitch 3/8". Length 22 $\frac{1}{2}$ " or 60 links.

Camshaft Setting:—Mesh chain with camshaft and crankshaft sprockets turned so that marked tooth on each gear is 45° past (to right—as viewed facing front of engine) top vertical position. With sprockets in this position there should be 9 $\frac{1}{2}$  links between tooth marks.

**VALVES:**—

Head Diameter	Stem Diameter	Length
---------------	---------------	--------

Intake	1 11/32"	3412"	4 $\frac{3}{4}$ "
--------	----------	-------	-------------------

Exhaust	1 9/32"	3412"	4 $\frac{3}{4}$ "
---------	---------	-------	-------------------

Seat Angle	Lift	Stem Clearance
------------	------	----------------

All Valves	45°	5/16"	.002-.003"
------------	-----	-------	------------

Valve Guides:—Press fit in block (press in place 1" below top of block, ream for valve stem clearance).

Valve Springs:—	Pressure	Length
-----------------	----------	--------

All Valves	83 lbs.	1 7/16"
------------	---------	---------

NOTE—Install springs with closed coils at top.

Valve Lifters:—Mushroom type in guide holes reamed in block. Removed from below. See Nash Shop Notes for Camshaft Removal (necessary to remove lifters).

## VALVE TIMING

Tappet Clearance:—.015" all valves, engine hot and idling (.018" max. may be used for sustained high speed driving). See Nash Shop Notes for Self-locking type tappet adjusting screw data.

**Valve Timing:**—See Camshaft Setting above.

Intake Valves—Open 19° BTDC. Close 63° ALDC.

Exhaust Valves—Open 59° BLDC. Close 23° ATDC.

To Check Valve Timing—With .015" tappet clearance, #1 intake valve opens 19° BTDC with 'DC' mark on vibration dampener at front of engine 1 3/16" ahead of pointer on chain case cover. #1 exhaust valve closes 23° ATDC. with 'DC' mark 1 15/16" past the pointer.

## LUBRICATION

**LUBRICATION:**—Pressure system. Gear type oil pump on right side of crankcase (driven by inclined shaft).

Normal Oil Pressure:—25-30 lbs. at 25 MPH (warm oil).

Oil Pressure Regulator:—Under plug on left side of crankcase behind pump. Opens at 25 lbs. Non-adj.

Crankcase Capacity:—5 quarts.

## COOLING

**COOLING SYSTEM:**—Capacity 14 qts. (15 with heater). Water Pump:—Centrifugal, adjustable packing type. See Water Pump Section for complete data.

Removal—Drain radiator, disconnect hose and drive coupling, take out mounting screws in pump flange.

Thermostat:—Fulton or Dole. In cyl. head outlet.

Setting—Starts to open at 160° F.

Temperature Gauge:—Auto-Lite (Motometer) Vapor Tension type. Auto-Lite No. H-9706.

See Miscellaneous Section for complete data.

## CLUTCH

**CLUTCH:**—Borg & Beck Model 8A7. Assembly No. 959. or No. 925. Single plate, dry disc type.

See Clutch Section for complete data.

Facings—Molded metallic type, 2 required. Inside Diam. 5 $\frac{3}{8}$ ". Outside Diam. 8". Thickness  $\frac{1}{8}$ ".

Pedal Adjustment:—Free travel  $\frac{1}{2}$ -1". Adjust by loosening one nut, tightening opposite nut on connector rod at clutch fork (tighten nuts to apply slight tension to rubber cushions, lock each nut with 'Palnut').

Removal:—Remove transmission (see below), disconnect clutch pedal linkage, remove clutch housing and pan, punchmark flywheel, clutch cover and pressure plate (reassemble to same marks), take out clutch fork and mounting screws in cover flange. Remove clutch assembly.

## TRANSMISSION

**TRANSMISSION:**—Warner Model AS3-T84G (Std.), AS4-T84G (with Overdrive). All helical gear, constant-mesh, synchro-mesh (second & high), sliding gear (low and reverse).

See Transmission Section for complete data.

Transmission Control:—Mech. steering column shift. See Transmission Section for complete data.

Removal:—Disconnect torque tube at trunnion bracket and remove Rear Axle (see below), disconnect shift rods and Overdrive control wires and cable, disconnect speedometer cable. Support engine at rear, remove rear engine mountings, take out transmission mounting bolts, pull transmission straight back and remove from below.

## OVERDRIVE

**Overdrive (Cruising Gear):**—Warner Type R7C with electrical 'kick-down' control Optl.

*See Transmission Section for complete data.*

**Overdrive Solenoid:**—Delco-Remy Model 1118004.

**Throttle Switch:**—Adjust switch position on mounting bracket so that contacts close with throttle valve wide open and spring on carburetor throttle valve pulley just starting to compress.

**Control Relay:**—Delco-Remy Model 1116798.

## UNIVERSALS

**UNIVERSAL JOINTS:**—Mechanics No. 1½R. Needle bearing type, 1 used (in rear bearing bracket at rear of transmission). **NOTE**—Universal joint is free fit in rear end of transmission mainshaft and press fit on forward end of propeller shaft.

*See Universals Section for complete data.*

## REAR AXLE

**REAR AXLE:**—Own Make. Semi-floating, hypoid gear type with Torque Tube Drive.

*See Rear Axle Section for complete data.*

**Ratio:**—4.1-1 Std. 4.4-1 with Overdrive.

**Backlash:**—.005-.007".

**Removal:**—Jack up rear end of car and support securely with body jacks placed on either side of frame at point 6" forward of front end of rear

fender (CAUTION—car weight must not rest on body frame flange which projects below frame rail). Disconnect stabilizer bar and rear spring and shock absorber mounting brackets from axle, disconnect trunnion bracket at transmission rear bearing bracket by removing nuts on forward ends of trunnion bracket mounting studs, pull axle to rear to disengage propeller shaft and universal joint assembly from transmission mainshaft, remove axle and torque tube assembly from under car. *Refer to Rear Axle Section "1941 Nash '600' Axle" for Trunnion Bracket installation & adjustment, & shaft bearing data.*

**Axle Shaft Removal:** Remove wheel and drum, disconnect brake line and cable, remove backing plate mounting bolt nuts, oil seal retainer, backing plate, and bearing adjusting shims. Withdraw shaft and bearing, using care not to drag shaft on oil seal.

**Wheel Bearing Adjustment:**—Shims located between backing plate and flanged end of housing. To adjust, remove wheel and backing plate (above), add or remove shims for endplay. Endplay .002-.004".

**Rear Suspension:**—Coil spring type with shock absorbers mounted within springs.

*See Rear Axle Section for complete data.*

## SHOCK ABSORBERS

**SHOCK ABSORBERS:**—Delco Model 1026-N (front), 1023-BB (rear—4 dr.sedans), 1023-Z (rear—others). Direct acting, hydraulic type.

*See Shock Absorber Section for complete data.*

## FRONT SUSPENSION

**Front Suspension:**—New enclosed type with knuckle support and coil spring on kingpin mounted on frame cross-member.

*See Front Suspension Section for complete data.*

**Kingpin Inclination:**—5½° crosswise.

**Caster:**—0° plus or minus ½°. Adjustable.

**Camber:**—0° to ½° Pos. Adjustable.

**Toe In:**—0-1/16" measured 10" up from floor. Adjusted by turning tube at outer end of each tie rod equally. **CAUTION**—Clamp bolts must be down toward ground to prevent interference with body during wheel movement.

**Steering Geometry (Toe Out on Turns):**—Inner wheel turned 21° plus ½°, Outer wheel 20°.

## STEERING GEAR

**Steering Gear:** Gemmer Model 250 Worm-and-Roller.

*See Steering Gear Section for complete data.*

## BRAKES

**BRAKES:**—Service—Lockheed hydraulic, double anchor type. Hand lever applies rear service brakes. *See Brake Section for complete data.*

**Drums:**—Cast iron. Diameter 9".

**Lining:**—Moulded. Width 1¾". Thickness 3/16". Length 20½" per wheel.

**Clearance:**—.008" toe, .004" heel for each shoe.

**Hand Brake:**—See Service Brakes above.

**HOOD LOCK:**—Alligator type hood. Lock button below instrument panel on left side. To raise hood, pull out on lock control button (hood will raise slightly), reach under front edge of hood and press up on safety catch tab to release safety catch, raise hood up.

### MODEL IDENTIFICATION

**SERIAL NUMBER:**—First number R-353001. Stamped on plate on right frame side member under hood.

**SERVICE SERIAL NUMBER:**—First number N6-45001. On 'Caution Plate' on left front door hinge post.

**ENGINE NUMBER:**—First number R-353001. Stamped on right side of engine block at front.

### TUNE-UP

**COMPRESSION:**—Ratio—6.3-1 std. cast-iron head.  
Pressure—125 lbs. at cranking speed of 350 RPM.

**VACUUM READING:**—Steady 18-20" idling at 7-8 MPH.

**FIRING ORDER:**—1-5-3-6-2-4. See diagram for spark plug cable connections on distributor cap. NOTE—Rotation now clockwise (reversed from previous models).

**SPARK PLUGS:**—AC No. 45. 14 MM. Metric.  
Gaps—.025".

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.020". Cam Angle 35° Closed.

Synchronization—Set movable contacts to open simultaneously with stationary contacts.

Automatic Advance—11½° max. at 875 RPM (distr.).

**IGNITION TIMING:** See Ignition Timing.

Std. Setting—6° BTDC. Vibration dampener mark 'IGN' (23/64" before 'DC' mark) aligned with pointer on chain case cover at front of engine. Both sets of contacts should open simultaneously. CAUTION—Torquematic Spark Control (see DISTRIBUTOR following for description) cable must be disconnected at dash before setting Ignition Timing.

**CARBURETION:** See Carburetor & Carb. Equipment.  
Idle Setting—Idle screw ¾-1½ turns open. Idle speed 7-8 MPH.

Float Level—¾" from projection on cover to top of soldered seam at front end of float with needle valve seated (invert to check).

Accelerating Pump—Lower Hole (Normal setting).

Fuel Pump Pressure: 3½ lbs. maximum.

**VALVES:** See Valve Timing.

**Tappet Clearance:**—.015" all valves (see Adjustment Note following) with engine hot and idling (may be set .018" max. for sustained high speed driving).  
**ADJUSTMENT NOTE:**—Due to redesigned cylinder head and increased angle of engine, a new oil plug (in drilled passage in cylinder head between lead from oil filter and lead to rocker arm shafts) is used and must be removed if valves adjusted with engine running (cutting off oil supply to rocker arm shafts). IMPORTANT—Replace plug after adjusting valves to provide proper lubrication for overhead mechanism after cover installed (if plug not replaced overhead valve mechanism will not be lubricated, oil will be by-passed in head).

**STARTING:** See Battery, Starter, Generator, Regulator.

### IGNITION

**Ignition Switch:**—Oakes Steering Column and Ignition Lock No. 302382. Ignition Switch No. 302440.

**Ignition Lock:**—Briggs & Stratton. B & S No. 85347.

**Key Series:**—5 digits. Groove—No. 1.

**COIL:** Two Used, Auto-Lite CE-4025-A. Mounted on right side of engine.

**Ignition Current:**—2 amperes idling, 5 stopped.

**CONDENSER:** Auto-Lite Part No. IG-2671. Two used.  
Capacity—.20-.25 microfarad.

**DISTRIBUTOR:** Auto-Lite IGE-4024. Twin Ignition double breaker, 6 lobe cam, full automatic advance with Torquematic Spark Control. Contacts open simultaneously to fire both spark plugs in each cylinder at the same instant and must be synchronized (see Ignition Timing). NOTE—Distributor rotation reversed from previous models.

**Breaker Gap:**—Set at .020".

**Cam Angle or Dwell:**—35° closed, 25° open (distr.). For each set of contacts (operate independently).

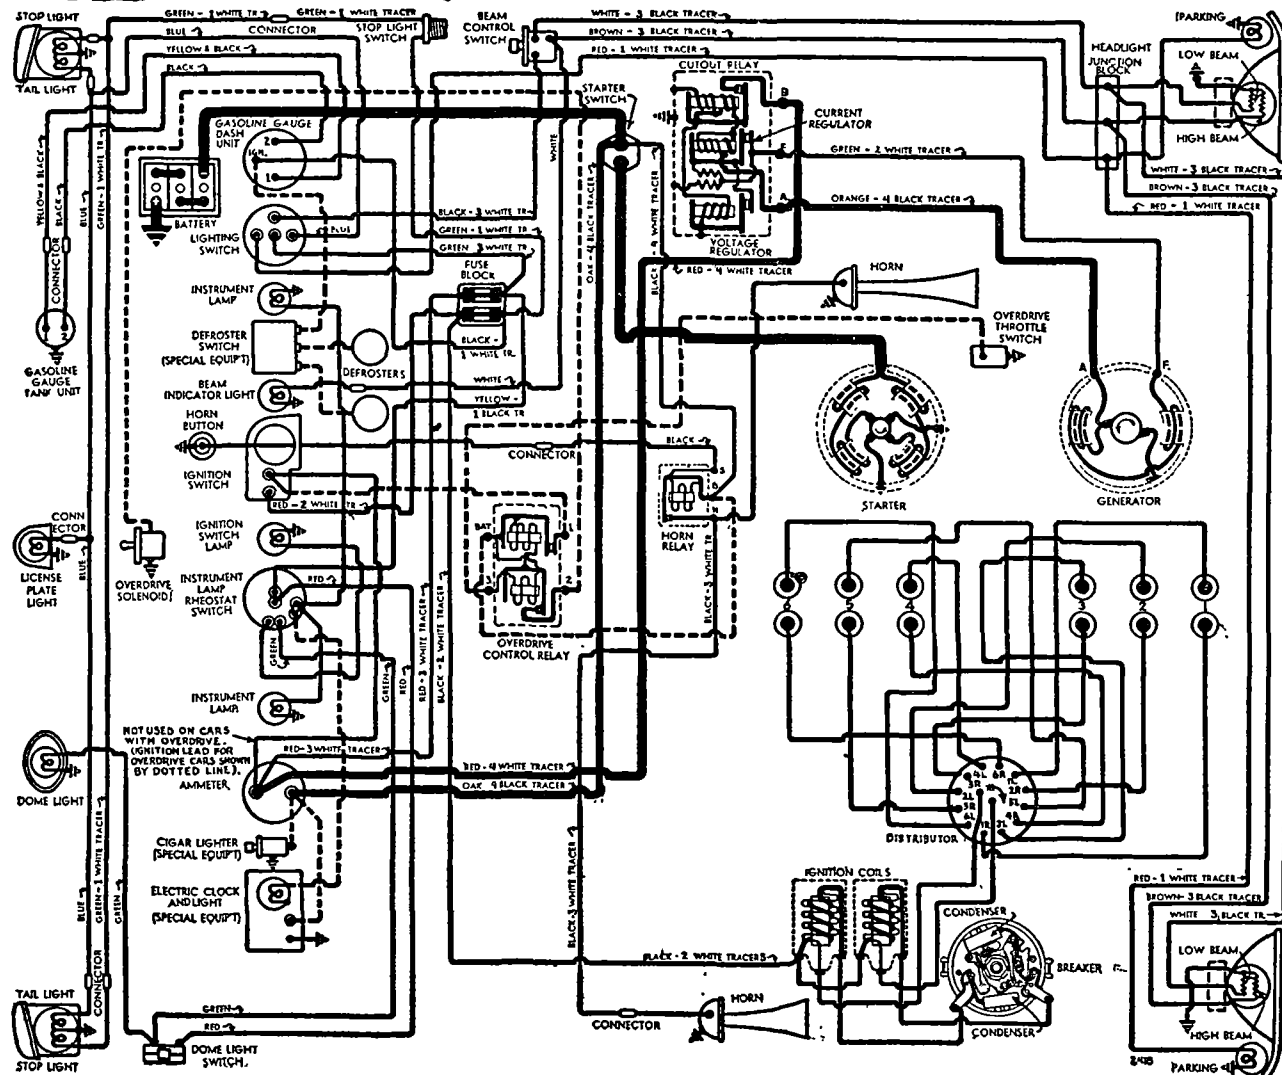

**Breaker Arm Spring Tension:**—17-20 ounces.

**Rotation:**—Clockwise viewed from above. NOTE—Rotation reversed from previous models.

### Automatic Advance

Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start.....	275	0.....	550
3.....	370	6.....	740
7.....	500	14.....	1000
9.....	665	18.....	1330
11.5.....	875	23.....	1750

**Torquematic Spark Control:**—Consists of cable anchored at dash and connected to distributor body by a travel limiting spring. Retards distributor through engine movement caused by torque action.

Maximum retard  $2\frac{1}{2}^{\circ}$  (engine movement in excess of  $2\frac{1}{2}^{\circ}$  taken up by travel limiting spring). See Ignition Timing for setting.

**Removal:**—Mounted on right side of engine. To remove, take out hold-down screw in advance arm, disconnect torquematic control, lift distributor off.

## IGNITION TIMING

**IGNITION TIMING:**—Setting for all engines as follows:

Flywheel Degrees	Piston Position
6° BTDC	.0150" BTDC

**To Set Timing:**—Car manufacturer recommends use of Nash Timing Light SE-569. Synchronize breaker points (see Synchronization following). With Timing Light connected as for Synchronization (see below), slacken torquematic cable by loosening lock-nuts on anchor bracket at dash. With #1 piston on compression, turn engine over until piston is 6° or .0150" BTDC, stop when 'IGN' mark on vibration dampener lines up with pointer on chain case cover (this mark is 6° or  $23\frac{3}{64}^{\circ}$  before top dead center mark 'DC'). Loosen advance arm clamp bolt, rotate distributor until points just break (lights go on) with stop pin (hold-down bolt and nut) in advance position in slot in advance arm, tighten clamp bolt. Adjust cable locknuts at anchor bracket on dash to leave torquematic cable without slack or tension and stop pin in advance position in slot.

**Synchronization:**—Use Nash Timing Light SE-569 (consists of two lights—one for each set of contacts) connected between each primary terminal and ground. Turn on ignition, turn engine over until fixed points just open (light for stationary contacts on). If both lights go on, synchronization correct. If not, loosen 3 lock screws on movable sub-plate, shift plate by prying with screwdriver in notch on edge of plate until this set of contacts begin to open (both lights on), tighten sub-plate lock screws, and set Ignition Timing as directed above. If other methods used, set contacts to open simultaneously at 60° (distributor) intervals.

**Torquematic Spark Control Check:**—Distributor must be free in bracket and cable pulleys positioned to prevent cable interference with engine. Advance spring and cable take-up spring must be properly located and spring resistance centralized. Car manufacturer recommends use of Nash Synchro Light SE-417 to check torquematic retard by means of dead center mark on vibration dampener.

## CARBURETOR

**CARBURETION:**—Carburetor—Carter Type WA-1, Model 435-S (#253 cast on face of flange). Single barrel,  $1\frac{1}{4}^{\circ}$  downdraft type.

For complete data, refer to Carburetor Index.

**Idle Adjustment:**—With engine warm and running at slow idle speed (choke valve wide open, fast idle inoperative), set throttle stop screw for 7-8 MPH idle speed. Adjust idle adjusting screw until engine fires smoothly ( $\frac{3}{4}$ - $1\frac{1}{2}$  turns open—turn screw in for leaner mixture). Readjust idle speed.

**Accelerating Pump Setting:**—Pump arm under dust cover at top of carburetor has three holes for pump link engagement. Set as follows:

Upper Hole (max. stroke)—Cold weather.  
Lower Hole (med. stroke)—Moderate weather.  
Inner Hole (min. stroke)—Hot weather.

**Float Level:**— $\frac{3}{8}^{\circ}$  from projection on cover to top of soldered seam at front end of float with needle valve seated (invert to check).

**Metering Rods & Jets:**—See Carter Jet Table in Carburetor Section for complete data.

**Fast Idle:**—Integral type (built-in carburetor).

For complete data, refer to Carburetion Equip. Index.

**Setting:**—Adjust by bending connecting link offset for  $\frac{3}{8}^{\circ}$  choke valve opening with stop screw against (not on) first step of fast idle cam.

**Automatic Choke:**—Carter Climatic Control.

For complete data, refer to Carburetion Equip. Index.

**Setting:**—1 Notch Rich (supersedes setting of 2 Notches Rich originally specified for this model).

## CARB. EQUIPMENT

**Air Cleaner:**—AC #1529112 oil-wetted type standard. Heavy duty oil-bath type optional.

**Fuel Pump:**—AC Type W (Std.), Type AD Fuel- & Vacuum Pump (Cars with Overdrive). Pump Exchange Part No. 533.

For complete data, refer to Carburetion Equip. Index.

**Gasoline Gauge:**—Auto-Lite electric. No. NG-9645D (dash unit), No. NG-9637T (tank unit).

For complete data, refer to Carburetion Equip. Index.

## BATTERY

**BATTERY:**—Auto-Lite Type CTL-1-15. 6 volt, 15 plate, 105 ampere hour capacity (20 hour rate).

**Starting Capacity:**—133 amperes for 20 minutes.

**Zero Capacity:**—300 amperes for 3.5 minutes.

**Grounded Terminal:**—Positive (+) grounded to body. Separate body to engine ground strap used.

**Dimensions:**—Length & Height  $9\frac{1}{16}^{\circ}$ . Width  $7\frac{7}{8}^{\circ}$ .

**Location:**—Under front seat.

## STARTER

**STARTER:**—Auto-Lite MAB-4076. Armature MAB-2057.

**Drive:**—Inboard Bendix Type LCD11FX-10.

**Rotation:**—Counter-clockwise at commutator end.

**Brush Spring Tension:**—42-53 ozs. (new brushes).

**Cranking Engine:**—160 RPM, 150-160 amps., 5.2 v.

### Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	3700	5.5	60
0.6 " "	1910	5.5	100
3.4 " "	1100	5.0	200
6.6 " "	695	4.5	300
10.15 " "	420	4.0	400
15.8 " "	Lock	3.0	582
22.5 " "	Lock	4.0	775

**Removal:**—Starter flange mounted on left front face of flywheel housing. To remove, take out flange mounting screws.

**Starting Switch:**—A-L #SW-4012. Mounted on body floor below clutch pedal. Operated by depressing clutch pedal fully. No adjustment required.

## GENERATOR

**GENERATOR:**—Auto-Lite GDZ-4806A. Armature GDZ-2079F. 2 brush type with Current-Voltage control. **Charging Rate Adjustment:**—No adjustment at generator. Charging rate controlled by Voltage Regulator and maximum output by Current Regulator. See Regulator data following.

**Maximum Charging Rate:**—35 amperes (hot or cold), 8.0 volts, 1900 RPM (generator) and above with load or discharged battery (Current Regulator setting). Actual charging rate controlled by Voltage Regulator and dependent on battery condition.

### Performance Data

Cold		Hot	
Amperes	Volts	Amperes	Volts
0	6.4	0	6.4
4	6.6	4	6.6
8	6.75	8	6.75
12	6.95	12	6.95
16	7.15	16	7.15
20	7.3	20	7.3
24	7.5	24	7.5
28	7.7	28	7.7
32	7.9	32	7.9
35	8.0	35	8.0

**Rotation:**—Counter-clockwise at commutator end.  
**Brush Spring Tension:**—53 ozs. max. (new brushes).  
**Field Current:**—1.60-1.78 amperes at 6.0 volts.  
**Motoring Current:**—4.16-4.60 amperes at 6.0 volts.

**Removal:**—Generator cradle mounted at left side of engine with fan belt drive. Water pump driven by generator shaft extension. To remove, disconnect water pump, loosen fan belt, remove generator clamp band and lift generator off.

**Belt Adjustment:**—Adjust whenever belt deflection is over  $1\frac{1}{2}^{\circ}$  (when pressed lightly midway between generator and fan pulleys). To adjust, loosen two cap screws on fan bracket, lift fan up (one screw hole slotted) for  $\frac{3}{4}^{\circ}$  belt deflection, tighten screws.

## REGULATOR

**REGULATOR:**—Auto-Lite VRP-4004F or 4004F-1. Current Voltage Type. On left side of engine dash.

For complete data, refer to Electrical Equipment Index.

**NOTE:**—Regulator case cover sealed. Serviced on exchange basis if seals not broken (to remove cover).

### Cutout Relay

**Cuts In:**—6.4-6.6 volts.

**Cuts Out:**—4.1-4.8 volts (approx. 4-6 amps. disch.).

**Contact Gap:**—.015" minimum.

**Air Gap:**—.031-.034" with contacts open (check at hinge end of core).

### Voltage Regulator

**Setting:**—7.2-7.5 volts at 70° F. See Electrical Equipment Section for settings at other temperatures.

**To Check (without breaking seals):**—Connect ammeter in charging line at regulator 'B' terminal (use short heavy leads), voltmeter between 'B' terminal and ground. Operate generator at speed equivalent to 30 MPH., charging fully charged battery, until voltage is steady. Voltage reading should agree with setting given above.

**To Adjust (with cover removed):**—Change regulator armature spring tension by bending lower spring hanger slightly. See Electrical Equipment Section.

CONTINUED ON NEXT PAGE

## CONTINUED FROM PRECEDING PAGE

**Contact Gap**—.012" min. (armature against stop pin).  
**Air Gap**—.048-.052" with contacts just opening.

## Current Regulator

**Setting**—34-36 amperes (marked '35' on the cover).  
**To Check** (without breaking seals)—Connect test meters as for voltage check (above). Operate generator at speed equivalent to 30 MPH. charging battery, turn on car lights and accessories or connect load (bank of headlamp bulbs etc.) between ammeter and battery so that generator charges at peak rate and Current Regulator operates. Current reading should agree with setting given above. If more than slight excess noted, regulator is defective.  
**To Adjust** (with cover removed)—Same as for Voltage Regulator (above).

**Contact Gap & Air Gap**—Same as Voltage Regulator.

## LIGHTING

**LIGHTING**:—Headlamps—Hall 'Sealed Beam' type.

*For complete data, refer to Electrical Equipment Index.*

**Headlamp Adjustment**—Aim upper beam straight ahead (hot spot center 3" below lamp center height).

**Beam Indicator**—In center of speedometer dial. Lighted whenever Country (upper) beams in use.

## Switches

**Lighting**—Douglas. Nash No. 3107032.

**Beam Selector**—Douglas.

**Instrument**—Douglas.

## Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps	Sealed Beam	
Parking	3	63
Instrument, Clock	1½	55
Beam Indicator	1½	55
Stop & Tail	21-3	1158
Rear License	3	63
Dome	6	81

## MISC. ELECTRICAL

**FUSES**:—Lighting—30 ampere. On fuse block mounted on left hand side of engine dash.

**Accessory**—30 ampere. On fuse block.

**HORNS**:—Delco-Remy. No. 1999565 (left horn—low note), No. 1999566 (right horn—high note). Vibrator type, blended tone, operated by horn relay.

Type	Current (at 6 volts)	Air Gap
1999565 (Low Note)	19-21 amperes	.047-.052"
1999566 (High Note)	18-20 amperes	.039-.044"

**Horn Relay**:—Delco-Remy Model 1116775.

**Contact Gap**—.025". **Air Gap**—.015" (closed).

**Contacts Close**—2.75-4.0 volts.

## ENGINE

**ENGINE CODE NOTE (ORIGINAL BORE & BEARING SIZES)**: See Nash Shop Notes for complete data.

**ENGINE SPECIFICATIONS**:—6 cylinder, valve-in-head, Twin Ignition type with Iso-thermal fuel intake system (intake manifold cast in cylinder head—water jacketed for temperature control).

**Bore**—3¾". **Stroke**—4¾".

**Displacement**—234.8 cu. ins. **Rated HP**—27.34.

**Developed Horsepower**—105 at 3400 RPM.

**Compression Ratio**—6.3-1 Std. cast-iron head.

**Compression Pressure**—125 lbs at 350 RPM.

**Vacuum Reading**—Steady 18-20" idling at 7-8 MPH.

**PISTONS**:—Aluminum alloy, Autothermic, cam-ground, tin-plated type. **Length**—3¾".

**Removal**—Pistons and rods removed from above.

**Clearance**—See Fitting New Pistons.

**Original Bore Sizes**:—See Engine Code Note in Nash Shop Notes for data.

**Replacement Pistons**:—Furnished std. and .001", .002", .003", .005", .010", .012", .015", .020", .040" oversize.

**Fitting New Pistons**:—Use .002" oiled feeler ½" wide between piston and wall on side opposite slot at right angles to pin hole. Pull to withdraw feeler must be 12-18 lbs. with piston at room temperature.

**Installing Pistons**:—Pin offset toward camshaft and slot toward left (trademark on piston toward front).  
**NOTE**—Piston pin offset 1/16".

**PISTON RINGS**:—Two compression, two oil control rings per piston, all above pin. Oil ring grooves drilled for oil drainage.

Ring	Width	End Gap	Side Clearance
Compr.	.124"	.010-.015"	.002-.004"
Oil Contr.	.155"	.010-.015"	.002-.004"

**Replacement Rings**:—See Nash Shop Notes for data.

**PISTON PIN**:—Diameter—.8745". **Length**—2.804".

Floating type, retained by locking ring at each end.

Pin hole in piston offset toward camshaft.

Pin Fit in Piston—Light push fit (piston at 200° F.).

Pin Fit in Rod Bushing—Select pin for .0001" clearance or light push fit at normal temperature.

**Replacement Pins**:—Standard, .001" .003" oversize.

**CONNECTING ROD**:—Length—8¾". **Weight**—36¼ ozs.

**Upper Bearing** (Piston Pin Bushing)—Bronze.

**Crankpin Journal Diameter**—2.002". See Engine Code Note in Nash Shop Notes for original bearing sizes.

**Lower Bearing**—Removable, steel-backed babbitt. **Clearance**—.0015-.0025". **Sideplay**—.008-.012".

**Bearing Adjustment**:—None (no shims). Replace bearings. Do not file rods or bearing caps. See Nash Shop Notes for instructions and 'Palnut' data.

**Replacement Bearings**:—Std. & .002", .010" undersize.

**Installing Rods**:—Mark rods and bearing caps before removal and install in same position. Oil hole in lower end of rod must be toward right of engine.

**CRANKSHAFT**:—7 bearing, counterweighted type.

See Nash Shop Notes for Vibration Dampener data.

**Journal Diameters**—2 31/64" all bearings. See Engine Code Note in Nash Shop Notes for original bearing sizes.

**Bearings**—Removable steel-backed, babbitt type. **Clearance**—.002-.003".

**Bearing Adjustment**:—None (no shims). Replace bearings. See Nash Shop Notes for bearing installation and fitting, replacement main bearing caps, and rear main bearing oil seal data.

**Replacement Bearings**:—Std. & .002", .010" undersize.

**End Thrust**:—Taken by center bearing. Replace bearing to take up excessive endplay. **Endplay** .004-.006".

**CAMSHAFT**:—Non-adjustable roller-chain drive.

See Nash Shop Notes for Camshaft Removal directions.

**Bearing Type**—Steel-backed, babbitt bushings.

**Clearance**—.002".

**End Thrust**:—Taken by front bearing.

**Endplay**—.004-.006".

**Timing Chain**:—Whitney No. 49205 roller chain.

**Width** 9/16". **Pitch** ¾". **Length** 22½" or 60 links.

**Camshaft Setting**:—Mesh chain with camshaft and crankshaft sprockets turned so that marked tooth on each gear is 45° past (to right—as viewed facing front of engine) top vertical position. With sprockets in this position there should be 9½ links between tooth marks.

VALVES:—	Head Diameter	Stem Diameter	Length
Intake	1¾"	.3725"	5 17/32"
Exhaust	1 19/32"	.3725"	5 17/32"

	Seat Angle	Lift	Stem Clearance
All Valves	45°	11/32"	.002-.004"

**Valve Guides**:—Press fit in head (positioned by shoulder on guide). Ream new guides for clearance.

**Valve Springs**:—Double springs used on all valves. **Free length** 1 21/32" (inner), 2" (outer spring).

	Inner Spring		Outer Spring	
	Pressure	Length	Pressure	Length
Valve Closed	21 lbs.	1 3/8"	38 lbs.	1 11/16"
Valve Open	51 lbs.	1 1/32"	95 lbs.	1 11/32"

**Valve Lifters**:—Mushroom type. Lifter guide holes in block. Remove from below with camshaft out.

## VALVE TIMING

**Tappet Clearance**:—.015" all valves, engine hot and idling (.018" max. may be used for sustained high speed driving. **CAUTION**—Oil plug in drilled passage in cylinder head (between oil filter pipe and lead to rocker arm shaft) must be removed to cut off oil to rocker arm shafts when valves adjusted with engine running. **IMPORTANT**—Plug must be replaced after adjustment completed (oil is bypassed in head with plug out and valve mechanism will not be oiled).

**Valve Timing**:—See Camshaft Setting above.

**Intake Valves**—Open 11.6° ATDC. Close 34.6° ALDC.

**Exhaust Valves**—Open 49.3° BLDC. Close 5° ATDC.

**To Check Valve Timing**—With .015" tappet clearance, #1 intake valve opens 11.6° ATDC. with 'DC' mark on vibration dampener at front of engine 23/32" after the indicator on the chain case cover. Exhaust valve closes with piston 5° or .0104" ATDC.

## LUBRICATION

**LUBRICATION**:—Pressure system with gear type oil pump in crankcase (pump driven by separate gear from camshaft with oil delivery up along drive shaft to oil gallery in engine block).

**Normal Oil Pressure**:—25-30 lbs. at 25 MPH (warm oil).

**Oil Pressure Regulator**:—On oil pump cover. Opens at 30 lbs. Not adjustable.

**Crankcase Capacity**:—6 quarts.

## COOLING

**COOLING SYSTEM**:—Capacity 17 qts. (18 with heater).

**Water Pump**:—Centrifugal, adjustable packing type. See Water Pump Section for complete data.

**Removal**—Drain radiator, disconnect hose and drive coupling, take out mounting screws in pump flange.

**Thermostat**:—Fulton or Dole. In cyl. head outlet.

**Setting**—Starts to open at 160°F.

**Temperature Gauge**:—Auto-Lite (Motometer) Vapor Tension type. Auto-Lite No. H-9644.

See Miscellaneous Section for complete data.

## CLUTCH

**CLUTCH:**—Borg & Beck Model 10A7. Assembly No. 950. Single plate, dry disc type.

*See Clutch Section for complete data.*

**Facings:**—Moulded-woven type, 2 used. Inside Diam. 7". Outside Diam. 10". Thickness  $\frac{1}{8}$ ".

**Pedal Adjustment & Over-center Spring Setting:**—Pedal free travel  $\frac{1}{2}$ "-1". Adjusted in same manner as on the Nash 8 (see next page for instructions).

**CAUTION:**—Over-center spring setting must be checked whenever clutch pedal is adjusted.

**Removal:**—Remove Transmission (see below). Disconnect clutch pedal linkage, support engine at rear and free rear engine mountings, remove clutch housing and pan. Punchmark flywheel, clutch cover and pressure plate (reassemble to same marks), remove clutch mounting screws and clutch.

## TRANSMISSION

**TRANSMISSION:**—Own Make. New design, all helical gear, constant-mesh, synchro-mesh (second & high), sliding gear (low & reverse).

*See Transmission Section for complete data.*

**Transmission Control:**—Mech. steering column shift. *See Transmission Section for complete data.*

**Removal:**—Disconnect shift rods, speedometer cable, overdrive control cable & wires (if used), and drive-shaft. Remove two right transmission mounting studs and install pilot studs (to support transmission during removal), remove other mounting stud nuts, pull transmission straight back and remove

## OVERDRIVE

**Overdrive (Cruising Gear):**—Warner Model AS1-R7C, Type R7C with electrical 'kick-down' control.

*See Transmission Section for complete data.*

**Overdrive Solenoid:**—Delco-Remy Model 1118004.

**Throttle Switch:**—Adjust switch position on mounting bracket so that contacts close with throttle valve wide open and spring on carburetor throttle valve pulley just starting to compress.

**Control Relay:**—Delco-Remy Model 1116798.

## UNIVERSALS

**UNIVERSAL JOINTS:**—Mechanics Type 2CR. New type roller bearing joint. Two used.

*See Universals Section for complete data.*

## REAR AXLE

**REAR AXLE:**—Own Make. Semi-floating, hypoid gear type with Hotchkiss drive.

*See Rear Axle Section for complete data.*

**Ratio:**—4.1-1 Std., 4.4-1 with Overdrive.

**Backlash:**—.005-.007". Shim adjustment.

**Removal:**—Hoist rear end of car, disconnect shock absorbers, remove axle shafts (see below), free axle from springs by disconnecting U bolts and rear shackles, withdraw axle assembly from beneath car.

**Axle Shaft Removal:**—Remove wheel and drum, disconnect brake line and cable, remove backing plate mounting bolt nuts, oil seal retainer, backing plate, and bearing adjusting shims. Withdraw shaft and bearing, using care not to drag shaft on oil seal.

**Wheel Bearing Adjustment:**—Shims located between backing plate and flanged end of housing. To adjust, remove wheel and backing plate (above), add or remove shims for endplay. **Endplay** .003-.008".

## SHOCK ABSORBERS

**SHOCK ABSORBERS:**—Delco Model 1016-E (front), 1023-BB (rear). Direct acting, hydraulic type.

*See Shock Absorber Section for complete data.*

## FRONT SUSPENSION

**Front Suspension:**—Independent, linked parallelogram type with coil springs.

*See Front Suspension Section for complete data.*

**Kingpin Inclination:**— $4\frac{1}{2}$ ° crosswise.

**Caster:**—0° to  $\frac{1}{2}$ ° Neg. Adjustable.

**Camber:**—Pos.  $\frac{1}{4}$ ° to  $\frac{1}{2}$ °. Adjustable.

**Toe In:**— $1/32$ -"- $3/32$ " measured 10" up from floor.

Adjustable by loosening clamp bolts and turning adjusting tube at outer end of each tie rod equally.

**Steering Geometry (Toe out on turns):**—Inner wheel turned 21° plus  $\frac{3}{4}$ °, outer wheel exactly 20°.

## STEERING GEAR

**Steering Gear:** Gemmer Model 305 Worm-and-Roller type with "push-pull" adjustments.

*See Steering Gear Section for complete data.*

## BRAKES

**BRAKES:**—Service—Bendix hydraulic, duo-servo, single anchor type, without Eccentric Adjustment. Hand lever applies rear wheel service brakes.

*See Brake Section for complete data.*

**Drums:**—Cast iron. Diameter 10".

**Lining:**—Moulded type. Width 2." Thickness  $3/16$ ".

Length 22" per wheel.

**Clearance:**—.015" at each end of secondary shoes with primary shoes forced out against drum.

**Braking Power:**—53% front, 47% rear wheels.

**Hand Brakes:**—See Service Brake above.

**HOOD LOCK:**—Alligator type hood. Lock button below instrument panel on left side. To raise hood, pull out on lock control button (hood will raise slightly), reach under front edge of hood and press up on safety catch tab to release safety catch, raise hood up.

### MODEL IDENTIFICATION

**SERIAL NUMBER:**—First number B-110001. Stamped on plate on right frame side member under hood.

**SERVICE SERIAL NUMBER:**—First number N8-17001. On 'Caution Plate' on left front door hinge post.

**ENGINE NUMBER:**—First number B-110001. Stamped on right side of engine block at front.

### TUNE-UP

**COMPRESSION:**—Ratio—6.3-1 std. cast-iron head.  
Pressure—110 lbs. at cranking speed of 350 RPM.

**VACUUM READING:**—Steady 18-20" idling at 7-8 MPH.

**FIRING ORDER:**—1-6-2-5-8-3-7-4. See diagram for spark plug cable connections on distributor cap.

**SPARK PLUGS:**—AC No. 45. 14 MM. Metric.  
Gaps—.025".

**IGNITION:** See Coil, Condenser, and Distributor.

**Breaker Gap:**—.017". Cam Angle—28° closed.

**Synchronization:**—Set movable contacts to open simultaneously with stationary contacts.

**Automatic Advance:**—12° max. at 1100 RPM (distr.).

**IGNITION TIMING:** See Ignition Timing.

**Std. Setting:**—9° BTDC. Vibration dampener mark 'IGN' (.725" before 'DC' mark) aligned with pointer on chain case cover at front of engine. Both sets of contacts should open simultaneously.

**CAUTION:**—Torquematic Spark Control (see DISTRIBUTOR following for description) cable must be disconnected at dash before setting Ign. Timing.

**CARBURETION:** See Carburetor & Carb. Equipment.

**Idle Setting:**—Idle screws ½-1½ turns open. Idle speed 7-8 MPH.

**Float Level:**—3/16" from top of float to gasket seat on cover with needle valve seated (invert to check).

**Accelerating Pump:**—Lower hole (summer), upper (winter).

**Fuel Pump Pressure:** 3½ lbs. maximum.

**VALVES:** See Valve Timing.

**Tappet Clearance:**—.015" all valves with engine hot and idling (may be set .018" max. for sustained high speed driving).

**STARTING:** See Battery, Starter, Generator, Regulator.

### IGNITION

**Ignition Switch:**—Oakes Steering Column and Ignition Lock No. 302382. Ignition Switch No. 302440.

**Ignition Lock:**—Briggs & Stratton. B & S No. 85347. Key Series—5 digits. Groove—No. 1.

**COIL:** Two Used, Auto-Lite CE-4025-A. Mounted on right side of engine.

**Ignition Current:**—2 amperes idling, 5 stopped.

**CONDENSER:** Auto-Lite Part No. IG-2671. Two used. Capacity—20-25 microfarad.

**DISTRIBUTOR:** Auto-Lite IKG-4102. Twin Ignition double breaker, 8 lobe cam, full automatic advance type with Torquematic Spark Control. Contacts open simultaneously to fire both spark plugs in each cylinder at the same instant and must be synchronized (see Ignition Timing).

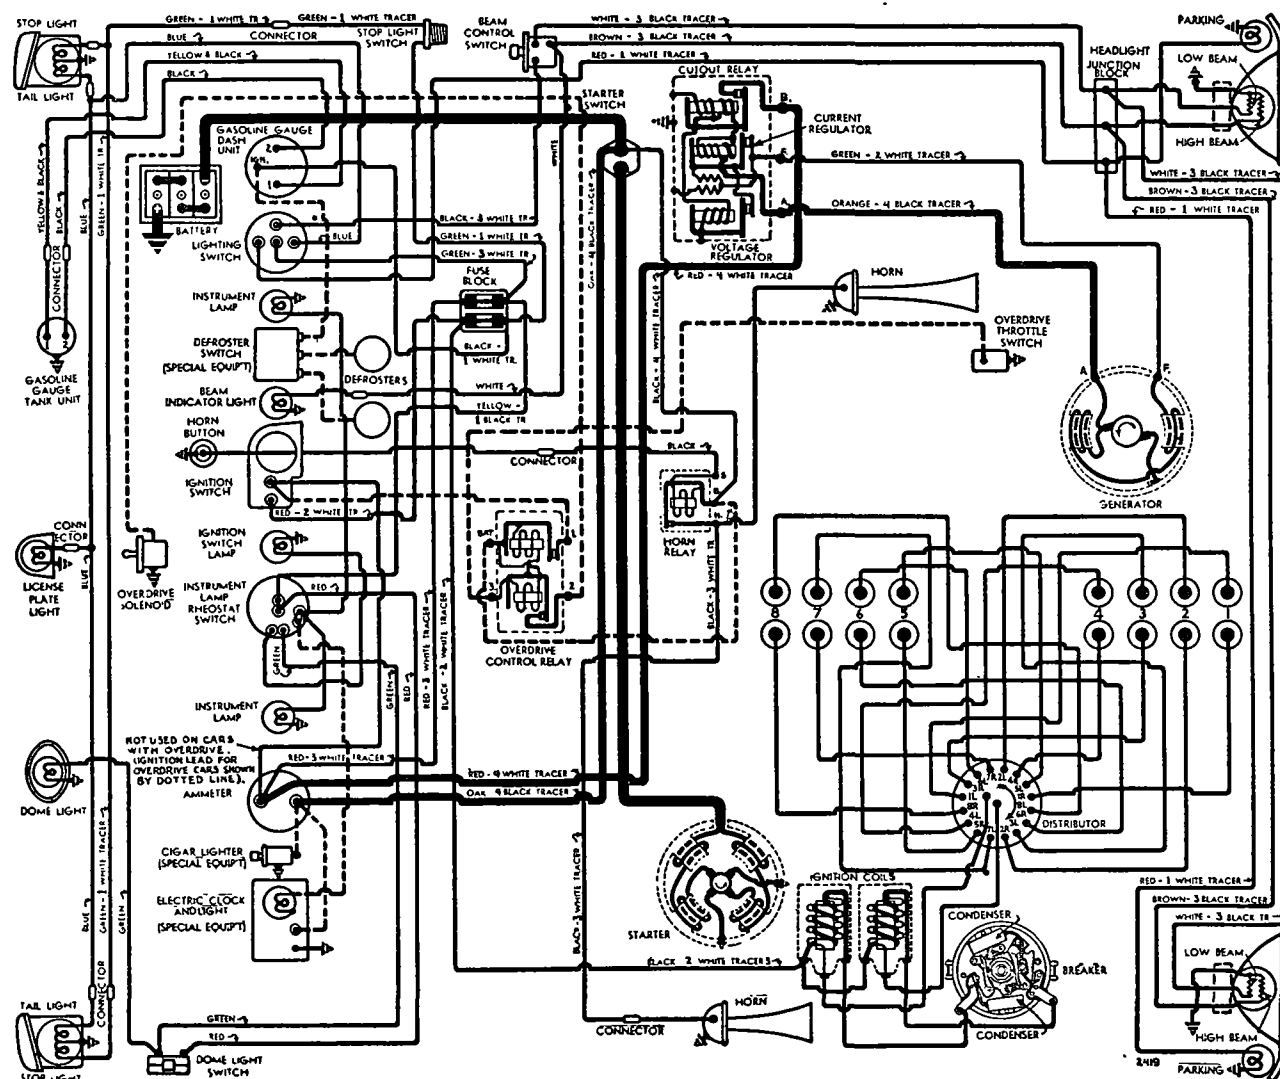

**Breaker Gap:**—Set at .017" (alike for both sets).

**Cam Angle or Dwell:**—28° closed, 17° open (distr.). For each set of contacts (operate independently).

**Breaker Arm Spring Tension:**—17-20 ounces.

**Rotation:**—Clockwise viewed from above.

Automatic Advance			
Distributor	Engine	Distributor	Engine
Degrees	R.P.M.	Degrees	R.P.M.
Start.....	275	0.....	550
4.....	400	8.....	800
6.....	575	12.....	1150
9.....	840	18.....	1680
12.....	1100	24.....	2200

**Torquematic Spark Control:**—Consists of cable anchored at dash and connected to distributor body by a travel limiting spring. Retards distributor through engine movement caused by torque action. Maximum retard 2½° (engine movement in excess of 2½° taken up by travel limiting spring). See Ignition Timing for setting.

**Removal:**—Mounted on right side of engine. To remove, take out hold-down screw in advance arm, disconnect torquematic control, lift distributor off.

**Installation Note:**—When installing distributor, crank engine to firing position for #1 cylinder (piston 9° BTDC), see that oil pump and distributor drive gear meshed with camshaft gear so that oil pump drive pin (at lower end of distributor drive shaft) is crossways of the engine.

## IGNITION TIMING

**IGNITION TIMING:**—Setting for all engines as follows:

Flywheel Degrees	Piston Position
9° BTDC	.0325" BTDC

**To Set Timing:**—Car manufacturer recommends use of Nash Timing Light SE-569. Synchronize breaker points (see Synchronization following). With Timing Light connected as for Synchronization (see below), slacken torquematic cable by loosening lock-nuts on anchor bracket at dash. With #1 piston on compression, turn engine over until piston is 9° or .0325" BTDC, stop when 'IGN' mark on vibration dampener lines up with pointer on chain case cover (this mark is 9° or .725" before top dead center mark 'DC'). Loosen advance arm clamp bolt, rotate distributor until points just break (lights go on) with stop pin (hold-down bolt and nut) in advance position in slot in advance arm, tighten clamp bolt. Adjust cable locknuts at anchor bracket on dash to leave torquematic cable without slack or tension and stop pin in advance position in slot.

**Synchronization:**—Use Nash Timing Light SE-569 (consists of two lights—one for each set of contacts) connected between each primary terminal and ground. Turn on ignition, turn engine over until fixed points just open (light for stationary contacts on). If both lights go on, synchronization correct. If not, loosen 3 lock screws on movable sub-plate, shift plate by prying with screwdriver in notch on edge of plate until this set of contacts begin to open (both lights on), tighten sub-plate lock screws, and set Ignition Timing as directed above. If other methods used, set contacts to open simultaneously at 45° (distributor) intervals.

**Torquematic Spark Control Check:**—Distributor must be free in bracket and cable pulleys positioned to prevent cable interference with engine. Advance spring and cable take-up spring must be properly located and spring resistance centralized. Car manufacturer recommends use of Nash Synchro Light SE-417 to check torquematic retard by means of dead center mark on vibration dampener.

## CARBURETOR

**CARBURETION:**—Carburetor—Carter Type WDO, Model 511-S (#360 cast on face of flange), 1" dual downdraft type.

*For complete data, refer to Carburetor Index.*

**Idle Adjustment:**—With engine warm and running at slow idle speed (choke valve wide open, fast idle inoperative), set throttle stopscrew for 7-8 MPH idle speed. Adjust idle adjusting screw for each barrel (in succession) until engine fires smoothly (½-1½ turns open for each screw—turn screws in for leaner mixture). Readjust idle speed.

**Accelerating Pump:**—Pump arm under dust cover at top of carburetor has 2 holes for pump link engagement. Set as follows:

Upper Hole (max. stroke)—Cold weather.  
Lower Hole (min. stroke)—Hot weather.

**Float Level:**—3/16" from top of float to machined surface of bowl cover (remove gasket, invert to check).

**Metering Rods & Jets:**—See Carter Jet Table in Carburetor Section for complete data.

**Fast Idle:**—Integral type (built-in carburetor).

*For complete data, refer to Carburetion Equip. Index.*

**Setting:**—Adjust fast idle screw for .015" throttle opening with choke valve closed.

**Automatic Choke:**—Carter Climatic Control.

*For complete data, refer to Carburetion Equip. Index.*

**Setting:**—Centered (at index mark). This setting supersedes 1 Notch Rich setting (original specification).

## CARB. EQUIPMENT

**Air Cleaner:**—AC # 1529113 oil-wetted type standard. Heavy duty oil-bath type optional.

**Fuel Pump:**—AC Type W (Std.), Type AD Fuel-& Vacuum Pump (Cars with Overdrive). Pump Exchange Part No. 534.

*For complete data, refer to Carburetion Equip. Index.*

**Gasoline Gauge:**—Auto-Lite electric, No. NG-9645D (dash unit), No. NG-9637T (tank unit).

*For complete data, refer to Carburetion Equip. Index.*

## BATTERY

**BATTERY:**—Auto-Lite Type CTL-2-17. 6 volt, 17 plate, 120 ampere hour capacity (20 hour rate).

**Starting Capacity:**—152 amperes for 20 minutes.

**Zero Capacity:**—300 amperes for 4.5 minutes.

**Grounded Terminal:**—Positive (+) grounded to body. Separate body to engine ground strap used.

**Dimensions:**—Lgth. 10 5/16". Width 7 1/8". Hgt. 9 1/16".

**Location:**—Under front seat.

## STARTER

**STARTER:**—Auto-Lite MAB-4104. Armature MAB-2057.

**Drive:**—Inboard Bendix Type LCD11FX-10.

**Rotation:**—Counter-clockwise at commutator end.

**Brush Spring Tension:**—42-53 ozs. (new brushes).

**Cranking Engine:**—160 RPM, 150-160 amps., 5.2 v.

### Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	3700	5.5	60
0.6 " "	1910	5.5	100
3.4 " "	1100	5.0	200
6.8 " "	695	4.5	300
10.15 " "	420	4.0	400
15.8 " "	Lock	3.0	582
22.5 " "	Lock	4.0	775

• **Removal:**—Starter flange mounted on right front face of flywheel housing. To remove, disconnect battery cable, take out flange mounting screws.

**Starting Switch:**—A-L #SW-4012. Mounted on body floor below clutch pedal. Operated by depressing clutch pedal fully. No adjustment required.

## GENERATOR

**GENERATOR:**—Auto-Lite GDZ-4803B. Armature GDZ-2079F. Two brush type with current-voltage control.

**Charging Rate Adjustment:**—No adjustment at generator. Charging rate controlled by Voltage Regulator and maximum output by Current Regulator. See Regulator data following.

**Maximum Charging Rate:**—35 amperes (hot or cold), 8.0 volts, 1900 RPM (generator) and above with load or discharged battery (Current Regulator setting). Actual charging rate controlled by Voltage Regulator and dependent on battery condition.

### Performance Data

Cold			Hot		
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	925	0	6.4	1000
4	6.6	1035	4	6.6	1120
8	6.75	1140	8	6.75	1235
12	6.95	1250	12	6.95	1350
16	7.15	1370	16	7.15	1460
20	7.3	1480	20	7.3	1590
24	7.5	1590	24	7.5	1730
28	7.7	1710	28	7.7	1900
32	7.9	1820	32	7.9	2090
35	8.0	1900	35	8.0	2250

**Rotation:**—Counter-clockwise at commutator end.

**Brush Spring Tension:**—53 ozs. max. (new brushes).

**Field Current:**—1.60-1.78 amperes at 6.0 volts.

**Motoring Current:**—4.16-4.60 amperes at 6.0 volts.

**Removal:**—Generator cradle mounted at left side of engine with fan belt drive. Water pump driven by generator shaft extension. To remove, disconnect water pump, loosen fan belt, remove generator clamp band and lift generator off.

**Belt Adjustment:**—Adjust whenever belt deflection is over 1½" (when pressed lightly midway between generator and fan pulleys). To adjust, loosen two capscrews on fan bracket, lift fan up (one screw hole slotted) for ¾" belt deflection, tighten screws.

## REGULATOR

**REGULATOR:**—Auto-Lite VRP-4004F or 4004F-1. Current Voltage Type. On left side of engine dash.

*For complete data, refer to Electrical Equipment Index.*

**NOTE:**—Regulator case cover sealed. Serviced on exchange basis if seals not broken (to remove cover).

### Cutout Relay

**Cuts In:**—6.4-6.6 volts.

**Cuts Out:**—4.1-4.8 volts (approx. 4-6 amps. disch.).

**Contact Gap:**—.015" minimum.

**Air Gap:**—.031-.034" with contacts open (check at hinge end of core).

### Voltage Regulator

**Setting:**—7.2-7.5 volts at 70° F. See Electrical Equipment Section for settings at other temperatures. **To Check (without breaking seals):**—Connect ammeter in charging line at regulator 'B' terminal (use short heavy leads), voltmeter between 'B' terminal and ground. Operate generator at speed equivalent to 30 MPH., charging fully charged battery, until voltage is steady. Voltage reading should agree with setting given above.

**To Adjust (with cover removed):**—Change regulator armature spring tension by bending lower spring hanger slightly. See Electrical Equipment Section. **Contact Gap:**—.012" min. (armature against stop pin). **Air Gap:**—.048-.052" with contacts just opening.

### Current Regulator

**Setting:**—34-36 amperes (marked '35' on the cover). **To Check (without breaking seals):**—Connect test meters as for voltage check (above). Operate generator at speed equivalent to 30 MPH. charging battery, turn on car lights and accessories or connect load (bank of headlamp bulbs etc.) between ammeter and battery so that generator charges at peak rate and Current Regulator operates. Current reading should agree with setting given above. If more than slight excess noted, regulator is defective. **To Adjust (with cover removed):**—Same as for Voltage Regulator (above).

**Contact Gap & Air Gap:**—Same as Voltage Regulator.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

**LIGHTING**

**LIGHTING:**—Headlamps—Hall 'Sealed Beam' type.  
For complete data, refer to *Electrical Equipment Index*.  
Headlamp Adjustment—Aim upper beam straight ahead (hot spot center 3" below lamp center height).  
Beam Indicator—In center of speedometer dial.  
Lighted whenever Country (upper) beams in use.

**Switches**

Lighting—Douglas. Nash No. 3107032.  
Beam Selector—Douglas.  
Instrument—Douglas.

**Bulb Specifications**

Position	Candlepower	Mazda No.
Headlamps		Sealed Beam
Parking	3	63
Instrument, Clock	1½	55
Beam Indicator	1½	55
Stop & Tail	21-3	1158
Rear License	3	63
Dome	6	81

**MISC. ELECTRICAL**

**FUSES:**—Lighting—30 ampere. On fuse block mounted on left hand side of engine dash.  
Accessory—30 ampere. On fuse block.

**HORNS:**—Delco-Remy. No. 1999565 (left horn—low note), No. 1999566 (right horn—high note). Vibrator type, blended tone, operated by horn relay.

Type	Current (at 6 volts)	Air Gap
1999565 (Low Note)	19-21 amperes	.047-.052"
1999566 (High Note)	18-20 amperes	.039-.044"

Horn Relay:—Delco-Remy Model 1116775.  
Contact Gap—.025". Air Gap—.015" (closed).  
Contacts Close—2.75-4.0 volts.

**ENGINE**

**ENGINE CODE NOTE (ORIGINAL BORE & BEARING SIZES):** See Nash Shop Notes for complete data.

**ENGINE SPECIFICATIONS:**—8 cylinder, valve-in-head, Twin Ignition type with Iso-thermal fuel intake system (intake manifold cast in cylinder head—water jacketed for temperature control).  
Bore—3½". Stroke—4¼".  
Displacement—260.8 cu. ins. Rated HP—31.25.  
Developed Horsepower—115 at 3400 RPM.  
Compression Ratio—6.3-1 Std. cast iron head.  
Compression & Vacuum Reading—See Tune-Up.

► Later type Replacement Cylinder Heads: See "Cylinder Head" in Nash Shop Notes.

**PISTONS:**—Nelson Bohnalite, aluminum alloy, Invar strut, tin-plated, split skirt type.  
Weight—16 ozs. (stripped). Length—3 11/16".  
Removal—Pistons and rods removed from below.  
Clearance—See Fitting New Pistons.

**Original Bore Sizes:**—See Engine Code Note in Nash Shop Notes for data.

**Replacement Pistons:**—Furnished std. and .001", .002", .003", .005", .010", .012", .015", .020", .040" oversize.

**Fitting New Pistons:**—Use .0025" dry (not oiled) feeler between piston and wall on side opposite slot at right angles to pin hole. Pull to withdraw feeler 8-15 lbs. with piston at room temperature.

**Installing Pistons:**—Pin offset toward camshaft. Slot toward left (trademark in piston toward front).

**PISTON RINGS:**—Two compression, two oil control rings per piston, all above pin. Oil ring grooves drilled for oil drainage.

Ring	Width	End Gap	Side Clearance
Compr. (both)	.124"	.010-.015"	.002-.004"
Oil Cont. (Upper)	.124"	.010-.015"	.002-.004"
Oil Cont. (Lower)	.1865"	.010-.015"	.002-.004"

**Replacement Rings:**—See Nash Shop Notes for data.

**PISTON PIN:**—Diameter—.8747". Length—2.574". Floating type, retained by locking ring at each end. Pin hole in piston offset toward camshaft.  
Pin Fit in Piston—Light push fit (piston at 200°F).  
Pin Fit in Rod Bushing—Select pin for .0001" clearance or light push fit at normal temperature.

**Replacement Pins:**—Std., .001", .003", .005" oversize.

**CONNECTING ROD:**—Length—8¾". Weight—34 ozs.

Upper Bearing (Piston Pin Bushing)—Bronze.  
Crankpin Journal Diameter—2.002". See Engine Code Note in Nash Shop Notes for original bearing sizes.  
Lower Bearing—Removable steel-backed, babbitt. Clearance—.0015-.0025". Sideplay—.008-.012".

**Bearing Adjustment:**—None (no shims). Replace bearings. Do not file rods or bearing caps. See Nash Shop Notes for instructions and 'Palnut' data.

**Replacement Bearings:**—Std. & .002", .010" undersize.

**Installing Rods:**—Mark rods and bearing caps before removal and install in same positions. Oil hole in lower end of rod must be toward right of engine.

**CRANKSHAFT:**—Nine bearing. No counterweights. See Nash Shop Notes for Vibration Damper data.  
Journal Diameters—2 31/64" all bearings. See Engine Code in Nash Shop Notes for original bearing sizes.  
Bearings—Removable steel-backed, babbitt type. Clearance—.002-.003".

**Bearing Adjustment:**—None (no shims). Replace bearings. See Nash Shop Notes for bearing installation and fitting, replacement main bearing caps, and rear main bearing oil seal data.

**Replacement Bearings:**—Std. & .002", .010" undersize.

**End Thrust:**—Center (#5) bearing. Replace bearing to take up excessive endplay. Endplay—.004-.006".

**CAMSHAFT:**—Non-adjustable roller chain drive. See Nash Shop Notes for Camshaft Removal directions.  
Bearings—Steel-backed, babbitt bushings. Clearance—.002".

**End Thrust:**—Taken by front bearing. Endplay .004-.006".

**Timing Chain:**—Diamond double roller type. Width 9/16". Pitch 3/8". Length 23¼" or 62 links.

**Camshaft Setting:**—Mesh chain with camshaft and crankshaft sprockets turned so that marked tooth on each gear is 45° past (to right—as viewed facing front of engine) top vertical position. With sprockets in this position there should be 10 links between tooth marks.

VALVES:	Head Diameter	Stem Diameter	Length
Intake	1 21/32"	.3725"	5½"
Exhaust	1 15/32"	.3725"	5½"

	Seat Angle	Lift	Stem Clearance
All Valves	45°	11/32"	.002-.004"

**Valve Guides:**—Press fit in head (positioned by shoulder on guide). Ream new guides for correct clearance.

**Valve Springs:**—Double springs used on all valves. Free length 1 21/32" (inner), 2" (outer spring).

**Inner Spring      Outer Spring**

	Pressure	Length	Pressure	Length
Valve Closed	21 lbs.	1 3/8"	38 lbs.	1 11/16"
Valve Open	51 lbs.	1 1/32"	95 lbs.	1 11/32"

**Valve Lifters:**—Mushroom type. Lifter guide holes reamed in block. Remove from below (camshaft out).

**VALVE TIMING**

**Tappet Clearance:**—.015" all valves, engine hot and idling. NOTE—.018" maximum may be used for sustained high speed driving.

**Valve Timing:**—See Camshaft Setting above.

**Intake Valves:**—Open 16° ATDC. Close 38° ALDC.

**Exhaust Valves:**—Open 45° BLDC. Close 10° ATDC.

**To Check Valve Timing:**—With .015" tappet clearance, #1 intake valve opens 16° ATDC with 'DC' mark on vibration dampener at front of engine 1 5/16" after the indicator on the chain case cover. Exhaust valve closes with piston 10° or .0400" ATDC.

**LUBRICATION**

**LUBRICATION:**—Pressure system. Gear type oil pump in crankcase. NOTE—When pump installed, slot in shaft should be across engine with #1 piston in firing position.

**Normal Oil Pressure:**—25-30 lbs. at 25 MPH (warm oil).

**Oil Pressure Regulator:**—On oil pump cover. Opens at 30 lbs. Not adjustable.

**Crankcase Capacity:**—7 quarts.

**COOLING**

**COOLING SYSTEM:**—Capacity 16 qts. (17 with heater).

**Water Pump:**—Centrifugal, adjustable packing type.

See Water Pump Section for complete data.

**Removal:**—Drain radiator, disconnect hose and drive coupling, take out mounting screws in pump flange.

**Thermostat:**—Fulton or Dole. In cyl. head outlet.

**Setting:**—Starts to open at 180°F.

**Temperature Gauge:**—Auto-Lite (Motometer) Vapor Tension type. Auto-Lite No. H-9644.

See Miscellaneous Section for complete data.

**CLUTCH**

**CLUTCH:**—Borg & Beck Model 10A7. Assembly No. 950. Single plate, dry disc type.

See Clutch Section for complete data.

**Facings:**—Moulded-woven type, 2 used. Inside Diam. 7". Outside Diam. 10". Thickness 1/8".

**Pedal Adjustment:**—Pedal free travel ½-1". To adjust, loosen one nut and tighten opposite nut on connector link at throw-out shaft lever. Both nuts must be tightened securely and locked with 'Palnuts'.

**Over-center Spring Adjustment:**—Check when clutch pedal adjusted. Loosen nut in lever on end of clutch throw-out shaft, position lever so that spring hole in lever not more than 1/8" above line from lever screw hole to other spring hole in engine bracket.

**Removal:**—Remove Transmission (see below). Disconnect clutch pedal linkage, support engine at rear and free rear engine mountings, remove clutch housing and pan. Punchmark flywheel, clutch cover and pressure plate (reassemble to same marks), remove clutch mounting screws and clutch.

## TRANSMISSION

**TRANSMISSION:**—Own Make. New design, all helical gear, constant-mesh, synchro-mesh (second & high), sliding gear (low & reverse).

*See Transmission Section for complete data.*

**Transmission Control:**—Mech. steering column shift.

*See Transmission Section for complete data.*

**Removal:**—Disconnect shift rods, speedometer cable, overdrive control cable & wires (if used), and drive-shaft. Remove two right transmission mounting studs and install pilot studs (to support transmission during removal), remove other mounting stud nuts, pull transmission straight back and remove

## OVERDRIVE

**Overdrive (Cruising Gear):**—Warner Model AS1-R7C, Type R7C with electrical 'kick-down' control.

*See Transmission Section for complete data.*

**Overdrive Solenoid:**—Delco-Remy Model 1118004.

**Throttle Switch:**—Adjust switch position on mounting bracket so that contacts close with throttle valve wide open and spring on carburetor throttle valve pulley just starting to compress.

**Control Relay:**—Delco-Remy Model 1116798.

## UNIVERSALS

**UNIVERSAL JOINTS:**—Mechanics Type 3CR. New type roller bearing joint. Two used.

*See Universals Section for complete data.*

## REAR AXLE

**REAR AXLE:**—Own Make. Semi-floating, hypoid gear type with Hotchkiss drive.

*See Rear Axle Section for complete data.*

**Ratio:**—4.1-1 Std., 4.4-1 with Overdrive.

**Backlash:**—.005-.007". Shim adjustment.

**Removal:**—Hoist rear end of car, disconnect shock absorbers, remove axle shafts (see below), free axle from springs by disconnecting U bolts and rear shackles, withdraw axle assembly from beneath car.

**Axle Shaft Removal:**—Remove wheel and drum, disconnect brake line and cable, remove backing plate mounting bolt nuts, oil seal retainer, backing plate, and bearing adjusting shims. Withdraw shaft and bearing, using care not to drag shaft on oil seal.

**Wheel Bearing Adjustment:**—Shims located between backing plate and flanged end of housing. To adjust, remove wheel and backing plate (above), add or remove shims for endplay. Endplay .003-.006"

## SHOCK ABSORBERS

**SHOCK ABSORBERS:**—Delco Model 1016-E (front), 1023-BB (rear). Direct acting, hydraulic type.

*See Shock Absorber Section for complete data.*

## FRONT SUSPENSION

**Front Suspension:**—Independent, linked parallelogram type with coil springs.

*See Front Suspension Section for complete data.*

**Kingpin Inclination:**—4½° crosswise.

**Caster:**—0° to ½° Neg. Adjustable.

**Camber:**—Pos. ¼° to ½°. Adjustable.

**Toe In:**—1/32"-3/32" measured 10" up from floor. Adjustable by loosening clamp bolts and turning adjusting tube at outer end of each tie rod equally.

**Steering Geometry (Toe out on turns):**—Inner wheel turned 21° plus ¾°, outer wheel exactly 20°.

## STEERING GEAR

**Steering Gear:** Gemmer Model 335 Worm-and-Roller type with "push-pull" adjustments.

*See Steering Gear Section for complete data.*

## BRAKES

**BRAKES:**—Service—Bendix hydraulic, duo-servo, single anchor type, without Eccentric Adjustment. Hand lever applies rear wheel service brakes.

*See Brake Section for complete data.*

**Drums:**—Cast iron. Diameter 10".

**Lining:**—Moulded type. Width 2." Thickness 3/16". Length 22" per wheel.

**Clearance:**—.015" at each end of secondary shoes with primary shoes forced out against drum.

**Braking Power:**—53% front, 47% rear wheels.

**Hand Brakes:**—See Service Brake above.

**OIL PAN REMOVAL, AND ENGINE CODE NOTE DATA (ORIGINAL BORE & BEARING SIZES):** Refer to Nash Shop Notes for complete instructions.

### MODEL IDENTIFICATION

**SERIAL NUMBER:**—First No. K-56001. On plate on right side of cowl under engine hood.

**Service Serial No. Note:**—Stamped on plate on left front door hinge pillar. First No. N4-55501.

**ENGINE NUMBER:**—Stamped on left side of engine block at front end. First No. same as Serial No.

### TUNE-UP

**COMPRESSION:**—Ratio 6.87-1 cast-iron head standard. Pressure—120 lbs. at 350 RPM. cranking speed.

**VACUUM READING:**—Steady 18-20" idling at 6 MPH.

**FIRING ORDER:**—1-5-3-6-2-4. See diagram.
